In an editorial, entitled "American Methods," the Timber News, of London, Eng., has stirred up something of a hornets' nest among the lumber journals of the United States. The burden of the article is the statement that "British timber agents and importers have on many occasions good cause to declare that they have been swindled out of their money by certain lumber shippers in various American ports, timber often being sent (and for which shippers have drawn the money before it has been received on this side) which on arrival has turned out to be of a very low grade, and far from what the shipper, according to his contract, ought to have supplied." An instance is quoted of a Hamburg firm which has taken civil and criminal proceedings against two New Orleans lumber companies, and already been awarded £5,000 damages in the civil case. It looks as though the Timber News had been a little hasty in taking up arms, but from the result of this particular case, and from the haste and energy with which several of the United States journals have criticized the London journal for its article, it would also appear that the shoe pinches in spots. Whatever the facts may be, the result will be beneficial, as too much publicity cannot be given to the few unscrupulous members of the trade whose methods may have far-reaching evil effects. The fact that the defendants in the civil suit had to pay $25,000 for the liberties they took with their customers in Hamburg, is a strong indication that the laws and customs of the United States, if rigidly enforced, are quite sufficient to protect foreign purchasers.

Lumber News from Ontario Points

Railways Standing Pat on Freight Tariff Matter—South Africa Trade Opportunities Neglected—Algonquin Park Limits

Ottawa, July 23.—Lumbermen are still in doubt as to what action the C. P. R. and G. T. R. will take to comply with the order of the Railway Commision calling on them to file tariffs restoring lower rates for lumber sent to Montreal for ocean export. The tariffs filed on June 15 purporting to meet this demand of the Commission have been objected to by the lumbermen in letters to the railway companies. These protests brought no redress. Further action was taken this week by Mr. Frank Hawkins, on behalf of the Canadian Lumbermen's Association. He made an appeal to the Railway Commission calling attention to the fact that in the opinion of the lumbermen the railways were not complying with the order. A similar letter was sent on behalf of the Montreal Lumbermen's Association. Now the lumbermen are waiting for the Railway Commission to act.

Ottawa, July 23.—J. R. Booth has denied two rather sensational stories regarding the closing of his lumber mill consequent upon the G. T. R. not being able to clear away the lumber on account of the strike. In one quarter it was stated that Mr. Booth contemplated legal action for damages against the railway. The lumber king declared this report was foundationless. On the other hand, it was alleged that Mr. Booth need not have closed his mill at all unless he wanted to add to the evil effects of the strike, thus creating sympathy for the G. T. R. and hostility to the men. Mr. Booth answered this by saying that he had nothing to do with the railway, and was looking after his own interests. The reason for the mill being closed, he asserted, could be seen in a hundred loaded wagons and fifty loaded cars, which could be moved only by the G. T. R.

Canada's Trade with South Africa

The Canadian Lumbermen's Association is drawing the attention of its members to the trade in wood goods with British South Africa. In a circular letter recently issued, the secretary says:

"The figures below, taken from the latest monthly report of the Department of Trade and Commerce, show that, of a total import of unmanufactured wood into British South Africa, amounting to $2,429,937 during the calendar year 1909, the United States furnished 26½%, while Canada's share amounted to only a fraction over 6%. In manufactured wood, the difference is still greater, United States having supplied 27.3% of the total import, whilst Canada only furnished 2.3%. Are you satisfied with your share of the British South African trade? The figures are as follows:—

	1908.	1909.
Unmanufactured—		
Total imports	$1,994,487	$2,429,937
Of this quantity,		
United States supplied	525,298	642,395
Canada supplied	105,067	149,066
Manufactured—		
Total imports	693,305	757,584
Of this quantity,		
United States supplied	162,702	207,301
Canada supplied	15,238	17,072

"The Canadian Government maintains a trade commission service in South Africa, and the resident representatives are: John A. Chesley, Rhodes Buildings, Cape Town, Cape Colony, S.A.; H. R. Poussette, Durban, Natal, South Africa. The Canadian Government also subsidizes a direct steamship line, with regular sailings the year around. Messrs. Elder, Dempster & Co., of Montreal, P.Q., will gladly give full information regarding space, rates of freight, sailing dates, etc., etc. If you are interested in opening up trade with British South Africa, you are invited to communicate with the above-named commissioners and steamship people in Montreal."

Algonquin Park Timber may be Saved

Negotiations for the extinguishing of the timber licenses in Algonquin Park are in progress, and the Department of Lands, Forests and Mines has scalers on various limits in the park measuring the standing timber so that a valuation can be made of it. Measurers are now said to be at work on the limits of the Munns Lumber Company, of Orillia, which is controlled by J. B. Tudhope, M.P.P., of Orillia. This concern is one of the licensees cutting in the park. These licenses, which originally were for pine only, were extended later to include hardwood. The Tudhope concern is now getting out hardwood and floating it along a stream to mills on the Canada Atlantic division of the Grand Trunk.

It is reported that the Department contemplates the purchase of the Munns lease in order to end, for the present at least, lumbering operations in the park reservation. Mr. Tudhope's company has already refused cash offers. Notwithstanding this the plan that is now contemplated in official quarters, it is understood, is the purchase of the Munns and other licenses by the issuing of debentures for about half a million dollars. Hon. Frank Cochrane, the head of the department, has expressed himself more than once, as being utterly opposed to any lumbering operations in the park, which is the watershed of several rivers. As a result of the rejection by the Munns Company and other licensees of all offers to sell out, scalers have been put to work to measure the timber so that an inventory can be made of its actual value.

Lumbermen in Jovial Mood—The Laidlaw Picnic

The R. Laidlaw Lumber Company, of Toronto, held their annual picnic at Beaverton, on Lake Simcoe, on Saturday, July 16th. A special train carried them thither, and during the journey to and from that place an excellent extemporary programme was carried out upon the train. The morning was an unfavorable one, but in spite of this about 200 people turned out to take advantage of the picnic. The programme on the train was very diverse, and was opened at the hour of 7.30 a.m., with a selection on the pipes by real live pipers, Messrs. Murray and McDonald. This was followed by a pleasant half hour with pipes of another class, which the gentlemen of the party regaled themselves with in the first car. Mr. C. G. MacBeth was the next entertainer, and he delivered an inspiring address up on "The Senators," referring with much feeling to the long list of Conservative Senators who had died since the election of the first Laurier government. Mr. Robert Wallace followed, with a recitation entitled "Tommy-rot Talk on Sorting." It should be explained that the title of this address does not infer that Mr. Wallace's remarks were unimportant. In Mr. Wallace's vocabulary, "Tommy-Rot" is a synonym for "tamarac." Mr. John Storey followed Mr. Wallace, and delivered an appreciative address upon "Bowmanville—Its Manufacturing Interests and Its Beauty," paying particular attention to the latter.

The most interesting event of the trip was a competition among the ladies, which commenced at 8.50. Mr. J. D. Coupland was given the delicate task of deciding a contest as to which of the ladies was the owner of the sweetest smile. The prize for the fortunate winner was a bottle of perfume. It is instructive to note that this competition was open to ladies of all ages, and that it was easily won by a very little girl. The next contest was a mathematical one, which has not yet been decided. The problem submitted was, "How many bales of shingles (90 pounds to the bale) in a pine log 20 inches in diameter and 16 feet long. The person sending in the first correct answer to the secretary will be entitled to lose $10.

Mr. A. C. Gordon then made quite a hit with a vocal selection entitled "The Old Grey Bonnet."

Another important contest was one which took place among the men as to who was the owner of the sourest face. Mrs. W. Markle was the lady to whom was given the difficult duty of judging the contestants. After very carefully investigating each face, she was about to bestow the reward (a bottle of vinegar) upon her own husband when she discovered the features of Mr. A. E. Eckhardt trying to make themselves pleasant at the far end of the car. Mr. Eckhardt was promptly presented with the prize.

Mr. R. Campbell delivered an interesting monologue entitled "Mohawk," explaining to the company why Mohawk Park, near Brantford, had not been selected as a site for the picnic. Upon arrival at Beaverton, the picnickers made straightway for the grounds, and from then until the time of departure everyone had an enjoyable time. The events of the afternoon included a keenly contested baseball match between two teams selected respectively from the east and north yards and the west and belt line yards. The west and belt line nine were the victors. Games and races of many other varieties were also indulged in.

During the afternoon an event of unusual interest occurred, when Reeve A. W. Talbot, of Beaverton, visited the picnickers and presented them with a gigantic wrought-iron key, symbolical of the fact that the freedom of the town was thereby conveyed upon all the visitors. At about 7 p.m. the return journey was commenced, and from then until 9.15, when the party reached Toronto, the hilarity continued unabated.

Benjamin Lewis, a marker in the James MacLaren Company mills at Buckingham, was instantly killed on July 21st by falling on a revolving saw. The victim was an experienced hand. The fatality happened just after the mill had started for the day. While walking past the saw Lewis missed his footing and fell on the saw, which cut off both arms and mangled the victim's body almost instantaneously.

The Wallaceburg Cooperage Co., of Wallaceburg, Ont., are running full blast, two stave knives, hoop machinery and heading machinery, and report business as very good for this season of the year.

Lumber Affairs of Eastern Canada

Quebec's New Forestry School—Arrangement of Alexander Gibson Company's Matters Nearing Completion

Mr. G. C. Piche, the director of the new forestry school established by the Quebec Government, in a recent interview gave some interesting particulars regarding the work of the school, the sessions of which begin during the coming autumn. This school will be affiliated with Laval University, and will have four professors, two in forestry, one in mathematics and one in forest law. Lectures will be given in the lecture rooms of the university. The regular course covers two years, previous to which the students in this course must have had a year's practical experience in the woods. The course will embrace forestry in all branches, sylviculture, forest management, forest utilization, etc., mathematics, natural and applied science, forest law, construction of buildings, dams, roads, etc. Students are to be admitted to the regular course by examination, held in August of each year. During their year of preliminary work in the forest they are to receive a salary and expenses from the government. Candidates must be twenty years old, enjoy goood health, be of good moral character and speak and write correctly both French and English. Students will also be admitted to special courses, without having to pass the examination for admission, but these will not receive the diploma and degree (Forestry Engineer) as the others do. The nucleus of the school has existed for some two years past, a number of young men having been in the employ of the government as "students" and occupied in the supervision of cutting and enforcement of government regulations, work in the nursery at Berthierville, etc.

Alexander Gibson Company Arrangement

The affairs of the Alexander Gibson Railway and Manufacturing Company are rapidly nearing completion. The case of the Royal Trust

Mills of the Alexander Gibson Company.

Company and others v. the Alexander Gibson Railway and Manufacturing Company, Alex. Gibson, the Bank of Montreal and others, which came before the Supreme Court in Chancery at St. John, N.B., has been settled out of court. The action was commenced some time ago on a motion to foreclose the mortgages held by the Bank of Montreal, Messrs. Farnworth and Jardine and the Canadian Colored Cotton Mills. The bank has a first charge on the property of the Alexander Gibson Company of $689,848.55, Messrs. Farnworth and Jardine a somewhat lesser sum, and the Canadian Colored Cotton Mills $207,926, a third charge. The property comprises, besides a railway equipment and mills, four hundred and fifty thousand acres of timber limits. The terms of settlement are that the property is to be sold and out of the proceeds Alexander Gibson is to receive $5,000 per year for life. He is to have the use of his house and grounds at Marysville during his life. The balance will be divided among the mortgagees.

Personal and Trade News from the East

On July 13 the saw mill owned by C. I. Keith at River Charles, N.B., was destroyed by fire with a loss of $4,000.

J. F. Steeves, of the well-known lumber firm of Church E. Gates & Co., of New York, is spending a short vacation with his sons at his old home, Hillsborough, N.B.

The Smith Lumber Company of Woodstock, N.B., have practically rebuilt their mill within the past year, putting in a new boiler and new machinery, which now makes it a thoroughly up-to-date mill.

P. G. Mahoney, the well known New Brunswick lumberman, is having his saw mill at Calhoun's, N.B., thoroughly overhauled, and many new improvements added, which will make it one of the most up-to-date in the vicinity.

Mr. A. Dufresne, Forestry Engineer, who has been in the employ of the Canada Paper Company, of Windsor Mills, Que., for the past ten years, has resigned his position with this firm and accepted one with the News Pulp and Paper Company, of St. Raymond, Que.

Forest fires along the C. P. R. from Fredericton, N.B., to McAdam Junction, were responsible recently for the loss of 1,000,000 feet of manufactured lumber owned by J. S. Scott of Fredericton. The loss is estimated at $20,000. The lumber had all been sold to the A. C. Dutton Lumber Co. of Springfield, Mass., who were to make payment upon delivery, which was to have taken place in a few days.

Mr. Arthur Hilyard, of Bathurst, N.B., visited St. John on a business trip recently. He states that lumbering conditions on the north shore are bright both in fact and in prospect. The entire cut has been ordered by English firms and shipments are heavy in spite of the usual midsummer slackness. He considers the prices of the English market very satisfactory and the prospects good of their remaining so, as the English stocks have been greatly reduced.

A farewell banquet was recently tendered to W. H. Doherty, late manager of the Sussex Manufacturing Company, at the Depot House, Sussex. Mr. Doherty subsequently left for Galt, Ont., where he will be general manager of the new Canadian Machinery Corporation, Ltd., which has a capital of $4,000,000. The woodworking machine department of the Sussex Manufacturing Company will be included in the new company.

A working agreement has been arrived at between the National Transcontinental Railway Commission and the Ontario Government for the payment by the Commission of a portion of the cost of fire-ranging along the tracks of the railway in Northern Ontario. The G. T. R. and C. P. R. already pay the entire cost of this service on their lines, and it is hoped before long to complete the system under which all railways will pay for the preventive work that is absolutely necessary if the forests of the north are to be perpetuated.

The Campbellton Situation

The recent fire at Campbellton, N.B., which swept a town practically out of existence, will mean a serious temporary check to the lumber industry in that centre, where were located several of the leading lumber firms of New Brunswick. Fortunately the long lumber mill of the Shives Lumber Company was located several miles above the town, and so escaped. The Shives Lumber Company had two double-gang shingle mills, located in the town, which were lost. An immense quantity of shingles were also stocked here awaiting shipment. While nothing has been definitely decided upon, it is almost certain that the Shives Lumber Company will rebuild their shingle mills at Athol, alongside the long lumber mill.

The heaviest loser among the lumber firms will be the Wm. Richards & Co., Limited, one of the oldest firms in the provinces. Their shingle mill and splendid long lumber mill both were completely wiped out, at a total loss, as no insurance was carried. It is improbable that the company will rebuild, which will mean a great loss to the many people who have previously found employment there.

B. A. Mowatt and C. Miller also had their shingle mill destroyed. It is estimated that over one million shingles, held up in Campbellton awaiting a better market, were burnt. The great bulk of the manufactured stock was insured.

While the town has been given a decided check by the catastrophe, there is no question as to Campbellton's future. Situated as it is on the bank of the Restigouche, ideally located from a lumbering standpoint, in a short while, a newer and better Campbellton will be erected where the old town stood. Already dozens of buildings are being rushed to completion and ready temporary assistance is being secured from outside sources.

The prospectus has just been issued of the Swanson Bay Forests, Wood Pulp and Lumber Mills, Ltd., of which the general manager in British Columbia is Mr. James Wood. The capital is $1,500,500. This company is being formed to acquire, and work pulp and timber leases at Swanson Bay and other adjacent parts of the coast of British Columbia, equipped with a pulp mill and saw mill now in operation. The leases comprise over 86,000 acres of specially selected pulp and timber lands, estimated to contain over 3,000,000 feet of excellent timber suitable for the manufacture of pulp and lumber. The company also acquire 506 acres of freehold land at Swanson Bay. Swanson Bay is 400 miles north of Vancouver and about 130 miles south of Prince Rupert. The purchase price payable by the company (under the contract for sale between Messrs. John William Robson and Walter Maclachlan and the company), for the leases, pulp mill, saw mill, freehold property, wharf, lots, and all the plant, stock, and other assets, is £50,000 in cash, £150,000 in fully-paid first mortgage sterling bonds, and 300,000 fully-paid shares. The whole undertaking will be taken over from The Canadian Pacific Sulphite Pulp Company, Limited, as a going concern as from January 1, 1910.

Logging Machinery in Canadian Woods

Various Methods Available for Increasing Output of Camps and Reducing the Cost — Comparisons of Efficiency — Concluded from Previous Issue

The Canadian operator in considering this broad question of power logging and the possibilities of reducing cost thereby has always reasoned that such devices as are used in the Southern States and certain foreign countries and in the Western States, were not adapted to the rough northern conditions. This has been the truth. It would be as fooolish to try and use a large portable pine logging machine in Canada as it would be to use an ocean liner in one of the Muskoka lakes, and it is only within the past two or three years that machines have been changed and adapted to the rough conditions existing in this country. It will,

Logging with Cableway Skidder.

therefore, be in line here to give an idea of the various machines adaptable to Canadian conditions and their uses.

The first operation in logging, outside of the road and camp considerations, etc., is the felling of the tree. At the present time there is no power suitable to do this with the small timber and rough conditions prevailing in the eastern provinces of Canada. When trees are felled they are cut up into logs. In the large timber of the West this cutting up is possible by power with some saving. In the Eastern Provinces it is not. However, the trees need not be cut up where they are felled. They may be conveyed to the roads, to the streams, or to the mill, in tree lengths, and at one of these points cut up by power with a saving of a major cost of this operation. It may be argued that trees of full length cannot be skidded. This is erroneous, as is shown from the fact that most timber in New England is skidded in that way, under conditions almost identical to those found in the Eastern Provinces. It is, moreover, not more expensive to do this, but cheaper, when the methods are properly understood. Moreover, the steam methods of skidding, to be discussed hereinafter, will allow the handling of trees in full lengths, and in fact such full length operation is more desirable than the hauling in the log lengths.

The next operation is skidding the logs. This is done in various ways in different sections, but is ordinarily done by one or two horses hauling the logs singly or several chained together or dogged in tandem upon the ground or upon small sleighs, the rear end dragging upon the ground. The logs are then conveyed a short distance, usually less than a quarter of a mile, and piled on skids for the sleigh haul, if further than this distance from the driveable streams. The skidding of the logs is the most expensive operation in the woods. The expense increases very rapidly with the roughness of the ground and the small size of the timber. In very mountainous regions the logs frequently have to be hauled by the men themselves, rolled or pushed or sledded off the hills at great expense, and with, moreover, frequent damage to the logs and to the standing timber. To illustrate this, there have been camps in Northern Ontario where logs had to be thrown off rough bluffs four or five times before they reached smooth ground where they could be suitably handled by the teams. Under such conditions the cost of skidding will frequently run as high as $5 or $6 per thousand feeet and the percentage of damage as high as 15 or 20 per cent., to say nothing of the grit which works into the logs, frequently causing damage to the saws in the mill.

The machines that can be used for skidding are of three kinds. Two of these, which are known respectively as snaking machines and slack rope machines, drag the logs upon the ground as do the horses. They merely change the kind of power without greatly changing the method of work. The third machine is a cableway skidder which raises the logs and conveys them through the air in part or whole suspension. It will be readily seen that the first two methods are for comparatively smooth ground, ground where horses could convey the logs by the old method, or ground not very much rougher or steeper. In all these three methods the steam engine is used, supplied with suitable drums and attachments in the way of wire ropes, blocks, etc. This engine must be very portable in order to pull itself about the rough country, and must be strong and efficient.

In the snaking method logs are drawn in by a single wire rope. This rope is pulled out to the stump either by horses or by men. The logs are then attached singly, or a number, and drawn in by the main strength of the engine. Such a system has practical efficiency for a distance of 1,000 feet on rough ground and 1,500 feet on very smooth ground, such as is found in the pine plains. It is not very suitable to any country with rough bluffs, precipices, bolders or similar ground encumbrances. In a general way it may be said that the eastern provinces of Canada present very few conditions where this method in itself is suitable. There may, however, be localities throughout any of the territory where it may be used to advantage, and it may furthermore be used for very short hauls in connection with the systems described hereafter.

The second system is the slack rope system, which also draws the logs upon the ground, but differs from the snaking system in that the pulling cable is returned to the stump or other place where the logs are to be attached, by a return cable—this cable passing through blocks at the further end. This has several points of advantage over the snaking system. First, the pulling line is returned much more rapidly to the place where the logs are to be attached, no men or horses being needed for the work. It can, therefore, be brought back over rougher or steeper ground than the line for the snaking system. Secondly, it is a method suitable to much longer hauls—hauls up to one and a quarter miles in length being possible in the conditions which prevail in the Eastern Provinces of Canada, while in the far West, with the large timber there found, this method is now being used up to two miles. Thirdly, the return line serves as a brake upon the load in going down very steep or rough places, thus preventing the logs from running away

Handling Pulp Wood in the Cord.

and tangling themselves in standing timber or being damaged. With this point in its favor the slack rope method becomes one of wider use to the Eastern Provinces than the snaking method, so that in a broad way it may be said that nearly all the flat country or steep country of smooth surface is suitable for this system. This machine, therefore, is one by which any relatively smooth ground logs can be taken directly from the stump and hauled a distance not to exceed one mile, to the sleigh road or to the driveable waterway. It may again be used under local conditions frequently found where lakes occur close together but without water connection. The logs may be landed in one lake, floated to

the nearest point to the other and dragged from the first lake to the second or into other waterways. By such a use of this machine drives may be frequently shortened and timber rapidly brought from one watershed into another.

The third machine above mentioned is a cableway skidder. It is the most versatile of the three machines and the one most suitable to the conditions of the eastern provinces of Canada. Its great versatility is due to the fact that it can at any time be used also as a slack rope or as a snaking machine, while the other two machines cannot be used as a cableway skidder. The cableway skidder conveys the logs in suspension instead of dragging them upon the ground. In addition to the suitable engine it consists primarily of an overhead cable, which is stretched from the tree at the engine, and the place of log deposit, to the farthest point from which these logs are to be skidded, and is there attached to a second tree, there being no intermediate support. A suitable carriage runs upon it and conveying ropes for handling this carriage and the logs. It will be seen that the logs, being brought in through the air, the nature of the ground has little or no influence upon the operations. Small cliffs, boulders, fallen timber, and underbrush, or mud, do not seriously hinder the operations of this machine as they do the others. In fact, recognizing that the reach of such a machine is over a quarter of a mile in a straight line, it may be said that there is no tree growing that it cannot secure, providing, of course, that its engine can be brought within a quarter of a mile of the tree. This is a point of vital importance in that there is remaining a great deal of timber throughout the country which is inacessible under the present methods. If 20 or 30 per cent. of such timber on a limit can be secured cheaply, it will add very largely to the value of any holding.

Summing up the features of these three machines and their efficiencies as compared with the present-day method of skidding by horses, the following is essentially true: Where the timber is small and scattered and standing on smooth ground, where it can be readily skidded by horses and does not go over 5,000 feet to the acre, the method of skidding by horses is the cheapest. Where the ground is smooth and the timber cuts over 5,000 feet and less than 10,000 feet to the acre, a snaking system is by far the cheapest. Where the distance necessary to the skid increases over fifteen hundred feet, under the same conditions, a slack rope system should be used, and on all timber standing on rough ground or in swamps, or on any kind of ground cutting over 8,000 feet to the acre, the cableway skidding method is the cheapest.

As an example of the saving to be effected by these methods, it is asserted by those who are in touch with the conditions in Eastern Canada, that a snaking machine on smooth ground, with timber cutting five thousand feet to the acre and skidding a distance of one thousand feet in every direction from the machine, will skid logs for from 50 cents to $1.50 per thousand feet, either putting them on skids or loading sleds or putting them in the stream; that a slack rope machine pulling a distance of one-half mile, would handle logs under suitable conditions in timber cutting from five to fifteen thousand feet to the acre, for from 75 cents to $1.50 per thousand feet, and that with a cableway skidder the cost will vary more widely because the ground and nature of the timber will vary widely where such a machine would be used. There is practically no timber growing, however, no matter how rough the ground, that it will not skid for less than $2 a thousand feet, and its cost will reach a minimum in smooth ground with timber cutting over 10,000 feet to the acre. Under such conditions the cost will be as low as 35 cents per thousand feeet. Pine timber in Ontario runs anywhere from three thousand to thirty-five thousand feet to the acre. The average timber in Ontario cuts three to four thousand feet to the acre or else the operators do not go into it. In this latter case the saving has been as great as $6 per thousand feet compared with the methods previously in use. In a general way a saving can be effected in skidding in the eastern provinces of Canada by the use of steam, which will vary greatly under specific conditions, but wherever there are any difficulties steam will operate very much more cheaply than animals.

The next operation in logging is the sleigh haul. Logs are usually put upon skids in the fall and held until the snow renders hauling possible. The logs are loaded on the sleds by hand. If in a flat country, this is quite expensive, but where there are suitable banks it is done quite cheaply. The loading of sleighs may be accomplished by steam, as is the loading of cars. The steam hauling of sleighs is also a recent introduction, and the successful methods are two. The first is the Lombard sleigh hauler, now built by a number of concerns in the Eastern provinces and the northern States under various names, which consists of a modified traction engine, the driving wheel being replaced by two large chains, thus securing a suitable bearing upon the road for the machine. This machine, on any flat or uphill road over four miles in length, is more efficient than horses, and its comparative efficiency rapidly increases with the length of the road and the amount of uphill work. Thus, on a flat ten-mile road, it will haul for one-quarter the cost of hauling by horses. It is, however, not suitable to very rough roads or very steep grades—that is to say, grades of eight or ten per cent. Nor is it particularly desirable on short roads; that is to say, under three or four miles in length, the various operations that have to be made for it, and its cumbersomeness, rapidly decreasing its efficiency on short hauls. It travels on a road approximately the same as an ordinary sleigh, and requiring little if any more preparation.

Hauling Loaded Sleds over a Ridge.

The second method of sleigh hauling is by hoist, similar to an incline hoist, as used in railroad logging. This is a short-haul method solely, and one not to be used on a flat road or a road with a moderate grade, unless that grade be uphill. It is a method, however, by which loaded sleighs can be hauled up any grade encountered, no matter how steep, and by which loaded sleighs may be lowered down hills too steep for horses to go over safely. Or it may haul empty sleighs up hills, thus saving the horses. It is a device by which logs can be taken from one watershed to another cheaply and easily. Thus a large saving can be made in eliminating the improvement of small streams, the logs being taken over the intervening height of land to the main streams, and frequently roads can be very materially shortened by disregarding the natural grade which has to be followed with horses, and by cutting over

intervening ridges. In other words, it enables the usual law of the lumberman to be broken where desirable; that is, "always haul downhill." In connection with all the above-mentioned methods, it is to be noted that this fact applies, and that it is an important advantage. It is possible, for instance, to have the ground skidder so constructed that it can be used as a sleigh hoist, thus securing more for your money. Moreover, a cableway skidder is also a slack rope or snaking machine, and a man having large operations to perform should buy a machine which can be used for the greatest number of operations.

There are a great many operations in the woods that can be performed by steam. For instance, you can deck up logs alongside the road; load or unload sleighs; deck logs along the stream for the drive; break them down in the spring; clear off wing dams; build stream improvements; build camps, etc. If a camp is not situated over a mile from a driveable stream, every single operation to-day can be performed by steam, with the exception of felling the trees and toting the provisions to the camp, and it can be done cheaper than by horses or men. The importance of this increases the farther back you go from the railroad. The greater the haul, the greater the saving by these methods, because a small amount of fuel is used instead of food or fodder. Any of these machines suitable for this work will burn less than three cords of ordinary refuse wood per day.

It will be understood that all these sleighs, haulers, general utility engines, and various types of steam skidders, in order to be suitable for eastern Canadian conditions, must be very portable. They are therefore built for using high-pressure steam, and are as compact as possible. The ordinary types of machine will pull themselves about the woods on any ordinary sleigh road, while the smallest type of machine, the general utility engine, will go practically any place that it is possible to put a skidding team to—climbing hills, mountains, etc. All can be taken into the woods, usually by the ordinary tote team, being separated into their various parts, so that an ordinary four-horse team can take them.

Logging by Steam—Snaking System.

U.S. Senate Report on Cost of Lumber

The United States Senate's special committee upon the cost of living recently presented its report and had the following to say regarding lumber:

"The average wholesale prices of forest products in March, 1910, as compared with average prices in March, 1900, were as follows:

"Hemlock, 16.7 per cent. higher this year than ten years ago; hard maple, 12.7 per cent. higher; plain white oak, 33.3 per cent. higher; quartered white oak, 30.4 per cent. higher; yellow pine sidings, 40.9 per cent higher; poplar, 56.3 per cent. higher; common to good strained rosin, 160 per cent. higher; cypress shingles, 35.1 per cent. higher; spruce, 28.2 per cent. higher; tar, 53.8 per cent. higher; turpentine, 14.5 per cent. higher.

"Of the twenty-one commodities under lumber and building materials eighteen advanced and three declined in price. Rosin advanced 160 per cent. and poplar lumber made the second highest advance. Cement and putty declined.

"The average prices of lumber, etc., in 1909, as compared to 1900, were as follows:

"Pine doors, Buffalo market, 12.8 per cent. higher than in 1900; hemlock, 24.7 per cent. higher; hard maple, 12,7 per cent. higher; plain white oak, 18.6 per cent. higher; quartered white oak, 30.8 per cent. higher; white pine boards, No. 2 barn, Buffalo market, 54.3 per cent. higher; white pine boards, upper (same market), 55.3 per cent. higher; yellow pine sidings, 59.6 per cent. higher; poplar, 52.9 per cent. higher; strained rosin, 118.5 per cent. higher; cypress shingles, 14.6 per cent. higher; 18-inch white pine shingles, 14.6 per cent. higher; 18-inch white pine shingles, 33.3 per cent. higher; spruce, 43.3 per cent. higher; tar, 20.2 per cent. higher; turpentine spirits, 2.9 per cent. higher.

Cost of Labor has Increased

"The wages per hour of labor employed in the lumber business in 1907 were 22.2 per cent. higher than in 1900. In planing mills the labor wages per hour were 18.8 per cent. higher in 1907 than in 1900. The hours of labor per week in the lumber industry were 2.6 per cent. lower in 1907 than in 1900, and the hours of labor per week in planing mills were 2.9 per cent. lower in 1907 than in 1900.

"In the building trades the advance of wages per hour was 31.6 per cent. from 1900 to 1907.

"The average yearly earnings of an employee in the lumber industry of Wisconsin were: $537.75 in 1907, $490.90 in 1905, and $467.76 in 1900. The average yearly earnings of such an employee in 1907 were 9.5 per cent. higher than in 1905, or 15 per cent. higher than in 1900.

"The tariff seems to have been no material factor in causing the advance in prices during the past decade. The greatest advances have been made in commodities upon which the tariff has little or no effect, and the absolute removal of the tariff on many of these commodities could not have afforded relief at the present time, for the reason that prices of these commodities, with a few exceptions, were as high or higher in other countries than in the United States.

"Prices of forest products advanced 40.3 per cent. from 1900 to 1909. Lumber has steadily advanced since 1900, and the price in 1909 was 41.8 per cent. above the price in 1900, yet with this advance other countries have been demanding our lumber in increasing quantities. A table shows that exports of sawed timber were 525,134,000 feet in 1900, valued at $6,672,564. By 1909 exports of timber had increased to $9,330,728 in value, though the quantity was only 434,985,000 feet. Exports of boards, deals and planks in 1900 aggregated 1,093,568,000 feet, worth $19,468,-594, compared with 1,509,936,000 feet in 1909, worth $32,398,278.

"Material decreases were made by the tariff of 1909 on articles grouped under the lumber schedule. These decreases seem to have had no appreciable effect upon lumber prices, as they have continued upward, even though lumber is imported in large quantities, the value of the imports—boards, planks, deals and other sawed lumber—in 1909 being $18,000,000, practically all being from British Columbia."

Quiet Holiday Trade at Montreal

Midsummer Season Brings Less Active Business—Railway Strike Retarding Shipments—Low Grade Pine Stronger

Montreal Office of the "Canada Lumberman,"
July 26, 1910.

Only fairly active trading is reported in local lumber circles, and for this condition the summer holiday season is largely responsible. Lumber is moving freely enough, however, in and around the port, and the exporters are having a busy season. The strike on the Grand Trunk Railway has kept some shipments back, and a shortage of cars at points of loading is bitterly complained of. Some exporters also were heavy losers by the Braeside fire, and as a result their shipment will not show up so well as expected. Quite a number of cars ready for shipment into Montreal were burned on the tracks.

The English market continues to show signs of recovering, and during June there was an active demand for Canadian lumber from this direction.

In the matter of shipping from Montreal, a congestion is at present felt around the harbor sheds, owing largely to the accumulation of freight during the Grand Trunk strike. Export dealers complain also against the long delays in bringing in lumber from the loading points consigned for export purposes. In some quarters it is felt that this is a matter for investigation by the Railway Commission. Lumbermen are charged for the storage of lumber on cars, and it is felt that the railway companies should be held equally liable for delays in delivering, which mean so much to the shipper.

The building situation is fairly hopeful. June was an exceptionally good month, and July promises to eclipse all records. In one day alone permits were taken out aggregating well over the two million dollar mark. A strike of masons and bricklayers has been retarding actual building operations, but this is not of such serious proportions now as at first appeared, and a settlement can shortly be expected.

Market News

Conditions remain practically unchanged. Pine in the lower grades is, however, evidencing signs of improvement, and not a few dealers express the opinion that an upward and firmer movement may be looked for. It is felt that the approximately 30,000,000 feet of lumber destroyed at Braeside, consisting, as it did, chiefly of the lower grades of lumber, will not be without its effect in clearing the market and buoying up existing conditions. Laths are reported holding firm; a condition quite unusual for this season of the year. Hemlock is expected to show improvement following the lead of the lower grades of pine. Spruce continues only in fair demand. No change in the dull condition of the shingle market can be reported, but dealers are looking for improvement within the next few weeks. The American market shows a weakening tendency. The heavy shipments of the Campbellton, N.B., mills will, no doubt, be missed.

Hardwoods are active, One inch rough birch is largely in demand, also 1½ inch birch. This latter, however, is reported quite scarce. Basswood is moving freely, also maple in 1 inch and 1½ inch stocks.

New York markets: Only fairly active market conditions are reported, the summer holiday season apparently making its influence felt. In wholesale circles the movement is more active than with the retailers, although the latter are not stocking up heavily. The building figures for the Manhattan district show a falling off during the first six months of the year, and this is particularly noticeable in the tenement house construction.

Boston markets: In the New England district, building contracts awarded since the first of the year show a big gain over the corresponding period in previous years. The market situation is rather quiet, but prices are holding their level, with the exception of an odd instance, where they rule lower. The demand for spruce has been fairly quiet, and buyers are hoping to purchase at a lower level. Offerings of eastern hemlock boards have not been large, and values continue well held. No improvement in the market for shingles can be reported. The best cedar extras are held by a few manufacturers at $3.40, Hardwood lumber is held firmly, but the demand is still quiet. Quartered and plain oak continue firm. Southern pine is not as active as usual at this season of the year.

Lumber Exports

Export lumber shipments through the Port of Montreal for English and Continental points during June and the first half of July are given below. Liverpool stands out prominently, having received four thousand standards. Shipments continue to be made at a steady rate, and up to July 17 over forty-one million feet had been sent abroad. The list of ports to which cargoes have been consigned, the figures being given in standards, is as follows: Liverpool, 3,999; Cardiff and Bristol, 415; Leith, 195; Belfast, 752; London and Antwerp, 946; Avonmouth, 82; South Africa, 410; London, 717; London and Avonmouth, 1,009; Manchester, 822; Bristol, 820; Glasgow, 2,052; Hull and Leith, 465; Newcastle, 693; other ports, 204; total, 13,581 standards, or 26,890,380 feet. The total shipments since the opening of navigation amount to 41,211,720 feet.

Personal and Trade News

Mr. Alex. McLaurin, President of the Canadian Lumberman's Association, sailed recently via the "Royal Edward" for a business trip to England. Mr. McLaurin is expected back towards the latter end of August.

Mr. R. M. Beckett, of Messrs. Dobell, Beckett & Co., wholesale lumber dealers, Quebec, Que., was in Montreal recently in connection with the firm's business interests. A reorganization of this company was effected earlier in the year. Trading will continue to be carried on under the firm name of Dobell, Beckett & Company.

A large quantity of pulpwood, variously estimated at from 1,200 to 1,500 cords, was destroyed by fire recently at Delaire's Siding, St. Evariste, near Sherbrooke, P.Q. The wood was owned by Mesrs. Howard and Craig, of Sherbrooke, and by Messrs. Delaire and Delaire. The loss is estimated to be in the neighborhood of $6,000.

Miscellaneous News from the Sunset Provinces

The E. H. Heaps' lumber mill at Ruskin, B.C., was destroyed by fire about 2 o'clock on July 17. The plant was totally reduced to ashes, and also a large quantity of lumber held for shipment next week. The hotel and store and the dry kilns were saved only by the good work of the employees. The loss will be in the neighborhood of $50,000. It is likely that the mill will be rebuilt.

Negotiations are in progress in Vancouver on behalf of a New York timber company for the purchase of a large tract of timber land near the boundary line. An impression prevails that the syndicate is one of many which may be forced to come over the border by the stringency of the new law forbidding the exportation of wood for paper-making purposes. Already thirteen lots of timbered land have been purchased in Lillooet district, and 37,000 acres of crown granted lands, situated on the Columbia River near the international boundary line, are under consideration. Another tract, traversed by the Spokane and Northern Railway, consisting also of 37,000 acres of timber land, 25,000 acres of which can be used for agricultural purposes when cleared, has been cruised and estimated. The quantities and species were as follows: Cedar, 1,000,000,000 feet; spruce, 280,000,000 feeet; Douglas fir, 100,000,000 feet; white pine, 20,000,000 feet. In addition, there are fully 150,000 poles of 40 feet acreage. The timber can be driven down the Columbia River to the American side, if required. It is estimated that the deal will necessitate a turnover of something like $1,350,000.

The Dominion Saw Mills and Lumber, Ltd., is the title of a British Columbia corporation which is now raising $4,000,000 on the London money market by an issue of 6 per cent. first mortgage debentures which will be secured on some 140 square miles of timber situated near Three Valley, a station on the main line of the C. P. R. a few miles to the west of Revelstoke. The authorized capital of the company is $5,000,000. The price of the debenture issue is 95 per cent.

Standing timber on the 90,000 acres owned by the company is estimated to total 2,250,000,000 feet, and in the statement of the assets of the company this is valued at $3 per thousand feet, giving a total value of £1,386,986. The appraised value of the mill, plant, etc., at Three Valley is £59,589. The manufactured stock of the company is figured as being worth £30,000. A manufacturing profit of $7.50 per 1,000 feet is said to be a conservative basis of valuation of the property as a going concern. The estimated manufacturing profit of $7.50 per 1,000 feet on a total of 2,250,000,000 feet amounts to £3,467,465. On the basis of an annual production of 50,000,000 feet of lumber at a profit of $7.50 per 1,000 feet, the company's annual profit would be £77,054. It is anticipated that in due course the output of the company should be increased to 120,000,000 feet per annum, in which case the annual profit on the basis given would be £184,931.

Among the directors of the company on the London board are Lord Desborough, Mr. Cecil Ward and Mr. F. C. Selous, the last two being well known in British Columbia. On the Canadian board are Mr. Elihu Stewart, formerly Dominion Superintendent of Forestry, of Ottawa; Mr. Alexander McRae, president of the Globe Lumber Company of Revelstoke; Mr. W. E. Hodges of Vancouver, and Mr. S. A. Mundy of Three Valley.

The Lumber Underwriters, 66 Broadway, New York, have again favored their friends with an attractive calendar for May, 1910, to May, 1911. The calendar carries the beautiful original drawing of the Fireman, done in several colors, the original of which they secured last year. The calendar and picture tell their own story at a glance. "We protect you" is the legend on the picture, and the vigorous looking fireman, presented in strong colors, carries the idea of protection forcibly to the mind.

The Retail Dealer and His Problems

The Retailer and the Wholesaler—A Discussion of Business Relations

Trade Relations Between Wholesaler and Retailer

By Fred Larkins

You have all heard almost endless discourses at your association meetings and through the press on the trials and tribulations of the retailer, the problems of the manufacturer and the trade relations between these two branches of the lumber trade.

As for the wholesaler, most of you have bought lumber of him and know him as a person who sells lumber to the retailer, except when he gets out of the "straight and narrow path" and sells to the contractors and consumers. I think, however, that I am safe in saying you have never given him and your trade relations with him very much thought otherwise. You have simply taken him as a matter of course without thinking of caring whence he came, why he is here or whither he goes. Most certainly you have not been accustomed to hearing of his trade relations with you at your association meetings, or seeing them discussed by the press. The result is you have never come to know who he really is or what he is here for. Neither has it occurred to you, probably, that his is a most important branch of the trade and that he is becoming a greater factor in the lumber business every day.

I shall endeavor, therefore, to explain to you as best I can who the wholesaler is, and why he is, and what I think your attitude, as retailers, should be toward him. The wholesaler, in the lumber business, is what the jobber is in other lines, and while he has not heretofore been generally recognized as such, yet he plays equally as important a part in the lumber trade as elsewhere.

Who the Wholesaler is

The first question is, "Who is the wholesaler?" When I refer to the wholesaler, I mean the person, firm or corporation which conducts its business as a legitimate wholesaler or jobber should, and in which the retailer can safely place as much confidence as he can in any manufacturer, great or small.

The wholesaler is one who buys his lumber from the manufacturers, usually at prices f.o.b. cars the mills, and on terms of spot cash as soon as invoices and bills of lading are received by him. This lumber he sells to the retailer, usually at delivered prices and on the customary sixty or ninety days' time. He not only has his traveling salesman on the road selling, but in many cases he has other representatives on the mill and looking after his supply of stocks and the shipment of same. He secures his supply of stock by various methods. He may contract for all or a portion of the output of certain mills, or he may buy blocks of stock at stipulated prices, to be ordered out and shipped within a specified time, or he may place his orders as he secures them in the open market, according to his individual taste and judgment, or according to market conditions. It matters not, however, what method he pursues along this line. So long as he is able to secure lumber that is suitable to the trade, takes care of his obligations with the manufacturers satisfactorily, sells his lumber by methods that are not detrimental to the best interests of the trade generally, maintains a due regard for his contracts and obligations with the retailer, and so conducts his business generally as to merit for him the confidence and patronage of both the manufacturer and the retailer, he is a legitimate wholesaler in every sense of the word. If he does not meet these requirements, he is not a legitimate wholesaler, is not entitled to the confidence or support of the trade and has no proper place in the lumber business.

The Wholesaler's Field

Te second question is, "Why are there any wholesalers?" The answer to this question will also answer the one we so often hear retailers ask, which is, "Why does the manufacturer permit the middleman, in the person of the wholesaler, to absorb a profit of a dollar a thousand or so instead of selling his product direct to the retailer, and either retaining this margin of profit or dividing it with the retailer?"

In the first place, it costs money and lots of it to sell lumber to retailers no matter how easy or how hard you are to be jarred loose from those precious orders. This is true whether it is done through the traveling salesman, the commission man or by mail. I will state right here that it is now a pretty generally recognized fact, and becoming more so, that the most practical, efficient and profitable method of selling to-day is by means of the traveling salesman who is exclusively in the employ of one concern on either a salary or profit-sharing basis, or both, and giving all of his attention to that one firm's business. Other methods such as selling by mail and through commission men, have been found to be productive of more lack of stability in prices and generally unsatisfactory market conditions than any other one thing save that of overproduction. Such methods are as detrimental to and should be as much discouraged by the retailer as the manufacturer. The retailer not only suffers a financial loss on every foot of lumber in his yard when prices decline, but as you all know, a declining market has a strong tendency to decrease the demand.

To dispose of the output of the average mill to the best possible advantage, it is necessary to cover a very large territory of distribution. This for the reason that different kinds, grades and sizes are used in different sections and for different purposes, and very naturally, in order to obtain the best results, it is essential that each item be offered for sale in the section where it is most used and is in best demand. Even then there are no set rules that can be profitably followed indefinitely, as the particular demands of different sections are constantly changing, either as a result of changes in the taste of the consuming public, or financial conditions, or both. Thus you will see that it is necessary to keep very closely in touch with the market in all sections at all times, if the best results are to be obtained.

It is hardly necessary, therefore, to call your attention to the fact that unless one is operating a very large mill and has a large volume of lumber to dispose of, the cost of selling direct to the retailer to the best advantage would be very large a thousand feet, and would necessitate the manufacturer securing from the retailer a very large margin in prices over and above what he could obtain by selling through the wholesaler with practically no expense. On the other hand, the wholesaler, by reason of the greater volume of business he handles, can afford to pay the manufacturer more than the latter could secure from the retailer direct, after deducting the necessary selling expense, and at the same time sell it at the prevailing market prices. In other words, the wholesaler's profit accrues as the result of what we may term a consolidation of the sales departments of several mills under one head, whereby the cost of selling, a thousand feet, is greatly reduced, thereby affording a profit to the wholesaler.

But this is not all. In fact it is only the beginning. Like every other enterprise, it takes money to run a sawmill, and I might say, unlike most other enterprises, it usually takes all the money one has and can borrow, together with all the credit he can get on everything he buys. To all practical purposes, when a car of lumber is prepared for shipment, it represents a cash outlay of whatever sum it has cost to produce it. This is made up of the original investment represented in the cost of the stumpage from which the lumber is made, and in the cost of the mills, logging equipment and other appurtenances with which it is made, and of the current expenses represented in expenditures for labor, mill supplies and other items entering into the cost of manufacture. Assuming that the manufacturer ships his product as fast as it is prepared for shipment, and sells it to the wholesaler for spot cash f.o.b. car the mill, he then uses no money in his business save that which is directly connected with his business as a manufacturer. On the other hand, if he sells his lumber to the retailer, and waits either for the car to reach destination, for the retailer to discount his bill and possibly five or ten days longer, which the latter sometimes takes for good measure, or for the bill to become due at the end of sixty or ninety days' time from date of shipment, he immediately begins to time up capital in a manner which is in no way directly connected with manufacturing. He has, in fact, become a jobber or wholesaler of his own products, and must provide the necessary extra capital to carry his accounts. In other words, he has an additional investment, amounting to the value of the lumber he has in transit or out on bills not yet due, at any given time. This means that he will have tied up in this manner at all times an average of the value of about forty-five days' output of his mill. Thus, in selling the retailer, the manufacturer not only ties up an enormous amount of money in accounts, but he is often called upon to allow the customary cash discount of 2 per cent. thirty or forty days after the car leaves the mill, whereas the wholesaler discounts his bill as soon as the invoice and bill of lading are received by him. Therefore, the question of capital and interest also enters into the proposition of selling direct to the retailer as against selling through the wholesaler. There are many mills which have barely enough capital to carry on their manufacturing business and are therefore obliged to sell to the wholesaler, who will relieve them of the necessity of tying up money in accounts. There are others who figure that, while they have plenty of money with which to carry the retailers' accounts, the same money will bring them far greater return if it is invested in standing timber, which will not only enhance in value, but prolong the life of their business, or in new and better manufacturing equipment, which will reduce their cost of production.

It will thus be seen that the wholesaler is of distinct benefit to the manufacturer in two important ways. First, he acts as his selling agent on a basis that is much less costly to him and brings him better net results in the sale of his product, and, secondly, he acts to a certain

extent as his financier by supplying him with the cash for his lumber as fast as it leaves the mill. There are also other matters of more or less importance that enter into this question, such as risks in credits, the necessity of having intricate knowledge of freight rates, if one is to sell to the retailer at delivered prices, the handling and tying up of capital in claims for freight overcharges, etc.

A Benefit to the Retailer

I have thus dwelt on the various benefits accruing to the manufacturer by reason of the existence of the wholesaler, not because it directly affects retailers or has any particular interest for them, but because, in the first place, the advent of the wholesaler in the lumber business is primarily and largely a result of these benefits and thus, to a great extent, answers the question, "Why is there a wholesaler?" In the second place, if it can be shown that the wholesaler is really of such benefit to the manufacturer that the latter sees fit, through necessity or choice, to market his product through him, it necessarily follows that the retailer must also recognize him as an important factor in the trade if he will avail himself of all the best sources of supply. In other words, the retailer is obliged to buy lumber from the wholesaler or confine his purchases entirely to those manufacturers who will sell him direct. Right here I wish to state for your information that there is to-day more lumber being marketed through the wholesaler than ever before, and the percentage is constantly increasing as time goes on, and the mills themselves realize the benefits that accrue to them by pursuing this policy. Still further, it is a fact that more than half, and I have heard it said that at least 75 per cent., of all the yellow pine lumber that is shipped to the retail yards from the mills located east of the Mississippi River is now marketed through the wholesaler. This is for the simple reason that those mills are so situated that they can better afford it, or are obliged to do so for the reasons that I have heretofore given.

Manufacturers Selling Direct "Knock"

This brings us to the real subject "trade relations between the wholesaler and the retailer." Assuming, for the sake of argument, that the retailer is enabled to exercise his own choice between the two by either buying his lumber from the manufacturer who will sell him direct or by buying through the wholesaler, which you all know is not a fact, the first proposition that confronts the retailer is the relative merits of the two bidders for his trade, and the advantages, if any, to be gained by buying from the one as against buying from the other. There are manufacturers who do sell direct and still think that is the best policy, and recognize the wholesalers as their strongest competitors, and as a result are oftentimes disposed to "knock" him by trying to convince the unsuspecting retailer that he can buy cheaper by placing his orders direct and thereby saving the middleman's profit. But when you stop to consider the difference which I have related between selling the retailer direct and selling the wholesaler, from the manufacturer's standpoint, to say nothing of the fact that no mill is going to the extra trouble to sell the retailer direct unless there is something in it, you will readily see that such an argument is an insult to any man's intelligence. In the language of the railroad traffic manager, it matters not whether he is a manufacturer or wholesaler, he is going to charge " all that the traffic will bear." Further proof of the falsity of this argument is to be found in the very existence of the wholesaler.

Another, and I might say about the only argument that has any merit to it is that by buying direct the retailer not only knows what he is going to get in the way of grades, etc., but he is assured of a reasonable uniformity in the grading and working of his stock. But even this argument will not stand unless the retailer confines his purchases exclusively to certain mills indefinitely, and you all know this would not ordinarily be a very good policy to follow from a buyer's standpoint. As a matter of fact, there is only one condition under which the retailer could better afford to buy direct from the manufacturer, and that is where he is able to buy as economically from one or more particular manufacturers from year to year, as elsewhere, and where he could always be assured of obtaining a supply from the same sources at any time and in such quantities as his requirements might demand. With very few, if any, exceptions, you all know that such conditions do not exist. Such conditions are rather for you to dream about than for you to try to find existing in reality.

Therefore, if the facts I have given are correct and my arguments are sound, we must reach the conclusion that there is no real advantage to be gained by the retailer by buying direct as compared with buying from the wholesaler, so long as the latter can supply him with his wants at market prices and in an otherwise satisfactory manner.

Advantages in Buying from Wholesalers

We now come to the question as to whether or not there are any advantages to be gained by buying from the wholesaler instead of direct from the manufacturer. I think I can show you that there are. In the first place, the source of supply of the wholesaler is only limited by the total output of all the mills that will sell him. Secondly, the nature of his business is such that the success of it largely depends on his keeping in the closest possible touch with stocks in all the manufacturing sections as well as the tendency of the market in all consuming sections. The source of supply of the manufacturer, on the other hand, is limited to the output of his one plant. Thus it is plainly seen that the wholesaler is not only in better position to supply you with your wants at all times and in every item, but is able to lay before you information as to special stocks that are suitable to the peculiar requirements of your trade. You may be needing something special or some item that is very scarce, and although you communicate with a dozen manufacturers at considerable expense in time and money, you may not be able to find it. But when you make your wants known to the wholesaler who is already in touch with all the mills, the chances are he knows right where to put his hands on the very stock you need and at a satisfactory price, thus relieving you of a great deal of trouble and worry and possibly save you some real money as well. Still further, we will assume you have a car of lumber to buy, and you have an equal opportunity of placing your order with a manufacturer direct or with a wholesaler. Suppose you give it to the manufacturer, and after waiting some time for shipment he notifies you that by reason of a fire, strike, accident, or other providential cause he finds himself unable to fill your order. He has pleaded providential causes, and you therefore have no legal recourse against him. It is therefore necessary for you to go to the trouble and expense of purchasing elsewhere, waiting on someone else to ship, and in case the market has advanced, you will suffer a financial loss as well. On the other hand, if you have placed this order with a wholesaler, with whom you have not agreed for shipment to be made from any particular mill, the latter cannot plead providential causes so long as there is a mill from which he can get your lumber. The wholesaler may encounter a plea of providential causes from the mill he places your order with, but that is his fight and not yours. That is one of the penalties he sometimes pays for his existence. This may delay the shipment of your order somewhat, though he is in better position to replace the order to best advantage than you are, but you eventually get your lumber at the price at which you originally bought it regardless of market advances.

Acts as an Arbitrator

Again, in case of complaints as to quality or manufacture of stock, the wholesaler stands between the manufacturer and retailer as an arbitrator. He hears both sides of the controversy and sees to it that justice is done to both sides. The wholesaler has no reason to show favoritism to either side, as he is under as much obligation to the one as to the other. He must see that the mill is treated right, if he would continue to purchase from that mill, and he must see that the retailer is also treated fairly if he would retain his trade. As a rule, when a retailer makes a kick on a car he does so in good faith and thinks he is right. On the other hand, the manufacturer has an equally abiding faith in his grades, and therefore does not at all times see the possibility of error on his part, and is inclined to look upon the complaint with suspicion. If the car in question has been purchased direct from the manufacturer, it is a case of the retailer's opinion against that of the manufacturer, with each considering the matter from his own point of view, and neither one inclined to give much consideration to the views of the other. Each considers the other's opinion biased by reason of his pecuniary interest in the lumber in dispute. In such cases it is often difficult for the two to get together on an amicable adjustment, which results in a long-drawn-out controversy, with probably a compromise of some sort in the end, whereby one side or the other suffers a loss. On the other hand, if the stock has been purchased from the wholesaler, the latter comes along and looks over the same as a more or less disinterested party, and ascertains the true facts in the case. If the retailer is wrong, he points out his error to him and the matter is quickly and satisfactorily settled. If the manufacturer is at fault the wholesaler reports the facts to him and he usually has sufficient confidence in the ability and disposition of the wholesaler to see that he is treated right to cause him to accept his report on a complaint without further question.

Will do More for Customers

Though possibly of somewhat less importance, yet I think you will agree with me that there is less of the spirit of independence in the attitude of the wholesaler toward the retailer in his dealings with him than is the case of the manufacturer selling him direct. The manufacturer is only interested in seeking a suitable outlet for his own product, and that product is composed of the items he figures it pays him best to manufacture. If you want something special and he does not think it will pay him to get it out for you, he is inclined to let you go elsewhere for it. If you get hard up, and want an extension on your account or note, he is disposed to cut you out and sell to those who are in position to pay promptly according to terms of sale rather than grant you an accommodation, even though you are perfectly willing to pay the interest for the overdue time. In other words, the number of retailers available for him to sell to is very great as compared to the required number to absorb his output; consequently, when something comes up that does not suit his peculiar taste, he takes on another customer in the place of the one who has displeased him in some manner. With the wholesaler, on the other hand, the success of his business depends largely on the volume of business he can do.

Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

A New Brunswicker's Successful Career

At a time when New Brunswick is looking forward to securing her share of the great increase in Canada's population and wealth, it is fitting to express appreciation of the efforts of those men who by their individual effort have added to the general prosperity of the province. The merger recently effected, by which the Sussex Manufacturing Company's woodworking machinery plant is to be associated with others in Ontario and elsewhere, gives promise of bigger and better things. It suggests also the name of Mr. S. H. White, a man who has done much to make Sussex one of the most progressive towns in the province. Mr. White has many thousands of dollars invested in the town and gives employment through his varied interests to scores of men and women. He is a retiring type of man, but what would mean disaster to other men calls forth in him a quiet determination to overcome difficulties, and he has on more than one occasion overcome almost unsurmountable difficulties and won from apparent failure the most pronounced success. His achievements speak for themselves.

Mr. White is best known to New Brunswickers as the president of the New Brunswick Telephone Company. A son of Mr. C. T. White, the well-known lumber operator, he commenced business in a small way as a Sussex general storekeeeper. He was associated with Mr. G. H. White for some time and later with Mr. W. J. Mills. Following his connection with the latter firm, Mr. White conceived the idea of establishing the Sussex Mercantile Company, which stands out as one of the very best departmental stores in New Brunswick to-day. It carries all classes of stock, and its fourteen stores and branches at Elgin, Havelock and Petitcodiac handle an immense volume of business.

Mr. White's other interests are many. He is president of the Sussex Manufacturing Company, which has continued expanding and increasing its lines of output until it is now one of the best assets of that town. He is the head of the Sussex Mineral Springs, with its yearly growth in trade, and has made it the big producer of mineral waters in New Brunswick. He enters the provision world as principal owner of the Maritime Dairy Company and the Sussex Packing Company. Mr. White has also a large lumber connection and has considerable business interests in St. John. His latest venture is as a leading associate in the Acme Ladder Company, which has won instant recognition in Canada and the United States, with factories at Sussex, N.B., and Worcester, Mass. Mr. White has his own strong faith in New Brunswick to thank for all his success.

Official details in connection with the consolidation which is to comprise the companies in Canada that manufacture this lighter grades of woodworking machinery and tools has been made public in an official announcement by Mr. Garnet P. Grant, who arranged the negotiations. The new company will be known as the Canada Machinery Corporation, Limited, and with its headquarters at Galt, Ontario, will comprise the MacGregor, Gourlay Company, Limited, of Galt, Ontario; the John Ballantine Company, Limited, of Preston, Ontario; the Hespeler Machinery Company, Limited, of Hespeler, Ontario, and the Woodworking Machinery Departments of Goldie & McCulloch Company, Limited, of Galt, Ontario, and of the Sussex Manufacturing Company, Limited, of Sussex, N.B.

The capitalization of the new company will be as follows:—

	Authorized.	Now Issued.
First mortgage, 6 per cent. sinking fund bonds	$1,000,000	$400,000
Preferred stock, 7 per cent. cumulative	1,500,000	850,000
Common stock	1,500,000	625,000

The Board of Directors of the new company includes among the Vice-Presidents Mr. Harry Cochshutt, of Brantford, managing director of the Cockshutt Plow Co., Limited, and vice-president of the Frost-Wood Co. The appraisals of the Canadian American Appraisal Company show the reproductive value of the plants to be $1,500,000. This which is over two and a half times the present bond issue of the company, which amounts to a total of $400,000. The different companies are being taken over free from all floating liabilities and the new company will have ample working capital.

The Jeffrey Manufacturing Company, Main Office and Works, Columbus, Ohio, are changing the location of their Denver office from No. 1711 Tremont Place, and after August 1st will occupy a commodious suite of rooms in the First National Bank Building. This Company, besides maintaining a large selling force in over a dozen of the leading cities of the United States, also maintains a corps of engineers at their Branch Offices in the following cities: Chicago, St. Louis, Denver, Montreal, Pittsburg, Charleston, W.V., Boston, New York and Birmingham. There are also nearly 100 Jeffrey Agencies in additional cities in the United States and other countries.

A Growing New Brunswick Firm

One of the most progressive firms in the Maritime Provinces at the present time is that of Alexander Dunbar & Sons Company, Limited, of Woodstock, N.B., whose well-known "Dunbar" brands of logging engines and mill machinery of all kinds are known and used from coast

Factory where "Dunbar" Logging Engines are manufactured

to coast. The present manufacturing business was started in 1889 in a small machine shop by Alexander Dunbar, Sr., and year by year, as the reliability of the machines manufactured became generally known, the business expanded rapidly, until to-day all kinds of mill machinery are turned out in addition to the logging engines.

In 1905 the present company was incorporated, and in 1906 they first started to manufacture logging engines. Continual improvements have been made to the Dunbar engine where experience has shown them necessary, and no time or expense has been spared to make it second to none manufactured. One of their latest improvements, which is to be found in no other engine, is the raising and lowering device, whereby the water in the boiler is kept at the proper level in going up or down grades, thus doing away with burnt tube ends and crown sheets. An illustration showing this will be found on another page of this paper. The steel castings for these engines are all made in England from the

Logging Train Drawn by Dunbar Engine

finest quality steel, and the boilers are built in Scotland under Lloyds' Marine Inspection.

Recently this firm were defendants in a law suit with an American concern, arising from an alleged infringement in patents on logging engines. A verdict was given in favor of the Dunbar Company by the Supreme Court in Equity, thus vindicating them and proving that they hold the only patent in Canada on logging engines. By this decision it is proven that any other patents that were held were obtained by false pretences.

The firm have now in course of construction at their works in Wood-

stock several of these engines, which they are rushing to completion in order to meet the demand next fall.

The shingle machine manufactured by the Dunbar Company stands out conspicuously as one of the best on the market. Several firms manufacture the original Dunbar machine, but this firm are the only manufacturers of the Original Dunbar Improved Machine. One of the principal improvements is the steel slab catchers, which are fitted close, so that there is practically no waste of lumber. The set rolls are made double-ended so that they may be changed when worn, thus doubling the length of service. All the feed pinions are cut from the solid, and the machine is fully guaranteed in every way. This shingle machine is in use all over the country and gives great satisfaction.

Their clapboard machine is the only one of its kind on the market and the only machine that does not require the logs to be turned. This machine should prove of great advantage in Western Canada, where the lumber is quartered. In addition to the several lines mentioned, the firm manufacture practically all kinds of mill machinery, and their past record for turning out first-class machines in every way should popularize their machines even to a greater extent than at the present time.

The Leading Saddlery House in Eastern Canada

Among the enterprising and successful industries of St. John, N.B., noted for more than sixty years as one of the most representative business concerns in the Maritime Provinces, is that of H. Horton & Son, Limited, manufacturers of Harness and Horse Collars, and general

Factory of H. Horton & Son Limited, St. John, N.B.

dealers in Horse Furnishing Goods. The business was established in 1847 by the late H. Horton, father of the President and General Manager of the business at the present time, Mr. Geo. A. Horton, who entered the employ as a clerk in 1875. Here Mr. Horton laid the foundations of the business training which has led him on to success, until to-day the business stands as the largest of its kind east of Montreal, and its well-known line of manufactures are known from coast to coast. In connection with this enterprise, a building of five storeys and basement is utilized, the fourth and fifth floors being devoted to manufacturing operations. The firm are wholesale and retail dealers in saddlery hardware, carrying a full and complete stock, embracing everything included under the general heading. They are also manufacturers of harness of all kinds, from the cheapest to the finest grades. Another important specialty is the manufacture of blankets, the firm importing the raw materials from jute factories in Scotland.

Messrs. H. Horton & Son, Limited, make a specialty of the lumber camp trade, and throughout the Maritime Provinces their trade in this connection is large. They carry a line of goods in blankets, harness, etc., that is specially suited to the lumber camps, and there is now hardly a camp in the Provinces in which the products of this firm will not be found.

In addition to the lines which they manufacture, the firm are also sole agents for the Maritime Provinces for Newlands & Co., of Galt, Ont., manufacturers of the celebrated Saskatchewan Robes and Coats, which are specially suited for the lumber camp trade. These goods have the biggest sale of any similar line made in Canada to-day. The firm also handle Bishop's Fur Robes and Coats.

In connection with their saddlery, hardware and manufacturing departments, the firm publish a very large illustrated catalogue, and price list, which shows the many lines handled, and which will be mailed free upon request.

A representative of the "Canada Lumberman" had the pleasure of a visit to the manufacturing department of the company while in St. John recently, and was shown through by the President of the Company. He was much impressed by the extensive stocks carried, and the up-to-date facilities employed by this firm in their different departments. At the forthcoming Dominion Exhibition in St. John a large space will be devoted to this company's different lines, and the public will be given an opportunity to see the expansion which has been, and is still being, made by this progressive concern.

Shipments of Lumber from St. John, N.B.

Recent shipments of lumber from St. John, N.B., were as follows:

Vessel.	Cargo.
June 30—Romeo, Fall River	159,269 sup. feet spruce deals.
July 2—Vere B. Roberts, New York	904,000 spruce lath.
July 2—Lucia Porter, New York	373,343 sup. feet spruce plank.
July 5—Clayola, Salem, f.o	175,717 sup. feet spruce deals and plank.
July 5—Arthur J. Lord, New London	225,832 sup. feet spruce deals.
July 6—Charles C. Lister, New York	978 pieces spruce piling.
July 7—T. W. Cooper, Boston	66,830 sup. feet spruce boards.
	750,000 cedar shingles.
July 7—Georgia Pearl, New York	172,121 sup. feet spruce deals.
July 8—Minnie Stanson, New York	364,050 sup. feet spruce deals.
	59,789 sup. feet pine boards.
July 8—Cora May, Quincy, Mass	152,061 sup. feet spruce deals.
July 8—Genevieve, New York	176,074 sup. feet spruce deals.
July 8—Trongate, Havana	6,736 pieces pine boards.
	75,572 sup. feet spruce boards.
July 8—Manchester Port, Manchester, via Philadelphia	751,340 sup. feet spruce deals, etc.
For Philadelphia—	10,053,800 spruce lath.
	2,592 pieces pine deals.
July 8—Erandeo, Brow Head, f.o	2,423,520 sup. feet spruce deals.
July 8—Albert D. Mills, New York	491,072 sup. feet spruce plank.
July 9—Walter Miller, Lynn, Mass	146,060 sup. feet spruce deals.
July 11—Preference, New York	347,938 sup. feet spruce plank.
July 11—Mary Miller, New York	342,534 sup. feet spruce deals and scantling.
July 11—Elma, Elizabethport	322,451 sup. feet spruce scantling, etc.
	179,000 spruce lath.
July 12—William L. Elkins, New York	265,000 sup. feet spruce deals.
July 12—Sallie E. Ludlam, Bridgeport, Conn.	240,867 sup. feet spruce deals.
July 12—Amanda Willey, Philadelphia	2,208,200 spruce lath.
July 15—Maple Leaf, New York	1,384,000 spruce lath.
July 15—Brookline, New York	2,005,700 spruce lath.
	149,600 sup. feet spruce deals.
July 18—Margaret May Riley, New York.	357,549 sup. feet spruce deals.
July 18—Winnie Lawry, Greenwich, Conn.	252,690 sup. feet spruce deals.
July 18—R. Bowers, New York	60,460 sup. feet spruce deals.
	42,523 sup. feet spruce plak.
	28,425 sup. feet spruce scantling.
	1,598,900 spruce lath.

The Riverside Lumber Co., Ltd., at Calgary, Alta., manufacturers of sash and doors, are now giving special attention to detail work. They have lately added to their equipment the latest and best woodworking machines and are extending their already large connection to all points in the West. They have profited by the experience of the older factories and their machinery is of the latest design.

The New Michel Saw Mill Co. have now in full operation their recently erected mill at New Michel, B.C. With easy logging and the most up-to-date machinery, combined with almost unbounded wealth of lumber at hand in the immediate vicinity of the mills, it is easy to foresee a bright future for this company. The mill is now working to full capacity, and it is proposed to put on a double crew at an early date.

The Lumber Mutual Fire Insurance Co., of Boston, in its financial statement for June 30, 1910, shows a net cash surplus of $418,543.14, an increase of $30,820.41. The payments for 1910 include losses amounting to $57,903.11, and dividends to policyholders of $71,574.99.

CAMP DEPARTMENT

The Lumber Jack at Close Range

Editor "Canada Lumberman":

Mr. Henderson's letters in the "Canada Lumberman" bring to the front the much-discussed problem: "How to better the condition of the shantymen." Some time ago, in order to study the lumberjack at close range, I visited a hardwood lumber camp. There were ninety men at this camp, of whom 50 per cent. were Americans, 25 per cent. Indians, and the remainder Canadians. The bunkhouse seemed to be swarming with vermin, in spite of the fact that quite a number boiled their clothes every Sabbath. This ceremony was performed in a large potash kettle, situated back of the camp. The literature, what there was of it, was confined to the cheapest kind of novels, of the "Diamond Dick" variety. Two stables were filled with a fine lot of horses, but no provision had been made for keeping them dry. The roofs were covered with the cheapest kind of tar paper, improperly put on. Obviously, the stables were wet and unsanitary. The foreman, if things did not go right, usually accompanied his orders with an oath. His policy, in order to get the work done, was to make the men afraid of him.

Another camp, which I will instance briefly, was occupied by a crew of pulpwood makers. This was located in a private park, a tract where signs were posted to keep out trespassers. In order to study conditions here, I hired as an ordinary hand. I arrived at the camp with another friendly lumberjack, and we were directed to the office. In answer to my inquiry about wages, the foreman replied: "We pay from $25 to $35 per month, and if you are good men and stay a month you will get $35. He then pointed to a long row of crippled axes (the souvenirs of departed lumberjacks), and told us to take our pick. The men at this camp were composed of Indians, Americans, and Canadians. There was an abundance of food, with plenty of "prune on de tab." They were cutting and skidding the spruce in twelve-foot lengths, and later on were to cut and peel the balsam. Both kinds were bunched at $8 per cord, delivered to the river.

Now I heartily coincide with Mr. Henderson relative to a Shantymen's Christian Association, not only in Canada, but in this country as well. It would be a good thing, if possible. Looking at it from my standpoint, it seems a complex question. One goes to the camps to earn some money, oftentimes a farmer's son, who has, heretofore, never been away from home. Usually he sees evidences of dishonesty on every hand. The men shirk their work. When the day's work is given in at the office, a false number of logs, or cords of pulpwood, is often reported. In the camp, after the day's work, he hears obscene stories and profane language. I will go on record by saying that the average lumber camp, as it exists to-day, is not a decent place for any respectable young man. And, again, oftentimes the employers are not strictly honest. While at the pulpwood camp above-mentioned, I noted the men who quit and called for their time. In nearly every instance they were short in their time from one to three days. A man who did not stay a month did not know what he was going to get. Under such circumstances, was there anything to conduce to the betterment of a man's morals or principles?

Do I believe in helping to better the social environment of the shantymen? Yes! A thousand times yes! I believe that "good can come out of Nazareth." When the conditions of camp life are changed for the better, the woods will attract a better class of men. Consequently, better men means steadier men—more willing workers—less shortstops and camp jumpers. My observations have not been taken from a circumscribed circle here in the Adirondacks, but especially from what I have seen throughout the Adirondack region and the Lake States. In the foregoing, I have taken two typical camps as an illustration. Perhaps conditions are different in Canada.

GEO. B. OBERTON.

North Bangor, N.Y.

A Lumber Jack Minister

That "As the twig is bent the tree's inclined" is an old saw particularly applicable to the lumber trade. This truth is exemplified by the story of the Rev. William Matteson, which comes from Galeton, Pa. Mr. Matteson originally was a lumberjack, and had the reputation of being the champion punk peeler of the Potter County woods. The surroundings of the lumberjack are not of a nature to inculcate the seeds of Christianity, nor to encourage their development should any exist. Mr. Matteson is said to have been no more spiritually inclined than the other men in his camp, but happening one day to drop into a church, and listening to the sermon, he became convinced of the error of his way, was converted, and decided to devote his life to spreading the Gospel. Later he became regularly ordained.

For a number of years he preached in various Pennsylvania churches, finally being given the pastorate of the Sweden Valley Methodist Church. He finally became convinced that he could do more good among the lumber camps by intimate association with the men of the woods than he could accomplish in any church. He therefore gave up his church and is now working in the woods of the Lyman Run district. He talks to the men as he works with them during the day, and in the evenings reads and explains the Scriptures to all who will listen. Being a practical woodsman, and thoroughly understanding the vicissitudes and temptations by which they are surrounded, he is especially adapted to this work, and if reports are to be believed, is doing a great deal of good.

The Telephone in the Lumber Camps

One of the most interesting uses to which the telephone has been put is reported from the woods of Northern Maine, where lumber camps find it an invaluable aid during the logging season. Many and varied are the tasks which the 'phone has been called upon to perform since its use has become universal, but this case is unique. Travelers in the heavily wooded sections of Maine have lately noticed the wires strung along with the trunks of trees for support. These connect with the dams on the streams down which the logs float. Should there be a sudden jam in the mass of lumber making its way down the stream, the telephone is at once pressed into service, and the man at the dam is notified to hold up all the logs until the lumbermen above have had time to straighten out the tangle. In former days this service was performed by relays of shouters. Men stood on the banks of a river at intervals small enough to allow each to be heard by his nearest neighbor. Sometimes the distances from the lumber camp to the log jam and from that to the nearest dam were very great. It can be easily seen what an enormous advantage the loggers with telephones have. The most important thing to be considered in the new system of warning is the degree of efficiency of the tree-to-tree telephone service. So it is that the lumbermen take great care in installing their apparatus and stringing the wires. An application of the telephone method was witnessed recently on the west branch of the Penobscot River. The water pursues its way over a rough and uneven course, so there are many rough spots over which the logs are to be guided. The men of the crew keep a strict watch on the glut of logs as it nears some big boulder in midstream. Perhaps it will pass down the river and avoid the obstable. If so, well and good. If the logs hit the obstruction and begin to pile up, then it is time for quick action on the part of the crew. To shout along the banks of the river for the man away below to shut the gate and keep the lower logs from passing through used to be the procedure. Nowadays the man at the telephone gives three long rings, and this attracts immediate attention at the dam. He hurries the order to keep the channel closed; dynamite is applied to the jam, and when tthe course is clear, another telephone message starts the logs floating down stream again.

Maine is also finding the telephone useful in her war on forest fires. The land agent and forest commissioner at Augusta recently had installed a number of telephone sets on look-out stations in the northern part of the State. Men are posted at these commanding spots with telescopes and keep a vigilant lookout for trouble. At the least sign of blaze or smoke they telephone to the nearest fire-fighting station for help. Without the 'phone the woods would have to burn until aid was brought by a courier.

The campaign against forest fires in Maine is more determined than ever before. Eight watch towers have been erected, each with its telescope and telephone connection. The watch towers are on the highest points of land in Hancock, Washington, Somerset, Piscataquis, Aroostook, Penobscot, Franklin and Oxford Counties, all of which have felt the effects of the fires in past seasons.

The Washington Forest Fire Association recently sent out the following advice that should be heeded:

Close season, June, July, August and September.

Don't toss away burning matches or tobacco.

Don't make a camp fire in leaves, rotten wood, or against logs, where it may spread or where you cannot be sure it is out.

Never leave a fire until it is out.

Don't burn your slashing in the dry season without a permit.

Put out any fire you find if you can. If you can't, notify a fire warden, some public officer, or the land owner.

If you don't know the fire laws, send for them. Help enforce them.

The lumber output of British Columbia during the first three months of 1910 was 115,622,703 feet, against 71,046,650 for the same months of 1909. This development is ascribed to the advent of standard gauge railways and strong financial companies in the woods of British Columbia.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

Wanted Red or White Oak

FOR PRESENT OR FUTURE DELIVERY in the following sizes: 1", 1¼", 2", 3" and 4" 5x7, 5x8 and 6x9" Squares with hearts boxed. Apply Box 986 CANADA LUMBERMAN, Toronto, Ont. t.f

Rossed Poplar

WANTED, FOR EXPORT, 2 FT. ROSSED Popular. Must be fairly dry so as to save freight.—The HOWELL COMPANY, Ogilvie Building, Toronto, Canada. 16

Wanted Soft Elm, Birch and Spruce

Soft Elm, Good 1½ x 6" and up

WANTED AT ONCE, PARTY WITH SMALL Portable Mill. THE BRADLEY COMPANY, Hamilton, Ontario. 16

MISCELLANEOUS

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other Pulpwoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

WILLIAMSON, Publisher, Toronto.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

Sale of Pine Timber on Metagami Indian Reserve

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 1st DAY OF OCTOBER NEXT for the right to cut the Red, White and Jackpine timber over eight inches in diameter on the Metagami Indian Reserve situate the Metagami River in the district of Sudbury.

For particulars, descriptions, conditions, etc. apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Department of Lands, Forests and Mines,
Toronto, July 13th, 1910.

No unauthorized publication of this notice will be paid for. 18

Tenders for Pulpwood Concessions

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 7TH DAY OF OCTOBER NEXT for the right to cut the Pulpwood on a certain area tributary to the Nepigon River in the District of Thunder Bay. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may be fixed from time to time for the right to operate a pulp and paper industry on the territory. Successful tenderers will be required to erect a mill or mills on the territory, and to manufacture therein the wood into paper.

Tenderers will be required to deposit with their tender a marked cheque payable to the Treasurer of Ontario for twenty-five per cent. of their tender, to be forfeited in the event of their not entering into agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted. For particulars as to description of territory, capital required to be invested, etc., apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 8th July, 1910.

No unauthorized publication of this notice will be paid for. 19

Heating of Saws

There are a considerable number of reasons for saws heating at the rim, such as (1) improper shaped teeth for the wood; (2) insufficient gullet space; (3) saws not "open" enough in the body for the speed of the rim; (4) an accumulation of gum on the teeth; (5) insufficient set; (6) backs of the teeth allowed to get too high; (7) improper "packing" or collars not properly turned; (8) too high a speed or too rapid a feed; (9) saw of too thin a gauge; (10) saw leading too much into the log or too long a fence; (11) dull saws.

Atherton Cedar

Atherton cedar, which is well known all over Australia, is a very valuable timber tree. Many thousands of superficial feet are shipped annually from Cairns, Queensland, to other ports of the Commonwealth, and the felling and dressing of the logs employs hundreds of men. One tree, which was felled recently on the banks of the Barron River, measured 35 feet in circumference at the base. The log was so large that it had to be split into four with blasting powder before it could be conveniently transported. Two trees growing about 30 yards apart, which were recently felled, contained 11,000 and 13,000 superficial feet of timber respectively. Many other valuable timbers are found in the Atherton scrub.

Causes of Saw Cracks

Saws may set up cracks from a variety of causes. Perhaps the most general is having angular instead of rounded gullets, and possibly they may not be sufficiently large to allow the sawdust to escape freely. Again, if the saw is allowed to get out of round or balance, and some teeth are longer than others, great strain is thrown on these, and cracks result. Cracks may also arise from the steel being of too hard a temper, from striking a nail, improper shape of teeth for the wood, too quick a feed in difficult wood, etc.

In some mills the chief object appears to be an enormous output; consequently the saws are sometimes forced and heated. If the saws are well suited to the wood and in first-class order, they should not heat, and cooling is therefore unnecessary. In gummy and difficult woods, however, a slight spray of water can often be used with advantage; it should never, however, be used in large quantities.

There is no doubt that small diameter saw collars are a mistake. By using large collars extra support is given to the saw; consequently, one of a thinner gauge can often be used with safety. The collars should by preference be made of steel, as they are less liable to spring when tightened up. The tight collar should be turned flat and the loose one slightly concave.

Split or Rived Shingles

In commenting upon the fact that the outside walls of bungalows are occasionally covered with cypress shingles which are split or rived instead of sawn, a writer makes the point that while the cost is very much greater than where other kinds of shingles are used, the expense is justified by reason of the more attractive effects produced. "The sawn shingle," he says, "is apt to get a dingy, weather-beaten look under the action of sun and wind, unless some treatment such as oil or stain is given to it in the beginning. But the rived shingle has exactly the surface of the growing tree from which the bark has been peeled, or, to be more exact, of the split surface of a trunk from which a bough has been torn, leaving the wood exposed.

"This smooth natural surface takes on a beautiful color quality under the action of the weather, as the color of the wood itself deepens and shows as an undertone below the smooth, silvery sheen of the surface, an effect which is entirely lost when this natural glint is covered with the 'fuzz' left by the saw."

Cemented Belt Joints

A correspondent writes to the Timber Trades Journal: "I find that cemented belt joints give the truest run for sticking high-class moldings, but the cement I have is not quite catisfactory. If you can recommend me a good one it would be esteemed."

He received the following reply: "We think you will find the following satisfactory: Mix 10 parts of sulphide of carbon with one of oil of turpentine, add enough gutta-percha cut into small pieces to make a tough, thickly flowing liquid. Carefully remove all grease from the joint, apply the cement to both faces, bring the surfaces into contact, and aply pressure until the joint is dry.

"If the belt runs over small pulleys it is an improvement to pare the joint to the round of the smallest pulley over which they run, as the buckling action which takes place at the joint is thus modified.

A wood used largely in Jamaica is that yielded by the blue or mountain mahoe, a tree rising to from 50 to 80 feet in height and with a diameter of about 3 feet. Of a dark blackish-green color, with a succession of lighter and darker bands when polished, it is found valuable for furniture and cabinet work, for interior work in houses, for railway sleepers and for shingles. The bark yields a good fibre suitable for short lengths of rope and cordage.

The United States is the greatest user of mahogany, and about 75 per cent. of the world's output is marketed there. Their mahogany supply comes chiefly from Africa, through Liverpool, where it is sold at periodical auctions. The American dealers, being the heaviest buyers, get the best. Shortage and the increasing demand have pushed prices at present to the highest point known.

There is probably no other class of lumber shipped from the United States for the Continental trade which is at the present moment a more prolific seller than satin walnut or red gum. This can be attributed, probably, to the fact that it is usually better manufactured and more thoroughly seasoned before shipment than the usual American output, and as a direct consequence there is a constant and increasing demand for this wood.

At some of the largest and most modern plants in Wisconsin and Minnesota a system of economy is employed that goes far toward proving that practical conservation comes from utilization. Dead and down timber and short top logs are sent to the mill. These are thrown on to the carriage, split, and transferred to horizontal band resaws. There they are sliced into boards, passed to the edger, thence to the trimmer, and out into the yard. At some points the mills are turning out sizes ranging from one by three, two feet long, to heavy timbers.

Multiply the width of the saw in inches by the number of thousandths of an inch in thickness, and multiply that product by ten, when the work is to be light, or by twelve, in case of heavy work. The resulting figure will approximate the number of pounds strain to which the saw will be subjected.

For example, take a 16-gauge saw 8 inches wide. The thickness will be .065 inch; therefore multiply 8 by 65 by 10, and the result will be 5,200, which will equal the number of pounds strain in the first case noted.

Review of Current Trade Conditions

Ontario

Midsummer dulness has prevailed very generally during the last fortnight in the lumber trade throughout Ontario. There has been, if anything, a falling off in the volume of trade, and prices in practically all lines are only holding their own. This, of course, is to be expected at this particular time of year, and it is not causing manufacturers or wholesalers much anxiety. The only decline worth noting is in the price of shingles. XXX B. C. cedars are now selling at $2.90 to $3, and even at that, the demand is light. Hemlock is moving fairly well, but prices are somewhat disturbed. In white pine, the trade is only of a "hand-to-mouth" nature. Dealers are well stocked, and their orders are very scarce.

1x4 common and dressing is selling at $24 to $25, and 1x8 at $27 to $29, which shows a decline of about $1 during the last fortnight.

The railway strike has not as yet caused any great inconvenience to shippers of soft woods. In the Georgian Bay district, manufacturers at most points will be unable to ship their lumber until the strike is over, but this is not thought to be a serious matter at present. Stocks throughout the province are pretty well distributed, and dealers can get along for several months without making further purchases. In Toronto, the stocks are sufficient to carry the trade along for two or three months anyway. Of course, from the manufacturers' point of view, the situation is an unpleasant one, as it would not take long for their yards to become choked up if they were unable to ship out their product. This has, in fact, already occurred at Ottawa, where J. R. Booth has been obliged to close his mill because of the accumulation of stock in the yards. In the hardwood trade the strike is a more serious affair. Hardwood dealers are much more in the habit of carrying only sufficient stock to meet actual demands. Toronto hardwood wholesalers have already experienced considerable inconvenience on account of car loads being delayed. Unless the strike is short-lived the hardwood dealers will be seriously affected.

The month of July has been rather a dull one in the lumber trade at Ottawa. Some dealers say it has been extremely so, and that they are not looking for much activity until prices begin to improve. For this reason there is not much concern felt about the effect of the railway strike, as prices are low and trade is not desirable, so far as the manufacturer is concerned. There is an over-supply of all common grades. From the wholesaler's point of view the season has been a satisfactory one. Up to the end of June, the sales were much greater than for the corresponding period of 1909. Even the most successful salesmen, however, now find it rather difficult to secure trade, as buyers are well stocked. Prices in general are steady, though low. Mill culls and box lumber are weak, but if any decline occurs it is not expected to be more than 50 cents per thousand.

The supply of pulpwood in Ontario has been somewhat heavier than the demand, and prices have shown a tendency to decline. Quotations at Niagara Falls at present are about as follows: Rough wood, $8.50 to $9.00; peeled wood, $10.00 to $10.50; two-foot machine, rossed, $12.00 to $14.00.

Eastern Canada

The manufacturing season in New Brunswick has so far been quite favorable, and an average output is expected, as a good percentage of the logs cut last winter were gotten out in the spring, and are available for sawing. Labor troubles, also, are conspicuous by their absence, so that conditions generally are quite favorable. Manufacturers have been further encouraged by the gradual improvement in the trade in spruce deals with the English market. The output during the present season will probably be about the average of the last three years, or perhaps a little greater. The larger part of this will be for the English markets. The sawing of spruce deals for the American markets will be rather less than usual on account of the dullness of the spruce deal markets in New York, Boston, etc. In spite of the generally favorable market conditions, the mills which are sawing for the English trade are not showing any signs of loading up heavily. In fact, the opposite is the case. None of the manufacturers are inclined to hold a large quantity of deals for better prices. The output of the Restigouche district will, of course, be considerably decreased by the conflagration which recently wiped out the town of Campbellton.

So far as manufacturers can learn, the English market for spruce deals, though showing little indication of change, has a tendency towards firmness. Higher prices, therefore, are looked for. Stocks of "English" deals are rather light, and shipments during the last fortnight have been heavy. The price of "English" spruce deals in ordinary specifications at New Brunswick ports would be about $15.75 to $16 per M. superficial feet.

Spruce at Boston is somewhat steadier than it has formerly been. Buyers, however, are still disinclined to come into the market at present prices. This seems to be rather a mistaken policy, because the manufacturers are rapidly curtailing their output, the estimate of curtailment being about 1,000,000 feet per day. The price for frames, 9 inch and under ,is $22.50. There is not much demand for random, and prices are a little uneasy. Spruce boards are in fair demand only, but steady. At New York, the arrivals of Canadian spruce have fallen off during the past fortnight, but stocks are still plentiful, and purchases will probably continue to be for immediate needs only. The building demand is quite up to the average. The demand for shingles at Boston shows no improvement, as buyers refuse to come back into the market, even at low prices. Cedar extras of the best quality are selling at $3.25, and in some cases excellent shingles have been sold at $3 and $3.15.

Lath are fairly strong, although prices have been shaded a trifle. For 1⅝ inch, the price varies from $3.60 to $3.65, and for 1½ inch from $3.35 to $3.45.

Great Britain

The volume of trade in the lumber markets of London is fair, and the deliveries continue to be extensive. Prices are inclined to stiffen, and in the near future a very fair opportunity of doing profitable business is expected. This applies both to floorings and deals. The paving demand and the packing case requirements are still very active. At Churchill and Sim's recent auction sale, 3x11 first Quebec spruce sold at £16 15s.; 3x7 to 10 inch brought £14, and 4 and 5 inch sold at £14 5s. The sawmill machinery trade is reported to be extremely busy. One of the leading woodworking machinery firms report that they are working overtime on contracts. The building trade, though not unusually brisk, continues to do its share in the consumption of lumber.

At Liverpool, the holiday season, though in full swing, is not interfering materially with the course of general trade nor with that of the timber trade. Recent arrivals of spruce have not met with quite so satisfactory a demand as would be desired, but a considerable proportion of the pine arrivals is going into consumption. There is no scarcity noticeable at present, though 9 and 11x3 inch are less plentiful than other lines. Birch has been unchanged of late. There has been a decline in the demand for logs, but planks are in rather better inquiry, and fresh arrivals are firm at advanced prices. Arrivals of Quebec pine and red pine are plentiful, and prices are about steady, though the demand has been none too good. There is an indication, however, that it will gradually improve.

At Manchester, the building trade is somewhat easier, and is causing a shrinkage in timber merchants' profits. Red deals are offering freely, but prices are still very high. Spruce deals are somewhat easier, as a result partly of the large quantity now on the quay, and the objection on the part of dealers to paying heavy yarding charges. Arrivals of pitch pine are very large and prices are somewhat reduced.

In Glasgow, business has become rather dull, and the sawmills there and in the neighborhood are doing very little business, as a result almost entirely of the midsummer holiday season. Shipbuilding is showing some slight sign of returning prosperity, but the house-building situation is very unsatisfactory. The result is that a feeling of considerable uncertainty pervades the timber market. The quays at present are quite active as a result of the arrivals of a large quantity of Montreal goods. These, however, are on contract, and consignment parcels on the quays are not likely to change hands.

United States

Prolonged warm weather and recent heavy rains have combined to produce a generally satisfactory condition in the various crops throughout the United States. This situation has had a beneficial effect upon the lumber business. The indications are that the fall trade will be good, with an excellent demand for building woods. In Chicago there is no decidedly strong demand for pine, but considering the season, it is satisfactory. Good lumber is still bringing strong prices, and dealers are assisting to maintain the prices, because they find whenever they have to replenish their stock that they themselves must pay higher prices. Lower grades of pine are still unsatisfactory and slow. The demand for hardwood in Chicago is not strong. Dry plain oak is in fair demand and steady in price. Quartered white oak is just about steady, and cottonwood and white ash are quiet. Prices, however, show no change. The hemlock situation has improved at Chicago, owing to the recent heavy demand. Higher prices are expected later on, as stocks at northern mills are reported to be only moderate. There is a good demand for spruce and fir siding, and railway material and heavy timber are also selling well. A good fall trade is expected in Southern pine at Chicago, as farmers are fairly certain of a full crop. Prices have already stiffened somewhat, and a number of the large concerns have raised them from $1 to $1.50 on a number of items. The red cedar shingle demand is only steady. Clears are selling at $3.27 to $3.32, and stars at $2.79, Chicago basis. White cedar shingles are in good demand at unchanged

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

prices. Lath are strong and firm. The cooperage market shows an indication towards improvement in the demand for oil staves. Beer staves have been detrimentally affected by prohibition and the cool weather. Apple barrel stock is not in particularly good demand, the frost damage in the spring having injured this trade.

At Buffalo there is a fair demand for white pine, considering the time of year, particularly for the high-grade stock. Low-grade continues to be difficult to dispose of. Box factories are fairly busy, but are using a great deal of the low grades of the other woods, as well as white pine. Hardwood lumber continues rather dull at Buffalo, and no improvement is looked for in the immediate future. The demand, however, is active enough to keep the trade fairly busy in all lines, and preparations are being made for the fall trade, which is expected to commence actively during August. At present the most important demand is for oak, birch and chestnut house trim, the oak and birch being used largely for door veneers. Dealers in elm, basswood and maple, however, are also fairly busy, and their prices are firm. The demand for white ash is good, but consumers are slow in agreeing to pay high prices. The supply, however, is light. Hemlock at Buffalo is moving actively, which is an indication that the building season will be a busy one. Lake dealers are able to sell at prices which keep Pennsylvania hemlock pretty well out of the market. Washington fir and spruce are both finding a good demand at Buffalo. The shingle trade is steady; 16 inch clears are in good demand, and 18 inch are also fairly easy to dispose of.

At New York, the trade in Northern pine is inclined to be dull, and is not expected to improve until the fall. Retailers are at present fairly well stocked. There is a good demand for hardwoods in the better grades. Retailers and wholesalers are both holding light stocks, and if the demand should improve materially, there might be considerable excitement in securing supplies. Oak is in good demand, and maple flooring is selling fairly well. Ash, birch and chestnut are steady.

Market Correspondence

Railroad Strike Affects Ottawa Business

Ottawa, July 21, 1910.—The closing of J. R. Booth's lumber mill on July 19, as the result of the strike on the Grand Trunk Railway, was the outstanding feature of the lumber industry in the Ottawa Valley in the last fortnight. At the time of writing, the mill has been closed three days, but it is expected that not more than another day or two will elapse before arrangements will be made to allow the mill to resume operations. Mr. Booth produces nearly half a million feet of lumber every 24 hours, and this is conveyed to the piling grounds by Grand Trunk cars. He devised this means of clearing the mill platforms some years ago when the city required him to obtain yards outside the corporation limits. At that time Mr. Booth was the chief owner of the Ottawa section of the G.T.R.—then the Canada Atlantic—and he built sidings from his mill to the railway and continued them into his lumber yards. These tracks were purchased by the G.T.R. when it bought the C.A.R., and since then Mr. Booth has been depending on the G.T.R. for removing the output of his lumber mill. The platforms around the mill are not capable of holding more than 12 hours' cut of the mill. Lumber barges call near, but the lumber is not loaded on them till it has seasoned a few months in the piling grounds.

Mr. Booth has had daily conferences with the local management of the G.T.R. since the strike occurred, with a hope of getting special attention paid to his lumber, but as the Company gave first attention to passenger business, no freight matters could be considered. When asked by the "Canada Lumberman" if the C.P.R. would not clear the mill platforms, Mr. Booth said that as the G.T.R. owned the tracks, no such arrangement could be made. He gave the opinion that a cessation of manufacture would disturb the trade in general, and no doubt increase prices eventually. The closing of the mills threw 2,000 men out of work and left 200 teams idle. Mr. Booth owns three yards—one on Concession Street, one in Nepean, and one called the Fraserfield. The haul is two or three miles to each, and it was customary for the cars to get loads in the daytime and be unloaded at night.

A deputation from the Board of Trade, accompanied by Mr. J. R. Booth and Mr. Peter Whelen, the president, sought the influence of the Minister of Labor to get relief from the lumber situation. The Minister thought a small number of railway men could serve the lumber mill, but Superintendent Donaldson of the G.T.R. said it would be more difficult than the Minister supposed. Mr. Booth kept all his other plants going, using wood to feed the paper mill boilers, instead of the sawdust.

Other lumbermen were also affected, but to a much smaller extent. The Shepard & Morse Co. were also put to inconvenience, piling lumber Booth supplies are left in the river, blocking the passage of other logs. The Shepard & Morse Co. were alos put to inconvenience piling lumber in the yards that otherwise would have been removed by the G.T.R. A continuance of present conditions would mean the closing down of part of the Shepard & Morse mill. The W. C. Edwards Co. was affected at Rockland to some extent, but as all their shipping from Ottawa is done by C.P.R. and by barge, no local troubles were reported. The Export Lumber Co. had one train of lumber left in the yard the day of the strike, but the C.P.R. also serves them, and the whole of this Company's shipping, which goes to South America, was diverted to the other line. The Rideau Lumber Co. has lumber available at so many points reached by the C.P.R. and by boat that it suffered only a comparatively trifling delay in shipping due to the strike. The output of the E. B. Eddy Co.'s paper plants is largely carried by the C.P.R. to points of delivery by rail, but a few shipments given to the G.T.R. were delayed. Paper makers will suffer if the strike continues to affect freight movements, as some material ordered by G.T.R. is held up en route. Sash and door factories are free from trouble consequent upon the strike, except in isolated cases.

The month of July has witnessed marked quietness in selling and shipping of lumber. A few of the dealers characterize the market as extremely dull. They are not looking actively for business, as they assert the prices are low enough, and buyers expect cuts in order to close bargains. There is consequently no great anxiety about any prospective reduction in the cut of lumber that may follow the railway strike. All the common grades of lumber are too plentiful. Several wholesalers report the season up to date, compared with other years, very satisfactory. For instance, the sales up to the end of June far exceed the returns for the corresponding month of 1909. However, the demand is found to be very slack at present, even among the most successful salesmen. It appears that buyers are well stocked up with the large deliveries earlier in the season, and there will not be a renewal of buoyant conditions for a month or so. The sash and door factories are very busy, but complain that standard prices are far below what the cost of production demands. The men in this business handle lath and shingles extensively, and report trade only fair. Larger manufacturers of shingles are, nevertheless, optimistic of the future of the market.

With buying passing through a sort of a holiday period, the price list is steady. Although many of the stocks are heavy, the holders will not come down in quotations to force sales. Mill culls and box lumber are weak. The prices, however, are not likely to drop more than 50 cents per M.

With four of the Ottawa planing mills equipped with automatic sprinklers to reduce hazard from fire, there is an opinion that the device should be made use of in all such lumber factories in the city. The factories already furnished are those of James Davidson, Library Bureau, W. C. Edwards Co., and Geo. M. Mason. The issue of a building permit recently, authorizing a factory to be constructed without the sprinkling device, does not indicate that the city contemplates any compulsory legislation on the question. Controller James Davidson, owner of one of the local lumber factories, told the "Canada Lumberman" that a sprinkler would pay for itself in three years in the amount saved in insurance premiums. His rate is 1 per cent. per annum, or the same as would be charged on a risk free from the menace of lumber.

In view of the prospective handicap to lumber shipping that would follow the closing of the Ottawa end of the Rideau Canal (a scheme which the C.P.R. wishes to accomplish), the Ottawa Board of Trade has a resolution before it, asking the Government not to allow such a proceeding unless another outlet is provided for the canal. Secretary Cecil Bethune, of the Board, claims that the closing of the canal would give the railways an opportunity to charge prohibitive rates to Oswego and northern New York. In other quarters this is regarded as an exaggerated view, as the quantity of lumber going from Ottawa through the Rideau Canal does not amount to over a million feet a year. The rates to Oswego are $1.65 by water and a little less than $2 by rail.

The Ottawa River measures only eight feet deep at the foot of the Rideau Canal, and a continuance of the dry weather would endanger transportation.

An Average Season in New Brunswick

Chatham, N.B., July 25th, 1910.—The manufacturing season thus far has been quite up to the average, so far as volume of output at the New Brunswick mills is concerned. Conditions have been quite favorable to a good season's sawing. In nearly all lines of the trade and industry a fairly large percentage of the logs cut last winter were gotten out in the spring, and have been or are available for sawing. Another favorable condition is the lack of labor troubles of any kind. The gradual improvement in the trade in spruce deals for the English market has also been a source of encouragement to the manufacturers.

Looking forward to total results of the sawing season in New Brunswick, it might be said that the total volume of long lumber manufactured at the mills in this province will be about the average of the last three years, or slightly in excess of this quantity. Much the greater portion of this output will be, of course, spruce deals, sevens, eights, nines, and elevens, for the English markets. The sawing for the American spruce deal market promises to be somewhat short of the average,

For the Camp

The Jenckes Machine Company, Limited

Sherbrooke - Montreal - St. Catharines - Cobalt - Vancouver - Rossland
Works: Sherbrooke, Que. St. Catharines, Ont.

owing to the lack of life which characterizes the trade in spruce deals and most of the other principal lines of spruce long lumber in New York, Boston and other lumber distributing centres. This condition of the latter markets will affect the owners of the American mills at St. John and on the Canadian side of the St. John River, the markets mentioned being of much greater interest to these than to manufacturers in other parts of the province.

While the mills which are sawing for the English market are working under favorable conditions, there is no indication of an anxiety to load up heavily with the manufactured article; in fact, the tendency seems to be quite the reverse. Certainly there are no evidences of a tendency to hold in stock any quantity of deals in anticipation of a better schedule of prices.

The fire at Campbellton will have the effect of curtailing the lumber output of that section. The deal mill of the William Richards Co., Ltd., was destroyed, together with 6,000,000 superficial feet of spruce deals. The same concern lost their shingle mill. Two shingle mills owned by the Shives Lumber Company were destroyed. The destruction of these plants will have a decided influence upon the season's output of the Restigouche mills, particularly of shingles, the burned plants having been a most important portion of the source of supply in this line.

A feature of the year in this direction has been the lack of forest fires. The reports of this nature tell of practically no losses. The continuous wet weather of the months of May and June have had the effect of removing thus far the danger of loss from this source.

The condition of the English market for spruce deals shows little change, but any indications of this nature are rather in the direction of firmness than otherwise. Buyers in this province find, when making enquiries, that the sentiment of the manufacturers of deals is of a most optimistic nature, and that, in most cases, higher prices are looked for rather than any concession made.

Stocks of "English" deals are not heavy enough to cause any anxiety to get them on the market in a hurry, and it is indicated that trade conditions in Great Britain will have a greater influence even than usual upon the volume of shipments during the remainder of the summer and the coming fall. The dealers of New Brunswick are in such a position that they are able to govern themselves, so far as shipping deals is concerned, according to materialization on the other end.

Shipments have been fairly heavy throughout the present month, and local stocks of "English" deals are consequently only moderate. At St. John the available quantity would be in the vicinity of nine and one-half millions superficial feet, at Chatham four and one-half millions at Campbellton seven and one-half millions, and at other points from three to five millions of feet.

An enquirer would be quoted in the vicinity of $15.75 to $16.00 per thousand superficial feet of "English" spruce deals in a specification containing, say, 50 per cent. sevens and eights and 40 per cent. nines, and balance wides, at New Brunswick shipping port.

Freight rates on lumber to the West Coast are quoted at from 31s. to 32s. 6d. per standard.

Alleged Over-Supply of Quebec Pulpwood

Mr. Gebhard Willich, U. S. Consul at Quebec, in a recent report to the State Department, says that despite the prohibition of exportation of pulpwood from Crown lands in Quebec subsequent to May 1 last, the supply on hand, and which may be secured from private lands in the future, will be entirely adequate to the demand, and there need be no apprehension of a shortage. The market for pulpwood has been poor, which shows a lack of demand on the part of buyers in the United States. There are hundreds of thousands of cords of pulpwood in Canada available for exportation at this time. While the percentage of pulpwood cut from Crown lands has not been large, it has been sufficient to prevent the sale at fair prices of great quantities of such wood cut on private lands. This has accumulated, and in many places has remained stacked up along railroad sidings in enormous quantities without finding a purchaser. Mr. Willich intimates that a number of concerns have sought to create the impression of an impending shortage of pulpwood, so as to justify an increase in the price of paper, and says that nothing in the situation in Quebec warrants such an assertion.

The above views are contrary to various reports received by the "Canada Lumberman" of late. The Editor would like to have an expression of views from Canadians who are in touch with the situation.

S. P. Musson, Son & Co., Barbados, report, under date of July 16, as follows: "Lumberstuffs.—W. Pine—Arrivals during the fortnight consist of the Trn. Schr. "Silver Leaf" with 150m ft., which had been sold to arrive at $30 for merchantable and $22.50 for second quality, and a small lot of 11 m. ft. ex "Dahome" for which we obtained $27 round. There is another cargo on the way, which, along with late receipts, will keep the market supplied for the present. Spruce—No arrivals in this class lumber during the fortnight, but we are expecting a cargo which is now about due. Pitch Pine—no receipts, and stocks in dealers' yards are being gradually worked off. Shingles—The Trn. Schr. "Adriatic" arrived on the 12th inst. from Dalhousie, with 1,476,500 cedar laying, which has been sold to arrive at $1.90, and the "Silver Leaf" brought down 100 m. each clears and second clears, for which consignees obtained $4.07 and $3.27 respectively, while we ourselves have two cargoes now on the way. No receipts of Long Gaspé, but supplies are expected. Shooks—Receipts consist of 733 bdls. by the SS. "Coppename" from New York, imported on dealers' account. Wood Hoops—No arrivals, but stocks are sufficient for requirements.

Gordon, Grant & Co., Port of Spain, Trinidad, report, under date of July 9, as follows: "Lumber and Cooperage Materials—We have no further arrivals of pitch pine to report, and a cargo or two of good all-heart quality would sell well. American and Canadian white pine boards are always saleable, and there is some enquiry for hemlock and spruce."

Cooperage Trade Shows Hesitancy

The coperage trade conditions in Ontario are reported upon by J. J. Innes, of the Sutherland Times Company of Chatham, under recent date, as follows:—

"The continued dry weather is reported as having a very bad effect on the apples, causing great numbers of them to fall off the trees, so that the outlook for an apple crop is not as rosy as it was a month ago. Rain is badly needed in the Eastern States, and if the present dry spell continues, it is going to have a serious effect on the apple crop.

" The demand for apple barrel stock is fairly good for this time of the year, but prices are very unsatisfactory to the manufacturers.

" Trade is being drummed to death, especially by some of the concerns who only sell cooperage stock as a side line, and work it in with their other business, such as selling automobiles, lumber or other wood goods, and have to keep travellers on the road anyway.

" The demand for stock for the general market is a little above the average of the last two years, and prices much beter in proportion than for apple barrel stock.

" The amount of stock being manufactured at the present time is comparatively light, partly on account of the low prices, and partly on account of labor condition and adverse weather.

" Trade should open up in the course of a month from now, and the prospects are that there will be an extra good fall trade this year, provided the dry weather does not greatly affect the apple crop and wheat.

" Tight barrel stock has been in good demand for all classes of heavy dressed and rough staves, especially pipe staves for some time, and prices are fairly good. The old staves, especially in the North, have been pretty well cleaned out, and the new staves are only coming in slowly, and are being taken care of by the consumers just about as fast as they come on the market.

" The output this year will be very light, as labor was scarce, and last year's prices kept a good many stave makers from going into the business last winter.

" Southern staves are quieter, the export trade from the South being exceptionally light at the present time, stocks in New Orleans, however, are very heavy and prices are being maintained by manufacturers and dealers. It is expected there will be quite a rush for export during August, so as to take advantage of freights before cotton begins to move. "

The Nepigon Pulpwood Sale

The tenders for the right to cut pulpwood on the Nepigon Limit, which have been called for by the Ontario Department of Lands, Forests and Mines, will be received until October 7. Tenderers are required to state the amount they will pay as bonus, in addition to Crown dues, for the right to operate a pulp and paper industry on the territory. Tenderers will also be required to deposit with the tender a marked cheque for 25 per cent. of the tender, payable to the Treasurer of Ontario, to be forfeited in the event of their not entering into agreement to carry out the conditions.

The conditions, as reported in the previous issue of the "Canada Lumberman," involve the erection of a pulp and paper mill costing, when equipped, not less than $500,000. The mill must be operated so as to produce daily at least 150 tons of paper, and to employ at least 250 hands on an average for at least 10 months of each year. The successful tenderer is to have the right to cut and remove spruce, poplar or whitewood, and banksian or jack pine, 9 inches and upwards in diameter, 2 feet from the ground, sufficient to supply the mills erected for a period of 25 years. No wood cut on the limits shall be exported or sold, but used only for supplying the mills erected. The limit covers the territory extending for five miles in depth on both sides of the Nepigon River, and extending back a distance of five miles from the shores of Lake Nepigon. and extending back a distance of five miles from the shores of Lake Nepigon.

Where Quality Counts

If there is one place where quality is at a premium, it is in Cutter Heads. To have a good Cutter Head—the best that can be produced, should be a thought first and foremost with the planing mill operator.

The Shimer Cutter Head

Is the one Head that will show results when placed upon your matcher or moulder.

It will make a record for you in matched single tongue and groove Flooring, exceeding in quality and quantity the product of any other tool and do it with less effort on the part of the operator.

SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

EDGINGS

Ontario

E. Cawley, sawmill proprietor, Beaverton, is advertising his business for sale.

Arthur Cook's residence, saw mill and a large amount of timber and lumber, at Devlin, Ont., were burned recently.

H. L. Merritt, of Stratford, Ont., has purchased the Chatham Bent Goods Works and is now making waggon and buggy material.

Mr. W. H. Langford, of Mt. Brydges, and Mr. Samuel Oakes, ex-reeve of the township of Caradoc, have purchased the planing mill business of Baskerville & Son, at Strathroy, Ont.

The furniture factory of Baetz Bros. & Co., at Berlin, Ont., was completely destroyed by fire recently, with a loss of about $30,000. The insurance amounted to $27,000 on the building and contents.

A permit has been issued for the new factory for the Continental Bag & Paper Company, at Ottawa, Ont. The building will be of solid brick, two storeys high, and will be 121 by 82 feet. Cost will be $30,000.

The old mill of the Rat Portage Lumber Company at Norman, Ont., was destroyed by fire recently, with five small frame houses. The mill was dismantled five years ago and not in use, so that the loss is trifling.

The two dry kilns attached to the extensive woodenware and basket factories of the Keenan Woodenware Company at Owen Sound, were burned recently. The buildings were full of staves and headings for tubs and pails. The factories and shipping warehouse were saved. The loss is variously estimated from $10,000 to $15,000, covered by insurance.

Mr. J. L. Leitch has commenced the manufacture of veneer wood, boxes and baskets at London, Ont. Twenty-five men are employed. Mr. Leitch states that if he can secure timber in the district he will locate a mill for the manufacture of veneer wood at London in connection with his factory.

The Canadian Cooperage Company, of Galetta, Ont., are figuring on erecting another stave and hoop plant, at a point which has not yet been definitely decided upon, as there are two towns desirous of securing the mill, and the company's timber is nearly equal distance from either of these two points.

The Hope Lumber Company of Thessalon, Ont., report that they are having an excellent season's business. They are running two shifts, 70 men being employed by day and 50 men by night. The daily output is about 160,000 feet of lumber. and a large quantity of lath. The mill has been entirely overhauled of late. The company recently built a large and comfortable boarding house for their employees, and an up-to-date stable; lengthened their trams and are now building a second dock from which the lumber from the south yard will be shipped. In all the company have spent upwards of $25,000 in improvements. It is understood that Mr. Foss, who is principal of the company, intends in the future to manufacture the output into the finished product, which will add about fifty men to the pay roll.

A company which will be known as the Meaford Transportation Company, Limited, is being organized at Meaford, Ont. A charter has already been obtained, the applicants for which were Captain J. F. Lunan, Col. H. R. Cleland, W. T. Moore, C. T. Sutherland and Homer Reid, the first three being the provisional directors. Every year there is carried to Meaford by outside boats probably ten or twelve million feet of lumber, the carrying charges for which would be of great benefit to the town if the business could be kept there. With this object in view, and with the intention also of taking contracts for the transportation of lumber to other ports, it is proposed to purchase a boat with a carrying capacity, approximately, of about 700,000 feet of lumber.

Eastern Provinces

The sawmill of J. Morrison, Montreal, was recently destroyed by fire.

C. J. O. Couture & Frere, lumber merchants, Amqui, Que., are stated to have assigned.

Recently issued Canadian patents include a patent for chain saw mortiser issued in the name of V. Varin, Montreal.

The Scott Lumber Company's sawmill, at Fredericton, N.B., operated by the Bank of Nova Scotia, was destroyed by fire recently.

The plant of the Miramichi Pulp & Paper Company, at Chatham, N.B., was recently damaged by fire to the extent of about $3,000.

A building permit has been issued to Rhodes, Curry & Company, of Sydney, N.S., for the erection of buildings for the Imperial Oil Company, on King's Road. Cost $2,000.

Fire destroyed three hundred thousand feet of lumber belonging to Hill Brothers at their mill at Folleigh, N.S., recently. The loss is estimated at $75,000, and is covered by insurance.

Paul Lea Company, Limited, of Moncton, N.B., who own a large woodworking factory there, intend to erect a branch warehouse at Compbellton, N.B., to meet the demand which will be occasioned by the recent fire.

The Blue River Lumber Company, Limited, with G. A. Forbes, of Montreal, at its head, has been organized to develop 65 square miles of timber on the North Thompson river, along the route of the Canadian Northern Railroad.

An extensive sale covering some 2,264,000 acres of timber and pulpwood lands in Newfoundland has been almost completed by Mr. Henry I. Crowe, a Newfoundland lumberman, to a well-known mine-owner interested in Ontario's northern mineral fields.

A company is seeking permission to construct a dam at Cascapedia, Que., and erect a lumber mill, the whole to cost about $200,000. Hon. Jules Allard, Minister of Crown Lands; Senator Edwards, H. G. Turner, engineer, New York, and Angus McClean, Buffalo, are interested parties.

The Cummings lumber yards, situated a mile above Maniwaki, Que., were destroyed by fire recently. Over 2,000 cords of pulpwood and seven hundred saw logs were destroyed. The mill being some distance from the burned area was untouched, but it is estimated that the damage will be several thousand dollars.

About 450,000 feet of timber has been cut in the vicinity of Lake Echo, N.S., since May 1st, by Gilroy Bros., owners of the lumber mills at Springhill. The timber is good quality and includes fir, spruce and hemlock. Since the middle of May, 350,000 feet has been hauled in. The daily turn out at the mills

is about 14,000 feet. It is the intention of Mr. Gilroy to keep the mill in operation until late in the fall.

A serious fire took place recently at Rooth Station, on the C.P.R. main line, between Fredericton Junction and McAdam Junction, N.B. Between 800,000 and 1,000,000 feet of manufactured lumber cut during last winter at a new mill erected there by John S. Scott, of Fredericton, was destroyed. The loss is estimated at between $15,000 and $20,000. The lumber, which was all white pine, had been sold to the A. C. Dutton Lumber Company, of Springfield, Mass., who were to make payment on delivery, which was to have taken place in a few days. The insurance amounted to about $10,000.

Western Canada

The Nicola Valley Lumber Company, of Cranford, is to build a new mill.

Fire near Creston, B.C., recently destroyed about $10,000 worth of timber and logs.

Kreyscher's shingle mill at Nelson, B.C., was recently destroyed by fire. The loss was about $5,000, with no insurance.

The B.C. Gazzette gives notice of the incorporation of The Dominion Sawmills & Lumber Limited, capital $5,000,000.

Horace Smith's sawmill near Comox, B.C., has been destroyed by fire, the loss being complete, as no insurance was carried.

For the timber limits of Three Valley and the sawmills of the Mundy Lumber Company, an English company has paid $1,250,000.

The Sprague Lumber Company, of Winnipeg, will locate at Fort George, B.C., and have recently made application for over forty acre sawmill leases in the country surrounding Fort George.

Serious bush fires are reported from the Lake Lumber Company's property at Galena Bay, Arrow Lake, B.C. The report states that the company's camps and supplies and two months' cut of logs are destroyed.

The Hill Manufacturing Company, Saskatoon, Sask., whose sash and door factory was totally destroyed by fire recently, will not rebuild at present. They are considering the advisability, however, of rebuilding in the autumn so as to be ready for the spring trade next year.

An extra provincial license has been granted by the B. C. government to The British Empire Lumber Company, Limited, with capital of $1,500,000 and head office for the province at Vancouver. Mr. A. H. MacNeill, Vancouver, is attorney for the company. The head office is at Montreal.

The Arbuthnot sash and door factory at Vancouver, B.C., was destroyed by fire recently. The factory, stables, sheds, stock, lumber and machinery were all destroyed, the loss amounting to $20,000, which was only partly covered by insurance. The factory had only been running a few weeks, but was greatly rushed with business.

The B. C. Gazette gives notice of the incorporation of the following companies: The Barkley Sound Power Company, Limited, capital $101,000; Newport Timber Co., Ltd., capital $400,000; British Columbia Log Brokerage Co., capital $100,000; Cranbrook Sash and Door Factory, capital $100,000; Portland Canal Lumber Co., Ltd., capital $50,000.

The work of the crown timber office at New Westminster, B.C., has been practically cut in half by the creation of an office at Revelstoke under the management of R. J. Katson. The new office deals with the railway belt, starting at a point about ten miles east of Lytton and extending to the boundary of Alberta. The Nicola valley remains under the jurisdiction of the New Westminster office.

Reports have recently been published to the effect that the Barclay Sound Cedar Company, which owns extensive limits on the west coast of Vancouver Island, would shortly erect a large mill at Port Alberni. These reports are incorrect, as the company do not intend increasing their plant at Port Alberni at the present time.

St. Louis parties have purchased 20,000 acres of timber in the vicinity of Port Renfrew, B.C., for a consideration of over $100,000. The deal was put through by C. C. Michener, president of the Red Fir Lumber Company, of Nanaimo. It is understood that a logging railway will be built from the property, the logging of which will commence shortly, to Port San Juan to provide water transportation in the event of the Canadian Northern choosing the inland route.

The Patterson-Eckert Lumber Company, Limited, and Macken Bros., of Chilliwack, B.C., have just completed transactions whereby they will dispose of their retail businesses to a new company, recently organized, which will be known as the Macken-Smith Lumber Company. The members of the new firm, W. L. Macken and W. I. Smith, have been actively engaged in the lumber business for several years. The new company will control the outputs of the mills operated by The Patterson-Eckert Co., and Macken Bros.

The North Pacific Lumber Company's plant at Barnet which has been closed since the fire in May last, is now ready for operation. The management of the mill took advantage of the destruction caused by the fire to thoroughly renovate their plant. The mill was always one of the largest and best equippped on the coast, but many improvements had been made in milling machinery since it was first built. The present plant is one of the most modern on the coast. The new mill will have a capacity of 125,000 feet a day. It is entirely operated by electricity.

Archibald Marshall, the timber expert sent to British Columbia by the Daily Mail of London, to report on the timber possibilities of British Columbia for that journal, left Vancouver for Quebec en route for London recently. Mr. Marshall is of opinion that British Columbia is going to experience a great advance in timber values, and that a prosperous time can be looked for. He is taking a Queen Charlotte Islands timber proposition with him to submit to his friends. This proposition provides for the purchase of timber licenses covering 29 square miles of timber lands in the Queen Charlotte group. Most of the timber is very high grade spruce, and it is intended to erect a mill at a site on False Bay.

The Mammoth Growth *of the* DISSTON SAW INDUSTRY

is not the result of chance; it is not because of priority in the field; it is because Disston Saws have been consistently good and consistently improved every year since the foundation of the business.

The pioneers who cut their way through the forests of the West, rearing cities where there were only wildernesses, relied upon the Disston Saw as one of their chief mechanical aids.

In every part of the civilized world to-day Disston Saws are in use, running the gamut of saw superiority from the smallest hand saw, butcher saw or hack saw to the largest circular and band saws.

Knowing how to make every particular saw best for the purpose for which it is to be used—and making the steel that goes into it also best for that purpose—and subjecting every one to rigid tests—is the chief "salesmanship" in the Disston business.

If you are unable to obtain the Disston Brand, write us and we will see that you are properly supplied.

For Sale to Close an Account
Crown Granted Timber Limits and Lands

in the

Province of British Columbia, Canada

The undersigned has received instructions from the owners who desire to close the account, to sell by private treaty

Forty Timber Limits and Lands

situate in the Salmon River Valley, West Kootenay, British Columbia, from thirty to forty-five miles north of the United States border, and upon, or contiguous to the Nelson and Fort Sheppard Railway which runs between Spokane, Washington, and Nelson, British Columbia, connecting with the Great Northern and Canadian Pacific Railways, and affording access to the United States and Canadian markets.

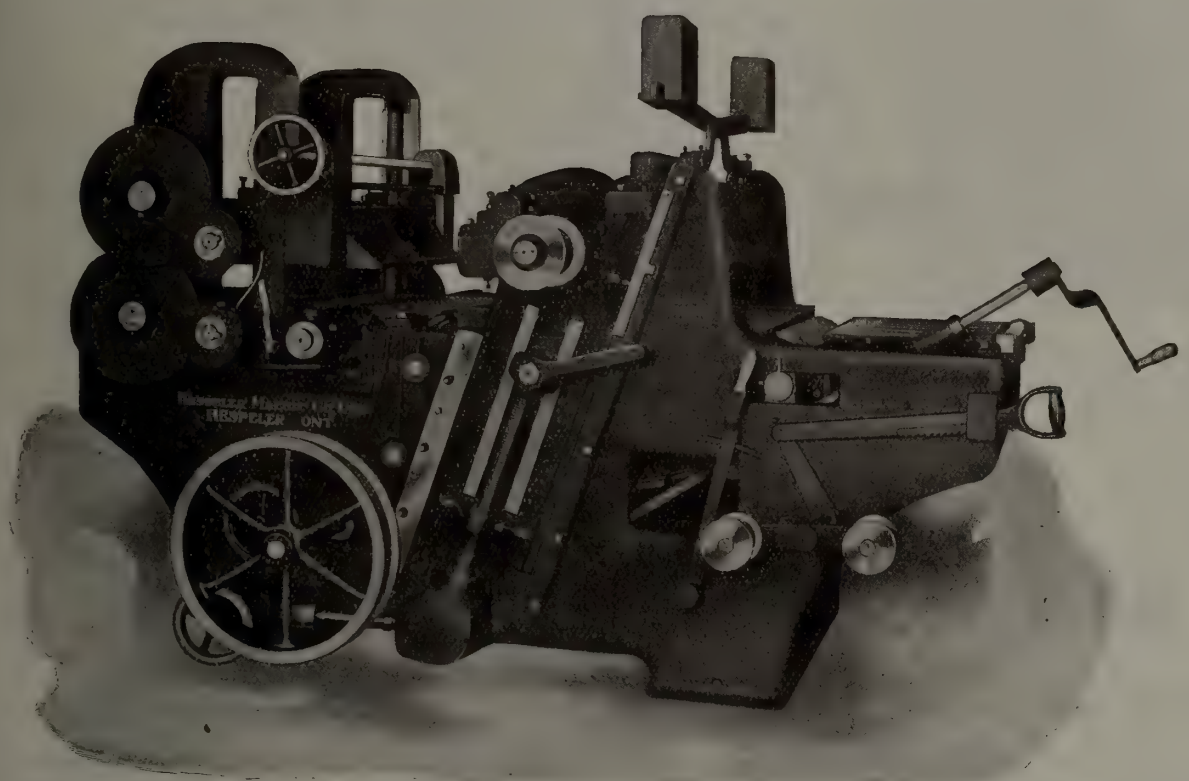
The limits contain in the aggregate thirty-eight thousand acres, and are comprised of bottom lands and benches of hills, constituting one of the best bodies of timber in the Central Southern part of British Columbia. Subdivision of the tract has hitherto been consistently refused. Individual limits contain from two hundred and fifty to twenty-one hundred acres, with from three million to forty-five million feet of Cedar, Pine, Hemlock and other woods of excellent quality upon them, in addition to large quantities of Cedar Poles—prices run from $5,000 up according to Stumpage and Location.

Some of the limits are essentially Cedar Pole Propositions, and contain large quantities of the very best quality of Cedar Poles from twenty-five to seventy-five feet in length, free of limbs

The properties are Crown Granted, and the timber upon them may be exported. The Timber is subject to a Royalty of fifty cents per thousand feet, when cut.

A considerable quantity of the land is available for fruit land when cleared, and the owners are prepared to give a deed of land and timber, or a license to cut timber only for a term of years, at the option of the Purchaser.

TERMS OF SALE:



In order to close the account, very easy terms of purchase will be given, namely, twenty-five per cent. cash, and the balance in four equal annual instalments, and twenty per cent. cash with balance in six equal annual instalments—interest at six per cent.—with operating privileges which will assist purchasers to pay for limits out of stumpage.

The character of the properties together with the easy terms of payment present a unique opportunity to persons of moderate means to acquire valuable limits for either operation or investment.

Prices and further information may be had upon application.

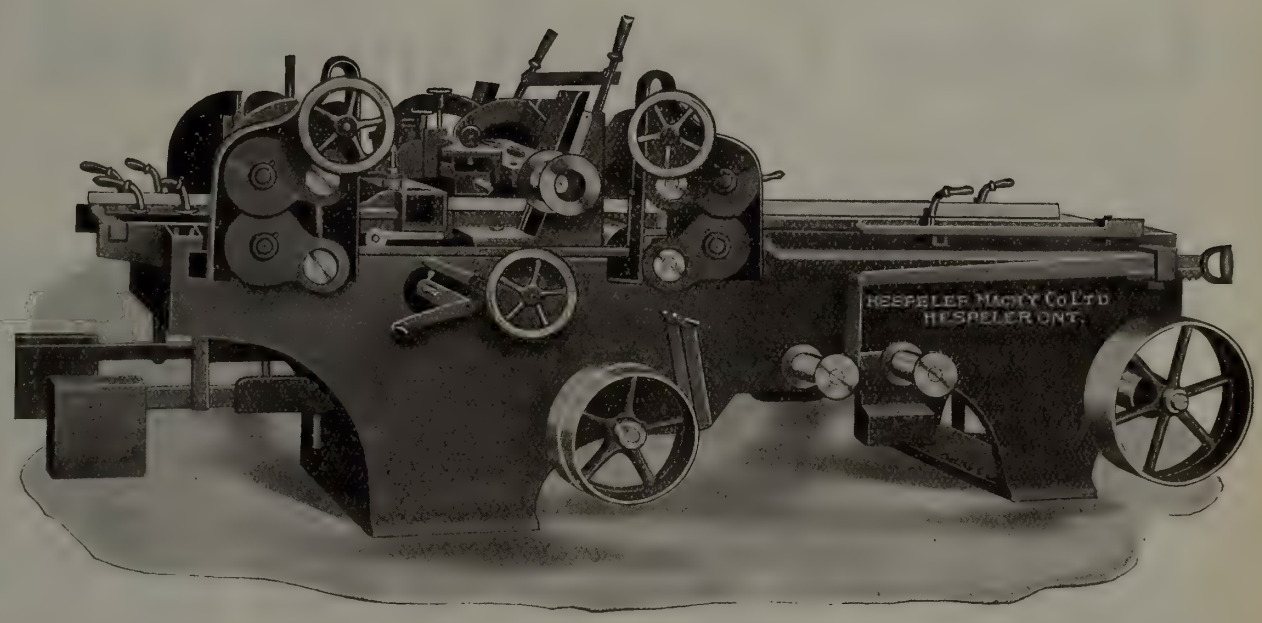
Hespeler Planers and Matchers Produce Superior Work at Less Cost and in Less Time



No. 31 Heavy Duty Double Cylinder Endless Bed Planer

If you want a planer to stand the heaviest kind of work this No. 31 is almost certain to meet your requirements. It is heavy and substantial, and has a capacity far beyond the ordinary machine. It is 26 inches in width and will take timber 14 inches in thickness. The Frame is extra heavy and well ribbed, the cross grits are all planed and strongly bolted together, and the whole frame is so designed so as to insure maximum strength and solidity.

No. 56 Single Cylinder Planer and Matcher

Shipping weight 5,000 lbs. This machine is of good design and heavy enough to meet all requirements within its capacity. It is free from useless trappings, but at the same time it embodies all conveniences and adjustments that are necessary, or desirable. It has a capacity to plane 24 inches wide, 7 inches thick and matches 18 inches wide. It has 2 changes of feed, 33 and 60 running feet per minute.

Complete outfits for furniture factories and planing mills supplied on short notice. Write for descriptive circular and any woodworking machine you may require.

Say Old Chap!

Do you know that I had quite a lot of second-hand machinery that was no use to me so I put a small "ad" in the **"Canada Lumberman"** and sold the whole line? The "ad" only cost me a couple of dollars and I got ever so many replies.

Why don't you sell those old machines of yours, there are lots of fellows who would be glad to get them?

The "Wanted and For Sale Department" of this paper is buying and selling second hand equipment every day.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

There's No Need to Argue

When You Have Stock That Speaks for Itself

"Quality Stocks" are the easiest and most profitable to sell—give the best service and the most satisfaction after being sold.

The man or concern working for a good name, satisfactory business, and fair profits handles "Quality Stocks." They speak for themselves and are their own best advertisement.

If you value the welfare of your business handle the lumber with a reputation.

INVESTIGATE THE NEW METHOD

No. 90 Planer, Matcher and Profiler

You can make the highest quality of flooring on the new No. 90 Planer and Matcher at 200 feet per minute. We will prove that you can do this. Our guarantee of proof is conservative because flooring has been run on the No. 90 at more than twice this feed in our own factories. The machine is built strongly enough and is powerful enough to stand up to a feed of 500 feet per minute—so when we say that you can run "A1" flooring at 200 feet per minute, you see that our statement is really conservative.

All your outline work (drop siding, beaded partition, lap rustic, V ceiling, casing, etc.) can be run on the No. 90 at 150 feet per minute! Think of it! And even at this very fast feed you will get better work than you can get from any moulder or four head matcher at 50 feet per minute.

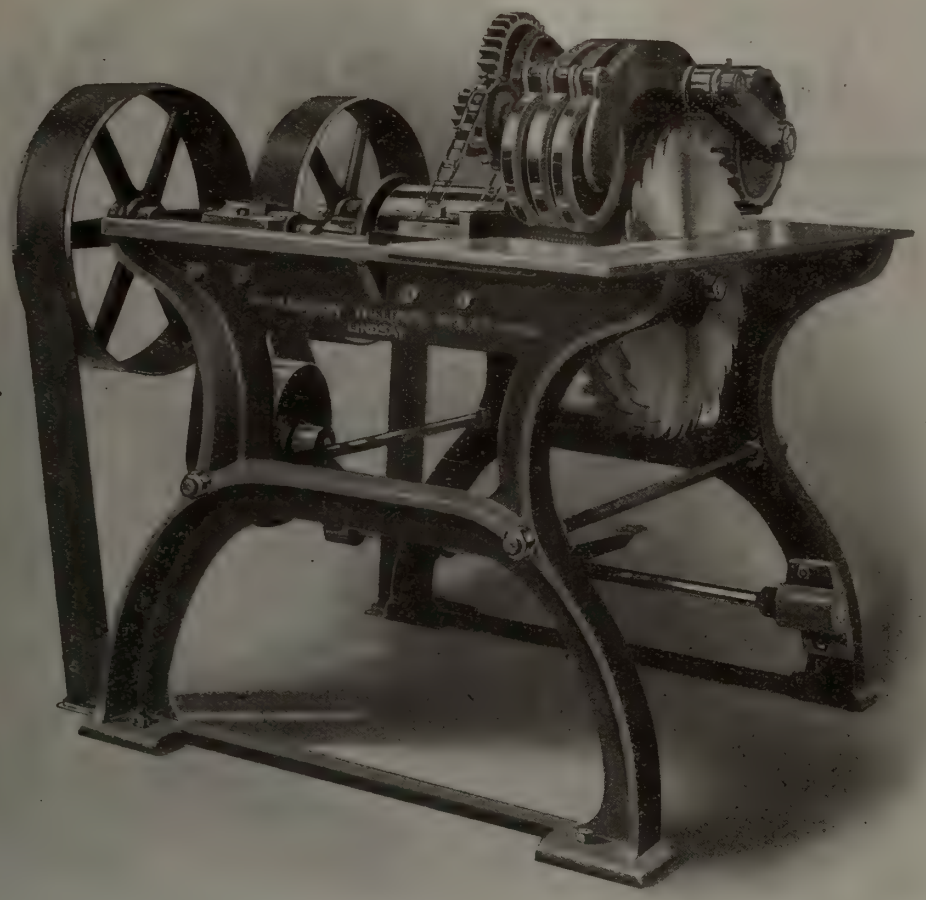
In other words, you can do much better work and three times as much of it with the No. 90 as you can get from any other four head machine. Stop and think this over! It means a whole lot!

The No. 90 is a simple, substantial machine built for speed and hard work. Every part performs a duty—there are no superfluous pieces.

The machine is equipped with the powerful Automobile Chain Drive.

It is also equipped with the "Berlin" 6-bit Round Top and Bottom Cylinders which will handle twice as much stock as a soft knife machine and at the same time save you 15 to 30 per cent. in grades.

For flooring, we furnish you 12-bit side heads especially designed for this fast feed work. At a feed of 200 feet per minute they will not tear out even the knots and cross-grained places as much as other heads will at 60 a minute.



If you have not received a copy of the June "Berlin Quality" Bulletin, you should write for it NOW. It contains four pages of description about this Fast Feed Working of Flooring and Outline. It is worth your careful reading.

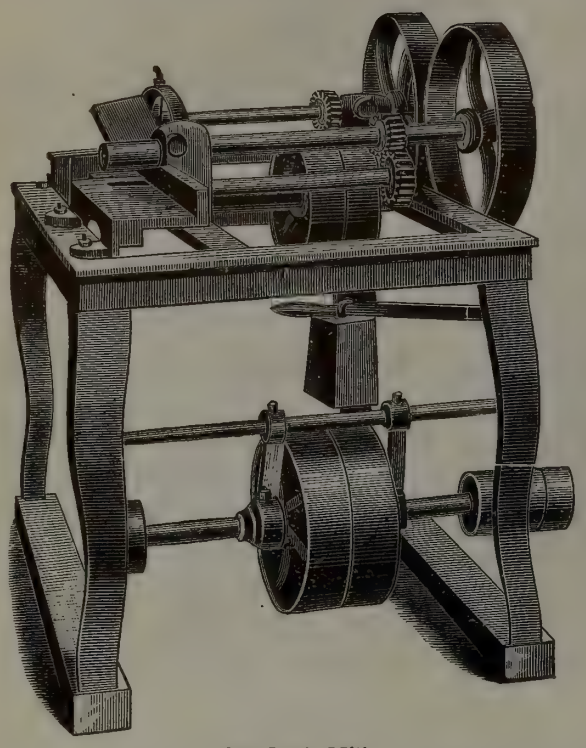
Hanchett Band Swage

Filers! Mill Men!



Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.

The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All

skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

One of the Best Investments for a Box Factory is a well built and modern Variety Saw

New No. 260 VARIETY SAW

It is a time and money saver, not only in manufacturing boxes and shooks, but a variety of other work will drift into a box shop occasionally, which only a **Variety. Saw** will be able to handle and the profits on these orders will usually put any returns from the choicest of box orders away on the shady side.

We call your attention to a brand new machine made especially for variety work in box factories, jobbing shops, etc. namely,

Our New No. 260 VARIETY SAW

This machine possesses advantages in quick and accurate adjustments over any other variety saw and will be found a decided improvement in Ripping, Crosscutting, Boring, Bevel Sawing, Cropping, Grooving, Mitering, etc.

We invite you to write for Circular 11-R which tells all about it

This Saw Stands Without a Rival

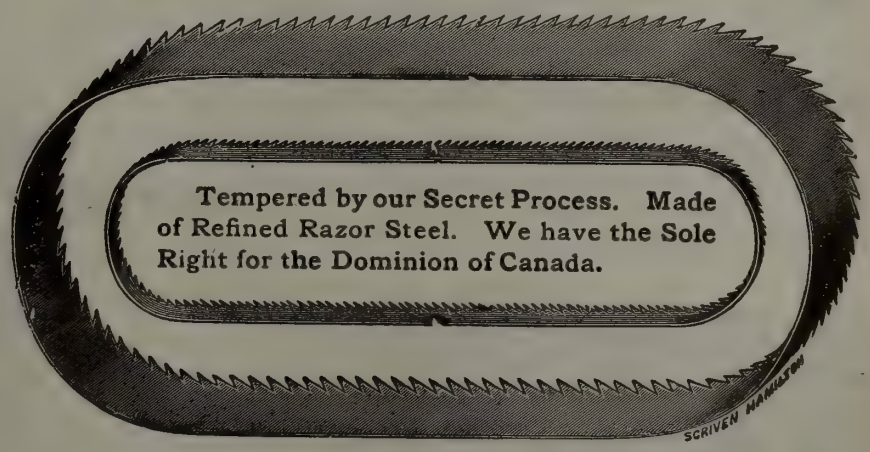
AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

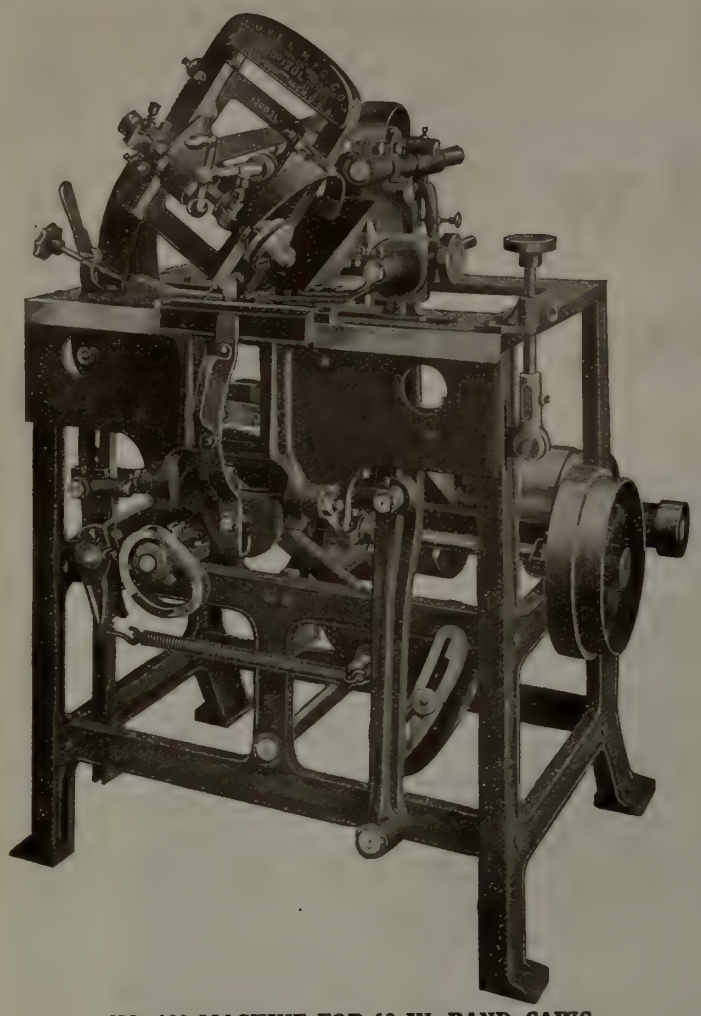


SHURLY DIETRICH, CO., LIMITED

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

Heavy Duty Lath Machine

This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.

The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

EDGERS

Garland Gang Edger

Built in all widths, and saws shifted by levers or hand wheels.
Will edge lumber perfectly and will handle anything up to six inches thick.
Notice how mandrel is carried at pulley end—the whole machine is made in the same solid manner.

Combination Gang Edger

How do you handle your small cants?
Is it costing you more than you think it ought to turn them into boards?
Here is a machine on which you can cut cants as large as eight inches thick into boards, and **at the same time** you can edge the lumber coming from your band or circular.
It is a very handy machine in a great many mills. Would you like to know more about it?

Dimension Bill Stuff in
Pine, Spruce and Hemlock
A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors
We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.
Door Making is our Specialty
We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**
Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.
If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

DURABLE FLOORS ARE MADE OF

Thin "Empire" Flooring

This flooring is 3/8 inch thick, just a little thicker than a carpet, and can be laid on an old floor without disturbing or multilating the interior woodwork. Also used largely in new buildings.

Carpets wear out. Hardwood floors last a lifetime.
Carpets are not sanitary. Hardwood floors conserve health.
Carpets soon fade and deteriorate. Hardwood floors are an asset of increasing value.
Carpets cause the house cleaning horror. Hardwood floors emancipate the housewife.

Your Customers Will Appreciate

Thin "Empire" Flooring

Please Send for Samples and Prices

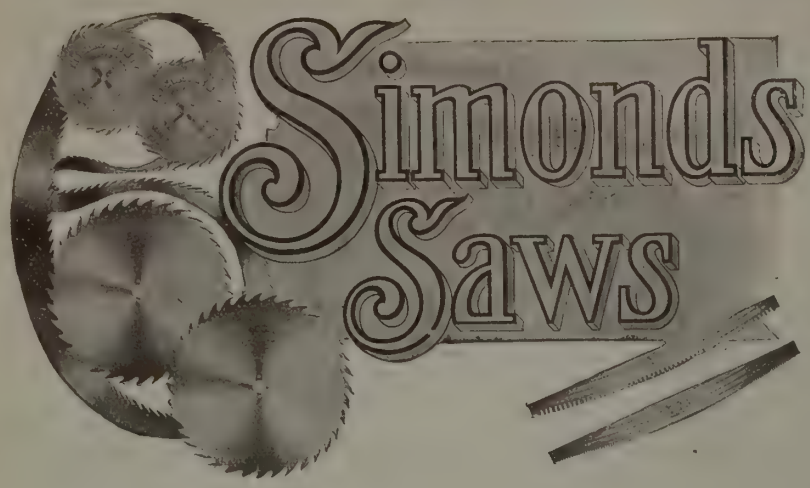
Shaftings, Hangers, Pillow Blocks, Friction Clutches, etc., etc.

Dodge Manufacturing Co., Toronto, Montreal



The Spark Extinguisher

shown in illustration was sold by us about a year ago to the Chicoutimi Pulp Co., Limited. It has been so satisfactory that we have just shipped two others to the same company for use at other mills. If you use wood for fuel you cannot afford to be without this apparatus. It is guaranteed to extinguish all dangerous sparks and will not affect the draft. Made to fit any stack or chimney.

SEND FOR ILLUSTRATED BOOKLET

Craig Street West, MONTREAL

This saw that represents the big economy whether Band or Circular, is not the one you pay the least for delivered down at your mill.

The frequency or infrequency with which they must be changed, and filed and tinkered with counts some, for this takes time, you know, the time that runs into money, and it is only the saws that are able to hold an edge and that won't crack, that make for economy.

Simonds Band Saws, because of the selected material used, their uniformity of temper, their hardness without brittleness, their evenness in grinding and strength of the brazing, are used in the biggest, busiest mills in the world for the sole reason that being so made they cut more lumber, stand more wear, tear, and hard driving, than saws of other make.

Your first order for a Simonds Saw, let it be Band, Gang, Cross-cut, or Solid or Inserted Tooth Circular, will make this so evident that it will never be your last.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, August 15, 1910 No. 16

Exports Show Extensive Increase

Statistics of Canada's foreign trade in lumber, as given by the report of the Department of Trade and Commerce, for the twelve months ending May 31, show an encouraging improvement. The exports of forest products for the twelve months ending May 31, 1910, were valued at $48,457,227, whereas, for the corresponding period ending a year previously, the total was $40,663,705. The figures indicates, therefore, that $8,305,000. The exports for the two years preceding that were: 1908, $43,656,320; 1907, $44,663,705. The figures indicates, therefore, that the trade has pretty well recovered from the period of depression which prevailed in 1908 and 1909. For the two months ending with May 31, the figures are equally encouraging, being as follows: 1910, $5,161,685; 1909, $4,221,491; 1908, $3,737,540; 1907, $4,251,590. The exports of forest products for the twelve months stand third in the list, being exceeded only by those of agricultural products and animal produce, and surpassing those of the fisheries, the mines, and manufactures. Imports of wood and manufactures of wood for the two months period were as follows: 1910, $2,644,329; 1909, $1,721,620. Of the 1910 total, $2,517,553 came from the United States and $57,676 from the United Kingdom.

Details of wood goods exported show extensive increases in every class except shingles, wood pulp and square timber. Shingle exports decreased from $429,969 in the two months ending May 31, 1909, to $291,383 in 1910. The decrease practically all occurred in the exports to the United States, and may be accounted for largely by the increase in the duty upon shingles entering that country. Exports of wood pulp for the two months were valued at $458,639 in 1910 and $494,072 in 1909. The greatest increase in exports is shown in planks and boards, for which the figures for the two months are as follows: 1910, $2,493,414; 1909, $1,876,713. Of the 1910 exports of planks and boards for the two months, those to the United States were valued at $1,690,444 and to the United Kingdom at $162,985. Exports of pine deals showed only a slight increase, the totals being: 1910, $173,296; 1909, $171,849. Exports of spruce and other deals were valued at $669,686 in the two months for 1910, and at $479,936 in 1909. Wood blocks for pulp were exported to the value of $684,635 for 1910, and $522,271 for 1909.

Fire Losses—A Plain Moral

The extensive losses by fire which have occurred during the last month or two in Canada among lumber mills and yards should carry a lesson to those who have anything to do with the lumber industry. Two instances may be taken as affording instructive texts for a sermon upon the importance of carrying protection against fire and doing all that is possible to prevent its occurrence. The fire which occurred in the Gillies Company's yards at Braeside, Ont., involved the loss of an enormous quantity of lumber. The disappearance of this lumber from the market cannot, of course, be remedied. It is a serious loss in itself, but its actual money loss has been so distributed by means of insurance policies in a great number of companies that it is not a serious blow to the lumber trade. In a comparatively short period of time conditions at Braeside will have been brought back to the normal and the business will be going along as though nothing had ever occurred. In Campbellton, N.B., the recent conflagration which wiped out the whole town originated, according to report, in the William Richards Company's shingle mill, which was itself completely destroyed. It is reported that this company carried no insurance, and that probably the mill will not be rebuilt. If such is actually the case, not only has a serious loss been caused by the destruction of the mill and the stock, but an important industry upon which many people depended for their livelihood has been destroyed. It even becomes a question, to what extent a company is justified in failing to carry insurance when the livelihoods of so many people are involved.

The gospel of fire insurance has been spread so widely by the insurance companies during the last decade or two that it is hard to understand the reason which induces the owner of a large industry, particularly amenable to fire, to fail to take so easy a means of protecting himself and all those who are concerned from ruin. The day was, not very long ago, when a lumberman might be excused from insuring because the rates of the insurance companies were exorbitant. To-day this has all been changed. In the lumber mutual companies insurance may be secured which is both safe and cheap. Profits to shareholders and large salaries to agents have been done away with ,and by educating the policyholder in the most effective methods of protecting his property from fire, much has been done to reduce the risk on lumber properties. Even greater reduction in the cost of lumber insurance will be made possible as the mutual movement grows. In the old days the profits on lumber were perhaps large enough to justify some manufacturers in neglecting the matter of insurance, but to-day profits have been reduced to a minimum and insurance is the only practical method of preventing complete business ruin.

Tally Sheet Order Withdrawn

There will be quite a feeling of relief among those sections of the lumber trade of Canada and the United States which are concerned in the selling of Canadian lumber in the country to the south of the border, now that the Treasury Department of the United States has decided not to insist upon a piece tally sheet accompanying each car of Canadian lumber which goes across the border. The following instructions have been issued by the Department regarding the matter: "On and after July 30th, 1910, Customs officers will require that the commercial description and kind of lumber, the number of pieces and the aggregate number of feet, board measure, laden in each car, shall be accurately stated upon entry, and also whether such lumber is tongued and grooved, rough or planed, and, if planed, on how many sides."

The order which made it necessary to accompany each car of lumber with a piece tally sheet was as follows: "On and after May 1st, 1910, officers will require importers to file upon entry of lumber imported by railway cars, a copy of the tally sheet showing the actual lading of each car, or, in lieu thereof, a specification of the number of pieces

of each size and length of lumber laden thereon, and also showing whether such lumber is rough or planed, and if the latter, the number of sides so planed. Unless such tally or specification sheet is filed as above required all cars containing lumber should be unloaded and the quantity of lumber contained therein ascertained by a tally of the number of pieces and sizes thereof, to be made at the time of unloading."

In the new regulation the "commercial description" referred to would cover the sizes of the lumber—that is to say—if it were 1¼ by 4 inches and up, 6/11 feet, this would be looked upon as the "commercial description," and is only the information that has been given heretofore by shippers. This modification of the order is the result of the recent visit of Mr. F. M. Halstead, of the Division of Customs of the Treasury Department at Washington, and the conference held in the office of the Consul-General at Ottawa between the Honorable J. G. Foster, Mr. F. M. Halstead and a representative of the Canadian Lumbermen's Association. This meeting was brought about as a result of the interest taken in the matter by Mr. Ward C. Hughson, chairman of the C. L. A.'s committee on Dominion legislation; Mr. Peter Whalen, of the Shepard & Morse Lumber Co.; Mr. W. M. Ross, of the J. R. Booth Co., and others.

If the regulation requiring the tally sheet had been left in force, Canadian exporters of lumber would have been subject to a vexatious and useless inconvenience. The object of the regulation was apparently to make sure that all lumber entering the United States was properly entered at the customs office and the full duty paid. It is not unlikely that from time to time misstatements are made by exporters from Canada or by United States importers. There is no question, however, that a very large majority of the lumber crossing the border pays its full duty, and that most of the people engaged in this trade can be depended upon to act honestly with the customs departmen.. It was unfortunate, therefore, that the department should have seen fit to introduce a measure which would have penalized the whole trade for the shortcomings of a few of its least scrupulous members. Under that regulation a great deal of difficulty would have arisen in connection with providing a tally for shorts and sidings of various widths and lengths. These classes of lumber are estimated in a general manner by the rule and are tallied in hundreds. A detailed statement could, of course, have been given, but it would almost have involved a greater cost than the value of the lumber itself. Fortunately the United States Treasury Department decided to make further investigation before enforcing the regulation, and they, no doubt, have come to the conclusion that, not only would the regulation be unjust, but that the same object may be obtained by the employment of a few secret service officials, whose duty it would be to watch suspicious dealers and make sure that the customs regulations are properly enforced. The decision of the department reflects considerable credit upon the executive of the Canadian Lumbermen's Association, who lost no time in bringing to the attention of both the United States Government and the lumber trade in general, the difficulties and injustice which the regulation involved. This is another of a long series of instances which prove very conclusively the great value of the Canadian Lumbermen's Association to its members.

Fire Prevention Essentials for Steam Power Mills

"Lumber Insurance," in its issue for July, contains the following timely and practical article upon fire prevention for steam power mill owners:—Are you doing everything practicable to keep your boiler room cut off tight from the mill or other exposed property? If you must have an opening, see that you have a fire door, and one that closes automatically. Do not permit the door to remain open even temporarily. A back-draught may occur or the promiscuous spark may get loose during the temporary opening. Is the shaving vault tight at all times when not opened in the regular course of operation? A stray spark lodging in a shaving vault causes the most serious effects. Keep the vault tight with an automatic closing door. Have an unfailing steam-jet or sprinklers.

Now is the dryest season of all the year. Do not wait for the insurance inspector to check up the condition of your private fire apparatus. Is the man responsible for the correct condition of your protection proving his reliability? He is not performing his duty if part of your barrels are temporarily half filled. Are the fire extinguishers properly charged? If it is over a year since the last charge their efficiency is doubtful. Have you "No Smoking" signs? Is there a sentiment among your men to observe the rule? Is the yard now in its cleanest condition, or are you allowing the busy season to jeopardize the interests of your anti-fire spirit? There are plenty of lumbermen who believe that the insurance companies' rating schedules do not take enough account of the "personal equation," believing that good management of physical conditions about a plant especially contributes to make the risk light. If you are consistent in thinking your risk belongs to this preferred class, the suggestions in this paragraph have already occurred to you, and have been acted upon long before the first of August.

To the lumberman who has never had occasion to call the fire department, would it not pay to try out the hydrant system about your plant? Do you know how many streams are available for effective service? Is the pressure all that it ought to be? Have you some dead end hydrants? If so, what would it cost to make the system circulatory? What is the most practicable way to bring about this improvement in your outside protection? If you find that it takes longer than you supposed for your department to prepare to resist a fire at your plant, consider whether it would not be wisdom to correspondingly improve the private protection. Had such a test been made by one lumber firm whose planing mill burned in May, the fire would have been extinguished with a very small loss. The fire broke out in glue pots. The owner immediately turned on the water through a one-inch hose connection to a "dead end" system; the fire was under control when the town department arrived at the nearest hydrant some distance away. The fire department innocently shut off the valve making the connection for the supply of the one inch pipe at the mill, then made it attachment and stretched the hose to the mill—only to find the fire then beyond control because the dead end connection had been cut off.

Make your fire department familiar with your plant.

Contractors Would Benefit by Stock Size Sash and Doors

The manufacturing of stock sizes of sash and doors was dealt with in a recent issue of the "Canada Lumberman," and the point was made that manufacturers would be well advised if they made a practice of discouraging custom orders as much as possible, and went in largely for the making of stock sizes. Any one who has been in the sash and door business during the last five years in Canada is well aware of the unsatisfactory condition of affairs which has prevailed so far as profits are concerned, yet no one, until quite recently, has taken it into his head to apply the remedy. The recent formation of an association of sash and door manufacturers in Ontario was the first step in the right direction. It is to be hoped that the men who have formed the nucleus of the association will receive the co-operation of all others who are engaged in this business, for without complete co-operation among a large majority of the manufacturers nothing will be accomplished. It is even to be hoped that the movement will not be confined to Ontario, as similar difficulties are found wherever sash and doors are manufactured and associations could profitably be formed in every province of the Dominion.

That this matter of encouraging the use of stock sizes is of great importance is borne out by the attitude taken by contractors and builders. In purchasing materials for a building the contractor will, as far as possible, try to get stock sizes, for he knows that the usefulness of the building and the satisfaction given by it to the owner will be in no way impaired by their use. He knows also, on the other hand, that

special sizes will not only involve extra expense, but will introduce an element of uncertainty into the work which it is his constant aim to prevent. As an instance of the practice of contractors and builders in this regard, the following extract is reproduced from "The National Builder," a publication which makes a point of presenting building matters in the most practical manner to its readers:

"The use of stock sizes of doors and windows is frequently advised. While this advice may be considered as applying more to architects than to the average carpenter, I think that we can all look into the matter of stock sizes not only of doors and windows, but of mill work generally, and of ordinary lumber.

"It might be desirable to have all of our work laid out by professional architects and to work entirely from the blue prints and specifications, but the facts are, that a great deal of common work is done without any blue prints or specifications, the carpenter and owner doing the planning, and doing considerable of it right on the job. For instance, the workman asks: 'How large is the window to be?' The owner wants it of such a size that it can be secured readily and economically at the local mill, but probably does not know what size that would be. It is the same way with the doors. In such case, the man who knows is appealed to whether his knowledge comes from long experience or from study, he has a great advantage over the man who does not know.

"To make my idea clear, a few words of explanation may be offered. Stock sizes of doors and windows, and in fact all mill work, are such sizes are made up in quantities and kept on hand, in stock, ready for immediate delivery when ordered. It will be seen that a mill can make up, say 100 or 500 doors of a given size and pattern much more cheaply than it could make the same number of different sizes.

"Having these goods already made, your order can be filled quickly and at the lowest price, while if you order odd sizes they must be made up. To do this, the machinery may need more or less adjusting and re-setting. All this takes time and must be paid for. A mill may have a good supply of every stock size, but if some one orders an odd size door or window it must be made, and the chances are that it will cost for time and labor, as much as several of stock size would cost for the same item.

"Of course, it is sometimes necessary to order odd sizes to fit the openings already made, and the mills must fill such orders, but there is no need of using odd sizes on new work."

The article concludes with a description of the various stock sizes of sash and doors, showing conclusively that the benefit of all concerned would be best secured by encouraging their use as much as possible.

Editorial Short Lengths for Busy Readers

Veneer has come to stay and shows an increasing popularity in all lines, but it is in the manufacture of panels that the most remarkable progress can be noted. So rapid has its adoption there been that the consumption of veneer for interior work is now probably four times as great as it was in 1907.

The Nineteenth Century Review for July contains an article by Arthur Hawkes, of Toronto, on "The Strength of American Enterprise in Canada," which is intended to show the English reader the immenisty of American investments and projects and their inseparable connection with the prosperity of the Dominion. Among other interesting statistics, the article estimates the aggregate of American capital invested in Canadian enterprises at $250,000,000, of which $58,000,000 is represented by mills and timber in British Columbia.

The Government of the Province of Quebec is reported to have prohibited the exportation of pulpwood from lands held by settlers on ticket. Where full payment for lands has been made, and ownership passes to the buyer, the prohibition does not apply. The action of the Quebec authorities is said to be the second step in their movement to prohibit the exportation of pulpwood, which is used largely in the United States for the manufacture of printing paper. A previous prohibition had been placed on the exportation of wood cut from Crown lands. Together, the Crown lands and settlers' lands have heretofore furnished about 47 per cent. of the pulpwood brought from Canada to the United States.

Every year brings its quiet season during the midsummer months, with a corresponding rush in the lumber business commencing about the first of September. Just as this rush begins, the wheat crop and other heavy crops in the country commence to move, merchants begin ordering in their stock for the fall and holiday trade, and a car shortage therefore congests business. This condition could be obviated if more of the retailers would place a part of their fall business during the month of August, and there would be, as a consequence, less trouble at both ends and in the middle of the line. Crop conditions and the general prosperity of the country determine the volume of lumber sales, and by the middle of July the stability of these business barometers may be estimated with a reasonable degree of certainty to justify placing orders for the fall trade.

Prompted by resolutions adopted by various associations of lumber manufacturers to produce odd as well as even lengths of flooring, ceiling, drop and bevel siding, finish, partition and molding, the United States Department of Agriculture undertook an investigation to determine the effect of this movement on saving in waste in lumber production. It was found that under conditions on the Pacific Coast the cutting of odd lengths would increase the output by 2.07 per cent. In the yellow pine district in the South, a possible saving of 1.21 per cent. may be effected. Estimating that planing mill products are about 22 per cent. of the total output of yellow pine, the figures obtained by the government investigation indicate that approximately 30,000,000 feet of planing mill material might be saved annually by manufacturing odd lengths in both saw and planing mill. At $20 per thousand, the value of this material would reach $600,000. In hardwoods it has been demonstrated that the saving would be even greater. The report shows that there is a reasonable basis for the manufacture of odd lengths, as there is a saving of wasted material in manufacture of odd lengths, as there is a saving of besides. If this is true in yellow pine, the same results would hold in the cutting of other woods, and it remains for manufacturers, retailers and consumers to get together and agree on means of bringing odd lengths into general use.

The forest service of the United States from time to time produces bulletins upon subjects which are of widespread interest to lumbermen. A recently investigated question may not perhaps seem extremely practical, and yet it does bear importantly upon the lumber trade in general in such a manner as to make the investigations along this line both interesting and valuable. The bulletin referred to gave the results of a study of the timber crop of an acre of land, in comparison with farmers' crops, as a freight producer. If statistics of this nature were compiled continually for a number of years, they would afford an interesting side-light upon the growth or diminution of the lumber business. The figures presented in this bulletin show that, next to cabbage, onions and potatoes, the lumber crop from an acre of land in a territory embracing Indiana, Illinois and Kentucky, yields more tonnage than anything grown in the cultivated field. Here are the weights set down for the various items, in pounds, per acre: Cabbage, 21,000; onions, 19,950; potatoes, 4,680; lumber, 3,000; hay, 2,710; corn, 1,728; barley, 1,219; oats, 886; tobacco, 877; rye, 848; wheat, 792. The method in which these figures have been reached is not clearly shown, and it does seem that 3,000 pounds per acre is rather small for a lumber crop; but probably these statistics have been gathered over an area which is very broadly inclusive, so far as timber growth is concerned. It would be interesting if similar figures were compiled in Canada, which would take into consideration the heavily timbered areas as well as those in the more settled districts. They would perhaps do something towards giving the public a proper appreciation of the importance of the lumbering industry to the commercial progress of the country.

The Timber Industry in Nova Scotia

Increasing Importance of Trade with West Indies—Pulpwood Resources Sufficient to Produce Nearly Two and a Half Million Cords Annually Forever

Specially written by our own representative

The outlook for the lumber industry in Nova Scotia this year is bright, and the amount of exports along that line promises to equal if not overreach that of last season, which was a good one for the Eastern province, when 225,000,000 feet were exported to the different markets.

Year by year Nova Scotia is developing a growing connection in lumber with the West Indies, where the lumber of the province finds a ready market. Last season the Pickford & Black line of steamships carried 1,669,693 feet from Halifax to West Indian ports, as against 1,228,958 feet for 1908, and from present indications the figure for 1910 will be far in advance of either of these.

The bulk of the Nova Scotian lumber shipments finds an English

A Nova Scotia Pulp Mill—La Have Pulp Co., Bridgewater

market, and it is claimed that there is far more lumber in comparison shipped from Nova Scotian ports across the water than from New Brunswick.

The three principal points of shipment in Nova Scotia are Parrsboro, Halifax and Bridgewater. From Parrsboro last year 55,000,000 feet were shipped, which practically represents the total cut in that section of the country. From Halifax last season 42,000,000 feet were shipped and from present indications that figure will be largely increased in 1910. Bridgewater is a most important shipping point, as well as

Nova Scotia Lumber for South America—A Shipment of 1,444,000 ft.

Liverpool, located about 30 miles farther down the coast—40,000,000 feet from the former and 25,000,000 feet from the latter having passed through customs in 1909. This will be greatly increased during this year, and it looks as if Bridgewater will be at least 20,000,000 feet ahead of 1909.

Unlike her sister province, New Brunswick, Nova Scotia's large timber areas are being gradually cut out and reduced, which accounts for the large number of portable mills operating throughout the province. The larger class of mills, which are to be found in great numbers in New Brunswick, do not play such an important part in the lumbering operations of Nova Scotia.

To give an idea of the forest product there, the following statistics show the names of the counties of Nova Scotia and the approximate area of forest lands: Annapolis, 166,000 acres; Antigonish, 100,000 acres; Cape Breton, 159,000 acres; Colchester, 251,000 acres; Cumberland, 226,000 acres; Digby, 120,000 acres; Guysboro, 181,000 acres; Halifax, 264,000 acres; Hants, 236,000 acres; Inverness, 291,000 acres; Kings, 73,000 acres; Lunenburg, 212,000 acres; Pictou, 155,000 acres; Richmond, 120,000 acres; Shelbourne and Queens, 107,000 acres; Victoria, 111,000 acres; Yarmouth, 65,000 acres; total, 2,800,000 acres.

As the cutting of the larger timber is being reduced the attention of the public is being more and more drawn to Nova Scotia as a source for the supply of pulpwood. The soil and the moist and equable climate are favorable to rapid growth of spruce. As an example of the pulpwood capabilities it has been stated on authority after examination that the section eight miles west and twenty miles back to the headwaters of Broad River will yield 225,000 cords. The second section, 11 miles west along the shore and north by West Brook a distance of 20 miles, will cut 175,000 cords. The third section, west of Granite River stream into Sable River and including the Tom Tigney, a distance along the shore of six miles and 25 miles north to West River, will yield 500,000 cords. The fourth section, west to Jordan River nine miles, and 25 miles to head of that river, will yield 400,000 cords. The fifth district, west of the Jordan to the Shelbourne 7 miles, to the headwaters 15 miles, will yield 250,000 cords. The sixth district, west of Shelbourne River to the Clyde 15 miles, and north 25 miles to the headwaters, will yield 750,000 cords.

Thus 1,200 square miles will cut 2,300,000 cords. It is usual to estimate an acre of fair land to produce 10 cords of wood. Estimating the burnt-over portions of granted land as equal to the producing portions of ungranted lands, there are for 2,800,000 acres a present growth of 23,000,000 cords of pulpwood. As the growth of this wood from five inches to eight inches requires about 12 years, it is a reasonable calculation that Nova Scotia could supply 2,333,000 cords per annum forever, if the fires were kept out of the forests. Against this the present annual local demands are: Sissiboo Pulp Mills, 6,000 cords; N. S. Pulp Mill (Mill Village), 5,000 cords; Le Have Pulp Mills (New Germany), 5,000 cords; St. Croix Paper Pulp Mills, 1,000 cords; McLeod Pulp Mills (Milton), 8,000 cords; total, 25,000 cords.

While the figures relating to the present extent of pulpwood growth are only approximate, it must be evident that if the growth be conserved by protection from fires, by judicious cutting and by replanting, the annual wood crop of Nova Scoia will compete with their great mineral output for the foremost place as an employer of labor and a producer of wealth.

While pulpwood is found in every county in the province, the localities in which it is chiefly cut are Queens, Digby, Shelbourne and Hants. Large quantities are also cut in Cape Breton for export. The demand has doubled the price within the past fifteen years. Both the demand and price are likely to increase in the future, so that the owner of a productive timber property is likely to make money by holding it and protecting it against fire.

Trade News from Eastern Provinces

Mulhall-Mack-McClearn, Limited, lumber operators, of Liverpool, N.S., are building a water sluice from their timber limits to the railway siding at Pleasant River, N.S., on the Halifax and South-Western Railway. The sluice will be nine miles long when completed. The company plan to cut 5,000,000 feet of lumber this coming winter at this mill.

The Sable Lumber Company, who are operating at Wilkin's Siding, N.S., have completed arrangements to sell their whole year's output to a large American boot and shoe manufacturer. The lumber will be made up into boxes for the American factory.

Mr. Geo. S. McClearn, of Liverpool, N.S., recently sold his Brooklyn property, located near Liverpool, to J. W. Lowe & Son, of Aylesford, who are building a new mill on the site. The mill will contain a rotary and stock gang, and it is anticipated that over 3,000,000 feet will be cut there this coming winter.

The Davidson Lumber Company, of Bridgewater, N.S., intend installing a rossed lumber mill in their plant at Bridgewater in the near

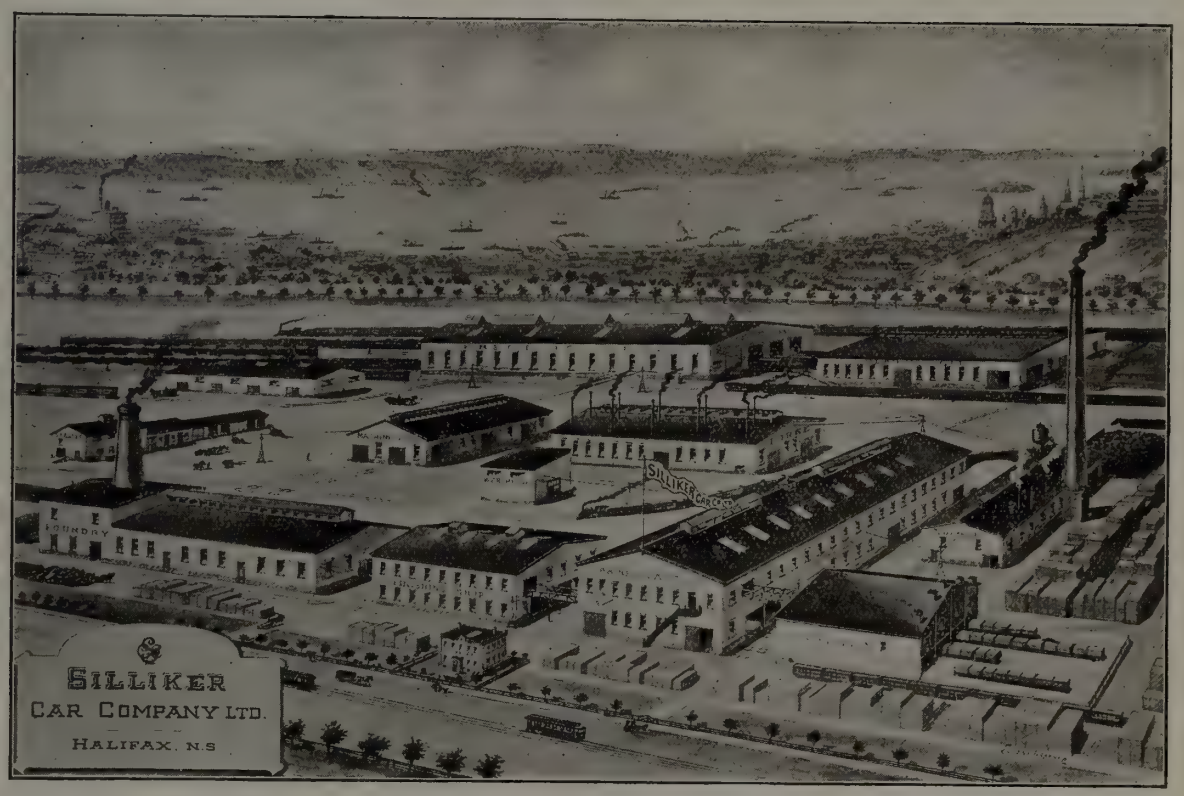
future. This company are now operating three mills, two at Bridgewater, and their largest one at Springfield. At their latter mill they have recently replaced their rotaries with band saws. Last year the company's output was about 30,000,000 feet, but the present year's output will be in the vicinity of 50,000,000 feet.

A Halifax despatch announces that the Andre Cushing lumber mill, at St John, and the extensive lumber limits and logs in New Brunswick, comprised in that property, have been sold by the Union Bank of Halifax to a syndicate headed by W. B. Tennant, of St. John. The Union Bank assumed the control of the property when the Cushing Company assigned and the bank took over the assets some months ago. The price has not been divulged, nor the plans of the purchasers, but it is thought the figure is in the vicinity of $300,000. An American firm offered a figure under $200,000, which the bank would not consider. The Cushing business was established many years ago by Andre Cushing, a citizen of the State of Maine. The mill at St. John is one of the best in the country. The claim of the Union Bank against the Cushings was about $750,000.

A Prosperous Nova Scotia Industry

Silliker Car Company of Halifax—An Extensive Consumer of Lumber—Mr. Silliker's Successful Career

Positively the greatest single industry in Halifax, and one of the most valuable to Nova Scotia, is that of the Silliker Car Company, Limited. No other industry in that city equals it in the number of hands employed nor in the amount of money paid out in wages. The company have only about entered their third year, yet their business extends all over Canada and Newfoundland, and they have on hand large contracts for freight cars, first-class passenger cars and sleeping cars for the Canadian Northern Railway, the Intercolonial and other transportation systems.



As a lumber consuming firm, the Silliker Car Company stands out prominently among Nova Scotia firms. During the year of 1909 over five million feet were used by them, comprising both hard and soft woods, and this year that figure will be much increased.

Not only do the company manufacture railway coaches and cars of all descriptions, but building materials of all kinds. Included in their plant is a woodworking mill, where, in addition to the preparation of material for cars, the general business of woodworking and cabinet making is carried on. This mill is equipped with all the latest machinery, enabling them to turn out the highest grades of office, bank, shop and church furniture and cabinet work.

The head of the company, Mr. C. J. Silliker, under whose practical management such splendid results are being obtained, is a native of New Brunswick, having been born in Bay Verte about 58 years ago. For the greater part of his life Mr. Silliker has been connected with the contracting business, and for fifteen years conducted a general contracting and building supply business in Amherst, N.S. From small beginnings he gradually rose in the business world, until, three years ago, he decided to move his plant to Halifax and add to it the car department, which is now being carried on so successfully. Mr. Silliker is a practical man in every sense of the word. He believes in direct supervision of all departments, and early morning till evening will find him at the plant, personally supervising the different departments of his extensive business.

C. J. Silliker,
President and General Manager,
Silliker Car Co., Limited

Selling to a Farmer

A well-known Western Washington lumber manufacturer has been having a controversy over some sales of lumber to a party who was not a regular lumber dealer in Eastern Washington. When the matter was brought to the attention of the manufacturer, he replied as follows:

"We do not know whether he is a farmer or a secretary of some lumber association, nor do we care. We did not ask him any of these questions; we are here manufacturing and selling lumber to the highest and best bidder. We consider we have no right whatever to protect any retail yard in any place where they do not buy lumber from us. This man came here with his bill for lumber and asked us to make him a price, which we did, and he accepted it. Now, we do not consider that we are duty bound to anyone, and we are thankful to say there is no man on the face of the earth has any strings on our business in any shape on manner. I own timber, railroad and mill, manufacture my own lumber, and sell it for the best price I can get. As I said to you once before this, we do not think we will go to Spokane or make any inquiries who we should sell lumber to; all we have to do is to look in Bradstreet and see how they are rated; if we think they are perfectly safe, we will ship our lumber to them. But will say this in conclusion, if any retailer, running any lumber yard, anywhere, buys any lumber from us we will protect him, but will not protect any yard where they do not buy lumber from us.

"Now, you can take this in any way you see fit. I have just given you my opinion of how I handle my business. It would not cut any figure if I did not sell any lumber nowadays. I have a good body of timber, and I think I would be as well off not cutting up. A little more I will say: I am not in favor of downing the market. I try to get as high a price as I possibly can for my lumber, but will say that I can put lumber on a car as cheap as any mill in the State; that is saying a good deal, but I can do it. That cuts no figure here nor there. That does not say that I will sell my lumber cheap. I think, when you consider the matter all over, you will think about the same as I do. I remember stepping into a yard one day and asking them what they were selling cedar shiplap for. They offered it to me for $25. Before I got through with them I offered to ship it to them for $17. Oh, no, they said, we can do better. Now, you see they were only getting $8 more than I was asking them. Should I protect those fellows, who never buy a foot of lumber from me?"

Free Pulpwood a Dead Question

Americans who Hope for Removal of Export Prohibition by Quebec, Laboring Under a Delusion

"It is reported on apparently good authority that Canada is willing to negotiate a reciprocity treaty." Where's your authority? The action of Canadian provinces in placing prohibitory exactions upon the export of commodities after the United States has applied the minimum features of the tariff doesn't smell overly strong of reciprocity.—Bay City Tribune.

I should say not. If the paper manufacturers and news publishers in the States believe there is going to be any reciprocity arrangements between the States and Canada, whereby the export of pulpwood will be allowed from Canada, they are simply nursing a delusion. Nowhere in Canada at present is the slightest interest being manifested in reciprocity, so far as pulpwood is concerned, and it has been pointed out that pulpwood is the "bone of contention."

There may be some international arrangement entered into, whereby Texas steers can be exchanged for Canadian horses, coal for iron ore, and cotton for cabbage or sunflowers, but there is nothing in the States that Canada can afford to swap pulpwood for, one very good reason being that it is beginning to dawn on the Canadians that they have but little more forest resources than will be needed for home consumption.

The people in general seem to know but little about the question, and care a good deal less. They are more interested in potatoes just now than planning for reciprocity, and it will require as many years to educate the masses up to the question of reciprocity as it will to explain the meaning of the term, "Conservation-of-our-natural-resources."

Hereafter, those owning timber in Ontario or Quebec provinces will be required to manufacture it in Canada, and that is all there is to it.

It ought not to need an order-in-Council to compel timber owners to do that which is manifestly to their own best interest. Any practical lumberman will tell you that the nearer you manufacture your forest product to the stump the cheaper you can do it, as a rule. Why not manufacture paper just as cheaply as possible, the same as we manufacture other forest products?

It will be no more a hardship for paper manufacturers of the State of New York to move their plants to the Province of Quebec than it was for the sawmill men to move their plants from Michigan and Wisconsin to Ontario when the timber was required "to be manufactured into lumber in Canada."

Only those who owned mill property and depended on Ontario for stock were affected. And this little bunch have been beseeching Congress at intervals ever since to enact some legislation that would force Ontario to allow sawlogs to be towed from Georgian Bay to Michigan waters, a business that has long since passed into history, never to be revived.

Those owning timber limits in Ontario found it more profitable to move their mills to the timber and manufacture in Canada than move their timber to the States to be manufactured there.

History seems to be repeating itself in the question of pulpwood supply for paper mills, and those interested in the manufacture may as well reconcile themselves to the existing conditions. Those having paper manufactories in the States, who are getting destitute of stock, will feel it a hardship to be obliged to move their plants to Quebec Province. But pulpwood, like any other commodity, must be obtained where it is, if at all, and not where it no longer exists.

Any country that is good enough to negotiate reciprocity with is good enough to do business in, and Canada is just as good as any. Every foreign corporation or individual has the same right to purchase property and carry on business and enjoy the full protection of the law in common with the native Canadian. Capital and labor are studiously encouraged and protected. A foreigner owning timber in Canada can cut as much or as little as he likes, transfer his title to others or retain it himself, so long as he obeys the law.

There is abundant water-power and timber for sale at a reasonable price now. And it will never go lower, but, on the contrary, must increase in stumpage value from year to year.

Minerals are being discovered every day, but the forests have all been discovered, and practical foresters know approximately how long the timber will last. But very few realize these facts.

O. E. Elsemore.

A census of the forest products of Canada will be taken on June 1st, 1911, which will embrace square, waney or flat timber, logs for lumber, and miscellaneous products. In the first class are included ash, birch, elm, maple, oak, pine, and all other timber cut as square, waney, or flat, which, in the enumeration, will be reported for cubic feet and value. Logs for lumber, which are included in the second class, are in such woods as elm, hickory, hemlock, oak, pine and spruce. They will be enumerated in the census by quantites of 1,000 feet board measure, with value in the same unit. Miscellaneous products of the forest include bark for tanning, fence posts, firewood, hoop and hop poles, masts and spars, piling, pot and pearl ashes, railroad ties, staves, stave-bolts and heading, telegraph poles (including telephone and other poles for electric wires), wood for pulp, and the furs and skins of forest animals undressed, and they will be enumerated by number or quantity and value. The census of forest products will be taken chiefly from farmers and the lessees of timber limits.

The lumber shed of the Rainy River Lumber Company, Rainy River, Ont., with its contents, the surrounding platforms and five box cars of the Canadian Northern were consumed by fire at midnight on Aug. 7. The united efforts of the brigades from Rainy River and Beaudette, Minnesota, were required to save the town from destruction. The loss is estimated at $100,000, partially insured. The shed was filled with finished lumber ready for shipment.

Supreme Nine and the Ancients

Import Subjects Dealt with at Recent Meeting —Proposed Changes Regarding Annual Meetings

A meeting of the Supreme Nine and the House of Ancients of the Concatenated Order of Hoo-Hoo was recently held at Chicago, at which Snark Hadley, of Chatham, Ont., presided. In his address, Snark Hadley referred to a number of important subjects which are at present under consideration. The principal of these was the death benefit fund suggested recently by Mr. Leonard Bronson. This subject was discussed by the meeting, and it was decided that the plan should be immediately put into effect through the Scrivenoter's office at Nashville. The death benefit plan involves a voluntary contribution of $2, which will be asked from each member of the order in good standing, to create a fund from which will be paid to the designated beneficiary of each subscriber who may die the sum of $250. Instant payment is to be made, with no further formality than proper identification of deceased. No health certificate is to be demanded.

In connection with the place of holding the annual meetings of the order, Snark Hadley said that it seemed to be the opinion of a large majority that the original date should be changed. He believed that this would be a proper move. He thought that they might consistently arrange for having the meeting at some central place, particularly along the Great Lakes. This would materially aid in having a larger attendance at future meetings. It would mean that the meetings would be held in such cities as Detroit, Cleveland, Chicago, Toledo, Mackinaw, Toronto, Duluth, and Buffalo.

The programme for the approaching annual meeting at San Francisco was approved. The meeting will open on Thursday, September 8th, and continue until Monday, September 12th. The programme includes a number of interesting side trips and a series of baseball games, as well as the regular important business sessions.

A resolution was adopted in accordance with Snark Hadley's suggestion about the place of the annual meeting, to the effect that a recommendation be made at the next annual meeting, that all future annual meetings be held at some one of the principal Great Lakes cities, and that the meeting be made the occasion of a week's excursion on one of the popular lake steamers.

Quebec Lumber Cut Statistics

The following comparative statement of timber, measured and culled, is furnished by the Supervisor of Cullers' Office, Quebec, under date of August 3rd:

	1908 Cubic Feet	1909 Cubic Feet	1910 Cubic Feet
Waney White Pine	669,840	622,560	438,360
White Pine	97,120	51,840	8,080
Red Pine	4,080	5,680	21,880
Oak	342,560	455,840	67,040
Elm	74,080	51,880	246,800
Ash	4,000	520	1,360
Birch and Maple	59,880	57,240	40,680

Telegraph Poles in Good Demand

The demand for telegraph poles in Ontario continues very strong, and as supplies are scarce the prices are firm, at the following, f.o.b. Toronto:

TELEGRAPH POLES.

25 ft. long, 6 in. top	$1 60	40 ft. long, 7 in. top	$ 6 00
25 ft. long, 7 in. top	1 90	45 ft. long, 7 in. top	7 35
30 ft. long, 6 in. top	2 10	50 ft. long, 7 in. top	9 65
30 ft. long, 7 in. top	3 00	55 ft. long, 7 in. top	12 00
35 ft. long, 7 in. top	4 75	60 ft. long, 7 in. top	17 50

Cedar posts are steady at 17c. for 8 ft. lengths 4½ in. and up.

Cedar ties are firm at 55c. for 6 in. and up face, 6 in. deep, No. 1, and 39c. for 5 in. and up face, 6 in. deep, No. 2.

THE WOODWORKER

The Care of Planer Knives

By J. Crew Taylor

It goes without saying that one of the most important points connected with the operation of a planing machine is in the care and adjustment of the knives. Machines can do bad work even with the knives properly ground and adjusted because of derangement in the bed, the feed rollers, chip breakers, or something, but they can't very well do good work unless the knives are properly fitted. So one of the first things for the novice in charge of a planing machine to learn is the proper care of knives.

The care of the knife really begins in its making and tempering, for knives are to-day varied in temper as well as in design to suit different kinds of work. There is a certain temper for hardwoods, another temper for soft woods, and then there is what is called a compromise temper where both hard and soft woods are being worked and the work all done on the same knives. The careful knife maker likes to be informed as to the class of work that is to be done with the machine so that he can temper the knives in such a manner as to insure their running and holding their edges longest. This means not only better work but less grinding.

Grinding—Proper Bevels

One of the first things a man has to learn is how to grind knives, how much to bevel them, etc. For smooth work generally the less bevel on a knife the better. That is, just make enough bevel so that the heel of the knife won't hit the face of the work. These are the natural points in knife grinding, however, that one would pick up and come to as progress is made in the work of caring for knives. Generally your knives and cutters are ground to a bevel that is twice the thickness of the knife. For example, if a knife or cutter is $\frac{3}{8}$ inch thick the bevel would measure $\frac{3}{4}$ inch from point to heel on the face of the bevel. This bevel may be varied as judgment dictates to suit local conditions. Only be careful about getting too long and keen a bevel, because, while it may make a machine run lighter, it doesn't add to the quality of the work and it makes the planer knife more likely to develop gaps.

With the modern knife grinding machines not much difficulty need be experienced in grinding knives to whatever bevel may be desired to grind them perfectly true. Also with a cup-wheel grinder one can grind a bevel on the knife perfectly straight or hollow it out concave to whatever extent is desired. Usually it is not desired to do much concaving, because this is the same in effect as grinding the bevel too long. It helps out, though, to concave the bevel slightly so that after the knife runs a while it can be whetted and made sharp again on the machine with a little work, whereas if it is ground perfectly straight, whetting would be quite a job or else it would necessitate snubbing off the point a little, which would make the knife run heavy and pound in the cut.

Not Too Fast

One thing to guard against rigidly in grinding knives is against grinding them too rapidly and thus taking the temper out. It is the easiest thing imaginable to get in a hurry and take the temper out of a knife by grinding too rapidly. When you see the edge of the knife turning blue or blue spots appearing on the face that is being ground, you may know from this that you are taking out the temper. Take it slow, that is the secret of good knife grinding. It doesn't cost any more either, the modern machines are made automatic, so you can set them to cut as slowly as desired and let them run. It is better to spend an hour or two grinding one knife than to burn a spot on it for the sake of getting it ground sooner.

In grinding strive to keep the planer knife the same width at each end. It don't matter if there comes a gap in one end, and seeming that end needs more grinding done than the other. Grind the knife down just the same its full length. This is essential to keep a good running balance in your knives, because if they are ground until they are wider at one end than at the other, and consequently heavier on one end, even if you do make the knife on one side of the head balance with the knife on the other side of the head there will not be what is termed a true running balance. There will be an unequally distributed weight which sets up a strain on the cutter head. So keep your knives the same width from end to end. Or, more correctly speaking, the same weight or as near as you can from end to end.

Balance the Knives

As soon as the knives are ground and you are ready to put them on the machine, we come to a point where practice divides itself. Some whet the knives up perfectly before putting them on, and others prefer to put them on the machines and do the final whetting afterwards. This, however, is a matter which you can be governed in by your own inclinations and experience. The first thing to attend to is to see that the knives are marked pairs, the ones that go opposite each other, and then lay the knives and the bolts and washers in place just as they go, and see that each pair balances, one with the other. Don't take it for granted that because they were carefully balanced before they can't be much out of balance in one grinding and let it go at that, but make sure. Balance them carefully, and if there is the least bit of difference in the weight get rid of it. If the difference is in the knives, measure them carefully and see if the heavy one is broader on one end than at the other. If it is, grind it off on the back top corner of the heavy end. Or if it is longer than the other knife, you may grind it off at the end itself. If the difference in the weight is in the bolts or washers instead of in the knives, make the corrections in them; don't grind the knives to humor the bolts. Usually bolts and washers that come with a machine are all carefully made of exact size, and consequently balance very nearly so that they do not require any attention. In the course of time, however, when some bolt may be strained or broken and it is necessary to put in a new one, the balance may be disturbed by this means; then one should look carefully after these bolts and washers. If a new one is put in, have it made not only exact in size, but make it weigh exactly the same as the others, no matter how much time or work it might take to do it. It is only by careful attention to these small things that one can insure perfect work at the planer.

When it comes to putting the knife on the cutter head the first problem that presents itself is that of how far to let the edge of the knife extend beyond the lip of the cutter head, and the next question is what means to use to insure setting both ends of the knife and all the knives on the head so that they will extend the same distance and cut evenly with each other.

Proper Extension

The first problem, that of how far a knife should extend beyond the lip of a cutter-head, is one that lots of ink has been used in arguing about by technical writers. These discussions have thrown considerable light on the subject, even though they have never resulted in any unanimous opinion as to the extension which is best for general work. The same theory applies here as applies in the use of a hand plane. In the hand plane with the cap that tightens down on the bit the practice is to take the jack plane used for roughing off and set the cap back $\frac{1}{8}$ inch or more so that the plane will cut freely and clear itself readily. The smoothing plane used for finishing off on the other hand has the cap set down very close to the edge of the knife, sometimes as close as 1-32 inch, so as to insure smooth work and break the shavings quickly, so as to prevent the bit digging into the wood. That's the way it is with the knives on the cutter-head, the lip of the cutter-head occupies the same relation to the knife that the cap does on the bit of a hand plane, and for rough work and light running the knife may be allowed to extend anywhere from $\frac{1}{8}$ to 5-16 inch. But for smoothing planers, where it is desired to do nice work, the knives should be set back close, say, extending something like 1-16 inch beyond the lip of the cutter-head.

Adjusting the Knives

As to what means one should use to insure getting both ends of the knife set out the same and keep the knives all set the same, so that all may cut evenly, there are a dozen different methods and appliances. The old-time method is to take a finely graduated rule and measure from the point of the lip to the point of the knife edge for the primary setting, then after whetting, make the final test by putting a smoothly dressed strip on the bed-plate, usually two strips being used, one on each end or near the end. These are put under the cutter-head and the bed adjusted so that the knives will just barely tip the face of the strip, then by carefully turning the cutter-head each knife can be adjusted. Where one shows a little out either way the bolts can be slacked just a little and the knives set, either in or out, by a light tap with the hammer. The later practice for this work involves the use of rigid gauges for setting knives, some made to hook over the back of the cutter-head and extending over the body of the knife to furnish a stop gauge in front of the edge. There is, in fact, a great variety in gauge designs, and some are gotten up elaborately for very accurate measurements and undoubtedly assist materially in not only setting knives correctly, but in getting the work done in less time than is required by the older method. It has come to be recognized of late years that this knife setting is really the most difficult job about the adjusting of a planer, and there are technical experts who claim that it is really impossible to set four planer knives perfect enough with even the best of gauges that each knife will cut exactly the same as the other. In fact, this idea had so strong a hold that at least one well-known manufacturer of planing machines has designed machines in which, after the knives are carefully set with microscopic gauges, they are then put in operation and jointed off while

in the machine to get all of the edges absolutely even. This, however, is getting down to finer points than the new man in the business, especially the man operating a small plant, will probably go in for at first. Still, they are good things to know about, because it gives one a better understanding of the great care that should be taken in fitting and adjusting planer knives to insure good work.

Safety and Saw Guards

Again we refer to the subject of saw guards, says Factory Items. One of our most valued employees was noticed a few days since running a saw with the guard carefully laid away. Being asked why he did not use it, he replied, "I never thought of it."

The editor supposed that he had harped upon this subject so much that it never would be forgotten, but it seems that not enough has yet been said. These guards were put on the machines with the intention that they be used whenever possible, and you MUST use them.

In this connection it will perhaps be of interest to state that the factory manager recently enquired of the "New York State Commission on Employers' Liability and Causes of Industrial Accidents" as to the responsibility of employers in connection with accidents where guards were provided but not used, and was advised that in all laws providing for compensation or insurance of workmen against accident by employers there is a provision excepting accidents due to "the gross and wilful misconduct of employees," in which classification deliberate failure to use guards duly provided would come.

We therefore reiterate our recent statement that we will not assume any doctor's bills nor pay for lost time arising from accidents due to this cause.

Dry Kiln Experience

As a rule, men in the shop are not very much interested in what the yard-men do with the mill product, be it flooring, finish or framing, but sometimes things are advocated that are so at variance with what we of the mills know is good and safe practice that it makes one think it is no wonder we get kicks at times on the matching of flooring or ceiling, or that some people get in all sorts of trouble by trying to do things the nature of which is a profound secret to them, says a writer in Woodcraft. It has been advocated as a good thing to have a "warm room" to store lumber in to keep it dry and in good condition. To get this room dry and warm it is said to be a good thing to havea stove or heater of some kind, to maintain the heat and in many respects make of it a dry-kiln. It is not many steps from this "hot room" to an actual dry-kiln, and on the possible merging of the two hangs a tale—not such an appendage as graces a mule, but rather one that might be called "a tale of one city."

Some time ago a certain mill-man who had come into the possession of a dry-kiln concluded that the argument of a hot room to dry dressed stock had in it all the earmarks of a success. When a customer made a big kick about the presence of too much moisture in a big lot of pine flooring he had ordered and was ready to lay, the thought came to this mill-man that here was a chance to demonstrate the usefulness of the kiln and satisfy a customer. The flooring was hauled back from the building and carefully piled in the kiln. At the end of two days this mill-man had on his hands a lot of flooring that was dry, but the pitch in the pine had all been drawn to the surface and had exuded and hardened, leaving a coat that required running through the machine again to remove. As the flooring shrunk more or less and was of an unequal thickness, the machine left it in a state that defied matching. It is not out of place to suggest that yard-men try to get the kiln or hot room at work on stock while it is in a rough state, especially if handling yellow pine or when confronted by the same difficulty as is here related. The drying of finished stock is quite a different matter.

How Much Steam for Stave Bolts

The question of the proper amount of steaming for stave bolts was discused by "The Barrel and Box," in a recent issue, and a correspondent, writing upon the subject, says: "While I agree with you that most manufacturers do not steam their bolts sufficiently to cut smooth staves, there is danger of steaming the bolts too much. As an instance of this, through the carelessness of some of my help, I found the bolts from one of our steam boxes had been steamed too much, and the results were as unsatisfactory as an under-steamed bolt when these bolts were cut into staves. An examination of the staves showed that a bolt steamed too long has too much of the life taken out of the wood, and causes the stave to cut in a manner known to the trade as 'feathery.' While the feathery stave would not be objectionable for certain classes of trade, yet it could not be classed as a No. 1 stave, and consequently, with bolts that are steamed too much, you have the same results as those that are steamed too little, viz., a smaller percentage of No. 1 staves. My experience in the stave business has lead me to believe that one of the prime features of the business is knowing just how much to steam stave bolts, and unless they are properly steamed, no manufacturer, regardless of his equipment, is able to produce the best results and get the largest number of No. 1 staves out of his stock. I hope slack stave manufacturers will give this matter careful consideration, as it is to the interest of all of us to see to it that the highest grade stock is made in every mill in the country. This will go a long way in boosting the barrel, and it is a matter that we need to look to with more serious thought than any other feature of the business at the present time."

I don't think there is a factory or mill of any sort anywhere in which men will not or do not carry matches in their pockets, and this is particularly the case where young fellows are employed and the cigarette is in evidence. In my travels through the northern part of this country I have had many people ask me if Southern mill men did not smoke a good many cigarettes. A man doesn't have to go South to see them. There are more of the vile sort smoked in the North among the mill men than in the South or West, because—there are more boys to smoke them. But carrying the matches to the shop is what I am writing about. One of the rip sawyers had a habit of carrying his matches in his watch pocket, tips down. One day he got busy and rubbed those tips together, and in an instant his oil-soaked apron was blazing. He rolled in the shaving pile to put out the fire, and that set them off, and we had the hardest sort of a time to save the shop. The damage to the shop was nothing, but the amount of skin that man had to wait on to grow back taught him a lesson on the match subject, and incidentally broke him of smoking.

Crowley.

Logic of the Resaw

That little, insignificant machine known as the table ripsaw plays a more important part in connection with saw milling than formerly; also, it is made better use of in factories working up lumber, says The American Lumberman. The ripsaw is a simple machine of comparatively few parts, but it has probably been improperly used more than any other machine connected with woodworking. This applies to the ripsaw not only as a single ripsaw on a small table, but to the ripsaw used as a side edger, and to the gang ripsaw used as a ripping machine proper and as a gand edger in the sawmill.

The most common fault in connection with the use of the ripsaw is the using of too much saw. According to the true logic of the rip, a man should have only enough saw extending above the table to reach through the thickness of stock being ripped. Means to this end are provided in some of the modern ripsaw rigs by having appliances either for raising or lowering the saw mandrel, or for raising or lowering the table to adjust for different thicknesses on the same saw. Where these attachments are not on the machine, provision can be made by the use of saws of different diameter to cut the different thicknesses required. Instead of resorting to this means as much as we should, however, it is too commonly the practice to use large saws, and to use them just the same on thin stock as thick, while smaller saws that would do much of the work better than the larger ones are thrown away. This is bad policy and false economy for a number of reasons.

The greatest improvement ever made on the ordinary table ripsaw is the power feed, with a driven roll behind as well as in front of the saw. Why this is the greatest improvement ever made can be easily demonstrated if the safety of the operator of the ripsaw is taken into consideration. The ripsaw is one of the most dangerous machines of sawmill or factory, and most of the danger comes from material catching the back of the saws and throwing the stock and strips at the operator, who stands in front. The power feed ripsaw, with its driven roll behind as well as in front, furnishes about the best provision that can be made against this throwing-back tendency of the ripsaw, especially if it is made heavy, so that it will hold firmly and feed out both the strip and the ripping, so that it may not be shaken or pulled into the saw by the careless boy or man taking away behind. Besides this factor of safety, which is, if properly looked at, the most important factor, are enough advantages in having a power feed ripsaw with feeding out roll behind, as well as feeding in mechanism, to make it worth the extra cost. Those users of ripsaws who give the subject careful study realize this point and buy the better-equipped saw tables.

As an explanation of why others do not use the better class of ripsaw more extensively, and why manufacturers do not push this type more than the smaller and less expensive ones, it is claimed that the buyers of ripsaws look too much at the first cost, and it is difficult to get them to pay enough extra for the better machine. The desire for economy on first cost was probably once good logic from a business standpoint, but the situation and sentiment of buyers are undergoing a change.

The ripsaw is being called more into play in connection with working up lumber at the sawmills, in working up scrap stock, and in the hardwood flooring plants, and the machinery using public realizes the advantages of the properly equipped power-driven machine. If the signs read right the public will do more buying of this class of machinery than it has heretofore. The most important point in connection with ripsaws is more than the matter of initial cost, which, after all, is a small item in the life of the machine.

The Retail Dealer and His Problems

Importance of Little Matters—A New Association Idea

Small Things are Important

A retailer in any line of mercantile business has necessarily to do with a good many small things during a day's business, but, though smaller in themselves than others of a directing nature, they are just as essential to the success of the day's work, says C. H. Ketridge in The Mississippi Valley Lumberman. We vary in our ability in this regard. One man may make an excellent "boss," and yet be a failure in the carrying-out of details. I presume that in the majority of retail yards the owner or manager has to exercise both of these functions of being "boss" and detail man all in one. He bosses himself in this respect, and where such a one is found, you can bet he is a first-class man. Many such are not easy to find. I have often run across men who were most efficient in looking after and carrying out the mass of details, but were poor hands to initiate and direct any general policy of a business. Yet these very same men are absolutely necessary to carry into effect the plans and policies of those who have only the planning and guiding ability.

The majority of yards require but two men to do the business; the rest require three or more. Where this is the case the second man becomes the yard foreman, and on him is usually placed the responsibility of seeing that the details are properly carried out. However this may be, though, the head of the concern should know enough of these little details himself to be able to see when and where they are being neglected, or otherwise. But this does not mean that he should do all the thinking and cause the yard man to become a mere machine in doing things precisely as he is told. If he does this, he has a whole lot of fret and worry on his hands, and the yard force never knows when they are doing the right thing. The result is that there are many times when things are at a standstill in the yard because the men don't like to go ahead until the boss is there to tell them what to do, and how to do it. Of course you understand, I don't mean that there should be a diversity in doing the things about the yard, and that every man should be his own boss, because such a course would be fatal to the collective unity that should exist between the employer and employe. Every man about the yard should be made acquainted with the general idea of what is wanted and required of him. The main point in the doing of anything about the yard is the quickest and best way to do it. But when you come to insist that a man shall climb a pile or handle a board just so, and all do the same thing in the same manner, you are trying to do something that cannot very well be done.

"How" is less Important than "What"

There was a time in my life when if a man didn't do a thing exactly as I would do it I didn't consider he was doing it right. But there came a time when it dawned on me that if I continued to think so it would make me a "fussy" individual all the rest of my life. You know of such "fussy" people, who potter around and find fault if everything is not precisely as they would have it. This is a most disagreeable habit to get into, but it is common with that class of people who are afflicted with what I call a clear case of an exaggerated ego, and allow it to be in prominent evidence in their relations with everybody. You often see it in some of the old carpenters and other mechanics who come to your yard. You cant' tell them anything, for they know it all, and are tenacious in wanting their own way. There are more or less cases of it, too, among the old lumbermen, who wouldn't adopt a better way of doing things because of this affection of swelled ego.

After all the long, long period of years of painstaking effort and torture in the process of learning to write, that has been the lot of every school child, it has remained for Chicago's woman superintendent of schools to say the sensible thing to the pupils in the matter of handwriting: "Write any way you please," says Mrs. Young, "but write legibly and fast." Had this been the rule during the past generations, what trouble, what sticking out of tongues, what cramping of fingers and rapping of knuckles by the teacher would have been saved, and our handwriting would have been just as good.

I have quoted this example of uncommon common sense as an illustration of what is often needed in our practical business methods. I have often told my employes that if they had a better way than mine of doing a certain thing to go ahead and use it.

Most of you probably know there is quite a knack in the handling of lumber with the minimum exertion of muscle. Some men will make very hard work of it, and still not accomplish as much in piling as another will do who doesn't seem to be working very hard. These men need showing, of course, in a general way, how to save motion and space in their action, but let them do it right-handed or left-handed as long as they do it well and rapidly.

While I am talking about piling, I want to say a few words about something I learned years ago from a yard man who had done hardly anything else in his life but work in a lumber yard. When he was piling boards I noticed that when he put a board on the pile he took one step back, grasped the end with his thumb and forefinger and with one motion shoved it to its place, leaving it to project the right distance over the lower board, about three-eighths of an inch. I practised on that trick for several days before I got the hang of it, and I have taught it to several men since then, and it has been no small saving in time and labor to me.

Take a look at your men and see how they handle themselves in putting boards or dimension on a pile. If they are piling from a stack in the alley, they will make several motions before the piece is placed on the pile, then they will make two or three shoves before it is in place. Just watch how they do this, and count the motions they go through, and then figure up how much time is wasted every day unnecessarily in tthe simple act of placing lumber in pile.

As I have gone around among the different yards since I quit piling lumber with my own hands, I have thought that an instructor in the art of piling was badly needed in some of them, and I've no doubt in the least that it would pay every line yard system to employ an expert in the handling of lumber to go over their whole system and give some or all of their yards a few days of instruction in the easiest and quickest methods of handling and piling all kinds of stock. Hardly an item can be mentioned but that there is a knack in handling it that is a saver of time and an avoidance of injury. It is a common thing to hear said that it is just as easy to do a thing in the right way as to do it otherwise. The dealer who has a sloppy-looking yard has not saved any time or work in having it that way. The man who piled his lumber worked just as hard and consumed as much time as he would have done if he had known how, and the easiest way to have done it properly. It is a mistake to think that slipshod methods are the cheapest. It need not cost a penny more to have lumber piles plumb and even at the sides, and at the proper angle at the ends than to have them "wobble-jawed" in shape, as you often see them in some of the don't-care yards. Yet the owners of the latter will tell you, and verily believe what they say, that it costs too much to be so particular about the looks of things. I would like just here to branch off and say something on the psychology of appearances, but I'm on another trail now.

Keep Doing Things in the Same Old Way

How curious it is that we will slip along year after year all our lives and do the same thing and in the same way as we have been doing without stopping to ask ourselves the why and the wherefore of it. I thought something like this the other day when looking over a large retail yard, and seeing the piles straight up from the ground instead of the usual pitch toward the alley. As is customary with me when I want to find out certain things, I didn't go to the office to know the reason for this method of piling. I went to the yard foreman direct, and asked him why he made his piles contrary to the usual way. He looked at me, and in a smiling way he answered me by propounding this question: "Why, isn't the lumber at the back of the pile as good as that in the front part?" It was a clever answer and a correct one, and contained as much as though he had taken half an hour to explain. Of course a man who knew nothing about lumber or lumber yards would have needed this half hour of explanation, but I saw the point in a flash, and then I remembered seeing the same method of piling in a hardwood yard. At the time I only saw it with my eyes, and the impression went no further. It did not penetrate for enough to stir up the interrogatory "Why?"

So it is with a multitude of other things in which we keep on doing and never realize why we pursue the same old line of continuity in doing them. If you were to be asked why you do certain things in a certain way, about all the reply you could make would be to give a woman's answer, "Because." There are times when we see an old familiar fact in a different light then than we had ever before thought of.

A resident here was telling me the other day of an incident which had occurred recently with him, and which interested me greatly. He said he was driving out with his family one evening, and one of the children, a boy four years old, kept up a continual questioning about various things that attracted his attention. Among them was the horse he was driving.

"I told him," said he, "that he must always be kind to the dumb animals and never abuse them. Turning and looking at me, he said, 'Papa, if you love your horse, why did you cut off his tail?' It was

poser," said he to me, "for I had never looked at a bobtail horse from that point of view before."

This story came into my mind as I was thinking about this subject of piling. Bobtailed horses are commonly seen here in the city, and we are so used to seeing lumber piles in a yard with the front ends pitched toward the alley that we don't mind it until we go into a yard where they are all piled straight up and down.

But the Back Ends Suffered

When I first had anything to do with lumber piling I was told that it was piled this way so that water would drain off without entering the pile, and of course I accepted this as the proper way, and for a very good reason. Then, again, I noticed, too, that it was the usual custom with every other lumberman. So I too fell into line, and tried my best to learn how to make a lumber pile look symmetrical and all piles have the same angle of pitch, and after much practice it became comparatively easy. But notwithstanding, I always have piled my lumber after the usual form of pitiched ends, I have frequently discovered the fact that while the front end of the pile was always dry, the back end of tthe pile was always the reverse. It was either slightly damp or downright wet and soggy. And in the case where it was getting down nearly to the bottom of a pile that was of slow-moving stock it was more or less damaged. I have at times found the ends of boards or dimension so badly damaged from rot that I had to cut them off, and still the front ends of those same pieces were as sound as when first piled. Seeing this so often convinced me that a slanted and pitched pile did not prevent the stock from becoming damaged. Practically speaking, the sides and front end of a lumber pile are always dry, but the back end is hardly ever in such condition, excepting, of course, during a long-continued period of dry weather. One great reason for this chronic state of dampness at the back end is the carelessness in piling and the neglect in taking care of it. The front end is always in view, but who ever goes to the back ends of his piles in the middle section of his yard unless it is to put a lath in place when he is piling. There is hardly a yard but where one-half of the stock is suffering more or less from this kind of neglect. As has been said, the back end of a pile is just as valuable as the front end, and why, therefore, should it not receive the same attention? Another thing, the extreme front end rests solidly on the foundation, while the back end sticks over its foundation from six inches to two feet or more. This may be all right in a shed, but out in the open every length should have its own support at the extreme back end just as it has at the front. The trouble is, where it projects over the support more than twelve inches it is apt to sag, especially in the case with the boards. The ends touching each other keeps out the ventilation, and in time they become mouldy in consequence. I have seen twenty-foot boards piled on ground supports that were intended only for sixteen-foot lengths. The ends sagged so much that they were almost solid in the pile. Every time it rained the end of the pile was so thoroughly saturated that it never had a chance to dry out. In stripping the pile for ventilation, the strip, whether a lath or inch stuff, is placed at the extreme end in the front end. This is to prevent the water from running down into the pile during a driving rain, and being thus placed directly over each other, the ends are kept in perfect shape. But how is it at the back end? The strip is never placed but at varying distances from the end; usually it is laid over the support beneath. That is, it is supposed to be so; but go out and look at your own piles and see if it is. Lumber is trimmed now to even lengths. Therefore there is no good reason why the stripping at the back end should not be the same as at the front. And if hardwood is piled in perpendicular piles and kept dry, I don't see why the soft woods cannot as well be piled in tthe same way. There is no question but that we are coming to the time when we will have to exercise more thought in taking care of our stocks. We have followed too long in the old rut of custom of present time methods of yard piling. And you and I know that there is great room for improvement in this particular.

A New Idea for Retail Association Work

A new idea has been broached by the secretary of a lumbermen's association, and that is, that the retailers' organizations take up with the plan of employing an expert to visit around among the trade and coach the different members on tactics and other things calculated to help build up a trade and increase their chance for profit, says the St. Louis Lumberman. In other words, follow out in a different manner the plan of some of the sawmill associations, of having somebody go around and see how the different members do business, and from seeing and observing, give pointers here and there, and straighten out tangles and make suggestions for advertising, for displaying, and about the kind of stock it is best to carry, how to handle it, and so on.

There is nothing in this idea reflecting on the intelligence of the average retailer, nor is there anything in it that should generate an antagonistic feeling, a feeling that every man is able to take care of his own affairs and doesn't need the advice of an expert or anybody else.

It is simply in keeping with modern ideas of progress and uniformity in pushing business. For instance, a man undertaking work of this kind should himself be well informed; and then he gathers other information as he goes along until, when he comes to a retailer's yard, he is able to tell such things as what are the best sellers in windows and doors, what offers the best chance to develop trade with the least amount of capital in hardwood flooring, and give pointers about storing and caring for stock.

It is not only that, but many other things are entering into house-building besides lumber. There are many side lines that are handled by retailers, and probably many more than can be, and in some sections these are probably of increasing importance and may grow into even bigger things than the lumber business itself. Indeed, there are some places where, if a lumberman does not take up with things of this kind, he will eventually find himself nearly out of business. Here is where he could get enlightenment from a properly qualified man visiting and going over his trade with him; get enlightenment as to what is what in his various offerings, and what is doing in this and that section of the country, and, in short, get enough good reliable information to pay him back several times for his yearly dues to the association.

This is only half the idea. The other half would come with the future gatherings of the associations. When this interest is once aroused right at home, when new ideas and changes are desired, and the retailer gets to thinking over them he will soon become anxious to discuss various points pertaining to the business in the gatherings of his fellow-men, and out of it should be eventually developed points of more interest and value even than those of the past.

Retailers Cultivating the Farmer

Nine out of ten retail dealers who have had a good summer's business made a feature of looking after small orders, and especially of cultivating the farmer trade, says The American Lumberman. Those who have gone out among the farmers have fared better than those who have stayed in to figure against competitors on big jobs about town. The rural trade has yielded excellent returns, judging from reports of those who have catered to it persistently.

Methods of cultivating this small order country trade vary. Some dealers with large stocks, equipped to take care of all business coming their way, put men out in the country districts to cultivate carpenters, contractors and prospective builders.

One retail firm consisting of two partners, at home with all kinds of people, in a locality surrounded by truck gardeners, many of whom are German, tells of excellent results by a somewhat different method. This firm cultivated carpenters and contractors, but made the strongest feature of driving out into the country every evening after business hours. At road houses, where the truck farmers assemble for their beer and after-supper chats, the partners would stop, mingle with the truck farmers, spend a little money and make themselves congenial. They knew how to do it, and the amount of business they developed in this way was remarkable.

This practice enabled the partners to do a good business during a period that was very dull in the city, where competition was very sharp. The same tactics would not apply to many localities.

It is a matter of studying localities as well as methods when it comes to cultivating the farmer. One thing these partners did might be copied by others: delivering lumber in their own wagons to distant country points. The charge for delivering was included in the price of the lumber. Delivery served as an advertisement for their business; every load of the selling concern printed in large letters on it, a device which, in several instances, brought direct results.

On one thing all who have cultivated this trade agree—country customers are less inclined to change than those in the city. Once a customer is treated right and becomes impressed with the fact that the dealer is straight, he is not likely to figure with somebody else. Some farmers are as inveterate bargain hunters as the shrewdest city buyers, and some take delight in going to every lumber yard to get prices on lumber to build a cow stable or a hen house, but these are the exceptions. The rule is for the farmer to stand by the men who treat him fairly. It is a good point to keep in mind and to follow up during the fall and winter, when there are time and opportunity to prepare the ground.

Some dealers, instead of sending out calendars and things of that kind, are arranging to send out books with a few house plans, particularly with designs, plans, pictures and suggestions for barns, poultry houses, gates, fences, and various kinds of stock buildings. Some of these are gotten up by publishing concerns which produce them in large quantities and print the dealer's name on the covers, and are both interesting and valuable. Bought in quantities, they are not much more expensive than calendars. Frequently they inspire building and improvements that otherwise would never have been thought of. The time soon will be here when the matter of literature and souvenirs for the holidays should be considered by the dealer. It is well to advertise intelligently and with purpose instead of just making a dive at it in the dark, and guessing. Inspire the trade to build, and educate it where to go for the stuff with which to build.

CAMP DEPARTMENT

The Breaking of a Rifle River Jam—A Tale of the Drive

Jim Foley was a top loader in the winter, a river driver in tthe spring and a fighter and lover of adventure at all times. He was absolutely fearless and cool under any and all circumstances, and would readily court danger for fun, money or fame. At the time of this story Jim Foley was 26 years of age, and it was his eighth season in the woods and on the Rifle River drive, in Michigan, in 1882. He was six feet one inch tall in his stocking feet, and rangy and strong as a moose. It was in the days of great lumbering prosperity in the Michigan woods, and the Rifle River, a swift and important tributary of the Saginaw, carried millions of feet of white pine to the mills at Bay City and Saginaw every spring and summer.

The winter in the woods had passed off without special incident, and the drive was on the way. Sixty million feet of logs were crowding the swift and tortuous Rifle River. The freshet, which had given the drive considerable impetus, was beginning to diminish, and every effort was put forth to keep the timber moving as steadily and rapidly as possible in order to get the greatest benefit from the high water, which would not last very long unless more rain should speedily fall, and that could not be depended on. The Rifle River Boom Company was under contract to deliver the timber and was under an expense of close to one thousand dollars a day, so there was every incentive to activity. When the logs were inclined to jam the key to the obstruction was quickly broken, and the logs moved on. But they suddendly came to a stop, and it happened at night. The logs moved down the river during the night a mile or more, and the tired river drivers awoke at dawn to find the 60,000,000 feet jammed in the river as if they had always been there, and the swift water curling and spouting through the mass. The cause of the jam was not hard to find. A great oak tree that measured four feet in diameter at the stump had fallen across the stream at a narrow point, and owing to the crowded condition of the river the logs had become jammed. The great oak was bent about three feet out of line by the pressure of the logs in the river, but it did not break, for the butt and top of the tree were firmly held by standing trees on each shore.

Edward Mullen, the veteran riverman and foreman of the drive, looked at the tree with knitted brow. Drivers to the number of 125 waited for orders. Mullen swore fluently, as big, kind-hearted men of action often do when confronted with vexatious problems and things do not go right.

"Somebody has got to go out in the centre and cut that oak tree until she breaks," said Mullen, casting his eyes over the group of hardy rivermen. "I won't ask any man to do it, for we all understand the peril that goes with the job, but I imagine that in this body of men there is one who will volunteer to turn the trick."

There was silence for about ten seconds, and then Jim Foley, with a grim smile and care-free manner, stepped forward. Every eye was upon him; and not a man in that crew but realized that what they were likely to see and hear would be no child's play.

"How much is there in it, Mr. Mullen?" asked Foley.

"Fifty dollars," was the prompt reply.

"I will cut the tree where you tell me for fifty dollars, providing it breaks with one to five strokes of the axe. It will be ten for every additional stroke."

"It's a bargain! Get busy and cut it at about the middle of the river."

A double-bitted axe was handed to Foley, and he thumbed its edge with the same care as did Sir Walter Raleigh the axe of the executioner, and whom history says remarked that it was a sharp medicine but a sure cure for all diseases. The situation with Foley was not unlike that of the celebrated Raleigh; for there was a bright prospect that the axe which he held in his hand would be swung to his own undoing. No man that ever stepped forward to lead a forlorn hope was looked upon with greater admiration and respect than was Foley by his rough-and-ready comrades of the river.

Foley went about his task without hesitation. He spoke a few words privately to Mullen, and the latter nodded emphatically a number of times. Jim had a sweetheart in Bay City, and he had several hundred dollars coming from the work in the woods and on the river. Nobody ever knew for sure just what Foley said to Mullen, but it was strongly suspected that he was willing his wages to the girl in case he lost his life when the jam broke.

A silence fell upon the group of rivermen as Foley, after shaking hands with Mullen and the others, walked out upon the great tree that formed the key to the jam, and was holding the river full of logs for miles. There was no spirit of bravado in his manner. He stopped at about the centre of the river and turned an inquiring eye shoreward to Mullen. The latter understood and merely bowed. Foley turned for an instant and looked behind him to note the lay of that terrible mass of timber which crouched like a wild beast to leap and crush him. He then swung around, face down river, and sank the sharp blade of the axe into the tree. Every man on the shore counted the strikes with breathless interest. A few of Foley's special friends ran down the shore and scattered out to be of possible assistance to him when he should go into the water. Mullen's face showed white through the bronze, but that was the only thing that disclosed to his men that he was deeply moved by the peril in which his duty as foreman of the driving crew made it necessary for him to place Foley.

One thing that increased the interest for the onlookers and the peril for Foley was the uncertainty of how many strokes of the axe the tree would stand before it yielded to the pressure against it. The chips began to fly under the powerful strokes of the steel in the hands of Foley. Twenty-eight strokes had fallen, and the cutting was in about six inches, when the tree gave way, breaking with a great rending sound. The excitement of the men on shore was so great that to this day no two of the spectators give the same account of what happened. There was no time for the daring Foley to run ashore on either end of the severed tree. He was seen to go into the river feet first. Whether he deliberately leaped, or lost his balance and had to jump at the time, is not known; but he and the first log to get started out of that mass of timber were together in the river, and in a moment Foley was on top of it, riding it down the swift current, while behind him came tumbling the great grinding mass of logs that had been released. There was a sharp bend in the river a quarter of a mile down, and the log which Foley was riding went close to the shore, when he leaped off and swam to safety. He was just in time. In less than half a minute that part of the river from which the daring driver had found refuge was filled with the rushing mass of timber.

Mullen shook Foley warmly by the hand as soon as he could get to him. "God bless you!" said the old river foreman, "you are one of the gamest men I ever saw. I am proud to know you. It was twenty-eight blows that you struck, and it means $280 for you when we get to Saginaw that you have earned extra this day."

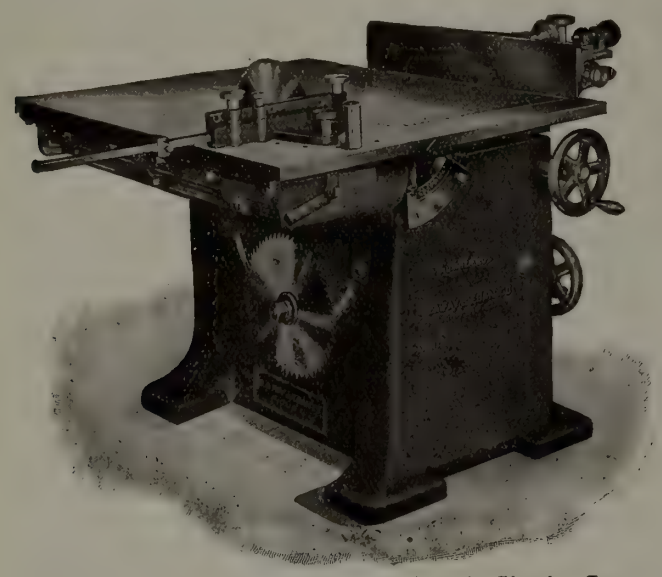
Foley took his honors with becoming modesty, but he was never the same reckless character afterward. He quit drinking and carousing when in town, and seemed to take a saner and more wholesome view of life than before he underwent that terrible ordeal in front of the great log jam. He married his Bay City sweetheart, but what has become of them is not known by Joe Kenny, who told the story, and who was one of the crew that saw him cut the log.—The American Lumberman.

Reducing the Cost of Loading Logs

Our company is using two loaders, built on the same principle, but operated differently as to the use of hoisting power. Our loading devices are extremely simple and inexpensive, yet very effective and rapid. They consist of two gin poles about eighty feet in height, erected on the opposite side of the railway track from the rollway. The rigging is manipulated from these gin poles, and consists of three single blocks and a five-eighths inch line, the tail hold being on the gins. The logs are handled by grabs used in both ends of the log, which swings to the car in one operation. One of the advantages of this device is that a built-up rollway is not necessary, the logs being delivered from the chutes on to skids, at the outer end of which is a brow skid, or bumper. By our method of loading, a log of any desired or particular length can be taken from the indiscriminate pile, an advantage of considerable importance in the loading of a train. We are using the same device at another rollway. Here, however, the hoisting apparatus is portable. It consists of an engine, mounted on an ordinary logging truck, and attached to the tender of the locomotive, from which steam is taken. We find that our devices save a great amount of time, which is ordinarily consumed in loading by other slow and more or less uncertain methods. —C. A. Taylor, in The Timberman.

A British Columbia lumberman, who is righteously incensed by the ignorant talk about lumber trusts, has the following to say: "I defy anyone to name any other necessity that is subject to such variations in price as are noted in the lumber business. The newspaper editor will send out half-a-dozen reporters, if necessary, to verify the details of an elopement or scandal, but no pains are taken to test the truth of the lumber monopoly yarn. I'll wager that if they sent half-a-dozen to as many Vancouver mills with specifications for a dwelling, the tender price of each would be different, and there would be a considerable variation between tthe highest and the lowest, despite the fact that we are supposed to have a price list."

Machinery and Equipment



What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

Double Circular Saw

The accompanying illustration shows a very useful tool, made by the J. A. Fay & Egan Co., 465-485 W. Front St., Cincinnati, Ohio. This is a combined ripping and cross-cutting machine, constructed on lines distinctly different from other machines of the same kind.

Both saw arbors are carried on a revolving frame, and it is easy to take off or put on saws without disarranging the table. Two saws up to 16 inches in diameter, one on each arbor, can be carried at the same time, and the frame revolved; or, if only one saw is used, it may be as large as 20 inches in diameter. The table is made in two sections—a moving section 44x15 inches, moving easily on frictionless rollers, and a stationary section 44x20½ inches, the latter having an extension so that material up to 20 inches in width can be ripped. The moving section of the table has sufficient motion to edge or cut off material up to 35 inches, and will open to permit the use of a 2-inch grooving head.

A gauge registers the angle to which the table is tilted. The ripping fence may be set to take stock up to 20 inches wide, and used on either right or left section of the table; a micrometer adjustment is provided on this fence, which is used when certain adjustments are too fine to be made by hand. The miter cut-off fence is used on the sliding table, and covers a range from 45 degrees back of the fence to 60 degrees in front. This fence is furnished with a stop-rod, to be used for stock of various lengths. This saw is one of the latest productions of the above-named firm, who will be pleased to send a descriptive circular, showing a large half-tone photograph of the machine and of its mechanism. In the tool itself the mechanism is completely enclosed.

J. A. Fay & Egan Coy's No. 205 Double Circular Saw

The construction and operation of motor boats is described in detail in a handy book, published by the Charles C. Thompson Co., 545-549 Wabash Ave., Chicago. The book is pocket size, bound in flexible leather, at $1.25, or cloth, at $1.00. It contains 292 pages, fully illustrated. It includes among its contents the following subjects: Principles of marine gasolene engines; the two-cycle and four-cycle engine; recent models of marine engines; battery and magneto ignition; the use of wet batteries and dry cells, etc., etc. It is in fact a most complete and attractive manual for those who have anything to do with motor boats.

A Wonderful Record

A letter of enddrsement recently given by a high official of the Isthmian Canal Commission to the operator who had charge of the eight Lidgerwood cableways used in building the Gatun Locks during the preceding eleven months, contains incidentally a remarkable record of efficiency of the cableways. This passage read as follows:

"These cableways, so far as delays from breakage or repairs were concerned, while working 12 ½hours per day, have been kept up to an efficiency of 99 per cent."

That is to say that during this whole period only one per cent. of time was lost on account of making repairs.

The cableways referred to are eight of the thirteen cableways designed and built by the Lidgerwood Mfg. Co. for the Isthmian Canal Commission. The other five are used for handling the broken stone and sand for the concrete, taking it from barges and delivering it to the storage yards some 600 feet away, on the average. The total to be handled will be 2,000,000 cubic yards of broken stone and 1,000,000 cubic yards of sand.

The eight cableways for building the locks are used for placing the concrete and reinforcement, and also for handling forms. They are travelling cableways of 800-foot span, operated electrically. They are handling on every working day more than 3,000 cubic yards of concrete. Up to June 4th there had been placed in the Gatun Locks and its auxiliary plant 437,461½ cubic yards of concrete. The amount placed in the five days from May 31st to June 4th, inclusive, was 16,809 yards, an average of 3,361 cubic yards per day.

Graphite

How little we know of the origin and manufacture of objects of daily utility, the ever-handy pin or needle, the lead pencil, without which we would be at a loss to pursue our daily vocations.

The busy man, as a rule, doesn't care; he only knows that his pencil is good or bad; that it does or does not fulfil its purpose. Yet the graphite from which it is made is one of the most interesting of products and enters into so large a part of our daily lives that it is well, if we have the time to spare, to gather some closer knowledge of this valuable product. Besides the common form of the lead pencil, graphite lubricates our steam engines, automobiles, bicycles and every bearing surface where friction generates heat and wear. In its other names of plumbago, or black lead, it is the basis for a valuable paint, which the manufacturers claim is unaffected by smoke, acids, alkalis, or the varyting temperatures of climates.

The uses of graphite in thte form of paint are well known to architects and builders, but many of its uses are perhaps not as thoroughly understood and appreciated as they deserve to be.

It is to familiarize the general public with the character of graphite that the United States Graphite Co., of Saginaw, Mich., has issued two interesting pamphlets. These are entitled, "Graphite Mining in Mexico" and "Interesting Facts About Graphite Paint." The typographical and illustrative features of these publications are in keeping with the excellent character of the text. They may be had on application, and we believe their perusal will be interesting and instructive.—American Architect.

No Over Supply of Pulpwood

Apropos of the recent report of the U. S. Consul at Quebec, that there was an over-supply of pulpwood in the Province of Quebec, the following interesting letter has been received from a correspondent:

Editor "Canada Lumberman": United States Consul Willrich, at Quebec City, says: "There are hundreds of thousands of cords of pulpwood available for exportation at this time."

Possibly, but it was not cut subsequent to May 1st last. He says: "Despite the prohibition of exportation of pulpwood from Crown lands, the supply on hand and which may be secured from private lands in the future, will be entirely adequate to the demand, and there need be no apprehension of shortage."

Mr. Willrich's observation may not extend beyond Quebec City limits. If what he says is correct, why all this fuss and feathers about reciprocity, and the numerous "kicks" about manufacturing pulp and paper in Canada?

I notice pulpwood in transit from eastern Ontario to central New York. There is also pulpwood being shipped from northern parts of Minnesota, near Rainy River, to points in Pennsylvania. I also noticed a raft of pulpwood crossing Lake Superior from Ontario to Ashland, Wis., to supply interior pulp and paper mills.

These pulpwood lots are picked up from deeded lands (freehold), but these lands cannot be depended upon for future supply, as there is not as much as 15,000 acres to be found in Quebec or any other province, in one body, from which the pulpwood could be exported to the States.

If there is as much pulpwood available as Mr. Willrich says there is in Quebec, why all this talk about the purchase of pulpwood limits on the coast of Labrador? The purchasers must have some idea of the necessary future supply or they would never invade such an isolated country seeking investments in spruce pulpwood limits.

There is no forest product that can ever be purchased cheaper than it can to-day. Twenty years ago I was told there was an inexhaustible supply of white pine timber, and I believed it; but the fact that there is a white pine famine to-day has led me to believe that the experienced forester knows as much about the future supply of pulpwood as the average manufacturer or diplomat. O. E. Elsmore.

Lumber Losses by Fire in 1910

Statistics Showing Extensive Destruction of Property—Principal Classes are "Unknown" "Incendiary" and "Kilns"

The Journal of Commerce, of New York, publishes monthly lists of fires occurring throughout Canada and the United States. From these lists the following table has been compiled, showing the fire losses in lumber and woodworking plants for the year 1909, as compared with total fire losses, in Canada and the United States:—

	—Fires in Lumber Trade—		—All Fires—	
Month	No.	Loss	No.	Loss
January	25	$1,657,000	370	$22,735,000
February	15	740,000	279	16,131,000
March	25	1,647,000	275	13,795,400
April	32	1,551,000	279	19,345,300
May	43	2,915,000	279	17,360,400
June	28	1,680,000	230	14,435,950
July	31	2,881,000	252	15,830,900
August	40	3,259,000	259	16,423,000
September	28	2,164,000	238	15,043,000
October	27	2,538,000	254	17,765,200
November	16	1,152,000	255	14,808,550
December	16	910,000	301	19,975,500
Total	356	$23,094,000	3271	$203,649,200

From this table we note, says "Lumber Insurance," that the fire loss in the lumber trade alone, that is, on lumber manufacturing and woodworking plants and on piled lumber, exceeded twenty-three million dollars in 1909, or 11.3 per cent. of all the fire loss. Figures showing total property values in the lumber industry cannot be obtained, so we are unable to say positively that losses in it are out of proportion to values, but judging from the large figures above, it would seem that the loss ratio is high in lumber insurance. What does this mean? Not only that there are in the lumber business exceptional hazards which demand special safeguards, but also, we believe, that lumbermen are exceptionally careless and their property often badly protected.

A careful study of all the lumber fires reported by The Journal of Commerce for 1909 reveals many things. In the first place, 1909 was not an unusual year, either in lumber or general fires. There were no large conflagrations. On the other hand, big lumber fires were common. There were no less than 65, involving a loss of $100,000 or over. While many saw and planing mills were burned, much the biggest end of this loss was on piled lumber. This fact points to the great risk of storing large quantities of lumber in the open, unless it is adequately safeguarded and protected.

Coming now to causes. Of the 326 lumber fires reported during 1909, causes had been inquired into at the time of report in some 113 cases. The probable causes are given in the following table:—

Cause.	Number.
Unknown	41
Incendiary	19
Kilns	14
Sparks from Locomotives	8
Furnace in Boiler House	6
Forest Fires	6
Hot-boxes (or Friction)	4
Matches	3
Sparks from Smokestacks	2
Spontaneous Combustion (in paint, etc.)	2
Gasolene Engine	2
Cigarettes	2
Water and Lime	2
Defective Wiring	2
Total	113

The first item is "unknown." In nearly half of these fires, all serious, the cause was reported back "unknown." This list is not unusual in this respect. A large proportion of fires in all lines are reported back to insurance companies as "cause unknown." This fact points to carelessness or worse on the part of the insuring public. If property was as well safeguarded and watched as it should be, fires would not occur without a reason which would generally be known, and a more thorough investigation after the fire would reveal causes and point the way to future prevention.

The next largest item is fires of incendiary origin. Instead of this being a less, it is probably a larger cause, than is here shown. It is probable that many of the unknown and mysterious fires come under this head.

The lumberman, on account of his heavy uninsured investments and the importance of a continuous successful output of lumber, is generally the last to desire a fire. Moreover, we believe that the integrity of the average lumberman is higher than that of some other classes of property owners. He can best protect himself against this danger of incendiarism (1) by a good efficient watchman service, and (2) by good fire protection to stop a fire at the start.

for lumbering and logging operations

For Flooring, Ceiling, Siding, Ship Lap, Double Ceiling, Doors, Sash, Blinds, Etc., the Up-to-Date Lumbermen Use

The Shimer Cutter Head

Because of the COMPLETE MECHANICAL FEATURES and very LOW PRICES at which it is placed before the manufacturing trade.

It is kept in first-class working order with less labor and expense than others and offers one of the very best investments, for a little thing, that can be found today.

Any size or style, made to fit machine, will be sent on trial 30 days to any responsible lumberman in this or any other country.

The dealer who accepts your order for the Shimer Cutter Head and supplies you with another means to deceive you in no small matter. Look for the Name and Trade Mark "The Shimer Cutter Head" stamped on every genuine tool. Any other is spurious—send it back—demand the genuine, of quality and helpfulness, with a record of 40 years of upbuilding and improvement. It costs no more.

Samuel J. Shimer & Sons
Branch of Milton, Pa. GALT, ONTARIO, CAN.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequeut issue.

WANTED—LUMBER, ETC.

Clear Cedar Wanted

WANTED ONE INCH BOAT CEDAR, clear. JUTTEN BOAT AND LAUNCH WORKS' Hamilton, Ont. 19

White Pine Wanted

WANTED 1 TO 5 MILLION FEET WHITE Pine on Georgian Bay, in logs or on the rail. State lowest cash price for merchantable and M. & D. culls. BOX 120, CANADA LUMBERMAN, Toronto. 18

Wanted Red or White Oak

FOR PRESENT OR FUTURE DELIVERY in the following sizes: 1", 1¼", 2", 3" and 4" 5x7, 5x8 and 6x9" Squares with hearts boxed. Apply Box 986 CANADA LUMBERMAN, Toronto, Ont. t.f.

Rossed Poplar

WANTED, FOR EXPORT, 2 FT. ROSSED Popular. Must be fairly dry so as to save freight.—The HOWELL COMPANY, Ogilvie Building, Toronto, Canada. 16

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

WILLIAMSON, Publisher, Toronto.

Sale of Pine Timber on Metagami Indian Reserve

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 1st DAY OF OCTOBER NEXT for the right to cut the Red, White and Jackpine timber over eight inches in diameter on the Metagami Indian Reserve situate the Metagami River in the district of Sudbury.

For particulars, descriptions, conditions, etc apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Department of Lands, Forests and Mines,
Toronto, July 13th, 1910.

No unauthorized publication of this notice wil be paid for. 17

Sale of Pine, Tie and Other Timber Damaged by Fire

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 8TH DAY OF SEPTEMBER NEXT, for the right to cut the Pine, Tie and other Timber, some of which has been damaged by fire, on certain berths in the District of Kenora.

For particulars, descriptions, conditions, etc., apply to the undersigned.

F. COCHRANE, Minister,
Department of Lands, Forests and Mines.

Toronto, July 27, 1910.

No unauthorized publication of this notice will be paid for. 17

Tenders for Ties and Rails

for Construction of Industrial Tracks on East Bank of the Don

Tenders will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, up to noon on TUESDAY, SEPTEMBER, 6TH, 1910, for the following materials: 20,800 feet of partly worn or re laying rail; 400 oak ties and 4,800 cedar ties.

Envelopes containing tenders must be plainly marked on the outside as to contents.

Specifications may be seen at the office of the City Engineer, Toronto.

The tenderers shall submit with their tender the names of two personal sureties (approved by the City Treasurer), not members of the City Council or officers of the Corporation of the City of Toronto, or, in lieu of said sureties, the Bond of a Guarantee Company approved of as aforesaid.

The usual conditions relating to tendering as prescribed by city by-law must be strictly complied with.

The lowest or any tender not necessarily accepted.

G. R. GEARY (Mayor),
Chairman, Board of Control.

City Hall, Toronto, August 6th, 1910. 16

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

Tenders for Pulpwood Concessions

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 7TH DAY OF OCTOBER NEXT for the right to cut the Pulpwood on a certain area tributary to the Nepigon River in the District of Thunder Bay. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may be fixed from time to time for the right to operate a pulp and paper industry on the territory. Successful tenderers will be required to erect a mill or mills on the territory, and to manufacture therein the wood into paper.

Tenderers will be required to deposit with their tender a marked cheque payable to the Treasurer of Ontario for twenty-five per cent. of their tender, to be forfeited in the event of their not entering into agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted. For particulars as to description of territory, capital required t be invested, etc., apply to the undersigned.

F. COCHRANE,
Minister of Lands Forests and Mines.

Toronto, 8th July, 1910.

No unauthorized publication of this notice will be paid for. 19

Sale of Pine, Tie and Other Timber Damaged by Fire

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 15TH DAY OF SEPTEMBER NEXT, for the right to cut the Pine, Tie or other timber, some of which has been damaged by fire, on certain berths and lots in the District of Thunder Bay.

For particulars, descriptions, conditions, etc., apply to the undersigned.

F. COCHRANE, Minister,
Department of Lands, Forests and Mines.

Toronto, August 5, 1910.

No unauthorized publication of this notice will be paid for. 17

Uses of Sawdust Flour

Further uses for what was formerly considered waste mill product are constantly being found, and attention is being called to the fact that flour made from sawdust can be used as a component material in the manufacture of dynamite, linoleum, xyolite and many other things. This is no new discovery, as European millmen have been studying this question for several years, but it is put forward now as being of value to the American lumbermen who are constantly wrestling with the problem of mill waste.

The wood flour can be ground in a cheap mill, very similar to those used in country places for the grinding of corn and rye. In Europe the largest field is found in the use of the pine and spruce sawdust, which, after it has been passed through the stones and bolted ready for shipment is worth from $12 to $13 a ton. As stated above, there are large numbers of uses for this flour, one of the most important of which is in the manufacture of dynamite. It is the absorbent for the nitro-glycerine, which is the explosive ingredient. This will not answer for the highest grades of dynamite, as wood-flour dynamite is inferior to that made with infusorial earth, but there are many purposes for which it does serve, and it is much cheaper. But dynamite is one of the smallest of the uses to which the sawdust flour can be put. It is used by linoleum manufacturers, who mix it with linseed oil and give body to their floor coverings. It is not considered quite the equal of ground cork for this purpose as it is less elastic, but it is cheaper and meets the requirements for medium grades.

The flour is also found to fill an important place in the manufacture of xyolite, a kind of artificial flooring, resembling wood in weight and stone in other respects. It is used for kitchen floors and in halls, corridors, cafes, restaurants and public rooms. It is impervious to water, and it is practically fireproof. It is used even for floor material in some of the German war vessels, and is used for this purpose for the reason that it is not liable to take fire or splinter if struck by shells.

Your Vacation Film

The success of your vacation pictures depends, most of all, upon your film. Look to it, if you hand over your Kodak for loading in a strange store, that no inferior substitute film is inserted. *The quality of your pictures is at stake.*

"Kodak film" means more than merely a film to fit your Kodak camera; it means film that is made by the Eastman Kodak Company. Kodak film is the film used the world over by explorers, by war correspondents, by hunters of big game, the film used by every expedition where adverse conditions demand absolute dependability in photographic equipment.

Experiment with no experiments. Look for "Kodak" on the spool end and N.C. on the box.

Review of Current Trade Conditions

Ontario

There is no change to note in the lumber situation in Ontario. A press report to the effect that several of the Georgian Bay manufacturers had decided to reduce the price by $1 per thousand, is without foundation. No weakness has recently developed. The volume of trade, for this time of year, is quite extensive, though much of it, of course, consists only in the filling of standing orders. Hemlock is about the only unsatisfactory wood. In spite of the meeting held recently, at which hemlock manufacturers drew up a price schedule, the owners of hemlock in some cases have been cutting prices, and the result is close to demoralization. Meetings are under consideration with a view to mending the situation. Dealers in pine and other soft woods expect no important improvement until the fall.

The hardwood situation is quite different. There is a good demand generally, and trade is brisk, although there is nothing in the nature of a boom. One merchant who is crowded with orders sums the matter up by saying that if you know the market, and where to go after orders, and work for them, you get them. In other words, the demand is good and the competition among sellers is keen. The same firm reports that August, so far, has been one of the best months they have ever had. This refers very largely, however, to Canadian trade, which is much better than that of the United States. The implement manufacturers are keeping up the demand, and it is not long before the furniture manufacturers will come heavily into the market. Hardwood dealers, therefore, feel every confidence in the immediate future.

There is quite a scarcity of 3 in. and 4 in. maple. Birch is rather quiet at present, as the furniture trade does not become very active until the end of August. Prices, however, are firm. Ash is strong, and so is basswood. Elm is in good demand, especially rock elm, of which the supplies are light. Thick maple is very scarce. Oak at present is quiet, waiting for resumption of the furniture trade activity. Prices, however, are firm. Hickory is scarce and in good demand.

Quietness continues in the lumber markets of the Ottawa Valley, but prices are unchanged. The large firms at Ottawa report that they are selling most of their lines cheaper than in 1907, and that a reduction in prices cannot be made. There is, in fact, quite a strong feeling of confidence as to future market conditions. Although common lumber is rather weak, the high grades of pine are selling at better prices than a year ago. Buyers from the United States are beginning to look for spruce for September and October delivery. The autumn pine trade is expected to be about up to the average, but there is no indication of a run on the low-grade stock. On account of the curtailment of manufacturing in the Ottawa Valley during the last month, it is expected that the shingle cut will be no greater than that of 1909. This will be rather an acceptable feature of the trade, so far as middlemen are concerned, as many of them still hold stock which they find it difficult to dispose of. Market indications point to an increasing use of hemlock and spruce as a substitute for low-grade pine. Spruce is quite active, and hemlock is following up closely. One-inch log run hemlock, all one width, is selling at $15. There is a scarcity of regular stock, such as 2x10-inch, 16 feet. This is selling at $15 to $16.

Eastern Canada

The decision of the firm of A. Cushing & Co., at St. John, to close their mill, will mean a material decrease in the lumber output of that port for the balance of the season. It is even stated that a number of other St. John mill owners will follow the example of the Cushing concern until they can obtain better prices on spruce deals, plank and scantling, spruce lath and cedar shingles, in the Boston and New York markets. It is hardly expected, however, that this will come about. It is felt among the New Brunswick manufacturers that the present dullness in the American markets cannot continue much longer. The price of the manufactured article is so close to the cost of the lumber at the mills that the present low prices can hardly be expected to continue longer. The dullness in the American markets is particularly noticeable in the case of short lumber. Spruce lath are unchanged, and there is no indication of anxiety on the part of wholesalers to sell at lower prices than those existing at present. Shipments of Nova Scotia spruce laths have decreased greatly of late. There are about seven millions of spruce lath in the Miramichi mills ,and about four and one-half millions in the Restigouche district. At St. John and vicinity the stocks amount to abount nine millions. Prices at present at Chatham are $2.40 to $2.50, and at St. John $2.55 to $2.65, f.o.b. schooner. A period of dullness is to be expected in the shingle market at this season of the year, the hot weather being particularly effective in reducing the demand. There is no change to note in the shingle markets. Cedar extras are quoted at $2.30 to $2.40 per thousand, and clears at $1.80 to $1.90. At St. John, the price would be $2.55 for extras and $2.05 for clears. The competition among the eastern spruce mills has affected the Boston markets materially. Several of the larger mills are still quoting $22.50 for spruce frames. It is expected that before long the price will be $22. There is only a very limited demand, as is usual at this time of year. The supply, however, is not too great, as the production has been somewhat curtailed. Random is irregular. Widths of 7-inch and under, with a reasonable proportion of good lengths, are selling at $19. Short lumber from the Canadian mills is being sold at $23.

Great Britain

Latest reports from London are to the effect that business continues to be fairly satisfactory, so far as volume is concerned. Deliveries of stock goods are increasing gradually in deals and battens, and the dock stocks are not growing too rapidly. Prices continue quite steady, and are even inclined to be firm. At Churchill & Sim's recent auction sale 3 x 9 unsorted Quebec spruce sold at £9, and 4th Montreal at £9 10s. Hardwoods at London are rather dull, but inquiries are encouraging. At Liverpool, the holiday season has resulted in the usual period of dullness. The demand for birch goods has improved considerably. C.i.f. values have not changed, but spot values are better, especially for fresh goods. There is a fair demand for logs, with a prospect of improvement. The consumption of planks is also increasing, and quotations are much above those of a year ago. Two and 2½-inch planks have been pretty well cleaned up, and good prices are being obtained by importers for common stock they have to arrive. Three-inch and 4-inch are plentiful, and prices are only holding their own. Quebec pine is fairly firm, but unchanged. There is only a moderate demand, as consumers are making much smaller purchases than usual. The trade, in fact, seems to be altering its nature, and the importer is now permitted to hold the stocks rather than the consumer. As a result, stocks at the various ports of discharge are accumulating. Prices of the higher grades are improving, so far as deals and boards are concerned, and particularly for prime wood in the log. Shipments of this class will probably be restricted, and prices are expected to advance. The substitution of red pine for yellow has resulted in better prices for this class also. Canadian pine deals are unchanged. The demand for some classes is rather weak, but importers are maintaining a firm stand as a result of the attitude of the manufacturers at Ottawa. Holders of Canadian pine stock in Liverpool are not pressing sales. There is an upward tendency in the market for spruce deal. Recent sales from St. John, N.B., have been made at the prices of £8 2s. 6d. to £8 5s. per standard, c.i.f., to the Mersey, for poor to medium specifications, and better for specifications containing a lower percentage of narrows than usual. A few sales of New Brunswick birch planks have been made by Liverpool brokers for delivery at Manchester.

The Glasgow markets are rather dull on account of the holidays. Stocks on the quays are rather small. Arrivals of Quebec goods are composed chiefly of contract shipments. Spruce has met with a rather good demand at steady prices, and consigned parcels have mostly been purchased on arrival, so that the stock on hand is light.

United States

Conditions have improved rather considerably during the last fortnight in the Chicago lumber market, as a result of the quieting of various strike rumors. Yards report a fairly good trade and country business is also in fair condition. The northern pine market at Chicago shows no unusual conditions. Stocks are somewhat broken, but receipts are extensive. The market is steady for all kinds of pine and selling quotations are satisfactory. The prices for good lumber have, in fact, maintained their firmness at producing and shipping points, and are showing some strength at Chicago. The hardwood market at Chicago is quiet, which is not unusual at this time of the year. Prices have been, on the whole, fairly good in spite of the dullness in the demand. This is accounted for by the fact that supplies have not been extensive. Furniture woods have been in good demand. The implement firms and car companies are not buying much, but are expected to become more active shortly. Northern hardwoods are light but steady. There is a fair demand all over the country, and an improvement is looked for by the fall. This is the case with birch and maple especially. Soft elm and rock elm are in good demand at steady prices. Basswood is rather quiet and uncertain in price. Oak maintains its lead. White ash and hickory are holding their own, with good stocks scarce. The hemlock market at Chicago is regarded as rather satisfactory. The buying is increasing, as retailers seem to be expecting a good fall trade. Stocks are not heavy at the mills or in the local yards, and a fairly healthy market is looked for. The demand for southern pine at Chicago has somewhat improved. The car companies show a renewed tendency to come into the market. The prices which are being obtained indicate a stronger market than a month ago. The red cedar market at Chicago is a little more active, but prices are unchanged. White cedars are firm and enjoying a good demand. Lath are very strong, the demand having increased greatly.

At Buffalo the demand for northern pine is just about what might be

SARNIA, ONTARIO

expected at this time of year. Low grades are still troublesome, and buyers are able to make their own prices. Box grades are reported to be extremely low. The scarcity of good grades is leading dealers to pay more attention to the Pacific Coast woods. Hardwood dealers are preparing their stocks for the fall trade, which they expect will be quite active. Quartered oak at Buffalo is scarce and so is plain oak. In fact, chestnut is selling on a par with plain oak at $52 for firsts and seconds and $35 for common. Birch also is in fair demand. Stocks of hardwoods generally are moderate. The demand for hemlock is good, and will probably continue for the rest of the summer. Prices are firm, but unchanged. The shingle trade at Buffalo is good, as the eastern demand is strong, and the local demand is also quite active. Prices are steady, though they are considered to be very low.

The demand for northern pine at New York is improving slightly and better prices are resulting. Stocks of good grades are scarcer, and there is an over-supply of low grade. The box demand is only fair. Orders for eastern spruce for the fall trade are beginning to increase at New York. It is generally believed that the decline in the spruce market has reached the bottom. Random stocks are still offering plentifully, but the improvement in the southern New England market has taken care of some stocks that would otherwise go to New York.

A prominent firm of Boston lumber manufacturers and dealers report under recent date that there is a tendency towards dullness, a very weak and dropping market for eastern shingles and rather a weak market for spruce dimension stock. "The white pine market," they say, "is stationary." "The great question with us here," they report, "is whether general business will be seriously affected by the heavy drop in the stock market. We think if the Canadian mills can all get together and somewhat curtail their production it would be a good thing in the long run and greatly help matters."

Pacific coast lumber manufacturers and representatives of the retail lumber dealers of the prairie provinces have recently had several conferences in Vancouver, looking to a settlement of the differences between them regarding trade matters. It is learned that in all probability the hatchet will be buried during the next thirty days at a gathering representative of both interests which is to be held at a date to be fixed shortly. The meeting will in all probability take place outside Vancouver, the idea being to have it occur at some point about midway between the strongholds of the contending parties, possibly at a summer resort in the mountains, where pleasure may be combined with business.

A month ago the coast lumber manufacturers determined to open yards at all principal points in Saskatchewan and Manitoba, owing to the apparent impossibility of amicably settling differences which had arisen between them and the retailers. Since that time the strain of the situation has been somewhat relieved, and at the present time there is reason to believe a settlement of disputed matters is not impossible.

The coast manufacturers found difficulty in getting the retail yards to accept what are technically known as "odd lengths." Every mill on the coast, if confined to the cutting of standard lengths, it is asserted, would lose a large percentage of its cut. The manufacturers are firm in the determination to market "odd lengths," which are declared to be as useful to the consumer as standard lengths, and are called for by the consumer in many instances.

Market Correspondence

Business Disturbances at New Brunswick

Chatham, N. B., August 8th.—The past fortnight has been productive of many events and conditions of much moment and interest to all interested in the lumber trade or industry.

One event of the week was the semi-official announcement that the sawmills of A. Cushing & Co., at St. John, would be closed. The reason given to the press was that the firm was doing business at a loss. The firm of A. Cushing & Co. lately went into liquidation, and the plant has been operated for several weeks past by the liquidators. The Cushing mill is one of the largest on the St. John River, and its closing will mean a considerable curtailment in the lumber output of the port for the balance of the season. The Cushing firm is an American one—that is, its members are American citizens, and much of their raw material is secured from the State of Maine, and much of the output of their mill is shipped to Boston and New York. It is quite possible that, with their logs quite as expensive as usual, and with the unfavorable conditions which exist in the markets at the ports mentioned above, mills which depend altogether, or practically altogether, upon those markets are having a poor year, so far as that most important element, profit, is concerned.

It was stated in a most reliable newspaper at St. John a few days ago that a number of the other local mill-owners would follow the example of the Cushing concern, and close their mills until better prices on spruce deals, spruce plank and scantling, spruce lath and cedar shingles might be realized in the Boston and New York markets. While such events will probably not come to pass, they are within the possibilities. "American" logs (those the product of which goes in duty free) have cost perhaps more this year than last year, the first cost being, no doubt, somewhat similar, and 1910 driving operations having been more expensive than in the spring of 1909. New Brunswick workmen, who saw largely for the American deal and plank markets, feel that the present condition of affairs cannot last; that the price of the manufactured article is too close to the cost of the logs at the mills to maintain its present low level for any long period.

The quiet in the American markets is felt to a very great extent in the short lumber trade. Practically the entire output of shingles and lath are marketed in Boston and New York; all the manufacturers and dealers in this section are directly interested in this phase of the situation, while only those who saw "American" logs are vitally interested in the New England long lumber trade.

Spruce lath have shown little change during the past month. The dealers and manufacturers of the North Shore of New Brunswick are quoting inquirers at practically the same figures as those furnished a month ago. There is no evidence of anxiety to sell either for immediate shipment or future shipment at any further concession in price. Shipments of New Brunswick spruce lath have fallen off considerably during the past four months, St. John port and river having shown remarkably light shipments of this line of goods. Stocks of spruce lath at mills on the Miramichi would total to in the vicinity of seven millions; in the Restigouche district, four and one-half millions, and at St. John and vicinity, nine millions. An enquirer for spruce lath would be quoted at Chatham, $2.40 to $2.50 per thousand, and at St. John, $2.55 to $2.65, f.o.b. schooner.

The cedar shingle market is usually sure to develop a season of depression at this particular time of year, the hot weather being one of the factors, and the haying season, with its consequent cessation of building operations, being another. So that any season of quiet that prevails in the spring may confidently be expected to continue until the early fall brings a resumption of building, in the cities and on the farms, and a consequent demand for the article in question.

The situation regarding cedar shingles is practically without features of any kind, and conditions to-day are somewhat similar to those of a month ago. The local value of "extra" cedar shingles is from $2.30 to $2.40 per thousand, and of "clears" from $1.80 to $1.90. At St. John, an enquirer would be quoted in the vicinity of $2.55 on "extras" and $2.05 on "clears."

Quiet But Steady at Ottawa

Ottawa, Aug. 12.—The local lumber market is passing through a long period of quietness without any decline in prices. Large firms are maintaining quotations despite heavy stocks. They claim they are selling most lines cheaper than in 1907, and that a reduction would be out of the question.

Reports of a drop of a dollar a thousand in lumber in the Parry Sound district have not affected Ottawa trade. The selling is not brisk, but confidence in the future is very marked. It is encouraging that while common lumber is weak, high-grade pine sells at a higher figure than a year ago.

United States buyers are looking for spruce for September and October delivery. An average autumn trade in pine is expected, but there is no likelihood of the Ottawa Valley yards being depleted of the surplus of low-grade stock which they have had for over a year. There is a great quantity of the present summer's cut of pine fit for shipment, which will not be reached in time to catch the barges this year. In the last month manufacture in the Ottawa Valley has been checked to such an extent that it is now estimated the whole season's cut will not be more than in 1909, although the mills started a few weeks earlier than last year. J. R. Booth lost four or five million feet on account of the G. T. R. strike; the Braeside fire hampered the Gillies Bros., besides burning thirty million feet of sawn lumber; James MacLaren Co., of Buckingham, had trouble with low water, and were closed for a while to make repairs; Ritchie's sawmill at Aylmer was idle for want of logs. The possible reduction in the lumber cut will please a number of middlemen who hold stock and cannot find a market for it.

The trend of buying points to hemlock and spruce being used more than ever as a substitute for a low quality of pine. As stated, spruce is more active than other lines of lumber, the chief reason being that, for a moderate price, builders can get a fairly good stock. A close follower of spruce in this respect is hemlock. One-inch hemlock, log run, all one width, commands $15 per thousand. Log run sells as low as $13.50, this being the lowest quotation given by one of the representative manufacturers this week. It is difficult to buy a large quantity of the best hemlock, but whenever it is offered it finds a fairly ready sale. Bartram Bros. have 2,000,000 feet of hemlock on hand. Other lumbermen are well supplied, also, but are too optimistic of the future to attempt to move any by cutting prices. There is a scarcity of such regular stock as

2 in. x 10 in. x 16 feet, and when this is found it brings $15 or $16. The demand for tamarac is quiet, and hardwoods are scarce and not very active.

Shipments from the port of Ottawa for the first three months of the present year show a larger movement of pine to the United States than during the corresponding quarter of 1909. The value of white pine exported in the 1910 quarter was $349,303, as to $255,145 a year previous. Pine plank advanced from $6,561 to $10,843. Clapboards increased from $4,950 to $8,975. Basswood went up from $1,870 to $6,672. Ash rose from $741 to $6,064.

The lines which fell off, comparing the two quarters, were: Lath, from $34,327 to $19,868; pickets, from $4,958 to $3,935; shingles, from $7,498 to $6,279; spruce, from $40,509 to $39,262. After the winter quarter this year, conditions changed considerably, and the figures which are being now compiled in the Consul-General's office, it is understood, will show different results when compared with the previous year. All shipments valued at over $100 are entered at the Consul's office.

The comprehensive work on the increase in the price of commodities in Canada, published by the Labor Department, contains interesting figures on the value of lumber cuts in the Ottawa Valley. The report gives the average price per thousand for the total annual cuts of all grades received by principal manufacturers. It is interesting to observe that the rate for the years between 1891 and 1898 ran between $12 and $12.50, or only a couple of dollars more than was received for dead culls this season. In 1899 the average was $13; in 1901 and 1902, $16.50; 1903 and 1904, $17; 1905, $17.50; 1906, $18.50; 1907, $21.50; 1908 and 1909, $20.50.

Abundant rainfalls in the Ottawa district have raised the level of the Ottawa River two or three inches and stayed the daily drop of an inch. Transportation is moving satisfactorily. Gillies Bros. experienced some delay from low water in bringing 150,000 pieces of cedar down the Madawaska, and Ritchie Bros. had to close their Aylmer mill while waiting for a drive of 12,000 logs. The stop-logs are nearly all in place in the Chaudiere dam in order to preserve as much as possible of the volume of water for the mills.

Fire Chief J. W. Graham, of the Ottawa Fire Brigade, has inspected the local lumber factories and mills with a view of recommending all the safeguards possible against fire. The recent burning of J. A. Desrivieres' planing mill roused the authorities as to the hazard of lumber. He is installing a sprinkler on his new factory, though the City Council declined to make such precaution obligatory. In order to banish one source of danger in Hull, the City Engineer there has prohibited the use of shingles. A by-law imposed this restriction before, but it was not enforced.

Lumber King's Fine Generosity

J. R. Booth Pays Men for Time Lost During G.T.R. Strike — Practical Simpathy for Mill Employees

Ottawa, August 4.—J. R. Booth, the Ottawa lumber king, became the idol of his 2,000 employes last evening, when he paid out $12,000 in wages which his men had not earned, owing to the eight days' enforced idleness in the mill caused by the Grand Trunk trainmen's strike.

Booth's mill, it will be remembered, had to close immediately, when the strike was declared on July 19, as there was no means other than G.T.R. cars to haul the green lumber from the mill to piling grounds. On July 27, Mr. Booth, through the assistance of the Dominion Department of Labor, made arrangements with a crew of strikers to operate cars and an engine which he leased from the railway. Mr. Booth agreed to pay the men at whatever rate was finally put in force at the end of the strike. In the meantime, an army of mill hands, most of them with families depending on the wages earned at the mill, were idle, and during the eight days which elapsed from the start of the strike until the arrangement with the union, they visited the mill daily, urging the proprietor to find some plan by which he could resume operations.

This predicament of the men touched the millionaire lumber manufacturer. He said nothing, but quietly resolved what to do. Every second Wednesday for many years has been pay day, but the Wednesday of August 3 was not bringing the usual cheer to the employees. They looked forward to a scant pay in their envelopes.

When the paymaster began to hand out money packages, bulged out with the usual content, the effect on the rugged recipients was marvellous. It required some time for them to realize what had happened. Next morning the generosity of Mr. Booth was the topic in spare moments around the yard and mills. By noon time the men had resolved how they would acknowledge the liberal and sympathetic act of their employer. They would send for him.

The message to Mr. Booth asked him to attend at 12 o'clock at the mill. The hour was suitable; but by the time the whistle blew for mid-day, women and children were hurrying with warm dinners in baskets and pails to the workers. So Mr. Booth sent word that he would be on hand a little before 1 o'clock. He preferred not to interfere with the men's eating time.

The lumber king reached the yard by a back route and was on a high lumber wagon looking down at 1,000 happy men before many of them noticed him. Those who had seen him climb up on the load of pine wondered at the vigor and sprightliness displayed by the man of fourscore years. The kind regards of the mill men were conveyed to Mr. Booth by one of the mill crew.

The lumber king replied in simple and direct style. He said:

"Gentlemen, it is a pleasure to me to see that you are so thankful for the little I have done for you.

"It was this way. I felt that I could stand the loss better than you could. (Cheers.) I was sorry for you, but that alone would not have bought you bread and butter. I suppose you have heard the story of the poor man, whose horse ran away and broke its leg. A crowd soon gathered round and told the man how sorry they were. Finally, one fellow took off his hat, put a five-dollar bill in it, and said he was sorry to the extent of $5. Another fellow was sorry to the extent of $10, and dropped in that amount. Others followed the example. The man was able to buy another horse.

"Now, gentlemen, I was sorry for you, and sorry to the extent of $12,000. (Prolonged applause.)

"Besides the wages, I lose by this strike another $12,000 or $15,000 as the result of interference with business. Yet I am heartily repaid for it all by hearing you men express your thanks to me."

Mr. Booth closed with affirming that there was no foundation for the statement that he was in league with the railway.

The National Trades and Labor Council, of Ottawa, passed a resolution of gratitude to Mr. Booth. Merchants of Hull, who will benefit greatly by the distribution of the money, mention the lumber king in their advertisements as "A prince."

Canadian Exports for Two Months

Details of the principal exports of wood and manufactures of wood for the two months ending May 31, 1910, as compared with those of 1909, were as follows:

Class	1909.	Total.	To United Kingdom.	To United States.
	$	$	$	$
Logs	78,011	151,017	8,018	142,239
Lumber—Deals, pine	171,849	173,296	169,789	339
Deals, spruce and other	479,936	669,686	611,399	53,194
Laths, palings and pickets	195,863	227,176	3,720	207,592
Planks and boards	1,876,713	2,493,414	162,985	1,690,444
Shingles	429,969	291,383	....	284,226
Timber, square	45,382	33,779	31,091	642
Wood blocks for pulp	522,271	684,635	....	684,635
Wood pulp	494,072	458,639	2,420	419,202

The total exports were as follows: 1910, $5,703,678; 1909, $4,789,695. Of the 1910 total, exports to the United States were valued at $3,765,832. and those to the United Kingdom at $1,169,060.

Miscellaneous Trade News

Fire did damage to the extent of about $10,000 to the factories of the Keenan Woodenware Company at Owen Sound recently.

The new Michel Sawmill Company recently lost about a million feet of logs as a result of bush fires spreading to their logging grounds.

Messrs. E. B. Hawkins and W. H. Cole, prominent lumbermen of Duluth, Wis., returned recently from a trip of inspection of their timber holdings near Campbell River, Vancouver Island.

The British Columbia Gazette gives notice of the incorporation of the following companies: The Comox Sawmill Company, Limited, capital $25,000; The Farmers' Lumber Manufacturing Company, Limited, capital $100,000.

A company has been formed at Vancouver to be known as the British Columbia Piano Company, Limited. This will be the only company manufacturing pianos west of the Rockies. Among those interested are President, Jas. Auld; Vice-President, A. W. Seaholm; Treasurer, A. T. Gwin, and Secretary, H. W. Lewis.

A proposal is under discussion by business men of east Kootenay for the establishment of a paper mill at Wardner, B.C. There are abundant sources of pulpwood in the district and ample power is available. The pulpwood would be drawn from the Bull River, St. Mary's River, Sheep Creek and White River. The power would be furnished by the Bull River Electric Power Company.

One of the best indications of the genuine building boom that Brandon and the surrounding district is enjoying at present is the fact that the planing mills and sash and door factories are practically running day and night in an effort to fill the orders that are on hand. New orders are coming daily, and it is only by running overtime and to the limit of capacity that the manufacturers can keep up with the requirements of the builders.

A lumber mill with a total daily output of 250,000 feet is to be constructed at Esquimalt, B. C., by a syndicate of eastern Canada capitalists, who, it is reported, have absorbed the B. F. Graham Lumber Company. The latter company some months ago secured a site including Graham Island, Thetis Cove, with 1,300 feet of water front and property extending inland to the E. & N. right of way—a total of 22 acres. Plans for the new buildings are being prepared and it is expected that construction work will be started shortly. The syndicate are expected to expend about a million dollars upon the plant.

EDGINGS

Ontario

Alfred Mitchell, saw mill owner, Powassan, Ont., has advertised his business for sale.

The Ontario Department of Lands, Forests and Mines will hold a "timber color examination" at North Bay on August 23.

It is expected that upon the return of Sir Wilfrid Laurier to Ottawa Mr. J. R. Booth will be appointed to the vacant position on the Ottawa Improvement Commission.

The International Harvester Company, of Chicago, have secured control of the Chatham Wagon Company, of Chatham, Ont., and intend to extend the plant considerably.

Peaboby, Houteline & Company, of Chicago and New York, are financing a comporation which intends to erect a large pulp and paper plant at Fort Frances, Ont.

C. E. Whicher's saw mill at Colpoy's Bay, three miles from Wiarton, Ont., was burned recently. The origin of the fire is unknown. The loss is about $5,000, partially covered by insurance in the Rimouski and London Mutual Insurance Companies.

A Sydney, Australia, merchant writing to the Secretary of the Canadian Manufacturers' Association at Toronto, asks to be placed in touch with manufacturers of wood working machinery, such as lath mills and saws. Another merchant enquires about pulp and paper mill machinery.

The Rainy River Lumber Company closed their mill at Rainy River, Ont., recently on account of the shortage of logs. The unusual dry season resulted in the creeks becoming very shallow, so that it was impossible to get the logs down to the river. There are about 15 million feet held up in this way.

A Fort William report says that owing to the unusually dry season, the water in many of the creeks and rivers is exceptionally low, and many of the lumber mills have been shut down on account of a shortage of logs. The big mill at Rainy River was closed at the end of July as it was impossible to float the logs down the river. There are some 15,000,000 feet held up in Rainy River.

The action of Mr. J. R. Booth in giving his 2,000 employees full pay for the time which they lost recently on account of the Grand Trunk Railway strike is an example which will be greatly admired by business men in general. Some of the men were not out of work for a whole week, but it is understood that the amount thus voluntarily paid over by the company is $12,000. Mr. Booth in addressing the men, who thanked him publicly for his gift, said he thought that as the men themselves were not responsible for having to lay off, it would be a pity if they had to starve, just because another organization had decided to go on strike. Needless to say his employees gave him a hearty cheer.

The C. N. R. officials at Toronto do not take any stock in the report that action is to be taken against the C. N. R. because brush and other debris are said to be lying on their right-of-way in the north, thus greatly adding to the danger of bush fires, which work such havoc in the timber lands every year. "We certainly do not need to be warned of the great danger that is always possible from forest fires," said one C. N. R. official, "and we have taken every precaution to keep our right-of-way clear of brush and debris. It certainly would not be in our interests to do otherwise. All the timber in that section is shipped via C. N. R., and it would mean a great loss to us in freight receipts if the timber were to be destroyed. Of course we are not responsible for lumberers who are cutting timber beside our right-of-way, and who leave brush on the clearings, but there certainly is no debris of any kind on our right-of-way."

Mr. Margach, crown timber agent at Kenora, Ont., has received word from his fire rangers in the Whitefish district, that forest fires broke out recently in the timber limits in the vicinity of Big Dryberry lake, and did much damage. Mr. Margach went out with some men to the scene. The fires are said to be in part of the limits surveyed last year and put up for sale in September, but not sold. Some of the limits, however, were sold to the Keewatin Lumber Company and others to the Rat Portage Lumber Company, and the fires are also said to be in the limits purchased by these companies. The loss to standing timber ready to cut will be considerable, and will necessitate heavy cutting operations this coming winter if the timber is to be saved for lumber. The limits still owned by the government will also require to be sold to operators who will cut this winter if the timber is to be saved. The greatest loss will be in the destruction of small growing trees, not yet large enough for lumber or ties, but which would in a few years be marketable.

Eastern Provinces

It is stated that Leblanc and Richard, sash and door manufacturers, Asbestos, Que., have dissolved.

The city engineer of Hull, Que., has issued instructions that in future no shingles shall be used for roofing buildings in the city.

Damien Lalonde's sash and door factory, at 1234 St. Lawrence Boulevarde, Montreal, suffered damage by fire to the extent of $2,000 recently.

One of the rossing mills at Chatham, N. B., known as the upper mill and owned and operated by the Miramichi Lumber Company, closed down on July 30 for the season.

The Miramichi Pulp and Paper Company on July 27 paid the arrears in wages which had been due their employees for some weeks previous. There is a report that the mill will begin operations very shortly.

The South Shore Lumber Co., Montreal, Que., has been incorporated with a capital of $20,000. Incorporators, Harold E. Walker, advocate, and James R. Walker, manufacturer, both of Westmount, Que.

The July 30 report of the Department of Agriculture states that lack of rain resulted in a heavy drop in apples. In Eastern Canada the apple outlook was lower than a month previous. Ontario winter apples were very light, and the early apples medium.

As a result of the destruction of the town of Campbellton by fire the underwriters who have been working upon the situation have taken a firm stand as is shown in the following letter to Mayor Murray: "It is the opinion and desire of the fire underwriters that there should be in the business section of Campbellton a district where no wooden buildings are permitted, and a second district where

wooden buildings are restricted to a height of 25 feet, and the general opinion prevails that there should be no shingle roofs."

It is reported from St. John, N.B., that as a result of the conference between rival interests who desire to secure the water power at Grand Falls, N.B., substantial progress has been made in negotiations for control of the power development by Sir William Van Horne's company. It is also stated that this company wishes to commence the construction of a hydro-electric plant and pulp and paper mills at the Falls.

Mr. Alex. Gibson, the well known lumber and cotton manufacturer of New Brunswick, celebrated his 90th birthday on August 1st. Mr. Gibson was born in the town of St. Stephen, Charlotte County, of Scottish Irish parentage. He commenced life as a poor boy and found his first employment in the lumber regions of his native province. Advancing step by step he met with success almost from the first and soon became lessee of the finest and fastest mill in the province at that date. This was situated at Lepreaux, Charlotte County, and was owned by the late William K. Reynolds, of St. John, N.B. From that date onward Mr. Gibson expanded his commercial and financial interests in the province until at the present date they extend through a wide list of industries of various natures. In addition to lumbering and cotton manufacturing he has found time to engage in many railway enterprises, and has been largely instrumental in this manner in the development of the province. The "Canada Lumberman" and its readers will join in wishing Mr. Gibson many happy returns.

Western Canada

Smythe Bros., saw mill owners, Aldina, Sask., are stated to have dissolved.

H. J. Lindal, lumber manufacturer, Leslie, Sask., has been succeeded by G. R. Calkins.

W. H. Kreyscher, of Nelson, B.C., is organizing a company to rebuild his shingle mill.

It is stated that D. Nevin & Co., saw mill owners, Chilliwack, B.C., have dissolved. W. Braithwaite retiring.

Latest reports from Nelson are to the effect that the rainfall is relieving the fire situation materially, and that all serious danger is now at an end.

The British Columbia fruit crop is reported to be in excellent condition and the box factories are working night and day to keep pace with the heavy demand for fruit boxes.

The Columbia River Sawmill at Golden, B.C., was recently destroyed by fire. The planing mill, machine shops and light planer plant were saved and also the stock in the yard. The damage is reported to amount to about $300,000.

Frank Billinger, Winnipeg, representative of the Dominion Railway Commission, is making a trip through the prairie provinces to investigate the work done by the railway companies in installing fire guards according to the order of the Commission.

Judge Williamson has given his judgment in the case of the Fernie District Fire Relief Committee vs. Bruce. His honor decided that those who received lumber at the time of the general distribution after the fire were responsible for payment of the value thereof.

Believing that many of the recent forest fires in British Columbia have been started by Chinese who are ignorant of the regulations because of their inability to read the fire notices, the provincial government are having the substance of the regulations printed in Chinese and Japanese.

The Salmon River Valley Land Company have had a saw mill shipped to Salmon Rapids, B.C., the town site owned by the company on Nine Mile Creek, ten miles below the Salmo on the Great Northern Railway. It is expected that the mill will be cutting lumber within a few days. Its capacity will be 10,000 feet per day.

A number of serious forest fires are reported from Okanagan district in British Columbia, which at the latest report were threatening the sources of supply of several irrigation systems. Fourteen miles north of Penticton in the mountains near Shingle Creek the flames did damage to the timber limits owned by Messrs. Fisher and Cooper, of Penticton.

Communications have been sent by the British Columbia government to mill owners, lumbermen and railroad companies asking for co-operation in combating the flames in the Crow's Nest district where the fire loss is greatest. The C. P. R. has augmented its fire patrol and is doing all that is possible to assist the government fire wardens. The suggestion has been made that a water car should be operated on the Kootenay lines somewhat similar to the electric sprinkler on the British Columbia Electric Railroad.

At a meeting of the New Westminster Board of Trade which was recently held, strong objection was taken to the British Columbia Companies' Act which has recently been passed compelling extra provincial companies who have resident agents in British Columbia to take out expensive licenses to carry on business in the province. They claimed that this was unfair and would bring hardship to many people now doing legitimate business. It was decided, however, not to enter any official protest at present, but to await the development of the situation.

The Privy Council has given judgment in the appeal of Mr. G. F. White in the action brought by him against the Victoria Lumber and Manufacturing Company. The judgment of the Privy Council reverses the judgment of the full court of British Columbia and restores the original verdict of the jury. Mr. White is a laborer in South Vancouver, and the action arose out of the death of his son who was an engineer at Chemainus in the employ of the Victoria Lumber and Manufacturing Company. His death was the result of an accident caused by a runaway on the railway in which two men were killed and several injured. The ground of the action brought by the parents was that the brakeman employed by the company was incompetent and that an improper safety switch had been provided by the company. The action originally went to trial on March 28th at Vancouver before a special jury, which awarded the plaintiff $6,000.

The British Columbia Government have made another step in connection with the dispute between themselves and the Emmerson Lumber Company regarding the illegal export of logs. The warden of provincial police seized another boom of logs belonging to the lumber company. The boom is now on its way to Vancouver. While this boom was being seized a sheriff on behalf of the lumber company was dispossessing the government of another boom at the same camp and returning it to the company. Mr. J. S. Emmerson says that the same steps will be followed in connection with this latest seizure as soon as they can take out a writ, and by that time there will probably be another boom cut and ready for seizure. Since the government took a hand in connection with this company's affairs two of its four licenses have been completely logged off. The logs have been manufactured and the lumber sold. Two booms have been seized at a third claim. At the fourth claim, where the company have their largest camp, no government officers have put in an appearance.

McILVAIN'S SPECIALS

For Prompt Shipment

Ask us for prices on 150,000 feet 5-4 and 8-4 No. 1 Common and Better.

For Sale to Close an Account
Crown Granted Timber Limits and Lands

in the

Province of British Columbia, Canada

The undersigned has received instructions from the owners who desire to close the account, to sell by private treaty

Forty Timber Limits and Lands

situate in the Salmon River Valley, West Kootenay, British Columbia, from thirty to forty-five miles north of the United States border, and upon, or contiguous to the Nelson and Fort Sheppard Railway which runs between Spokane, Washington, and Nelson, British Columbia, connecting with the Great Northern and Canadian Pacific Railways, and affording access to the United States and Canadian markets.

The limits contain in the aggregate thirty-eight thousand acres, and are comprised of bottom lands and benches of hills, constituting one of the best bodies of timber in the Central Southern part of British Columbia. Subdivision of the tract has hitherto been consistently refused. Individual limits contain from two hundred and fifty to twenty-one hundred acres, with from three million to forty-five million feet of Cedar, Pine, Hemlock and other woods of excellent quality upon them, in addition to large quantities of Cedar Poles—prices run from $5,000 up according to Stumpage and Location.

Some of the limits are essentially Cedar Pole Propositions, and contain large quantities of the very best quality of Cedar Poles from twenty-five to seventy-five feet in length, free of limbs

The properties are Crown Granted, and the timber upon them may be exported. The Timber is subject to a Royalty of fifty cents per thousand feet, when cut.

A considerable quantity of the land is available for fruit land when cleared, and the owners are prepared to give a deed of land and timber, or a license to cut timber only for a term of years, at the option of the Purchaser.

TERMS OF SALE:

In order to close the account, very easy terms of purchase will be given, namely, twenty-five per cent. cash, and the balance in four equal annual instalments, and twenty per cent. cash with balance in six equal annual instalments—interest at six per cent.—with operating privileges which will assist purchasers to pay for limits out of stumpage.

The character of the properties together with the easy terms of payment present a unique opportunity to persons of moderate means to acquire valuable limits for either operation or investment.

Prices and further information may be had upon application.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Are You Stealing from Yourself ?

At first glance this question may seem rather absurd. "Stealing from yourself", yet it has been done, is done, and will be done in various ways. We have found that some people were, unknowingly, "Penny Wise and Pound Foolish"; bought altogether on price without considering values. It's an easy mistake to make. THINK IT OVER. You will find positively more uniform value per dollar in "Quality" lumber than any other kind.

Advertiser

Say Old Chap!

Non Advertiser

Do you know that I had quite a lot of second-hand machinery that was no use to me so I put a small "ad" in the **"Canada Lumberman"** and sold the whole line? The "ad" only cost me a couple of dollars and I got ever so many replies.

Why don't you sell those old machines of yours, there are lots of fellows who would be glad to get them?

The "Wanted and For Sale Department" of this paper is buying and selling second hand equipment every day.

INVESTIGATE THE NEW METHOD

No. 90 Planer, Matcher and Profiler

You can make the highest quality of flooring on the new No. 90 Planer and Matcher at 200 feet per minute. We will prove that you can do this. Our guarantee of proof is conservative because flooring has been run on the No. 90 at more than twice this feed in our own factories. The machine is built strongly enough and is powerful enough to stand up to a feed of 500 feet per minute—so when we say that you can run "A1" flooring at 200 feet per minute, you see that our statement is really conservative.

All your outline work (drop siding, beaded partition, lap rustic, V ceiling, casing, etc.) can be run on the No. 90 at 150 feet per minute! Think of it! And even at this very fast feed you will get better work than you can get from any moulder or four head matcher at 50 feet per minute.

In other words, you can do much better work and three times as much of it with the No. 90 as you can get from any other four head machine. Stop and think this over! It means a whole lot!

The No. 90 is a simple, substantial machine built for speed and hard work. Every part performs a duty—there are no superfluous pieces.

The machine is equipped with the powerful Automobile Chain Drive.

It is also equipped with the "Berlin" 6-bit Round Top and Bottom Cylinders which will handle twice as much stock as a soft knife machine and at the same time save you 15 to 30 per cent. in grades.

For flooring, we furnish you 12-bit side heads especially designed for this fast feed work. At a feed of 200 feet per minute they will not tear out even the knots and cross-grained places as much as other heads will at 60 a minute.

If you have not received a copy of the June "Berlin Quality" Bulletin, you should write for it NOW. It contains four pages of description about this Fast Feed Working of Flooring and Outline. It is worth your careful reading.

Disston Progress

1840—Henry Disston made but **few** saws a day.

1850—Made **some** dozens each of various kinds **of** saws per day.

1860—The DISSTON SAW WORKS turned out **hundreds of dozens** of saws per week.

1865 Factory destroyed by fire—rebuilt immediately.

1870—Sales increased to **thousands of dozens** per month. Factory again destroyed by fire and rebuilt.

1880—Mounted up to **tens of thousands of dozens** per month.

1890—Leaped to **hundreds of thousands of dozens** per year.

1900—**Millions** of saws of various patterns were made and **sold.**

1910—**Sales still increasing and the demand for Disston Brand of Saws and Tools unprecedented.**

THE REASONS:—Integrity, persistence, courage, enterprise, knowledge, all united in a constant effort to manufacture and deliver the BEST saws for every purpose which it lies within human power to produce.

Keystone Gang Bolter

Our new Gang Bolter is designed to saw slabs for lath, pickets or kindling wood bolts at one operation.

We have shown others the superior features of our Bolter and we can show you.

Mandrels are made of best steel 2⅜ inches in diameter and run in self-oiling boxes.

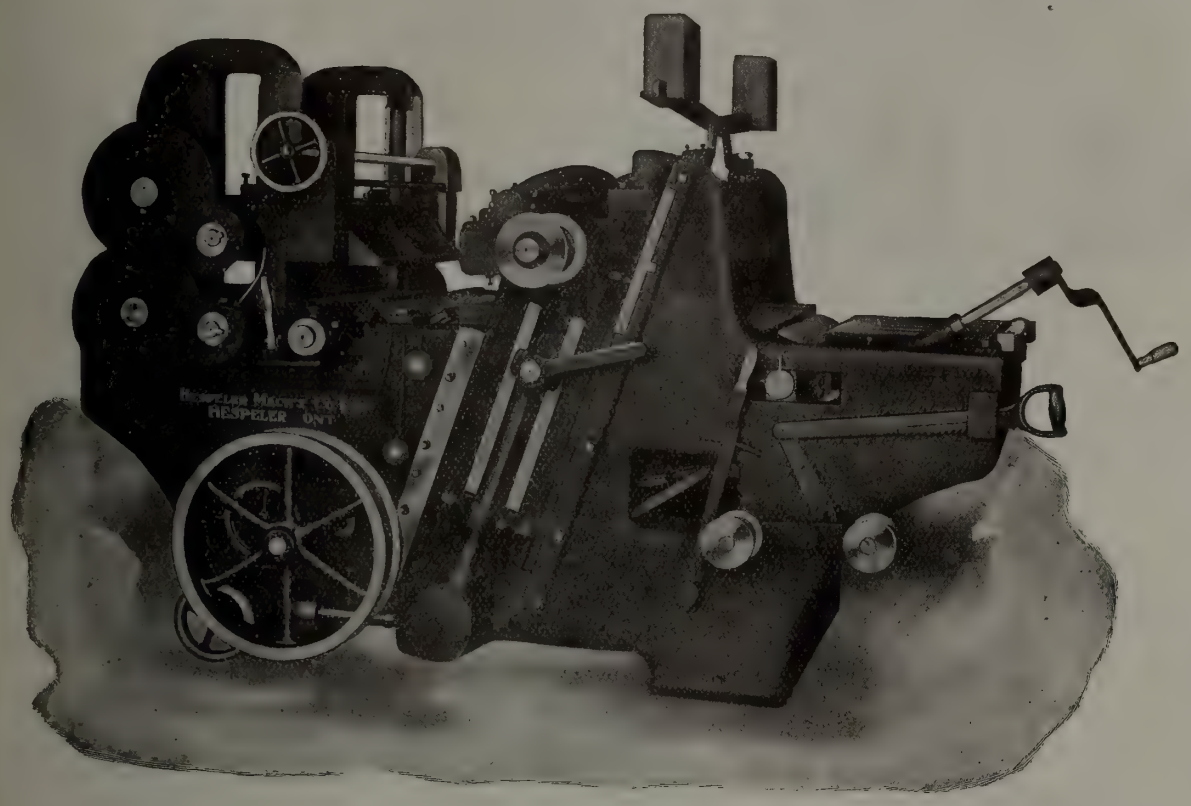
Our new catalogue is yours for the asking.

Rothfuss Howard Iron Works
Williamsport - Pennsylvania

RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.

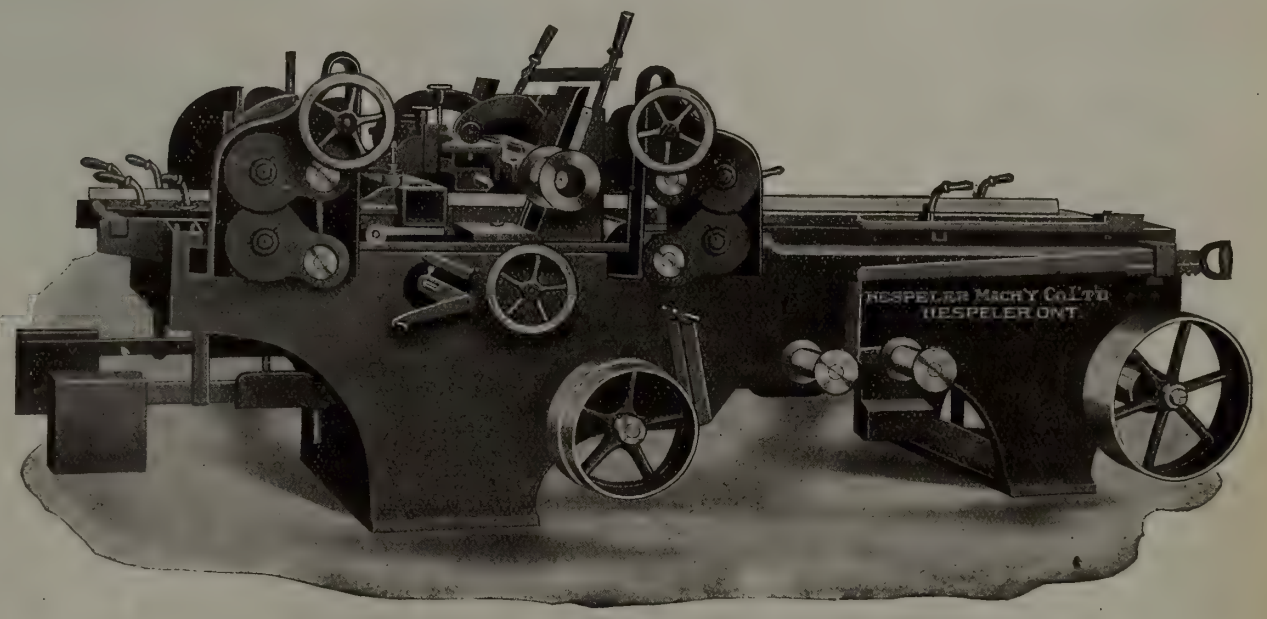
The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All



skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

Hespeler Planers and Matchers Produce Superior Work at Less Cost and in Less Time



No. 31 Heavy Duty Double Cylinder Endless Bed Planer

If you want a planer to stand the heaviest kind of work this No. 31 is almost certain to meet your requirements. It is heavy and substantial, and has a capacity far beyond the ordinary machine. It is 26 inches in width and will take timber I4 inches in thickness. The Frame is extra heavy and well ribbed, the cross grits are all planed and strongly bolted together, and the whole frame is so designed so as to insure maximum strength and solidity.

No. 56 Single Cylinder Planer and Matcher

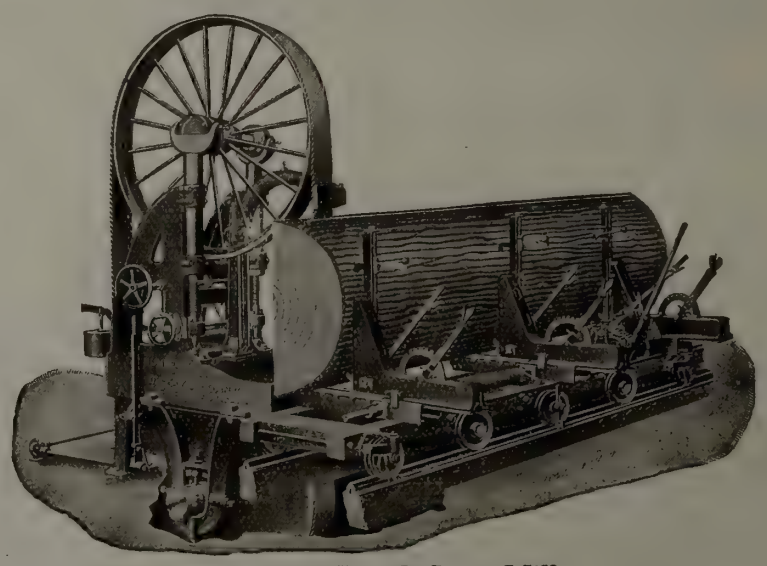
Shipping weight 5,600 lbs. This machine is of good design and heavy enough to meet all requirements within its capacity. It is free from useless trappings, but at the same time it embodies all conveniences and adjustments that are necessary, or desirable. It has a capacily to plane 24 inches wide, 7 inches thick and matches 18 inches wide. It has 2 changes of feed, 33 and 60 running feet per minute.

Complete outfits for furniture factories and planing mills supplied on short notice. Write for descriptive circular and any woodworking machine you may require.

The Hespeler Machinery Co., Limited

Hespeler, Ontario, Canada

One Improvement Leads To Another



After reaching the acme of perfection in reducing saw kerf by the application of our **Patent Knife-Edge Straining Device,** we saw the advantage of applying

Ball Bearings

to the upper wheel shaft of our **No. 57 Band Saw Mill** which insure much smoother running and eliminate all troubles found with the old style of box.

Our Mill, besides the immense saving in kerf, is economical in the production of lumber. It will cut a board so straight and smooth that there is only a minimum of waste at the planer.

Let us Tell you All about Our Band Mills

No. 57 Band Saw Mill

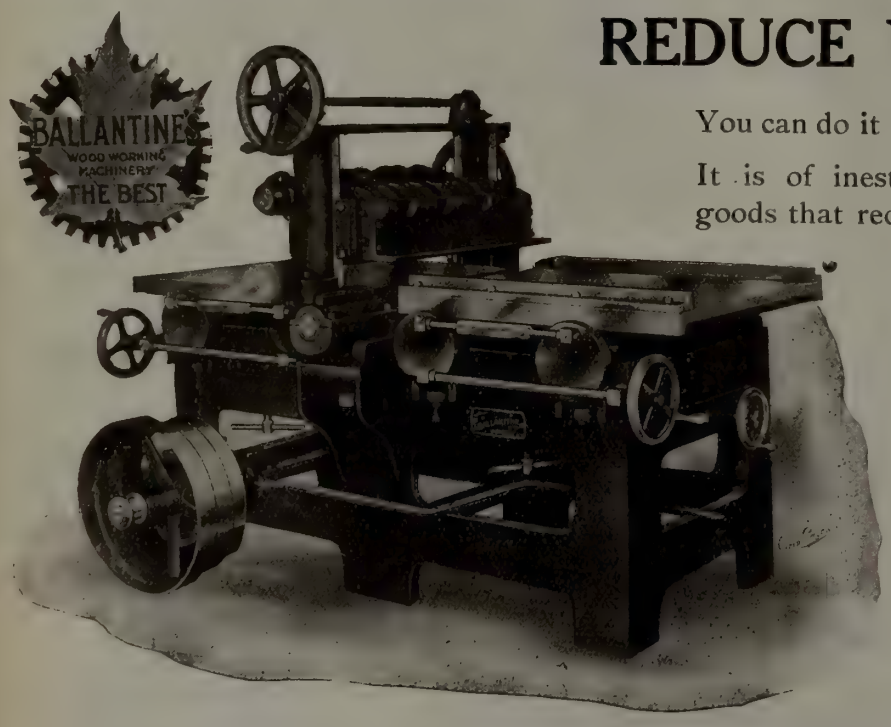
The New Atkins Catalog

Now Ready



You should have this new book on Saws. It contains the very latest information, lists and description covering Saws for all purposes.

Send For It To-Day

Drop a postal to the address below and we will send the book free of charge. Whether you buy Atkins Sterling Saws or not, you should have the book on your desk. Write for it now before you forget it.

E. C. Atkins & Company

U. S. Factory: INDIANAPOLIS, Ind. **Hamilton, Ont.**

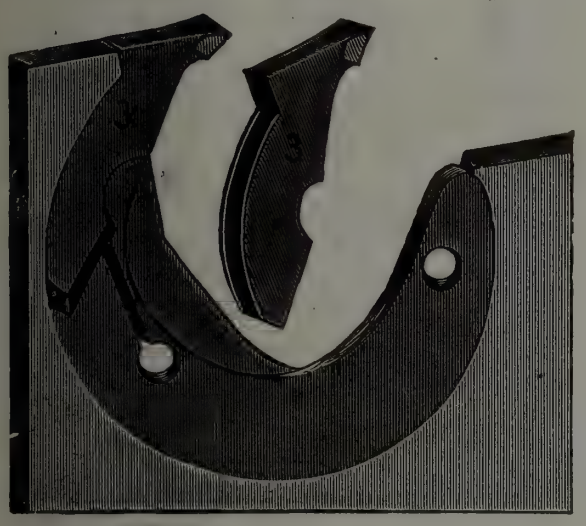
REDUCE YOUR FACING COST 75%

You can do it by installing a **FALLS UNDERCUT PLANER.**

It is of inestimable value on all classes of manufactured goods that require straight surfaces and wherever the hand planer is used for facing. Stock of any width, from the narrowest to the full width of the machine, may be run. Narrow strips can be straightened as well as on the best hand planer, which proves that the roller control is perfect. In fact, on it every class of facing can be done as well or better than on the best hand planer, **at three or four times the rate of hand work.** We absolutely guarantee this result.

Besides, it is absolutely safe. Accidents are impossible on it, no matter how careless the operator may be.

Order One for 30 Days Free Trial



JOHN BALLANTINE & CO., Ltd., Preston, Ontario

R. H. SMITH CO., Limited

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

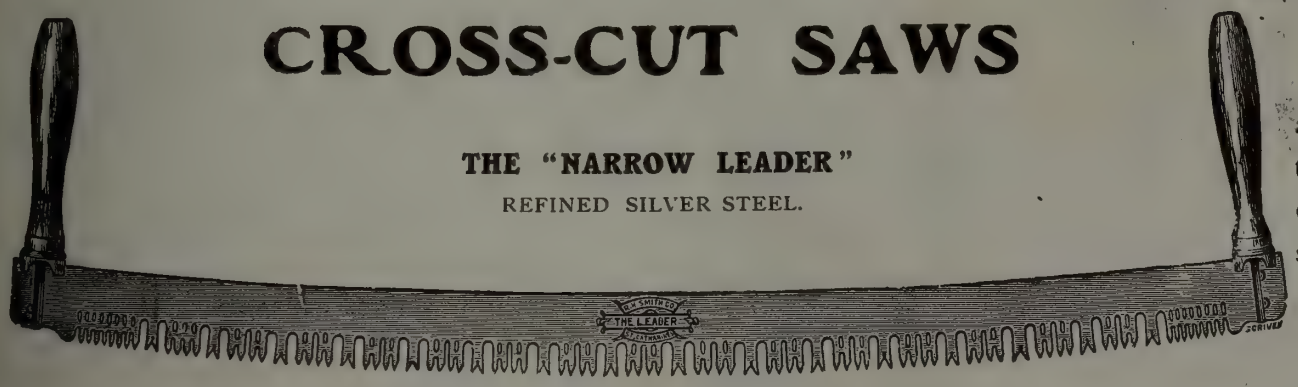
INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.



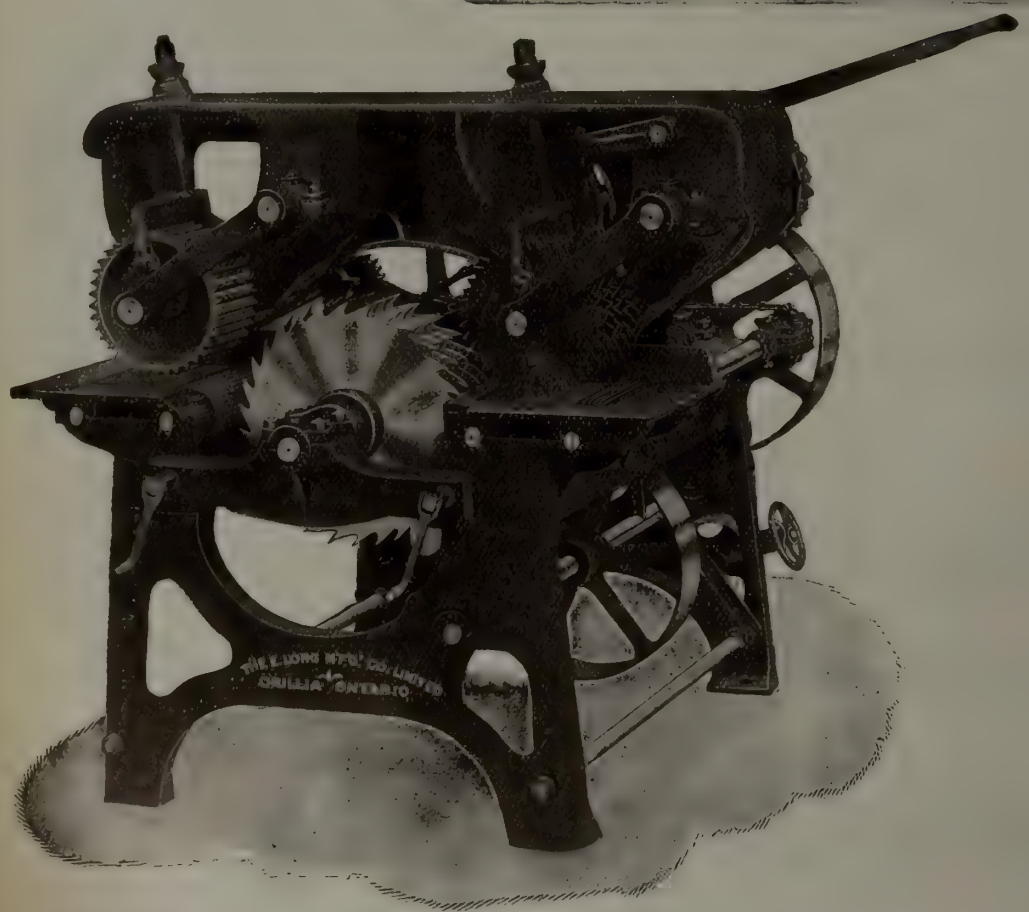
Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.



Write for prices.

R. H. SMITH CO. Limited St. Catharines, Ont.

Heavy Duty Lath Machine

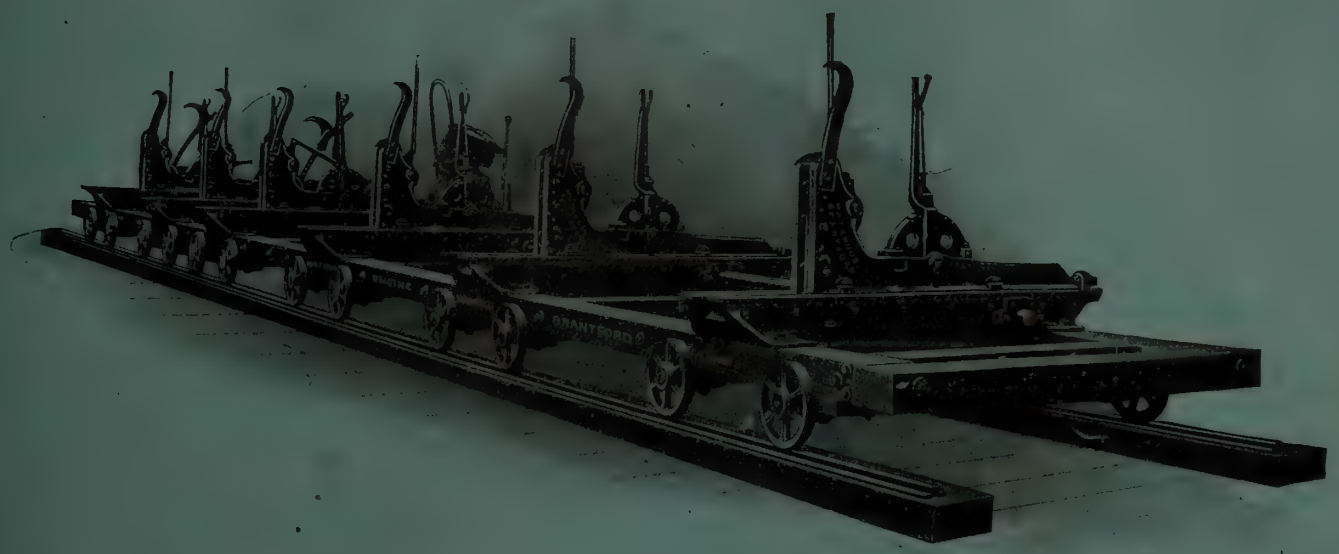
This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few o them:—

The front and rear pressure rollers are power driven.



The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

The Spark Extinguisher

shown in illustration was sold by us about a year ago to the Chicoutimi Pulp Co., Limited. It has been so satisfactory that we have just shipped two others to the same company for use at other mills. If you use wood for fuel you cannot afford to be without this apparatus. It is guaranteed to extinguish all dangerous sparks and will not affect the draft. Made to fit any stack or chimney.

SEND FOR ILLUSTRATED BOOKLET

Geo. W. Reed & Co., Limited Dept. B

Craig Street West, MONTREAL

This saw that represents the big economy whether Band or Circular, is not the one you pay the least for delivered down at your mill.

The frequency or infrequency with which they must be changed, and filed and tinkered with counts some, for this takes time, you know, the time that runs into money, and it is only the saws that are able to hold an edge and that won't crack, that make for economy.

Simonds Band Saws, because of the selected material used, their uniformity of temper, their hardness without brittleness, their evenness in grinding and strength of the brazing, are used in the biggest, busiest mills in the world for the sole reason that being so made they cut more lumber, stand more wear, tear, and hard driving, than saws of other make.

Your first order for a Simonds Saw, let it be Band, Gang, Cross-cut, or Solid or Inserted Tooth Circular, will make this so evident that it will never be your last.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, September 1, 1910 No. 17

Prevention of Saw Mill Accidents

One of the most important duties of the owner of a sawmill is to take every possible precaution against accidents to employees. No lumber manufacturer desires to endanger the lives of his employees. Apart entirely from the humanitarian point of view, the simple business aspect of the matter is sufficient to induce a sensible manufacturer to install every reasonable device for the prevention of accidents. It is encouraging to note in connection with this subject that the reports of the factory inspectors of Ontario have each year something to say in the way of commendation for sawmill owners. In the report presented recently by Factory Inspector Robert Hungerford, whose work includes many of the sawmills of Northern Ontario, he said: "I am pleased to report that I have seen but one gang edger in use within the past year without a guard. They are becoming much more generally used, and if not thoroughly guarded will, I am sure, greatly augment the list of accidents in sawmills. In my opinion these machines can be rendered comparatively safe by the use of a finger guard in front and the roller guard on the back, which I would strongly recommend to be used in all cases where gang edgers are operated."

There is another aspect of the case which should not be overlooked. In the same report Inspector Hungerford had something to say by way of criticism regarding the employment of boys in lath mills and shingle mills. The section of the report referring to this matter was as follows: "The lath mill, which is an adjunct to every large sawmill, requires close attention on the part of the inspector, on account of the employment of boys under the required age. The cutting of lath is generally let out by contract, and the contractor in his desire to increase his profits engages boys at as low a rate of wages as possible, and as the work is of that character at which a boy soon becomes expert and equally as useful as a man, it will be seen that there is some temptation for him to take a chance on violating the law. I have also experienced some trouble in keeping boys out of the shingle mill, which is another adjunct to the sawmill, where they are employed packing shingles." Does this indicate that the owners of lath and shingle mills are breaking the law and are guilty of carelessness in regard to the lives of their employees? It is to be feared that if Mr. Hungerford's facts are correct there is more than a grain of truth in this conclusion. The factory inspector is about the only man who is in a position to speak with knowledge upon this subject. According to his observations, boys who are under age are frequently employed in the lath and shingle mills. The temptation to employ boys is perhaps greater than those who are not connected with the business would imagine, yet the men who are guilty of this practice take upon themselves a responsibility which they cannot justify. The safety of the employees should be as sacred a matter with the employer as the safety of himself or of his own family. If he had a son engaged in running a shingle mill or a lath mill and that son had not yet reached the age at which he could be expected to exercise reasonable caution in his work, it is safe to say that the mill owner would have many anxious moments.

Through the work of the factory inspectors it is encouraging to learn that labor conditions in sawmills are improving rapidly. They have become, in fact, better than conditions in many other manufacturing institutions. Mr. Hungerford and the rest of the staff of inspectors have much reason, therefore, to feel gratified with the results which they have been able to secure.

Keeping Track of Saw Mill Costs

The preparation of mill reports showing at a glance all the operations and their costs, and providing a useful guide for those who have to see to the efficiency of the plant is a factor with the lumber manufacturing business which cannot be overlooked without loss. The views of an authority upon this subject are given in the following summary of an address delivered by an expert accountant to a number of lumbermen at a recent convention.

The aim of a lumber manufacturer, of course, is to make money. His plant may have been an excellent one when it was built. His employees may be capable and his material of the best, yet he is certain to suffer loss unless eternal vigilance is a watchword throughout his whole institution. Variations are so many among the lumber mills, and even the conditions in any particular mill change so continuously that without the preparation of mill reports and a careful study of them it is unreasonable to expect success. The interests of large operators are continually increasing, and they must have presented to them—daily, weekly or monthly—carefully prepared, brief and comprehensive statements of the various undertakings with which they are connected. By this means only will they be relieved of a considerable amount of uncertainty and anxiety.

Daily reports are the backbone of such a system, but the tabulating of them into monthly statements, showing sales and expenses, is a valuable means of condensing their size while at the same time retaining all the essential information. Such a statement will be used chiefly as a means of arriving at the approximate profit to date, and it is essential in connection therewith that the utmost conservatism should be practised. In the listing of expenses minute care is necessary, as there are expenses which must be calculated only when the books are closed, and which, therefore, make it important that they be watched continually. Any over-statement or under-statement of profits is fatal to the progress of the company. Improper assignment of expenses to periods to which they do not belong may make a monthly statement appear very creditable, yet when the year's business is taken into consideration it may be found that some of the monthly statements were far too optimistic. Take for instance the matter of taxes, insurance premiums, etc. They must not be charged as an expense against the particular month in which they are paid. An asset or a liability account should be opened, which should be transferred in monthly instalments to their respective expense accounts. Take also the departments of the cook house, the operating house, the store, hotel, barn, etc. In the apportionment of the expense connected with these operations individual discretion must be exercised. In some of these departments the profits can be arrived at with considerable accuracy by keeping an inventory of monthly supplies on hand.

Each of the departments referred to need not be made the subject of a monthly report in detail, but the accountant should be made responsible for keeping close tally upon the expenses or profits, as the case may be.

The most important part of the monthly report should be the summary of costs per thousand feet, together with a condensed statement of the resources and liabilities. In conclusion, the whole matter may be summed up by insisting upon the importance of accuracy, conciseness and completeness in the separation of lumber sales, the classification of expenses, the creation of departments, the arrangement of costs, the inventory, the balance sheet, etc. Without such accuracy, conciseness and completeness the reports are worse than useless. They are certain to be a danger. With the care indicated, however, reports of this nature will be powerful factors in providing the management with reliable information by which to decide upon their future plans.

A Salesman's Duty—To Keep Good Customers

There are a great many different kinds of travelling salesmen in the lumber business, yet when all is said and done there is only one kind of salesman who counts. The getting of orders is not all that a salesman has to do. He may go over a piece of territory and take orders which make his predecessors or competitors stare. The amount of business he may bring into the firm during his first year may be greater than anyone ever expected, yet he may be a positive detriment to the firm, for the taking of orders is not all that he has to do. Orders have to be filled. The goods have to be delivered, and every order secured should properly be considered as a bait by means of which to land future business. Just here is where many travelling salesmen make their great mistake. They fail to take into consideration sufficiently the delivering of the goods. A salesman who over-represents the ability of his firm to make delivery or who takes orders for grades, knowing that the goods will not be precisely what the bearer wants, will soon wear out his welcome with that particular buyer. There is only one way to be a successful travelling salesman, and that is to secure lots of orders for goods which the firm can deliver satisfactorily. All the magnetism and energy of a salesman are wasted unless they are exerted in the cause of conservative business methods.

It is a different story when one comes to consider the work of a salesman in the yard. His duty is to show the goods and sell them afterwards. Tact in sizing up his customer is his greatest business asset. His transactions, if unsatisfactory, can be rectified by personal interview, but the tranactions of the travelling salesman involve great inconvenience to both parties if they are not hedged around by extreme care and consideration for the interests of the customer. A travelling salesman who joins the staff of a lumber selling concern goes out upon the road with the reputation of the firm in his care. He may bring it back safe and he may bring it back improved, but he may also fail to bring it back at all. His methods will be sized up by his customers during their first transaction, and the customers will be quick to reward him with future orders if they find that when they ask for certain grades and quantities they can count upon receiving them without delay. It will not be long before a good salesman will receive proof of his ability. Orders will commence to arrive in which nothing is said about the price. Such a salesman has built up for himself a reputation for integrity, and for his firm a reputation for business-like methods. He, in short, is the firm to many of his customers, for he is the only member of it with whom they come in contact. The whole duty of a salesman, therefore, is to sell and to deliver what he sells. The whole duty of a firm, so far as its salesmen are concerned, is to co-operate with them completely, to back them up, and to see that, so far as they are concerned, their path is made easier every time they cover it anew.

Changing Uses of Lumber in Ontario

Nothing is more instructive regarding the growing scarcity of various classes of lumber than the changing uses to which they are being put. Lumber, which a few years ago was despised or ignored, is to-day coming into general use for many purposes. As fast as one class of lumber becomes scarce, some other variety, formerly neglected, is found to possess qualities which make it a fairly good substitute. Scientific investigations into the uses of lumber, moreover, are resulting in entirely new ways for making use of both lumber commercially popular and woods which formerly have not been used at all. The result is that lumbering is becoming everywhere a much more scientific and a careful business than it ever was before. Trees which formerly were left to grow are now being cut, and the yield per acre in forest country is all the greater for this reason. A few general, but at the same time exceedingly interesting, facts regarding changes in the use of lumber in Canada were published recently in The American Lumberman, of which the following is a reprint: "In Ontario, Canada, within recent years, changes in the varieties of lumber used have been as marked as in the United States. These departures partly have been caused by the declining available quantity of white pine, once the main dependence, and higher prices therefor, partly because of the increasing inclination toward the use of the hardwoods. Southern yellow pine has come in as a substitute for white and Norway, or red pine. This wood is now extensively used for beams and joists, heavy work in which strength and stiffness are combined with straightness of grain and cut; also, because it can be procured of sufficient length and size for almost any building. Yellow pine is much used for factories and warehouses. Hemlock timber also is coming more into use than formerly. Heavy southern pine flooring is being much employed for warehouses and factories, or any building that must sustain great weight or wear. Hemlock is taking the place of pine for the rougher and cheaper buildings, with the prospect that its use will increase.

"The use of the hardwoods for flooring and interior finish is much more general than a few years ago. Floors in nearly all the good houses are now largely of oak, maple or birch, the doors and sash being often of oak, birch or ash. Underfloors are often of southern pine, with the surface floor of maple. Cypress is being used to a considerable extent for doors and sash in substitution for white pine. Spruce from Nova Scotia is also coming into use for floors.

In the manufacture of furniture of a superior class, oak is the main dependence, the supply mainly coming from the United States. The demand is bound to be a continuous and increasing drain on the oak resources of this country, for nowhere else on the American continent can an abundant supply of merchantable oak be found. But on account of the diminishing supply of American oak, the world-wide demand for it and the higher prices that prevail for oak, Canadians are increasingly resorting to birch, of which that country has a liberal supply. Ash and elm also are being employed when it is desired to finish the goods in the early English style. The revival of demand for black walnut in the United States has not affected the Canadian trade to much extent, and the golden oak finish, so popular in the United States, has not attained much vogue in Canada. The gradual rise in prices for oak is regarded as certain to result in a more general use of the cheaper woods.

Poplar is the principal wood used for the cases of pianos, on which the veneer of mahogany, black walnut, Circassian walnut, oak or other cabinet woods is laid.

Owing to diminishing supply of yellow poplar and the higher prices prevailing therefor, piano makers in Canada are resorting to chestnut for case work. This wood, like poplar, mainly comes from the Ohio River valley and the eastern slopes of the Appalachian range. It is said that the price of yellow poplar in Canada during the last eight years has increased fully 50 per cent. Some elm also is used as case wood, but because of its hardness manufacturers do not like it so well as chestnut. Elm also is getting somewhat scarce. Spruce, imported principally from Vermont and New Hampshire, is used largely for the sounding

boards of pianos. It is said that spruce clear enough for that purpose is difficult of procurement in Canada.

Along the same line an interesting article also appeared in the same journal dealing with the commercial value of woods which were formerly regarded as inferior. The article referred to is as follows:

"Within the last few years greater attention has been given to some of the so-called inferior woods, which, in reality, are merely those woods with the character of which consumers have not familiarized themselves. Prominent in this class are red gum and red birch, these two woods being used for substantially the same purposes, and their appeals for favorable consideration have been made simultaneously. Both woods were neglected by lumber manufacturers and producers of various commodities, in the construction of which wood is used wholly or employed as one of the basic materials, until recent years, when, owing to the increase in the value of the better grades of the preferred woods, the necessity for obtaining a substitute became a duty rather than merely a source of possible profit.

"In a broad sense neither red gum nor red birch is being employed as a substitute, although both are used in the manufacture of furniture, interior trim and other articles which are sold either as some other wood or given a fancy name. Both woods now are regarded as dependable supplies from which certain articles can be made. Many of those employing either red gum or birch in their work have learned that these woods are better suited to their purposes than practically anything else that can be secured."

The Relation of Lumber Grades to Price Changes

The relation of prices to grades is a matter which provides so many apparent inconsistencies that it sometimes seems impossible to discover any logical rule which governs it. Yet there is a rule which in itself is fairly consistent, and the question needs only to be studied carefully to bring the rule to light. First of all, the conditions which arise and which are apparently inconsistent are briefly as follows: when there is a good market for lumber—that is to say when prices are strong—grades are likely to be lowered somewhat, and when the demand is dull grades are frequently found to be quite up to the buyer's expectation. One who is not acquainted with the conditions of the lumber market would expect the opposite to be the case. He would think that when there is a good demand for lumber and profits are swelling, some manufacturers would be inclined to put a better class of lumber into their grades than usual, in short that they would not think it worth while to try to work off in a grade of lumber stock which a conscientious dealer would place in a grade lower. He would just as naturally imagine that when prices are low a dealer would be inclined to make his balance better and prevent the disappearance of profits by putting into each grade a little stock which, if he were buying the lumber himself, he would perhaps object to. Lumbermen for some reason or other, however, are not as a rule built that way. Whether it is natural honesty which makes them take the other point of view or not is hard to say. They deserve the benefit of the doubt, however, for it happens often enough to be taken as a rule, that in dull times they put into various grades better stock than they really need. Probably they figure that it would be well in this way to encourage their customers, lest they might go elsewhere for their supplies.

The supply of lumber has a great deal to do with this situation, and the position of the retailer has also a large share in the matter. If the supply is plentiful—if manufacturers have been producing more lumber than the market can consume—there are only two ways in which trade can be stimulated. The manufacturer may ask lower prices or he may give better grades. Everyone in business has an inborn objection to lowering prices. It goes against the grain. Lower prices are more difficult to get away from than are better grades. As soon as the balance of trade becomes more stable the manufacturer or wholesaler who has been giving better grades than usual finds it rather easy to revert to the old methods and reduce the quality of the grades. If he had been selling his lumber, however, at reduced prices he would find the whole retail world apparently banded together to prevent him from advancing them.

When we consider the other aspect of the case the situation does not redound quite so creditably to the lumbermen. When prices are good the lumbermen find it quite fashionable to lower grades. One would think that the man who is paying fancy prices would insist upon getting fancy goods, but here again the matter of supply comes into play. The apparent scarcity of lumber at such periods makes it reasonable for the manufacturer to argue that the retailer, rather than go without stocks, will accept a little lower quality than usual.

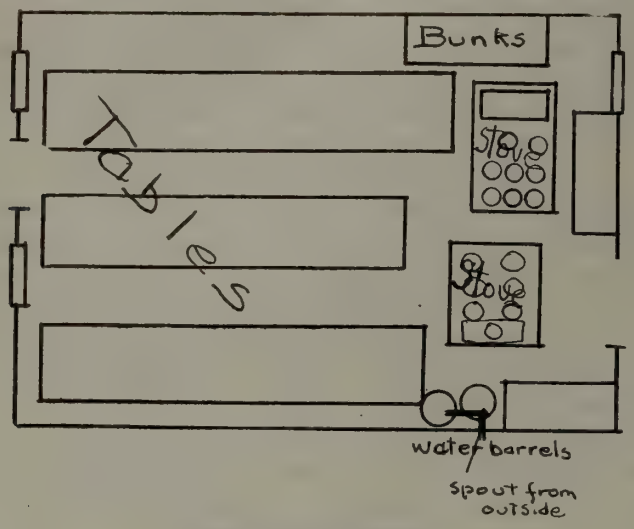
The ruling factor in all this is apparently the urgency of the demand. Lumber is an absolute necessity under present conditions of civilization, and if it becomes scarce one must pay more for it or else accept lower grades. Those who argue that the lumberman is not justified in acting according to this rule do not analyze the situation fairly. It is better for all concerned that the stability of the markets should be preserved as much as possible, and a far better lever for regulating the markets is the variation of grades than the variation of prices. It is not thought by this argument to encourage either price cutting or tampering with grades. Either of these evils is sufficient to create enormous disturbances in market condition. In the variation of grades, however, within well defined and reasonable limits much has often been done towards relieving unsatisfactory market conditions.

Editorial Short Lengths for Busy Readers

"What is the red cedar shingle of to-day? It is a thin, oblong piece of wood, with one end thinner than the other in order to lap lengthwise in covering roofs and outer walls of buildings—cooked in a dry kiln until the fibre of the wood is of little better value for the purposes aforesaid than a piece of burnt cork. If the pure food law could get at the shingle manufacturers of to-day, they would all have to go to jail. But what are we going to do about it? We are going to find a remedy. We are going to lift this poor, erring, sinful mortal of the flesh, the shingle manufacturer, out of the depths of degradation and save his soul from everlasting perdition in the hereafter, because of a crime for which he alone is not responsible." This is how a manufacturer writes in The Pioneer Lumberman, and, continuing, lays much of the blame at the door of the railway companies because they charge a rate on the estimated weight of a thousand shingles, thereby tempting the manufacturer to kiln dry his shingles, reducing their weight, but at the same time injuring their quality. This may be true enough, but it is a sad commentary on the honesty of the manufacturer.

There is probably some truth in the reports that large quantities of pulp wood cut from private lands are piled up at various points in Quebec awaiting an improvement in the market. This fact is being seized upon, however, by anxious United States paper manufacturers as an indication that the prohibition of the export of pulpwood cut from Crown lands, is not going to affect them seriously. United States Consul Willrich, at Quebec, gave voice to this idea in his last annual report, and it was wonderful how quickly and widely the report was spread in the United States press. The situation, however, is not so rosy for the United States manufacturers as they would wish. The first return of a normal demand for pulpwood will make a large hole in the supplies which can be exported, and a shortage is more than likely. From the point of view of loyal Canadians, the retention of our resources in our own country to encourage Canadian industry is a cause for much satisfaction.

The fall is upon us, and those retailers who have neglected to order stocks ahead of time will be partly responsible for the car shortage, and will be seriously handicapped because of their lack of foresight.



What with the appearance of a slight movement in favor of curtailing the output of lumber, and the destruction of large quantities of lumber by fire during the present summer, there seems to be a slight tendency towards conditions which will bring about reasonable prices before long.

Logging Operations in Ontario Camps

Detailed Description of the Work in a Camp of 100 Men—From the Purchasing of Supplies to the Taking Out of the Logs

There are so many features peculiar to the operations of each logging camp that foremen in charge of one camp may learn a great deal from observing the methods employed at others. With a view to giving in detail a description of the operations of a typical Northern Ontario camp, the following articles have been prepared. The facts were secured by a forestry student, who spent considerable time in the camp. It is felt that such a description will be of interest, not only to those who are engaged in the camps, but also to many retailers, wholesalers, clerks, etc., who seldom have an opportunity of studying at first hand the source of supply of the raw material upon which their business depends.

The camp under consideration is one in which about 100 men are employed each winter, and in which the average output is 100,000 pieces (5,000,000 b.f.). In passing, it may be remarked that when this particu-

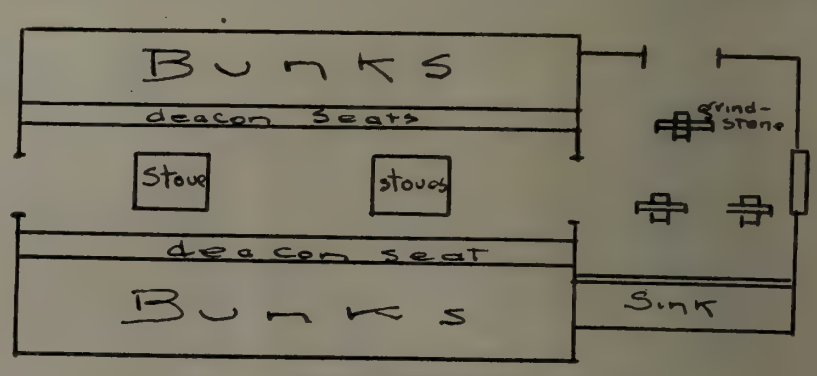
Plan of the Cookery

iar camp commenced its operations, a "cream-skimming job" was conducted, i.e., the shore line for about 500 feet in was stripped, and the logs were simply "chained" on to the ice. By this method a much larger cut was possible; the costs were greatly reduced, and the haul, the most important of all considerations, was eliminated. About 190,000 pieces were landed during these operations by the camp of 100 men. The tract in which this camp is located is in typical Archean country, rough and rugged land, with steep, rocky hillsides, sand slopes and muskegs. In fact, it is one of the most difficult types of country for logging operations. The timber growth is principally a white-red pine association, in about the proportion of three-quarters white to one-quarter red. The red pine predominates on the higher exposed portions of the rocky table land, and is found in pure stand on the sand plain towards the back of the area. The white pine holds the field on the more protected hillsides, coves and valleys. The other conifers are conspicuous by their absence. There are, however, here and there, in low, wet land, white spruce and balsam, and even white cedar. In the muskeg there are found black spruce and larch of diameter averaging 4 inches, to the exclusion of all other species. The red pine timber is small and faulty, the average log being about 11 inches in diameter. Generally from three to four 16-foot logs are secured per tree. The white pine is larger than the red pine, and in much better condition. The poor merchantable condition of the red pine comes as a matter of course, when it is remembered that the stand is comparatively old—175 to 200 years. The stumpage, however, is quite high, which compensates for the faultiness of the timber. The maximum stumpage per acre would be about 45,000 b.f. of white and red pine, with a total average of 25,000 b.f. The other species are negligible.

In cruising and estimating this tract of land, a party of three men, one of whom was a cook, was employed. Their outfit consisted of compasses, axes, tents, culinary utensils, etc. The substantial part of the commissary was mainly pork, tea, bacon and beans; lightness and compactness being primary conditions. The cruiser, by the aid of his map, located the post of a section carner. Having thus "found himself," the compass man (assistant cruiser) would walk ahead, the cruiser following, crossing and recrossing the compass line, and estimating the timber. In this way parallel lines were run, varying from one-eighth to one-quarter of a mile apart. Two men could estimate from 200 to 400 acres per day and determine within 15 per cent. the amount of lumber that could be secured from the standing timber.

The location of the camp on a tract of land in Northern Ontario is a matter of great importance. Experience has taught the logger that country within a radius of 2½ miles can be logged profitably from any one camp. This affords a total area of about 20 square miles, if the camp is located in the middle of the tract. The country under consideration, however, is so largely broken up with logs that the average area logged is about 15 square miles. With an annual cutting area of four square miles, one camp is, therefore, able to operate for three or four seasons. During this time the logging expense will naturally be a decreasing arithmetical progression for the total time.

The principal factors in the location of a camp are: (a) A wholesome and plentiful water supply; (b) location as near the centre of the tract as possible; (c) location near the water. The importance of the last of these factors will be seen when one considers that if the camp is located close to the water, supplies may be landed directly from the water to the storehouse with a minimum of handling, and in winter time a level grade is insured for cadging the supplies. The camp also should be located on a knoll, so as to secure good drainage facilities. The size of the clearing for such a camp depends largely on the length of time it is to be utilized, and also upon the soil and the kind of timber. If the camp is to be used for two or more seasons, a clearing of 2½ acres is sufficient for 100 men. This would insure safety from bush fires and from falling trees. The buildings required are an office, a foreman's shanty, wash house, stables, storehouse, teamsters' shanty, blacksmith and filer's shack, cookery, sleeping, also oil house, piggery, grindstone shanty and toilets. The accompanying sketch gives a rough idea of the layout o fsuch a camp.



THE COOKERY contains the cooking outfit, or kitchen, and three long tables occupying 80 per cent. of the room, while in the corner the cook and cookee have their bunks. It is 52 feet long by 30 feet wide.

THE BUNK-HOUSE.—Adjoining the cookery and of equal size is the bunk-house. A decked tier of double bunks runs along each side wall, providing sleeping accommodation for 85 men. A lean-to is built at the back of this shanty for the accommodation of three grindstones and a wash sink for the men.

THE BLACKSMITH SHOP (36 ft. x 21 ft.) contains the smithy and the filer's room, and bunks for these two men. For the stabling of the full complement of horses, namely, sixteen teams, two stables 42 ft. x 33 ft. are provided. These stables are very well constructed, and are kept scrupulously clean. The stalls are large and roomy, 9 ft. x 10 ft. Mangers 2 ft. wide by 3 ft. high. The stall floors of hewn poles slope to the back, insuring a dry bed at all times.

Just east of the stables, and on the water front are the two storehouses, 33 ft. x 28 ft. A small dock juts out from each, to facilitate unloading of supplies.

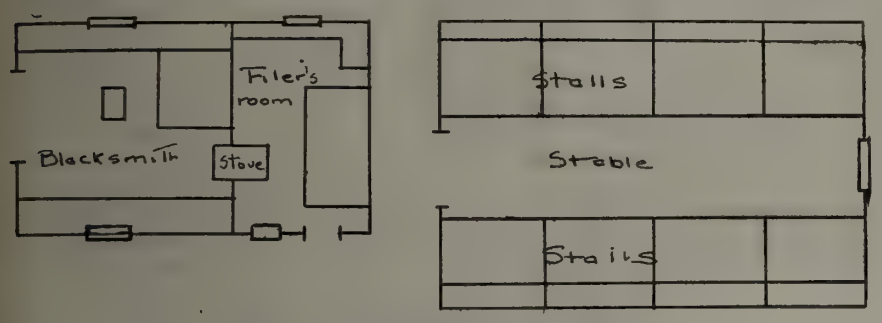
The wash-house and foreman's camp, each 20 ft. x 20 ft., stand on

Plan of Bunk House

higher ground to the south of the stables.

Directly opposite the cookery is the office, also 20 ft. x 20 ft., and behind it is the oil-house, 15 ft. x 10 ft. To the north of the office is the teamsters' camp, 22 ft. x 18 ft., and behind it stands the toilet for the office.

The same general principles are used in the construction of all the buildings. The walls are of red pine logs, average diameter 12 in., and are generally seven logs high. The logs are notched into each other at the corners, and interstices are filled with a clayey mortar secured near the camp. The roofs are of inch lumber, resting on the framework of poles. They are then covered with tar paper.



Gable ends are boarded up, and in the office and sleep-camp are provided with windows. The windows are two feet by three feet, and

have six panes of glass. Entrance to the buildings is secured by sawing out the size required for a door from the end of the building. Floors in the cookery, sleep-camp, teamsters' shack office, and foreman's shanty are of inch lumber, but in the other buildings, half-hewn poles serve the same purpose.

Stated conservatively, 14,000 b.f. of inch lumber were used in flooring, roofing, etc., and 40,000 b.f. of merchantable Norway pine logs were used in the walls, etc. This last item is entirely inexcusable, as less valuable species were near at hand.

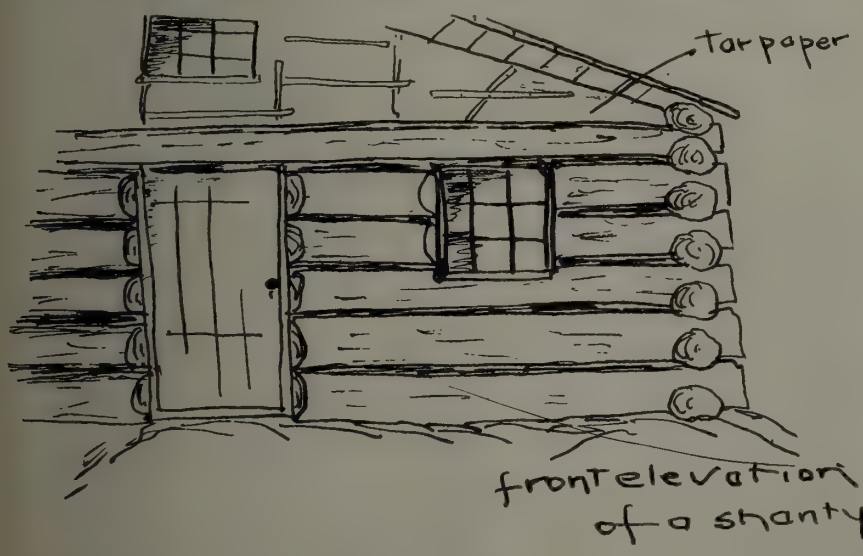
Figures are not available for the cost of construction in this portion lar camp, but for similar camps, fifty men and three teams working for three weeks would be required. For the total cost $2,000 is a reasonable figure, considering the size and completeness of the camp.

There are several special features of this camp. The sleep-house and cookery are larger and higher than generally met with. The ventilation of the former building is assured by a "fool-proof" ventilator. These

Plan of Blacksmith Shop and Stable

buildings are also whitewashed every fall. A dozen or so pigs are brought in in the fall and are fed on the refuse from the cookery. Fresh meat is thus guaranteed for a "rainy day."

The cook is paid $75 per month, and the two cookees $30. The meal hours are: Breakfast, *6 a.m.; lunch, 11 a.m.; dinner, 5.30 p.m.



Businesslike methods are adopted in everything in this particular camp. To summon the men to meals, two calls are given by the cookee using a large megaphone. One signal is given fifteen minutes before the meal and the other at the meal hour. To facilitate matters during meal hours, the following notice is conspicuously displayed in the cookery: The food supplied is of excellent quality. The following is a representative menu for a set of meals for one day:

Breakfast—Porridge, milk; beef, fried potatoes, pickles; pancakes, syrup, bread, butter, prunes, tea.

Lunch—Boiled pork, fried pork, boiled potatoes, buns, two kinds of cake, bread, butter, prunes, apple-sauce, tea.

Dinner—Soup, beefsteak, boiled potatoes, turnips, onions, bread, buns, rice pudding, apple pie, mince pie, plum pudding, two kinds of cake, tea.

The average daily cost per head is about 40 cents for actual food, and 8 cents for service, making a total of 50 cents in round numbers. It must be remembered, however, that these figures are greatly inflated, because of the high prices charged by the company for foodstuffs laid

down at the camp. If reduced by 40 per cent., the result would be nearer the truth.

COMMISSARY STORES.

The following is the amount of food required to feed 100 men for one month, with prices of goods "laid down" at the camp:

23 lb. evaporated apples	at	.15	.....	$ 3.45
3 cases canned apples	at		.....	5.00
1-66 allspice	at	.50	.....	.88
25 lb. Baking Powder	at	.50	.....	12.50
200 lb. Beans	at	.10	.....	20.00
30 lb. Bacon	at	.20	.....	6.00
240 lb. Butter	at	.35	.....	84.00
3,360 lb. Beef	at	.07	.....	235.20
96 lb. Barley	at	.10	.....	9.60
80 lb. Cheese	at	.25	.....	20.00
10 lb. Cinnamon	at	.50	.....	5.00
200 lb. Currants	at	.15	.....	30.00
6,615 lb. Flour	at	.04	.....	264.60
10 lb. Figs	at	.10	.....	1.00
10 lb. Ginger	at	.30	.....	3.00
1 lb. Hops	at	.50	.....	1.00
60 lb. Compound Jam	at	.15	.....	9.00
300 lb. Compond Lard	at	.25	.....	75.00
6 boxes matches	at	1.00	.....	1.00
3 lb. Mustard	at	.30	.....	.90
100 lb. Mincemeat	at	.15	.....	15.00
3 lb. Nutmeg	at	.75	.....	2.25
120 lb. Onions	at	.10	.....	12.00
20 gallons Pickles	at	.60	.....	12.00
45 bushel Potatoes	at	1.00	.....	45.00
80 lb. Prunes	at	.15	.....	12.00
40 lb. Peas	at	.10	.....	4.00
4 lb. Pepper	at	.35	.....	1.40
50 lb. Raisins	at	.15	.....	7.50
100 lb. Rice	at	.10	.....	10.00
30 lb. Rolled Oats	at	.10	.....	3.00
100 lb. Sauerkraut	at	.15	.....	15.00
100 lb. Salt	at	.05	.....	5.00
1,600 lb. Brown Sugar	at	.10	.....	160.00
100 lb. Glucose	at	.10	.....	10.00
48 Bars Soap	at	.10	.....	4.80
9 lb. Soda	at	.10	.....	.90
90 lb. Tea	at	.35	.....	31.50
10 gallons Vinegar	at	.50	.....	5.00
50 cartons Yeast Cake	at	.15	.....	7.50
100 lb. Fish	at	.10	.....	10.00
3 cases Condensed Milk			.....	18.00
480 lb. Vegetables	at	.05	.....	24.00
Total			.....	$1,204.68

An inventory of all the supplies in the camp is made weekly, and this account, together with a list of supplies wanted, is entered on a blank and forwarded to the district agent of the company. The average value of the stock kept on the shelves is about $400. By comparison, it will be noted that camp prices are considerably higher than outside figures. No doubt this increase is due in part to extra haulage and handling, and also by the necessity of buying certain articles in the retail markets, e.g., tobaccos. However, allowing for all these considerations, the prices are slightly excessive.

The bunks in the sleep-camp are double, and every two men are provided with three pairs of woollen blankets, 84 in. x 72 in., costing about $3 each. Two tiers of bunks, one along each side of the bunkhouse, accommodate the 85 men. They are bottomed with boards and bedded with hay, straw, or balsam boughs. Immediately in front of the

bunks, and running the full length of tthe building on both sides, are the "deacon seats" or benches. They are made of half-hewn timbers, and are the only seats in the shanty. Each man pays 50 cents per month to have his washing done by the washerwoman, who is provided with a shanty on the outskirts of the camp.

Articles for sale in the "van," and comparative prices, are as follows:

Article	Price in Camp.	Price Outside.
Braces	.65	.50
Caps	1.00	.65
Drawers	1.00	.65
Mitts, wool	.50	.25
Mitts, buckskin	1.25	.80
Mackinaw Coats	5.50	5.60
Pants	2.50	1.75
Pants, Mackinaw	3.50	2.50
Soap	.10	.05
Tobacco, 8 plugs for	1.00	8 for .80

Other articles sold are shoepacs, moccasins, shirts, stationery, electric oil, liniment, epsom salts, painkiller, pipes, pack-knives and horse medicines. Business is transacted only during business hours, i.e., 7 to 9 a.m. and 5 to 8 p.m. Credit rules, and sales made are entered in the day-book against the buyer's account. Afterwards the items are transferred to the ledger.

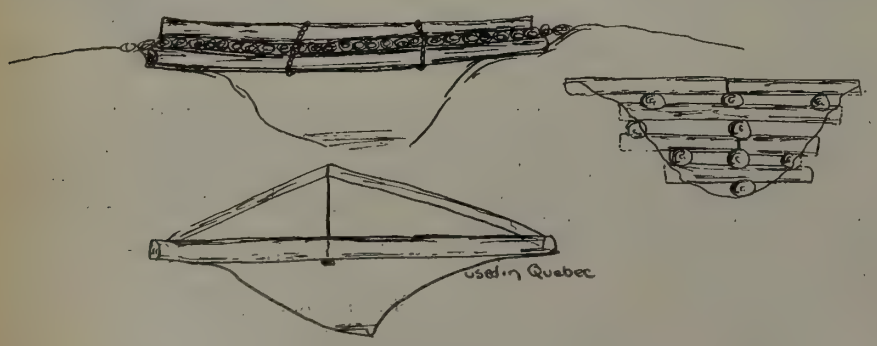
THE CAMP OUTFIT.

The camp outfit includes the regulation lumber-camp cooking stoves, one six-hole and one eight-hole, with ample ovens and water-heating

attachments. The heating stoves for the office, teamster camp, foreman's shanty, blacksmith shop and wash-house are of the box stove variety—3½ ft. x 1½ ft. In the bunk-house are two large cylindrical sheet-iron heaters, four feet long by two feet in diameter. These are bedded horizontally in a frame filled with sand. The following is a cooking outfit for a hundred-man camp:

Two eight-hole cook-stoves and necessary stovepipe; 325 tin plates, used for pie, meat and dinner; 110 tea basins; 200 knives and forks; 96 one to three-quart dishing-up dishes; 144 spoons; 24 salt and pepper shakers; 12 syrup jugs; 12 lamps and lanterns; 24 tea or soup jugs; 12 24 in. x 22 in. bake pans; 6 14 in. x 22 in. bake pans; 3 10-gallon boilers; 6 pots for boiling vegetables, varied sizes; 4 dishpans; also 2 wash-basins, 1 washtub, towels, and mirrors. The tables and benches are of inch lumber, 3 ft. x 35 ft., and are covered with enameled cloth.

In the locating of the various buildings, it is essential that the cook-



Suggested Location for Cookery

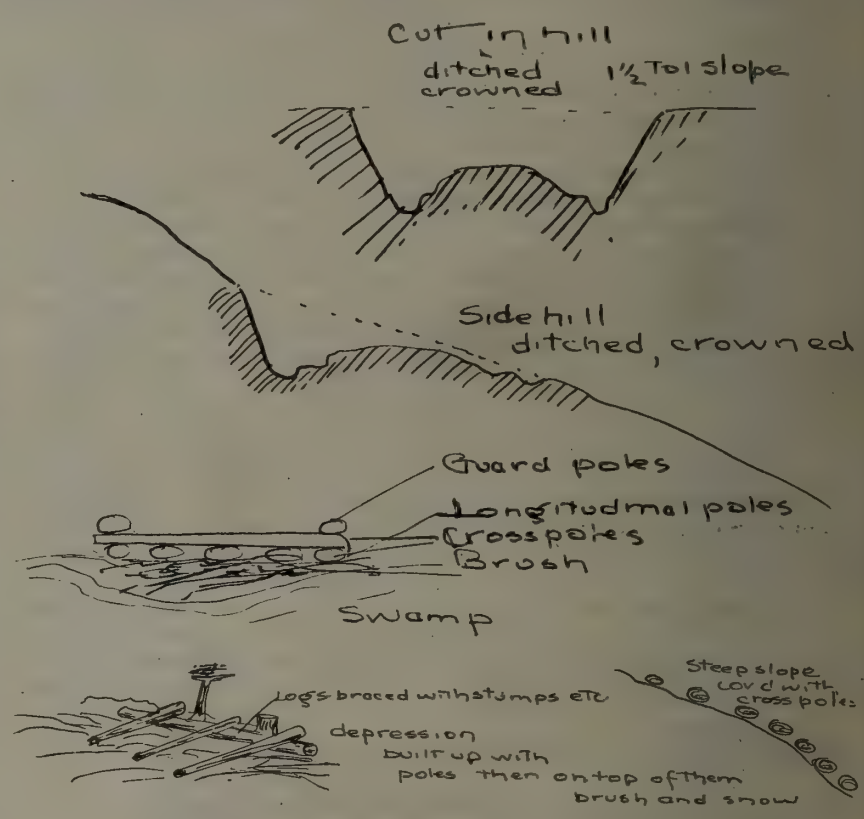
camp should be as near the water as possible, so as to reduce the handling of supplies and carrying of water. The accompanying sketch illustrates an ideal location, from the cooks' point of view.

The equipment of a good camp blacksmith shop includes: Anvil, bellows, vise, taps and drills, boring machine, hammers, sledges, bits, chisels, bar iron and coal; costing roughly $175. Logging tools include: Skidding tons, decking and skidding chains, blocks, cables, saws, cant-hooks, snow-shovels, grindstones, etc., pointers and canoe. A fair average cost for these tools for a 100-man camp would be $1,500.

Ten teams of horses are employed up to the end of the cutting season, about January 10th. From then on the full complement of sixteen is kept, as the sleigh haul makes heavy demands on horseflesh. The animals are of a fair quality, weighing about 3,000 pounds a team. Four hundred and twenty-five dollars is an average value per team. The daily rations for each team consist of one bushel of oats and 45 pounds of hay, and one mess of boiled feed fed once a week. During the "sleigh haul" these quantities are slightly increased. The cost per team per day is: One bushel of oats, 75 cents; 45 lbs. hay, 68 cents; total, $1.43. The equipment for one team of horses is as follows: Two sets of harness; 15

Road Making—Bridging a Stream

feet wrapping chain, ⅝ in.; for slopes or drags; 40 feet decking chain, ⅝ in.; 12 feet anchor chain, for guying gin pole; 1 block, 6 in. x 9 in; 1 grab-hook; 1 pair of skidding tongs; total cost, $90.



THE OPERATION.

The location of the camp site is dependent on accessibility to the supply depot, water, and the economical execution of the operation. The timber estimator considers these factors in picking camp sites. With his report as a guide, the walking boss and the foreman carefully survey the ground in the early summer, before the camp is built. After the reconnaissance is completed, and general principles have been laid down by the superintendent, the foreman brings in his first gang and sets to work, September 1st marks the opening of the season. But at this period of the year the lumberjack is not available. Because of this, inferior French and English labor must be used. With these men, and possibly a few good ones, the camps are built, roads opened and cutting begun. Meanwhile the foreman is travelling his territory "night and day," getting thoroughly familiar with topography, swamps, etc.; "spots" main roads and skidways; determines landing places, and lays out the work generally for the season. Towards the end of September, real lumbermen become available, and the work begins in earnest.

The composition of camp crew, and their monthly wages during the winter of 1909-10 was as follows: One foreman, $100; 1 clerk, $45; 1 scaler, $65; 1 assistant scaler, $30; 1 cook, $75; 2 cookees ($30), $60; 1 chore boy, $28; 1 blacksmith, $65; 1 handy man, $30-$35; 1 filer, $30; 1 stable boss, $30; 6 head choppers ($30), $180; 12 sawyers ($26-$28), $324; 12 teamsters ($30), $360; 12 skidders ($26), 312; 18 swampers ($26), $468; 22 road-makers ($26), $572; 3 odd-job men ($24), $72. The monthly payroll amounts to from $2,800 to $2,900.

SELECTING AND BUILDING THE ROADS.

The motto of most road-builders seems to be, "Get there, and get there quickly." The first consideration is a route over which wagons can travel without tipping over. There are many places so steep that the hill must be taken at a gallop, and descended at a gallop to prevent the vehicle from knocking down the horses. The location of "cadge" roads is a "tough proposition" in country presenting the topographical difficulties of Northern Ontario. These roads, as a rule, follow the higher levels, for in so doing a dry roadbed is secured for summer haulage—a very important consideration, as much freight is brought in during the fall. Where at all possible, roads are laid out along river bottoms, thus insuring a water grade. However, when they are not available, the

Road Making—Ditching, Crowning and Filling in

contour lines of the hills are followed. Very little grading is done, small irregularities only being disposed of by the road gang. Large trees are avoided, but small ones, and stumps, are grubbed out. Small wet holes are bridged by laying across poles, spaced every two feet. If a real muskeg is encountered, balsam boughs are first thrown down. Upon these are laid cross-poles of birch, balsam, etc. These support the two heavy bed-pieces, running parallel with the road, and bear the corduroys proper. These are logs of an average diameter of six inches, notched underneath to fit into the bed, and on top grooves are cut, in which the wheels of the wagons run. At each edge of the corduroys a line of guard logs is put down, and fastened by chains or by heavy spikes. Creeks are bridged by throwing across two stout trees six feet apart. The floor is of cross-poles, spiked down. Guard logs act in a double capacity—retain the floor pieces in place, and, by the chains which are anchored through to the under logs, aid them to bear the load. The cadge road, as built in Northern Ontario, costs from $50 to $60 per mile. These figures, however, are not absolutely complete, as will be seen later.

(To be Continued)

The Montmorency Lumber Company, Montmorency Falls, have about 50,000 cords of pulpwood at several points on the Montmorency River and are shipping it out by rail to different American centres.

The Dragoon Cotillion, Toronto Exhibition

A week or so ago the troopers of the Royal Canadian Dragoons were on duty for the preservation of order at points affected by the Grand Trunk strike. At the Canadian National Exhibition they may be seen in a more pleasing role, when picked riders execute in front of the grand stand the beautiful and intricate figures of "The Dragoon Cotillion." This embraces all the picturesque and complicated figures of the stateliest of old-fashioned dances. As the cotillion reaches its climax the movements attain a puzzling complexity, out of which horses and riders extricate themselves in a most graceful manner. The spectacle, in daylight, as the red coated horsemen perform their evolutions with set lances, and bannerettes fluttering in the breeze, is very fine, but it does not equal the exquisite picture at night, when each lance point is tipped with an electric light. This feature is greatly appreciated by all who visit the Canadian National Exhibition.

St. John, N. B. as a Lumber Centre

It's Exceptional Facilities for Trade with Great Britain and the U. S. — Recent Shipments

In speaking of the lumber industry in New Brunswick, which now forms the province's chief industry, its principal city, St. John, figures as the most important centre. Situated at the mouth of the St. John River, ideally located as a natural distribution point for the whole province by both water and rail, one can form a splendid idea of the magnitude of this industry by a visit to that city.

New Brunswickers are reasonably proud of St. John, which is growing rapidly year by year. With so many avenues of communication by rail and water, and with such exceptional facilities for communication with the markets of the United Kingdom and United States, it would not be amiss to say that three-fourths of the lumber business of the province is transacted in St. John.

The bulk of the lumber shipped from this point finds its way to the United Kingdom. At St. John are located a number of lumber commission merchants, who buy the output of the mills for miles around, thus relieving the small mill owner of the loss of time and trouble of seeking a market himself.

During the season of 1909-10 over a million dollars worth of lumber was exported from St. John to transatlantic points alone. This does not include a large amount shipped across the border to the United States.

The condition of the American market, however, at the time of writing is very unsatisfactory. It is not so much a question of price, as it is finding a market at all just now. Several St. John men have had shipments of lumber of the first grade hung up at Boston points for weeks, and cannot find a market. This is due to a large extent to the depression in the building trades at present throughout America.

It it a noticeable fact that very little lumber is shipped to Ontario from this centre. Enquiry into the cause of this brings out the information that the haulage per mile from New Brunswick points over the Canadian Pacific Railway to Ontario points is much higher than to similar points of distance in the United States. Instances are known lately where several lumber manufacturers in St. John have attempted to open up trade with Ontario, but owing to the prohibitive rates charged by the Canadian Pacific Railway the stock could not be landed there on a paying basis. At the present time, when the United States shingle markets are so bad, and with millions of shingles hung up in New Brunswick, it is regrettable that some arrangement could not be effected with the railway whereby shingle manufacturers in this part of the country could compete at western points in the shingle market. Cases have been known within recent weeks where dozens of cars have been sent back from St. John points empty, rather than take a reduced freight rate offered by a large manufacturer.

Besides the lumber brought in by scows from up the river, by rail from inland points, and by schooners from mills on the Bay Shore, there are situated around St. John eleven large saw mills and one pulp mill. To feed these mills 150,000,000 feet of logs are floated down the river every year. They are all large mills of the latest pattern, and give employment to hundreds of men. The owners of these mills are: Hilyard Bros., J. R. Warner & Co., A. E. Moore & Co., Murray & Gregory, F. E. Sayre & Co., Stetson & Cutter, John M. Driscoll, Andre Cushing Co., Limited, C. Miller, and the E. Partington Pulp and Paper Co. Jos. Roderick & Sons and Haley Bros. have planing mills here, and in addition to the saw mills there are several woodworking factories, which produce builders' material for the local market. The Christie Woodworking Company have been located at this point for many years. A. E. Hamilton Co., Limited, is a young firm here. In January last they were burned out completely, and six weeks from the date of the fire they had a new factory erected, machinery installed, and were again under operation.

So long as New Brunswick counts lumbering as an important industry, so long will St. John be its central point for shipment. Over a million feet a day going out at the present time, and that figure steadily increasing, shows the importance of St. John and the position it takes in the lumber industry.

Recent shipments of lumber from St. John, N.B., were as follows:

	Vessel	Cargo
Aug. 1	—Tay, New Bedford, Mass.	151,681 sup. feet spruce boards.
Aug. 2	—Edward Stewart, New York	198,776 sup. feet spruce plank.
		1,454,600 spruce lath.
Aug. 2	—Hunter, Salem, f.o.	211,622 sup. feet spruce scantling and plank.
Aug. 2	—Calabria, New York	2,218,300 spruce lath.
Aug. 2	—Nettie Shipman, New York	1,300 pieces piling.
Aug. 2	—Cheslie, New York	429,875 sup. feet spruce deals.
Aug. 3	—Priscilla, Salem, f.o.	146,451 sup. feet spruce plank and scantling.
Aug. 4	—Orozimbo, Boston	24,410 sup. feet spruce scantling.
		101,600 sup. feet spruce boards.
Aug. 5	—Helen G. King, New Bedford	101,101 sup. feet hemlock boards.
		51,669 sup. feet spruce plank.
		12,478 sup. feet spruce scantling.
Aug. 5	—Adonis, New York	329,091 sup. feet spruce deals.
		718,000 spruce lath.
Aug. 6	—E. Mirriam, New York	1,719,900 spruce lath.
Aug. 11	—Angelo, Brow Head, f.o.	889,226 sup. feet spruce deals.
Aug. 11	—Benefit, Vineyard Haven, f.o.	304,490 sup. feet spruce plank.
Aug. 11	—J. Arthur Lord, New York	224,666 sup. feet spruce deals.
Aug. 12	—Lady Avon, New Bedford, Mass.	199,615 sup. feet spruce plank.
		154,317 sup. feet spruce scantling.
		6,826 sup. feet spruce boards.
Aug. 12	—Witch Hazel, New York	102,243 sup. feet spruce deals.
		50,048 sup. feet spruce scantling.
		93,811 sup. feet spruce boards.
Aug. 17	—Cora May, Boston	152,518 sup. feet spruce boards.
Aug. 18	—Rewa, New Bedford, Mass.	193,982 sup. feet spruce deals and scantling.
Aug. 18	—Isaiah K. Stetson, New York	122,086 sup. feet spruce boards.
		44,981 sup. feet pine boards and plank.
		816,000 spruce lath.
Aug. 18	—H. H. Chamberlain, New York	1,331,300 spruce lath.
Aug. 18	—Jessie Lena, New York	233,030 sup. feet spruce plank.
		79,893 sup. feet spruce scantling.
		512 sup. feet spruce timber.
		300 sup. feet pine plank.
		157 sup. feet hardwood plank.
		9,657 sup. feet spruce boards.
		415,600 spruce lath.

Quebec City and District Lumber and Pulp News

Quebec, August 29th, 1910.

Recent rainfalls in this district have caused a rise of approximately seven inches in the rivers, and many owners whose cuts were left partially stranded in the earlier portion of the season are rushing their stocks through to mill points. Especially is this true for the surrounding district, but on the other hand Northern and more Eastern mills were practically able to get their total supply down in the spring months, and by the present swelling of the rivers no particular benefit is experienced.

Locally, business in lumber circles is quiet, and dealers state that very little trading is being carried on with Montreal.

Prominent exporters in reviewing the situation comment on the fact that both the American and English markets are buying lightly and apparently from hand to mouth. Improvement is looked for when these big consumers gain confidence with the knowledge that lumber stocks in this country are normal.

Pulp Wood Outlook

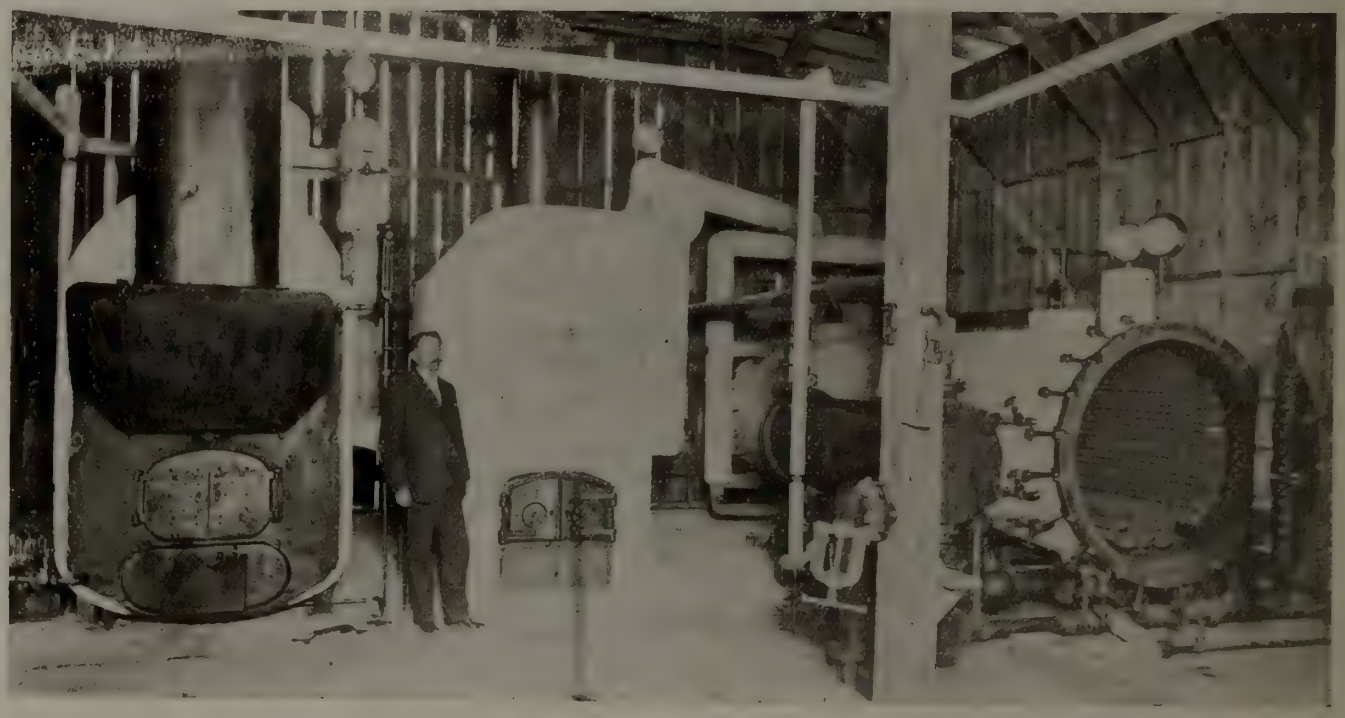
Four-foot peeled spruce pulpwood is quoted at from $6.00 to $6.25 per cord, f.o.b. cars at shipping points, and while some dealers are holding for higher prices sales are recorded frequently at the above figures. Pulpwood is not moving freely by any means, and the United States demand is poor at present. It is stated that especially in the Eastern Townships and along the lines of the different railways considerable quantities of pulpwood are available for shipment.

Owing to low water conditions that have existed at United States mill points during the summer, the majority of mills have not been working to more than half capacity, and the demand from this direction has consequently been light. It is not generally thought, however, that American mills are holding large stocks.

On the whole, it is estimated that this season's production of pulp wood is only 75 per cent. of the usual cut, and this estimate, if correct, would point to a clearing of the situation, with firmer prices in sight for next year.

The Government policy of prohibiting the export of pulpwood, cut from Crown lands, does not materially affect the situation. It is variously estimated that only from 15 to 20 per cent. of the total cut of pulpwood this year is taken from Government lands. Of course, the difficulty is that where one dealer is encountered who is not concerned with Government timber lands, his next door neighbor's holdings may all be Crown land timber, and the latter is in consequence a heavy sufferer under the new regime.

Howard Process of Vulcanizing Lumber



Interesting Demonstration Plant Installed in Toronto—A Preserving Process in which no Chemicals are Used—Red Pine, Green from the Saw, Dried Perfectly in 24 Hours

The Lumber Vulcanizing Corporation of Canada, Limited, whose executive offices are in the McKinnon Building, Toronto, have started a plant beside the Rosedale Saw Mill in the north eastern section of the city for the purpose of demonstrating to Canadian lumber manufacturers and users of wood in its various forms the merits of "The Howard Vulcanizing Process" for drying and preserving wood. The place chosen for the demonstration plant is certainly advantageous from every standpoint. In the first place it is a rare thing nowadays to find an operating saw mill in the heart of a great city like Toronto. To this mill train loads of logs are brought daily from the northern woods, so that the Lumber Vulcanizing Corporation have at their disposal the greenest kind of wood with which to put their process to the severest test.

This process of preserving or vulcanizing wood is not by any means a new one. In fact, age is one of its strong points. It was originally devised in the early eighties by Charles Howard and George W. Howard, who started a plant at 19th Street and East River, New York, under the name of the United States Vulcanizing Wood and Lumber Company. At this plant ties were treated and sold to the Manhattan Elevated Railroad Company and the Erie Railroad. There was at that time no universal demand for vulcanized ties or lumber, the American people then thinking their forest resources inexhaustible. The plant was discontinued, but the Howards kept on perfecting their process, and are once more in action in connection with the National Lumber Vulcanizing Corporation general offices, New York Produce Exchange, New York City, and the Lumber Vulcanizing Corporation of Canada, Limited, which companies own all the patents for the process.

The Lumber Vulcanizing Corporation of Canada inform "The Canada Lumberman" that the very ties treated by "The Howard Process" in 1882, and laid at a point in New Jersey just outside of New York City, are still found in perfect condition after 28 years service, a remarkable fact when the average life of an untreated railroad tie is usually not more than 7 or 8 years.

The Plant at Rosedale.—A representative of "The Canada Lumberman and Woodworker" visited the Rosedale demonstration plant on August 22nd, and found that the process is not at all complicated, and can apparently be operated in connection with any saw mill or woodworking establishment. Mr. Charles Howard, the original inventor and perfector of the process, is in charge, and fully explained all the details. The plant consists of a boiler, a superheater, a pump and condenser, a vulcanizing cylinder, and a cooling shed. The mill refuse, ordinarily sent to the burner, is used in producing the heat and steam, and not a single chemical of any description is utilized in the process. The lumber is conveyed on a car into the vulcanizer, and afterwards from the vulcanizer on tracks to the cooling shed. When the lumber is placed in the cylinder the method employed is first to exhaust the cylinder of air, and then to gradually heat the cylinder by means of superheated steam passed through the coils which line the circumference as shown in the accompanying illustration. The next step is to introduce live steam into the cylinder until it thoroughly penetrates the wood to the centre of the board and completely sterilizes and coagulates the contents of the cells. The third step is to re-exhaust the cylinder, and by so doing dry the wood from the centre out. The temperature used for the process will in every case depend entirely upon the kind of wood treated, the quantity, and the degree of drying required. While re-exhausting the cylinder the temperature is raised to a high degree, as perfect a vacuum as possible being maintained the whole time the heating continues. The lumber is then removed on tracks to the cooling shed, which is heated by exhaust steam, and gradually allowed to cool. The risk of checking is thus minimized. The maximum time taken for the process for the finest interior finish is 24 hours, but lumber used for rougher work, or railroad ties, may be vulcanized and cooled in less time.

View of Vulcanizing Plant—Mr. Chas. Howard, the inventor, is the man in the picture.

When the representative of "The Canada Lumberman and Woodworker" visited the plant on August 22nd a quantity of marked, freshly cut red pine lumber was put into the cylinder at noon, and on the following noon it was removed in perfectly dry condition, and showed no signs of warping or checking.

Claims made for the process.—The Lumber Vulcanizing Corporation make wide claims for "The Howard Process." They maintain that freshly cut or green lumber after treatment can immediately be used for building, interior and decoration purposes. The process, they say, extracts 40 per cent. to 45 per cent. of moisture from the wood, leaving the remainder of the sap, gums and other juices of the tree in a hard or coagulated condition, thereby both lightening and strengthening the wood. The wood is fully preserved against deterioration either naturally or through the agency of fungoid growths under conditions of moisture and air such as are met with in railroad ties when laid upon the track.

There is no use of chemicals whatsoever. Wood treated by this process, they claim, does not shrink materially while drying, and after treatment is not effected by atmospheric changes. It becomes harder and the whole piece of wood becomes more dense. The spike holding power of railroad ties is dependent on the quality of density.

They further state that vulcanized wood takes a fine polish, most important to those who employ wood for interior finish, and most

important of all is their claim that the process makes wood hitherto of value more valuable, and enables the most inferior sap pines to be turned into commercially useful woods.

Microscopical examination made by expert chemists, they state, has demonstrated that the action of the process is very thorough, and that the change has been produced throughout the mass of the fibre. There is no destruction of the cell walls. The process dries the wood and at the same time sterilizes it.

Further claims made for "The Howard Process" are that it does away with all kilns. Improves quality of all lumber. Increases the crushing strength. Increases the transverse strength. Reduces the weight 30 per cent. to 45 per cent. It materially prolongs the life of wood. Eliminates shrinking, swelling and warping. Emphasizes and beautifies natural grain of the wood. Does away with necessity of maintaining heavy stock of lumber in yards.

The process can be installed in connection with any saw mill or woodworking plant.

What experts say about it.—The National Lumber Vulcanizing Corporation, which holds the American patents for "The Howard Process," has a plant at Wallaceton, Virginia, where the red and black gums and short leaf pine boards have been treated for some time past and shipped to England. Not long ago a leading Canadian railroad interest sent to this plant Mr. D. Northall-Laurie, F.I.C., late member of the staff of King's College, London, England, Demonstrator of Research Work of the Chemistry Department King's College, and Fellow of the Institute of Chemistry, the recognized authority on curing and preserving of woods, to report on the process. Mr. Laurie also visited New York, where the wood treated from 1882 to 1887 was used in interior construction, and also New Jersey, where the ties treated in 1882 were still in use on the Erie Railroad.

Mr. Laurie concludes a very exhaustive report as follows:

"Whilst in New York I examined woods that had been treated by the vulcanizing process before being used for interior decoration.

"The first place visited was the old office of Messrs. Ichabod T. Williams & Sons, the large lumber dealers at the corner of 11th Ave. and 25th Street. This office contained a white oak floor, as well as panelled ceiling and dado. Although no longer in use, and in consequence subjected to extreme of heat and cold, the wood showed no signs of shrinkage or warping, and appeared as fresh in general appearance as if it had been newly laid down. Mr. Williams stated to me that the wood had been there upwards of fifteen years.

"The Milano Apartment Building at 125-127 West 58th Street was also visited. Here, mahogany, oak and birdseye maple were used, all of which had been previously subjected to the vulcanizing treatment. There has been no splitting or shrinkage whatever, even where the wood encloses steam radiators. This wood was also treated and fitted about fifteen years ago.

"With reference to the question of railroad ties: I went to Passaic, N.J., to see the yellow pine ties that were treated by the Howards and laid on the Erie track in 1882. Heavy rails were substituted for the light ones in 1896, and at the present time, on account of the cutting through of the ties by the rail, there are not many of them left. Pieces of wood were cut off, and the appearance of the pine immediately below the surface was certainly remarkable. The wood retained all the fresh appearance of newly cut lumber, and the odour of pine was distinctly noticeable.

"I interviewed the road master who has had charge of this portion of the track since 1886, and he can vouch for the fact that the ties have been down since his time. He also volunteered the information that the ties seemed to hold the spikes better than any others, especially during the warm weather, at which time the spikes in the creosoted ties tended to become loose.

"All seasoned wood is stronger than green wood. This is due to the fact that a dry fibre can sustain its shape under stress longer than a water soaked one. Vulcanized pine has been subjected to many tests, including a series at Columbia University, New York. The results of these tests tend to show that there is an increase in strength over that produced by plain seasoning which would increase the value of lumber used for bridge or other constructional purposes. I have not at present made any series of tests to confirm these observations, and it would require a considerable number of experiments to be made to arrive at any correct conclusions as to the percentage increase. The most important point to make clear is that there has been no loss in strength as a result of the treatment, which proves that that process does not injure the wood. From a consideration of the process I would expect wood to be somewhat more tough than when dried at the ordinary temperature. This is on account of the coagulation and subsequent hardening and oxidation of gums and saps.

"I am satisfied that the process, as demonstrated to me at Wallaceton, does all that is claimed for it. The wood is undoubtedly dried and hardened in an exceedingly short space of time, and with the application and use of no chemicals whatever.

"Steam and vacuum only are used, the duration of the various steps in the process depending upon the size, kind and amount of wood under treatment. The process is not an expensive one, and can be used in conjunction with a saw mill.

"In connection with the question of the preservative action I cannot speak from personal knowledge, as I did not see the original ties treated that are now upon the Erie track. The fact that these ties were treated by the Howards in 1882 and delivered over to the Erie Railroad is certain, and I have seen affidavits made by the Howards to this effect. Their condition at the present time amply shows that there is perfect preservation.

"The fact that all the organic and sap constituents contained within the cells of the wood have been baked or congealed as a result of the treatment makes it clear that there can be no fermentative action upon these materials. The process is one of sterilization at temperatures above the boiling point of water and below the charring temperature of cellulose, and from theoretical considerations of the action of heat upon organic materials, such as are met with in wood under the conditions stated, I see no reason why there should be any deterioration or further shrinkage of the wood cells under ordinary atmospheric conditions. Microscopic examination fully bears out the above conclusions.

"The value of the process for the quick preparation of the various woods used in the arts is one that should not be lost sight of.

"A thoroughly seasoned and preserved wood is one that is always sought for by all users of lumber, and the fact that it is possible to put to commercial uses, woods hitherto considered as too poor a texture to be worth cutting, is an indication of the possibilities of the process. Dealing with the question of railroad ties, it appears to me that the soft spruce woods after such a treatment could be used with success for this purpose. This would put into use large quantities of useless wood."

Vulcanized ties vs. untreated ties.—Tests were made on May 11th and June 3rd, 1910, at the Meadville, Pa., laboratory of the Erie Railroad to determine the spike holding qualities, also the amount of pressure necessary to drive a spike into treated and untreated pine ties. Compression tests were made to determine the crushing strength per sq. in., the size of piece tested containing four sq. in. Tests were made in two ways with the grain of the wood, and at right angles to the grain. Two tests were made in each case in order to arrive at an average. The following are the results:

		—Untreated Ties—	
	Vulcanized Ties. Swamp Pine.	Short Leaf Yellow Pine.	Long Leaf Yellow Pine.
Crushing with grain, Sample 1	21,010	4,542	6,870
Crushing with grain, Sample 2	32,160	4,837	9,490
Crushing across grain, Sample 1	7,820	1,068	1,140
Crushing across grain, Sample 2	7,280	932	1,830
Average with grain	27,305	4,689	8,180
Average across grain	7,550	1,000	1,485
Driving spike, Sample 1	4,190	2,280	3,140
Driving spike, Sample 2	5,560	2,070	4,270
Driving spike, Sample 3	4,110	2,610	4,630
Driving spike, Sample 4	4,500	2,300	3,870
Pulling spike, Sample 1	3,005	2,010	1,750
Pulling spike, Sample 2	3,120	1,880	3,500
Pulling spike, sample 3	3,000	2,320	2,960
Pulling spike, Sample 4	2,980	1,820	2,740
Average driving	4,590	2,315	3,977
Average pulling	3,026	2,007	2,737

From these tests it will be seen that the vulcanized swamp pine had a very much better record than either the long or short leaf untreated pine.

Demonstrations of the Process.—The Lumber Vulcanizing Corporation of Canada, Limited, will arrange to give demonstrations to all interested parties. This process is evincing interest among Railroad, Telegraph, Telephone and other Constructing Companies; and also among Lumber, Furniture, Piano, Carriage and Wagon Manufacturers, Implement Makers, Car Builders, Ship Builders, and kindred industries. Among other prominent lumber concerns the Canadian Western Lumber Company, Limited, was represented at the test mentioned herein by Mr. Hugh A. Rose of Toronto.

The Chicoutimi Pulp Company, Chicoutimi, have completed extensive additions to their mill at Chicoutimi. The capacity of the plant is now two million spruce logs, or forty thousand tons of dry pulp yearly. The company at present have contracts, running for five years, with English and French houses covering their entire output, with the exception of the extra capacity just added. No difficulty is anticipated, however, in placing the latter supply with United States or other markets. Mr. J. Dubuc, Chicoutimi, is the manager of this flourishing concern.

Figures compiled by Supervisor of Scales Robert Hamilton show that the logging camps tributary to Vancouver are this year turning out more raw material than ever before. The record for July will run up to 56,000,000 feet as against 42,680,000 feet for July, 1909, and the official compilations show that the cut of logs for June was 70,000,000 feet and for May 69,000,000, making the past three months a banner quarter. This record is approximately double that for the same three months last year.

THE WOODWORKER

A Cutting Bill

Nearly twenty years ago I was apointed foreman of a department in a woodworking plant getting out special bills of mill work. I found the blanks upon which the cutting orders were being made out, made of slips of flimsy paper, far too small for the purpose, it being sometimes necessary to use several of these slips on a part of a small job. On the theory that the fewer pieces of paper the men are required to handle around the mill the better, it occurred to me that a different form of bill was necessary. As my work required numerous pieces of all kinds and sizes, I had the blanks made much larger (10x14-in.), properly ruled, and divided into columns, at the top of which was printed the number of pieces, thickness, width, length, kind of wood, with plenty of space left for remarks, small sketches, etc., showing just what operations were necessary for each piece.

It was customary for the cutter to write out in full on each piece cut the order number, number of pieces, thickness, width and length, so that when the cuttings came to the machine room they could be located. This habit necessarily consumed considerable of the cutter's time. I therefore had the numbers 1, 2, 3, etc., printed vertically on each line at the left-hand edge of the bill, so that each piece could readily be identified by the number of the item; all the marking the cutter was required to do then was to put down the order number and number of the item, thus: 360—8, instead of No. 360, 1 piece, $\frac{7}{8}$x2$\frac{1}{2}$x4—6.

In this mill all the machine work was done in one section of the building, the different departments being located just off the machine room. A similar cutting bill having been adopted in all departments, I soon found out that when it became necessary for the different foremen to look up the progress of their work, or make changes, much time was lost by being compelled to thumb over a number of the same kind of bills in order to find the one wanted. It occurred to me then to have the bills for each department printed a different color, so that each foreman could easily recognize his own bills as far as they could be seen, and when it became necessary for the machine men to ask questions regarding the work everybody knew exactly where to go. These bills were made out in duplicate by using a sheet of carbon paper between, one being kept by the foreman for reference, the other being sent to the cutting department, and afterwards to the machine room with the material when cut.

I enclose a sample of the cutting bill referred to merely to show the method of locating the different pieces. In the space for remarks any other signs or abbreviations might be adopted, according to the ability of the men handling the stock to clearly understand the different operations. We found the scheme to work very well, and I am told it is still in use in the same mill; and although the idea may be as old as the hills, it was entirely original as far as I was concerned.—Bill, in the *Woodworker*.

Adhere to Pattern Details

Strict adherence to pattern details in the making of moldings is a virtue that is being appreciated more these days than formerly, and some day the careless and indifferent molder man who is satisfied to get his work to look something like the pattern, instead of following religiously every detail, will find it difficult to hold a job. Men using stock moldings like to have that from one lot member up well with that of another, if the pattern and size are the same, and they are becoming somewhat impatient of indifferent work and lack of strict adherence to the details of patterns.

The speed of the saw blade should be regulated by the diameter of the saw wheel, the nature of the wood and the rate of feed. A very general speed in England for ordinary work with 5-foot saw wheels is 7,000 feet per minute, and as the wheels increase in diameter this can be increased up to, say, 10,000 feet per minute, but beyond this speed the writer has failed to find any advantage, but rather the reverse, as, the saws being more given to heat and fracture, any advantage supposed to arise from the increased speed is more than nullified. For sawing very hard woods, such as quebracho or the hard Borneo, Indian or Australian woods, a speed of about 6,000 feet per minute will usually be found quite sufficient.—*Timber Trades Journal.*

Practical Hints for Fixing Machines

The woodworking machines of to-day are great improvements on the machines of a few years ago. Strength and durability are prominent features in their construction. Weight has been added, where possible, to add to their stability. The various parts have been carefully drawn out, machined, and assembled, while their utility has been enormously increased by modern improvements. It looks good to the eye. You feel proud to possess it. You anticipate doing more and better work in less time by adopting it in your factory. So you have it "laid down" and set going. But, unless great care has been taken in doing so, all those improvements, good as they undoubtedly are, may be quite useless to you in a short time, for the best of good machines will not do good work if unsteady on its bed. Your belts will not run long or true. Your bearings will soon assume a worried look, and the timber will be wavy.

Firstly, you have to decide where machine is to be laid (the length of timber you intend to work on must be kept in mind, so that you will have plenty of room before and behind). Then, unless driven by separate motor, you have the drive to consider from main shaft. This should be at right angles, if possible, and, unless in line accurately, there will always be trouble. Having determined exactly where machine will give best results, you start by getting chalk line on floor parallel with shaft, by means of a plumb line hung over shaft at two points, say, about 6 feet or 8 feet apart; from this line your measurements will all be taken, so it is essential that it should be correct. From said line of floor two parallel lines should be drawn at right angles; the distance between them should correspond with distance between bolt holes in machine frame. Then you can bore holes for bolts, or, better still, set your bolts in concrete. If the latter method is adopted it will be much simpler to make a rough frame of wood, same size as bottom of machine. Bore hole in this, same size and same position as on machine, then you have only to fix this to floor, and your bolts will be held in position while concrete is put in. Use bolts as long and thick as possible, and have large plates on bottom end to prevent bolts being pulled through floor or concrete. Have surface of bed level and true (whether on floor or concrete), especially at points where bolts come, then put a thick rubber washer over each bolt, and drop your machine in position and screw down. Now you know your machine is solid and steady, you are certain it is in line, so you measure for length of belts, and, if new leather is used, allow one-eigth of an inch less for every foot; this will work out correctly if your belts are of the proper width. You will find they will track the pulleys evenly, without any shipper or striker to hold them in position. Then, of course, you know machine is in line, and belts will not stretch unevenly, but will pull their full load with a heavy cut at top speed. The same care should

be taken in setting countershafts, if any; also, you should see that pulleys are nicely balanced on them. For, although a belt does not transmit all the power or speed from countershaft to machine, it seems to make a point to carry any vibration there is, and not lose any on the way either.

Drive from underneath, where possible, as you can never get good results from a belt pulling against caps of journals. You can have belts looser when under-driven, as the weight of belts helps a little, and any sag there is has a tendency to hug the pulley closer.

If these hints are carried out, your machine will run well with very little attention, and you will not have a reproduction of the sea waves on every piece of timber that comes through.—J. M. N., in Timber.

Importance of Yard System and Management

Valuable Suggestions Concerning the Grading and Piling of Lumber Stocks in the Yard and their Delivery to the Mill

Whether a woodworking plant is of large or small capacity, the importance of having yard work systematized is recognized by most manufacturers as a factor in the smooth running of the whole plant, says James M. Leaver, writing in "Packages." Delivery of unsuitable stock may seriously handicap the output of factory, as well as increase the waste loss over and above the normal amount which has been estimated by the office when making quotations. Delay in delivery from yard to mill will curtail capacity of machines and thus raise cost above the figures for labor and expense which had been considered correct when prices for finished product were made.

Actual results depend, in a large measure, on the ability, energy and foresightedness of the yard foreman in keeping stock in good shape, and delivering the right kind at the right time. And if sufficient and proper appliances, stock and labor have been furnished the yard foreman, failure on his part to connect will stamp him as a man of insufficient action and resource to handle this part of the manufacturing proposition.

The right sort of man will not only keep the sorting, piling and loading charges down to the lowest point compatible with best results, but will do this with an entire absence of friction and worry, while at the same time planning and striving for improved methods, so that his employers will feel that in him they have one who is always looking out for their best interests.

System in all the details, capacity in the handling and selection of men under his charge, and thorough knowledge of stock and the purposes for which it is adapted, as well as an energetic, even disposition, are the main requisites for the man who acts as purveyor of material for the factory with which he is connected.

Slovenly Piling Costs

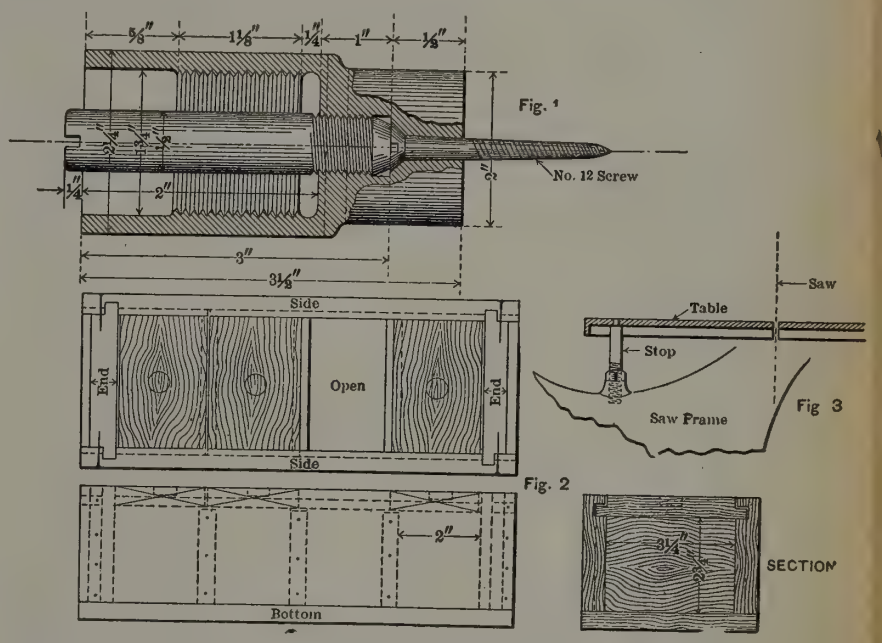
Slovenly piling costs at least as much as neatly erected piles, the straightness of the edges, the proper pitch, the right slant to the courses, having crossers in line, and careful covering, protect the stock from inclement weather, facilitate quick drying and prevent winding and twisting of boards.

Every manufacturer has seen piles that are wobbly because of crossers being used in a zig-zag fashion, and he knows the effect of such piling when the warped boards are being fed through planers and resaws; he also knows that the lumber suffers when piled with insufficient slant to the courses, and not enough lean forward from the top of the pile to foundation, on the pile front. Air circulation between courses and piles themselves is essential in hurrying the drying and reducing the interest account, to say nothing of freight saving where finished stock must be shipped on the basis of per 100 lbs. Plenty of air space, therefore, is an aid to reduced expense, and as a factor in helping close figuring in keen competition, must be carefully considered.

The effect which a neat and well-kept yard has on the moral bearing of all employes is also worthy of taking into account; it is the starting-point of the whole manufacturing operation; if handled in a loose and careless way it will undoubtedly impress the whole force unfavorably, and have a tendency to lead to slipshod methods throughout the whole plant. It is the small things that count when the final result is shown up, the impressions received affect the spirit and go of the whole operation; favorable impressions are no more difficult to instil than the unfavorable; it will not cost more to do the right thing which produces these favorable impressions than it does to lapse into carelessness; indeed, it is actually cheaper to do things right rather than wrong.

Well Assorted Stock

To accomplish the desirable condition of readiness at all times to furnish promptly the requirements of customers, a well assorted stock of widths as well as qualities is absolutely essential, and when such stock is on hand all of the time the reputation of the woodworking shop, so protected, is enhanced to the extent of extra consideration by buyers when important contracts are being placed; these are easier to obtain or renew when the stock supply has been such as to facilitate prompt delivery and good material.



It is just as essential that the yard operation should be in close touch with the office policy, as that the actual mechanical conversion of the stock in factory should be controlled by that policy. Not all the waste loss incidental to the manufacture of millwork occurs in the factory; much of it may be avoided by care and circumspection in getting ready for and supplying the factory demand. So far as waste in the yard is concerned, it may be said that the proverb, "Prevention is better than cure," applies very forcibly. To reduce ripping waste nothing is so effective as sorting and matching widths.

Grading Prominent Feature

Grading for different classes of work should also be a prominent feature of yard economy. Probably every woodworking plant has quality problems distinctly different from those of another. It is not always the kind of work that we can get; rather it is often the case that we must take such work as we can get, and do the very best we can to reduce the mixed proposition on our hands to a practical working basis. Therefore, we must think and decide what is best to do from the facts at our command; that mistakes should occur sometimes in working out conditions is not greatly to be wondered at. To successfully evolve order and profit out of the chaos of mixed orders and various grades of material, calls for administrative ability of no small calibre, and we can justly say that many failures to make woodworking pay have occurred, primarily, from the inability of parties to realize the hard, bare facts that must be taken into account. Proper assorting for grades and widths, so that orders can be filled with the least possible lumber loss, and from the grade from which they were figured, goes a long way to help over the difficulties. To figure one grade and manufacture all, or in part, from a higher grade, is a quick way to lose money. To know just what the different grades will produce is a valuable asset.

A Woodworker's Wrinkles

Fig. 1 shows a screw chuck made of cast-iron; it is without a doubt the best chuck that I ever used or saw. It is made long enough so that a firm grip can be taken to remove it from the lathe. The threads are cut away to insure a straight start on the spindle. It is drilled and countersunk for a No. 12 screw, which is secured in place by a half-inch setscrew, which is nothing more than a common half-inch bolt with the head cut off and a saw-slot cut in as shown. The screw can be removed

Suggestions for the Woodworker.

and another put in in less time than it takes to think about turning a thin disc to place back of the work. The small face-plates are fitted with this screw.

The large wood face-plates vary in size from 2 to 6 ft. in diameter. Each of these is fitted with an iron face-plate, which is never removed until the wood plate is out of use.

Table Stop for the Band Saw

Fig. 3 presents a band-saw table stop which was designed and made in this shop. The old stop was a simple setscrew and locknut, which was removed, and in its place was put a stud with a shoulder pin. The table rests on the shoulder, the pin passing through a hole in the table and finished flush with the top. With this device a workman can detect at a glance if the table is in a correct position or not.

Bench Box for Brads and Screws

Fig. 2 is a simple shop requirement, one that is in constant use, but given little attention. It is for brads, screws, etc. Three of these are made for each bench. One is for very fine brads, one for heavy brads and one for screws. It is made up of several compartments, each about 2 x 2¾ x 3¼ inches. It has individual covers over each pocket, excepting one as shown.—P. Maher, in Wood Craft.

The Retail Dealer and His Problems

The Art of Collecting—Equipment of the Yard

Collections—By C. R. McCrary

The subject of collections is one of vast importance to all lumbermen. In fact, I think it the most important question that retailers ever have to take into consideration, for the reason that no matter what we may sell or what per cent. of profit we may think we are making on the sale, if we fail to collect the money for it, then it would be far better if we had not made the sale at all. I would much rather have my lumber bins full of bright new lumber than to have the amount they represent scattered around through the country in bad or doubtful accounts. Well, someone is ready to say, we all agree with you in that, but how are you going to prevent it? I don't expect to give any rule that will absolutely prevent the accumulation of some accounts that might be considered doubtful; but will offer some suggestions that, if followed, will at least reduce the amount of bad or doubtful accounts, or, in a measure, prevent their accumulation.

We have what we might call two classes of trade. The one comes under the head of house bills, where we give our figures in a lump on the whole bill. The other is what we call our retail or "jag" trade, where a man will want, perhaps, a wagon load or less.

We will first consider the house bill trade. We all know that it is with a feeling of considerable doubt that we tackle these bills. We are never sure just whom we are figuring against, and have to proceed very cautiously so that we can have some assurance of landing the bill, and at the same time make a fair margin of profit. Now I think the first thing necessary is to have a definite understanding beforehand, as to the terms of payment, and then live up to them.

For instance, when we sell a house bill, we say: "We will furnish this bill, and as soon as the house is inclosed, the roof and lining on, will expect you to pay one-half the bill; will expect the balance when house is completed, and if not paid then will expect you to pay me interest on the part unpaid until it is paid." Now, there is nothing unreasonable in this. It is just simply bringing our business down to a cash basis, which is the only true basis on which to do business.

There are other cases where it becomes necessary to file a lien in order to make ourselves safe. "Ah!" someone may say, "that would ruin our business. We can't do that." Why should it? It doesn't ruin the banker's business to require a mortgage to secure a debt. What would we think of a bank that would loan money to anybody and everybody indiscriminately without any definite time for payment, and without security? We would say that bank isn't safe, and we wouldn't do business there either. There is no more excuse for a lumberman doing business in a careless, slipshod way than there is for a banker. I have filed a goodly number of liens in the last twelve years. I have never foreclosed one yet. It has always brought the answer without foreclosure. Some of them are good friends of mine now, and have been all the time. You don't need to make an enemy of a man by protecting yourself. Tell him that in case he should die or something else happen to him you just want to make your company safe. Talk friendly to him and you will find he will stick closer to you than he ever did.

Much more might be said on this question, but I must hasten and refer briefly to the other class of trade—the retail or "jag" trade.

Now, we all of us have customers that will drop in and want a few boards for a gate or barn door or something else. They are in a hurry, perhaps; haven't their purse with them. We know they are perfectly good, but they say, "Well, just keep an account of this." The very time they get something else they say, "Well, just put this down with that other," and so keep that up until they get a bill of ten, twenty or maybe forty dollars, and yet we hesitate to say anything about it. We may have twenty or even fifty customers of that kind, and when we come to figure up we find this class of customers owe us perhaps $1,500 or more. They are actually using our money without our getting any interest from it. Now, this is all wrong, and no man or company of moderate means can continue in business a great while and run their business in this manner.

Now, I think a better way is this: First, carefully draw off your book accounts, making a list of the name of each, and the amount he owes. Do this on the first of each month. Do this for two reasons. First, to find out the amount you have standing out; second, to find out who it is that owes you. Then go over the list and check those that are 30 days old and send a statement itemized, without comment. Then go over the list and find all that are 60 days old, and send them statements, and also call their attention to the fact that 60 days is the limit for the extension of credit by your company, and you will expect them to call and settle soon. Now, if you have not made that your rule, just try it, and you will be surprised how many will respond, and the longer you follow this up the fewer accounts you will have over 30 days old.

The only way we can successfully down the catalogue houses is to reduce our business to as near a cash basis as possible, so that when we sell our stuff we have the money with which to buy more, thereby being able to turn our stock four or five times in a year and sell at a smaller margin of profit, and yet, by turning our stock oftener, make a decidedly better profit on the amount of capital invested than we have been doing under the old credit system. I think there is but one definition for the word "collect," and that is, "Get the money for what you sell."

Equitable Terms of Sale—By J. E. Lane

This subject seems to have caused a great interest among both buyers and sellers. When one has read with interest both sides of the controversy as they appear in the trade journals, he would imagine that all that could possibly be said from the standpoint of each had been thoroughly threshed out.

I will not attempt to go on record as stating just what would be "Equitable Terms of Sale" for both, as both sides of the question have merit, and I will only try to reason out how equitable terms to both can be brought about and have harmony and friendly business relations cemented together as of old.

It matters not how, or by whom, the buyer or seller, this controversy started, it has almost caused an eruption in the ranks of these two parties who represent the foremost business men of the age; men whose business takes foremost rank in the commerce of the world.

In years gone by, and I think you will agree with me, in all the millions of dollars involved in the purchase of lumber, this matter of terms of sale, as such, has never entered the mind of either the buyer or seller in a serious way nor otherwise than a friendly and agreeable manner, the seller stating, "You can purchase one car of this at so much, figuring the cost of production, adding a reasonable margin of profit and freight to destination; then, at your option, sixty days after date, pay us in full, less expense bill, or five days after arrival of car deduct 2 per cent." As soon as the car arrives, is unloaded and inspected, as near as the average retailer is able to judge as to grade, it is checked over, and the buyer uses his option as to payments. This has been the going custom for years, neither the buyer or seller offended; each looking forward to the interests of the other, for neither can prosper without the support of the other.

When times are good the seller takes advantage of better prices, and the retailer does likewise, rejoicing that his friend, the manufacturer, prospers, and on the other hand the manufacturer seeks out and looks with favor to the prosperous retailer.

The seller manufacturer, while under a heated passion, may remark that he can sell direct to the consumer, and can establish yards at various points and eliminate the dealer. But the dealer, being in the field, has proven to be the "Trail Blazer" and the forerunner of our enterprising and progressive country, helping on every hand to promote and develop every industry that goes to make up a commercial community.

On the other hand, the buyers of to-day could say, "We can buy timber, erect our own mills and manufacture our own lumber." This has proven to be just as impractical, since the amount of money that would be involved would be heavy, while the greater portion of lumber sold to-day to consumers is handled through great line yard companies, who control unlimited capital. And, by the way, a great many of the large owners of line yards are also owners and operators of large manufacturing plants. In addition to all this is the mail order house, which needs no mention, as every buyer and seller of to-day is familiar with this factor of the business.

"Terms of Sale" between buyer and seller should be framed with some elasticity, as supply and demand are the main factors to govern. When prices have an upward tendency and the seller has a ready market, he is in a position to dictate terms which are usually satisfactory to the buyer who is anxious to have his order placed with all haste possible, and, as business is usually good, prices are more satisfactory. But when business becomes dull and trade begins to lag, customers are not anxious to buy, and when he realizes that his time is not at all valuable, he begins to inquire in different directions for prices. The dealer or buyer does likewise, and the manufacturer or seller, who is anxious to sell his product, is ready to make almost any terms to suit the buyer. There has been no exception to this rule in the past, and will not likely be in the future. My theory is to let the seller make such terms to the buyer as would better suit his condition. It should be the option with the buyer to accept or reject his proposition. It should also be the seller's option to manufacture or handle any product he may see fit, whether they be odd lengths, long lengths or poor grade, it makes no difference. It should be his business to find a market, and on such terms as he should deem best for his community. There has always been a market for everything, and it remains with the seller to establish his trade. The

buyer has always been buying, and it remains with the buyer to buy where he can make the best terms, and so on through all kinds of business, supply and demand is the rule and will continue to givern.

At meetings where manufacturers and retailers meet on the same ground, we forget the troubles that we have had in the past, and can realize that the glaring headlines in the trade papers, which woke us up from our slumber, only meant to bring us closer together, I am sure that each and every one of us, when we return to our homes and begin to look over our business in the past, as well as look to the future, will see that there has been no reason, and there should be no reason, why manufacturer and retailer should stand in opposite directions, when only one step in the right direction of each, will bring them together, and that this long-drawn-out controversy will only tend to enlighten each more to the conditions of the other. When all is said and done, there should be no more trouble over "Terms of Sale," where both interests are the same and where each has his own side and realizes that one should not be made to bear the burden of the other.

Sheds and Yard Equipment

If we study the history of the merchandising of lumber products in any locality, we find that it is a process of evolution, says George M. Yeomans in The Pioneer Western Lumberman. First comes the settler with his axe, felling trees and building a log house. The retail lumber yard has no place in his thoughts. A little later comes the small sawmill, making only rough lumber. This first millman's cut is small; he has no planer, and he hauls the green rough boards direct from the saw to the job. The demands of his trade are few, and do not require dressed or dry lumber; nor is he afraid of his business life when he sells direct to the consumer. The retail yard has no place in his trade.

A little later, however, more and better mills come in, and as the country builds up, the millman finds that the trade calls for dry lumber and for lumber worked to suit various building needs. Presently he decides that he must give the mill all his attention, so disposes of his lumber to a neighbor, who starts the elementary retail lumber business. He may do this by loading his lumber on a barge and selling it at towns on the river below the mill, or he may haul it to some town and deliver it directly from the mill to the building. The lumber yard and shed problem are just commencing to be thought of at this stage.

As we trace the business down, we find conditions changing. The country is building up and getting richer, and the builder is no longer satisfied so easily as a few years back; he is no longer satisfied with green lumber indifferently made; he demands dry stock, good mill work and uniform grades. The towns are now farther from the timber, so that it is no longer practicable to haul from the mill to the job. These conditions force the retailer to quit peddling lumber and to establish a yard, and the further demands give reason for further developments after the yard is established. The trade demands that lumber be handled by retail yards, and it also demands that the yards shall have proper sheds and equipment.

Now, we take it for granted that the man who goes into the retail lumber business does so with the primary object of making money. There are, in a general way, three departments in the retail business, viz.: First, buying; second, storing and handling; third, selling. Of these departments, the first and third are essentially the money-making ends of the business, and the second is only incidental to the business. The storing and handling department of the business is essential, for no one can conduct a business for any length of time by simply buying right and selling at a profit. To conduct a retail lumber yard, one must buy in large quantities, and at such times as he feels he can buy to advantage, and generally he sells in much smaller quantities and at such times as his customer may desire. This condition makes it essential to store and re-handle the lumber, and the constantly increasing demand for better material and service gives rise to sheds and yard equipment. The question in the retailer's mind is not as to whether or not he shall have sheds and other suitable equipment, but it is: How can the storing and handling be done at a profit? Is it possible to make the storing and handling put dollars to his bank account, as well as it is to make money by buying and selling? How can the storing and handling be done efficiently?

In the first place, we cannot get something out of a thing into which we have put nothing; nor can we expect much from an investment into which we have put but little. If we put good brains and experience and common sense into our yard plan, and the same things combined with hard work into the handling of our merchandise, I believe we can expect good dollars in return.

In many large cities, to-day, some of our best and most public-spirited citizens are spending a lot of time and are preparing to spend a lot of money on park plans. Before these cities start to build a system of parks, they think it necessary to have a broad and comprehensive plan.

It is as necessary for us retail lumbermen to have a comprehensive plan for our retail yards as it is for a city to have a good park plan, i.e., provided we wish to get results from our yards.

Keeping in mind our question: Can the storage and handling of our merchandise net us a profit? we want to take up three features of the yard plan. The first is the money-making value of the yard location and a yard railroad spur. The second is the money-making value of a shed. The third is the money-making value of a good general appearance of the yard. We might go on and elaborate, taking up drainage, fences, carts and wagons, machinery equipment, etc., etc., and show their money-making value, but the three points named will serve to bring out the idea which we wish to express.

Taking up these points in order, the first is:—The money-making value of a location and yard spur. (Understand, when we say value of location we are speaking strictly with reference to storage and handling value, and not with reference to any value that location may have to the selling.) The retail lumber business mainly consists of handling a heavy commodity in large quantities, and also it is generally dependent upon a railroad for the transportation of the lumber to the yard. This being the case, it is self-evident that the lumber yard should be located on a railroad, and it is very desirable that a spur be run from the railroad directly into the yard, so that, as far as possible, lumber and supplies may be handled direct from the car to the pile or warehouse. Suppose we take an example of a yard handling fifty cars a year. If they can save $7.50 (approximately 30 cents per thousand) per car on the handling by being able to take the lumber off the car in their own yard, rather than to haul from the railroad team tracks, in a year's time they will have saved $375, which will go a good way toward paying for the spur. I think those who have tried both methods will agree that the saving per car would be more than $7.50. This is only one example of how the location can be made to save money, and sometimes savings will add as many dollars to the bank account as earnings.

The second point is the money-making value of the shed. We have already tried to show how the evolution or development of the business has given rise to the shed in which lumber may be stored and protected from the dust, the sun and the rain and snow. Now, a shed may be built which will hold lumber and protect it from the weather and keep it in good condition, and yet may not be a good money-maker. I think we are too apt to look upon a shed as merely a storage place, and we gauge its capacity by its size. Would it not be better to look upon lumber in the shed as at a certain point in the delivery, and to gauge the size of the shed by the amount of lumber we can put through it at a minimum of expense? To make a shed efficient—to give it a money-making value—it must be so constructed that lumber can be put into it quickly and taken out quickly, and it must be so arranged that you can obtain at once any article which is within the shed. Do we realize that when we have to hunt over the whole shed for a certain piece which we know is there, but "can't just put our hands on it," and, having found it at last, we have to pile over a lot of other pieces to get it out, that we have lost the storage and handling profit on that piece as surely as though we had left it lying out in the rain and dust? Is it not a fact that a little planning and foresight will often many times increase the earning power of our shed?

If those of us who have seen a model plant at some manufacturing centre, and studied the way in which the costs of handling have been reduced to a minimum, will stop and compare that way with the way in which our sheds are arranged, and how we handle the lumber in and out of them, I believe we will agree that there is a chance for a saving in our methods, and that it is time that the retailer bestir himself and apply his brain to this subject.

The last point is the money-making value of a good general appearance of the yard. I do not think it necessary to dwell long on this point, for whatever your relation to the retail business, either as a wholesaler, a retailer, or a consumer, you feel and know the effect against a place which carelessness, disorder and confusion creates, and the leaning toward a place where neatness and order prevail. The wholesaler will note and seek the yard which looks good and up to date. He will cultivate that yard's trade and give it a better line of credit than he will the yard which has a slipshod and ramshackle appearance. This means money to the retailer. It is a real asset, though it may not appear on his statement.

Then, again, who can say how much neat piles, clean harness, well-loaded logs, and well-kept buildings influence the customer? Judge by your own experience, and you will agree that a good general appearance will make money for the one who creates it.

Reviewing what has been written, I have tried to show three things: First, how the trade demands good service; second, how it is necessary to have a good equipment to render good service, and third, how we may utilize this equipment as a money-making factor.

The demands of the trade are constantly and rapidly becoming more exacting, and it behooves us to make a careful study of how we are to meet these demands. If we do not meet these demands, we will find the business which we now enjoy directed to other channels. The best servant will enjoy the greatest reward.

While we are driving keener bargains and asking better service from the manufacturers, and while we are pushing our sales, in order to gain efficiency, let us also remember that it is possible to attain efficiency in storing and handling by the use of proper equipment.

CAMP DEPARTMENT

Value of Coupon Books in the Commissary

At the recent meeting of the managers of lumber commissaries at Baltimore Mr. W. K. Trechsel spoke at considerable length on the subject of coupon books in the commissary. His address was as follows:

"It may be said, without reaching beyond the boundaries of truth, that the matter of credits, or advancement of wages and their limitations and safeguards are of primary importance to the commissary manager, as well as to any storekeeper. Especially is this true in the operation of commissaries where credits are based on the earned or yet to be earned wages of labor, either directly connected with the commissary, or through agreement with a company employing such labor. Unlimited and unrestricted credit is one of the greatest drawbacks and handicaps under which any business may operate, more especially that of a commissary.

"The credit or advancement feature is an absolute necessity in the successful operation of commissaries; in fact, a commissary could hardly thrive without it, where semi-monthly or monthly payrolls exist.

Safety

"Let us look into the merits of the coupon system from the point of safety. A coupon book issued against the commissary by the company to its labor and charged against the accrued or future earnings of the employee generally bears a number on its cover, receipt and coupons, each corresponding throughout the book. As there is but one book of this number, the receipt of which is kept on file in the company's office, after being signed by the recipient at time of issue, it is possible to determine, at all times, the legal or illegal procurement of said book when presented at the store or commissary, and even the detached coupons can be identified readily with their respective books. In this way no switching is possible without detection, and a stolen or illegally issued book is at once recognized and traced to its source. As a further safeguard, each book should be countersigned on the cover by some authorized clerk or officer of the company at time of issue. It is even possible, should one wish to go to such lengths, to determine at any time the amount left unused in any book by assorting the coupons according to their numbers; hence one could determine, with absolute accuracy, the amount left in any book which has become lost or stolen.

Limitation of Credit

"In limiting credit the coupon book cannot be excelled. It is impossible for anyone holding a coupon book to exceed his credit limit, as a new book must be secured before other purchases can be made when the old book becomes exhausted. Overrunning of accounts is thereby completely eliminated and losses from this source minimized.

A Labor-Saving System

"As the saving of labor, both in the office and commissary, means a saving in clerk hire—a dead expense—any system that will diminish labor, and consequently expense, should receive the serious attention of any business man. The curtailment of expense without affecting the efficiency of service is what all managers are, or should be, striving for. The speaker asserts that the coupon book system, intelligently handled, will more than save its cost (to say nothing of its many other advantages) in the curtailment of expenses for clerk hire and bookkeeping. It obviates the necessity of charging all items and transferring them to the ledger and later to the monthly or semi-monthly statement; avoids disputes that constantly arise under the old system; circumvents that bugaboo, "Forgot to charge." Each purchase is complete and the transaction closed when the coupons to the amount of the purchase have been detached and placed in the cash drawer. The book has been charged against the pay roll of the holder at the time of issue, and then and there the only charge necessary was made. If any disputes arise as to whether the complainant received a certain book, the receipt which was dated and signed, detached and filed at time of issue will bear witness and effectually dispose of any such claim. As intelligent men you cannot help but appreciate what a saving this system affords.

The Cost

"Frequently the speaker meets with this remark from a prospective convert to the coupon book system: 'I know it is the best and safest system, but it is too expensive.' The value of anything should be determined, not by its cost, but by the results attained. If I can save $500 by investing $50, is it not better for me to do so than to invest $25 and save $100? The ratio of cost to the result should be the determining factor in estimating values. You are paying large sums of money for fire protection and burglary insurance; what are you spending to protect and safeguard your credits in your commissary? The percentage of cost, when figuring the price of the coupon books as compared to their money value, sinks into insignificance—it becomes a fraction so small that you would laugh at anyone giving it any consideration if applied to almost any other transaction.

"Let me ask, in conclusion, why it is that a majority of the largest commissaries use coupon books and have used them for years. Why are we adding daily new commissaries to our large list of coupon book users? There is but one answer: The coupon book system is the best system yet devised for commissary use."

The Timber Cruiser's Work

Timber cruising is one of the oldest occupations known to history, beginning with the use of timber in large amounts in building.

When Noah built the ark, which contained a large amount of timber that had to be of good enough quality that the keel lasted 120 years before the work was finished, he certainly had to look up the best timber that could be got for the purpose, and there is an internal evidence in the story that either Noah or Ham did the cruising, for they both showed some of the traits common to woodsmen.

When Hiram, King of Tyre, got out the timber for the temple Solomon built he must have had some one to cruise out the timber, lay out roads and do the other preliminary work that the predatory rich are generally too busy to attend to personally.

Hence, comparing the cruiser with the sawmill man is like comparing the giant cedar of the Pacific Slope with a tomato vine in regard to age.

With this introduction let us see if we can agree on what cruising is.

The best definition that occurs to me is this: Cruising is trying to find out how much timber there is on a piece of ground and what it is worth. Now, let us take this apart and see what is in it.

First, what is timber?

From the loggers' point of view timber is any part of a tree that he can cut up and sell and get a profit out of. If he cannot handle it at a profit it is not timber to him and he leaves it in the woods.

What he takes out is timber. This brings us to the question of what timber is worth.

First—The logger has to build some roads.

Second—He gets his engines and rigging.

Third—He puts up his camps.

Fourth—He buys his labor power.

Fifth—He has to make arrangements to get his logs to market.

Here are five main items of expense to be charged against these logs, all of which are variable, and none of which can be known certainly until he is done logging, that enter into the problem of what timber is worth.

Besides all this, the price of logs may go up or go down, owing to circumstances over which he has no control, so that between the time he starts to work and the time he gets his logs on the market he has 50 per cent. more timber or 50 per cent. less timber than he thought he had.

Here is where the poor cruiser gets his. He has to make a guess at all these unknown and variable quantities when the logger sends him in to look up the chance. If, when the logger cleans up, logs have gone up, the seller of the timber says the cruiser is a thief, or words to that effect. If, on the other hand, logs have gone down, or it has otherwise become unprofitable to handle the lower grades of logs and the logger has gone broke, word goes out from the logger that the cruiser is several kinds of things not fit for publication.

The theory of cruising as taught in the forestry schools is very simple. All the cruiser has to do is to go out in the woods and measure the diameter of each tree four feet and three inches from the ground, then measure the height and the diameter at the top. Then he can look in the Jam Book or the Hook Tenders' Guide and find there how much timber is in each tree in plain figures.

Unfortunately, in practice this takes lots of time, and leads to some very absurd conclusions from the logger's point of view, although the theory is good.

The best that can be done is to keep as near this theory as possible and take great care to grade the timber according to the standards by which logs are sold. Then the logger can, by looking at the estimate, see pretty near what he can handle at a profit. If the timber grades 30 per cent. No. 1, 40 per cent. No. 2, and 30 per cent. No. 3, and the price of No. 3 logs is such that he cannot get them to market at a profit, to him No. 3 logs are not timber, and he must cut the estimate 30 per cent. if he buys.

A mill man, located near the timber with his own transportation, could perhaps buy the same tract on the full estimate and make money. This shows the need of a uniform system of estimating and grading stumpage. Then each timber owner and logger could tell pretty near what he had, and, knowing the price of logs, could tell pretty near what it was worth at any time. Uncertainty on this point works a hardship all around, particularly on the cruiser, and the wonder is that they get as near together as they do.

Tenders for Pulpwood Concessions

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 7TH DAY OF OCTOBER NEXT for the right to cut the Pulpwood on a certain area tributary to the Nepigon River in the District of Thunder Bay. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may be fixed from time to time for the right to operate a pulp and paper industry on the territory. Successful tenderers will be required to erect a mill or mills on the territory, and to manufacture therein the wood into paper.

Tenderers will be required to deposit with their tender a marked cheque payable to the Treasurer of Ontario for twenty-five per cent. of their tender, to be forfeited in the event of their not entering into agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted. For particulars as to description of territory, capital required t be invested, etc., apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 8th July, 1910.,

No unauthorized publication of this notice will be paid for. 19

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

Growing Scarcity of Genuine White Oak Timber Attracts Attention

Washington, D.C.—It will surprise most persons who know something about oak to be told that the so-called white oak timber of our markets is often a mixture not only of various species of the white oak group, but also of other species, such as the red oak. This generally unknown fact is reported by the United States Department of Agriculture, which, as a part of its forestry work, is frequently called upon to pass judgment upon the identity of market woods in dispute.

Foresters divide all the oaks into two distinct groups, the white oak group and the black oak group. One way of distinguishing the two is by the fact that the black oaks require two years to mature their acorns, while the white oaks take but one. The woods of the two groups of oak are also structurally different. The true white oak, known to botanists as *Quercus alba*, is merely one of the species which make up the white oak group. Red oak, on the other hand, belongs to the black oak group. Red oak has a number of other common names, among them mountain oak, black oak, and Spanish oak.

There is so much confusion in the ordinary use of names of the oaks that it is almost impossible to keep them straight without resorting to the scientific names, but the marketing of wood of the black oak group as white oak is hardly fair to the consumer. Red oak, for instance, is now much more abundant than white oak, grows faster, and is generally regarded as inferior. The two species often grow together and occupy the same general region.

In the early days of its abundance, market white oak was derived almost entirely, it is safe to say, from *Quercus alba*, the true white oak. This species combines approximately the utmost strength and toughness of any of the timber oaks, excepting possibly the southern live oak, which in the colonial days was so highly prized for shipbuilding that it was protected by special laws. The immense inroads made upon the then apparently inexhaustible white oak forests, which stretched from the Atlantic seaboard to about Missouri, gradually so reduced the supply that the use of other species became inevitable.

At the present time it is almost impossible to obtain a consignment of white oak that does not contain pieces of some other species. Of the white oak group, those most used, in addition to the true white oak, are bur oak, chestnut oak, chinquapin oak, post oak, swamp white oak, cow oak, and overcup oak; of the black oak group, Texas red oak, red oak, and spotted or water oak.

Real white oak timber of No. 1 quality is very largely cut into quarter-sawed boards, while a combination of one or more white oaks and red oaks may constitute other cuts of "white oak." In many markets the term "cabinet white oak" is now understood to include a mixture of white oak and red oak, while it often signifies red oak only.

The question, "What is white oak?" is now coming up among consumers and manufacturers of commercial oak timber. The above-named white oaks are distinct but closely related species, which together must be depended upon for the future supply. For the ordinary purposes for which true white oak is used, practically all the trees of this group yield woods that can be interchanged and will serve equally well.

Steam Regulating Dampers

All boilers should be fitted with some kind of damper. This is particularly necessary in sawmills where a large proportion of the fuel used is very inflammable. This causes intense heat for a short period, and, being rapidly burnt out, much cold air is allowed to pass through the more or less bare bars and quickly lowers the furnace temperature; when fresh wood waste, etc., is thrown on the fire, a strong draught will often draw small shavings, etc., over the furnace bridge before they are properly consumed.

It is not easy with mixed fuel to keep the steam pressure uniform, owing to the difficulty of feeding regularly and the inflammable nature of the fuel.

Although dampers are really important factors in steam economy, as a rule, they do not receive by any means the attention they deserve.

A damper automatically worked by steam is to be preferred to one worked by hand, as this latter will often be neglected by the attendant, with a consequent loss in fuel.

An automatic damper can be arranged to damp the fire at any desired pressure of steam. It is important, however, that whatever form of automatic damper is used, it should have a sensitive action. This may be secured by hanging it on a steel-pointed screw-pin and making the working parts with steel centres and V edges. This will allow the damper to open or close rapidly when the desired pressure of steam is reached.

In addition to a damper in the chimney-stack, the ashpan or ashpit door should be arranged to damp also. In boilers without dampers the draught has to be checked by opening the furnace door, a practice not to be recommended, as the constant rush of cold air, in addition to reducing the furnace temperature, has a distinctly injurious and straining effect on the boiler. Leakage or broken masonry in the boiler flues will damage the draught considerably. Dampers and ashpit doors should shut tight.

Your Vacation Film

The success of your vacation pictures depends, most of all, upon your film. Look to it, if you hand over your Kodak for loading in a strange store, that no inferior substitute film is inserted. *The quality of your pictures is at stake.*

"Kodak film" means more than merely a film to fit your Kodak camera; it means film that is made by the Eastman Kodak Company. Kodak film is the film used the world over by explorers, by war correspondents, by hunters of big game, the film used by every expedition where adverse conditions demand absolute dependability in photographic equipment.

Experiment with no experiments. Look for "Kodak" on the spool end and N. C. on the box.

Review of Current Trade Conditions

Ontario

Trade is only fairly active in Ontario products and manufacturers and dealers are building upon fall prospects, which promise well. There have been no changes during the past fortnight in spruce, pine or hemlock. The market in these lines is practically featureless. B. C. shingles are somewhat of a drug on the market, the trade being pretty well stocked up and the demand being small. A fair quotation would be $2.95 to $3.00.

The hardwood market, generally, is steady, without any disposition to boom. Canadian trade in nearly all lines is good. The American market is inclined to be dull, buying being recorded only for immediate requirements. A factor in this situation is doubtless the unsettled state of the money market, added to which the consuming trade reports collections slow, which might also have an adverse influence. Apparently the reverse state of affairs is experienced by the Canadian trade, collections being reported good over here. Hard maple is in good demand, and there is a fair call for 1-inch birch. Black ash is strong in all thicknesses. Basswood is not moving any too briskly, but prices are well maintained. The American woods brought over to this territory are in good demand, with prices firm.

The lack of tone to business conditions in the Ottawa valley is ascribed by some manufacturers to the unwarranted pessimism concerning the crops that has been rife in some quarters. This at least may be put down as one of the causes of the comparatively quiet trade during the past few weeks. Much livelier buying may be looked for once the lumber actually called for by the present demand is under way. Manufacturers generally are well supplied with the common grades of pine, but a good quantity of this is reported to be in second and third hands. The market is firm in regard to pine of high quality and good spruce and good hemlock. These classes of woods were responsible for the depression of the market for low grade pine. But little spruce or hemlock is to be bought cheap except in cull stock. Hemlock, log run, 12 to 16 feet long, in regular widths, is worth from $12 to $16 f.o.b. at the mill; the wider the stock the higher the price. Similar prices are quoted for dead cull pine, which is not nearly so serviceable for cheap construction needs.

Shipping at most points is dull, large stocks of lumber which have been sold being held in the yards until towards the close of the navigation season. With an active demand for pine sidings quotations for this line went up 50 cents to a dollar.

The market for lath and shingles is still depressed by the quietness of the lumber business. There has been considerable demand for 32-inch lath, with an increased output of this line on the part of some of the manufacturers. Prices run from $1.50 to $1.75 per M. The best white pine lath are quoted at $4 per M., but there are few sales at this figure. Shingle prices are firm with export quiet. Telegraph poles and railway ties continue in good demand.

Eastern Canada

The market has exhibited very little variation during the past two weeks. Shipments of "English" deals from the Miramichi were heavy during August. From St. John, on the other hand, shipments of this class were very light, although numerous cargoes of spruce lath, spruce plank and scantling, and spruce deals were shipped to Boston, New York and other points. There is a more stable demand and a tendency to firmer prices in English spruce deals. The feeling in provincial lumber trade circles among all interested in this class of lumber is one of considerable satisfaction, and there is a bright outlook for the fall and winter trade. On the Miramichi and the Restigouche, and also at St. John, N.B., only a slight increase is noted in stocks of this kind. The marketable quantities at the centres named might be represented by 4½ millions, 6 millions and 8 millions. A fair quotation would be $15.50 to $16 per M. superficial feet on a specification containing 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens and wides. The average quotation in transatlantic freight rates from New Brunswick to the west coast is 31s.

Interest is centered largely on the logging operations which will commence shortly. Prospects for the year's work are for a somewhat smaller output than that of 1909-10. On the Maine side of the St. John river this is no doubt attributable to the indifferent demand for New Brunswick lumber experienced in the American markets. It is contended in some quarters that the listless tone to the markets this spring is no encouragement for lumbermen to operate largely in logs, the output of which is intended for the markets of Boston, New York, Philadelphia and Sound ports. The recent disaster at Campbellton also militates against logging prospects.

At Boston the market opinion is divided as to eastern spruce. Some of the dealers have been in receipt of a larger business, and state that they have been getting a better price in a few instances. Other equally reliable dealers say they have not been able to trace any real improvement in demand, and do not expect any increase until after the first of September. Retailers have been having a fair business this summer, and some have done more this month than usual at this time of year. The advance in freight rates by the Bangor & Aroostook Railway Company has resulted in its costing 40 cents a thousand feet more to land lumber at Boston, but no advance has been made in price to offset this higher rate of freight. Frames are selling at $22 to $22.50. Demand for random has been light of late. Prices in some cases have been shaded a little. Demand continues fair for spruce boards.

A fair amount of business is reported by New York wholesalers. Prices are not strong, but an improvement is looked for early in the fall. Trade in the aggregate at this point is of fair volume. There is good call for high grade hardwood stocks, but the low grades are still too much in evidence to admit of any stimulant.

There is little encouragement to be found in the market for shingles at Boston. Buyers are not willing to place orders with any freedom. For the best cedar extras the asking prices range from $3 to $3.25. Demand for lath is not active, and prices vary considerably, according to sellers. For 1⅝-inch prices range from $3.55 to $3.60, and for 1½-inch from $3.30 to $3.40.

United States

A more settled feeling concerning the crop, with the belief prevalent that there will be a sufficient return of the principal grains to insure a continuance of general prosperity, has improved conditions generally during the past week or so and provided a somewhat better prospect for fall trade. Much interest is shown in stock at the mills and in wholesale offerings, and inquiries are plentiful. As usual the retail trade is anxious to familiarize itself with market conditions before placing orders for fall supplies. From this it must not be inferred that there has been any stagnation during the past two weeks. A considerable amount of lumber has been moving on small orders, and dealers and mill concerns are surprised at the amount of lumber they have shipped in small parcels for current use. One of the most notable features of the situation is the continued demand all over the country for the output of the sash and door factories. This, of course, is attributable to the general building activity. Up to date there has been no abatement in the demand for factory lumber and finished product.

The market for northern pine at Chicago has been holding its own well for the time of the year. There is a good demand for piece stuff, also for selects. Cull lumber tends to accumulate while the demand is slow and prices are irregular. Pattern lumber is reported to be bringing fancy prices. From Minneapolis, the principal distributive centre of the northwest, the country yard business has not made a large showing. But while the country trade is dull, lumber is not accumulating to any great extent at wholesale points, and there has been no disposition on the part of the manufacturers to cut their prices as a stimulant to demand. Prices for hemlock are firm at Chicago, where operators are reported to be finding a wider market for their output. The eastern demand is strong. The hardwood market generally has been gaining strength during the last week or so. A good demand is coming from the car building concerns, furniture factories and agricultural implement companies, who, for the most part, are running full time. A large quantity of plain oak is being absorbed by wholesale and retail buyers. There is a steady but light demand for quarter sawed oak. In the lower grades of cottonwood the market is slower. A slight improvement is noted in birch and maple. White cedar shingles are developing strength and can scarcely be bought under $2.90. Quotations for red cedars are about $3.27 for clears and $2.74 for stars. Prices for lath are firm. The cooperage market is exhibiting its usual weakness at this time of the year.

At Buffalo, while there is always sale for good grades of pine, the low grades are being sacrificed. There is a good stock of hardwoods on hand in the local yards considering the state of the general supply, and all prices are fairly strong, with oak, birch and chestnut leading. A good amount of hemlock is still asked for and prices remain stationary. Hemlock is in fair request, largely owing to the fact that the price has been moderate and retailers and builders have made no effort to stock up. The shingle trade is somewhat easy, few lines selling outside of red cedar.

Great Britain

With the holiday season on the wane a resumption of good trade conditions is looked for. The spruce deal market holds up steadily, and shippers are keeping to their prices, which so far they appear to have had no difficulty in obtaining. Spruce values at Liverpool are somewhat unsatisfactory from the importer's point of view. The demand on the whole has improved a little, but it is still made up of a series of small lines. Large orders are quite the exception. Unfortunately this

means competition for practically every standard sold, and this naturally has an adverse effect on the market. Quotations showing a difference of 5s. to 10s. per standard demonstrate clearly the state of the spot market at the present time. Quebec pine remains unchanged with the expectation of an advance in the price of the higher grades, especially in the wider average deals and boards. Lower qualities are not being moved as rapidly as might be wished, but taking the general state of trade the demand is quite up to expectations. Quebec birch is a good spot, the prices being firm and the stocks very low. Shipments of pine timbers from Canada last month were light, the bulk of receipts going to the Manchester canal. The first quality waney pine received went to the wood merchants and no doubt was destined to go into direct consumption. Second class white pine was in limited demand, though stocks were low. There was not much inquiry for square Canadian pine. The small stocks held in Liverpool seemed sufficient to satisfy current trade. The stocks of norway pine were but 5,000 cubic feet and demand was limited. The call for Pacific coast pine (fir) was considered better than it had been, but stocks remained heavy.

An improved market is noted at Glasgow, where inquiries have been more in evidence than for some time past, and the movement, both from the quays and public storage yards, while by no means brisk, has been on moderately good lines. A let-up in the arrivals of American hardwoods has resulted in some clearances being effected, chiefly in oak lumber, the price of which is inclined to be firmer. Spruce is in fair request and values show every indication of being maintained, as the stock is decidedly light.

The trade at London seems to be steadily improving, and if this continues timber importers should look forward to a period of remunerative business. From the St. Lawrence and New Brunswick deals have arrived sparingly, but the consumption has shown no elasticity, and a large proportion of the importation has been stored at the docks. Prices keep firm for small quantities at a time, but the market is no longer a wholesale one, and the high producing prices have effectually checked the demand, and made a free market almost a thing of the past. Spruce has been more largely imported. Prices for Lower port stocks are well maintained, and a little more business has been possible. Birch planks are selling slowly, with no appreciable alteration in value. Birch timber, oak, ash and elm have not been inquired for except in retail quantities.

The Manchester trade generally is very quiet. There seems to be a decided ease in the building and timber trades. Orders are few, and in softwoods are of little use when they are secured. Everybody seems to have the idea that if they have a large turnover the profit will look after itself. An example of this occurred this week, when an inquiry amongst the local merchants for a quantity of 7 in. x 3 in. spruce deals, of long average lengths, found nearly all on the same mark, £9 5s. per standard. This is not a working profit, as the deals would have to come either from the yard or dock stocks, and be carted four miles or so. Spruce deals are firm and the import will be a light one. It is difficult to get scantlings and deals to dimension. An inquiry for a load of 12-foot by 4 in. x 3 in. at the docks found no holders. From monthly stock sheets we learn that spruce "decreases" are as follows, compared with the same period last year: Import, 6,000 standards less; stock, 5,500 standards less; consumption, 480 standards less.

Market Correspondence

New Brunswick Trade and Logging Prospects

Chatham, N.B., Aug. 24th, 1910.

The approach of September causes all connected with the lumber industry to turn their attention again to the logging end of the business. A start is usually made about the middle of September or between that time and October 1st. The prospects for this year's work in the woods are already taking shape in this section. On the whole, the outlook for logging during the winter of 1910-11 indicate that the total quantity gotten out will fall short of that of the winter of 1909-10. Particularly will this be the case on the St. John river. Owing to the low prices and indifferent demand, in most of the principal lines which has prevailed in the American markets for New Brunswick lumber, the volume of the cut on the Maine side of the St. John river will no doubt be small. Several cases of lumbermen—who usually cut heavily on the American side—curtailing their logging operations are known. Others, who know conditions and the influences which shape events in this direction, state that the unfavorable markets of the spring and the present summer offer little inducement to lumbermen to operate largely in logs, the output of which is intended for the markets of Boston, New York, Philadelphia and Sound ports.

Another element which will have a tendency toward the curtailment of the log crop is the destruction of the mills at Campbellton. The indications are that, even if new plants are erected to replace those which were destroyed, they will need few logs during the season of 1911.

Of those lumbermen who saw exclusively for the English market, it might be said, speaking generally, that their logging operations will not exceed those of last year. Since the slump of 1907, there has been less tendency to load up with raw material, and there is little doubt that a similar policy will be followed in making plans for the logging operations of the coming fall and winter.

There have been few really important changes on the market end of the industry. Shipments of "English" deals from the Miramichi have been very heavy thus far during the present month. From St. John, on the contrary, shipments of this line of goods have been very light, although there have been numerous schooner cargoes of spruce lath, spruce plank and scantling, and spruce deals shipped to Boston, New York and Sound ports.

The trade in "English" spruce deals continues very even with the current of events trending always toward firmer prices and a more stable and brisker demand. Although the improvement has been very gradual, it is quite apparent in local and provincial lumber trade circles that all who are interested in the selling of "English" deals are very well satisfied with the developments of the spring and summer, and equally well satisfied with the outlook for the fall and winter trade in "English" spruce.

Stocks of this line of goods are augmenting slowly at St. John, on the Miramichi they have grown less during the past three weeks, and on the Restigouche stocks are also growing slowly. Eight millions of superficial feet, four and one-half millions and six millions would cover the marketable quantities at each of the centres mentioned. Judging from all indications an enquirer would be quoted from $15.50 to $16.00 per thousand superficial feet on a specification containing say 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens and wides, on the wharf at New Brunswick shipping port.

The quotations in trans-Atlantic freight rates, from New Brunswick to the West Coast, range from 30s per standard to 32s 6d, with the average at 31s.

Lumber Conditions at the Federal Capital

Ottawa, Aug. 25—A state of lethargy prevails in the sales departments of lumber companies, but the hiring agents are busier than usual at this time of year manning the camps in the woods. Shanty work has been started a week earlier than last year. Among the first companies to send away crews were: Gillies Bros., to Montreal River and Ville Marie; Colonial Lumber Co., to North Temiskaming and Kippewa, and Pembroke Lumber Co., to Jocko and Petawawa Rivers. The Colonial Lumber Co. will operate more extensively than in 1909. J. R. Booth, W. C. Edwards Co. and other large firms contemplate doing an average winter's work. Wages for shanty men are $3 or $4 a month higher than last season, and unless hands become considerably more plentiful after the harvest is saved labor will be unequal to the demand. When hiring began a year ago $26 was the highest offered, going up to $30 near the end of the season. A few companies are already paying $32. The general wages are $26 to $28 for road cutters and $30 for teamsters, loaders and log makers. Expert hands are sent away without any specified rate of pay, and it is expected they will be paid off with $35 per month, as they got an extra $5 last winter. Lumber men show a disposition to leave more power to foremen in fixing wages, and every contract signed by men before leaving provides that if they cannot do the work for which they were engaged they will have to accept the bosses classification. The men are hired until the end of the log haul. Their transportation is paid going. If they do not remain for the river drive they have to travel home at their own expense. There is a slight moderation in meat prices since last year, and the outlook is that food supplies for the camps will not cost quite so much. It is evident that on the whole the cost of operations will exceed that of 1909.

Shipping is duller even than sales. There is a great quantity of lumber held in the yards that has been sold, but it will not likely be removed till near the end of navigation. The demand for thick shipping cull pine sidings was more active than for other sorts of lumber, and quotations went up 50 cents to a dollar. Although several lines of pine are weak, lower quotations were made on only a few sorts. There is a promising future for red pine. One middleman reports a fair demand for choice stock. Log run, mill culls out, commands as high as $22 for 1½ inch stock.

The quietness in lumber business affects lath in a marked way. All four foot stock is dull and prices are likely to break. The consumption of 32 inch lath is increasing at the expense of the other sort, and some manufacturers have increased their output of the more marketable variety. The price has improved slightly, now running at $1.50 to $1.75 per thousand. Dealers quote the best white pine lath at $4 per M., but actual transactions at that price are very scarce. Shingle export is quiet, but prices are well maintained. Telegraph poles and railway ties are in better demand than sawn lumber of any kind. Rural telephone companies are active in the Ottawa district, in Carleton alone

The Jenckes Machine Company, Limited

Sherbrooke - Montreal - St. Catharines - Cobalt - Vancouver - Rossland
Works: Sherbrooke, Que. St. Catharines, Ont.

75 miles having been recently built. This demand helps to use the more plentiful short lengths. The prices are steady.

A prominent manufacturer told the "Canada Lumberman" that the present quietness in trade would vanish as soon as lumber actually needed is shipped. One of the causes of dull trade, he asserts, is the unwarranted poor reports of crops which spread abroad. Several stocks of lumber are low enough to boom rapidly in price with a couple of weeks' brisk buying. So far, the common grades of pine are the only kind plentiful with manufacturers. And even a lot of that is in second and third hands.

The water supply is 30 per cent. less than a year ago and nearly as bad as the worst season, in respect of navigation. The Chaudiere dam is built up with every stop log that it will contain, but nevertheless the Booth mills are seriously affected. The pulp mill has to take advantage of the noon hour when the saw mill is closed to keep up its supply for the paper factories, and frequently machines are idle for want of water power.

The Gatineau River is so low that the W. C. Edwards Co., Hawkesbury Lumber Co. and E. B. Eddy Co. have logs stranded along its banks. Still worse is the Lievre River, where the James MacLaren Co., of Buckingham, has an immense quantity of logs on the way to the mills. At the town of Buckingham the logs take up so much of the stream that people are complaining of the hindrance caused to navigation. There is an agitation for more booming of logs as a result. The situation has been made more serious recently by the bringing down of thousands of logs which arrive about this time every year.

Bailey Bros'. lumber mills at Aylmer were destroyed by fire on August 18, entailing a loss of $10,000. The night watchman believes the fire was of incendiary origin. The mill was not running. The blaze was close enough to Ritchie Bros'. mills to cause much alarm to the owners. That some danger lurks in J. R. Booth's big saw dust burner was shown on August 15 when the endless chain carrying refuse became clogged at the mouth and the flames inside the incinerator set the blocked stuff on fire. A nearby shed was ignited and the city fire brigade came out. The loss was $100. Fire Chief Graham, after an inspection tour, is advising all the lumber mill owners as to precautions against fire. The W. C. Edwards Co. has adopted his suggestion and erected a platform beside the Rideau River where an engine can be placed to pump from the stream should another big fire, such as occurred a couple of years ago, break out.

The lumber mills at East Templeton, recently sold to James McFadden and associates, are expected to begin sawing in the early part of next month. The logs which the firm has been waiting for are on the way down the Ottawa River. The idleness of this big plant, capable of producing 25 million feet a year, running single shift, will tend to noticeably reduce the Ottawa valley cut of 1910. The whole property, comprising two mills, one with circular and gang saws and the other with two band saws, 250 acres of land, booms, piers, etc., changed hands. Campbell & Stearns, formerly of L'Orignal, propose building a $25,000 saw mill at Gracefield.

Owing to difficulty in getting logs the Pembroke Lumber Co. has suspended night operations. Ritchie Bros., of Aylmer, have similar trouble, some 300,000 of their logs being hung up between Petawawa and Quyon and obstructed by other drives. While waiting for supplies Ritchie Bros. will saw a few weeks for the Hawkesbury Lumber Co.

Annual Report of Canadian Forestry Association

The annual report of the Canadian Forestry Association for the current year has just been issued and is being mailed to members of the association. In addition to a report of the business meeting of the association, a full report of the convention held in Fredericton, N. B., in February last is contained in the volume. All papers read are given in full and much of the ensuing discussion as well. Much valuable information is contained in regard to the protection of the forest from fire, the wood pulp industry, the education of professional foresters or forest engineers and many other aspects of forestry, especially in eastern Canada. Requests for copies of the report should be addressed to James Lawler, Secretary Canadian Forestry Association, Ottawa, Ont.

Complaint has been made by B. C. timber owners that more logs are being cut than the state of the market demands. Although business in the Northwest has fallen off owing to adverse crop reports, the production of logs on the Coast is still great. In July approximately 56,000,000 feet were scaled against 42,680,000 feet July, 1904. For the last three months the total was very large. In June the amount was 70,000,000 feet, the greatest on record, and in May 69,000,000 feet. Prices naturally are lower than several months ago, ruling from $7 to $10. It must be remembered, too, that in the cut in British Columbia most of the output is No. 1 timber, as there is less call for No. 2 than on the other side of the line.

B.C. Millmen Reduce Price of Common Lumber

Coast and mountain mill men at a conference with the prairie retailers at Banff last week agreed to reduce the price on common lumber $2 per thousand.

All reports presented showed the lumber trade to be in a flourishing condition. The stocks of coast mill men were shown to have been 101,000,000 feet as compared with 200,000,000 million feet on January 1, and 175,000,000 feet a year ago.

Stocks of mountain mills are now 165,000,000 feet as against 200,000,000 feet this time last year. Spruce mills reported that they will have 20,000,000 feet compared with 75,000,000 feet a year ago, and the white pine men of the region east of Winnipeg showed that their stocks are forty per cent. less than they were a year ago. Several spruce mills and one white pine saw mill have closed up through lack of a supply of logs. The former includes the Red Deer mill at Prince Albert. Two large saw mills in the Kootenays were destroyed by fire last month, thus reducing the output for the present.

British Columbia mill men will also reduce the price of shiplap $1 per thousand. They also agreed that odd lengths would not comprise more than twenty-five per cent. of their shipments to the prairies.

Exports of Pulp from Winnipeg

Export figures for pulp and pulpwood are of unusual interest in the light of the pulpwood legislation that will go into effect September 1. In 1909 Quebec exported nearly $1,000,000 worth of pulpwood, the actual figures being $949,549, this being the second most valuable export from the province, an increase in two years of over 100 per cent. The exports of the product to Great Britain in 1908 amounted to $847,176; to France, $82,213, and to the United States, $19,000, a decrease from $38,700 in 1908.

In contrast to the foregoing figures are the figures for pulpwood exported to the United States. In 1908 there were exported by water to the United States 30,479 cords, at $197,662; in 1909, 80,781 cords, at $625,827. Exports declared at the consulate of pulpwood by water as well as by rail show a value of $636,186 during 1908, and of $1,180,029 in 1909, making an increase of $543,843 for last year.

Following a meeting of the trans-Pacific tariff bureau at Seattle, steamship companies operating in the oriental trade have decided to give a flat rate of $7 per thousand on lumber from North Pacific ports to the Orient, instead of the former rate of $8.

The question has been raised as to the suitability of jackpine for paving blocks in connection with civic paving contracts. A firm of contractors have been desirous of using it, but City Engineer Rust reported against it as not sufficiently durable. The Board of Control has agreed to give it a trial, provided the concern undertaking the work will guarantee the life of the blocks.

Samuel J. Shimer & Sons, Milton, Pa., have issued a new catalogue and pattern book, No. 30, for 1910, which will be of great interest to all who are connected with the woodworking business. The catalogue illustrates a number of new tools and a large variety of useful patterns, many of which were designed for the Shimer Cutter Head. This catalogue will be found a most reliable pattern book for lumbermen and users of cutter heads, cutters, knives and bits. Those who are interested will do themselves a service by writing to the company for a copy.

The Hull city engineer has issued instructions prohibiting the further use of wooden shingles for roofing buildings in the corporation limits. Several residences partly covered by shingles under this ruling will be completed by fireproof material. The action is the result of an insurance inspector's report condemning shingle roofed houses. Owners of planing mills of this district are going ahead of municipal ordinances by installing sprinklers. J. A. Desrivieres, whose factory was recently burned, defeated the attempt to compel him to put a sprinkler on a new factory, but is building the sprinkler as the result of the lower rate offered by the insurance companies.

The Jeffrey Manufacturing Company, Montreal, have removed their Toronto office from the Dineen Building, Temperance St., to more commodious quarters at 174 King St. E. Mr. H. W. Scott, mechanical engineer, formerly connected with the home office of this Company in Columbus, O., is now in charge of the Montreal office and works. The Jeffrey Manufacturing Company are an old established concern, making a specialty of elevating and conveying apparatus for handling all kinds of materials in lumber camps, mines, quarries, as well as conveying apparatus for handling materials from the docks, loading to vessels. New machinery has been installed at the Montreal works for more economical production. This Company has nearly 100 Branch Offices situated in the leading commercial centers of the world.

Its High Daily Average, its ability to always keep a surplus of logs skidded ahead for the leading crew is what places the

CLYDE SELF-PROPELLING STEAM SKIDDER

in a class by itself. Its absolute independence of the loader prevents any interference with its fullest skidding capacity at all times and its self propelling feature saves in both moving and skidding besides the expense of switching.

EDGINGS

Ontario

J. A. Minchner, of Stratford, and several capitalists associated with him are arranging to build a large furniture factory at Owen Sound.

Mr. A. Knechel, of the Dominion Department of Forestry, has returned from a trip of some weeks' duration through the new territory which will be opened up by the Hudson Bay Railway.

A Toronto jury returned a verdict of accidental death in the case of a workman employed formerly by the Nordheimer firm, but recommended that all circular saws should be adequately protected.

Recent incorporations include the Stone Lumber Co., Limited, of Sault Ste. Marie, with a capital of $100,000. The incorporators include John A. McPhail and S. G. Stone, both of Sault Ste. Marie, Ont.

The Fort Frances Lumber Company's sawmill at Fort Frances, Ont., together with three cars of lumber, was destroyed by fire last month at an estimated loss of $60,000. The fire is attributed to a spark from a locomotive.

Mr. James Lawler, Secretary of the Canadian Forestry Association, left Toronto recently for Ottawa, where he will take up his residence. The offices of the Association will hereafter be in the Canadian Building, Slater street.

The Conservation Commission Committee on Forests has appointed Mr. Thompson, of Portage Du Fort, an experienced lumberman, to tour Canada and make a report on forest fires. He will cover the entire country from Halifax to Vancouver.

The Provincial Department of Lands, Forests and Mines has asked for tenders for the right to cut pine, tie and other timber on several sections in the district of Kenora, where the timber has been damaged by fire. Tenders must be received by September 8.

The lumber dealers and contractors of Hamilton, Ont., held an enjoyable picnic at Niagara Falls on the 20th ult. One of the features of the event was a programme of games. The winners in the lumber dealers' races were Thos. Patterson, H. M. Gray and S. Ludlam.

James Lawler, Secretary of the Canadian Forestry Association, has returned to Toronto after an extended trip of observation in the United States. He was greatly impressed with the advances made in practical forestry. Mr. Lawler has removed his office from Toronto to Ottawa.

The Canadian Lumberman Machine Company, a branch of an industry established at Muskegon, Mich., capitalized at $105,000, has decided to locate at Woodstock. It will manufacture dovetail, glue and jointing machines for making scrap ends of lumber into full-sized boards. The machines cost about $4,000 each.

The Rainy River Lumber Company's mill at Rainy River closed down recently because of a shortage of logs. Owing to the dry season the water in the creeks dried up, and it was impossible to get the logs down the river. About 15,000,000 feet were held up. A large number of men are rolling them into the water and starting them toward the mill.

Heavy rains of the last ten weeks have had excellent effect on the lumber trade. Logs that had been stranded in the smaller tributaries of the Ottawa are afloat and will be rafted to the mills at once. The fall sawing on the Ottawa and tributaries will be very large. The copious rains also have improved navigation on the Ottawa river and on the canal from Ottawa to the St. Lawrence at Kingston.

The wreck of the vessel Brunswick, which is said to contain $40,000 worth of walnut and oak lumber in a good state of preservation, has been located in Lake Erie, some distance from Wheatley, Ont. The Brunswick was lost about fifty years ago in a storm on the lake, when the captain, with three of his crew, made their escape by swimming ashore. It goes without saying that a lawsuit is in prospect.

Arrangements have been made this week between W. R. Preston, of Fort Frances, member of parliament for Rainy River, and Frank Cochrane, Provincial Minister of Lands, Forests and Mines, under which Peabody, Houteling & Co., of Chicago, will establish a large pulp and paper mill at Fort Frances, to be run by electricity generated at Alberton Falls. The mill will have an initial capacity of fifty tons a day, and must be in operation within two years, and must double its capacity as soon as the western Canadian paper market will warrant the expenditure.

Frank Cochrane, Minister of Lands, Forests and Mines, returned recently from a three weeks' trip through northwestern Ontario. He states that in the Lake of the Woods district and in other localities the destruction of young timber by forest fires has been very great. The principal loss was not so much in the present value of timber as in the destruction of the undergrowth, which will retard the reforestration of the area burned over for many years. One result of Mr. Cochrane's trip will be a more rigid enforcement of the fire regulations, and it is understood that the Government contemplates making the forest reserves game preserves as well, in order to check the slaughter of wild game.

The Canadian Conservation Commission has laid out an extensive programme of work for its committees. The Committee on Forests will collect all available information in regard to standing timber, including its quality and acreage, and as to whether or not owned privately or by the provincial or Dominion Government. It also will make a study of the results attending the prohibition of the export of logs. The Committee on Waters and Water-powers will gather information as to developed and undeveloped powers, and prepare a report as to the cause or causes of the difference in the flow of rivers and streams during the last quarter of a century, and also on the effect of drainage upon lake levels. Attention will be directed to water-power legislation to conserve water-power for public use and prevent its exploitation by speculators.

Eastern Provinces

Leblanc & Richard, sash and door manufacturers, Asbestos, Que., have dissolved partnership.

Fire destroyed 300,000 feet of lumber belonging to Hill Bros., at their mill at Folleigh, N.S., recently. The loss is estimated at $75,000, and is covered by insurance.

It is expected that the Maclaren sawmills, at Buckingham, Que., will close down for the season about Sept. 1st.

Bailey's lumber mill at Aylmer, Que., was destroyed by fire last month at a loss of $10,000. The cause of the fire is attributed to incendiarism.

McLaggan Bros.' sawmill at Blackville, N.B., was destroyed by fire last month. The mill was equipped with rotary, shingle and lath machines, and the loss is estimated at about $10,000, with no insurance.

Messrs. Campbell & Stearns have purchased the limit belonging to Charles Lowe, at Gracefield, Que., and have started building operations on a sawmill at that town, which will cost in the neighborhood of $35,000.

The Cummings lumber yards, situated a mile above Maniwaki, were destroyed by fire recently. Over 2,000 cords of pulpwood and 700 sawlogs were destroyed. It is estimated that the damage will be several thousand dollars.

The Paul Lea Company, Limited, of Moncton, N.B., which owns a large woodworking factory, intends to erect a branch warehouse at Campbellton to meet the demand which will be occasioned by the recent fire at that place.

Instead of the expected ninety million feet of spruce logs in the St. John River drives reaching the Fredericton booms, only about seventy-three million feet have been collected. The balance are stranded on the upper reaches of the river, and the mills will have to wait for a fall freshet.

About 450,000 feet of timber has been cut in the vicinity of Lake Echo, N.S., since May 1, by Gilroy Bros., owners of the lumber mills at Springhill. The timber is good quality, and includes fir, spruce and hemlock. Since the middle of May, 350,000 feet has been hauled in. The daily mill output is about 14,000 feet.

George Scott, presdent of the Gambo Lumber Company, of Montreal, left last month for Newfoundland, where he will inspect the company's limits and properties in that province. Its limits are at Bonavista, in the northern part of Newfoundland, and comprise pulp and lumber areas. Recently the company put in a modernly equipped lumber mill. Business in lumber and pulp lines in that province is in satisfactory condition.

A report from St. John, N.B., states that the Cushing mill at that place, and the extensive lumber limits and logs in New Brunswick comprised in that property, have been sold by the Union Bank of Halifax to a syndicate headed by W. B. Tennant, of St. John. The Union Bank assumed control of the property when the Cushing Company assigned. The price has not been divulged nor the plans of the purchasers, but it is thought the figure is in the vicinity of $300,000. An American concern offered a figure under $200,000, which the bank would not consider. The Cushing business was established many years ago by Andre Cushing, from Maine. The mill at St. John is one of the best in the country. The claim of the bank against the Cushings was about $750,000.

Western Canada

The Finger Lumber Company of Canada, Limited, of Le Pas, Northwest Territories, have obtained a charter.

S. J. Lucas, a representative of J. E. Brayton, well-known timber specialist, of Chicago, has been in Winnipeg looking into the possibilities of a pulp mill in that vicinty.

The B. C. Gazette contains notices of the incorporation of the British Empire Timber Co., Limited, capitalized at $1,500,000, and of the Empire Lumber Co., capitalized at $5,000,000.

A large timber deal has just been closed by Mr. C. W. Wilson, of Vancouver, acting on behalf of himself and associates, involving the transfer of 10,000 acres of excellent cedar and fir limits situated on Sidney Inlet, Vancouver Island, to Messrs. McEachran, Donahoo & McEachran, of Victoria, who, it is understood, were acting on behalf of eastern clients.

According to a despatch from Nanaimo, B.C., serious bush fires are raging on Lasqueti Island, destroying much valuable timber. Among the heaviest losers is the Hillis Logging Company, whose buildings and logging equipment have been destroyed. The fire has spread over an area of a mile, and is the biggest and fiercest ever seen on Lasqueti Island.

The upset price of $162,203 on the timber limit comprising 15,000 acres, at Adams Lake, B.C., offered for sale at the local Crown timber agent's office yesterday, proved too much, apparently, for even the big lumbermen, for no bids were offered. The limit was put up for auction at the request of E. L. Kinman, of Vancouver, but he did not appear at the sale.

The July revenue of the Crown Timber Department of British Columbia is placed at $191,782.70, details of the month's transactions being as follows: Timber licenses issued west of the Cascades, 784, producing fees of $110,120; east of the Cascades, 491, with fees of $57,284.70; timber transfer fees, $1,148; coal transfer fees, $150; coal licenses, 208, producing $20,800; penalties, $2,250; miscellaneous, $30.

More mill workers are to be brought from Quebec by the Canadian Western Lumber Company to take the place of Asiatics in British Columbia. As this concern has 900 men in its camps and over 500 at its plant at Millside, it will pay it to have the best labor available, and for that reason it is once more sending Father O'Boyle east. With a decreasing cut of timber in Quebec, men are available there. So satisfactory have these workers proved that the example of this company is being emulated by other concerns, who are advertising in Quebec for mill workers.

An Edmonton despatch says that owing to the low water level in the Saskatchewan river about 70,000 logs, estimated approximately at 3,500,000 feet, are stranded in the mouth of Buck Creek, and as the water will probably not rise, it is likely that the logs will remain in Buck Creek until next spring. Meanwhile the local market will suffer a shortage in lumber. The present demand exceeds the supply, but it is possible that the state of affairs will be relieved by the fact that pile-drivers have been successful in sending about 60,000 logs which were stranded on the shores of the river.

The feature of most interest during the last few weeks was the amount of valuable timber destroyed by fire in different parts of the country. In the latter half of July destructive fires raged in Alberta timber, and for many miles at a stretch there was a continuous line of fire. Great damage was done on the limits of the Bow River Lumber Company. The Rainy River country also suffered heavily, and some of the mills lost thousands of dollars' worth of lumber. It was with much difficulty that the town of Rainy River was saved. R. H. Campbell, superintendent of forestry, said that the railways were responsible for these forest fires in the western provinces. He ordered them to clear up piles of brush and dried timber that were lying alongside the railway tracks.

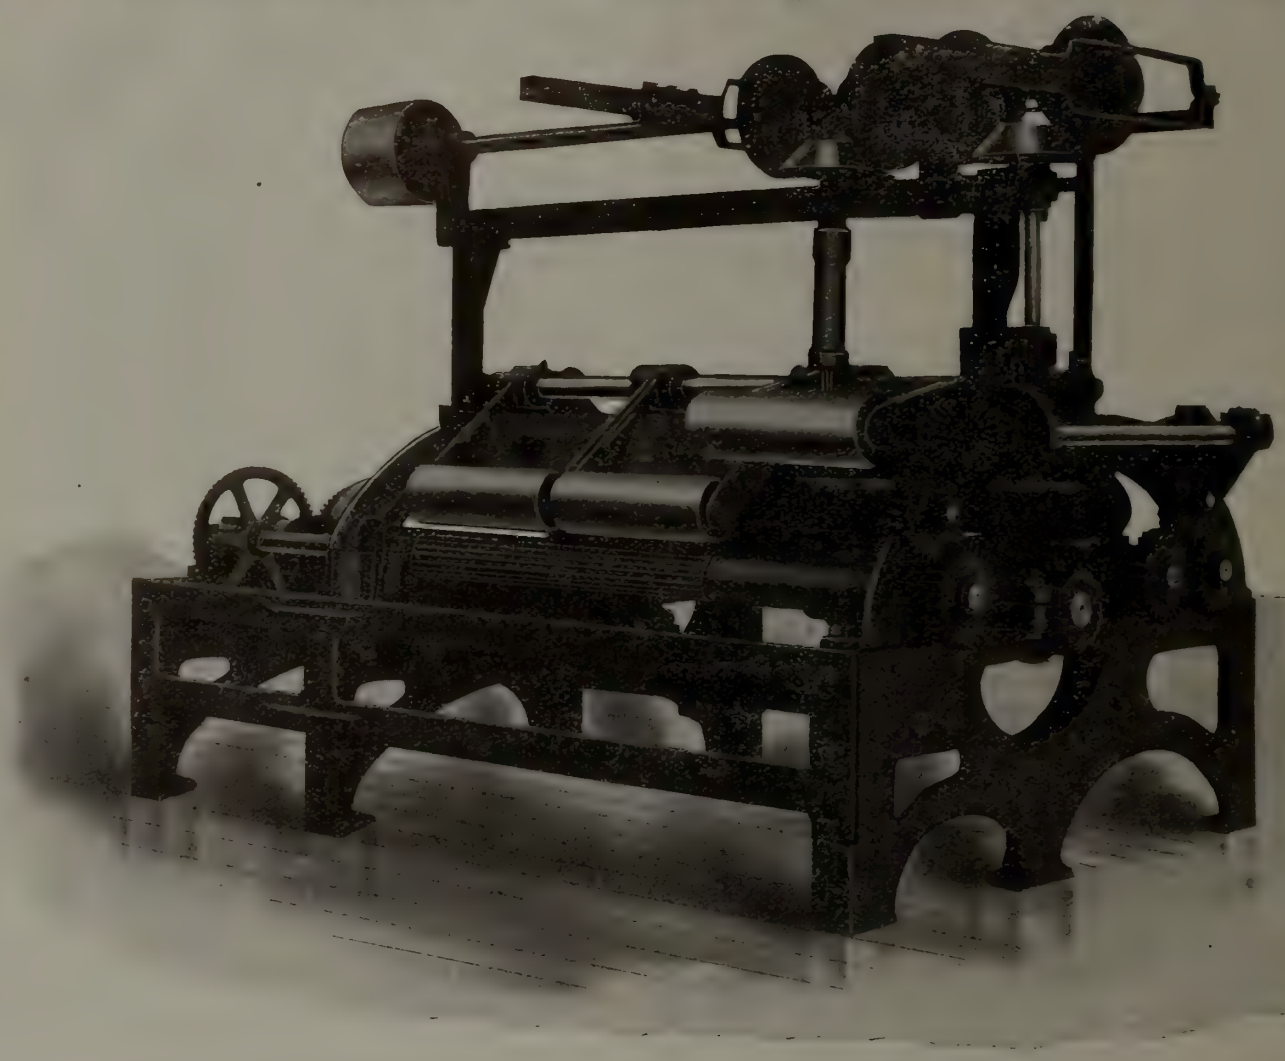
Yards: Fifty-eight and Woodland Ave.
Philadelphia, Pa.

Thos. Mackarell & Co.

49 Metcalfe St., Ottawa
Canadian Express Bldg., Montreal



White Pine

We make a specialty of the famous MLB Brand manufactured by Messrs. McLachlin Bros. Ltd., of Arnprior, Ont.

Red Pine

We hold the LARGEST STOCK in CANADA of this WOOD, and can give prompt shipment in any size.

"Jumbo"
Combined Gang and Edger

We have made several improvements since this cut was made, less gearing is used than shown in the cut.

This a very complete machine and embodies every detail of construction essential to an adequate gang edger.

We have sold a great many of these machines and hear nothing but good said of them. We have some very flattering recommends for our "Jumbo."

Some of its good points are:

MANDREL: 4½ inches by 10 feet 6 inches long.
DRIVE PULLEY: 20 inches by 20 inches.
SAWS: 2 Movable Saws on Edger side (more if desired) 8 stationary saws on gang side. 2 Water Boxes.

This machine is 5 feet 7 inches inside of frame; reverse friction is supplied in case cant binds and prevents saws from being burned. Supplied with Press Rolls and impossible for Cant to fly back.

Prices Cheerfully Quoted

Forging Teeth for Inserted Tooth Circular Saws.

Disston
Inserted Tooth Circular Saws

Every season our shipments of Inserted Tooth Circular Saws are larger than shipments of the preceding season—much larger. The development and growth of this department of the Disston industry are remarkable.

Necessarily there can be only one reason for such progress—we are making and delivering to all parts of the world the best, the most satisfactory — most efficient and economical circular saws that can be obtained in the market.

Again, there can be only one reason for the superiority of our product—we are employing the best brains, the highest type of men who have ever directed their talents and energies to this great field of industry.

If **you** are not aware of the economies in time, power and upkeep which follow the installation of **Disston** Inserted Tooth Circular Saws, ask the millman who has used them.

For Sale to Close an Account
Crown Granted Timber Limits and Lands

in the

Province of British Columbia, Canada

The undersigned has received instructions from the owners who desire to close the account, to sell by private treaty

Forty Timber Limits and Lands

situate in the Salmon River Valley, West Kootenay, British Columbia, from thirty to forty-five miles north of the United States border, and upon, or contiguous to the Nelson and Fort Sheppard Railway which runs between Spokane, Washington, and Nelson, British Columbia, connecting with the Great Northern and Canadian Pacific Railways, and affording access to the United States and Canadian markets.

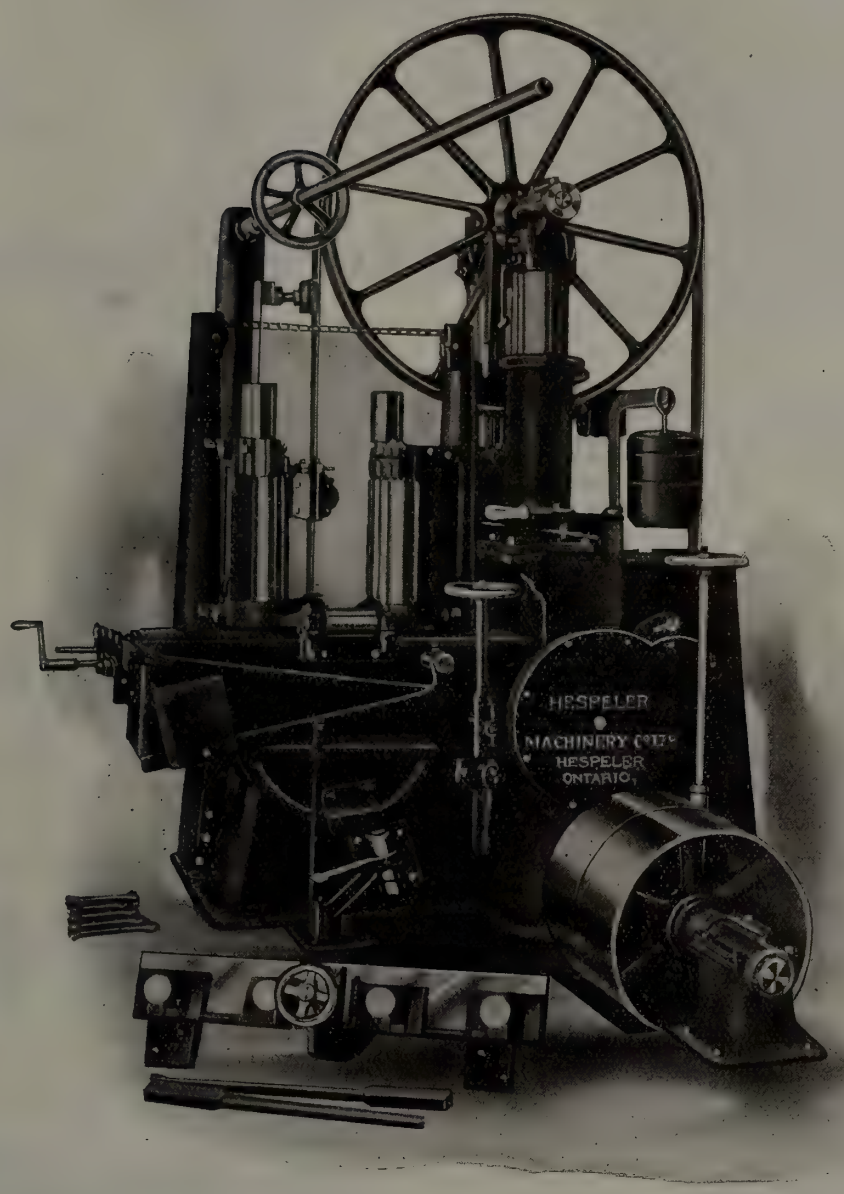
The limits contain in the aggregate thirty-eight thousand acres, and are comprised of bottom lands and benches of hills, constituting one of the best bodies of timber in the Central Southern part of British Columbia. Subdivision of the tract has hitherto been consistently refused. Individual limits contain from two hundred and fifty to twenty-one hundred acres, with from three million to forty-five million feet of Cedar, Pine, Hemlock and other woods of excellent quality upon them, in addition to large quantities of Cedar Poles—prices run from $5,000 up according to Stumpage and Location.

Some of the limits are essentially Cedar Pole Propositions, and contain large quantities of the very best quality of Cedar Poles from twenty-five to seventy-five feet in length, free of limbs

The properties are Crown Granted, and the timber upon them may be exported. The Timber is subject to a Royalty of fifty cents per thousand feet, when cut.

A considerable quantity of the land is available for fruit land when cleared, and the owners are prepared to give a deed of land and timber, or a license to cut timber only for a term of years, at the option of the Purchaser.

TERMS OF SALE:



In order to close the account, very easy terms of purchase will be given, namely, twenty-five per cent. cash, and the balance in four equal annual instalments, and twenty per cent. cash with balance in six equal annual instalments—interest at six per cent.—with operating privileges which will assist purchasers to pay for limits out of stumpage.

The character of the properties together with the easy terms of payment present a unique opportunity to persons of moderate means to acquire valuable limits for either operation or investment.

Prices and further information may be had upon application.

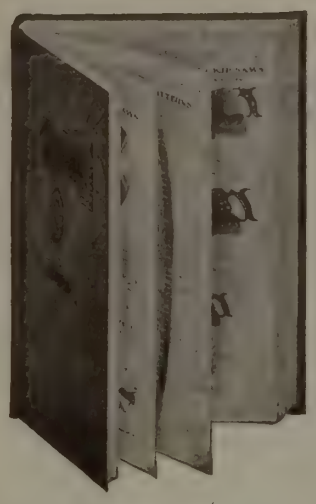
A. B. BUCKWORTH,
YMIR, B. C.

A Perfect Band Re-Saw

A careful study of the above illustration will give you an idea of what a complete, well-designed and substantial machine this re-saw is.

Some of its merits:—

The Feed Works are driven by belt and changing from one feed to the other can be accomplished by simply turning a hand wheel one quarter of a turn. Each machine has five changes of feed.



The Saw runs within 1 inch of the centre of the back roll, cutting the stock while it is firmly held. When doing bevel sawing the feed works can be drawn back by a lever to prevent the saw striking the rolls and the safety lock is so arranged that the rolls can not be tilted until the feed works are drawn back from the saw.

The Frame is cast in one piece, cored out hollow underneath, is heavily ribbed and perfectly rigid.

The Rolls are driven by spur and bevel gears all cased in. All gears cut from the solid and as near noiseless as possible.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Our Spruce Pine Shingles and Lath

You wont forget

If You Once Buy Them

All manufactured from the choicest timber, on the most up-to-date machinery, under the most careful personal supervision—result.

"Quality Lumber"

CAN YOU AFFORD TO BE WITHOUT IT?

The Lumber with a Reputation

John Fenderson & Co., Inc.

Sayabec, P. Q.

Saw & Shingle Mills:
Sayabec, P.Q. St. Moise, P. Q.
Salmon Lake, P. Q. Cedar Hall, P. Q.

Sales Office:
Springfield, Mass., U. S. A.

OUR QUALITY STOCK: Flooring, Ceiling, Partition, Novelty Siding, Bevel Siding, Moulding, New Brunswick Cedar Shingles, Lath, etc.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

Announcement

The Lumber Vulcanizing Corporation of Canada, Limited, invites lumbermen and other manufacturers to arrange with them for a demonstration of

"The Howard Process"

for

Drying and Preserving Wood

at their Plant in Toronto

The success of this particular process is of peculiar and imperative interest to Railroad, Telegraph, Telephone and other Constructing Companies, to Lumber, Furniture, Piano, Carriage and Wagon, Sash and Door and Interior Finish Manufacturers, to Implement Makers, to Car Builders, to Ship Builders, and to kindred industries. A plant can be economically installed in connection with a saw mill or woodworking establishment.

SIMCOE - - - ONTARIO

INVESTIGATE THE NEW METHOD

No. 90 Planer, Matcher and Profiler

You can make the highest quality of flooring on the new No. 90 Planer and Matcher at 200 feet per minute. We will prove that you can do this. Our guarantee of proof is conservative because flooring has been run on the No. 90 at more than twice this feed in our own factories. The machine is built strongly enough and is powerful enough to stand up to a feed of 500 feet per minute—so when we say that you can run "A1" flooring at 200 feet per minute, you see that our statement is really conservative.

All your outline work (drop siding, beaded partition, lap rustic, V ceiling, casing, etc.) can be run on the No. 90 at 150 feet per minute! Think of it! And even at this very fast feed you will get better work than you can get from any moulder or four head matcher at 50 feet per minute.

In other words, you can do much better work and three times as much of it with the No. 90 as you can get from any other four head machine. Stop and think this over! It means a whole lot!

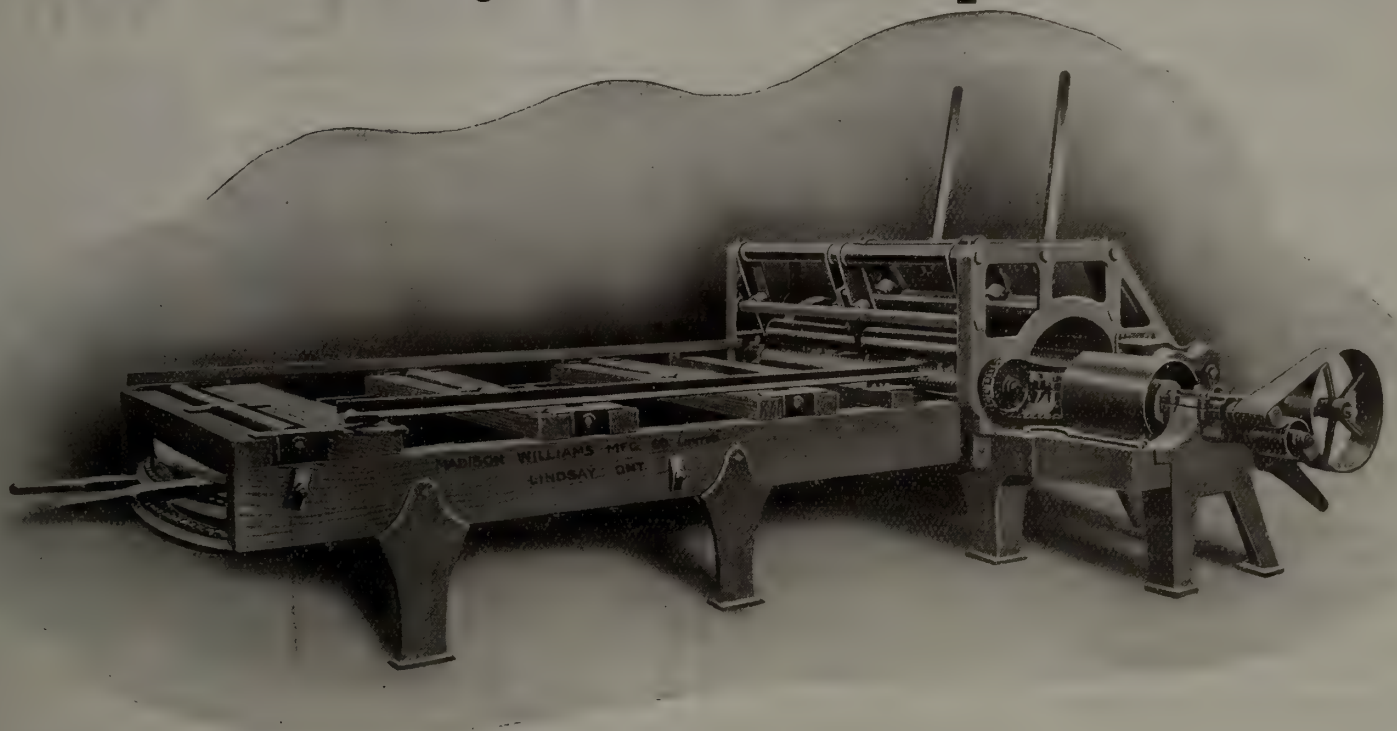
The No. 90 is a simple, substantial machine built for speed and hard work. Every part performs a duty—there are no superfluous pieces.

The machine is equipped with the powerful Automobile Chain Drive.

It is also equipped with the "Berlin" 6-bit Round Top and Bottom Cylinders which will handle twice as much stock as a soft knife machine and at the same time save you 15 to 30 per cent. in grades.

For flooring, we furnish you 12-bit side heads especially designed for this fast feed work. At a feed of 200 feet per minute they will not tear out even the knots and cross-grained places as much as other heads will at 60 a minute.

If you have not received a copy of the June "Berlin Quality" Bulletin, you should write for it NOW. It contains four pages of description about this Fast Feed Working of Flooring and Outline. It is worth your careful reading.



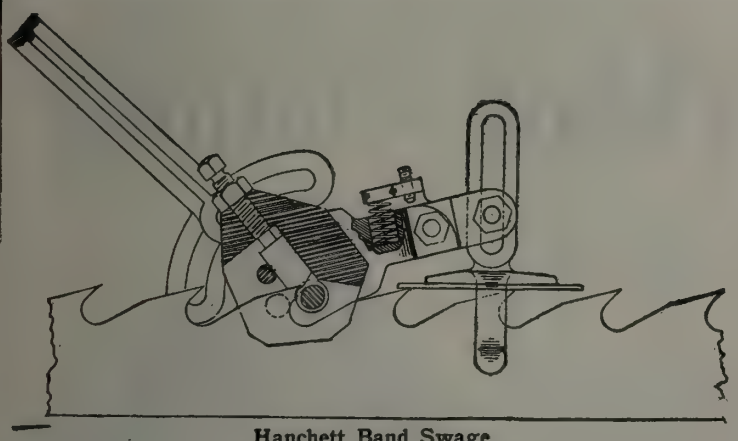
Berlin Machine Works, Limited

Hamilton - Canada

Builders of Berlin

Sanders, Sizers, Matchers, Moulders, Surfacers, Planers, Jointers, Edgers, Rip-Saws, Re-Saws.

The Edger that Never Encounters a Superior and Rarely Meets an Equal



The illustration shows our No. 4 Edger with double feed. In the cut the rear table is not shown, but it is always furnished.
Every feature of this edger is extremely practical, and there is nothing crude or clumsy about it.
If you want to saw good straight lumber our No. 4 will do it for you. Descriptive bulletin and prices on request.

Hanchett Band Swage

Filers! Millmen!

Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

Hanchett Swage Works

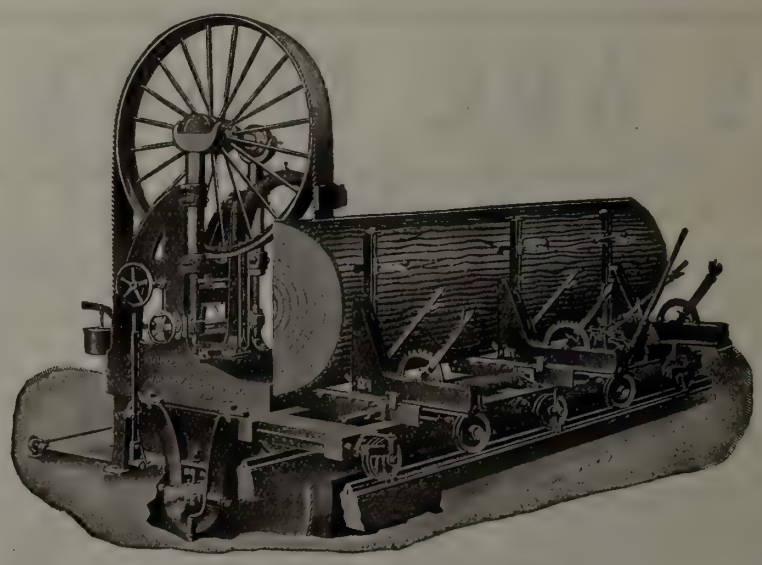
RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.

The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

One Improvement Leads To Another



After reaching the acme of perfection in reducing saw kerf by the application of our **Patent Knife-Edge Straining Device,** we saw the advantage of applying

Ball Bearings

to the upper wheel shaft of our **No. 57 Band Saw Mill** which insure much smoother running and eliminate all troubles found with the old style of box.

Our Mill, besides the immense saving in kerf, is economical in the production of lumber. It will cut a board so straight and smooth that there is only a minimum of waste at the planer.

Let us Tell you All about Our Band Mills

This Saw Stands Without a Rival

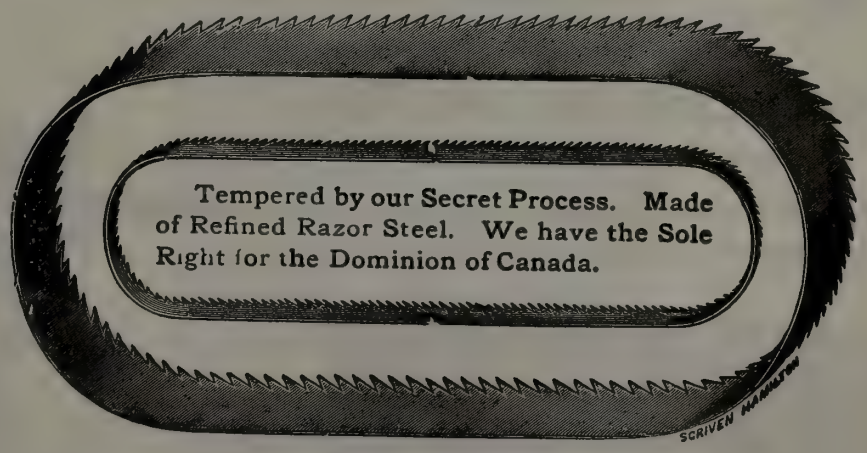
AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

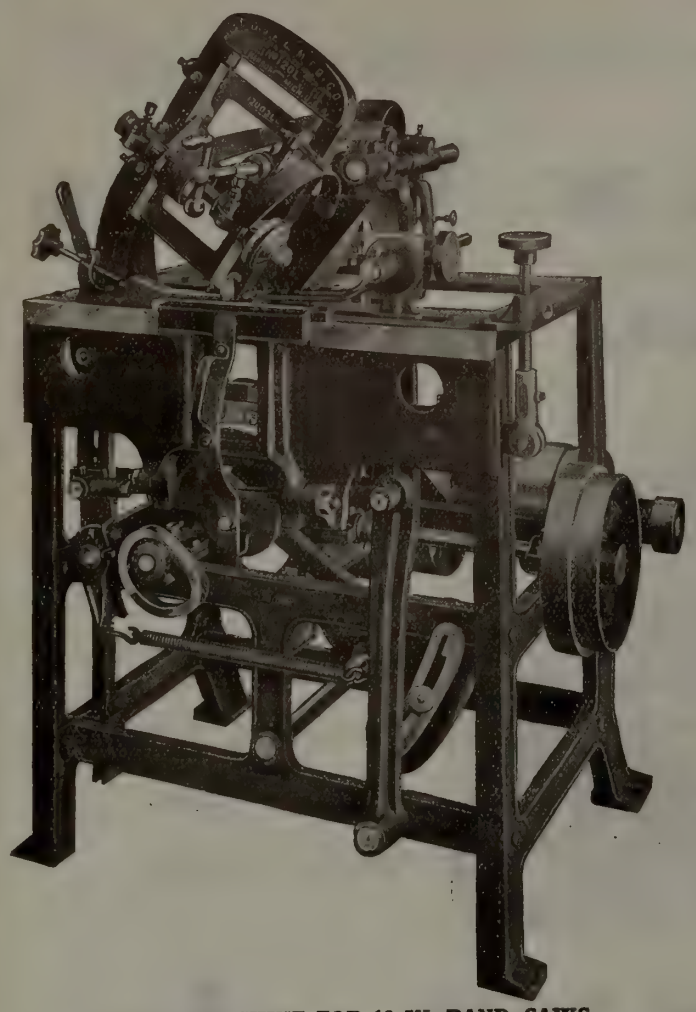


SHURLY DIETRICH, CO., LIMITED

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

Heavy Duty Lath Machine

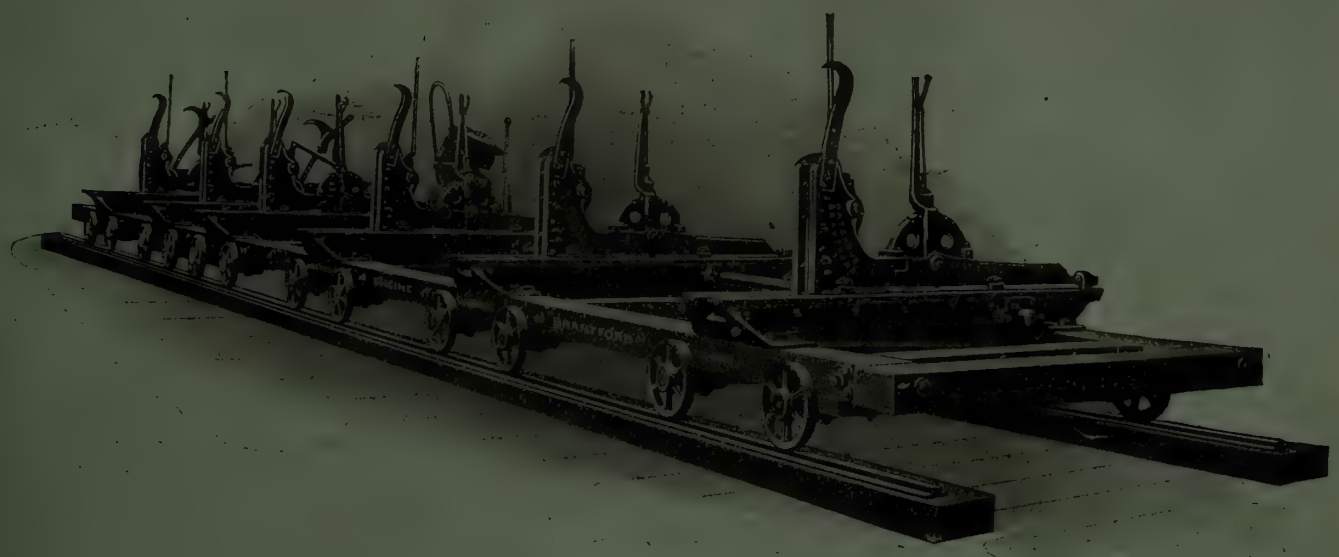
This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.



The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

Manufacturers of
Sawn Lumber, Lath, Sash, Doors and Factory Material
Dimension Bill Stuff in
Pine, Spruce and Hemlock
A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors
We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.
Door Making is our Specialty
We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**
Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.
If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

The Spark Extinguisher

shown in illustration was sold by us about a year ago to the Chicoutimi Pulp Co., Limited. It has been so satisfactory that we have just shipped two others to the same company for use at other mills If you use wood for fuel you cannot afford to be without this apparatus. It is guaranteed to extinguish all dangerous sparks and will not affect the draft. Made to fit any stack or chimney.

SEND FOR ILLUSTRATED BOOKLET

Geo. W. Reed & Co., Limited Dept. B

Craig Street West, MONTREAL

As far as the cutting edge is concerned the Inserted Tooth saw ought to show up best, for the reason that each tooth is a separate unit and can be made with a higher temper than the tooth which is solid with the plate.

Simonds Insertable Saw teeth are very finely and accurately machine milled (both bit and shank) to fit into the plate and they are brought to a high temper by a very skillful process — **this temper is always uniform.**

There is one kind of timber in sawing which Simonds Inserted Tooth Saws show a big lead and that is—frozen timber; one reason is that the points are held exceptionally firm in the plate by the Simonds way of insertion, so solid that they cannot spring sideways and cause the plate to dodge.

Again, Simonds Points or Bits have a better clearance from the cutting edge both backward and downward than other makes of insertable bits—and the clearance is so uniform that Simonds Points may be worn down full length of swage without side filing or materially varying the width of kerf.

You know the name **Simonds**—now know the **Saw Simonds.** Every kind used in mill work, woodworking machinery and lumbering—Cross-cut, Gang, Band, Solid or Inserted Tooth Circular.

Your very next order should be for **Simonds Saws.**

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, September 15, 1910 No. 18

Newfoundland's Timber Resources

The article appearing elsewhere in this issue, which deals with the lumbering and paper manufacturing industries of Newfoundland should be read with much interest by Canadian lumbermen. Here, at the very door of Canada, at a time when a universal lament is going up about the exhaustion of timber resources, and particularly about the disappearance of the white pine, a huge area is making its bow before the world for its initial appearance as a lumber producing country. And in no mean sense of the word is this the case. The white pine of Newfoundland is no pigmy. It is the good old timber which gladdens the heart of the limit owner and stirs the lumberjack to his keenest efforts. Twelve to thirty-six inches at the butt is its measurement, and it reaches a height of 40 feet before its quality is interfered with by the appearance of branches. Beyond the branches another 20 or 30 feet of height is reached, so that the majority of the trees provided three good sawlogs, of which some 20 per cent. are free from knots. This is not a small area of timber by any means. It extends over an area of 2,000 square miles, and is estimated conservatively to contain 3,000,000,000 feet. These figures are sufficient alone to make the island colony step immediately into the foreground as a lumbering country.

But if the white pine resources of the colony are extensive and rich, the pulp areas are unquestionably to be the mainstay of the timber operations. The whole world has heard with wonder the story of the development of the paper-making industry at Grand Falls, Newfoundland, by the Harmsworths, of London, Eng. After only a few years' existence, the company consumed last year no less than 150,000,000 feet of timber. What the future holds in store for such a healthy infant industry it is not possible to estimate. The fisheries of Newfoundland have been famous for centuries, and people of other countries have come to look upon the colony as a place where a few hardy coast dwellers eked out a precarious existence by the capture of codfish. To-day and in the future we will have more and more of the wonders of the interior of the country. It will probably be the old story over again. Fisheries attracted early settlers. Railway development followed. Timber wealth is opening up the interior, and we may expect to hear in the near future of great mineral and other wealth-producing resources. In the history of these events, a notable part will be assigned to those who have had the courage to be pioneers, and who are to-day sharing the burdens and the hardships of the early days of the lumber industry. The seasoned lumbermen of Canada will follow with peculiar interest the course of events in these new timber areas.

A Record Year for Forest Fires

A report from the U. S. Department of Agriculture states that the year 1910 is expected to hold the record among many years for the severity of the losses from forest fires. How such losses may be prevented is a matter of general public concern. A bulletin by Chief Forester Henry S. Graves discusses forest fires and the proper methods of preventing and fighting them, as follows:

"In some sections of the country forest fires have always been of such common occurrence that there is a popular notion that they cannot be prevented. The risk from fires can never be entirely eliminated, for in the forest there is always inflammable material which is very easily ignited. They may, however, be largely prevented, and under efficient organization their damage may be kept down to a very small amount. The problem is like that in cities, where fires can never be entirely eliminated, but where the risk of loss to property may be reduced almost to insignificance."

The importance of systematic provision for the early discovery of fires and for getting a properly equipped force of fire fighters quickly to the scene of an outbreak is insisted upon by Forester Graves. "A careful supervision or patrol during the dry season," he says, "is one of the most important measures in organized forest protection. One of the fundamental principles in fire protection is to detect and attack fires in their incipiency." After pointing out the value of lookouts, telephone or signal communication and various methods of patrol, the Forester tells how to fight fires, as follows:

"The principles of fighting forest fires are essentially the same as those recognized in fighting fires in cities. The following are of first importance: (1) Quick arrival at the fire; (2) an adequate force; (3) proper equipment; (4) a thorough organization of the fighting crew, and (5) skill in attacking and fighting fires. Quick access to fires is accomplished through the work of supervision and patrol in discovering fires before they have gained much headway, and by a well-developed system of communication through the forest by roads and trails.

"A small fire may be put out by one man, but in extensive forests several hours may pass before the fire can be reached. It is important to secure an adequate force of men and to get them to the fire quickly. In a well-organized system of patrol the guard who discovers a fire communicates quickly to other guards and to headquarters by telephone, signal, or other means, and indicates the number of men he needs.

"The efficiency of the fire-fighting crew depends very largely on their skill and experience, and particularly on the skill and experience of the man directing the work. It is not only a question of knowledge of how to assign each man where his work will be most effective, but there must be judgment exercised in determining the general method of attack. The character of the fire, the character of the forest, the condition of the atmosphere, the strength and direction of the wind, the rapidity with which the fire is running, and many other points have to be taken into consideration."

After describing how surface fires may be put out by beating, by throwing sand or loose earth, and by other methods, the account goes on:

"Sometimes the front of the fire is so fierce that it is impossible to meet it directly. One method under such circumstances is to direct the

course of the fire. The attack is made on the sides near the front, separating the forward portion of the fire from the main wings. A part of the crew attacks the forward part and others run down and extinguish the wings. The front of the fire, attacked from the sides, is forced gradually and constantly into a narrower path. Usually the front can be directed toward some cleared space, road, pond, stream, swamp, or fire line, when it will be checked enough to admit of a direct front attack. Sometimes by this plan the front may be rapidly narrowed by working from the sides, until it is at last entirely extinguished. The plan of giving direction to the course of the fire has often been successfully carred out when the fighting crew is too small for a direct attack.

"When fires gain such headway that it is impossible to stop them by direct attack, no matter how numerous and efficient the crew or complete the equipment for fighting, back-firing becomes the only means of stopping the fire. It should, however, be used only when it is absolutely necessary. One of the commonest mistakes in fighting fires is to over-estimate the rapidity of the fire and the difficulty of putting it out. A forest fire is always a frightening spectacle, paricularly if it is sweeping in the direction of one's own property. Men often become excited and start back-fires when it is entirely unnecessary. Back-firing necessarily involves deliberately burning over property. When this belongs to another person and one's own forest seems in danger there is a great temptation to sacrifice it.

"If it is found that a back-fire is necessary, a favorable point is selected directly in front of the fire, from which to set the new fire. This must be a point where it is safe to start a back fire, such as a road, fire line, stream, or swamp. The leaves are ignited at points five feet to a rod apart for a distance not greater than the estimated width of the head of the fire. These small fires gradually meet and form a continuous line, eating back against the wind. A part of the crew is stationed across the road or other break from which the back fire is started, and put out at once the small fires which may result from the sparks blown over from the back fire.

"The meeeting of the two fires stops at once the head of the main fire. It is usually possible then to attack the wings with the ordinary methods of fighting. It is necessary to attack the wings at once, paricularly if there is a strong wind, for otherwise each wing of the old fire would soon form an independent fire with a well-developed head. It is necessary also that a number of men be stationed where the original fire and the back fire meet, in order to extinguish smoldering fires in tops, logs and other debris."

"A fire is never out," the bulletin concludes, "until the last spark is extinguished. Often a log or snag will smolder unnoticed after the flames have apparently been conquered, only to break out afresh with a rising wind. After the fire-fighting crew has left the ground it is always well to assign at least one man to patrol the edges of the burned area until it is certain that the fire is entirely out. This may not be for several days."

The Settler and the Lumberman—Their Interests Mutual

The "Canada Lumberman" is charged by the "Northland," the weekly newspaper of Cochrane, Ont., with having "slightly overshot the mark" in a recent editorial article dealing with the old problem presented by the counterfeit settler in timber growing sections of the country. It would be fortunate for the lumbermen of Ontario and the provinces if the criticisms offered in the " Canada Lumberman's " article were too strong. The truth of the matter, unfortunately, is that no amount of criticism can do justice to the situation, for which the only remedy is a radical alteration of the government's method of dealing with the matter.

The "Northland" in criticising our article misunderstands its point. No complaint is made against the bona-fide settler. The "Northland" and the "Canada Lumberman" and in fact all who have the interests of the province at heart are agreed that the settler needs and deserves all the encouragement he can secure. He is the great pioneer who stands all the hardships of our northern land, and who sows for future generations to reap. Like the Irish, there is nothing too good for him—provided it comes within the limits of fair play to others, and provided principally that he is a settler and not a thieving gipsy. The timber limit owner welcomes the actual settler as a brother, recognizing in him not only a possible source of labor and of trade, but also of companionship for himself and his men. The fake settler, however, who skins the timber and hies away to other limits to repeat the operation, is a leech, sucking the life-blood from the country.

The "Northland" could reasonably join hands with the "Canada Lumberman" and all others who are interested in the progress of Ontario in this matter. If the people of the north, who are most seriously concerned in the matter, would portest against the favors given to these political parasites, perhaps the government would be persuaded to stop the favors. The most discouraging feature of the matter is that this is not a peculiarity of any one government. It has continued through the lifetimes of several governments, and seems to be one of those evils which all political parties are too ready to benefit by. The only hopeful source of remedy lies in the uprising of the people of the north themselves, who should be sufficiently interested in the development of the country to try to get rid of this disturbing and disgraceful class of people.

There is another section of the "Northland's" criticism which deserves notice. Our old friend, the lumber " king," is dragged out again and set upon a pedestal to afford an instructive contrast with the poor and lowly settler, and arouse sympathy for the latter. The truth of the matter is that there are lumber "kings" and lumber "men," just as there are successful and unsuccessful settlers, miners, tradesmen or manufacturers. That a few lumbermen have succeeded in making a comfortable living is no argument to justify the despoiling of others for the profit of a few blacklegs, who are deserving of nothing so much as the rawhide.

After all is said and done, there still remains much to be attended to. Let the "Northland" realize the importance of fair play to all who are developing the country honestly, and join in the effort to encourage them and to discourage the scum. If it is not convinced of the truthfulness of the charges, let it visit any prominent lumberman and have a talk. It will be quickly shown that there are many limits in the Georgian Bay district (and unfortunately in other provinces of Canada as well) where the fake settler has skinned large areas which the lumberman has already paid for, and upon which he continues to pay ground rent, as a condition of retaining the right to cut timber on the balance of the limit.

Forests Fires a Serious National Menace

During the past summer forest fires have been devouring the growth of centuries with ruthless rapacity. Northern Ontario, Manitoba and British Columbia have suffered most. Fine tracts of merchantable timber worth millions of dollars have been destroyed, square mile upon square mile of young growth coming on to supply the demands of the future has been wiped out of existence. In Northern Ontario, where but a thin layer of vegetable mould covers the rocks, the soft, oozy forest floor, the only hope of vegetation and equable stream flow has been completely destroyed, leaving a cheerless rocky waste for generations to come. Even if no thought be given to the number of lives lost, it must be admitted that the loss occasioned this year by fores fires has been nothing short of appalling.

Can nothing be done, then to prevent this loss? The answer is that much can be done. The solution of the problem is indicated in two words—public sentiment. The two principal causes of forest fires are campers and railways, and public opinion must be brought

to bear upon these. The tourist-camper does not at all realize the extent of the damage which his unextinguished camp fire may do. Laws against leaving camp fires burning are already on the statute books, but it is quite evident that their observance rests mainly with the tourist himself. He must be impressed with the very serious nature of his offence. If a man sets fire to a building, he is convicted of arson and sent to prison as a felon, but if his unextinguished camp fire burns down millions of dollars worth of timber and perhaps destroys human life as well, he is, at best, made to pay a small fine. When public opinion views this carelessness of the camper as a criminal act and frowns upon him accordingly, considerable progress will have been made in lessening the number of forest fires from this cause.

But it is the railways that spread the most destruction. Traversing, as they do, the great lone stretches of uninhabited timber areas, the sparks from their locomotives start numerous fires that gain great headway before being detected. Too often the right-of-way, piled thick with inflammable rubbish, furnishes a tinder-box for these conflagrations. The owner of destroyed property along the line has found it almost impossible under the present laws to get damages from the railway company, so difficult is it to fix the responsibility, and so expensive is the process of litigation. In order to lessen the number of fires due to this cause, the Committee on Forests of the Commission of Conservation has proposed to make the railways pecuniarily responsible. It has recommended that there be added to the Railway Act a clause making them liable to a fine of $1,000, recoverable by summary prosecution before a stipendiary magistrate or two justices of the peace, for every fire started by sparks from their locomotives. It makes no difference whether the fire begins outside the right-of-way or spreads therefrom to adjoining land. The railways are exempt from this fine if they can show that they have the best modern appliances on their locomotives to prevent the emission of sparks, that their employees have not shown negligence in conducing to the starting of the fire, and that they have maintained an efficient and properly equipped staff of fire-rangers. In other words, the Committee proposes to lessen the number of fires caused by sparks from locomotives by having the railways fined for the damage they do, unless they take every possible precaution to prevent such damage. This is obviously a fair recommendation as regards both the railways and the public, and the effort to have it made law is worthy of public support. Every Canadian is deeply interested in the protection of our forests; for each forest fire means that he and his children will have to pay higher prices for every foot of lumber they use. Such a measure, for the preservation of our forests, as that recommended by the Committee on Forests of the Committee of Conservation should, therefore, commend itself to everyone.

Editorial Short Lengths for Busy Readers

A Washington, D.C., despatch says: "This city is proving to be an attractive market for Canadian spruce lath, a large shipment having been brought in this week from St. John, and this is the third cargo to arrive this season. The builders in this city and vicinity claiming that such lath are superior to those made of southern pine, and, as a matter of fact, more than one-half of all the lath used in this city are imported from New Brunswick."

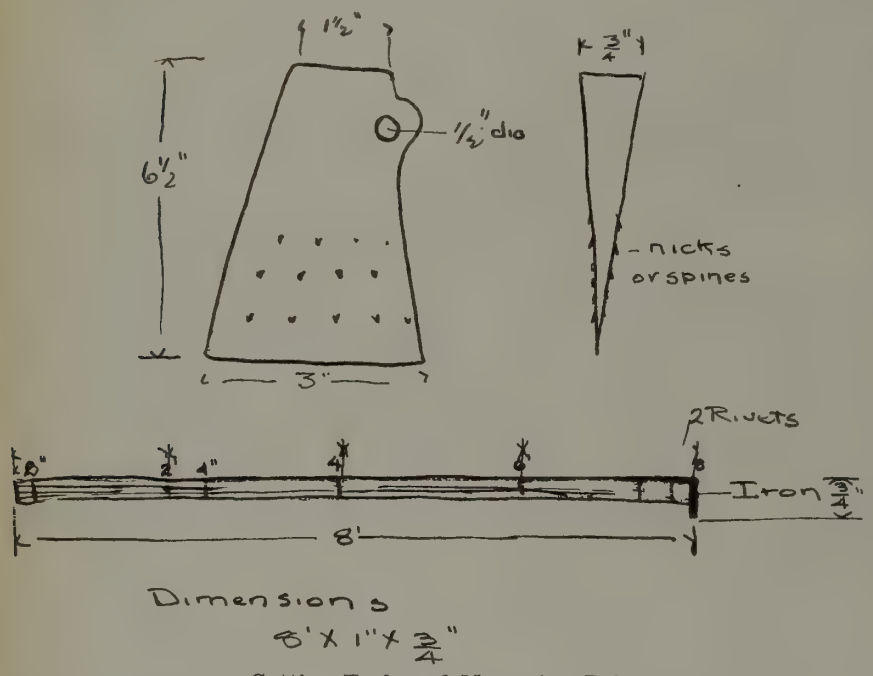
During the first seven months of the current calendar year the United States exported $29,800,000 worth of boards and planks, an increase over the corresponding period of last year of $5,300,000. They imported $8,500,000 worth of the same, an increase of $800,000. They exported $6,400,000 worth of sawed timber, an increase of $500,000, and imported none. They imported $7,000,000 worth of wood pulp, an increase of $1,600,000, and exported none; and imported $3,600,000 worth of pulp wood, a decrease of $1,800,000.

At the annual meeting of the Maritime Board of Trade, at Chatham, N.B., W. B. Snowball, president of the board, and a well-known lumberman, gave an interesting address on the trade conditions throughout the maritime provinces, touching, among other things, on the pulp and lumber industries. Mr. Snowball spoke of the great waste which characterized all our lumbering operations. "To make any enterprise pay to-day," he said, "we must stop all waste, and if the lumbermen and papermakers are to continue to make profits, they must learn the same lesson. Slab edgings and sawdust, uncooked pulp chips and acid, and a half-score of by-products should be utilized. The rossing of the wood for export to keep industries in foreign countries going should be prohibited."

In an article upon the "Export Lumber Trade of the U.S.," an exchange says: "The third customer in point of size—and here is something worth taking special note of—is British North America, which means Canada, to which we shipped during the past eleven months lumber to the value of $4,478,765. In this, too, we have broken all previous records of recent years though the shipments did not exceed those of 1908 a great deal. Evidently there is included in this quite a lot of oak staves, and possibly some veneer, and it would be interesting to know, though it is impossible to figure out from the statistics, just what constituted this valuable list of lumber. When we consider that Canada is a pretty sharp competitor of ours in wood products, and while we are talking about Canada as our future source of supply, it is rather startling to contemplate the fact that the actual returns show Canada as being pretty close up to our best customer in the purchase of lumber, as there is hardly a million dollars' difference between the shipments to that country and those to the United Kingdom."

Manual training and technical education would go a long way, if thoroughly provided, to improve manufacturing methods in Canada. In no line would this be more noticeable than in the manufacture of lumber. Unskilled labor is the direct cause of incalculable loss in the production of lumber and lumber products. From the cutting of the tree to the making of the board, timber, lath or shingle, the unskilled man, who has only a meagre acquaintance with tools and methods, destroys great quantities of valuable material. It is not strange, therefore, that at a recent meeting of the Royal Commission on Technical Education, held at Chatham, N.B., the chief evidence should have been given by men who are prominent employers of labor in the manufacture of lumber. One of the witnesses was Mr. W. B. Snowball, who said that it would be a great advantage if all Canadian lumber could be manufactured on the Canadian side of the boundary line. He said there was a scarcity of skilled labor for the mills of the Miramichi. Many of the young men who had education enough went away. Witnesses connected with the pulp business gave evidence that manual training would be of great aid to the young men entering their business, particularly in the chemical and engineering departments. One said that the pulp manufacturers of Norway and Sweden were ahead of Canadian manufacturers because of the advantage derived from manual training in the schools.

The matter of technical training is one which has too long been neglected by lumber manufacturers. With the increasing scarcity of timber, it has now become a matter of the first importance. One might imagine that after a short acquaintance with lumber manufacturing machinery a workman would acquire a better knowledge than he could secure from a technical education. In a few instances he might, but the great thing is to provide a large class of men who have minds and hands trained to the use of tools, and reduce the loss of time and material now spent in the instruction of so many new hands. In the more intricate processes of woodworking the demand for skilled workmen is great. Scarcely any other calling requires in so great a degree the knowledge and acquaintance with tools and machinery which a technical education can provide. The whole lumber manufacturing and woodworking industry stands to be greatly benefited by any measure of technical education reform which may result from the enquiries at present in progress.



Logging Operations in Ontario Camps

Detailed Description of the Work in a Camp of 100 Men—From the Purchasing of Supplies to the Taking Out of the Logs

(Continued from previous issue)

Although the general principle, "Nothing pays like first cost in road building," is a dead letter with most cadge-road builders, at least one man appreciates it; e.g., there is a section of tote-road three and three-quarter miles long at this particular camp. This particular piece of road was built four years ago. It is a model road. There are no abrupt grades, but it follows the gentle contours. The road is graded and crowned, and is drained with adequate ditches on either side; the trees and stumps have been grubbed out for fifteen feet on each side, and indeed, in efficiency, workmanship and grades, it equals the fine Government trunk-road between Sudbury and Sault Ste. Marie. Skid sites are blazed out at the same time as are the main roads. The roads are cut out to a width of 25 feet. Stumps are grubbed out, and prominent boulders blown out. The capacity of the road is measured only by the steepest up-grade on it. Considerable expense is gone to in improving irregularities, e.g., water-holes or slight depressions are built up with cribbing; short, abrupt rock rises are eased by bridges, and even extensive cots are made where the material in the rise is sand.

Twenty men and a sub-foreman are employed steadily on road-

Cutting Tools and Measuring Pole

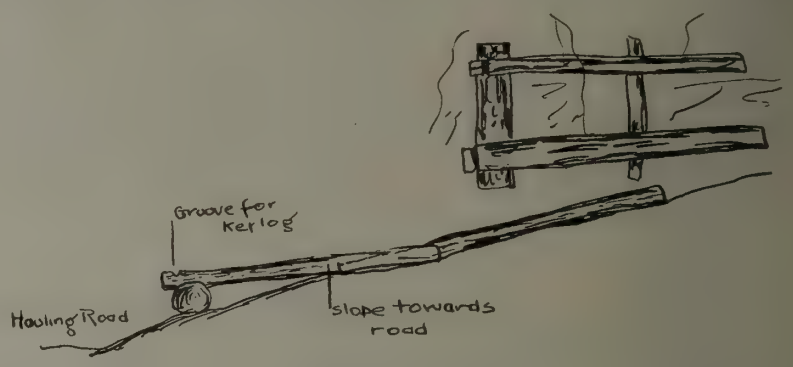
building throughout the season. Italians are used, and for this particular kind of work better men could not be secured. From 700 feet to 1,000 feet are built a day by this gang, bringing the cost up to about $150 per mile. The evident principle of the foreman with regard to hauling roads is to build them wherever possible, thus shortening "snaking distance." However, more skidways are necessary, so the one balances the other. On a 2,500-acre tract, in the seasons of '06-'08, forty miles of road were built at a cost of from $80 to $300 per mile. With a five-mile haul, logs were landed in '06-'07 for $8.70 (year camps were built); the following year for $5.70 a thousand feet.

CUTTING.

The cutting gang consists of a "notcher," the most experienced man, who sizes up the timber to be cut, determines the best felling directions, and notches the trees to be sawn down; and two "sawyers," who saw down the trees, and saw them into log lengths at the marks on the boles indicated previously by the notcher. For measuring the lengths the notcher uses an eight-foot pole, marked as shown. In addition to the two-foot mark branded on the stick, a two-inch length at the end and a four-inch mark, following the two-inch mark, are put on. These are for the purpose of allowing the measurer to make allowance for "brooming," namely, 2 inches for 16-foot white pine logs, 4 inches for 16-foot red pine logs. A sharpened iron point is rivetted on at the end of the stick, which is used to grip the tree trunk when it is being marked.

Stumps from 2.5 feet to 4 feet are not uncommon in this camp. For this waste there is no good reason. It is feasible to reduce the height of pine stumps to 20 inches. This high cutting means an average loss of at least 6 inches on each tree cut, which is in the aggregate enormous. In addition to the actual quantity of lumber which is wasted in cutting high stumps, the quality of lumber must also be considered, since every lumberman acknowledges that, except for defects, the best quality on the whole tree is found in the butt log. However, everything is cut to within a top diameter of 6 inches. This is relatively close utilization. Little care is exercised in the felling of trees to prevent injury to the young growth. The only object is to get the tree in the best possible position for sawing. This also is a serious source of waste.

A cutting gang will make from 180 to 240 logs per day during the fall, before the timber has become frozen. In the winter, 135 per day is



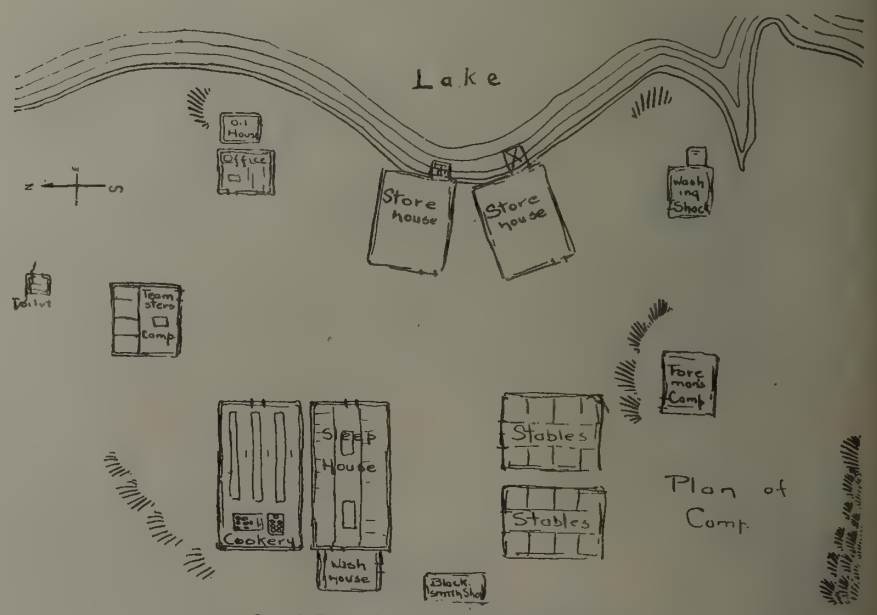


Diagram of Skidding

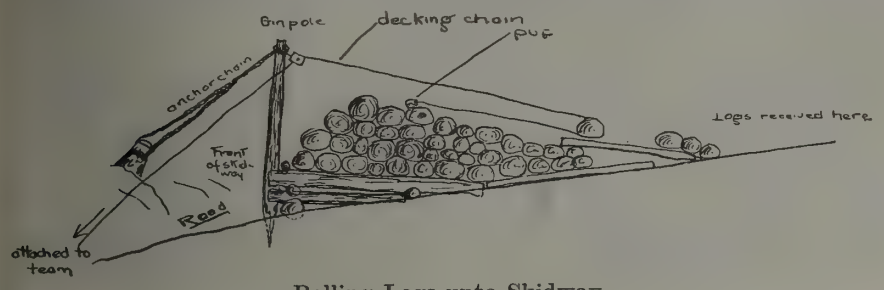
a fair average. Logs are not swamped by the sawyers, but by the swampers or trail cutters. A set of cutting gang tools consists of: two 6-foot saws; two 4½-lb. pole-axes; one pair of steel wedges (small spines are nicked in the face of the wedge to bind it in frozen timber), and one iron mallet, 3 lbs., provided with a short handle.

SKIDDING.

A skidding gang is constituted as follows: Two or three trail cutters, who limb logs, clean the brush away from them, and cut out a road along which the logs are hauled to the skidways (double-bitted axes are used, a sharp edge to cut trees, etc., and a dull edge for roots); two "rollers" whose duty it is to stand, one at each side of the skidway, receive the logs as hauled in by the teamster, and place or load them on the skids; one teamster, who has charge of the gang, in addition to his other duties, which are snaking-in logs and assisting in the loading of the skidway by means of his team.



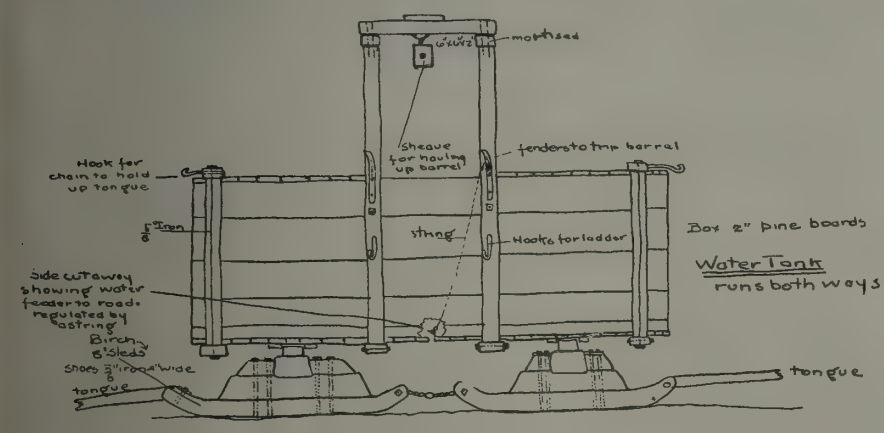
A Good Lay Out for Camp Buildings

The skidway sites are blazed out by the foreman when he is laying out the hauling roads. Afterwards the road-making gang and swampers cut them out. They are from 25 feet to 40 feet wide, and are grubbed clean of stumps to about 60 feet back. There is one skidway every 100 feet or 150 feet along the road. The site is picked with the principle of always rolling down hill. Red pine skids are used, generally of merchantable size. However, they are not left behind, for when the logs have been loaded, the skids are picked up also.

In building a skidway, a cross-sill log is first laid down, to secure a

solid bed and a slightly rising grade. Upon this are laid the ends of the two long parallel sticks upon which the logs are rolled. If the slope is too great for a single sill, a cribwork is first built up to the required level.

Logs are snaked to the skidways by means of tongs. The two "rollers" receive the logs and place them on the skids. First, however, a small log is placed at the end in notches previously cut. This serves as a key for the whole bank of logs. After the bottom layer has been laid, succeeding logs are rolled up the skidway by means of two small poles, one end on the ground and one on the bottom layers of logs. Up this inclined plane the timbers are rolled by means of the canthooks and brute force—"bulling it," as the "jack" says. For the top layers, skidding rigging is needed. A block is chained to the top of an 18-foot gin pole, which is pointed at the butt end and driven into the ground midway between the big skids at the front end of the skidway. To further strengthen the pole it is guyed down by a heavy chain. Through

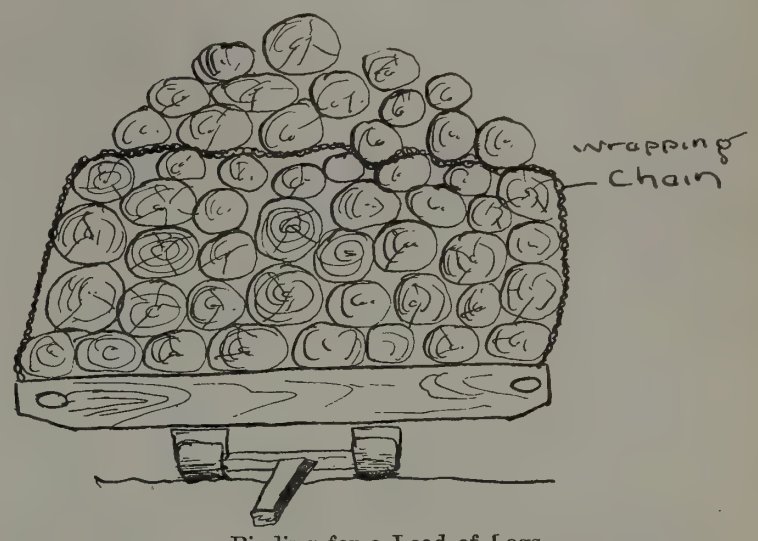


Rolling Logs unto Skidway

the pulley runs a long $\frac{5}{8}$-inch decking chain, to the free end of which is attached a stout "pup." To haul up a log, the chain is brought up and under the log, and the "pup" is then driven into the log lying under the space to which the new log is to be placed. The other end of the chain is then fastened to the bitch grab-hook on the double-trees of the team. The word is given, and the log is quickly and easily rolled up the skidway. The pup is automatically released as the log falls in position, and is caught on the cant-hook of one of the rollers who has been guiding the log up the incline. The logs are stamped at both ends by the rollers several times to insure recognition at any future time. The horse harness used is of the ordinary type, with the addition, however, of "leisure" straps, which serve to keep the hind part of the tugs up from the ground. One hundred and fifty logs are skidded per day. The average size skid is about 25 feet wide by 70 feet long, and contains 350 logs.

HAULING.

Hauling, the second great division of the operation, begins about the middle of January, and is in full swing by the first of February. Snow is a cheap and efficient grading material, and its use has been developed to a high degree in Northern Ontario. From the early winter, the hauling roads are kept open by a crude plow, composed of two red pine logs bolted together, and braced by an ironwood sapling. A strong foundation is necessary for iced roads. Just before the beginning of hauling operations, light loads are sent over to break in the runs. Bad sinkholes are built up, and summits are shoveled down to the minimum level.



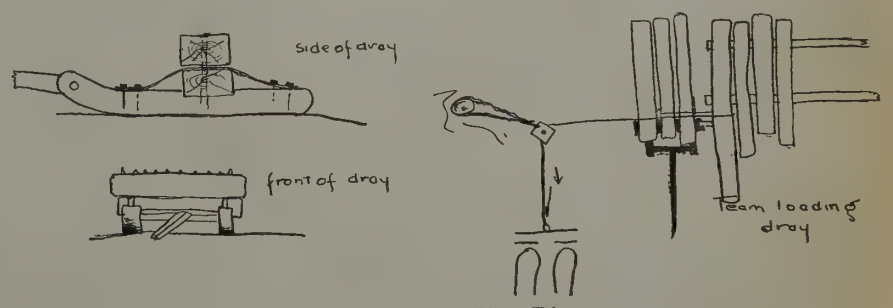
Water Waggon for Icing the Roads

At convenient places along the road, water-holes, or reservoirs, are built for the tank.

After the preliminaries are finished, the "water wagon" or tank is brought into service. Its capacity is 25 barrels, or 1,600 gallons of water. It is mounted on sleighs which allow of motion in either direction. The crew consists of two men, the teamster, and the "conductor," who manipulates the valves. Sprinkling is generally done at night, as at this time there is no interference with the all-important haul, and also, the lower night temperature hastens freezing. In loading the tank an ordinary coal oil barrel is used. In the bottom end of the barrel is cut a square hole, about 12 inches by 12 inches. Over this is fastened a hinged iron flap. The barrel is fastened to a block and tackle, secured on the standard of the sprinkler. When it is desired to load the barrel, it is plunged down into the water, fills automatically through the bottom, is then hauled up by the team and dumped by the projecting ends of the iron pivot hitting the standards and overbalancing the barrel, throwing the water into the tank. An improvement on the old-style sprinkler is the placing of the water exits midway in the tank. In this position the water falls directly on the track, and the hind runners pass over the falling water, thus moulding the runner-way.

The high state of efficiency of the roads demands ceaseless attention. A gang of 10 or 15 men, known as "guipers," who might be likened to sectionmen on a railroad, devote their whole time to repair work, as,

Binding for a Load of Logs



under the heavy loads passing over the roads, there is a liability to disaster at any time. Another gang of five men are constantly employed shoveling out roads, skidways, etc. For checking sleighs at steep places, sand is placed in the runner-ways; heaps of it are piled up at the side, and prevented from freezing by fires built on it. A man is stationed at each bad hill to sand the road when needed.

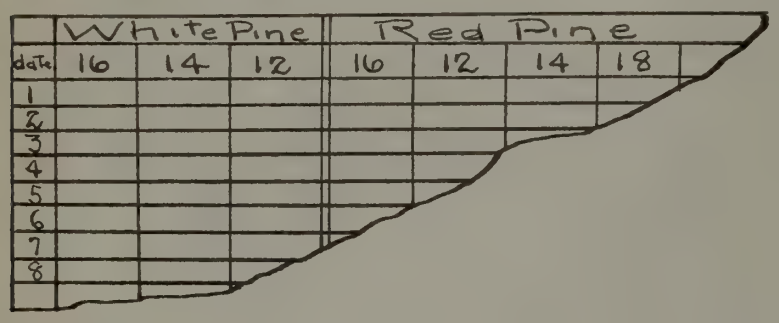
A very necessary part of the hauling outfit is the snow-plow. With it runner-ways are formed on new roads, snow cleared away after storms and the proper shape of the road is maintained. It is a heavily built machine, provided with steel channel cutters, capable of adjustment by levers. Directly back of the cutters are fastened extension wings, or snow-boards, which flare out over the track, throwing all snow from the back to the sides. A teamster and leverman work the plow.

LOADING.

"Jammers" are now used exclusively in log-loading. Their use is an advance in logging methods, caused by competition of southern woods in the lumber market. The jammer is an improved form of gin, mounted on a moveable framework, and used to load logs on sleds by horsepower. There are two kinds used—End jammers, i.e., one which loads from the road, and side jammers, loading from the opposite side of the skidway from which the logs are being lifted. The jammer is made as follows: The two standards are of unhewn red pine, 30 feet long, top diameter about 6 inches. At the top they are bolted together. To this top is chained a heavy block, through which runs the half-inch cable used in the operation.

The spuds are secured to a pair of heavy 15-foot red pine skids, 12 in.

Log Dray and Loading Diagram



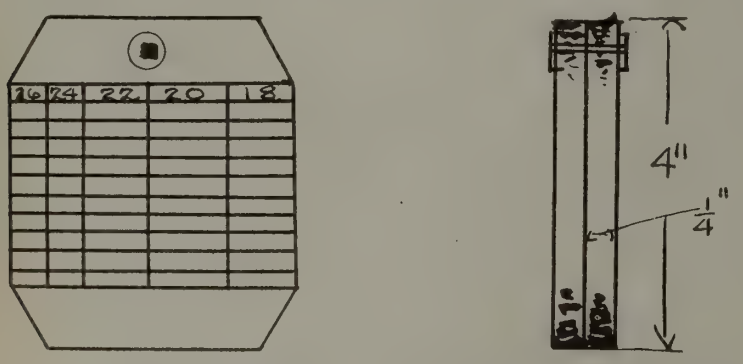
by 12 in., spaced to the gauge of the road. A guy line fastened to the farthest end of the skid holds the standards in position. Another pulley is chained to the front end of the bed. For hauling up the logs, a $\frac{5}{8}$ in. steel cable, about 100 feet long, is used. One end of this cable is secured to the top of the spuds. Running free on it is another block, the hook of which is provided with two 15-foot steel cables, at each end of which is a "pup," which grips the end of the log in loading.

One of these jammers will load one thousand pieces a day, whereas, with the ordinary block-and-tackle method, only 350 were possible. A loading crew consists of two "senders," who attach the pups to the log and guide it over the sleigh; two "tailers," their duty being to roll

down the logs from the back of the skidways to the senders, and one top-loader, who stands on the load and receives and places the logs. This is work requiring courage and skill, and offers the highest remuneration.

HAULING SLEIGHS.

The bunks of the hauling sleighs are of red pine, 12 ft. x 12 in. x 12 in. No sway poles are used to connect and steady the fore and aft bunks. Ordinary sleighs are used. The average number of logs per load is 25 to 30 (computing 50 b.f. per log, which is the average of over 35,000 pieces scaled), giving 1,500 b.f., or about 9,000 lbs. per load. In binding the load, the wrapping chain is put on when all but one, the last,



Culler's Tally Board

layer has been placed. Then when the top layer has been placed, the weight serves to tighten and steady the chain. At steep up-grades a snatch team is stationed to assist the haulers up the hill. These extras emphasize the axiom, "Nothing pays like first cost in road-building."

A dray is a rough sled, built on the same principle as the ordinary sled, with the addition, however, of two sharp spines driven up through the bolster, one on each side. These serve to hold the load. Five to eight pieces are rolled on these drays, either by cant-hook or by block and tackle, as in the skidding operation, one end resting on the bolster, the other dragging along the road. The logs are chained down to the bolsters with a wrapping chain. This method is crude, clumsy, and very expensive. It is only applicable for short distances, and with at least a 10 per cent. grade. At this camp it was used only to keep the horses at work until the "haul" began. The logging superintendent reported regarding it as follows: "This method no good; too costly and slow for present-day logging; always use double sleighs and regular bunks. One team loads for the other to haul; therefore, the dray method costs twice as much."

LANDING.

The logs are landed on the ice at this camp, as in many other camps of this northern country. This demands "glare" ice, which is secured only by snow-plowing, which gives the ice an opportunity to freeze deep enough for safety. The logging superintendent's report on this subject says: "Slush and snow ice on landings, where logs are being dumped, shows poor management. It is bad on the horses and on the work. Nothing pulls horses down so quickly as wet feet in the middle of winter. Glare ice is indispensable, and easily secured. Keep shifting and stirring up the snow with a simple log plow. This soon makes good

Tally Board for Boom Timber

ice. However, if this has been neglected at the outset, more expensive means are necessary. The whole must be laboriously tramped down by men, and then scraped and plowed."

SCALING.

The log scaler is employed by the lumber company, and receives about $65 per month. The Doyle Rule is used, although officially it is known as the Ontario Rule. He works with an assistant, and each is provided with a log scale. The culler also has a curved tally board, chiseled out of soft maple, so as to fit the shape of the arm below the elbow. It is held in position by elastic bands. It is ruled as shown. Another tally, of smaller size and shape to fit in the pocket, is used to record the boom timber, i.e., lengths 18 feet and over. The scaler places himself at one side of the skidway and the assistant goes to the other. The helper measures the diameter inside the bark, and calls it to the culler. The latter meanwhile has measured his end. Then, making allowance for defect, if any, and noting the length, he records the smaller diameter under the proper column. After it has been measured, each man ticks his end of the log with the keel stuck in the end of the scale. To secure the length of the logs further in the pile, the length of the next stick is compared with that of the one preceding, in this case the log whose length is positively known. For instance, the assistant calls out, "18, 2 less," meaning the diameter inside bark is 18 inches, and the length of his end, as compared with the previous log, is two feet shorter. Thus the scaler, knowing his end, can allocate the measurements to the proper column.

All logs over 18 feet are measured by taking the average of the inside, top and butt diameter. The majority of pieces cut are 16 ft., 20 ft., 24 ft., although even lengths from 12 feet to 24 feet are made, depending, of course, on the condition of the timber.

Twice a week the figures obtained are transferred to another board similarly divided. At the end of the week, totals are made. These figures, in turn, are entered on the Government sheets, species being separated. Thus, sawlog sizes 12 ft., 14 ft., 16 ft., with diameters, are on one sheet, and boom timber, showing top and butt diameters and lengths, on another. Board measure is also computed and entered. In the spring these sheets are forwarded to the Crown Timber Agent. From 2,500 to 3,000 pieces are scaled per day. One scaler serves two camps. Once during the season two Government scalers check the work by scaling 25 per cent. of the logs, and if the company's scale is unreasonably low the work must be done over again.

REPORTING PRACTICE.

The van and office hours are from 7 to 9 a.m., and from 6 to 8 p.m. Needless to say, these hours are strictly observed by the men. To the clerk at the end of the day the "notcher" of each cutting gang reports the number of logs made. The teamsters of the skidding gang give an account of logs skidded. Also, the "skinners" hauling state logs sledded down, and the tender at the landing does the same for logs dumped.

Every week the clerk makes an inventory of all supplies in the camp, and of supplies desired for the "cookery" and "van." These items are entered on the same sheet and forwarded weekly to the district bookkeeper.

A weekly report of work done is also forwarded. This is made out in duplicate, one sheet being retained at the camp. A record of logs made, skidded, landed, etc., is entered in a book provided by the Crown Lands Department. This record is kept by the clerk, and on the completion of the work in the spring is sworn to by him. It is then delivered to the woods ranger in whose district the shanty is located.

In the camp under consideration the expense per thousand feet was as follows for a cut of five million board feet:

For cutting per M.	$1.10
For skidding	2.47
For hauling	2.55
Share of capital expenditure	.64
Total	$6.76

Stumpage, driving and the cost of manufacture are not included in the above.

Keep a Want Book

No yard can lay claim to being in the right class that does not keep a want book. When you fellows who do not want to say "Amen" to this protest against this assertion, you don't want to get too noisy, for I may be a great big Devit for all you know, and be able to "show" you that I am right, so if you protest you best go at it gently.

Those of you who do know me need not be so particular. But I do want to say to you that it don't pay to buy from your competitor, and that is what you will have to do a whole lot if you don't keep a want book.

Make each one of your employees put on the want book everything that you are getting short on, and see that they do this, too.

Then order the stuff at once. Dont' wait for a traveling man to come along, but tell the firm to give him credit for the order, and get the stock.

Nothing is more aggravating to me than to have to tell a customer I haven't got the stock he wants ,and it hurts your business, too, and gives the other fellow a show at your customers also, and it gives them a bad impression of your business methods.

Gordon Grant & Co., Port of Spain, Trinidad, report under date of August 20, as follows: The only arrival of pitch pine since last writing is the Barquentine Savoia from Gulfport. Although dealers' yards are fairly well stocked, there is an outlet for a cargo or two of really "All Heart" lumber assorted in accordance with present requirements. We sold N. S. white pine boards at $30.00 per M., and for this class of lumber there is a steady demand. There is some enquiry also for spruce and hemlock.

A Novel Lumber Railroad Line

Ingenious and Useful System Installed on Primrose Bros.' Nova Scotia Limits

Lawrence McKay, of Truro, N.S., whose portable mills are operating at Riversdale, the timber limits of Primrose Bros., has installed there rather a novel method of handling the deals and for conveying purposes

An Interesting Lumber Motor.

generally. This consists of a railway line built from the limits to the mills, a distance of about five miles in all, on which is run a gasoline motor truck, made especially for the purpose, which hauls the logs from forest to mill and from mill to siding. The accompanying illustration will give a fair idea of the method of conveyance. The rails are of hardwood, 4 x 5 inches, and are of standard gauge width. The motor truck was built especially from Mr. McKay's own design, and the flat cars are about one-half standard size. This system was installed last season, and has taken the places of four teams, reducing the actual

Section of Road for Lumber Motor.

hauling expenses from $1.25 per 1,000 feet of deal to 15 cents. On the basis of 1,000 acres per year cut, it is claimed that the road will pay for itself in two years.

Railway Curtailing Lumbermen's Privileges in Nova Scotia

The lumbermen of Nova Scotia, and particularly in that section of the country where the railway is the only source of transportation, are greatly incensed over the action of the Intercolonial Railway authorities, who are contemplating cutting off what is known as stop-over privileges to the lumber manufacturers. Heretofore, and at present, the manufacturer hiring a car had the privilege, on payment of three dollars extra, to load part of a car at one siding and finish loading at another. Down in Nova Scotia, where lumbering is done mostly by portable mills, and where conditions are entirely different from other parts of the country, it is not unusual for a manufacturer to have a car stop at two or three sidings in order to make up a load. If this new rule of the railway goes into force, he will be obliged to pay full car rates every time he wishes to stop at a siding, supposing sidings are only a mile apart, and there are only a few hundred feet of lumber at each siding to be loaded. The injustice of the thing is at once apparent, and a general voice of indignation should be raised by lumbermen against the action of the railway.

The lumber industry affords more freight and is a better paying proposition than any two other classes of freight in Eastern Canada. It is a clean freight; the company's employees have to do no handling whatever, everything being placed on the cars for them, and they get a higher freight rate, proportionately, than for any other class. Under these conditions, we fail to see the wisdom of the railway authorities in cutting off the stop-over privilege, and thus increasing the freight rates (which are now high) to a point where the manufacturer will find it almost an impossibility to do business. The Intercolonial Railway have sent out a circular letter to every important lumber manufacturer in Nova Scotia who would be affected by the change, stating their intention, and the letters of protest and indignation that are being sent back show them the position the lumbermen take in the matter.

The Rhodes, Curry Co., of Amherst, N.S., are considering the question of starting a branch of their building department at Campbellton, N.B. The foreman of construction work, Mr. MacAulay, is now in that town, and has erected temporary headquarters for the company. They have a number of contracts already and expect to close a number more during the next few days. Another branch of this firm, located in Sydney, N.S., are doing a big business in that city this year and have contracts for a number of large buildings in course of construction.

Another big New Brunswick lumber deal is now being talked of, no less than a merger of the Alex. Gibson Railway & Manufacturing Co., of Marysville, the Partingdon Pulp & Paper Mill and the Cushing Saw Mill, of St. John. It is reported at St. John that such a deal is likely to be consummated within a short time. The properties mentioned are among the largest in the province, and a merger of the three would make a very big concern.

The sale of the big lumber property of I. C. Prescott at Albert, N.B., to an American concern, which has been under consideration for some months, has been finally completed. The purchase price is said to be $75,000, and includes the timber areas, mills and residence, the latter being one of the finest in the province. The property has been in the possession of the Prescott firm for about eighteen years.

Danger of Shingle Saw and Edger

Factory Inspector Thomas Keilty in his annual report to the Department says: The lumber industry was decidedly more active this year than it was last year. This is especially true in regard to the number of small and temporary mills which were operated. To this may be added a special condition affecting nearly all the mills bordering on the Ottawa River, namely, a period of two to six weeks when they had to close down on account of high water in the Spring. This condition naturally shortened the season of mill operations to such an extent that it required active operations, and in some cases necessitated the running of mills at night in order to get out the required cut of lumber.

Conditions in saw mills remain about the same as in former years in so far as they relate to our factory laws or the work of inspection. Of course this particular industry is always subject to dangers incidental to its peculiar nature, and which may not be enumerated in the milder forms of industry. There is, however, a feature to which a reference is made in a former report, and while it is not a general condition in my district, it may have a wider use in other parts of the Province. I refer to combination shingle saw and edger. It requires no argument to demonstrate the dangers of this machine, which are largely in the fact that it was built with the intention of being operated by a single person, and in many cases is so operated. There are but few of these machines in my district, and I have positively discouraged the method of one person attending to the saw which cuts the shingles, and at the same time removing the shingles from this saw as fast as they are cut and jointing them on the combination saw, which is closely connected and run at right angles to the shingle saw proper. It is clearly evident that where a man's attention is divided within two dangerous machines, the danger of accident from contact with them is very much increased. I have advised that where such machines were in use that an operator be required to attend to only one saw, and that an additional operator have the care and operation of the other saw.

One of the general conditions which follow the operation of these small saw mills is the difficulty in having their boilers regularly inspected. The same may be said of brickyards. But in all such cases I have brought argument to prevail upon such persons until the requirements have been fairly observed.

While I do not think that the use of guards will at all times prevent accidents, to a certain extent they will minimize them, and place the operator to a far better advantage, in that he did his part by taking all the precautions necessary to avoid accidents. In wood-working establishments the buzz-planer and saws seem to be the machines from which the majority of accidents arise, and the metal-stamping press has also a great many injuries to answer for.—Arthur W. Holmes, Ontario Factory Inspector.

No Slump in Eastern Spruce Markets

Reports of Depression in New York Exaggerated—Overproduction and Politics the only Source of Trouble—Need for a Producers' Association

The state of the markets for Canadian lumber and lath in the New England States has been a subject of much discussion of late. In the daily press, reports have been published to the effect that not only had the demand for Canadian spruce fallen greatly, but that the outlook for an improvement was decidedly blue.

It is a pity that reports of this nature should gain so much circulation as they have, because, although they reflect the conditions of the markets to some extent, they do not give an accurate idea of them. Most of the reports which have recently appeared in the daily press have given the idea that the demand for Canadian lumber in the markets of the New England States has practically come to an end. In reality this is by no means the case. There is still a good steady business in progress and the prospects are that in the near future conditions will again become quite normal.

With a view to obtaining the ideas of those who are closely in touch with the situation the "Canada Lumberman" recently communicated with a number of prominent United States importers of Canadian spruce, and others who are interested in the New England markets, and also with some of the more prominent Canadian manufacturers. These firms were requested to give their views upon the situation and outlook. Their ideas will be found to coincide fairly well. They agree that, although at present the markets are quiet, there is good reason to expect the fall trade to open up with an encouraging improvement. There is at least no cause whatever for serious alarm regarding the present dulness of the markets, as this is a feature of the trade which occurs regularly every year during August and September. Opinions differ somewhat as to the exact cause of the quietness, if it is to be ascribed to anything other than the seasonable disinclination for trade. Some dealers claim that political disturbances are the principal cause, and that with the conclusion of the elections in the United States this fall and the settlement of some of the important questions now before the Supreme Court of that country, business confidence will return and a prosperous period will be the result. Others are of the opinion that the most important cause of any depression which may exist at present is the inclination on the part of the manufacturers to force the issue and make their own markets, even at a sacrifice of profits.

One of the encouraging features of the summer's trade has been the fact that the regular good sizes of spruce, such as 1 in. x 9 in., 5-4 in. x 9 in. and 2 in. x 9 in., have sold at as good prices as those of two years ago. Price cutting seems to have been confined to the narrow sizes.

Some manufacturers and dealers report that the volume of business this summer has been as good with them as in 1909, but that prices have been lower. Such conditions could scarcely exist if there were a state of serious depression or panic in the lumber markets. The truth of the matter seems to be that people are buying just about as much lumber as ever, and that Canadian spruce is getting its share of the trade, but that owing to the unsatisfactory monetary conditions prevailing throughout the United States it is impossible to secure as good prices as formerly. As soon as the conditions have been remedied and the banks of the United States see fit to loosen their purse strings a little it should be possible for manufacturers to secure better prices. A fair amount of trade is in progress even now, and those who claim to be in close touch expect better prices early in the fall.

The fact that the New York markets have been overstocked with Canadian spruce seems to be demonstrated. It should be possible to prevent the occurrence of this in the future. The formation of an active association of manufacturers and shippers might go far towards preventing either overproduction or overshipment. The ideas of readers of the Canada Lumberman upon this matter would be welcomed by the editor.

The letters received by the "Canada Lumberman" give an excellent idea of the situation. They are as follows:

The Shepard & Morse Lumber Company, Boston, Mass., write as follows: We do not know that recently any very great slump has taken place in the New York lumber market. There has been something of a slump in Eastern spruce, but we think it is in a little better condition now and that the prices are a little stiffer. At prices lower than were obtained last spring the demand in New York all this year has been very poor. They have not done nearly as much building there as last year. In fact, we do not think over half as much. There seems to be a general uncertain feeling in regard to the future. In one respect this has put the market in a healthy condition in New York, as we think the yards are rather short of stock, and what they sell they have to buy. On the other hand their wants are rather small, and there is no doubt spruce is pressed prettty hard for sale in Canada and that many mills are anxious to move stock. Still we have not noted any particular difference in the last two or three weeks in price on Canadian stock in New York. Once in a while there is a lot there on the market that has to be sacrificed. The difficulty is that it cannot be moved in very large quantities. Whereas we look for a fair fall trade, we do not look for anything very vigorous.

We think the political situation in this country is such that we shall not have any first-class business until matters are more settled. We do not, however, look for very bad business. We think there will be a fair volume moving along in a rather slow way, and that sometime when it is felt we have suitable conditions of government—when the corporations get used to the new regulations, or else the government sees fit to let them alone more than they have done—then we think we shall have a new era of prosperity and better business conditions.

There has been a great deal of talk about the crop in this country, but as far as we can learn there seems to be a fair average crop, at any rate not sufficiently bad to warrant the rather stagnant condition of business that we have. We look upon the principal trouble as political. As to how long it will be before that is remedied it is pretty hard for us to state. We judge the present agitation by Col. Roosevelt is not helping business matters any, and that a considerable revision of tariff schedules will also be an unsettling feature which may last for another year.

For ourselves, we are intending to take out a rather small cut of logs this next winter. We are inclined to think it would be the part of wisdom if the Canadian mills in general adopted that plan, as we doubt very much if they can look for any better average price for lumber next year than has been obtained this year, and for ourselves we do not feel like buying spruce and paying as much as we have paid this year. It would greatly benefit the general situation if the mills would close down early this year. We judge, particularly in the white pine districts, they would be about as well off to do so, if they are going to cut small this next winter, as lumber sawn in the fall is hardly further ahead than that sawn in the spring, and the saving in insurance and interest on the sawmill is considerable.

John Fenderson & Co., Springfield, Mass., write as follows: As far as the New York market goes, the condition just at present is not any too good, but do not think there is anything very alarming in this, because ordinarily during August and September business is bound to be more or less quiet throughout this section. We think the trouble is, if anything, that the manufacturers are trying to force the issue, and it looks as if they were making their own market, which is certainly not a high one. There is just a certain amount of demand all the time, and when the manufacturers are inclined to go and force the sales of an excessive quantity by shipping cargoes into New York harbor unsold they are bound to reap results which cannot be other than a slump in prices.

The writer has just spent two weeks in New York City, and most of the people seem to feel that after around the middle of September things should recover and business be a good deal better. The one very bad feature of the New York market is the fact that anybody and everybody that can ship by water will load vessels from both the south and north, and ship immense quantities of material, expecting to sell the stock after it arrives in New York harbor, with the result that most of it arrives at the same time and is stock very much alike. Of course it behooves them to unload immediately to save demurrage, and the biggest part of them have no facilities for unloading and storing, but must of necessity sell at some price or other. You can see what effect this is apt to have on prices. For instance: just last week there were several big consignments of lath arrived in New York. Whereas we have been getting $3.75 for delivery in lighterage limits by rail, as soon as these cargoes arrived the price slumped about 35c., and undoubtedly as soon as these are cleaned up and vessel shipments stopped the price will recover to the old basis.

We have given up altogether prophesying as to what conditions are going to be. We don't know, but we are living in hopes. Conditions in themselves are not so bad, especially in the market you mention, but the glutting of the market with a large quantity of stuff all arriving at one time naturally carries its own penalty, and the people shipping the stock are bound to put up a cry that the New York market has gone to the bad. Certainly conditions are not what they should be, but they are far from being as bad as they are painted. We feel that what depression there is is largely a condition of the mind, and such agencies as your magazine can help a whole lot to doctor up this ailment.

Bartram Brothers, wholesalers, New York City, write as follows: There has not been a "bad slump" in the New York lumber market, but there have been unfavorable conditions, holding back the demand for lumber generally, which, of course, the Canadian product has also felt. The feeling throughout this section is that of uncertainty. There has been a holding off in demand at the yards. The box makers also have generally reported restricted business. Therefore there is a feeling of uncertainty as to the business of the fall and winter. From this results a hesitancy in buying largely for the anticipated business. This more expressly applies to spruce and lath, but in some measure to white pine. Consequently it follows that the seller, finding the buyer indifferent, has in a few instances made concessions in prices, but the stock widths largely in demand have remained firm in offering. The time is near at hand when these contracts must be closed for fall delivery and winter and spring use. This waiting has given the impression of the "slump" to which you refer in your letter. It would seem that before long, by the middle of September or the 1st of October, the buyers will have assured themselves of the true conditions. On the part of the manufacturer and wholesaler there has been no material concession in prices. I can freely say that the situation is not as serious as is intimated in your letter, and I trust that the next month will see a very much improved condition, and feel that all indications are in this direction.

Market conditions in New York are indicative, but never normal. It is used so often to realize upon stocks not moved, and also as a dumping place for odds and ends, that often the buyer reports conditions that appear abnormal, but in reality are constantly recurring throughout the year.

A prominent New York wholesaler writes as follows: The fall trade is practically just starting in. There seems to be no great volume. Orders are

being very carefully placed and practically, only for stock for prompt consumption, and where sales are made the prices are very unsatisfactory as compared with what lumber has been selling at the last few years in this market. Prices are being made by those who are most anxious to convert their lumber into cash.

Spruce lumber is being offered from West Virginia at from $2 to $3 per M below its regular list prices. White pine is also very willing to make concessions in prices to obtain sales.

Prices in lumber from our Southern States are also being cut. The trade that I visit, being principally the suburban yards, is quiet, and they are only buying for their actual needs.

There are two principal factors which I think are the strongest influences in keeping trade quiet, and they are: the uncertain prospects in the political situation and the conservatism of some of our banks and banking institutions in making loans for commercial purposes. When these two factors are cleared up so that the general public can feel safe in making advance commitments, and in other business enterprises, business will move ahead again, and I think with considerable strength.

I think that the country is on a safe and sane basis and prepared to advance rapidly when our Supreme Court settles some of the cases now before it, and we are sure of a staple and business-like administration our government.

If our fall election shows a good backing to the administration now in power and the Supreme Court makes some pronounced decisions in the cases now before it. We will be ready to go ahead with full swing and good business all along the line.

The above will show you that I do not look forward to any marked improvement in our fall trade.

A prominent New York State firm of manufacturers and wholesalers write as follows: The situation in New York and vicinity for spruce lumber during the season of 1910 has been what would be termed a "buyer's market." Prices have varied considerably on quotations, and there seems to have been a desire of some concerns to secure business at any price. Another problem has been N. C. pine, which has been put in competition against spruce by southern mills to the end that it has brought prices of spruce boards somewhat lower than they have been selling for the past two or three years. The regular good sizes of spruce, namely, 1 inch x 9 inch and 5-4 inch x 9 inch and 2 inch x 9 inch, have sold at as good prices as two years ago, the price cutting seeming to have been with the narrow stock. The volume of business has been as good with us as in 1909, but prices have been somewhat less. The cut in the duty on lumber, to our minds, has been practically **given** to the buyers, which will account for some of the price cutting. Spruce lath have been selling at fully as good prices this year as last year in New York, and the market seems to have absorbed the eastern stock without breaking prices. Had there been any large amount of speculative building or money for such purposes prices would be a great deal better. The box trade has been somewhat better, but, owing to the low prices of southern box, spruce and white pine have been seriously affected, and while we would hope for a better market in the fall and the coming season of 1911, we would not care to foretell it at the present time. We do believe, however, that the fall business, unless the yards have fully stocked up, should be somewhat better, as no doubt a good many of the large manufacturers have already contracted a good deal of the better class of the spruce stock.

Alfred Dickie, Stewiacke, N.S., writes as follows: We have not, these last two years, been paying much attention to the New York and Boston markets, for the reason that returns from that quarter have not been sufficiently inviting. We have found the South African and South American markets more to our taste; also the Continental European markets, in spots. England and Ireland have also been better markets than those of the U.S.A. for the two years in question. Business seems to lack snap in the U.S.A., as if they had not thoroughly got over their panic year yet. Immigration has also fallen off somewhat in favor of Canada, so that there is not the call for building more houses. When spruce gets scarcer in the United States, as it is bound to do very shortly, then Canada will find there more incentive to market her wood goods. Meantime, we must look for other markets to tide us over the interim, which will not be a long one.

Frederick Cleveland, wholesaler, Albany, N.Y., writes as follows: During the past two months I have sold very little lumber in the New York market on account of low prices being made by some wholesalers and mill men who were unable to hold on to their spruce for better prices later in the fall. Very low prices were made on spruce last month in the metropolitan market, but I find that a great many of the yards have not taken advantage of these quotations and have let their stock run down. I am looking forward for good demand for spruce this fall at good prices.

The Windsor Lumber Company, New York, write as follows: A bad slump has taken place in the New York lumber market, although at the present time there are indications of a slight improvement. I think that is largely caused by the fact that the banks are limiting the line of credit that they are extending to the builders, which, of course, has the effect of materially curtailing building operations. I think that the situation is easing up somewhat. One thing is certain, however, and that is that more lumber has been forced on the market than it could readily absorb.

The Fred S. Morse Lumber Co., Springfield, Mass., write as follows: We do very little business, indeed, in the New York market; therefore, we are not in touch with the conditions as they now exist. We do, however, cover a good share of New York State outside of the metropolitan district, likewise all of New England, and we have found conditions in our territory far from satisfactory all through this season. The outlook, however, is such as leads us to be very optimistic that trade conditions will gradually improve during the fall.

The Manufacturers' Lumber Co., New York City, write as follows: Business has been more than ordinarily quiet during the summer months, and prices have not been what they should be.

We have, however, enjoyed a fair amount of business, and at present the indications are that trade will be a good deal better. We have recently booked a number of orders of substantial size at fair prices, and prospects are that our own business will be reasonably good during the next few months.

Wonderful Newfoundland Development

Lumbering and Paper Making Industries Rapidly Bringing Prosperity to the Island Colony—Story of Five Years of Unexampled Progress

Much attention has been directed lately by lumbermen in both Canada and the United States to the wonderful possibilities for the development of the lumber industry in Newfoundland. Until a few years ago the interior of Newfoundland had practically been untrodden by man; but with the opening up of the interior by the Reid Newfoundland Company with their line of railway, a new era began to dawn, and it was found that Newfoundland possessed timber resources which are second to none on the North American Continent. Capitalists were not slow to avail themselves of the great opportunities presented, and to-day there is not a foot of available timber land in Newfoundland that has not been taken possession of.

In order to give the reader an idea of the possibilities that lie before the lumber industry there, it is necessary to deal briefly with the physical character of the country. The land embraces an area of 42,000 square miles, one-third of this being taken up by rivers and lakes. The timber belt exists principally in the north-eastern section of the Island, and all along the Exploits River and its tributaries—the Gander River and Lake, the Gamleo, the Humber River and the various rivers flowing into St. George's Bay and the Ba yof Islands, and also the entire west coast.

The products of the forest are varied, the chief lumber being spruce, white pine, yellow pine, red pine, fir, juniper, birch, witch hazel, aspen and white maple. The spruce is an invaluable wood for rough work and of great strength. Its fibre is particularly suitable for pulp. Experts who have examined the timber limits of the colony say they know of no place in the world where there is such an enormous quantitl of small spruce and fir growing thickly together and conveniently located near the lakes and rivers, thus reducing very much the cost of operation.

The white pine is of superior quality and is the mainstay of the industry. It runs from 12 to 36 inches at the butt up to 40 feet before a limb is reached, and then reaches 20 to 30 feet farther. Most of them make three saw logs, while fully 20 per cent. are free from knots. The pine belt of the Island covers 2,000 square miles of territory, and at a low estimate it contains 3,000,000,000 feet.

In estimating the future of an industry an important factor is the accessibility of the forest region to the market. In this respect Newfoundland is well served, having 6,000 miles of coast line with deep bays, inlets and natural harbors, which are adjacent to many of the forest belts, besides possessing many valuable inland waters where logs can be floated to a mill with the greatest ease. Chief among these are the Codroy, Terra Nova, Gambo, Gander and other rivers, all of which possess a horse-power varying from 1,000 to 30,000.

An important factor is the Reid-Newfoundland Railway, stretching from St. John's to Port-aux-Basques, covering 648 miles, and connecting with branch lines and steamers right through the country. This railway taps the very heart of all the important lumber centres, and has done more to open up the interior of Newfoundland than any other agency.

The leading companies now operating on the Island are: The Newfoundland-Reid Co., Ltd.; The Anglo-Newfoundland Development Co., Ltd.; The Central Forests Co., Ltd.; St. George's Lumber Co., and Fisher's Mills.

While the lumber operations in Newfoundland, especially in the pine belt of the colony, are very profitable on account of the high value of this wood, the great future in these forests is in the manufacture of pulp and paper. This was quickly realized by acute capitalists, and when in the year 1903 Messrs. Harmsworth of England decided to look around for a favorable place in the new world to establish pulp and paper mills they decided, after a short investigation, upon Newfoundland. The result to-day is that Newfoundland possesses the largest mills of their kind in the world.

In 1905 this company leased from the Government of the colony an area of about 2,000 square miles with Red Indian Lake as its centre, and started at Grand Falls the mills which have now become famous, and which are attracting hundreds of tourists annually. Four years ago this site was practically a wilderness almost untrodden and without an inhabitant. To-day it is the site of an enterprise that promises to make it within a year or two the second town on the Island in point of population and commercial importance. Mill buildings of

concrete, covering several acres, have been erected there and equipped with costly and up-to-date machinery. Many miles of railway have been built, with large terminal wharves at the sea coast and dams, booms and boom-piers constructed in the river. Around the mills there has grown up in a few years a town of over 400 buildings, modern in every way, and laid out in the most attractive manner. Up to the present the company have invested over $8,000,000 in mills and town, everything being, of course, owned and controlled by them. There is now a population of 4,000, which is daily increasing.

The power for the mills is derived from the Grand Falls. An

Sectional View of Grand Falls, Newfoundland.

immense concrete dam was built at the top of the falls, 882 feet wide, capable of developing 30,000 horse-power. The water is conducted to the power house by steel tubes 15 feet in diameter and 250 feet long. The power house and grinder room is 270 feet long by 60 feet wide, and is equipped with two 2,500 h.p. dynamos for furnishing light and power for the plant, the remainder of the building being taken up with turbines operating pulp wood grinders. There are three turbines in the electric generating room and four double turbines in the grinding room, each of the latter furnishing power to six grinders. Each of the 24 grinders can turn out about 10 tons of dry pulp per day.

The main buildings of the pulp and paper mills at Grand Falls cover an area of six acres. The buildings extend from east to west some 650 feet and from north to south 550 feet. The largest building of the series is the paper machine room, which is 234 feet long by 121 feet wide and 44 feet high. In the process of manufacture the logs are cut into 32-inch lengths, in the mill, which has a capacity of six hundred cords daily, and carried on a conveyor by an endless chain 1,700 feet to the "barker" room, and from there to the grinder room.

Thirty thousand tons of coal are used annually at the mills, the coal furnaces being fed automatically. As the coal comes in on the cars it is dumped into crushers, where the lumps are broken up and then taken by a bucket conveyor to the top of the boiler house, whence it passes on to a distributing belt, which drops it into a big bin. From

Exploits River Dam, Rapids and Falls.

this bin small chutes run to each furnace and the coal is thrown automatically into the fires, while the grates, moving up and down mechanically, stoke themselves and drop the clinkers to the bottom of the ash-pit.

One noteworthy building in the plant is that termed the "save-all," through which all the water from the pulp and paper-making apparatus passes, and any pieces of pulp remaining in the water are secured by a screen, so that nothing is absolutely lost. Any oil, refuse or other material that would spoil the quality of the paper is eliminated by the "save-all" machinery.

Many interesting facts and figures could be brought out in connection with this plant. In the construction of the dam and the various buildings over 70,000 barrels of cement have been used. The sewer from the mills to take off the waste water from the various processes has a capacity of 15,000,000 gallons per day. To guard against contingencies incident to such an enterprise an accessory steam plant is provided to generate electricity and also to work the pumps when the turbines are shut down.

Besides the "mechanical" pulp, two large digesters turn out 100 tons of "sulphite" pulp daily, and at the present time 800 tons of paper are being shipped weekly by the company's steamers to England.

Planned and designed by Mr. G. F. Hardy, the eminent New York engineer, the Grand Falls mills have given to Newfoundland the claim to possess absolutely the finest and most up-to-date pulp-paper plant in the whole world.

The logging centre for these great mills is at Millerton, about twenty miles from Grand Falls, and connected by the company's own railway Millerton lies on the shores of Red Indian Lake and is the centre of a huge watershed running into the Exploits River and possessing some of the best timber areas in the island. Here, winter after winter, the great supply is cut to keep the mills working. Last season 150,000,000 feet were consumed, and this year the figures will be far in advance of that.

As Newfoundland in the past has been noted for her fisheries, so in the future will lumbering play a most important part in that country's industries. The policy of the Government is to encourage and facilitate the introduction of capital for this industry. They allow all machinery for operating to enter the country duty free, and all the materials for building and equipping the plant. Capitalists are beginning to awaken to the fact that Newfoundland possesses a won-

Crest of Dam at Grand Falls—30,000 Horse Power.

derful field for investment. We have been informed by the Government that every available timber limit in the country has been taken up. In addition to the Anglo-Newfoundland Development Company at Grand Falls and other companies now operating, an American concern is now about to begin operations on the Gander River, and several other sites nearby are being considered for the establishment of similar enterprises. It appears certain, therefore, that within the next two or three years Newfoundland will become world-famed through her great lumbering operations.

Hoo-Hoo Annual at San Francisco

The 19th anniversary of the birth of the Concatenated Order of Hoo-Hoo was celebrated at San Francisco on September 9th, when the annual concatenation was opened in that city. An excellent attendance was present and much enthusiasm was shown in connection with the work of the order.

Among the reports presented that of the Scrivenoter was one of the most interesting, showing, as it did, a balance of $10,083. The total receipts for the year amounted to $39,619. Among other things the Scrivenoter referred to the Imminent Distress Fund, which he said was in a very healthy condition, and he reported that the applications for assistance during the past year had not been numerous. In connection with the Death Emergency Fund the Scrivenoter reported that up to the time of the closing of his books he had received subscriptions to this fund totalling $2,700 and the money was still coming in in great volume.

As the result of diligent effort in the direction of bringing desirable delinquents back into active membership, 185 reinstatements had been effected during the year.

During the year 82 concatenations had been held and a total of 1,455 new members had been initiated, in addition to 11 life members.

Lumber and Its Interests at C. N. E.

Many Exhibits of Importance to Manufacturers—Machinery and Equipment Well Represented—British Columbia and Saskatchewan Timbers Displayed

There was a good representation of the lumbering interests among the exhibitors at the Canadian National Exhibition at Toronto this year, and many machinery and equipment firms were represented in Machinery Hall and the Process Building. A few also were in the Manufacturers' Building. The British Columbia Government had an excellent exhibit of its timber, and there were also interesting examples of timber from Saskatchewan, among the exhibits noted were the following:

J. I. Case Co., of Toronto, Ont. and Racine, Wis., exhibited a number of traction engines for hauling heavy loads. They have a special engine which is particularly suitable for lumbermen's use.

The Superior Manufacturing Co., Toronto, exhibited a complete line of stamps and stencils, as well as their special line of log stamps.

The Tallman Brass & Metal Company, of Hamilton, Ont., had a comprehensive exhibit in machinery hall, of which Mr. G. W. McKnight and Mr. F. Irving, travellers for the company, were in charge. The exhibit included their products in brass, bronze, copper and aluminum castings of every description. The Tallman Company make a specialty of finished brass goods. Their babbitt metal also is extremely well known. Their celebrated Arctic metal is sold from coast to coast. They also exhibited pig tin, pig copper, aluminum, lead, antimony, and other metals in the raw material.

Baines & Peckover, 98 Esplanade, Toronto, exhibited, among other things, the well known Dawson's "Lincona" Balata Belting, which is especially suited for work in damp places. Their exhibit also included the "Atlas" babbitt metal. This company deal in galvanized sheets, angles, flats, shafting, machinery steel, cold nuts, spring steel, wire rope, hoops, corundum wheels, screws, and, in fact an almost endless assortment of metal goods.

Batts Limited, West Toronto, manufacturers of various high-grade wood products, including staved columns, veneered doors, newel posts, cypress greenhouse material, pine doors and frames, sash, flooring, trim, turned newels and balusters, had an extremely attractive exhibit in the Process Building. This included a number of their staved columns, which, for appearance, durability and low price, have come to possess a most creditable reputation among architects, contractors, etc. One of the columns shown was a duplicate of the design provided for the Francis Street Public School at Fort William, Ont. It was 36 inches in diameter at the base and 26 feet long. The order for these columns was received at last year's Canadian National Exhibition and they were delivered before the close of navigation. The facilities which Batts, Limited, possess for the manufacture of colonial house columns are so complete that they can practically make any size or length. One of the noticeable features of the columns shown by this company is their excellent proportions. These have been favorably commented upon time and again by the most critical architects. In the manufacture of doors Batts, Limited, have also made a foremost place for themselves, and the products shown at the Exhibition were of the choicest variety.

Goldie McCulloch Co., of Galt, Ont., had a good exhibit in the Process Building, where Mr. W. K. Trapp and Mr. E. Hetherington were in charge. The exhibit included a number of attractive vaults and vault doors, for which the company have become famous and also several of their excellent boilers, engines, etc.

The Carborundum Co., Ltd., had their exhibit in the Process Building. This included a number of their machines for grinding all classes of knives. Among these were some excellent draw stones, sharpening stones, razor hones, strops, etc. They also showed an interesting line of emery paper and cloths, carborundum paper and cloths and garnet paper and cloths. Mr. C G. Emery and Mr. H. L. Davis were in charge.

Burrows, Stewart & Milne, manufacturers of stoves, ranges, etc., had their exhibit in the Process Building. This company have lately commenced the manufacture of camp stoves. Their most interesting product along this line is the Forest Jewel, which is made both with and without a reservoir holding 25 gallons. This stove has a top measuring 42 by 30 inches, and oven 24 by 28 by 16 inches. It is especially suitable for railway, construction, lumber and mining camps. The company are also producing the "Shanty Jewel" heater which takes wood 42 inches long. The diameter of the top is 26 inches. The fuel door is 13½ inches by 11¼ inches. This is a very powerful heater. The company's exhibit was in charge of Mr. E. Goff and Mr. J. F. Stevenson.

The Percival Plow & Stove Co., Ltd., of Merrickville, Ont., had an excellent exhibit in the Process Building, where Mr. C. J. Bateman was in charge. This company manufacture box stoves of any size for lumber camps.

A. R. Clarke & Co., Ltd., 611 Eastern Ave., Toronto, manufacturers of gloves, mitts, moccasins, leather goods and lumbermen's clothing of various kinds, had an interesting exhibit in the Process Building, where they showed leather in process of preparation for the manufacture of boots. This company claim that they have the largest range of rough furnishings to be found anywhere in Canada. One of their most interesting products is their guaranteed shirt, which they guarantee will turn water. The specialty of their business is that the tanning of leather is done in their own factory and the leather is then worked up into gloves, etc. In marketing their goods they are, therefore, able to figure on one profit only instead of two. They are giving employment to about 350 hands.

The A. R. Williams Machinery Co. had a comprehensive exhibit in Machinery Hall, which included a wide range of machinery for various purposes. One of the most interesting machines in their exhibit was their Universal Woodworker, which can be turned into 16 different machines, including buzz planer, sander, knive, grinder, mortiser, tenoner, sash maker, moulder, band saw, boring machine, grinder and circular saw, both cross cut and rip. This machine is especially designed for the use of boat builders, contractors, carpenters, etc. Mr. A. R. Williams and Mr. W. E. McCready were in charge of the exhibit.

Cowan & Co., Galt, Ont., manufacturers of woodworking machinery, had a good exhibit of their products. This included their moulder No. M. 152 which was shown in operation matching lumber at the rate of 150 feet a minute. They also showed a chain saw mortiser, a sash relisher and mortiser and a number of other interesting machines.

The Canada Metal Co. had an exhibit of babbitt metals in Machinery Hall, where Mr. A. E. Byers and Mr. M. Matthews were in charge. Their exhibit included practically everything in metals. Chief among these, however, were babbitt metal, solder, block tin, copper, brass and aluminum castings, linotype and sterotype metals, etc.

The Canadian Hart Wheel Co., of Hamilton, Ont., had their exhibit in Machinery Hall in charge of Mr. William Kerr. They showed all kinds of grinding machines for planing knives, draw cutters, etc., and a wide assortment of emery wheels, oil stones, razor hones, etc.

D. K. McLaren, Ltd., Montreal, had an attractive exhibit of their belting, both leather and waterproof. They also showed Phillips Bros'. Steel Pulleys and Vanda Packing. Mr. W. E. Warner was in charge.

The Elliot Woodworker, an extremely useful machine for carpenters, builders, etc., was shown by Mr. W. A. Elliot, of Toronto, in Machinery Hall. This machine is suitable for trimming, mitreing, dadoing, dowelling, emery grinding, etc. It is in fact one of the most versatile little machines on the market. It is small and compact and weighs about 80 pounds. It takes about ¾ of a horse power to operate.

The G. Walter Green Co., Ltd., of Peterborough, Ont., had their exhibit in Machinery Hall, where they showed an interesting assortment of saw and lath mill machinery. This included a saw mill in motion, two different kinds of shingle machines, two different styles of lath mills, saw sharpening machinery, etc.

The Dodge Manufacturing Co., Ltd., Toronto, showed a full line of transmission machinery. This included shafting, hangers, pulleys, clutches, etc. They also exhibit their rope drive systems in operation.

Bournival & Co., 85 Richmond St. W., Toronto, exhibited an interesting woodworking machine in Machinery Hall. It is known as the Champion Combination Woodworker and is capable of six different operations, including those of a rip saw, jointing machine, band saw, light boring machine, heavy boring machine and wagon tenoner.

The Canadian Malleable Iron & Wheel Co., of Toronto, had their exhibit in Machinery Hall. This company which have only just been formed, are placing upon the market steel products made from ordinary bar iron in the short period of four hours. They are the owners of a special process recently discovered for performing this work. The steel is especially adapted for manufacturing cutting saws and edge tools of all kinds. Mr. R. I. Henderson was in charge of this interesting exhibit. The cost of manufacturing steel by this new process is estimated by the company at less than three cents a pound, which includes the purchasing price of the bar iron.

The Positive Clutch & Pulley Co., Ltd., 11 Jarvis St., Toronto, showed in the Machinery Hall a combined jaw and friction clutch and pulley. This article combines the features of the ordinary friction and jaw clutches, using the friction clutch to pick up a load and then transfering it from friction to jaw instantaneously, thereby saving

wear and tear on the friction clutch. They also showed an interesting pulley with wood rim and metal centre which permits of a great saving in power consumption. The exhibit was in charge of Messrs. F. Fowler and W. H. White.

Robertson & McGavin, of 32 Church St., Toronto, showed a wide range of belting and other mill supplies in Machinery Hall. They represent the New York Belting & Packing Co. Their exhibit also included various kinds of hose and a general range of mill users and engineers' supplies.

The London Concrete Machinery Co., of London, Ont., had their exhibit in a tent a little east of Machinery Hall. They showed, among other things, a number of block and brick making machines and an interesting assortment of mixers, all of which are of much interest to both manufacturing and retail lumbermen. Mr. H. Pocock was in charge of this exhibit. An interesting part of their exhibit was a single drum hoist operated by gasoline engine or other power. This hoist is of such simple construction that it can be built for a very small sum, only costing one-quarter the amount of the usual hoist, which will do the same amount of work. It can be easily moved about from place to place and has a capacity of about two tons. It is operated by 5 horse power at the rate of 40 feet per minute. It should prove of much interest to lumbermen in connection with their camp operations.

The Ideal Concrete Machinery Co., of London, Ont., showed an interesting variety of machinery for the production of cement blocks, bricks, etc. Mr. C. F. Pulfer was in charge.

Wagstaffe, Ltd., of Hamilton, Ont., had an excellent exhibit of their jams, jellies and sealed fruit in the Manufacturers' Building. This company's products are especially interesting to purchasers of camp supplies. They are most attractively put up. Their jams and jellies are prepared in copper kettles, boiled in silver pans, packed in gold lined tins and every possible attention is given to their preparation so that they may be both tasty and pure.

H. P. Eckardt & Co., Toronto, conducted the exhibit of Heintz, products, including pickles, etc., of 57 varieties. These products are widely used in lumber camps, where they are especial favorites on account both of their flavor and their excellent keeping qualities.

The Dunlop Tire & Rubber Goods Company had their exhibit in the Manufacturers' Building. They showed, among other things, Dunlop belting and a full line of mechanical rubber goods, such as engineers' supplies, fire hose, etc. An attractive feature of their exhibit was a unique rubber man made out of steam packing, hose, belting, crude rubber, etc. The man was 12 feet high and built in proportion, and attracted a great deal of attention. Mr. H. C. Austin was in charge of the exhibit.

The Gutta Percha & Rubber Manufacturing Co., of Toronto, had an excellent exhibit in the Manufacturers' Building, in charge of Mr. W. H. Alderson. The exhibit included mechanical rubber goods and foot wear and their well known multi-ped hose in lengths of about 500 feet. They also showed their well known radium valve discs and an attractive assortment of lumbermen's foot wear of all kinds, as well as belting, fire hose, valve packing, etc.

The Canadian Fairbanks Co., Ltd., had a comprehensive exhibit in the Transportation Building, which included pumps, belting, marine engines, scales, etc. The Fairbanks-Morse marine engines were shown in various sizes from 2½ to 18 h.p.; also stationary engines from 1 h.p. to 12 h.p. and a gasoline tractor of 25 h.p. The company also had an exhibit in a tent adjoining Machinery Hall, where they showed their pumping engines, gasoline engines, etc. One of their most interesting exhibits was a 15 h.p. 3 cylinder heavy duty marine engine for scows, tugs, etc. Mr. E. J. Beatty was in charge of the exhibit.

The Hastings Wagon Co., of Watford, Ont., showed a special line of farming and lumbering wagons.

The Dominion Wrought Iron Wheel Co., of Orillia, showed a wide range of trucks, steel wheels, etc., in the Transportation Building, where Mr. Norman Knox was in charge.

The Jackson Wagon Co., of St. George, Ont., had an interesting exhibit of wagons, trucks, etc., in the Transportation Building.

Shurly & Dietrich, Ltd., of Galt, Ont., manufacturers of the well known Maple Leaf saws, had a most attractive and unique exhibit in the Process Building. Their products, which are of great variety, were shown arranged in attractive designs upon the wall. This firm's exhibit has become one of the regular features of the Canadian National Exhibition, having been on view at every exhibition for a great many years past. It would be difficult to imagine a more effective exhibit, and inasmuch as the products shown are thoroughly Canadian and of the highest quality, they are pointed to with pride by many Canadian visitors.

The Butterworth Foundry Co., Ltd., of Ottawa, had their exhibit in Machinery Hall. One of the most interesting products which they handle is the well known Fleming Grate Bar, which can be installed under any boiler at a comparatively small cost. They claim that this grate bar is the most economically operated device on the market and that it will reduce the fuel bill by from 15 to 30 per cent. The Fleming Grate Bars, they claim, are built upon scientific principles so that a natural draft is produced, causing a continuous passage of air through the bars, over the bridge wall and into the combustion chamber. In plants where shavings are burned the results from the use of this grate bar have been particularly satisfactory.

British Columbia had an excellent exhibit of its forest products, which included blocks of wood of various kinds and sizes. Among them were the following: a 40-inch square block of fir, a cross section of a cedar tree with diameters of 52 inches and 58 inches, a 42-inch square block of cedar, a 44-inch square block of spruce, a cross section of a spruce tree with diameters of 65 inches and 67 inches, a cross section of a fir tree with diameters of 71 and 74 inches, and a 24-inch square block of hemlock.

The lumber industry of Saskatchewan was represented by a number of logs from the Prince Albert district, where five lumber mills are operating. The capacity of one of these mills is 2,250,000 feet per week. A section of a white pine log was shown from this district which was 3 feet 6 inches in diameter.

The Canadian Rubber Company at their booth in the Manufacturers Building showed a full line of their products, which included belting, packing, hose, valves, rubber goods and textile goods of all descriptions. They also had a fine exhibit of crude rubber from different parts of the world and an excellent array of rubber boots and shoes.

Personal News and Notes

A recent visitor at the office of the "Canada Lumberman" was Mr. W. D. Johnston, president of the American Lumber Manufacturing Co., Pittsburg, Pa.

Mr. John Donogh, of the John Donogh Lumber Co., Ltd., Toronto, is taking a vacation in Yarmouth, N.S., where he will remain until about the middle of next week.

A press report recently announced the destruction by fire of the Cummings lumber yards near Maniwaki, Que. We are glad to report that this story was quite unfounded and that the yards were not visited by fire at all.

During the past month ten steamers have cleared from ports on the Miramichi River, N.B., with cargoes of lumber consigned to European points, aggregating 20,000,000 feet. With the addition of two new mills on that river, previously reported, lumber operations there are very brisk.

Mr. W. H. Bromley, who for several years has been manager for the Pembroke Lumber Company, is reported to have decided to sever his connection with that firm and establish a lumber brokerage business in Pembroke. Mr Bromley has long been regarded as an expert in the handling and grading of lumber and his many friends predict a brilliant future for his new enterprise.

A report recently gained considerable circulation to the effect that Hon. Jules Allard, Minister of Lands and Forests for the Province of Quebec, was interested in a company which is seeking permission to construct a dam as Cascapedia, Que., and to erect a lumber mill at that place. Hon. Mr. Allard states that the report is without foundation, as he has no interest whatever in the company.

The Beauce Pulp & Lumber Company, whose mills at Scott's Junction were destroyed by fire May 26, lost no time in rebuilding and had their new mills, which are quite as large as the former ones, completed and in operation by the initial week in August. The company are now sawing night and day to make up for lost time. All their logs were brought down in the early part of the season.

The Mercantile Lumber & Supply Company, wholesale dealers in lumber, have opened a handsome new suite of offices in the Hochelaga Bank Building, 97 St. James street, Montreal, where they will be pleased to receive their patrons. This firm, which was only recently organized, are increasing their business very rapidly. Owing to their facilities for handling large quantities of lumber, they are in position to help the trade materially, being able to buy at advantageous prices. The firm are to be incorporated immediately with $50,000 capital.

S. P. Musson, Son & Co., Barbadoes, report under date of August 27, as follows: W. Pine—The schooner Helen Stewart brought a small lot of 15 m. ft., which has not yet been sold, but as mentioned in our last a cargo has been placed to arrive around $29.50 for merchantable and $22.50 for second quality, and market is in a fair position for further arrivals. Spruce—The only arrival has been the Helen Stewart, which vessel arrived on 21st inst., with 150 m. ft. This, which consisted principally of second quality and inferior, has been placed on the market at $24 for merchantable, $16.50 for second quality, and $14 for inferior. Pitch Pine—No receipts, but we have placed a cargo for October-November shipment. Shingles—No receipts during the fortnight. Shooks—Receipts of 700 bdls. by Canadian and New York steamers for dealers' account. Wood Hoops—A small lot of 415 bdls. have been received also for dealers' account.

Ontario Retailers Form Association

Organize Under the Retail Merchants' Association of Canada—Resolutions Adopted Regulating Conduct of Members—J. B. Reid, Toronto, Elected Chairman

About a year ago the Retail Lumber Dealers of the City of Toronto formed a Retail Lumber Dealers' Section of the The Retail Merchants' Association of Canada, Incorporated, an association which comprises all sections of the retail trade, and which is now regarded as expressing the collective views of the organized retail trade of Canada. Considerable good work has been done through the Lumber Dealers' Section of the Toronto Branch of the Association, of which Mr. G. W. Booth is chairman, and they desired to extend their field of operations and include all the retail lumber dealers of Ontario. For this purpose a convention of retail lumber dealers was called to meet in Toronto on Monday, September 5th, 1910. The result of the call sent out was the meeting together of a large number of enthusiastic lumbermen.

After the delegates had duly registered their names, Mr. G. W. Booth was elected chairman of the meeting, and he presided in a very able and capable manner. In delivering his address of welcome, Mr. Booth pointed out that there was no time in the history of Canada in which it was more opportune that the retail lumber dealers should meet together and determine which of the cross roads they should take than now. Canada was bound to increase in population, and this increase meant, not only keener competition, but a greater popula-

J. B. Reid, Toronto, Chairman.

E. M. Trowern, Toronto, Secretary.

tion to serve, and the question was, "Should we live and let live; or should we endeavor to see how much business we could do and how much service we could render to the public for nothing?" He pointed out that any man who disregarded a fair profit in his business was neither true to himself nor to his creditors, and was doing an injustice to those who were endeavoring to conduct their business upon legitimate and fair lines. To make a profit, should not be regarded as a crime, because the experience of the past had shown that when the profits of the various lines of trade were removed and the business men were doing business without a margin, the result was always depression and hard times; but when everyone received a fair reward for their labor, there was always a steady, continuous expansion. He extended to the delegates a hearty welcome, and hoped that at the next convention not one single retail lumberman in Ontario would be absent from the meeting.

Mr. C. G. MacBeth, manager of the Laidlaw Lumber Company of Toronto, also welcomed the delegates, as follows, saying that he trusted that the meeting would be productive of much good for the important branch of business represented. He hoped that nothing would be said or done at the convention to cause injury or give offence to any, and that all the deliberations would be characterized by a spirit of justice and good common sense.

Mr. F. W. Brennen, of Hamilton, in reply, said he hoped the meeting would develop the best that was in them. He was not one of those who thought that the lumber business contained a monopoly of mean men, because his association with lumbermen had taught him that they were as big and broad as most business men, but a few of the old school yet remained who believe in the principle that they should mind their own business and let every man mind his own business, whereas the new doctrine, and one which he hoped would increase, was, "You mind my business and I will mind your business," and by doing this each man would be minding his own business, and the easiest way to accomplish this was through associated effort. The day had gone by when it was possible for any one man to do all the business. The trade must be distributed in the various local centres as the population developed, and it was the purpose of an association to meet together and by so doing adjust and regulate conditions so that fair and honorable ethics of trade could be formulated and carried out, so as not to take away the individual liberty of any man, but to regulate the trade so that all would have an equal opportunity. He thought conditions of trade should so exist that it would be an enjoyment to be in business, and not a constant cause of fear of losing time and capital. He trusted that the deliberations of the meeting would result in the formation of an excellent organization.

An adjournment was then made for luncheon until 2 o'clock.

Upon resuming the business of the day, the chairman called upon the Dominion Secretary of the Retail Merchants' Association of Canada, Mr. E. M. Trowern, who delivered a short and interesting address on "The Reasons for and the Method of Organization." Mr. Trowern pointed out the great development that had taken place in organization work during the past few years. He said that there was a time not long ago when retail associations were being formed of a host of single line associations. These associations by themselves lacked power and influence whatever with either the Provincial Legislature or the Dominion Government. It was for this reason that The Retail Merchants' Association of Canada was formed, which includes all classes of retail men. The Association is divided into sections of trade, and each section has its own officers and its own laws and regulations, but by and through the unity of all acting under one association, they made that association a mighty power in taking care of all things pertaining to the retail trade. He pointed out that there were over 200,000 retail merchants in Canada, who formed a mighty force in demanding what was right and fair when occasion required. They had secured a Dominion charter by a special Act of Parliament, which placed them in a position to secure and distribute information to their members and take care of their interests in a way that had not been attempted in the past. He laid stress upon the importance of the retail trade, and said that no man need be ashamed to be called a retailer. Retail distribution was as necessary as any of the professions, and every retail merchant was a necessity in the community in which he was located. Retailers paid the largest share of taxation; they employed more clerks; they paid more insurance; they owned more horses, and contributed more to the support of the Government than any other commercial class.

Up to the time when they became organized under one association, they were practically not regarded as worthy of notice. By becoming associated under one banner, the retail lumbermen of Canada could secure all the advantages that the association afforded, and when they required the influence and support of the great body of retailers throughout Canada, it was waiting and at their command, providing what they asked for was right and fair. The one membership fee of $5.00 per annum enabled any merchant to attend any meeting of any section of trade, and in this way keep in touch with retailers in any line of business that he might be engaged in. It also gave him the privilege of having his section represented on the Provincial and Dominion Boards of the Association and a voice in its management

Upon the conclusion of Mr. Trowern's address, it was moved by Mr. W. Foster, of Toronto, seconded by Mr. Geo. Brown, of St. Mary's,

"That we believe that it will be in the best interests of the retail lumber dealers to form a lumber dealers' section of the Retail Merchants' Association of Canada."

This resolution was unanimously carried.

The following resolutions were then placed before the meeting and unanimously carried:

1. That we believe that it is in the best interests of the retail lumber dealers of Ontario to form a Lumber Dealers' Section of "The Retail Merchants' Association of Canada."

2. That to designate what should constitute a retail lumber dealer we define a retail lumber dealer as one who carries a stock and who has an office, sign, and the necessary appliances to carry on a retail lumber business connected therewith and whose name is entered on the assessment roll of the municipality in which he does business.

3. That we consider that the custom of some wholesalers or sawmill owners selling direct to contractors, either at a lower or at the same price, does an injury to the legitimate retail trade.

4. That we consider that selling agents who have no yard or office facilities and who pay no municipal taxes do an injury to the legitimate trade by selling direct to contractors either at reduced prices or at the same price as that sold by legitimate retailers.

5. That we consider that specialists who manufacture and handle one or two lines of material do an injury to the retail trade by selling direct to contractors at the same price that they charge the retail trade.

6. That we consider it advisable and do hereby appoint a Retail Committee to confer with the mill owners, manufacturers and wholesale trade to take up with them a plan whereby through mutual co-operation the entire trade can be placed upon a better plane.

7. That we request the executive to consider some plan whereby the trade generally can be kept posted upon trade conditions and help to guide some who operate in the business without having sufficient knowledge and skill in office management and what it costs to do business, as well as current quotations.

8. That we consider that the existing practice of figuring on contractors' lists and giving a lump sum price on the same is not in the best interests of the retailers, and that we do away with this practice and where a contractor asks for prices quote the price per thousand or per running feet, as the case may be.

9. That it is not, in our opinion, in the best interests of the trade for the retailers to work, dress or size lumber brought in by wholesale dealers or jobbers and builders, and that the retail trade be requested to discontinue this practice.

10. That it would be in the best interests of the trade to make and adopt a price list covering stock mouldings, trim and base, etc.; also to make a rate on machine work per hour or running feet, as the case may be, and that a committee be appointed to complete such a list.

11. That it would be to the best interests of the trade if each member reported to the secretary the names of all sawmill owners or wholesale dealers or jobbers who they know are selling direct to contractors.

12. That we adopt the principle of selling matched lumber by strip measure.

All those present united in membership, and the following officers were elected:—J. B. Reid, Toronto, Chairman; F. W. Brennen, Hamilton, 1st Vice-Chairman; Donald Ferguson, London, 2nd Vice-Chairman; Henry Wise, St. Catharines, Treasurer; W. J. Hetherington, Toronto, Auditor.

Considerable interest was manifested in selecting a place for the next convention. Mr. F. W. Brennen put forth the claims of Hamilton very strongly, but upon a vote of the meeting it proved that Mr. Donald Ferguson had made the strongest appeal to the meeting, and London was the chosen.

At 5 o'clock in the afternoon, the members adjourned to partake of an excellent menu, and a reception was given by the City of Toronto.

Mayor G. R. Geary welcomed the delegates on behalf of the city, and stated that he was pleased indeed to see such a fine looking body of retail lumbermen. He extended to them all the privileges of the city.

Alderman Alfred McGuire, Chairman of the Reception and Legislative Committee of the City Council for the City of Toronto, occupied the chair; and with some excellent speeches and the very hospitable and extensive menu card, the delegates enjoyed themselves until 9 o'clock, when they dispersed, all joining in singing the National Anthem and Auld Lang Syne.

Convention Notes

Mr. T. A. Patterson, Toronto, manager of Mickle, Dyment & Son; Mr. W. J. Hetherington, and Mr. E. Rathbone made an excellent Reception Committee.

Mr. J. B. Reid, upon accepting the reins of office as chairman for the year, made a very happy and genial chairman, and if good fellowship does not exist it will not be for lack of the true association spirit that Mr. Reid possesses.

The business of the meeting under the capable chairmanship of Mr. G. W. Booth was carried out on schedule time, and in a prompt and businesslike way, that might be very profitably followed by larger and more pretentious bodies.

Mr. F. W. Brennen proved himself to be of the best timber and entirely outside of the "cull" class.

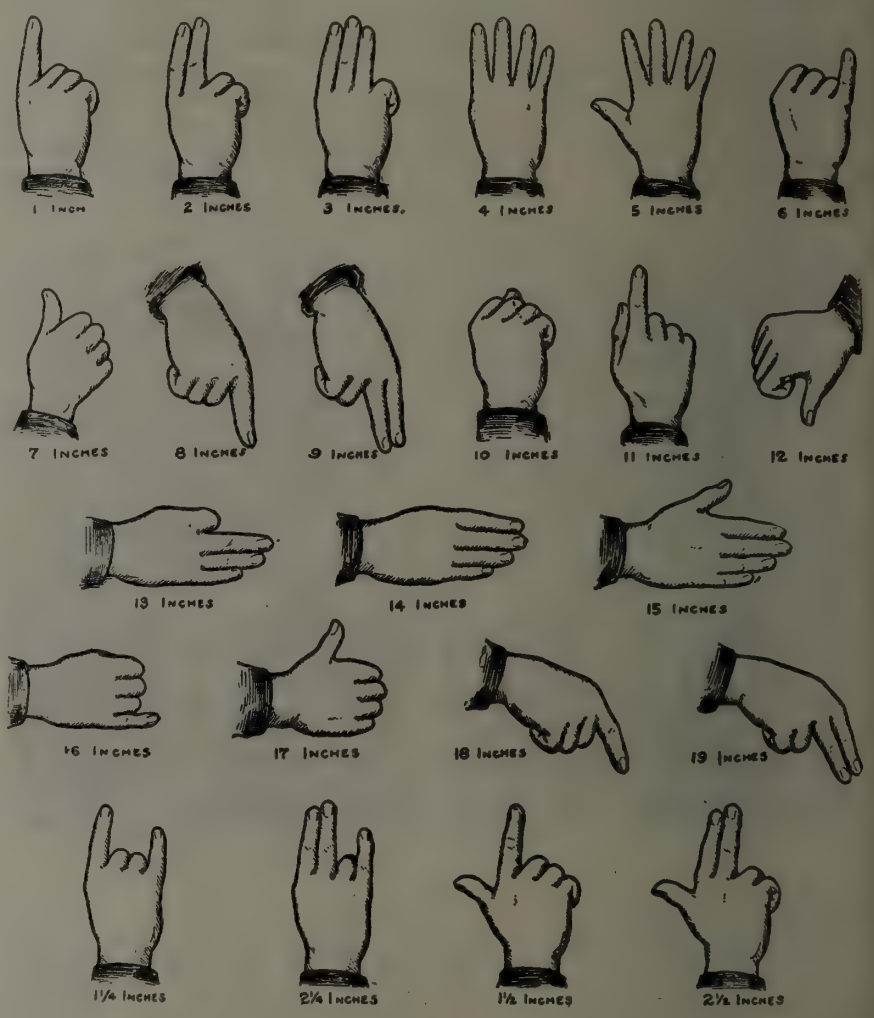
Mr. G. G. Miles, who has already been christened the orator of the convention, took the opportunity of pointing out to the City Architect through the chairman of the Reception Committee of the City Council, that he wanted them to consider Canadian lumbermen when they were placing their tenders for supplies.

The experience of Secretary E. M. Trowern in organizing retail merchants proved of much value to the convention and greatly assisted the chairman in carrying out the programme, which passed off so smoothly.

Alderman Roland, who is one of the members of the Reception Committee of the City Council, is also a member of The Retail Merchants' Association of Canada, and he did not miss the opportunity of putting in a good word for the work that has been done by the Association, and trusted that the newly-formed section would prove to be a great benefit to all its members.

Application forms for membership will be sent out immediately, and every retail lumber dealer is requested to "Come on and Lift."

The McFadden Lumber Co., of Templeton, Que., have purchased the mill formerly owned by the MacLaren Lumber Co. at Templeton. The mill will employ 350 men.



Silent Language of the Saw Mills

Diagrams Illustrating Manner in which Sawyers Give Signals for the Proper Cutting of Logs into Lumber

The accompanying set of illustrations, showing some of the silent signs used in the mills in the United States, which are generally understood by mill men, is reproduced from the West Coast Lumberman. In addition to these signs, there are others used which, on account of being a combination or being given by motion, cannot be well illustrated.

The signs, up to and including twelve, are given simply by raising the hand, as indicated. From 13 to 19, inclusive, they are given by placing the hand in position as indicated, and then drawing the same across the body from left to right.

The illustrations showing the fractions are given as examples of how the signs are combined. In some cases it is not possible to give these signs, where there are combinations, in one movement. For instance, $3\frac{1}{4}$ cannot be given at one time, as the three first fingers represent three, and the little finger a quarter, so, given at the same time, it would be four; it is given, therefore, by first giving the sign of three, then closing

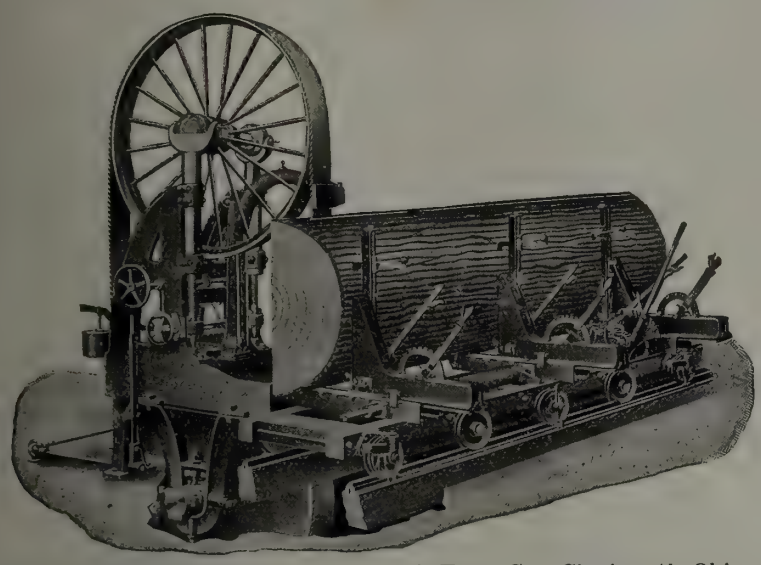
the three fingers and raising the little finger for the quarter. Three-quarters following any unit is given by first giving the sign of three, then following with little finger.

The same thing pertains to a half, the thumb representing the half. For example, $4\frac{1}{2}$ cannot be given with one motion, as a combination of the four fingers and thumb make five; it is given, therefore, by first rasing the four fingers, with thumb closed, then closing the four fingers and raising thumb.

In giving the sign for an eighth, the sign for eight, index finger down, is used. Take $7\frac{3}{8}$ as an example; hand closed with thumb up for 7, followed by three fingers up, then index finger down for $\frac{3}{8}$.

Instructions to turn the log are given by raising open hand with palm out, then dropping same to side.

The order to set log for cutting off slab is by raising closed fist and holding same up until the log has been set at proper place, then dropping fist to side.



In cutting lumber of special thickness, there is an understanding between the sawyer and setter. Each mill has some special signs along these lines, which are local, and which are not of general use.

This language is quite necessary, and is of great value, saving much time and lung power, and, our contemporary adds, it is the only noiseless thing in the mill.

Another New Catalogue

J. A. Fay & Egan Co., the well-known manufacturers of woodworking machinery, have just issued a Band Saw Mill catalogue, composed of fifty-eight pages, which illustrates and describes an outfit of machines adequate for all the requirements of a modern mill—considering quality, output and economical production of lumber.

No. 57 Band Mill (illustrated herewith) is said to be the most successful machine in this output. It will saw boards evenly, thereby causing little waste when being planed to dimensions. Besides economy in the production of lumber, the Fay & Egan mills effect a saving in kerf—running a blade only 1-16 in. thick. The manufacturers guarantee

No. 57 Band Saw Mill. J. A. Fay & Egan Co., Cincinnati, Ohio.

their mills to run a thinner blade at a higher speed than any other manufactured, without any danger of buckling or breaking.

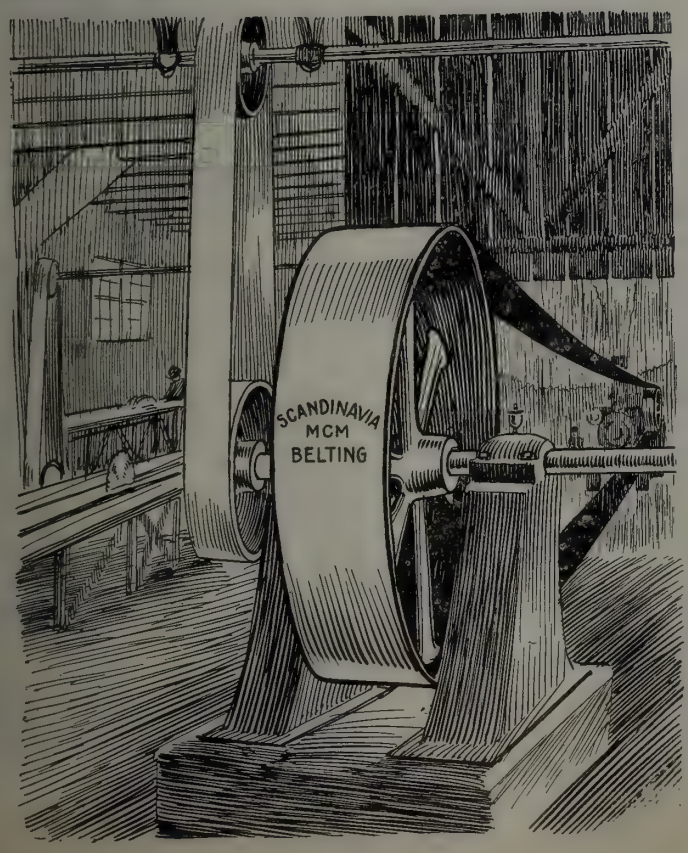
Readers are invited to write to the manufacturers for their new Band Mill Catalogue. Their proper address is 465-485 W. Front St., Cincinnati, Ohio.

The Canada Iron Corporation, Ltd., whose head offices are at Montreal, have issued a most attractive publication relating to their operations and products, and containing also a series of tables relating to the same. The publication is handsomely illustrated and substantially bound in cloth. The reading matter is printed in a pleasant shade of brown which contrasts pleasantly with the illustrations, which appear in black. The Canada Iron Corporation, Ltd., is a consolidation of the Canada Iron & Foundry Co.; the Canadian Furnace Co.; John McDougall Co., and the Annapolis Iron Co. The corporation now own a large number of mines, blast furnaces and machine shops in various parts of the Maritime Provinces, Quebec and Ontario. A copy of this excellent publication would prove of much interest to all who are interested in the development of Canada's mining resources and in the encouragement of Canadian manufacturing.

New Saw Clamps by Disstons

Henry Disston & Sons, of Philadelphia, have just announced that they are beginning the distribution of two new saw clamps made so light and compact that they can be carried in a tool chest with no trouble or inconvenience.

The new No. 5 Handy Saw Clamp is a strong, dependable implement made of grey iron. The arches are reinforced so that they possess all the strength that can possibly be required. An eccentric lever for tightening, promotes quick and positive action. There are three points of pressure on the jaws so that proper contact with the blade is obtained along the entire length, insuring the holding of the saw blade firmly and rigidly in position. The clamp is fastened to bench by screws.



The length over all is 14¾ inches. The filing length of jaw is 13 inches. The weight of the clamp is 3¾ lbs.

Disston's are also making a new No. 6 Saw Clamp which is of the same general design as No. 5, with the addition of screw lugs for fastening to the bench. The lugs fold snugly to the body of the clamp, thus taking up small space in a tool chest.

"To make any enterprise pay to-day, we must stop all waste, and if the lumbermen and paper makers are to continue to make profits they must learn the same lesson. Slab edgings and sawdust, uncooked pulp chips and acid, and a half score of by-products should be utilized. The rossing of the wood for export to keep industries in foreign countries going should be prohibited."—W. B. Snowball, before Maritime Board of Trade.

Scandinavia Belting

for Transmission and Conveying

A Solid Woven Impregnated Textile Belt.

Equally good in **wet** and **dry** places, and will not come apart.

Made in three weights, and in widths up to 60 in.

This belt has given exceptional satisfaction in **lumber mills** and similar places.

We guarantee that this belt on the basis of price will give better service than any belt on the market.

Write for Bulletin "B" and discounts.

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

FOR SALE

SEVENTEEN ACRES OF SECOND GROWTH White and Red Oak. Suitable for piles or ties and small square timber. Close to Railway track; also 100,000 feet of White Pine, 70,000 feet of Hemlock, 30,000 feet of mixed Hardwood inch, 500 telephone poles 25 feet to 35 feet. Apply to E. TODD, Box 16, Caledonia, Ont. 20

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other PulpWoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

WILLIAMSON, Publisher, Toronto.

Tenders for

Pulpwood Concessions

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 7TH DAY OF OCTOBER NEXT for the right to cut the Pulpwood on a certain area tributary to the Nepigon River in the District of Thunder Bay. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may be fixed from time to time for the right to operate a pulp and paper industry on the territory. Successful tenderers will be required to erect a mill or mills on the territory, and to manufacture therein the wood into paper.

Tenderers will be required to deposit with their tender a marked cheque payable to the Treasurer of Ontario for twenty-five per cent. of their tender, to be forfeited in the event of their not entering into agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted. For particulars as to description of territory, capital required t be invested, etc., apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 8th July, 1910.

No unauthorized publication of this notice will be paid for. 19

A Unique Belt Remedy

A writer in the Woodworker says: "In talking with a young man in charge of a small sawmill in the backwoods of Pennsylvania, we got to talking perchance on the best belts. I noticed that his double 8-in. leather belt was considerably the worse for wear, and queerly pitted and marked up on the pulley side. On my commenting on it, he said when they were running they always had a boy handy with a pail of sand, and whenever their saw started to slow down in a heavy cut a little sand on the belts would make it dig out in great shape. Then I saw the reason of those queer pits.

"He said he wouldn't have a smooth belt, because a smooth, soft one would slip too much. It had to be rough enough to take hold of the pulley, or else it would slip. He never used any belt dressing of any kind but sand, and had to buy a good many belts, as they wore out quickly; in fact, he couldn't get a belt for love or money that would last over six months. He had used rubber and fiber belts, but they were no good. He always turned the roughest or flesh side of the belt in, and even then it would slip unless sanded. His engine flywheel and arbor pulley were fearfully and wonderfully scored up, but he seemed to take it all as a matter of course. His belt was laced with whang leather, with a lump lace that went bang! every time it hit the arbor pulley. I did not see them sawing any lumber, but did see a pile that they had sawed. Some of it was pretty fair, but more than half of it had been scooped and washboarded, and there were numberless pieces that varied ¼-in. in thickness.

"Talk about conservation of resources of the country! How many small mills are there that waste lumber in just such poor cutting?"

Horse Power Transmitted by Leather Belts

The relation which exists between the horse-power transmitted and the width and velocity of the belt which transmits it is based on the following rule: The product of the speed of a belt in feet per minute with its width in inches is equal to 500 times the horse-power transmitted.

From this rule we may calculate, first, the horse-power which a belt of given width and velocity can transmit; second, the velocity with which a given belt has to be run to produce a given horse-power, and third, the width necessary for a belt in order to transmit a given horse-power with the speed it is running the pulleys.

First Rule.—Multiply the speed of the belt in feet per minute with its width in inches, and divide by 500 for leather; the result will give the horse-power.

Second Rule. — Multiply the horse-power by 500, and divide by the width of the belt in inches; the result will be the velocity in feet necessary to transmit the power.

Third Rule. — Multiply the horse-power by 500 and divide the product by the velocity of the belt in feet; the quotient will be the width in inches required to transmit the power without slipping.

These rules hold good for moderate-sized belts. Very large belts need not be so wide, but may be 20 per cent. narrower than medium-sized ones, while for very narrow belts the width must be taken larger by 20 to 30 per cent. We may deduce from this a rule easily remembered: it is that for every horse-power it takes one inch width of belt if it runs at the rate of 500 feet per minute, and that the horse-power increases in the ratio of this velocity.

Review of Current Trade Conditions

Ontario.

As usual of late, the lumber markets of Ontario continue quiet. There is, however, a general feeling that any dulness prevailing at present can be entirely attributed to seasonable conditions. During the summer months trade invariably becomes quiet and reaches its climax in September. Those who are in touch with conditions throughout the country believe that a brisk trade will commence in October. Even at present there is a fair amount of trade in progress, and prices are well maintained, with the exception of shingles. British Columbia three X are selling at $2.90 delivered to the retailer. Before the duty on shingles entering the United States was increased, New Brunswick operators found a market for their product in the New England States, but now they cannot get into those markets, and have become a very aggressive factor on the Ontario markets, in competition with British Columbia shingles.

Georgian Bay manufacturers report business conditions as quite encouraging. One large firm reports so many orders that it was seven cars behind on one week's shipment. All good grades of lumber are moving well. The only line that is dragging seriously is box lumber. The Canadian Canners' Association have evidently decided that dealers and manufacturers of box lumber can be frightened out of their stocks, as they are refusing to buy unless prices are lowered to suit their tastes. As the prices offered by the Canners' Association are lower than box lumber can be sold at without a loss, business has come to a standstill temporarily. Another disappointing feature of the trade is the increasing amount of price-cutting on the low-grade stocks. This applies also in some measure to the better grades. There is no excuse for this kind of proceeding. But the practice continues nevertheless. Within the last few weeks sales have been made by some Toronto firms at prices which were much lower than the same buyers paid for the same goods from other dealers immediately afterwards. In view of the general belief in the approach of better markets, there is no reason for sacrificing stocks at all.

In the Ottawa Valley there has developed quite a scarcity of the high grades of pine. The result is that prices have advanced in spite of the quiet condition of the market. Good sidings, shorts and strips are particularly scarce, and the output for the year is not expected to be so great as that of last year. 1 x 7 inch and up pine good sidings are selling at $50 to $52, and 8 inch and up at $55 to $60. 2 x 7 inch and up are bringing $58 to $65. No. 2 cuts 2 x 8 and up have advanced from $1 to $4 and are selling at $35 to $40. The wide stock in these lines is very scarce, and is easily bringing the higher prices. Narrower 2 inch good pine is somewhat easier. The upper grades of pine are expected to go still higher in price as soon as the markets across the line commence to improve. A great deal of dulness of the export market at present is the result of the political and financial disturbances in the United States.

The middle grades are feeling the benefit of the scarcity of the best grades of lumber in the Ottawa Valley. Shipping culls and better are looking extremely promising and stocks in the yards are comparatively small. Prices are steady, and buyers who are looking for bargains find them scarce. 1 x 7 shipping culls are plentiful and are about a dollar lower than a month ago. Ottawa manufacturers contradict the reports which have recently been spread regarding a decline in the price of spruce at United States points. J. R. Booth reports that the prices received for his spruce are equal to those of the last few years. Box lumber and mill culls are slow, but are somewhat better than a month ago. Manufacturers figure that a 20 per cent. advance on present quotations is necessary if box lumber is to pay a profit. In spite of the low price of box lumber, there is no apparent surplus of stock when one considers the stocks of former years.

Eastern Canada.

The reports which have recently been circulated regarding an alleged extensive depression in the Boston and New York markets are considerably exaggerated. Conditions have unquestionably been dull for some time, but the trade in New Brunswick long and short lumber for export to New York and Boston is not by any means as inactive as reports have made it out. The quietest spot in the trade is connected with spruce deals. The demand for this line is dull, but this is a seasonable occurrence at this time of year. Throughout the hot weather the New York and Boston markets for spruce deals are almost invariably quiet, and improvement does not, as a rule, make itself felt until early in October. Shipments from New Brunswick and New York have, as a result, been quite light both in long lumber and lath. The dulness of the American markets has affected prices in New Brunswick, and American deals are now quoted at $15 for 3 x 6 and 3 x 8, and $20 for 3 x 10 and 3 x 12. Lath at St. John are selling at about $2.40 for dutiable stock and on the Miramichi at $2.25. Spruce random for export to Boston are unchanged. The demand at Boston is somewhat better than at New York. F.O.B. prices at St. John are now about $17.50 to $18 for non-dutiable 2 inch random spruce.

Boston reports indicate that the spruce market has strengthened considerably during the last fortnight. Inquiries are coming forward from buyers who previously could not be tempted into the market, and it is reported that several large sales have resulted. Manufacturers also are taking a stronger stand. Frames are selling at $22.50, and some of the mills will only accept contracts for small lots. The demand for random is not improved. For 2 x 4 to 2 x 7, prices vary from $18 to $19, and for 2 x 8 from $20.50 to $21.00. There is a moderate demand for spruce boards, and prices are somewhat improved. The demand for shingles at Boston has improved slightly of late, and buyers are showing a greater tendency to come into the market than they have for several months. Cedar extras have been sold at $3.25, but only the best have brought this price. Some buyers can obtain stocks at $3.10, but the $3.00 price has almost disappeared. Lath are stronger. For 1 5/8 inch the price is from $3.65 to $3.75, and for 1½ inch from $3.40 to $3.50.

Western Canada.

Stocks in the prairie yards are admittedly very light, as a result of the heavy demand which prevailed earlier in the season. It is also true that stocks being carried by the manufacturers are much lighter than they were a year ago. Reports presented at the recent conference of manufacturers and retailers at Banff were to the effect that coast mills had in their yards a little over 100 million feet, as compared with 200 million on January 1 and 175 million a year ago. Mountain mill stocks at present were placed at 165 million feet, as compared with 200 million feet on January 1 and 175 million feet a year ago. Spruce mills also are short of stock, their estimate being 20 million feet at the close of the cutting season, as compared with 75 million feet a year ago. The white pine mills east of Winnipeg place their stocks at 40 per cent. less than they were a year ago. Export trade is brisk, and local demand throughout the West is extremely active, because of the great amount of building in progress at Vancouver, Victoria, New Westminster, Prince Rupert, etc. The shingle market in Western Canada is unsatisfactory, as the demand is not able to take care of the large output. Prices have fallen off considerably, and several of the leading manufacturers are proposing a general shutdown for a month. Cedar and fir logs are firm. The present surplus of No. 1 logs is not as large as many of the mill men would like, and it will probably decrease rapidly.

Great Britain.

English advices indicate that the lumber markets within the last fortnight have been without important change. Prices, as a rule, however, are firm, and the outlook is considered satisfactory. There is much less price-cutting in evidence at present than there has formerly been. One of the most encouraging features of commercial conditions at present is the report recently issued by the Inspector-General in Bankruptcy. It shows that the country was much freer from bad debts last year than had been the case for some time previous, and that the number of failures was the smallest since the year 1890.

The spot market at London is progressing quietly with a fair amount of business, but very small profits. This difficulty, however, is expected to disappear shortly if holders will only maintain a strong position. Deliveries indicate an active movement of stocks and prices are firm all round. There is no indication at present of a heavy autumn shipment. Deliveries for the week ending August 20th amounted to 7,654 standards, as compared with 8,145 during the corresponding week of 1909. At Southampton a steady demand continues and fair quantities have been sent by rail from the docks and yards during the past fortnight.

At Liverpool the feeling of pessimism which has prevailed for some time is still in evidence, and does not seem to have become any less general. All dealers in soft woods report trade as very quiet. This applies particularly to the trade in Canadian pine, for which the high prices asked by importers in order to obtain a working margin of profit, make it very difficult to effect sales. It is noteworthy that consumers of Canadian pine have little or no idea of the conditions at present prevailing in the Ottawa Valley. Those who have been in the business for some time are inclined to retain their old ideas about prices and supplies and those who have only come into the business recently are in the habit of looking out for other woods to replace Canadian pine deals.

The spruce deal market at Liverpool at present is unchanged. No scarcity worth mentioning is reported of any particular dimension, except 2½ x 7 in. There is apparently an actual shortage of this size, which has been scarce in the cargoes arriving during the present season. There is also a scarcity in lengths over 15 feet of both 3 x 9

and 3 x 11 inch deals, for which good prices are being obtained. The demand for these sizes is always good, and they are becoming scarcer year by year. 3 x 12 inch and wider is also in good demand.

Birch planks are firm both for c. i. f. and spot values, especially the latter. The demand has improved materially. There are quite a number of last year's planks in stock, but these are being gradually reduced. Spot values, therefore, are being well maintained. Shipments so far this year have been small. Logs have also been in better demand of late, and stocks are showing signs of shrinking. Prices are well maintained, but the c. i. f. market for pitch pine logs continues dull.

At Manchester, many parcels of red deal have arrived recently which indicate the approaching end of the season. Considerable quantities of spruce, etc., have been sold during the past few days. Pine is rather weak, especially Quebec pine in the lower qualities. Even the best quality is only moving slowly, as a result of stagnation in the textile and other engineering trades.

At Glasgow, trade conditions are still far from satisfactory, but a steady improvement is in progress. There has been a wider inquiry in evidence of late than for some considerable time previous, and buyers are more inclined to take up stock that is reasonably cheap. Business has been of a hand-to-mouth character for so long that stocks in merchants' hands are unusually light. Consignments arriving are meeting with fairly good reception, many of them being sold ex quay. Hardwoods are moving freer, especially oak and white wood. The spruce business is moderate and at fair prices. Pine goods are still hanging fire, especially with the lower grades.

United States.

The trade in northern pine in United States markets has shown no important change during the past fortnight. Prices, however, are being well maintained, and the demand is steady for the good grades. For the lower grades there is only an indifferent inquiry. At Chicago, there is room for improvement in the northern pine market, but there is nevertheless a fair volume of trade in progress at fairly satisfactory prices. There is a general belief that fall trade will soon be actively under way. The hardwood trade at Chicago is steady, though somewhat light. The demand and prices for hemlock continue unchanged in spite of the dulness of the yellow pine market at Chicago. There is the usual dulness in the sale of fir and cedar, though both the demand and the price for spruce are well maintained. Shingles continue steady at Chicago, selling at $2.90 for white cedar. Red cedars are quiet, the mill price being about $2.10 for clears and $1.65 for stars.

The cooperage business at Chicago is reported to be thoroughly demoralized as a result of the poor prospect for anything like a nominal hog crop, and the uncertainty of wheat and corn values, to say nothing of the general commercial and financial depression. Oil heading factories are the only ones doing a good business. At Buffalo some slight activity has been noticed in slack cooperage stock, hoops and staves being a little higher. Jobbers are quoting coiled hoops at $10.25 to $10.75 and staves at $9.50 to $9.75 for No. 1 elm. Heading is selling at 7¼ to 7½ cents.

The trade in white pine at Buffalo is fair. A large order of box was recently sold by one dealer at an encouraging price. The higher grades are selling steadily at good prices, as the demand continues firm. There is a fair demand at Buffalo for Eastern spruce, of which a number of special lines are imported dressed from Canada. In the form of bevelled siding, it is selling well. The demand for Eastern cedar at Buffalo is light, especially for shingles, which, together with the tariff conditions, prevent the sale of Canadian shingles completely. The hardwood trade at Buffalo continues fairly active, but is rather lacking in real life. Oak is doing well in a moderate way. Birch is scarce and stocks of maple, elm and bass wood are rather broken. The trade in hemlock at Buffalo continues good, as a result of the building activity. On account of the competition from yellow pine, however, prices are low.

Sash and Door Men Adopt New List

The Ontario Sash & Door Manufacturers' Association held a meeting at Toronto on September 6th, at which the principal business transacted was the adoption of a new universal price list to supersede the one formerly in use. This list comes into effect on September 20th. It was gone over thoroughly in every detail and the members were unanimous in agreeing both to it and to the great importance of supporting the recently formed association. The list is at present in the hands of the printers and will shortly be ready for distribution. The following were present at the meeting: M. Wooldridge, Palmerston; F. P. Potter, the Georgian Bay Shook Mills Company, Midland; R. A. Rastall, Mickle, Dyment & Sons, Brantford; A. E. Dyment, Meaford; J. Evans, P. W. Gardiner & Sons, Galt; J. Jenness, J. Davidson, Ottawa; A. H. Diver, Esq., Sarnia; J. R. Eaton, Esq., Orillia; W. A. Moore, Esq., Meaford; Mr. Harrison, Owen Sound; W. D. Cargill, Esq., Cargill, Ont.; F. Buchanan, C. Lloyd & Son, Wingham; F. W. Brennen, Hamilton; J. D. Shier, Bracebridge; R. Laidlaw Lumber Company, Toronto.

Market Correspondence

Exaggerated Reports About Eastern Spruce

Chatham, Sept. 8th, 1910.—One of the chief features of the week has been the circulation of reports through the columns of the newspapers in regard to the American lumber markets. The reports in question refer to the Boston and New York markets in particular, and are of a most pessimistic nature. While there is no doubt that conditions are not showing any improvement in the markets mentioned, there is no doubt also that some of the published newspaper reports are exaggerated.

To judge from conditions, in New Brunswick, governing the trade in long and short lumber for export to the markets of New York and Boston, the prospects or even the present state of affairs, are neither as bad nor as unfavorable as they are painted. The most unfavorable conditions, and unquestionably those which have given rise to the pessimistic reports in question, exist in the trade for spruce deals in sizes suitable for the New York market. Certainly the demand for this line is quiet and buyers exhibit an indifference somewhat disheartening to those who have this line of goods to sell. Still, conditions are little, if any, different from what they have been for several months past. During the hot weather and until well toward the 1st of October, there is always a quiet spot in trade in New York and Boston, and this is felt more decidedly in the former centre. This year the New York markets are late in picking up and the influence of this circumstance is keenly felt.

Shipments to the New York market from New Brunswick have been remarkably light during the past month, both in long lumber and lath. There have been some heavy shipments of the latter line to Philadelphia.

The feeling of pessimism which exists in regard to the trade in New York has had considerable effect on local prices of both "American" deals and lath. The St. John value of the former would be, at present writing, from $15 00 for 3 x 6 and 3 x 8, to $20.00 for 3 x 10 and 3 x 12.

The value of laths at St. John is in the vicinity of $2.40 per thousand, dutiable stock, and on the Miramichi $2.25 for the same line.

Conditions in connection with spruce random suitable for the Boston market have shown little change, and this market is more favorable than is the New York market, at least for New Brunswick products, to judge from the feeling in that regard on the part of those most interested. Shipments of this line of goods to the Boston market from Bay of Fundy ports have been frequent, and stocks have consequently not augmented to any extent that could rightfully be described as heavy. Values in spruce random have shown few changes, and an enquirer would be quoted $17.50 to $18.00 for non-dutiable two-inch random spruce f. o. b. St. John.

Good Lumber Scarce at Ottawa

Ottawa, Sept. 10.—The scarcity of good lumber in the Ottawa Valley, when general market conditions are quiet, has given rise to considerable speculation as to future production of high grades of pine. Leading manufacturers are almost unanimous in the view that the supply of good sidings, shorts and strips will be proportionately less than next year. They base their conclusions on the percentage of good timber in the forests. One large local manufacturer asserts that there is already a veritable famine of good lumber. The Ottawa district would not feel the situation so keenly, he asserts, if the western lumbermen were not in a similar plight. Advances, that are very significant in the present dull period, have sent the prices of good lumber up a few notches in the last fortnight. The best quality of two inch white pine sidings, 7 inch and up,, reached $65 per M. No. 2 cuts of similar stock were stronger also, some commanding $40 per M. In both of these lines the wide stock is very scarce, and for it these high rates are paid. Narrower two-inch good pine is a little easier. Good pine siding, 1 inch, 1¼ inch and 1½ inch are from $1 to $2 higher. The prospect is that the existing quotations for the upper grades of pine will go still farther upward when buying becomes brisk across the border. Ottawa exporters trace much of the quietness in placing orders to the political and financial uncertainty in the United States.

The extreme shortage of the highest quality of lumber has stimulated the demand for middle grades. The market for shipping culls and better, while not active, seldom had a more promising outlook. The stock in the yards is comparatively small when surpluses of other dull years are reckoned with. The production in 1910 will be considerably lower than last year, and only in odd lines is there any marked accumulation of lumber. Consequently prices are steady. Manufacturers and middlemen offer no inducements to buyers looking for

good bargains, and it is stated on authority that a cut of a dollar or two a thousand in all grades, selling between $20 and $30 per M., would clear out the yards in a short time. The most plentiful line of shipping culls at present is 1 inch x 7 inch, and they are a dollar per M. lower than last month, but even that line is likely to improve rapidly.

Reports have been circulated concerning a decline in spruce prices on the outside market. J. R. Booth regards these as wholly unfounded, and reports the prices received for his own product as up to the average of the last few years.

Box lumber and mill culls are admitted to be still slow sellers in all quarters, but they are moving more freely than last month. Three months' trading as brisk as used to be common between Ottawa and United States markets would reduce the stocks of low-grade lumber to ordinary quantities. When box lumber was a couple of dollars cheaper per M. a few years ago, the purchases of one single American firm have amounted to 30 million feet in a season. The price rose to such an extent that this trade subsided, but there is promise of its being restored. Box lumber is now cheaper than ever before in comparison with the value of all better grades.

Another circumstance that insures the betterment of conditions as to the box lumber situation is that manufacturers figure that it is impossible to pay the stumpage charges, meet the increased cost of lumber camps, and sawing in the mills and continue to produce box lumber at any less than a 20 per cent. advance on present quotations This estimate of the situation encourages middlemen to hold out for current prices and has a strengthening effect on the trade.

" It is a mistake," said a local manufacturer, " for people to figure on the apparent surplus of box lumber. It is very small compared with what I have seen in the Ottawa district. The United States buyers are being supplied from hand to mouth, and it may be no time until there is a big raid on the store of low-grade pine laid away around here. Apart from this altogether, if the consumption of lumber among Canadians, themselves, keeps on increasing as it has done for the last few years, it will not be three years until box lumber will be as scarce as the good lumber."

Heavy rainfall in the Ottawa Valley improved the power conditions at the Chaudiere, and September promises to be a better month for the manufacture of pulp and lumber than August. The lumber boats are moving freely on the Ottawa River. Some of the small mills which ran out of logs when their drives became stranded on narrow streams are using their own logs again.

The W. H. Kelly Lumber Company of Buckingham, Quebec, are shipping their seventh and last raft of the season from Rockland to Montreal. It consists of 152,000 cubic feet.

Cooperage Trade Fairly Busy

Mr. J. Innes, of the Sutherland, Innes Company, Chatham, Ont., reports as follows upon the cooperage situation under date of September 6:—

The demand for cooperage stock is not as heavy in some lines as is usual at this season of the year. This particularly applies to the apple barrel stock. The apple trade in Canada this year is very light, and not half the usual quantity of apple barrel stock will be required. Trades that use the same grade of stock, however, are a little better than usual, consequently there will not be a great deal of apple barrel stock carried over into another season.

The flour trade is now opening up. New wheat is coming in, and mills are beginning to run full and using an increased number of barrels.

The general trade throughout the country continues good, while there is no boom on, it is steady, and cooperage stock is being used freely; in fact, some new outlets are being found, especially with the lower grades of stock.

The export demand has been very good, and while there is not the quantity of stock exported from Canada that there was five or six years ago, at the same time the export trade is still considerable. The cheap timber in the south, and cheap negro labor, have taken a lot of the export trade formerly held in Canada.

Owing to a most peculiar ruling on the part of the customs department, unjointed staves are admitted from the United States into Canada, free of duty, whereas, there is a 10 per cent. duty on staves going from Canada into the United States, whether the staves are jointed or unjointed. The cheap timber and negro labor in the South more than offsets the heavy freight into Canada on the higher grade of staves, and while the staves do not compare with our Canadian staves, or make nearly as good a barrel, quite a number of the millers who want a cheap package are importing these staves to the detriment of the cooperage industry in Canada. It is a mystery to the manufacturers of cooperage stock how such a ruling could be made by the customs department, and, to say the least of it, it does not look as if the cooperage industry was getting a fair show.

With the exception of the trade for apple barrel stock, the prospects for a good fall and winter trade are excellent, and while the adverse rule of the customs department has hurt the Canadian trade to a great extent, it has had the effect of putting quite a number of mills out of business, and, consequently, the production of stock has been decreased to such an extent that it has had some effect on the market.

There is practically no change in prices of the higher grades of material for the last twelve months. The lower grades have been affected by the apple crop failure, and No. 2 stock is from 10 per cent. to 15 per cent. lower than at the corresponding time of last year.

With proper support from the Government, the market would not be affected so much by fluctuations in demand, as a great deal of this low-grade stock can be sent to the United States even with 10 per cent. duty, and if the customs department would only treat the importation of staves in a sensible manner, the higher grade of staves would also be selling at more remunerative prices than they are at present, and enable some of the mills which are now closed down to resume operations.

Ontario Travellers Securing Fair Business

"Generally speaking, we find business and collections good," said a member of a well known firm of wholesalers in Toronto to a representative of the "Canada Lumberman" who called upon him recently. "The yards throughout the province are pretty well stocked with lumber and a few dealers are inclined to think that they had better wait awhile before buying, saying that they do not think it wise to buy on what they consider a falling market. From the wholesalers' point of view, however, there is a fairly good trade in progress. There is a certain amount of price cutting in evidence, but it is uncalled for. The other day I offered some stock to a retailer and he said to me, 'Why, I am buying that stock from so-and-so.' I asked him how much he was giving and finally I sold him exactly the same lumber manufactured by the same mill for $1.50 a thousand more. The price cutting, of course, is going on in connection only with the low grade lumber. Hemlock at present is the most unsatisfactory part of the whole business There seems to be a wide range of prices, as some manufacturers are holding for high prices and others are sacrificing their stock. There is, however, a dearth of 16-foot lengths and you can get your own prices for them. Ordinary lengths are selling at $14.50 and you can get $16 to $16.50 for 16-foot lengths. Red cedar shingles are in bad shape. They are frequently selling now at $2.85.

"I notice that the maritime province trade is reported as suffering from a bad slump. Reports state that the demand is slow with prices from $17 to 23 for spruce lumber which formerly sold at $27 to $30. If they ever got such prices as these they must have been abnormally high. Even at the lower figures they should not complain, and it looks to me as though trade had simply settled down to a more reasonable basis.

"The lath situation at present is firm. There is no appreciable decline in the prices and everybody is getting good or fair returns for their stocks. This is the busy season for lath, as the houses which are being built have reached the lathing stage.

"Trade in general is just now at an intermediate stage, which may account for whatever dulness may prevail. Old contracts are finished and business has not yet been commenced on the new contracts.

"I have been travelling through the Niagara peninsula recently and everybody there expects a large fall trade, much larger in fact than a year ago. This applies to the whole peninsula with the single exception of Niagara Falls, where trade is extremely dull on account of the fact that until quite recently the retailers were getting too high prices for their stocks and customers were forced to go elsewhere.

"Stocks of lumber on the Georgian Bay are largely sold out and the prices secured have been very good. There is quite a scarcity of cars for loading lumber at the mills and many of them are getting behind in their shipments.

"The hemlock situation is rather a mixed one, although prices are badly cut up and some dealers have practically disposed of all their stock at good prices. One of the largest dealers in hemlock tells us not to sell any more, as they are sold out. The explanation of this is that they had good stock and could get good prices. The stock that is making trouble is low grade stuff, and it finds very little demand. Moreover it has to meet the competition of mill culls."

Loveland & Stone, Cutler, Ont., have purchased berth No. 2 in the Township of Hutton and berth No. 4 in the Township of Parkin, from Allan McPherson, of Longford, Ont. The berths cover about 18 square miles and are estimated to contain about 30,000,000 feet of pine of good quality. The purchase price was in the neighborhood of $120,000. The timber from these berths will be manufactured at Loveland & Stone's mill at Sellwood on the C. N. R.

Dr. Carl Petraschek, a forest expert, of Austria, is at Washington conferring with officials of the forest service preliminary to a trip which he will make through the forests of Canada and the United States for the purpose of studying woodland conditions and the manner in which they are met. Dr. Petraschek for 22 years was chief forester of Bosnia, Theresegovine, Austria.

For the Camp

When purchasing your supplies of provisions remember that we make a specialty of this business and just at the present time can offer some lines at exceptionally interesting prices. If needing any dried fruits let us hear from you.

Valencia Raisins
Evaporated Peaches
Currants
Figs
Prunes
Evaporated Apples

We have some choice Grocery Barbados Sugar that costs much less than the regular yellow.

Board of Trade Building, MONTREAL

HUTHER BROS. PATENT GROOVER OR DADO HEAD
For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense.
HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

EDGINGS

Ontario

The rumor that Mr. G. Ingle, of Lindsay, Ont., intended to sell his planing mill is reported to be incorrect.

The McDonald-Rowland Lumber Company, of Owen Sound, have recently purchased the sawmill and equipment in the town of Gore Bay, Manitoulin Island, formerly owned by Mr. Brett. They operate extensively on the island, taking off several million feet annually, the greater percentage of the cut being hardwoods. The lumber is brought in cargoes to their sorting and shipping yard at Owen Sound, where a staff of sorters and shippers are continually kept busy.

Incidental to the devastation of timber this summer by what are conceded to be the most extensive and destructive forest fires that ever visited north-western Ontario, the lumberjack, after an almost total absence of two years, is to have another innings, the biggest, in fact, that the section has ever known. Men in touch with the situation declare that the cut between the eastern boundary of Manitoba and the north shore of Lake Superior during the coming season will be by far the largest in the history of the district. There is an increased demand for railroad ties, and the price will be as good as or better than ever before. Throughout the tens of thousands of acres in the burned area, the ties must be taken out this winter if the raw product is not to be rendered worthless by the elements and worms. It is expected that the increased demand for ties will more than offset the increased cut, and that the price and the cut will eclipse all former records. The centre of activity in the woods will be between Mine Centre and Atikokan, on the Canadian Northern.

Eastern Provinces

T. D. Chenard's sawmills at Berthier, Que., were destroyed by fire on Aug. 31.

Fire broke out in the planing mills of H. Mathieu & Co., 14 St. Charles Borromee Street, Montreal, recently. The loss was not heavy.

The W. H. Kelly Lumber Co., of Buckingham, Que., are shipping their seventh raft of the season, which consists of 152,000 cubic feet, from Rockland to Montreal. The company are closing up a very successful season.

Lord Northcliffe, the London publisher, accompanied by a party of friends, visited Quebec recently, en route for a visit to his properties in Newfoundland. The object of his visit is to inspect the plant of the Newfoundland Development Company, which is supplying the paper and pulp for the Harmsworth publications from the Newfoundland forests.

The Cushing sawmill property at St. John, N.B., has been purchased by the Edward Partington Pulp & Paper Co. H. W. Schofield is secretary-treasurer of the purchasing concern. The mill will be used in connection with their pulp manufacturing business. Rumor says that the Alex. Gibson concern at Marysville, N.B., may also be merged with the Partington interests.

Log contractors at Three Rivers, Que., are now looking for contracts for the coming winter's operations. There will probably be a larger output this winter than last, owing to the establishing of a couple of new lumber firms on the upper St. Maurice. The sawmills are running full time and will have all they can do to cut up all their logs, sawing having commenced late this season.

The sale of the big lumber property of I. C. Prescott, at Albert, to an American concern, which has been under consideration for some months, has been finally completed. The purchase price is said to be about $75,000, and includes the timber areas, mill and residence, the latter being one of the finest in the county. The property has been in the possession of the Prescott firm for about eighteen years.

The results of the examinations for admission to the study of the course at the Quebec Forestry School, which commenced on the 16th and 17th of August last, have been announced, the following candidates being successful: Messrs. G. A. Tessier, Three Rivers; Emilius Garon, St. Denis de Kamouraska; James Dunn, Pointe aux Trembles; Laureat Garneau, Quebec; D. Brule, St. Barthelemy; Aug. Picard, Quebec; Henri Pinaud, Beauceville; Alex. Turgeon, Bellechasse; Arth. Belanger, Cap St. Ignace. The first six are winners of the prizes offered by the government. The examiners were: Messrs. Bedard, Mercier, and Piche, respectively director, sub-director and professor of the new school.

Western Canada

J. G. Robson, lumber dealer, New Westminster, B.C., is stated to have assigned to S. S. Malcolmson.

It is expected that the report of the B. C. Forestry Commissioner will be ready for delivery to the government within the next month or two.

The Victoria Lumber & Manufacturing Company, which operate one of the biggest sawmills in British Columbia at Chemainus, Vancouver Island, is reported to be preparing to open fifty retail lumber yards in western Canada, with head-quarters at Regina, in charge of W. E. Moore.

Hon. Mr. Bowser, in his capacity as minister of finance, met the repre-sentative lumbermen of British Columbia, and more especially those of Vancouver Island, on Sept. 6, to discuss the question of assessments, in respect of which considerable dissatisfaction has been expressed by the representative men of the trade.

Fires along the C. P. R. right of way, between Trail and Castlegar, are still causing considerable trouble. The majority of these fires have been started by sparks from the locomotives. Endeavors have been made by property owners along the line to have the company patrol its right of way, but nothing has been done.

A proposal is under discussion by business men of East Kootenay, B.C., for the establishment of a paper mill at Wardner. There are abundant sources of pulpwood in the district and ample power is available. The pulpwood would be drawn from the Bull River, St. Mary's River, Sheep Creek and White River. The power would be furnished by the Bull River Electric Power Company.

The four and a half million feet of logs stranded in Poplar Creek, up the Saskatchewan river, have been floated by the rising waters following the recent rains, and drives of timber are on the way down the river to J. Walter's mills.

The arrival of these logs at the mills will insure several weeks more of steady employment for the workmen, and will prevent the lumber shortage that threatened to become serious. Walter's sawmills had been shut down for a few days owing to the scarcity of logs.

In British Columbia, in the month of July, 401 forest fires occurred. All but a score of these were discovered in time and quickly extinguished, but from the small remainder serious loss of life and property resulted. The loss to standing timber is estimated at $40,000; to buildings, farm stock, bridges, etc., $317,000. The government had nearly 4,000 men at work, and spent $40,000 in suppressing the fires. Seven lives were lost. One hundred and forty of these fires were caused by locomotive sparks, and 13 by donkey engines; campers caused 66, settlers 29, lightning 36, and of 117 the cause was unknown.

"The prospects for a good demand for lumber from the prairies this fall have been greatly improved by the latest crop reports," says Mr. W. A. Anstie, secretary of the Mountain Lumber Manufacturers' Association. "The latest information on this question indicates that the total wheat production will be approximately 101,000,000 bushels, as against 120,000,000 bushels last year. Of course the area of land under cultivation this year is greater than in 1909, but I think that on the whole the demand for lumber this fall will be comparatively good. The output and sales for the first six months of this year were the greatest in the history of our organization, and I anticipate that the year's result will be highly satisfactory."

A Victoria, B.C., despatch states that the Canadian Pacific Lumber Company, which has recently been capitalized at $5,000,000, includes the present Canadian Pacific Lumber Company, of Port Moody; the Barkley Sound Cedar Company, of Port Alberni; the Anglo-American Lumber Company, Vancouver, and the Gibbons Lumber Mills, Arrow Lakes. The timber holdings which have been merged approximate 135 square miles of valuable limits, and the total capacity of the four mills at present is about 300,000 feet for a working day of ten hours. The company intend to erect a large mill at New Alberni, on land which it now owns, upon the completion of the E. and N. Railway extension from Nanaimo, which will give it access to Victoria. It is expected that a large trade with the Orient will be built up from this mill, and the intention is to make it one of the finest on the island. The company's officers and directors are: President, M. Carlin, Victoria; first vice-president, Robert W. Gibson, Victoria; second vice-president, J. D. McArthur, Winnipeg; manager, Thomas Meredith, New Westminster; directors, Messrs. C. G. Major, New Westminster; Geo. E. Carbould, New Westminster; W. W. Fraser, Winnipeg; D. C. Irwin, Vancouver; Rand Gibbons, Revelstoke. J. F. Halle will have charge of the present mill at Alberni. When the proposed new mill is erected the mill now operating will be devoted entirely to the production of shingles, and the management of the two plants will be in Mr. Halle's hands. The Vancouver mill will be managed by Mr. McAfee, and the Arrow Lakes mills by Rand Gibbons.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1124. **Maple flooring blocks.**—A London firm would be pleased to hear from Canadian manufacturers who can supply large quantities of maple flooring blocks to specification, and also of rock maple strips.

1146. **Agents.**—A Sheffield company manufacturing large cross-cut, circular and frame saws, also steel edge tools, would like to get into communication with first-class firms in the leading Canadian cities prepared to act either as agents or as importers upon their own account.

1150. **Lumber, white oak, poplar, &c.**—A prominent importer and dealer in Gande, Belgium, desires quotations from Canadian exporters of the above and other lumber.

1154. **Mill supplies, &c.**—A Newfoundland firm is open to purchase mill supplies, such as wood-working machinery, saws, &c.

1159. **Patent rights.**—An English firm wishes to dispose of the Canadian patent rights in a system of manufacturing folding boxes, cases, crates, &c.

1172. **Lumber.**—A London engineer in touch with large works and contractors is desirous of representing a first-class firm of Canadian lumber exporters.

1196. Spruce deals.—A Manchester firm wishes to correspond with Canadian exporters of spruce deals, all sizes.

1198. Pine deals.—A Manchester firm asks for dimensions and prices of pine deals from Canadian exporters of same.

1199. Spruce deals.—A Manchester firm wishes to correspond with Canadian exporters of spruce deals.

1203. Hard maple strips for flooring.—A Manchester firm wishes to correspond with Canadian exporters of hard maple strips for flooring, dimensions 1¼ inch and 1½ inch thick by 3 inches wide, 18 inches and up long, in multiples of 9, c.i.f., London and Hull.

1210. Spruce deals.—A Manchester firm asks for dimensions and prices of spruce deals from Canadian exporters.

1226. Broom handles, chair dowels, and reeds.—One of the best known firms of wholesale dealers in wooden goods in London, England, is open to purchase in large quantities the above goods. Bank references.

1227. Maple flooring blocks, maple skewers, maple and birch dowels.—A prominent firm of wholesale importers and forwarding agents in London, England, are in the market for the above products in quantity.

1231. White wood pulp.—An importing house in Buenos Aires want to get quotations on white wood polp, c.i.f. Buenos Aires, if possible.

1277. Woodworking machinery—A firm of wholesale hardware and machinery merchants in Sydney, Australia, are anxious to get catalogues and price lists of all kinds of woodworking machinery. Good orders in sight.

1279. Machinery, pulp and paper mill—A firm of wholesale machinery dealers in Sydney, Australia, desire quotations on the above machinery, f.o.b. Montreal or Boston.

1281. Skewers, maple dimension stock, hardwoods—A firm of wholesale timber merchants in London, Eng., desires to get in touch with Canadian exporters of the above lumber.

1316. Pine sidings—A Manchester firm asks for prices and dimensions of pine sidings from Canadian exporters.

1317. Spruce scantlings—A Manchester firm asks for prices of spruce scantlings in all dimensions from Canadian exporters.

1319. Broom handles—A Manchester firm wishes to obtain prices of broom handles, all qualities, from Canadian manufacturers.

1326. Pine deals—A Manchester firm wishes to obtain prices of pine deals, all sizes, from Canadian exporters.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

If You Aim to have a Full Line—of Lumber

the same is not complete without our

Spruce, White Pine, N.B. Shingles, Lath

THE SPRUCE, you know—the same old reliable stock, small, tight-knotted, smoothly dressed, the article that helped you build up your trade.

THE PINE, you should know if you do not—a beautifully tight-knotted board, good grades, and a smooth job of dressing, if you wish it dressed.

THE SHINGLES—smoothest sawing, best grades, the shingles that made Fenderson famous.

THE LATH—made from slabs, a nice uniform article, in 1¼ in. and 1½ in. widths.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

For Sale to Close an Account
Crown Granted Timber Limits and Lands

in the

Province of British Columbia, Canada

The undersigned has received instructions from the owners who desire to close the account, to sell by private treaty

Forty Timber Limits and Lands

situate in the Salmon River Valley, West Kootenay, British Columbia, from thirty to forty-five miles north of the United States border, and upon, or contiguous to the Nelson and Fort Sheppard Railway which runs between Spokane, Washington, and Nelson, British Columbia, connecting with the Great Northern and Canadian Pacific Railways, and affording access to the United States and Canadian markets.

The limits contain in the aggregate thirty-eight thousand acres, and are comprised of bottom lands and benches of hills, constituting one of the best bodies of timber in the Central Southern part of British Columbia. Subdivision of the tract has hitherto been consistently refused. Individual limits contain from two hundred and fifty to twenty-one hundred acres, with from three million to forty-five million feet of Cedar, Pine, Hemlock and other woods of excellent quality upon them, in addition to large quantities of Cedar Poles—prices run from $5,000 up according to Stumpage and Location.

Some of the limits are essentially Cedar Pole Propositions, and contain large quantities of the very best quality of Cedar Poles from twenty-five to seventy-five feet in length, free of limbs

The properties are Crown Granted, and the timber upon them may be exported. The Timber is subject to a Royalty of fifty cents per thousand feet, when cut.

A considerable quantity of the land is available for fruit land when cleared, and the owners are prepared to give a deed of land and timber, or a license to cut timber only for a term of years, at the option of the Purchaser.

TERMS OF SALE:

In order to close the account, very easy terms of purchase will be given, namely, twenty-five per cent. cash, and the balance in four equal annual instalments, and twenty per cent. cash with balance in six equal annual instalments—interest at six per cent.—with operating privileges which will assist purchasers to pay for limits out of stumpage.

The character of the properties together with the easy terms of payment present a unique opportunity to persons of moderate means to acquire valuable limits for either operation or investment.

Prices and further information may be had upon application.

YMIR, B. C.

Canada Machinery Corporation Limited

Head Office : - GALT, ONT.

Manufacturers of

High Grade Wood and Iron Working Machinery

WE are pleased to announce to the public that we have purchased the Plants and Good Will of the MacGregor Gourlay Co., Limited, John Ballantine & Co., Limited, Preston, Hespeler Machinery Co., Limited, Hespeler, the wood tool departments of The Goldie & McCulloch Co., Limited, Galt, and Sussex Mfg. Co., Limited, Sussex, N. B., and are now in position to supply to our many customers the most complete line of Wood and Iron Tools ever offered by one company. A careful selection of machines formerly offered by above companies is now being made and prospective buyers may rest assured that each and every article offered is the best that is produced. Such additions as are called for to meet the requirements of our customers in their various lines will be made as rapidly as possible. We solicit the enquiries of all intending purchasers for any machinery used in the manufacture of wood and iron.

Address all Inquiries, Sales Department

Penetanguishene, Ont.

REDUCE YOUR FACING COST 75%

You can do it by installing a **FALLS UNDERCUT PLANER.**

It is of inestimable value on all classes of manufactured goods that require straight surfaces and wherever the hand planer is used for facing. Stock of any width, from the narrowest to the full width of the machine, may be run. Narrow strips can be straightened as well as on the best hand planer, which proves that the roller control is perfect. In fact, on it every class of facing can be done as well or better than on the best hand planer, **at three or four times the rate of hand work.** We absolutely guarantee this result.

Besides, it is absolutely safe. Accidents are impossible on it, no matter how careless the operator may be.

Announcement

The Lumber Vulcanizing Corporation of Canada, Limited, invites lumbermen and other manufacturers to arrange with them for a demonstration of

"The Howard Process"

for

Drying and Preserving Wood

at their Plant in Toronto

The success of this particular process is of peculiar and imperative interest to Railroad, Telegraph, Telephone and other Constructing Companies, to Lumber, Furniture, Piano, Carriage and Wagon, Sash and Door and Interior Finish Manufacturers, to Implement Makers, to Car Builders, to Ship Builders, and to kindred industries. A plant can be economically installed in connection with a saw mill or woodworking establishment.

SIMCOE - - - ONTARIO

A Double Circular Saw

(Rip and Cross-cut)

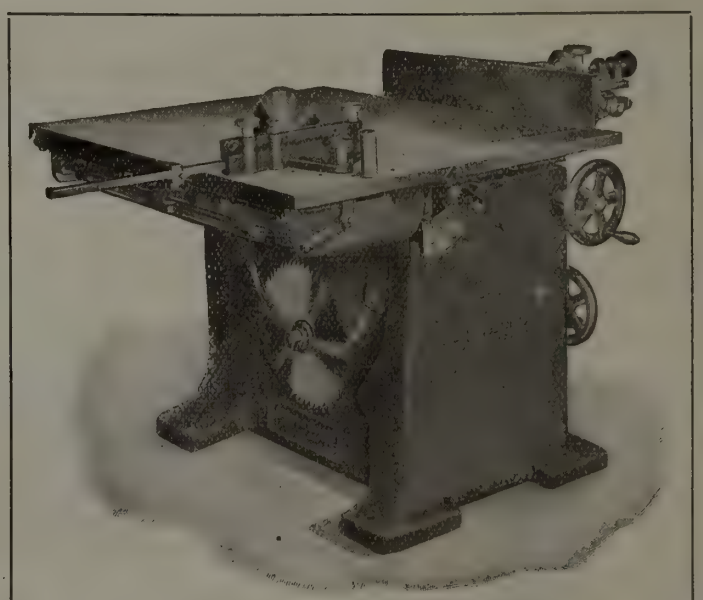
is a handy thing in a furniture factory—because of the time it will save and the convenience in changing from one operation to the other.

Our No. 205 Double Circular Saw

is made for quick and accurate work with especial emphasis on the word ACCURATE.

It is constructed like an iron-working tool, every detail is carefully worked up to give ACCURACY.

In changing from rip to cross-cut sawing, or vice versa, all that is necessary is to turn the hand-wheel at the front when one saw goes below the table and the other comes up.



Note that the saws are always ***out in front,*** easy to change when wanted a different gauge or style of teeth.

Then to tilt the table or to adjust the fences the operator need not move out of his tracks.

Fine adjustments of the fence can be made on this machine owing to the micrometer device on it.

Our Circular Sheet No. 10-R Tells all About the Construction of Our No. 205. Let Us Send You a Copy of it

DON'T BUY A DOUBLE SAW UNTIL YOU COMPARE OURS, FOR YOU WANT THE BEST

No. 205 Universal Double Circular Saw

Making and Packing Shingles

"Boss" Shingle Machine

Shingle Machine

It is perfectly automatic in its action. A patent brake relieves the machine of all jar when the carriage is stopped to change blocks. It is altogether the simplest in construction of any machine built, and combines so many advantages that it is far superior to any machine on the market. Write for literature.

Shingle Packing Box

Packing Box

This box is suitable for 16 or 18-inch Shingles and is universally used by shingle manufacturers. The above cut describes it. Simple, handy and the greatest time saver ever brought out as a packing box. Send for literature describing this and our other saw mill machinery.

Two Machines You Cannot Afford to be Without

MOWRY & SONS Gravenhurst Ontario

A MODEL EDGER

This Cut Represents Our No. 3 Edger.

This machine is built for those requiring a very neat, compact and substantial edger.
The arbor runs in 3 long bearings, the main pulley being between two of them.
There are 3 saws 16 inches diameter, one stationary and two movable.
Made in two sizes, 36 inches and 42 inches.

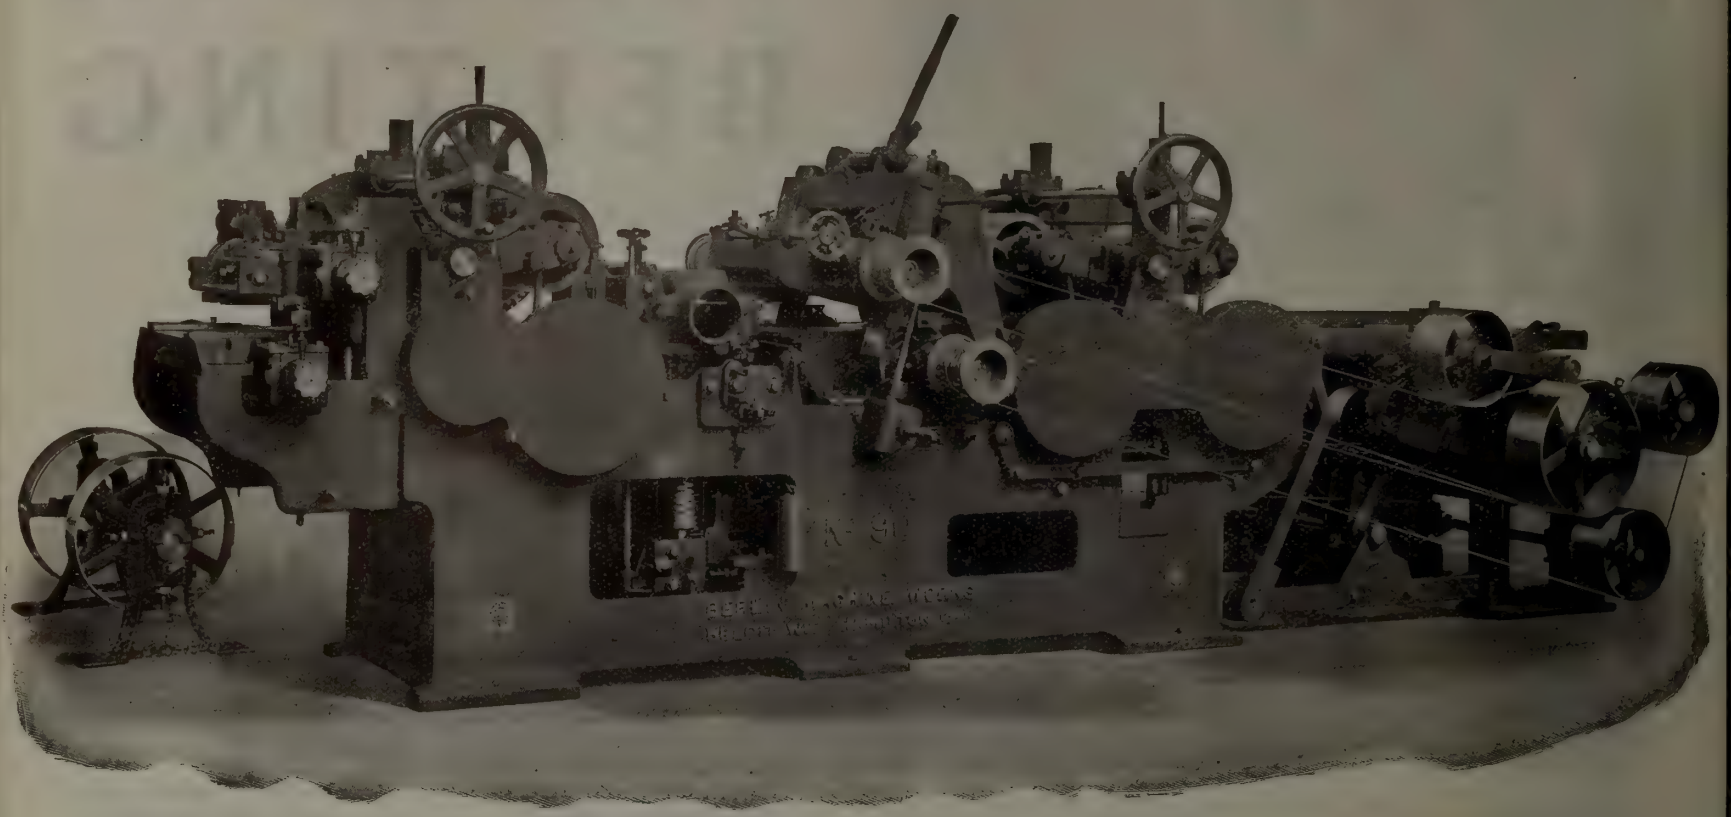
RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.

The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All



skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

INVESTIGATE THE NEW METHOD

No. 90 Planer, Matcher and Profiler

You can make the highest quality of flooring on the new No. 90 Planer and Matcher at 200 feet per minute. We will prove that you can do this. Our guarantee of proof is conservative because flooring has been run on the No. 90 at more than twice this feed in our own factories. The machine is built strongly enough and is powerful enough to stand up to a feed of 500 feet per minute—so when we say that you can run "A1" flooring at 200 feet per minute, you see that our statement is really conservative.

All your outline work (drop siding, beaded partition, lap rustic, V ceiling, casing, etc.) can be run on the No. 90 at 150 feet per minute! Think of it! And even at this very fast feed you will get better work than you can get from any moulder or four head matcher at 50 feet per minute.

In other words, you can do much better work and three times as much of it with the No. 90 as you can get from any other four head machine. Stop and think this over! It means a whole lot!

The No. 90 is a simple, substantial machine built for speed and hard work. Every part performs a duty—there are no superfluous pieces.

The machine is equipped with the powerful Automobile Chain Drive.

It is also equipped with the "Berlin" 6-bit Round Top and Bottom Cylinders which will handle twice as much stock as a soft knife machine and at the same time save you 15 to 30 per cent. in grades.

For flooring, we furnish you 12-bit side heads especially designed for this fast feed work. At a feed of 200 feet per minute they will not tear out even the knots and cross-grained places as much as other heads will at 60 a minute.

If you have not received a copy of the June "Berlin Quality" Bulletin, you should write for it NOW. It contains four pages of description about this Fast Feed Working of Flooring and Outline. It is worth your careful reading.

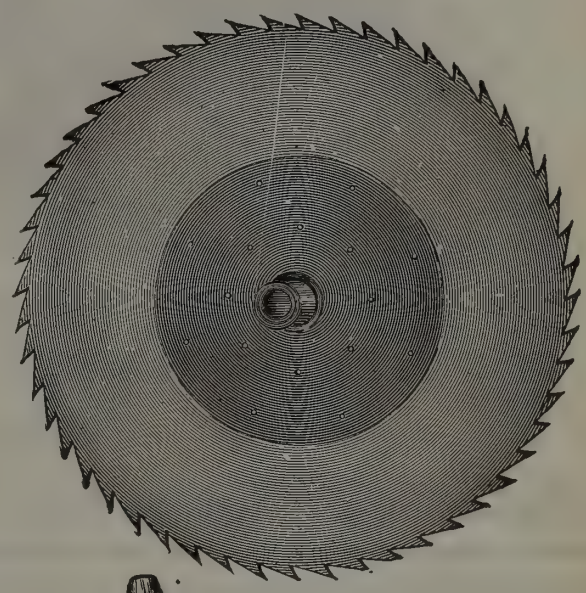
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the Simond's Process in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

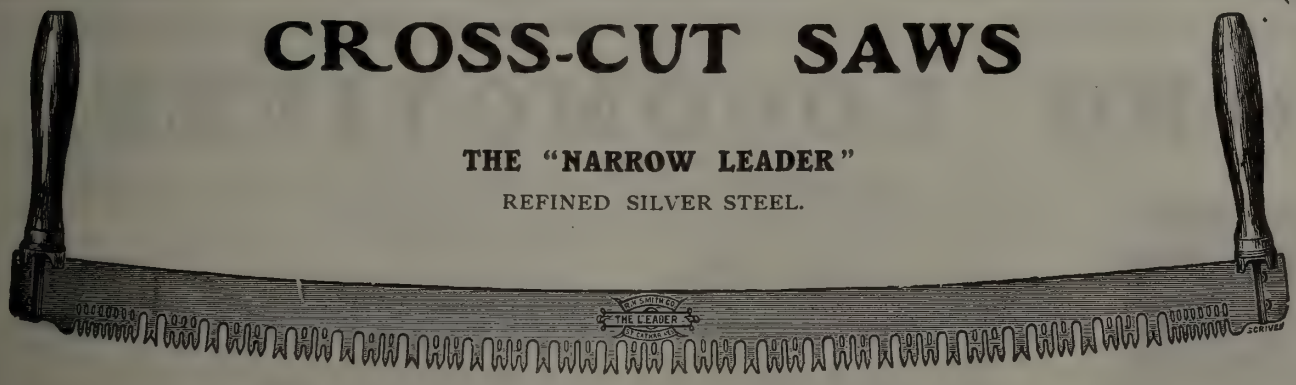


Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws pertectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.



Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

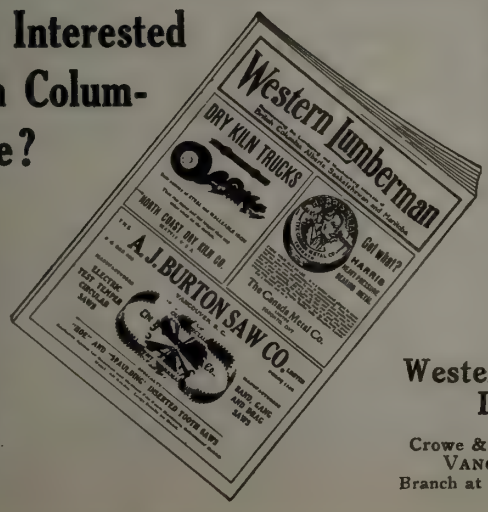
The Shimer Cutter Heads

Taken from the Solid Never-Break Steel Forgings

Are the Strongest and Most Durable Cutter Heads in all the World

They are made with precision, care and judgment by skilled tradesmen in this line. Each Cutter is fixed upon its seat, pitched for clearance, and as a result it works with the freedom of a saw tooth when set, producing outlines of lumber, accurate, clean and smoothly finished.



In the filing and fitting department The Shimer Cutter Heads for tongue and groove flooring are so easily sharpened with an ordinary three-cornered file and the Bits are so easily set to the gauge that a uniform size of tongue and groove is maintained until the full circle (tool cutting edge) of each Bit is used up. Duplicate Cutters can be had promptly at very reasonable prices.

The dealer who accepts your order for the Shimer Cutter Head and supplies you with another means to deceive you in no small matter. Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every genuine tool. Any other is spurious—send it back—demand the genuine, of quality and helpfulness, with a record of 40 years of upbuilding and improvement. It costs no more.

Forging Teeth for Inserted Tooth Circular Saws.

Disston

Inserted Tooth Circular Saws

Every season our shipments of Inserted Tooth Circular Saws are larger than shipments of the preceding season—much larger. The development and growth of this department of the Disston industry are remarkable.

Necessarily there can be only one reason for such progress—we are making and delivering to all parts of the world the best, the most satisfactory — most efficient and economical circular saws that can be obtained in the market.

Again, there can be only one reason for the superiority of our product—we are employing the best brains, the highest type of men who have ever directed their talents and energies to this great field of industry.

If **you** are not aware of the economies in time, power and upkeep which follow the installation of **Disston** Inserted Tooth Circular Saws, ask the millman who has used them.

Heavy Duty Lath Machine

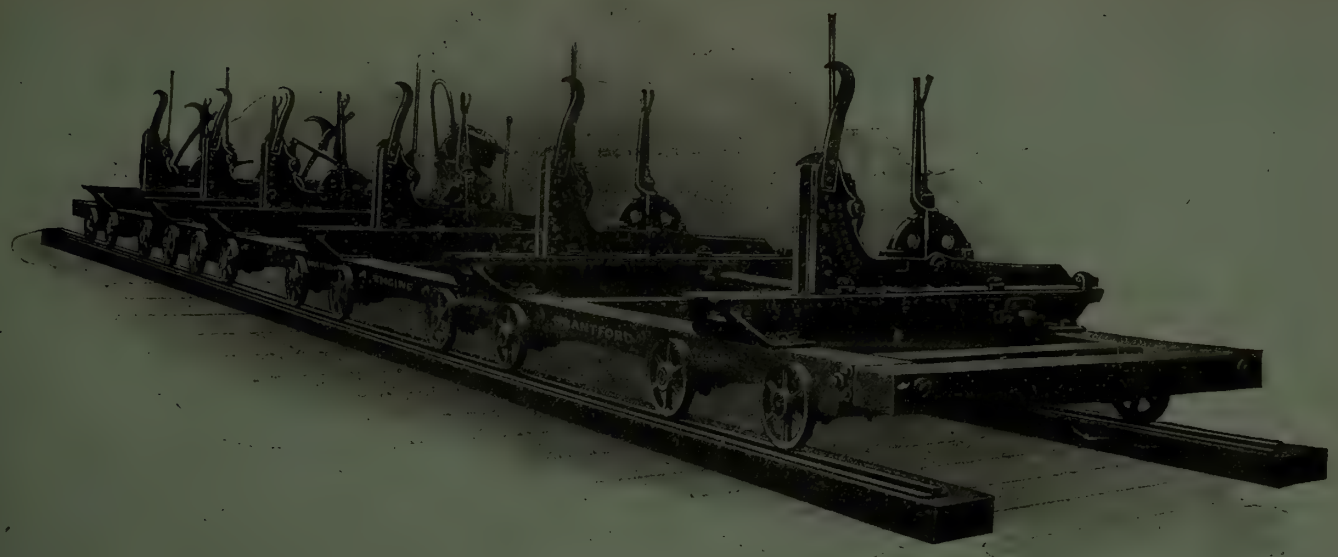
This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.



The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

What Experience in Building Sawmill Machinery Means to You

Our Twin Engine Steam Feed

Quality in sawmill machinery is simply the result of experience. It is an easy matter to build cheap machinery—anybody can do it.

But it is not easy to make sawmill machinery **right**—so it will stand up to the hard work it has to do, and at the same time always cut perfect lumber. And it requires a good deal of experience before any firm can make **uniformly good** machinery.

We have had the experience—54 years of it.

This means two things;

The knowledge we have gained in that time enables us to turn out machinery which is absolutely sure always to work properly—we know exactly what will be required of it.

It proves we have always made good machinery—otherwise we wouldn't be in this business now.

We **know how** to build sawmill machinery, but we are continually doing everything possible to turn out better machinery. Parts that appear to be even slightly imperfect are not fixed up and used, but are thrown out, and we are quite willing at all times to give any guarantee in respect of material and workmanship our customers desire.

One thing is certain—you cannot possibly buy anywhere, at any price, better machinery than we make—and cheaper machinery is not good enough for you.

Dimension Bill Stuff in
Pine, Spruce and Hemlock
A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors
We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.
Door Making is our Specialty
We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**
Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.
If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

Craig Street West, MONTREAL

"The HOWARD" Vulcanizing Process

The quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto

Snow Plows

The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate, Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9" wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12" of loose snow each time the plow passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

As far as the cutting edge is concerned the Inserted Tooth saw ought to show up best, for the reason that each tooth is a separate unit and can be made with a higher temper than the tooth which is solid with the plate.

Simonds Insertable Saw teeth are very finely and accurately machine milled (both bit and shank) to fit into the plate and they are brought to a high temper by a very skillful process — **this temper is always uniform.**

There is one kind of timber in sawing which Simonds Inserted Tooth Saws show a big lead and that is—frozen timber; one reason is that the points are held exceptionally firm in the plate by the Simonds way of insertion, so solid that they cannot spring sideways and cause the plate to dodge.

Again, Simonds Points or Bits have a better clearance from the cutting edge both backward and downward than other makes of insertable bits—and the clearance is so uniform that Simonds Points may be worn down full length of swage without side filing or materially varying the width of kerf.

You know the name **Simonds**—now know the **Saw Simonds.** Every kind used in mill work, woodworking machinery and lumbering—Cross-cut, Gang, Band, Solid or Inserted Tooth Circular.

Your very next order should be for **Simonds Saws.**

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, October 1, 1910 No. 19

The Ontario Retailers' Association

The decision of the Ontario Retail Lumbermen to form an association in connection with the Retail Merchants' Association of Canada is one more evidence of the fact that the lumber industry throughout Canada is gradually coming to a reasonable appreciation of the importance of its work, and to an understanding of the old truth that in union there is strength. During the last three years several important associations of lumbermen have been formed, with the result that in a great many instances the interests of the lumbermen have been promoted with an effectiveness not formerly considered possible. The parent organization, so to speak, is the Canadian Lumbermen's Association, which, during its two years of existence, has done much to remove difficulties which were of long standing and could not otherwise be overcome. The sash and door manufacturers of Ontario, who recently organized, have already secured definite results by adopting a new universal price list to replace one which had formerly been in existence for some years and had outgrown its usefulness. The same association is working effectively towards the elimination of the ruinous price-cutting which has prevailed between manufacturers for some time. As an example also of the usefulness of an association of retailers, the case may be cited of the Western Retail Lumbermen's Association, with headquarters at Winnipeg, which has not only succeeded in bringing order out of chaos, but has proved itself of genuine constructive value to its members by the creation and successful operation of an insurance department, which provides excellent protection at a substantial saving in cost.

The newly-formed Ontario Association is starting with a full appreciation of its work. The series of resolutions adopted at the organization meeting held in Toronto on Sept. 5th covered a wide range of subjects of the utmost importance. If the association settles down with determination to deal with each of these problems it cannot fail to earn, and, it is to be hoped, to receive the support of retailers generally throughout the province.

Realizing the importance of securing a dignified standing for the association, the second resolution passed at the organization defined the term "retail lumber dealer" as one with a stock, office, sign, necessary appliances and a place on the municipal assessment roll. The retailer whose office, yard and equipment are carried under his hat, is not wanted in the association. Other problems of importance included in the resolutions were: Selling by manufacturers or wholesalers direct to contractors; co-operation between manufacturers, wholesalers and retailers; keeping the trade posted on trade conditions; elimination of figuring a lump sum on contractors' lists; adoption of a price list for stock mouldings, trim, base, etc.

These are all practical matters along the line of which co-operation alone can produce results. It remains now for the members of the trade to make the association a success by supporting it, and working for it. A small portion of the time now wasted annually by retailers in dealing with difficulties which can be handled successfully only by an association, if devoted to assisting the association, would ensure for it a rapid growth.

Arbitration for the Retailer

A large percentage of the time of the busy merchant of this country is consumed in going over his files, with a view to ascertaining whether or not he is right in a certain dispute. A great deal of this time could be saved, as well as avoiding the disagreeable part of arguing out the question with customers. From time immemorial, as soon as two parties got into controversy, the first thing thought of was to resort to law. The court decides the case, leaving one party to the controversy dissatisfied. A great many cases go to court that could be settled without legal interference, expense or delay. This would be a friendly settlement, handled expeditiously and inexpensively. The courts are not appealed to in minor cases in these days as they were formerly. This is partly due to the fact that organizations of commercial interest have taken an active interest of the subject of arbitration; and why should this method not be used among lumbermen? There are a great many cases that come to court, and are decided by a jury of six or twelve men, all identified with different branches of trade. They listen to the evidence, and their decision is rendered, but can a decision rendered by such a body be any better than or as just as that of a committee of, say, five business men appointed from the same line of business?

The principle of using arbitration for the settlement of disputes in the lumber trade has recently been applied with considerable success in the United States. The Pacific Coast Shippers' Association of Seattle, Wash., and the American Lumber Trades Congress have made arbitration one of the principal features of their work. At the first annual meeting of the latter body the following resolution was adopted: "Arbitration methods should be employed wherever possible in the settlement of all matters in dispute." The Pacific Coast Shippers have carried the principle into definite operation, and for nearly three years it has proved so successful that it is now regarded as a permanent feature of the trade. This application of the principle has met with so much approval and success that its main features are worthy of careful study.

A committee of five members and two alternates constitute the arbitration board, of which three members and one alternate make a quorum. The secretary may take the place of one of the alternates. The board have power to establish rules for the conduct of their business. Disputes between members regarding business matters may be laid before the board by either party, who is then entitled to arbitration. A unanimous decision by the board is final. On a majority decision, appeal may be had to the board of trustees. In disputes between a member of the association and a member of a retail dealers' association the member may submit his case to the secretary for a ruling as to whether he has a claim against the retail dealer. If the decision is in his favor, the secretary will then submit the claim to the secretary of the retailers'

association. A retailer having a dispute with a member of the shippers' association may file his claim with the secretary for consideration. If the secretaries of the two associations cannot adjust the claim, a joint committee is provided for, consisting of one member from each association who, between them, will elect a third. In case of a dispute between a member and a lumberman who is not a member of any other association, the dispute is referred direct to the secretary. In case a member refuses to arbitrate in a dispute with another member, the matter is referred to the board of trustees. If they decide in favor of arbitration, and one of the parties refuses to arbitrate, he is removed from the list of members. When one member agrees to arbitrate a dispute the other must present his case within 60 days.

Co-operation Alone Will Save the Forests From Fire

The perennial laments about the loss resulting from forest fires throughout Canada and the United States have taken a rather more encouraging form this season than in former years. In Canada the subject has lately succeeded in attracting the interest of the Prime Minister to such an extent as to lead him to make an important public utterance upon it, and to propose a method for reducing the loss. During his recent visit to western Canada, Sir Wilfrid Laurier received an impressive object lesson in the matter. When passing through Seymour narrows on the steamer Prince George one day late in August, he not only saw, but remarked to many members of his party, the terrible destruction caused by forest fires in that vicinity. Later, on the same day, his steamer threaded the island-bound passage of Johnston Straits, away up near the entrance to Queen Charlotte Sound, and the Prime Minister was again moved to discuss the subject with a good deal of vigor. Vast hillsides which, a number of years ago, had been partly logged over, were blazing high. In some places near Albert Bay entire mountains were on fire. Sir Wilfrid was told that when the loggers carried away the commercially valuable sections of the trees they left lying in the woods tops and branches which became dry during the succeeding summers and afforded excellent food for the fires.

Sir Wilfrid was so much impressed with the matter that he declared upon the spot that the provincial and federal governments should get together and devise a plan for preventing fires by compelling the loggers to burn the brush at the time, or in some other manner effectively reduce the risk of a fire. When Sir Wilfrid was making these observations the whole country was shrouded in a pall of smoke from fires which were devouring great areas of valuable timber in many districts.

"Co-operation," as hinted by Sir Wilfred, is unquestionable the only effective method of fighting forest fires. But there are many kinds of co-operation, and some of them are not of much use. At the present time, for instance, it is to be feared that the two governments, provincial and federal, although they co-operate to a certain extent, are not securing the results warranted by the expenditure, or which are equal to the demands of the case. For some time the Dominion Government, which maintains a small force of fighters in the railway belt, objected to any assistance being given, even by the province, in the work of fire prevention. During the present year there has been a little actual co-operation of forces. In order to attain effective results, the best method would be to support only one fire-fighting force, which should be controlled by one government and supported by both. This, of course, would involve a loss of a considerable amount of patronage to the Dominion Government, and some members of parliament might not appreciate this feature. Public opinion, however, should be aroused to the point at which it would compel the government to forego any consideration of patronage and take into consideration only the saving which can be effected. If both governments were to unite in supporting the various fighting forces, and the provincial government were to superintend the work, it is reasonable to hope that the service might shortly be placed upon an effective basis.

That the problem requires the services of the most energetic and resourceful minds is evident from the fact that, during the month of July alone, the forest fire loss amounted to $40,000 in British Columbia, and that $317,760 worth of improvements were destroyed. No less than 401 fires were attended to by the provincial forces, at a cost of $40,163 in salaries and expenses, and private companies and individuals are estimated to have spent a further sum of $20,000. Of the 401 fires, 25 per cent. are attributed to C.P.R. locomotives; 95 per cent. of the fires were discovered in time to extinguish without much loss. Eight lives were sacrificed as a result of the fires during the one month.

Mr. W. C. Gladwin, chief fire warden of British Columbia, in his report upon the above fires, makes the suggestion that the railway companies should be obliged to use oil for fuel in the timbered sections of the country, even if this involved bonusing the railways for each engine thus equipped. He believes that it is impossible to prevent the escape of cinders by a screen, and at the same time allow sufficient draft for the engine. Another suggestion which he makes is that screens should be placed upon the windows of all the smoking compartments, as many fires are started by smokers throwing away cigar and cigarette stubs. One so frequently hears these and many other important preventive measures advocated, and yet the fires have occurred with such discouraging regularity that it seems as though nothing effective will ever be devised or put into practice. There is no good reason for taking such a pessimistic view of the matter, and there is one way, and one only, for stopping the loss by forest fires. That is to settle at once and forever upon a responsible body in each province, and then, after making diligent enquiry as to causes and methods, to set to work vigorously with the determined intention of adopting every practical measure. Not until this has been done will the governments of the country be acquitted of the charge that they are carelessly permitting one of the most valuable natural resources to go to needless waste.

Protection for Lumber Ably Supported

The return of Sir Wilfrid Laurier from his trip to the western coast, and the return of Hon. W. S. Fielding, Minister of Finance, from his journey to Europe, make it probable that in the near future we will again hear of tariff negotiations between Canada and the United States. After the negotiations which took place last spring in Albany and Washington, it was understood that when the Canadian ministers were ready to resume they would notify President Taft and his Cabinet. In the interim many matters of great importance from a tariff point of view have occurred in each country. In Canada the ministers have made a point (especially the Prime Minister) of finding out the opinions in various parts of the country upon tariff matters. In Western Canada Sir Wilfrid found a strong movement in favor of a protective tariff upon lumber coming into Canada. In eastern Canada he knows that there is a general sentiment in favor of continuing the provincial prohibitions of the export of sawlogs and pulpwood. His own government has nothing to do with the latter question, practically speaking, but he will not be inclined to listen to any proposal on the part of the United States that he should use his influence in prohibiting the Province of Quebec or any of the other eastern provinces to remove the prohibition.

In the United States, political strife has been boiling during the last six months, and in regard to the pulpwood matter the government has been the subject of widespread attack. It has been accused of encouraging the Canadian provinces to prohibit exports. If the truth were known to the people of the United States they would realize that their own concern had not a great deal to do with the course taken by Canadian provinces. The prohibition imposed by Quebec, for instance, was a matter of internal economy solely, and was amply justified by the condition of affairs. There is no room to doubt now that this prohibition will remain a fixed policy on the part of that province for many

years to come. But this will not prevent the people of the United States from making use of the subject as a fruitful source of campaign literature.

Reports have been circulated in London, England, quite recently, to the effect that Sir Wilfrid Laurier has already invited President Taft to renew the conference on trade relations, but this is premature, so far as the public has any information upon the subject. It can reasonably be expected, however, that the negotiations will be resumed in the near future. In the meantime, Canadians are becoming more and more keenly interested in all the matters which will come up for discussion, and they will watch with jealous concern whatever steps are taken when the conference is opened.

The relation of the lumbermen of Canada to the tariff issue is one of those complicated subjects which protective tariffs breed so freely. The position of Canada in the matter is not to any great extent one of her own making. The United States is a country of large timbering resources which have been exploited to a wonderful extent. That country has been wedded to a protective system from its birth, and Canadians are obliged, when selling lumber in the United States, to pay heavy import duties. In contrast with this, United States lumber in the rough comes into Canada free of duty. In the early days of Canada this was perhaps a wise policy, as it supplied the settler with the raw material for his buildings at the lowest possible price, and relieved him of any fear of becoming the victim of the few lumber manufacturing concerns which then existed in Canada.

The day when there was any fear that the lumber manufacturers of Canada might combine to raise prices is long ago passed, if, indeed, it ever existed. To-day, even if it were impossible for a single foot of lumber to be imported into Canada from foreign countries, it would be practically an impossibility for the manufacturers to demand higher prices for lumber than would afford a legitimate profit. The business is so widely scattered all over Canada, and the various varieties of lumber manufactured in Canada compete so effectively with one another, that the regulation of prices would be a task foredoomed to failure. The only effective method of regulating lumber prices would be by regulating the production, and even this, in the light of past experiences, would be a hopeless undertaking on a large scale. It cannot for a moment be claimed to-day that the consumer of lumber in Canada stands to lose a single cent by any measure of protection.

The cause for a protective tariff, on the other hand, is strong. Throughout Canada, United States lumber is an active competitor with the Canadian product and its competition is carried on upon an unfair basis. United States lumber, in many instances, can be produced more cheaply than Canadian lumber. A few points will make this clear. Southern pine, which is manufactured by cheap negro labor, and which grows in localities that can be more cheaply operated than any which are found in Canada, is sold in many parts of eastern Canada at prices which cannot be approached by the manufacturer of Canadian lumber with which it comes into competition. In western Canada, 75 per cent. of the total cut of the country is subjected to competition from the United States lumber, which, in all respects, is as favorably situated, and frequently more so, in the matter of freight rates. The enormous production of lumber in the United States creates surplus stocks which have to be dumped somewhere, and the Canadian markets on the prairies, with their absence of tariff restrictions, offer an ideal opportunity for the disposal of such stocks without injury to the markets of the United States. Thus it comes about that, in all parts of Canada, United States lumber in great quantities is sold successfully, to the detriment of the Canadian manufacturer, while at the same time Canadian lumber is subjected to a heavy tax when entering the United States.

Lumbermen have been accused of taking an illogical position in regard to this matter because they call for protection for their own industry, and yet claim—in the matter of fire insurance—that they should be allowed to make contracts with United States companies; in other words, Canadian insurance companies should not be afforded the same measure of protection as the lumbermen are seeking against foreign competition. The argument is one that does not hold. In the matter of fire protection there was the most imminent danger of a trust—already in active and successful operation through Canada—compelling the people of Canada who desired protection to pay for it just whatever prices the trust desired. In lumber there is no danger whatever of such a state of affairs ever coming into existence, to say nothing of its not being, as in the case of the insurance trust, already in active operation.

Editorial Short Lengths for Busy Readers

Lumbermen of British Columbia who operate on Crown granted land are making a reasonable request in seeking to have that province make the taxation upon their property uniform with that upon licensed areas.

"Some of the finest timber land in the province" is the description of areas along the upper Fraser River, as given by a party from Kamloops, B.C., who recently made a trip of inspection along the line of the G.T.P., between Fort George and the headquarters of the Fraser. The great timber wealth of British Columbia has evidently not been even estimated.

Statistics show that, up to date, the amount of lumber manufactured in Canada is equal only to one-seventh the amount that could have been manufactured out of the timber destroyed by fire. In some countries in Europe, such as Germany and Switzerland, destruction has been practically overcome, and the annual cut is no greater than the annual increment by growth. This is an ideal to work toward in Canada. We may never reach it, because of the great difference in forest conditions, but we may approach many times closer than we have yet come.

It is satisfactory to note that the conservative caution of English investors has had something to do with preventing the occurrence of a boom in Canadian lumber. Possibly the contagion of the rubber boom had more than anything else to do with the reported probability of a similar occurrence in connection with British Columbia lumber. The lumber industry of British Columbia, and of Canada as a whole, would suffer more than any other industry or individuals if feverish speculation in timber properties were permitted. Canada's timber resources need no booming. They will be exploited rapidly enough. The only danger is that it may be too rapid. The values are there, and they are being secured profitably by those who are already in the field. New capital can be depended upon to come forward in pretty close proportion to the necessity for it.

Hon. Jules Allard, Minister of Crown Lands for the Province of Quebec, states that the legislation put into force some months ago, limiting the exportation of pulp wood cut on Government lands, is having its effect. Several prominent paper manufacturers of the United States are negotiating for sites for pulp mills, and it is expected that within the next year several new mills will be established. This is a form of protection which is adding immensely to the wealth of the country. The policy of advancing our raw materials as far as possible to their final state of development as manufactured articles is a genuine work of conservation.

Conflicting reports have lately been published about the disagreement between the B. C. lumber manufacturers and the retailers of the prairie provinces. Latest reports are to the effect that several of the manufacturers are actively arranging for the establishing of yards in Saskatchewan and Manitoba. They claim that the retailer is growing fat on the consumer and the manufacturer. If the manufacturers once obtain a good foothold in the retailing field, the retailers, whether they have been acting as alleged or not, will find their business seriously reduced. Those who understand the situation well should do whatever they can to avoid a selling war. There is no reason why there should not be a good profit for manufacturers and retailers alike, and at the same time, that the consumer should get fair play.

New Brunswick Lumber Trade News

Building Operations in Campbellton—Displays at St. John Exhibition—The Partington Pulp and Paper Developments

Campbellton, N.B., Sept. 24.—The situation at Campbellton, N.B., is not improving as the cold weather comes on. Very few permanent buildings have yet reached that stage of completion in which occupancy can be assured, although building operations are being rushed forward with all haste.

The I.C.R. have taken over the site of Richards' shingle mill, where the big fire had its origin, and have begun operations for a new roundhouse. The station is also under way, and will be built where the old roundhouse stood.

The two large firms engaged in the lumber business, who were practically cleaned out by fire, have not yet definitely decided as to when or where they will build.

The Wm. Richards Co. will, we learn, in all probability build again, although it was rumored to the contrary. Their actual loss was over $200,000.

The Shives Lumber Co. will also build again, but are not just decided as to location. It must be remembered that only their two shingle mills were destroyed, their large sawmill, situated above the town, not being in the fire region. Outside of the loss of valuable records and papers they were fully covered by insurance. These are the only two lumber firms who suffered loss by the fire, the rest being well out of the fire region. The representative of the "Canada Lumberman" was speaking to a number of leading business man of Campbellton recently, and could not help noticing the optimistic view each one took of the future of Campbellton. They are determined that Campbellton's future will be better and brighter than anything hitherto, and there is no question that in course of time this will be the case.

Dominion Exhibition at St. John, N.B.

St. John, N.B., Sept. 17.—The Dominion Exhibition, held in St. John, N.B., Sept 5-15, was the best and largest in attendance ever held in the Maritime Provinces. One feature which impressed the representative of the "Canada Lumberman" was the large number of exhibits directly appealing to the lumber industry. Many of the exhibitors our readers are quite familiar with, and we believe it will be of general interest to mention here those that come within the scope of this journal.

H. Horton & Sons, Ltd., of St. John, N.B., had a splendid exhibit of harness, Saskatchewan robes and coats, of great variety, and a full line of horse blankets. Their goods are in great demand in the Maritime Provinces, particularly among lumbermen, and their booth was at all times the centre of attraction. They also represent the International Stock Food Company, of whose productions they had a goodly supply on exhibition.

Alex. Dunbar & Sons, Ltd., of Woodstock, N.B., manufacturers of the well-known Dunbar Logging Engine, had one of their logging engines on the grounds, which created much interest, not only among lumbermen, but among the crowd who daily flocked around. They also exhibited a specimen of their sleds, which go with the engine, together with a full set of photos illustrating the working of the engine in the woods.

E. N. Jones, of St. John, also had a fine exhibit of mill and lumber supplies. Mr. Jones has been in business in St. John for four years, and represents the following well-known firms, whose goods he carries in stock: The Fleming, Birkley & Goodall, Ltd., of Halifax, Eng., manufacturers of the famous brand of Teon Belting, of over 100 years' standing; The Canadian Logging Tool Co., Ltd., of Sault Ste. Marie, manufacturing the famous Soo line of logging tools of the latest improved patterns. This company are placing on the market this year a second-growth American hickory handle, which will overcome the difficulty caused by frequent breaking of handles; The Shaw Mason Ltd., of Sydney, manufacturing the Colonial Anti-Friction Metal; The Eagle File Co., manufacturing the Eagle Brand of files, and the Greenwood Mfg. Co., of Boston, Mass., manufacturing the Sun Metal Packing, are also represented by this company.

D. K. McLaren, Ltd., of Montreal, were also to be found there with their famous line of belting, so much in use by the lumber trade. Their exhibit was a splendid one and attracted much attention.

Many of our readers, both east and west, are familiar with the patented "Dunbar" shingle machine, manufactured by McFarlane, Thompson & Anderson, of Fredericton, N.B. Their exhibit of the shingle machine, set up and in working action, turning out shingles under the direction of an expert workman, proved of great interest to sawmill men, and we learn that a number of machines were ordered as a result.

E. Leonard & Sons, of whom Geo. H. Evans is St. John representative, had a good exhibit of engines and different sawmill supplies.

A unique exhibit was that of a model of a portable dam, invented by Wm. Canney, of Maugerville, N.B. The claims of this new dam are that it will revolutionize an important part of the lumbering business and prevent any drives being held up on either small streams or the largest rivers. The model is built so it buckles on the bottom of the river, if the bed is rough, and a section of it can be used without the entire river or stream being dammed when it becomes necessary to flood a dam.

Stanfields, Limited, of Truro, N.S., with their well-known line of underwear, created great interest. This firm specialize in lumbermen's clothing, and a big demand has been created for their products.

The Partington Company's Expansion

In connection with the extensions being made by the Edward Partington Pulp & Paper Co., Ltd., of St. John, N.B., application has been made for incorporation under the Joint Stock Companies' Act. It is planned to take over, acquire, and operate the business now carried on by Edward Partington near the reversing falls, and conduct there a regular lumbering business. All the property of the former Edward Partington Company is to be taken over, including mills, real estate, boats, and all other property connected with the concern. The capital stock is to be $950,000. The names of the applicants are: Edward Partington, Thos. McAvity, Geo. S. Fisher, J. R. Clarkson, H. W. Schofield, and A. H. Hanington, all of this city. This is the company which recently took over the plant of the A. Cushing Company at St. John, and is reported to be considering a merger with the Alex. Gibson Railway & Manufacturing Company, of Marysville.

Edward Partington Pulp and Paper Company's Plant at St. John, N.B.

The Cushing Saw Mill, St. John, N.B., acquired by E. Partington Company

News Notes from New Brunswick

The Wilson Box Co., Ltd., is a new company starting a large box factory in St. John, N.B. The buildings and plan of the Dunn Pork Packing Co. have been purchased and are being converted into a box-making industry. The new company have also bought the Crawford sawmill property at Westfield, and wil operate it in connection with their factory. Alex. Wilson, lumber merchant, of St. John, is the managing director. It is expected the mills will be in full operation within ten months.

The Canada Woodworking Co., Limited, of South Bay, N.B., are rushing their new factory to completion. All the machinery has been purchased, and the plan will be running about November. Tubs and pails will be turned out there, and the plant will have a capacity of 2,000 pails per day. The company will also operate a sawmill there to supply their plant.

The Enterprise Foundry Co., Limited, of Sackville, N.B., are putting on the market a new style camp range which is a great improvement over former ranges, and will no doubt meet with great favor from construction camps, lumbermen, etc.

The Alexander Gibson Railway and Manufacturing Company closed down their mill at Blackville, N.B., for the season, having completed the manufacture of this year's supply of lumber. The season's output from the mill at Blackville was about three million feet, somewhat less than usual. There is still about a month's more work at the company's mills at Marysville, where it is believed that the output this year will be about eighteen million feet, making the company's total output for the two mills about twenty-one million feet. The men who have been employed at the Blackville mill find their services in great demand, as there is a shortage of men for the woods, and lumber operators are scouring the country over for men.

Fire in the sawmill of A. & R. Loggie, Loggieville, N.B., on the 11th inst., did much damage before it was finally under control.

The Nepisiquit Lumber Co.'s new sawmill at Bathurst, N.B., started operations on the 1st inst. This is one of the largest and best equipped mills in the province.

Lumber operations on the Miramichi River, N.B., are very brisk just now. During September five large steamers loaded for European ports, aggregating nearly 15,000,000. A large quantity is also awaiting shipment at the different mills.

J. H. Crandall has removed his portable mill from Chatham to Newcastle, where he is at present cutting 15,000 feet of long lumber and about 17,000 lath per day.

A meeting of the creditors of Edward Robichaud, who operated a rotary sawmill at Notre Dame, N.B., was held at Moncton recently, when the property was ordered to be sold. The liabilities are $4,000, and the property is valued at the same.

Mr. H. W. Schofield, secretary-treasurer of the Edward Partington Pulp and Paper Co., St. John, N.B., who has been on an extended visit to England, returned recently.

Varying Views on the Spruce Situation

Eastern Canadian Spruce in the New England Markets—Too Many Speculative Shipments to New York — Improvement Expected

Further discussion of the lumber situation in Eastern Canada and the New England States is contained in additional letters to the "Canada Lumberman" upon the subject, which enforce the conclusions reached in the correspondence published in the "Canada Lumberman" of Sept. 15th. The outstanding feature in the correspondence is the fact that everyone is confident that the fall trade will show an improvement. There is a general agreement also that the principal causes of quietness prevailing during the past month or two have been the seasonable inactivity in all lines of trade and the regrettable habit that some manufacturers have of refusing a reasonable profit and shipping the lumber to New York on consignment. This policy of sending lumber to market on a speculation, to be sold to the highest bidder, might be reasonable if stocks were light and the demand good. But in a dull market it is the height of folly, and emphasizes clearly the necessity for something in the nature of an association of manufacturers to prevent so needless a loss.

The belief that prices for spruce in New Brunswick are not so depressed as some of the dealers in New York and Boston and other eastern markets have made out, is strengthened by a recent occurrence. A large United States firm of manufacturers, who operate also in Ontario, reading the daily press reports about low prices for eastern spruce, sent a man into New Brunswick to investigate the situation and buy up all the stock he could. This traveller found that he was unable to buy a single stick at the low figures which he had expected. He came back after having made a few purchases of narrow sidings only, and even for these he had to pay much higher prices than he had expected.

A somewhat different story, however, is given by one of our correspondents, Mr. John E. Moore, of St. John, N.B., a dealer, shipper and manufacturer who is in close touch with conditions, and whose views upon the situation are worthy of close study. Mr. Moore gives a brief but interesting summary of the eastern situation, so far as it concerns U. S. trade, and while admitting that stocks are light, reports an almost entire absence of demand. His views regarding the feasability of regulating the production by the formation of an association of Maritime Province manufacturers, show that the manufacturers have gone their own individual ways for so many years that there is now "a great lack of harmony between them." In view of the decreasing lumber trade of St. John and other eastern ports, which Mr. Moore sees good reason to expect, this lack of harmony is especially unfortunate. Situated as the Maritime Provinces are in a particularly favorable position for shipping to the English and U. S. markets, a business like co-operation among manufacturers would go a great way towards preventing the losses which occur so frequently, when for political or speculative purposes, the large markets are badly depressed. Further correspondence upon these important questions will be welcomed by the editor. Following are the letters received since the publication of our last issue:

John E. Moore, St. John, N.B., writes as follows: We do not operate to any great extent in the New York or Boston market, but from what we hear from others these markets are in a bad state. There is practically no demand, which is very strange considering the fact that stocks are very light. All the lumber brokers in the U. S. predicted that 1910 would be a banner year for business, but the results have turned out very different.

Regarding an association for the Maritime Provinces to regulate the production of lumber, shingles and laths, I doubt very much if it can be worked on a satisfactory basis. Take the manufacturers here at St. John. There is and always has been a great lack of harmony between them. Each of the manufacturers runs his own business in the way he thinks best, without regard to his neighbor. One thing I can say is, from now on the St. John river production must naturally decrease. In the past we have had many mills here operated by American citizens, the logs were cut in the State of Maine and floated down the St. John river. This privilege was granted years ago under an old law known as the Pike Law. This law will be recinded on the 1st of August, 1911. The product of any American logs floated down here after that date will not be admitted to the United States without duty as heretofore, but will be subject to $1.25 per thousand for rough lumber, 20 cents per thousand for laths. If this lumber has been planed it is subject to 50 cents per thousand more duty on each side that is planed.

The rate of stumpage is increasing with us rapidly, and the cost of production is also increasing, and the way the markets have been this year there is little or no profit to be made.

The cost of Transatlantic freight has strengthened to the extent of 15s per thousand from the lowest charter made at the early part of the year.

Clarke Brothers, Bear River, N.S., write as follows: We know very little about the depressed condition of the markets in Nova Scotia and New Brunswick so far as lumber is concerned, although we are advised the New York and Boston markets are materially lower than they were some weeks ago. This does not affect us individually, inasmuch as everything we had for sale intended for shipment to the American markets was sold early in the season, and we have our contracts filled with the exception of two cargoes, one of which we are loading and the other to go forward later. We have never considered the American market as of any particular value to us in Nova Scotia, except as an outlet for whatever of hemlock we might manufacture, as we have in hand orders covering considerably more spruce and pine than we are able to fill, and this is a yearly occurrence. We could find a market for a million feet of spruce shipping boards instantly, if we could get the lumber and the necessary tonnage, and could have sold much more to the River Platte had we been able to secure the spruce stock of the right quality. Our experience has taught us that in sending shipments to the United States it is necessary that the lumber should be sold before it is shipped. We are strongly averse to the practice of shipping lumber to any market on consignment. We do not believe it sound business. We do not find Americans sending their products to this country unsold to be knocked down to the highest bidder, nor any other country of which we know, and our judgment is it is a poor rule that does not work both ways. There is not a surplus of lumber cut in Canada, provided it is properly handled, and it is most unwise to force lumber upon an unwilling market. The United States has not, in our judgment, recovered from the panic of 1907. While there has been an attempt to boost the price of stocks to a figure equivalent to that they held prior to the 1907 panic, and while the large holders very nearly succeeded in doing so, the purchasing public did not come into the market, with the result that much of these stocks is still held undigested, and this is in our view one chief cause for the present condition, so much money being tied up in stocks by the large operators. We cannot forsee just what the future holds as to business conditions in the U. S. A., but so far as Canada is concerned and particularly Nova Scotia and New Brunswick, we see no reason to suppose that there will be any difficulty in the marketing of all the good quality shipping lumber that can be secured, outside, perhaps, the one feature of hemlock for which the United States offers the only outlet.

There has been a slight slackening in the demand recently from River Platte. This was only to be expected after the heavy shipments which went, in 1909

and the early part of the present year, but as they have good crops and business is in a healthy condition in that country we anticipate a return to normal conditions and the usual demand the coming year. The local consumption of lumber in Nova Scotia has materially increased in the last ten years, and to-day we believe there is as much used within the Province as there is exported, while the exports show no dimunition. This means a larger annual cut, but with the rapid growth in this province it is to be hoped we are not cutting more than the increment.

One chief difficulty perhaps in the situation is that many of our lumbermen friends in this province decline to accept a reasonable figure for their product, and prefer to take their chances of securing something better by shipping their goods to the market unsold. This practice we regard as most reprehensible, and we believe the sooner our friends get around to this view the better it will be for all concerned. If we could ship a cargo of lumber either to the United States or West Indies to be sold on consignment and have the receivers there load the vessel again with a cargo of their products to be landed at our wharves in Nova Scotia and sold as they sell ours, to the highest bidder, the matter would adjust itself, but this condition does not exist. They offer inducements in the way of price to encourage shipments by consignment, but when we want to buy molasses or sugar and any other commodities produced in either of the countries named, we find we can only secure same by paying the price asked by the parties who have the goods to sell. Applying the same principle to the lumber trade will not result in an accumulation of stocks in either New Brunswick or Nova Scotia, but will result in reducing the output to the actual demand and lay the foundation of a permanent and profitable business without entailing the loss which now occurs both in the waste of our forests and in the loss to individual operators, which will continue to occur as long as these consignment shipments are made.

John G. Hall & Co., Wholesalers, Boston, write as follows: It is a usual thing for the lumber markets in New York and Boston to be depressed in August, that being a month when people are taking their vacations, and business generally is quiet and buyers are always scarce, but this year was much duller than usual.

However, notwithstanding the low prices prevailing in August, we do not think there is much cause for alarm, and think we shall see a fairly good trade this fall, the only thing to interfere with it being the general uncertainty as to politics.

Trade in the different yards has not been too bad, and you must remember that prices on spruce the last two years have been very high, and there is a general feeling in the markets for all articles that there must be a stop to the advance in prices.

W. M. Crombie & Co., Wholesalers, New York, write as follows: We do not consider that any bad slump has taken place in the New York lumber market. The last month or so has been a dull period of the year, and on some kinds of lumber the supply has been somewhat ahead of the demand, particularly in Southern Yellow Pine, and to some extent in Canadian Spruce lumber.

As to Canadian Spruce, the ruling prices have been about the same as last year, though we know of some instances of sizeable lots selling for less than last year's prices.

As to Canadian White Pine, prices on the medium and high grades have been fully sustained, and on the low grades, if anything, prices have been a little less than a year ago, but the quantity of lumber moving of low grades, on the whole we think has been fully up to or ahead of a year ago.

Business with the yards in the metropolitan district compares very favorably with that of a year ago, and it looks to us as though there will be a fair amount of buying this Fall.

The Fox River Lumber Company, Fox River, N.S., write as follows: At present the market is not up to its average, on account of some very heavy shipments arriving, which kept it overstocked. But at present, shipments are not so heavy, and we think that in the near future the market will be fully as good as usual and trust to see it better.

Donald Fraser & Sons, Fredericton, N.B., write as follows: Except shingles, our business has not been much affected by the depression, and there are evidences of improvement in the market.

A Progressive Nova Scotia Firm

Oxford Foundry and Machine Company's Good Record —An Indication of the Province's Substantial Growth

One of the most modern and complete foundry and machine plants catering to the saw mill machinery trade in the Dominion is to be found in Oxford, N.S. The Oxford Foundry and Machine Company, Limited, whose products can be found in sawmills from coast to coast, and whose business is increasing steadily year by year, owe their success to the superior class of machinery they are turning out.

The foundry business in Oxford was first started in 1883, and passed into the hands of the present company some fifteen years ago. In February, 1910, the company was formed into a limited liability company, capitalized at $80,000, of which Mr. A. M. Hingley is president and Mr. C. C. McNeill managing director. The company owes its success largely to these two men, whose business and mechanical ability, coupled with their integrity, industry and general dispositions, are passports to still greater success and prosperity than they have already attained.

When they first took over the business there was a staff of five hands employed. Now they have about 40 men, and with their continued increase of business will need still more. The firm year ending August, 1910, was the biggest in the history of the company.

Plant of Oxford Foundry and Machine Company, Oxford, N.S.

The foundry has a railway siding from the main line into its buildings; and in connection with the rear of the machine shop is a large eight-ton crane for heavy work. The buildings are heated throughout by steam and are lighted by electricity from the company's own dynamo. The plant is a most up-to-date one, and new machinery is being added to it constantly. Two fine working lathes are noticeable, one for engine being 22 inches by 14 feet, and the other, a shafting lathe, 60 inches by 22 feet. All heavy work is handled by moveable cranes. One remarkable feature of the plant, which shows the loyalty of the firm, is that every machine is made in Canada.

The firm have just completed a handsome suite of offices adjoining the foundry. Besides the large general and private offices on the ground floor they have installed an up-to-date bathroom for the use of employees, which will be generally appreciated by the latter.

The line of sawmill machinery turned out by this firm is extensive; among their products are found gang edgers, portable trimmers, frame carriages, double saw beds, double edgers, engines, and many other lines. One of their lines we illustrate here, a heavy double edger. This is undoubtedly one of the best edgers found on the market. It is specially adapted for large mills, as it will do the work of two ordinary edgers. It will edge for a gang on one side and rotary on the other, cutting any different thicknesses of stock on either side, and going through edger at same time. Both tables are supplied for the edger, but in the illustration the back one is not shown.

As has been mentioned, the products of this company are found from

coast to coast. At Hamilton Inlet, Labrador, is a mill supplied by them; in Cranbrook, Mayook and other points in British Columbia and the west their machinery will be found.

Our readers from month to month will be given an opportunity of seeing illustrated by splendid half-tones the different lines turned out by this firm, and we bespeak for them for 1911 an even greater year's business than the record one just passed.

Nova Scotia News—A Quiet Trade Season

Halifax, N.S., Sept. 26.—Shipping and trade in general in all lines of lumber business are very quiet throughout this province. This is largely due to the season and to weak market conditions. The English market, which has continued fairly good all through the summer, has taken the greater part of the stock which naturally goes that way, though some of the larger operators will still have a few shipments to make.

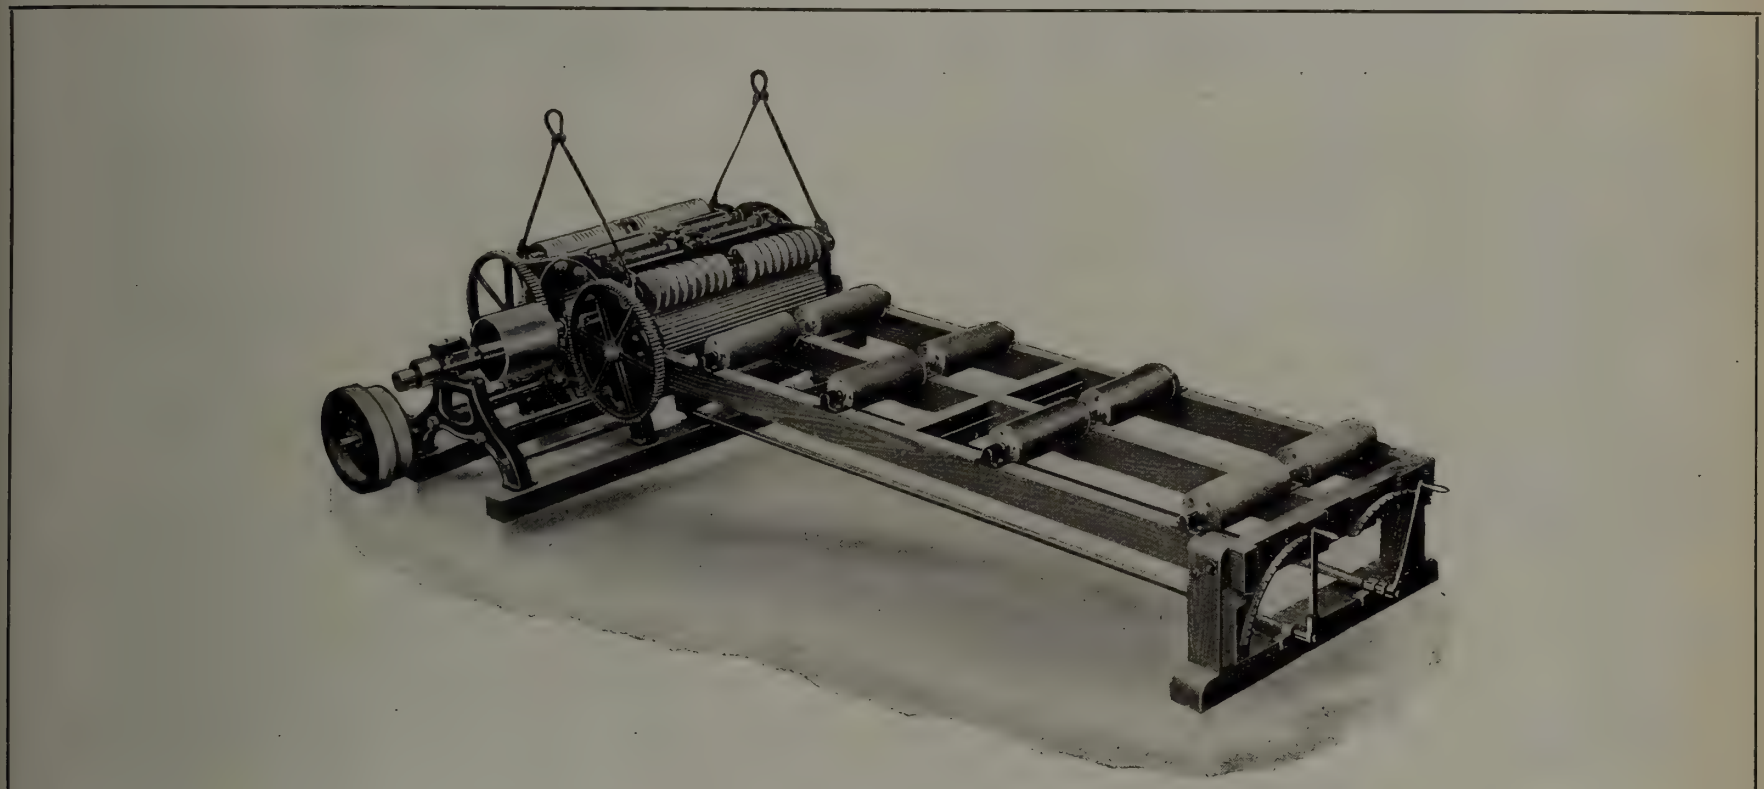
The South American market is reported duller, but considerable stock still goes forward, this being sold at the prices prevailing earlier in the year. Tonnage that will move four to five million feet is now being loaded in the western part of the province.

The United States market is inactive, and shipments are very much lighter than at any previous part of the shipping season. Though this market does not seem to be losing ground for such stock as Nova Scotia sends, there seems to be small indication as yet of any marked advance in prices. The greater part of the Nova Scotia stock goes to the New York market in the shape of 2x4 hemlock and lath. 2x4 hemlock is selling all the way from $17 to $20 delivered New York, the range in price depending on the percentage of the desirable lengths which are included. Lath are worth around $2.25 to $2.30 f.o.b. What few cargoes of random spruce are going forward are selling around $17 to $18, this being practically all sidings, with a small percentage wider than 7 inches.

Freights are moving downward, and are from 25c. to 50c. lower than prevailed during the early summer. One charter has been made at $3.25 from a Bay of Fundy port to New York for hemlock. A few shipments are being made to the West Indies market from Western Nova Scotia.

Lumber operations around River Hebert, N.S., are brisk this season. Kelly Bros., operating there, have shipped over 1,000,000 feet this year so far; Kelly & McIver have about the same quantity, and Porter & Syme have already shipped 1,000,000 feet, mostly to St. John for export. This latter firm are planning for more extensive operations this winter than ever before.

The Canada Car & Foundry Co., Limited, of Amherst, N.S., are very busy just now, working to their full capacity. They are now turning out fourteen box cars a day.



Mr. Joseph Higgs, lumberman, of River Philip, has been operating this summer at Beaver Bank, N.S.

The Campbell Lumber Co., Weymouth Bridge, N.S., write as follows: We find the American foreign lumber market is better for us than their home market, their duties favoring them in the latter and us in the former. I have heard, however, that the market is not in very good shape on one line of hemlock, 2x4, while we get the usual price for the hemlock boards, which we handle to a small extent. In these we get quite as good a price as we got last year.

New Law Affects Lumber Shippers

Shippers, owners and agents of shipping property in New Brunswick are affected by the new law which came into effect on September 1, entitled "An Act regarding the water carriage of wood goods." According to clause 10 of the new Act, the charterer, master or agent of the ship, is not held responsible for deficiency in measurement of the cargo, whereas formerly they were made responsible, the bills of lading being signed for the number of pieces and measurement. Consequently, when the ship arrived at its destination, under the old Act the owners were required to make good the deficiency in measurement, if there was any.

Under the new order of things, the captain signs his bills for the number of pieces only, and any deficiency there is in the measurement on arrival at destination the shipper has to stand for. As this means much sometimes in the run of a year, the shippers oppose it, while the owners, on the other hand, feel that the responsibility is where it belongs. The new law will not be felt to any extent by shippers in the coastwise business, but those doing business with the south and with the West Indies, and the tramp steamers taking deals to the other side, will be directly affected. The prospects are that the shippers and owners are to lock horns on the new law, as it is understood that St. John shippers will take concerted action. It was reported that steamer owners have long been working to bring about this Act.

Heavy Double Edger Manufactured by Oxford Foundry and Machine Co.

B. N. Jones, the Eastern Provinces Representative of the Nepisiguit Lumber Company, of Bathurst, N.B., has just completed a very successful trip through the Provinces for his company. He reports business among the woodworking and planing mills as being good this season.

The addition of the Cushing sawmill to the Edward Partington Pulp & Paper Co., of St. John, N.B., will make this one of the best equipped plants of its kind in the Maritime Provinces. Over 15,000,000 feet of pulpwood are used by this firm yearly, 150 men being employed. The majority of their product finds an American market.

The death occurred on Sept. 22, at Toronto, of Mr. James F. McEvoy, who, before retiring from business fifteen years ago, had been long identified with the lumber and milling interests of L'Orignal. Mr. McEvoy was a native of Ireland and came to Canada at an early age, settling at Kemptville, where he remained until 1878, when he removed to L'Orignal. Nine years ago he moved to Toronto. He was 76 years of age.

Birds' Eye View of Plant of Michigan Puget Sound Lumber Comapny, Situated on Rock Bay, Victoria, B.C.

Michigan Puget Sound Lumber Co.

Victoria, B.C. Concern Operating the Largest Sawmill in the Capital—Timber Holdings of Immense Value—A Notable Achievment in Export Shipments

Four years ago, or thereabouts, J. H. Moore, a prominent Seattle lumberman, came to the conclusion that the timber resources of Vancouver Island offered unlimited possibilities for wealth, if developed by men possessed of experience and the requisite capital. Quick to act whre his judgment approved, Mr. Moore reached Victoria two weeks later with his partners, Messrs. C. T. Moore, W. T. Coleman and S. M. Cochrane. The party at once set out on their hunt for likely timber lying at the right distance from salt water. They staked some sixteen sections on the Jordan river, and duly advertised it for purchase according to law. Then they returned to the forest and staked more, until they had in all some forty-nine sections of choice timber. Next a block of 1,532 acres of crown-granted timber was purchased from J. A. Sayward, the Victoria mill owner, for $100,000 cash. In March, 1907, a half interest in the above properties was disposed of to Seattle parties for $150,000, and a considerable portion of this additional capital was at once invested in a logging plant with which the Jordan River Lumber Company began development on a large scale.

Then came an era of hard times, when certain of those who had invested in the Jordan river properties and industry required to realize quickly by withdrawal in order to protect other interests. This produced the occasion for Mr. Moore's forward movement, for—realizing by this time that he had one of the finest possible timber propositions—he went directly to the home of timber men, the State of Michigan, and there interested fresh capital.

Large Saw Mill Plant Acquired.

Mr. Moore's new associates were not slow in realizing the value of the timber holdings in which they now had a share. The newcomers invested several millions of dollars, and in a short time associated companies were formed for the more speedy development of the joint resources. One of these companies—the Michigan Puget Sound Lumber Company—secured control of the J. A. Sayward saw mill at Victoria, one of the largest on the island, together with extensive limits on Powell river, on the mainland, about one hundred and fifty miles north of Vancouver.

Since last fall, when the mills passed into the possession of the new owners, the plant has been undergoing constant improvement under the supervision of the general manager, Mr. Delbert Hankin, whose task was rendered the more difficult owing to the fact that the demands of the large local and shipping trade made it impossible to close down for any length of time. The capacity of the saw mill has been increased to 150,000 feet in ten hours, the main equipment comprising one Allis-Chalmers 10-foot band head saw, one Allis-Chalmers 9-foot double cutting carriage resaw, one Mershon roller resaw, and one small gang resaw. Some of the finest logs cut in British Columbia are to be found in the company's booms in Rock Bay.

The planing mill in connection is thoroughly equipped to handle expeditiously the lumber output of the mill, but several of the slow-speed machines are to be replaced later on with high speed models. The capacity of the lath mill is about 20,000 daily. The plant also comprises an up-to-date sash and door factory and interior finish department, as well as a box factory. The briskness of the local building trade, and the number of orders constantly on hand, would seem to justify increased attention being given to this department. Just at present the men employed are busy framing up and putting together a large order of doors, frames and sash for the huge plant of the Powell Lake Pulp & Paper Company. The box factory has an output sufficient to supply the needs of the Island firms and leave a surplus for shipment to the prairies. In addition to the fruit packers, boxes are supplied to the fish, soap and oil companies, and the business done in this one department reaches a handsome total on the year's operations.

Catering to the Export Trade.

The Michigan Puget Sound Lumber Company accomplished a notable feat early in the summer—one in which every citizen of Victoria took a deep interest—when they undertook to load a large ocean vessel at the mill dock in the upper harbor. The "oldest inhabitant" recalled something similar as having occurred some thirty years previous, but the vessel happened to be a schooner of moderate draft. This time it was the large four-masted bark Elginshire, of 2,229 tons, 285 feet in length and 40 feet beam. Her lay days began on June 4th, and just about that time General Superintendent Hankin and another gentleman, Mr. T. C.

Powell River, B. C. Mainland, Showing Booming Ground and Logging Railway of Michigan Puget Sound Lumber Company

British Bark Elginshire at Dock of Michigan Puget Sound Lumber Company Taking on Two Million Feet for Delagoa Bay, East Africa

Sorby, secretary of the Inner Harbor Association, began to experience attacks of insomnia which threatened to become chronic. The former was worrying over the problem presented in having to provide two million feet of lumber for a foreign cargo when the local and prairie demand called for most of the daily cut. The latter had pledged his word that when fully laden the ship would be able to reach deep water. Lumber went aboard in a steady stream, and as the vessel's draft ran into big figures Mr. Sorby's perturbation was remarked by many. However, he redeemed his pledge. By sticking everlastingly at it he managed to arouse the federal authorities to the importance of the occasion, and secured an order for a dredge to operate at points in the harbor where silt had accumulated. When the day came, thousands watched the departure of the big vessel, and Messrs. Hankin and Sorby were overwhelmed with congratulations. It is the intention of the company to develop the export trade, now that the capacity of the mill has been greatly increased.

The firm's supply of logs is secured from the Powell Lake limits, where an extensive logging outfit is maintained and a large number of men find steady employment the year round. Powell river is not navigable, and a railway one and one-half miles in length is used to convey the logs from the lake to the booming ground on salt water, where the company's tugs hook on to the tows when made up. It so happens that the Powell River Pulp Company requires the landing pre-empted by the lumber company, and a suit is now in progress between the two concerns to effect a settlement of their respective claims. The immense cement dam to be erected by the pulp company will raise the present level of water on the 28-mile lake about 25 feet.

The officials of the Michigan Puget Sound Lumber Company are: Dudley E. Waters, president; E. B. Cadwell and J. H. Moore, vice-presidents; Chas. A. Phelps, treasurer; Delbert Hankin, general superintendent; D. B. Taylor, secretary, and M. T. Vanderbosch, assistant secretary.

Hardwood Trade Expects Good Business

Stocks Reduced in all Lines but Basswood—Shortage Probable Before Arrival of New Stock—Strong Demand for Low Grade Birch

From information received from a number of manufacturers and wholesalers of hardwoods in Ontario, there appears at present to be reasonable expectation that an active winter, spring and summer trade are now ahead of the trade. The best indication of this is the manner in which, during the past summer, low-grade stocks have been moving. This has been the case especially with birch, which has been in splendid demand for flooring. The popularity of birch for flooring has been increasing rapidly, and is based on a solid foundation, viz., peculiar adaptability for this product resulting both from durability and fine appearance.

The market situation in general was well outlined in an interview which the "Canada Lumberman" recently had with Messrs. A. E. and R. L. Clark, of Edward Clark & Son, Toronto, manufacturers and wholesalers of hardwood. This firm have their own limits in Northern Ontario. They operate both in the Canadian and United States markets, and are closely in touch with trade conditions over a wide territory. Their views upon the situation were summed up by Mr. A. E. Clark as follows:

Our stock is away short. We have a great deal more on our books sold that we had this time last year. This applies to practically all kinds of hardwood except basswood. Birch and maple particularly are short. We have very little ash and elm. Our market all season has been good in every respect. The low end has held its own well with the good end. We have no surplus of any particular grade, and we have handled more lumber this year than ever before. The demand has been good from all kinds of consumers, and our local trade has taken up our surplus stocks closely. The American trade, especially the chair trade, has been particularly strong, and the furniture trade in general has been quite good. The demand for low-priced chairs manufactured from birch and maple has been very strong.

In regard to the outlook for the fall trade, so far as Canadian business is concerned, the conditions are good. We do not anticipate a strong demand, however, from the other side until the congressional election is over. Most of our customers in the United States expect that the elections will result in a Democratic House with a Republican president, a combination which is not very encouraging from a financial point of view.

We cannot see any reason to expect a decline in prices unless enormous stocks are put on the market next spring, and this is altogether improbable. Over-production alone can, in our opinion, affect prices in the near future. We expect, however, that instead of over-production there will be a shortage in a great many lines of hardwood before the new stocks come in. The majority of lines of hardwood in dry stock will be cleaned out long before the new cut is on the market, which, in all probability, will cause a considerable advance in prices for early spring trade. The question arises at present whether it would be wise to increase or to diminish our preparations for future trade. We do not see any reason at all for decreasing. We figure on handling our production on the same scale during the coming year as we did last year. Of course, if we can work up an increased trade we will buy more extensively. At the present time, however, we see no reason for changing our policy.

There certainly is no important falling off in American trade. Hardwood consuming plants are coming into greater prominence all the time, and there are at least eight new firms in the United States which will have consumed sixty million feet of hardwood during the past summer and this fall. Although there has been a falling off in some lines of the consuming trade in the United States—for instance, in the furniture trade—the enormous call for hardwood for interior work has offset this almost completely, making the present hardwood year a satisfactory one with nearly all lumbermen. So far as we are concerned, I cannot see why these conditions will not continue at least for another year. Our country is in a position in which it is bound to grow. With favorable economic conditions we are certain to have an increase in the consumption of hardwood for another season. The greatest increase in the consumption of hardwood in Ontario during the last season or two has been unquestionably in connection with the manufacture of agricultural implements. On the other hand, however, there has been an enormous demand for hardwoods for interior work. Three years ago we never used to think of calling on a planing mill and asking for carload orders of hardwood. If they wanted a little hardwood they would simply go to some firm in the city themselves and buy a few thousand feet.

We have contracted for five months ahead of date of delivery for all our low-grade birch. The same is true of nearly every mill in Northern Ontario. The flooring plants are taking up all the low-grade birch and maple as fast as it is fit to be shipped. Contracts for this would have been made this year at an advance of $3 above the prices secured for the same stock last year. Every indication is that this strength will continue. During the present year we could have contracted for twice as much if we had had the stock. We could not contract for any more than we had in sight, as very little of this wood could be secured.

The basswood situation is the only one that is at all quiet. Basswood goes into implements, buggies, and picture frames, and the producing period in connection with these trades has not commenced yet. It will be pretty well on into the winter before production is commenced, and the manufacturers are following the policy of making the other man hold the raw material for them. Even at that, however, we have no positive complaint, as one-half of our basswood is under contract. The consumers are simply not taking delivery at present. There was a very heavy production of basswood this year, because prices kept advancing. Although this wood shows a slight weakness at present, there is no cause for alarm, as it is one of the chief stocks of which there is a short supply. It is only a matter of a few years before we will have done with it.

London Company Report Good Hardwood Outlook

The London Lumber Company, London, Ont., under date of Sept. 23, report upon the hardwood situation as follows: We find the stock of dry lumber at the mills to be much larger than that of a year ago. The quality is largely of a long run grade, and we believe the reason for the increased stocks is that the mill men have been insisting on selling a grade of long run with only the dead culls out. It is impossible to market this grade of stock at the present time.

The demand for hardwoods is not quite as brisk as a year ago, and while prices appeared to show a slight advance last spring, the prices paid at present are down to about the same as one year ago.

We are looking forward to a fair trade during the winter, but it is a general feeling among wholesale hardwood dealers, that it will be impossible to make contracts with mill men this winter, when they insist on selling only a grade of long run with nothing but dead culls to be layed out. The market is overloaded with the low end of all kinds, especially in birch and basswood.

Hodgson's lumber mill and 400,000 feet of lumber were burned at Como, on the Ottawa River, on Sept. 14, causing a loss of $50,000, with only $20,000 insurance. The Village of Como was at one time in danger of being wiped out.

The Retail Dealer and His Problems

" Intelligent Ignorance " of the Buyer—More About Collections

Some Peculiarities of the Retail Lumber Trade

The retail lumber business is a curious mixture of many things that are unknown in any other line of trade, says a writer in the St. Louis Lumberman. Every business has things that are peculiar to it, but in none is there that diversity of opportunity for the exercise of trickery and cunning which ignorance and greed in the consumer tries in his relations with the lumber dealer. There is a commonality of experience of this nature in every retail business. It used to be a matter of wonder with me in the earlier days of my experiences as a yard man that there was so much of what I call "intelligent ignorance" among the average buyers of lumber. Of course, I knew that everybody could not be expected to know as much about lumber as the men who were engaged in the sale of it; ignorance in this case is excusable; but it was the man who assumed that he knew about lumber and knew nothing but that a board was a board because he had heard it called so that was responsible for a good deal of my bother and worry. And so it came about that I took but little note of the degree of a man's general intelligence when I had to deal with him in selling him lumber. They were and are now all on a par with me when I talk on lumber with them. It is another curious thing that so little is known of lumber by the more educated class of people, that you naturally suppose would be better acquainted with it than they are, and when such people have come into my yard and attempted to do their own buying they have given me more bother and annoyance, in taking up my time with their fool questions and their ignorance of knowing what they wanted. It was not their ignorance that I considered so much as their conceited assumption that they knew as much about what they wanted and what I should give them for the money as I did. "Give a man what he wants," some would say. Theoretically this is true; but if it is done in all cases in the selling of lumber to the consumer, it very often acts as an injury to the dealer and his yard. To illustrate how this works in practice—a lawyer came into my yard once, and I happened to be busy just then in the office and didn't see him. Calling me out in the yard he showed me some 6-inch boards he had picked out from the B select pile under the shed. I asked him what he was going to use them for, and he replied, "Oh, never mind what I want them for. Send them up to my house as soon as you can." And he walked out without saying anything more. I sent them up, and the first of the month I went around to his office to collect the bill, and when he saw it he "went up in the air," as we say now, and declared that was an outrageous price to pay for a few boards to fix some holes in a sidewalk. I agreed with him that it was expensive lumber for such a purpose, but tried to expain that had he told me at the time the purpose for which he wanted them I would have shown him that No. 1 common was the grade that was usually used for sidewalks. But no, "He didn't," as he said, "want any d——d knots in any more of his sidewalk lumber." Of course, it was unreasonable on his part; but it is just such lack of reason and sense that has always operated to discredit the lumber business in the mind of the general public, and we are suffering from it to-day in the form of unreasonable legislation, which comes largely from this class of ignorance I have mentioned.

The instance related above was only one out of scores of similar cases that came up in the course of my experience, and they operated to the detriment of my trade; but as my competitors were subjected to the same experiences we neither of us felt any lessening of our trade in consequence.

It is the same everywhere in the selling of lumber to the consumer. But people cannot be prevented from talking about their experiences with the lumbermen; neither can their opinions be changed concerning his business, and therefore it is this talking and forming of judgment that go to make up what is denominated "public opinion." And you and I know the principal part of it is wholly unjust and based on false premise and assumption.

Afflicted with the Carpenter Tongue

The retail lumberman everywhere is afflicted with the "carpenter tongue," which is a serious annoyance when it is wagged against him. There is not much use in trying to control it by coercive action, because it can't be reached on account of its secret and insidious nature. The common public naturally presumes and supposes that a carpenter knows all about lumber, and knows as much about it as the lumber dealer does. If anything, they will rely more on his judgment concerning it than they will that of the lumberman. It is one of the most aggravating things to a dealer who knows his business to have a prospective purchaser of a bill bring in some "jack-leg" carpenter to look over and inspect the stock and pass his judgment on the quality of the material that has been figured in the bill. The dealer knows the carpenter, but the man-going-to-build knows little if anything of the man's knowledge of his trade or of his judgment concerning building material; and yet there is the fact before him that the sale of that bill is depending perhaps on the say-so of a man that he knows is unreliable and unqualified to have in charge such a job. He is conscious of the fact, too, that if he secures the sale of the bill it will be largely owing to how he stands in the good-will of the carpenter. There is an element of absurdity in such a situation. Every competent dealer has often felt and recognized it, but he knows there is no help for it, and so he is careful not to show his feelings, and does what he can under the circumstances to control with tact and diplomacy both the carpenter and the customer.

There is so much of importance in connection with the carpenter problem in the retail business, so much requiring finesse and shrewd manipulating, that the dealer who is successful in securing the good-will and co-operation of all the carpenters in his community comes as near being at the head of his class as anyone I know of.

Good-Will of the Carpenter a Consideration

It is of little consequence to the dealer whether the carpenter is a good or a poor mechanic, or whether he knows much about lumber or otherwise, as long as he can secure his good-will and influence for his yard. In a certain sense, the carpenter is his partner in the building trade of that locality, and is a sharer in its profits, and I think it is the part of wisdom for every dealer to consider this problem in that light, for, in the nature of the lumber business, the two parties are inseparable and necessary to each other; and, therefore, the dealer should work for the carpenters' interest in connection with that of his own. There are many times when he can do this without in any way compromising them, and a dealer who fails to give the preference to the carpenter when he can do so is either careless, too selfish, or lacking in the due recognition of the importance of the carpenter to him and his business. As a rule, the general nature of the relations existing between the lumber dealer and the carpenter may be expressed as that the dealer can't get along with him nor get along without him. It is up to the lumberman, therefore, to consider the carpenters as his best friends, and to learn to treat them accordingly. In the larger centres of population the labor unions have more to do in the control of the building trades than they have in the country places, where there is more independent action on the part of the individual mechanic. In the country, nearly every carpenter is a contractor, who has a general idea of what is necessary for a building, and has confidence enough in himself to assume the responsibility. And it is this confidence, however misplaced it may be, that causes a good deal of the trouble to the dealer, and the keeping of the carpenter a poor man.

Looking for the Cheap Man

It is a worthy ambition in everyone to want to be his own "boss," but in the case of the carpenter who has this worm of ambition in him it more often than otherwise proves that he is working for a very poor "boss." You know there are always those who are looking for the cheapest man to put up a building for them. The cheap man likes the sensation of being the head of a job, and thinks he is doing a great thing in cutting it out from one of the larger contractors who figure to make some money out of it. He imagines he is figuring, but in reality he guesses at a good deal of it, and takes the job without any very clear idea of how he is coming out financially when it is finished. These make-believe contractors are the source of worry to the dealers and factory people who are called on to quote figures on the bills they submit for estimates. In some places, a good proportion of these contractors are of foreign birth, and the way they spell the names of the kinds and grades of material they want is as ludicrous as it is annoying. And yet you have got to be patient and be careful not to show what you feel. But whether he be native or foreigner, it is all the same to the dealer when the specified items on the list are only partially intelligible, when the entire list of items for a house bill is written with the blunt end of a carpenter's pencil on both sides of a single sheet of cheap paper, and smeared over with the sweat of dirty hands. It requires the gift of mind reading to get at what is wanted.

There have been times when I've not been very sorry to lose the sale of such bills, for past experience taught me that there is sure to be trouble connected with them from the start to the finish. When you have to take things for granted from another party, he is apt to also take for granted that you will give him just what he expects to receive, whether it tallies with your conceptions of what he wants or not. In the furnishing of such a bill, after you have by chance got it from the other fellow, you are continually meeting trouble arising from the difference in what was meant and what you figured on. If you insist on holding strictly to your interpretation of the specifications as they came to you, and compel the party to either take the grade figured on or pay

the difference between that and a better one, there is pretty sure to be generated a feeling against you that bodes no good to any future trading with you by that man. And the chances are, when it comes to selling him the extras on the bill—which, in a case of this kind, are liable to be considerable—you will lose the sale of them entirely, for the man will buy no more in your yard than he has contracted for in the specified bill. This common bother of having to decipher a lot of unintelligible figures pencilled on a cheap class of paper may be to a great extent remedied by getting up a plain form of blank, with printed descriptions on it of every item that is likely to be wanted in a bill of material for the general class of buildings common to the locality, and opposite these a line for the written quantities and descriptions to be set down. There could also be a few lines for the description of other and miscellaneous articles not usually called for. These blanks can be printed in almost any country printing office. They need not be of the most expensive paper or cost a great deal. A thousand of them will last the ordinary yard for a number of years, and by having your card printed on them for a heading it would serve also as an advertisement for the yard. The idea is to get them out and give a supply to every carpenter in the town and neighborhood, and when you hear of a party who is talking of building, a few of them sent out to him would act as a hint that you wanted him to figure with you.

Collection Troubles and How to Avoid Them

By H. W. Corwin, Retailer

"The easiest way to avoid collection troubles is, of course, to sell for cash, but since our business is one in which the cash sales are only about 5 per cent. to 10 per cent. of the total sales, we have the collection problem. Dealing as we do in a commodity which runs into large figures, from a retail standpoint it is not convenient for even the best of people to always pay the spot cash.

"A careful selection of those to whom we extend credit is a most important item. In this we are guided by our knowledge of the debtor, by the experience of others, such as the grocer and butcher, and again by his financial ability, which is the greatest factor.

"A man with money or property not sewed up or with a good income is collectable. Such persons are generally those who give us but little trouble unless something unforeseen occurs or they have not used good judgment and have overstretched their ability to pay.

When a man whose ability to pay is unknown to me asks for credit I consult our credit rating books, which is a summary of his past method of payments to a large number of his creditors. In our city we have a firm who compile such reports by means of lists obtained from the various merchants who are subscribers to the agency. While not entirely infallible, such a book is safe to go by, as it errs only in making persons out as worse pay than perhaps they are. Our book is much consulted, and persons with bad rating are compelled to pay cash or give security.

"In selling on credit some arrangement should be made as to the manner and time of paying. In our city a large part of the homes are erected with money furnished by the building and loan associations, who pay the money out only as the building progresses, and who usually demand receipts of the contractor before the final payments are made. In such cases the terms are mailed to us and it is to our benefit to cooperate with the local association. Many times we get orders on the associations, who pay the money directly to us.

The fixing of a definite time and the impressing of the importance of paying at that time in order to keep their credit good and to avoid trouble makes many a person come to scratch without having to resort to strenuous methods.

The mailing of invoices soon after the material is sold and delivered is a great aid. We mail our invoices to everyone who buys on credit at least three or four times a month. That it brings in money is evident by the returns in the following few days. In fact, when we want money badly we first mail our invoices. We also mail monthly statements or send them by the collector to all on our books. We aim to keep the debtor mindful of his obligation to us at all times and to knock the pins from under any excuse as to overlooking the account, etc.

Possibly as good a way as any to create prompt payment without collective measures is to give a small discount (in our case it is 2 per cent.) either at the time of purchase or within a few days thereafter. With contractors and large business firms we permit the discount if the account is paid by the 10th of the following month. We find that our contractors are fond of picking up a little change in that way. Others in these days of high prices for materials are glad to make the same saving.

Regularity in collecting and in insistence on the meeting of the obligation according to the terms of sale is necessary. Our experience has been that the time to collect is to be on hand when the debtor says he will have the money and not a minute later. For that reason we use the services of a collector who makes a business of collecting and who is invariably "Johnny on the spot."

A wholesome fear of trouble such as garnishees or liens is a good thing to create. Dilly-dallying with the debtor does not pay, for then the debtor knows you are an easy mark. Resorting to legal measures once in a while will make the debtor and his friends know you mean business and intend to have your money. The creating of such a fear makes collecting easy. If it were not for this fear the large credit furnishing houses could not do business and make a success. People when buying from them will exert themselves to keep up with their payments and will often pass by the easy fellows like you and I who have not been quite so strenuous. Insistence on prompt payment with the discount for the same if necessary and a feeling that you cannot be trifled with as well as judgment in the extending of credit will do away with much of our collection troubles and make the money roll in easier.

Finally, do not be afraid to say "no" when it comes to credit. Better do a little less and get the cash than do more and take the chances. Let your competitor have the bad ones and get the good-paying customers yourself. If you feel kindly toward the competitor exchange notes with him and co-operate in the getting of the cash. You probably won't get the poor ones he has refused in that case.

Interswitching Order Ignored

Difficulties have recently arisen at various points in Ontario and Quebec in connection with the interswitching order issued by the Board of Railway Commissioners on July 8, 1908. In view of the differences of opinion which have arisen regarding the scope of this order, the Board recently issued a circular dealing with the matter. The circular in part is as follows: "While of the opinion that the language of the Order is clear beyond misinterpretation, the Board declares that, for the purposes of the Order, (a) The maximum interswitching distance is unqualified, and means, as stated, 'any distance not exceeding four miles.....from the nearest point of interchange,' regardless of the location of the point of interchange, or of station yard limits, or any other limits or boundaries."

At Burlington, Ont., the planing mills are being charged by the railway 2½ cents per hundred pounds for switching cars a distance of 2½ miles, in spite of the fact that according to the interswitching order the charge should only be 1½ cents per hundred pounds for any distance within four miles. Claims have been entered by the shippers, but consideration of them has been deferred because the railway companies have entered a protest regarding the operation of the order in connection with interswitching at Montreal. The railways hope by this means to induce the Board to change the scope of the order so as to enable them to make heavier charges for interswitching. The point at issue in Montreal is whether the interswitching order should apply in cases where the car has to go upon the main line during the interswitching. Both in regard to this point and the point at issue at Burlington the circular above referred to is quite explicit, and the Board is expected to decide against the railways in both cases.

Freight Congestion Troubles Lumbermen

Lumber dealers in Toronto and at a number of other important Ontario points have been considerably hampered in their business by the congestion of freight traffic which has taken place upon the C. P. R. ever since that company was called upon to handle the business which the G. T. R. was unable to take care of during the strike of its operators, Fortunately the present is rather a quiet season in the lumber trade and the inconvenience is not so great as it would have been at almost any other time of year. Nevertheless the interference with trade is a serious matter. The C. P. R. have tried to give the public the idea that the congestion is largely the result of lack of sidings. Lumber shippers, however, are convinced that this is not the case and that the cause of the congestion is lack of motive power. Inquiries have been recently made among several firms which have sidings on the C. P. R. at Toronto, and in one case it was found that a company which had 700 feet of siding had not had any shunting done for four or five days.

At a meeting held recently in Vancouver the following were elected officers of a new organization styled the British Columbia Log Brokerage Company: John O'Brien, President; Theodore Magnessen, Vice-President, and F. H. Parker, Secretary-Treasurer. The manager of the company is T. F. Foley, who was formerly associated with the Washington Log Brokerage Company of Seattle. The company, which has opened offices in the Dominion Trust Building, will handle a large percentage of the Western British Columbia output of logs. On account of its facilities for filling orders, it is expected that the British Columbia Log Brokerage Company will be of much benefit to British Columbia mills. At a meeting of directors it was decided that the market conditions warranted the following prices: No 1 fir (28 inches and over), $12 per thousand; No. 2, $9.00 per thousand· No. 3, $6.50 per thousand.

Idle cars continue to decrease. The number out of service in the United States and Canada on August 31, being the latest figures available from reports filed with the American Railway Association, was 50, 729, a reduction of 22,950 from the preceding two weeks.

Machinery and Equipment

The Manufacture of Saws—Description of the Various Processes

How the Modern Saw is Produced

A saw is not just a sheet of metal with teeth cut in the edge. That is, the twentieth century saw is not so constructed. That kind of a saw was good enough to supersede pieces of flint and serrated metals used during and following the stone age, but the high pressure of the twentieth century has made it necessary to produce saws which are not only abreast but ahead of the times, which will run easiest, cut fastest, and hold their edge, teeth and tension under unusual, forced conditions. It is necessary, therefore, to employ steel of a special quality, differing very materially from that which is used in other branches of manufacture.

Saw steel must be of the very highest grade, close-grained, tough, hard, but not brittle, so that when it is sharpened it will retain its cutting edge and tension under the most trying service. It is a fact that no matter how closely the material and processses of manufacture which enter into the making of steel are safeguarded, it is a physical impossibility to avoid some slight variation.

Saw steel should be made of virgin ore, and the formulæ contain large quantities of very expensive ingredients, but by far the most important is that of proper heat treatment. The slightest variation in this regard, or the neglect to properly clean the crucibles, will produce a corresponding variation in the product. The steel mill may, therefore, carefully analyze every product going into the furnace, and may surround itself with every apparent safeguard, and yet be unable to produce batches of steel of absolute uniformity. It is necessary, therefore, for the saw maker to use every possible safeguard in the way of chemical and physical analysis in order to be assured that his saws will be of uniform temper, and for this reason, reject and return to the mills every plate of steel received which is not absolutely up to specifications.

Being assured of the fact that the saw plate itself is of proper material, the first process of manufacture is that of toothing. This is a purely mechanical process, but required ponderous machines and absolute accuracy of construction. It has also given the saw maker an opportunity to display his inventive genius to the highest degree. In the modern plant there must be an endless variety of machines for this purpose, each covering a certain type of saw; machines which must accurately and with the greatest economy produce the small, fine teeth of the mitre saw, and then those covering the other various types, such as hand, rip, cross-cut, band, circular and other saws.

From the toothing room the saw advances to the tempering process, and here we find one of the most intricate and painstaking operations in the evolution of the perfect saw. As the process used by the most successful manufacturers is exclusive, we must pass on without too much detail, but it is needless to say that it is one of unusual minuteness of detail, for the slightest variation here may undo all the safeguards which have surrounded the bringing of the plate up to this stage. In the first place, the piece of steel is heated to a bright red and immersed at that heat in whale oil. The action of the whale oil serves to render the steel as hard as glass. Naturally, this extreme hardness will not serve the purpose of a saw. It renders the saw brittle, and therefore it becomes necessary to reduce this temper to the proper degree required for the class of saw which is to be made from the particular steel. This is done by the application of heat in other furnaces, and is called the drawing process.

After the hardening and tempering process, it is necessary that each saw, of whatsoever nature, should be straightened and tensioned before it is ready for the subsequent processes. In this straightening or smithing department the highest quality of skilled labor is required of the manufacture. The men who do this work are called saw makers, because, to their skilled judgment the proper tension of the saw is due. The different plates are put upon the anvil and hammered by a hand process, though in the case of band saws a power hammer of power roll is often used to excellent advantage, and in some cases the power hammer can be used to advantage on circular saws. Without this process, a saw will not run true, nor would it be able to stand up and do its work in all kinds of wood and with all sorts of speeds and feeds. The tension has to be regulated in power saws to suit the speed and feed of the particular mill in question.

Tempering

Polishing

Smithing Circulars

The grinding room is one of the most important departments of a modern saw factory, in which the utmost care and precision must be used, for here the saw, which is of an even thickness throughout, must ground down to the proper gauge, so as to give it the easiest movement while in action. The mammoth band saw must be ground to an even thickness throughout its entire length and width. The finest types of cross-cut saws are "segment-ground," a process which enables them to cut rapidly and easily with but little set to the teeth.

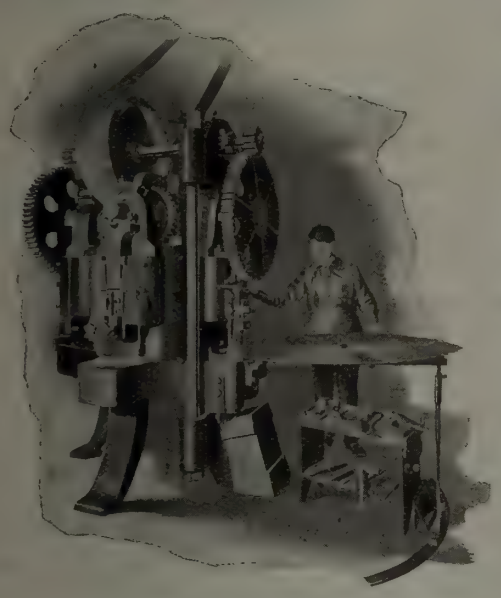
A "segment-ground" cross-cut saw is of even thickness along its entire tooth edge, and two gauges thinner on the back at the end, and four to five gauges thinner on the back at centre. It tapers gradually towards the back, which is the thinnest point. This construction is scientific, as the thickness is placed at the point necessary in order to give the saw stiffness, and the tapering of the blade at the exact point where ample clearance will be given. This is an intricate process, requiring special machinery, and it produces saws of greater efficiency than any other.

The hand saws are taper ground, so that the tooth edge is the thickest point, and a gradual taper is given to the balance of the blade, so that its thinnest part is on the back at the point. The circular saws are ground down from the tooth edge towards the centre, and similar treatment is given to all classes of saws, so as to secure the easiest running quality.

After grinding, it is necessary that all saws should go through a second hammering process, as the process of grinding disturbs the tension of the saw more or less, and it is necessary that this tension should be readjusted before the saw is further finished.

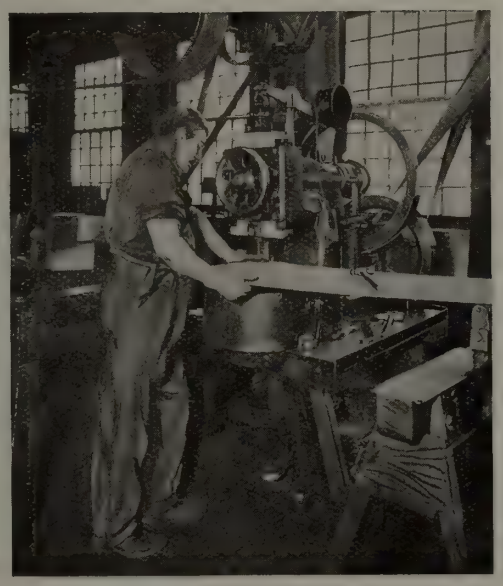
After hammering comes the second grinding, or skimming, process,

which is merely a light grinding to remove all possibility of hammer marks after the first grinding.



The saws are then ready for the fitting of the saw teeth, wherein each tooth is properly pointed and given an accurate and desirable pitch, so that it will perform its operations with the greatest economy. It is the natural ambition of the most successful saw makers to deliver saws which are ready for immediate action.

The saw is next passed to the finishing room for polishing, etching and packing.



It is needless to say that each of the processes enumerated above must be safeguarded by the most rigid inspection, as a failure to perform any one of them would render the saw practically useless. In these various departments men of unusual ability and judgment are employed, who have had many years of practical experience.

In the manufacturing of lumber and lumber products by far the most universal and important tool is the saw. It is natural, therefore, that all who are engaged in the lumber industry in Canada should take an interest in the development of the saw-making industry in this country. In this connection it is of unusual interest to note that E. C. Atkins & Company, the Silver Steel Saw people, have recently erected a modern saw-making plant at Hamilton, Ontario.

They have sent to this factory Mr. H. P. Hubbard, who was formerly superintendent of the home plant, at Indianapolis, Ind., U.S.A. With him have come all the knowledge, experience and "know-how" of the mother industry. With him have come also the improved machinery and equipment necessary to the production of the highest class of saws. They have also brought to Canada scores of skilled artisans from the United States. These men will make Canada their home. A visit to this model plant will prove instructive to anyone interested in the manufacture of high-grade saws.

News Notes from Georgian Bay

Manley Chew's mill at Midland was closed dow. on September 15, having by that time completed the manufacture of all the logs on hand.

The Turner Lumber Company, of Toronto, have decided to take out only a very limited number of logs from their Georgian Bay limits this winter.

The Log Pickers' Association of Ontario gathered about 160,000 logs on Georgian Bay during the past summer. The product from these logs will be worth about $80,000.

Mr. George H. Holt, of Chicago, who is associated with the Holt Lumber Company, of Oconto, Wis., is considering the taking out of logs from his limits in the township of Mackenzie on the Magnetewan River. This limit is about 81 square miles in extent and is estimated to contain about 100,000,000 feet of pine.

The timber limits in the Georgian Bay district have been unusually free from fire during the past summer, and as a result the cut during the coming winter may be considerably lessened. In many previous winters large quantities of logs have had to be taken out, as they had been injured by fire and would spoil unless manufactured without delay.

The Sydney Shipping and Mercantile Agency have announced that a new line of fast cargo steamers for the Australian trade is shortly to be inaugurated. It is to be owned and managed in Sydney, but an oversea firm of shipbuilders will be connected with the venture. The line is to trade from Australia and New Zealand to the (eastern) United States, Canada and Great Britain. The fleet will comprise five steamers and will maintain monthly sailings. The builders guarantee that they will be the most up-to-date and fastest cargo steamers trading to the southern hemisphere.

Serious Charge Against Railway Company

At the sitting of the Railway Commission at Winnipeg on Sept. 24, Mr. D. C. Cameron, President of the Rat Portage Lumber Company, made a vigorous complaint against Mackenzie & Mann, charging that they were engaged in a deliberate attempt to put his company and himself out of business by refusing them proper shipping facilities. He stated that he could easily double his plant at Winnipeg, but he is dependent on the Canadian Northern for a supply of cars to carry his logs, and the plant was unable to run more than 125 days in a year now owing to the cold-blooded refusal of the railway to furnish him with sufficient cars. He had complained many times to both Mackenzie and Mann. The former had tried to put him off with promises, while the latter had bluntly informed him that he could not have any better service than he had had in the past six years. He appealed strongly to the railway commission for relief, and said if it were not given he would be forced out of business. The statement came out in his application for lower rates on the C.N.R. between Western Ontario points and Winnipeg. Intermediate rates, it seems, are higher than through rates from Rainy River, and Chairman Mabee expressed himself as antagonistic to such discrimination.

Ottawa, Sept. 26.—The attention of Ottawans was drawn to-day to a veteran slide master of the Ottawa river in the person of Janvier Souliere, now 81 years of age, on the occasion of the 60th anniversary of his wedding. It was he who, in 1860, conducted the Prince of Wales, afterwards King Edward VII, through the dangerous rapids at the Chaudiere on the occasion of Prince Edward being entertained by the citizens of the Capital before the ceremony of laying the corner stone of the Parliament Buildings. Janvier was then 31 years of age. Though grey headed and drooped, bearing the burden of 71 years of rugged existence, he was still the most trustworthy person to steer the raft that bore Edward's son, now George V, over the same slide when he made the exciting trip nine years ago. Janvier is a native of St. Andrew's, Argenteuil County, Que. He wedded at 21 a girl of the village and they came to Ottawa in 1854. They have 84 descendents. Their diamond jubilee was commemorated by a special service in St. Jean Baptiste Church.

The report that Loveland & Stone, Cutler, Ont., had purchased berth No. 2, in the Township of Hutton, and berth No. 4, in the Township of Parkin, from Allan McPherson, of Longford, Ont., as published in The Canada Lumberman of Sept. 15, should have given the purchasers' name as The Cutler Bay Lumber Co., Ltd. The Cutler Bay Lumber Co., Ltd., is composed of Messrs. Loveland and Stone and some Eastern Canada parties. In addition to the limits purchased from Mr. McPherson, they hold a number of others. Their capital is $300,000, and they are an entirely distinct company from that of Loveland & Stone.

Why

did the Big River Lumbe equipment for thei

did Wm. Deary, General fast-feed Matchers

did S. J. Cusson, General buy 12 Berlin fast

did Nathan Paine, of th their NEW plant?

did the Bowman-Hicks Lu ment for their NE

Why have we orders for and have installed over 218 fast feed matchers in the past fourteen months?

As a boy would say, "What's the answer?"

All of the splendid orders above were placed within 60 days of each other.

Everyone knows of the enormous size of the Potlatch Lumber Co., and their output of 750,000 feet daily.

The Virginia & Rainy Lake Co. is a fifteen million dollar corporation just starting in Virginia, Minnesota.

The Paine Lumber Co. is known from Australia to London. Their product is everywhere.

The Big River Lumber Co. are not yet as well known, but are building one of the largest mills in Canada.

A year ago the Potlatch Lumber Co. decided to build several new plants. Machinery men got busy.

Mr. Deary said to three machinery manufacturers, "We're not going to buy a pig in a bag. Put your latest machine in, we'll run them ourselves and we'll decide which one we want. We want the best there is."

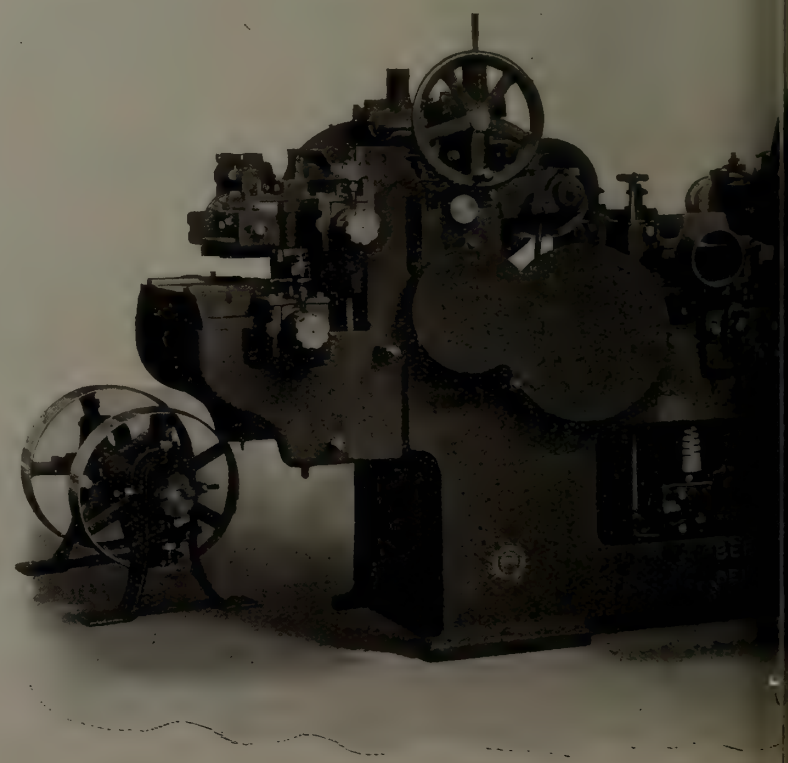
Three machines went in. The others went in with a hurrah. A bet was offered our Spokane Mgr. that we never would put in a machine on the side-by-side test.

We shipped a Berlin "90"; a 200 feet-per-minute racer with fast feed OUTLINE attachment. All three machines were put in condition and started off.

Six to nine months tells a pretty straight story of what a machine is, and here's the story, straight and true.

Number 1—Matcher was characterized as a machine so complicated that it took an expert to care for it. Took an extra man to oil it. Number 1—eliminated.

Number 2—Matcher racked itself to pieces at fast feeds. Impossible to keep the bearings in alignment and the oil flooded the belts.



Number 2—eliminated.

Number 3—The Berlin "90" was run night and day for between six and nine months. It was not tied up for repairs, not complicated and ran continually, turning out a fine product all the time and the Potlatch men liked it because "it was always going."

Remember this—all three machines were run by Potlatch operators. The test was fair to all, it showed accurately the practical value of each matcher.

The entire reason why SEVENTEEN Berlin "90's" go into the new plants of the Potlatch Lumber Co., is because a "90" will do more work, is easy to operate and keep in condition.

We do not know how much more work the "90" turned out per minute. The test was run and they decided what was what.

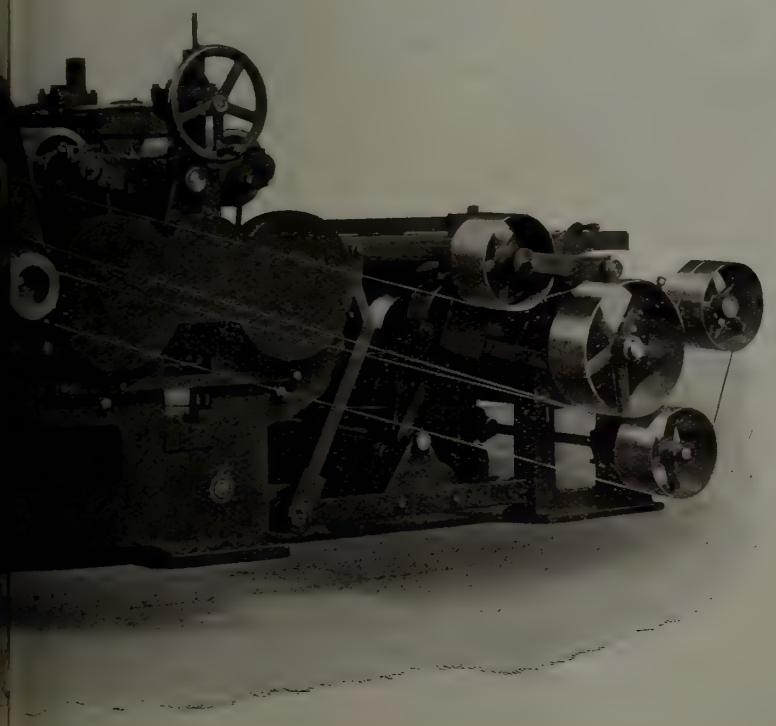
Big River, Sask., buy seven Berlin fast-feed matchers among their plant?

r of the Potlach Lumber Company, Potlach, Idaho, buy 17 Berlin eir new plants?

ger of the Virginia & Rainy Lake Lumber Company, Virginia, Minn., Matchers for their NEW plant?

e Lumber Company, Oshkosh, Wis., buy 34 Berlin machines for

Co., Lorain, La., buy four Berlin fast-feed matchers among the equipnt?



A few months ago, the Virginia & Rainy Lake Lumber Co. bought their equipment. Mr. Cusson wanted the best there was and did not buy on price.

He is too good a business man for that. But the fact that TWELVE Berlin fast-feed matchers were ordered with sizers and surfacers and other equipment means something.

The Paine Lumber Co. considered all makes of tools carefully. They bought SEVEN Berlin Resaws in preference to any other. They bought TEN Berlin Sanders. They bought Berlin Matchers and Moulders.

The Big River Lumber Company investigated, and that investigation was exhaustive and conclusive. They purchased EIGHTEEN machines all told. And all Berlin.

Why was this? Men of the character of Wm. Deary, S. J. Cusson, Nathan Paine, Wm. Cowan have had too much experience to buy unwisely. They cannot afford to take chances, they want dependable material.

You can buy a Berlin "90" at a reasonable price. Here's a few reasons why we have sold 218 Berlin 94-X's and 90's lately.

The "90" is equipped with cylinder heads carrying 6 self-hardening steel knives. There is no head so perfect.

The side-heads are our 12-bitted type, the only 12-bitted side-heads in the world. The construction divides the cut so that the side-head work is clean and knots and cross-grained places are not torn out.

Our Automobile feed drive eliminates the nest of gears found on other tools. The chain drive runs smoothly and quietly and doesn't give trouble. Easy to reach, no tearing down of machine.

Our system of top, bottom and side-head belt tighteners keep the belts tight every minute. Easy to slip belt off or on.

Our head grinder saves time in sharpening the cylinder knives. It is quick, always ready, a wonderful little tool.

Our beading or stationary profiling attachment requires but one 8-inch belt to drive it. Two pulleys, tightener furnished, driven from above, below or countershaft. Very simple.

You can change from a run of drop-siding to beaded ceiling in two minutes. End thrust provided for everything so a boy could understand.

Full equipment of heads for your work furnished. Make anything you like in profiling work at fast-feeds and by jointing the knives secure work you never dreamed of. This is not bunk, but facts.

It is the field against the Berlin always, but we're not worrying. If you want a proven machine, a UNIT matcher, right in every detail, you want a "90." We are installing one every working day.

We will appreciate very much your inquiries.

Freight Rate Changes Not Satisfactory

Readjustments Made in Lumber Schedules do not Comply with Order of Railroad Board—Case Argued and Interpretation Sought

Ottawa, Sept. 20.—The lumbermen had an opportunity to-day of showing the Railway Commission that 90 per cent. of the cars of lumber shipped for export were not covered by the rates ordered by the Board to be put into effect on June 15 last. This is the branch of the famous lumber rates case, which began in 1908, that remains unsettled. The railways had been upheld in the higher tariffs on domestic shipments, but were ordered "to re-establish rates to Montreal which will on the whole be lower than the domestic rates."

The tariffs filed in response to this order were so far from complying with it that the Canadian Lumbermen's Association, backed by the Montreal Lumbermen's Association, wrote the Commission asking for an interpretation of the order, with a view to ascertaining whether the railways were considered to be within their rights. This application, though not actually a complaint, was regarded as such by the Commission, and the railway companies were called upon to justify their position.

At the hearing to-day Commissioners Scott and MacLean presided. J. F. Orde, K.C., represented the Canadian Lumbermen's Association; W. S. Tilson, the Montreal Lumbermen's Association; E. Beatty, C.P.R.; W. H. Biggar, K.C., G.T.R.; J. Phippen, K.C., C.N.R. In addition to the legal talent there were present: Frank Hawkins, Secretary of the Canadian Lumbermen's Association; W. R. MacInnes, of the C.P.R.; John Pullen and A. Hayes, of the G.T.R., and Guy Tombs, of the C.N.R.

The railway companies submitted statements covering six specified sections in eastern Canada, in which lumber for export from the port of Montreal originates. In most of these territories the rates were lowered. The representation looked fair, taking into account only the extent of territory and the number of shipping points named; but when the volume of lumber carried from the different places was estimated it was evident that low export rates went into force only where the railway companies' revenue would be slightly affected by the change. In the Ottawa Valley, where three-quarters of the lumber originates, the export rates were formerly 4, 6 and 7 cents per 100 pounds, from Ottawa, Arnprior and Pembroke, respectively. The rates were advanced a cent all round in the general revision in 1908, and were not altered as a result of the Commission's ruling.

Mr. Hawkins, for the lumbermen, submitted statistics on the quantities of lumber carried, in contrast with figures relating to territories which were given by the railway witnesses, and which were incomplete as data, without a record of the freight supplied by each territory. For instance, the railways showed that the old domestic rate from Lennoxville had been raised from 6 cents per 100 pounds to 8 cents, while the export rate, though advanced similarly, had been put back to 6½ cents. The lumbermen admitted they were satisfied that this adjustment was a compliance with the order of the Board, as far as it went.

The period taken for comparison of rates and quantities of lumber hauled was the months of June and September, 1908. The railway companies' statements of lumber carried were accepted by both parties. In the two months referred to, the G.T.R. hauled to Montreal for export a total of 295 cars, and the C. P. R. a total of 354 cars.

Mr. Hawkins showed that in the territory described as "A," east and south of Montreal, three G.T.R. and twenty C.P.R. cars of lumber originated. This was 1 per cent. of the total G.T.R. shipments and 5½ per cent. of the total C.P.R. shipments, so that the rates in effect were not very material.

From "B" territory, west of Montreal to Toronto, and Bobcaygeon, on the C.P.R, and west of Montreal to Toronto, and Orillia, on the G.T.R., one car was shipped on the C.P.R. and none on the G.T.R. This was a still less important district.

From "C" territory, north of the main line to Toronto and Windsor, on the C.P.R, and north and west of Toronto to North Bay and Sarnia, on the G.T.R., six cars were shipped on the C.P.R. and sixty-three on the G.T.R.

From "D" territory, C.P.F. main line, Toronto to Windsor and south, and on the G.T.R. south of Toronto to Lake Erie, two cars were shipped on the C.P.R. and none on the G.T.R.

From "E" territory, C.P.R. west of Montreal, via Ottawa, to Sault and Chapleau, and G.T.R. north of Coteau Junction to Ottawa and west to Depot Harbor, 249 cars were shipped on the C.P.R., or 81.65 of the total C.P.R. shipments, and 220 cars were shipped on the G.T.R., or 74.59 of the total. The railways practically withdrew every export rate in this territory, or where the rates are given they do not comply with the order, except in two or three instances. Nor even did all the rates in the first-mentioned four territories comply with the order.

From "F" territory, comprising north of Ottawa to Waltham, Nominingue and Maniwaki, all on the C.P.R., thirty-five cars were shipped. Only one rate, that from Morrison, complied with the order.

The outstanding feature of Mr. Hawkins' statement was the effect of making no reduction on the export rates from the big lumber-producing centre surrounding Ottawa. Mr. Orde argued that it did not avail the lumber shippers anything to modify rates in sections where practically no lumber was shipped, when shipping points were burdened with an exorbitant tariff.

The railway solicitors pleaded that the rates from the Ottawa Valley were abnormally low before the revision, and they would not stand the toning down applied to other districts. Consequently, the charges were left the same for domestic as export shipping.

The Commission reserved a decision. Their pronouncement will be on the point whether the new rates comply with their order of the early summer.

Personal News and Notes

The wedding will take place on October 19th of Mr. Jno. Storey, of the staff of the R. Laidlaw Lumber Company, to Miss Lillie M. Wilson, eldest daughter of Mrs. Jacob Wilson, 583 Euclid Ave., Toronto. After the wedding the couple will take a two weeks' honeymoon.

Mr. John Hanbury, of Vancouver, President of the Hanbury Manufacturing Company, accompanied by Mrs. Hanbury, visited Winnipeg recently, where his son, George Hanbury, was married on September 21 to Miss Kilgour, of Winnipeg. Mr. Hanbury reports that during the year his company have spent $20,000 in increasing their plant, and even with their extra facilities have found it very difficult to keep up to the trade.

Mr. L. S. Amery, of London, Eng., who accompanied Earl Grey on his recent trip to Hudson Bay and around the Coast of Labrador, reports that on their way to Hudson Bay they passed through probably the largest area of pulpwood in the world. It was over 200 miles square and penetrated by scores of rivers. Within ten years, he believed, pulp mills would be thickly scattered on all these tributaries. Means of transportation would be plentiful by that time with the steamship route through Hudson's Bay and the Grand Trunk Pacific. "I feel quite confident therefore that we shall all get our daily editions for a couple of hundred years more," said Mr. Amery with a smile.

Mr. W. H. Bromley, Reeve of Pembroke, Ont., has severed his connection with the Pembroke Lumber Company of which he was Manager and has commenced business in Pembroke as a lumber broker. He has already purchased the cut of the Massey Lumber Company amounting to six million feet and will shortly make other purchases which will provide him with a splendid stock. On the occasion of his resignation the employees of the Pembroke Lumber Company presented Mr. Bromley with a handsome gold watch bearing his monogram and an appreciative farewell address.

Dr. B. E. Fernow, Chief of the Department of Forestry at the University of Toronto, returned on September 26th from a three months' trip to Europe where he had been attending a number of important forestry conventions and had been studying conditions throughout Sweden and Norway in particular. He reports that he saw a great deal of excellent forestry in progress in Sweden. There were many things, of course, which could not be applied to Canadian conditions, but there were also many which could be made use of to advantage in this country. Conditions in Sweden are much simpler from the forestry point of view than in Canada. The lumbering country is much more settled than he had expected. The forest areas are largely in control of farmers, who naturally take much more care of their property than they would if they were simply interested in the timber itself. Dr. Fernow states that a stationary population, such as that of Sweden, is much easier to educate upon forestry lines than a moving one, such as that of the timbered areas of Canada. During his visit Dr. Fernow attended the meetings of the Association of German Foresters at Ulm, Bavaria, and of the International Association of Forestry Experiment Stations at Brussels. He also visited Stockholm and attended the International Geological conference. In addition he made a number of excursions and side trips on his own account in order to study forestry conditions.

FOR SALE

ONE LOMBARD STEAM LOG HAULER and ten sets of big sleds complete all in good condition. This log hauler and outfit has been operated successfully for the past three seasons in the Megantic district. Have finished our operations there and have no further use for it. Will sell at a bargain. Price less than 40% of what a new output of this description would cost. This is a rare chance for lumber operators who want an up-to-date hauling outfit. For further particulars apply to HOWARD & CRAIG, Sherbrooke, P Q. 19

Modern Planing Mill and Dry Kiln

Consisting in Part of

ONE 20 x 42 HAMILTON CORLISS ENGINE.
Two high pressure horizontal tubular boilers
One 16 kw. 110 volts direct current dynamo
Two Berlin moulders
Seven Berlin matchers
One Berlin double matcher
One Berlin band resaw
One Berlin surfacer
Three rip saws, self-feeding
One siding saw
One swing saw
One dry kiln, 40x100, three tracks
And all appliances including 100 two wheeled lumber buggies. All practically new. Preter to sell as a whole but will sell separate. Address RED CLIFF LUMBER CO., Duluth, Minn. 22

Veneer Cutting and Panel Machinery For Sale

FOLLOWING MACHINERY FOR SALE AT a bargain. All in excellent condition.

1—7 x 14 engine and drag saw
1—log ladder and live roll
1—120" fan, heater and engine
1—8 x 120 ft. roller dryer, heater, engine, etc
2—200 h. p. zell boilers
1—10 x 12 x 5 Northy pump, trup and receivers
2—6 x 4 x 7 Northy pumps duplex
1—100" Coe veneer lathe
1—88" Coe veneer lathe
1—100" Coe veneer clipper
1—88" Coe veneer clipper
1—100" Capital knite Grinder
1—3 sided matcher
1 air hoist and tank 88" lathe
1—chain block
1—8 ft. bolting saw
1—veneer toping machine
1—veneer jointer 8 ft
2—Smith cut off saws, wood rame
1—plate veneer dryer 4 x 8 x 5
3—log ladders
1—elevator 8′ x 10′
1—boring machine
1—dowal
1—60" 3 drum Sander, Berlin
2—8 ft. double saws, Berlin
1—32" planer
1—iron frame dado and groove saw, Townsley
1—12" buzz planer, Berlin
1—20" buzz planer, Berlin
1—iron frame selt feed rip saw, Goldie Mc
1—7 ft. siving saw, Goldie Mc
1—8 ft. belt sander. Jackson Cochran Co.
1—wood frame rolling table, rip and Co saw Berlin
1—36" band saw
1—platform coale, Fairbanks Morse & Co.
1—saw gunner and emery grinder, Hart Emery Wheel Company
107—factory trucks
3—press screws for packing
1—band saw filing machine
1—iron setting machine and 20" filing vice
1—Gilead hydraulic press 48"x96
1—double power press b and d 64 x 72"
3—single power presses, Algoma Iron Works
1—56" glue spreader, Townsley
2—30 gal. glue heaters
1—hand press 3 screws and plates
1—hand press 5 screws and plates
1—hand press 7 screws and plates
117—dry kiln trucks, wood frames, iron wheels
720—ft. 2" trail
2—wood frame cut off saws, Smith
1—30" fan, dust separator
1—no 7 vertical heater, shatting boxes and hangers, belts, rubber and leather, pulleys, clamps, (lbr), culls for hydraulic press, turn buckles and bars.

FOR SALE—DIRECTORY OF LUMBER consuming Factories of America, a most complete and valuable book for wholesalers and manufacturere. Will accept $6, which is one-half regular price The CANADA LUMBERMAN, Toronto. tf

Tenders for Pulpwood Concessions

TENDERS WILL BE RECEIVED BY THE undersigned up to and including the 7TH DAY OF OCTOBER NEXT for the right to cut the Pulpwood on a certain area tributary to the Nepigon River in the District of Thunder Bay. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may be fixed from time to time for the right to operate a pulp and paper industry on the territory. Successful tenderers will be required to erect a mill or mills on the territory, and to manufacture therein the wood into paper.

Tenderers will be required to deposit with their tender a marked cheque payable to the Treasurer of Ontario for twenty-five per cent. of their tender, to be forfeited in the event of their not entering into agreement to carry out conditions, etc.

The highest or any tender not necessarily accepted. For particulars as to description of territory, capital required t be invested, etc., apply to the undersigned.

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 8th July, 1910.

No unauthorized publication of this notice will be paid for. 19

FOR SALE

SEVENTEEN ACRES OF SECOND GROWTH White and Red Oak. Suitable for piles or ties and small square timber. Close to Railway track; also 100,000 feet of White Pine, 70,000 feet of Hemlock, 30,000 feet of mixed Hardwood inch, 500 telephone poles 25 feet to 35 feet. Apply to E. TODD, BOX 16, Caledonia, Ont. 20

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other Pulpwoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

tf. WILLIAMSON, Publisher, Toronto.

Are Large or Small Kilns More Efficient

The size of the dry-kiln, says a writer in The Woodworker, is dependent on the amount of material to be dried and the length of time that can be consumed in the process. Ordinarily, for prompt work, a bank of several small kilns has advantages over one large one; various kinds and thicknesses of lumber may be handled independently. Thin stock and soft woods dry more quickly than thick or hardwood. Some kinds of woods require different treatment in the kiln than others, and, taken all round, the smaller kilns can be loaded and unloaded in shorter time. Should it be necessary, more help can be employed, and each kiln rushed to its full capacity without in any way retarding drying or getting at any special lot of lumber.

There is probably only one instance where the large kiln has any advantage, and that is where large quantities of one kind and a certain thickness is to be handled constantly. In such a case, a kiln that would handle a daily output without interruption could be used to best advantage.

Speaking of kilns, how few there are who can operate a dry kiln scientifically and satisfactorily, without spoiling lumber by splitting or warping, case-hardening or checking! The regulation of spaces between the piles, between the layers and between the pieces in the layers; the amount of heat, the moisture and the withdrawal of the same, are all points that need to be understood to a nicety. The condition of the stock as it goes in, its dryness, general character and shape, size and use, all have an important bearing on the treatment it should receive. How many dry kiln operators take these conditions into account and treat the stock accordingly?

All could benefit by giving this subject more careful thought and attention. Lumber would come out in better condition, with a correspondingly less loss through ill-treatment.

Power Losses in Saw-mills

There is little doubt that an immense amount of power is often lost through clumsy and badly arranged shafting and gearing, or if it is good and is allowed to get out of line or level the bearings are pinched and the loss may be very great and remain undetected for some time. As illustrating this a case recently occurred in which it was alleged that a gas engine did not give out its proper power. On testing the gas engine it was found to be all right, but the shafting to which it was attached was out of level and absorbed no less than 40 per cent. of the power of the engine. When this was set right and the shafting was properly arranged and supported, there was no further trouble. The moral is that shafting should be frequently tested, and the engine indicated occassionally running light, and with the shafting attached. In point of fact as much attention should be given to the transmission gear as to the machines themselves, and it will pay well to have very slow running shafting speeded up, and lighter pulleys substituted for the heavy cast-iron ones formerly in vogue. To still further reduce the working friction and consequently the power consumed, adjustable ring-oiled bearings and elastic roller bearings have latterly been considerably introduced with very satisfactory results.

Sawing Straight Strips

For sawing lumber into narrow straight strips for moldings and similar work it is very important that the board be guided past the saw in such a way that it will follow a straight line. For this purpost the saw-table should be twice as long as the longest board to be worked up, and a guide should extend the entire length of the table. The board is then placed against the guide with the hollow side toward the latter, so that it is supported at its extreme ends or at least at points as far apart as possible.

In this way any irregularity in the edge of the lumber is corrected at the first cut. After having trued the edge in this way the stock may go onto an ordinary power feed rip-saw with a comparatively short guide. The short guide working against a true face will cut the successive strips of equal width, that is, parallel from end to end.

Some mills have used a carriage supported on rollers upon which the board was clamped while it was passed before the saw to joint the edge, but the objections to this method are, first, that it takes time to clamp the board, and second, the carriage must be returned to the feed end before another board can be started past the saw; while where the long stationary guide is used, one board can accurately follow another.

Trueing Up Log Band Saw Wheels

To secure good sawing, it is of the utmost importance that the face of the saw wheels is kept perfectly true and flat. In working, it is found that the front edges of the wheels wear faster than the rest of the face; consequently, if this is allowed to continue, a greater strain is thrown on the back part of the saw, and the front of the blade, being more or less slack, is apt to run from the line, and cracks are set up; the tension also of the saw is damaged and distorted. When, therefore, wear is found on the wheels they should be at once trued up. If the wear is not great, this can be best done by grinding them to a true surface by means of a large emery wheel, but if they are much out, it may be necessary to take a preliminary cut in a lathe and afterwards grind them. Care should be taken that the emery wheel is not forced, and water can be used with it with advantage. It may be taken as an axiom that perfect band sawing is impossible without perfectly true wheels.

A New Method of Seasoning

Short cuts towards seasoning timber required for joinery and cabinet purposes have long been desiderata to the timber trade both at home and abroad. The increasing use of drying kilns, especially in America, as a means of conditioning and seasoning lumber is evidence of the modern-day desire to accelerate Nature's somewhat tardy methods. It has been left to a Frenchman to devise a system which is certainly somewhat startling, judged by the canons of precedent. Still, we live to learn, and in these scientific days, as may be expected, the agency which is to revolutionize the tedious process of seasoning timber is electricity, the method being known as the Nodon-Brottonnean. The timber is nearly immersed in a tank of water containing 10 per cent. of borax, 5 per cent. of rosin, and a little carbonate of soda, and rests on a lead plate connected with the positive pole of a dynamo. Another similar plate lying on the exposed surface of the timber is connected with the negative pole. Thus a current of electricity can be played around the wood, from which it is said all the sap appears to be removed, while the borax and rosin takes its place in the pores. In a few hours the timber is taken out and dried—by what means is not stated—and, hey presto! the seasoning is complete. Any of our readers who possess a dynamo for power or like purposes, or who take a supply of electricity need not find the rest of the plant very difficult to obtain, and we shall be happy to record the results of the experiment. The quick conversion of a sappy parcel of Rio quality pitch pine deals or of some discolored Archangel redwood into serviceable timber is something worth achieving.—Timber Trades Journal.

Michigan is the leading state in the United States in the production of beech lumber, and the cut in 1908, though less by 3,460,000 feet than the cut in 1907, was more than one-fifth of the total output. Indiana ranked second, with more than 17 per cent. of the total cut, and Pennsylvania third, with nearly 15 per cent. New York cut nearly 3,000,000 feet more beech lumber in 1908 than in 1907. Taken together, these four states supplied practically two-thirds of the total production.

WANTED
Lumber Company Manager

Thoroughly experienced Manager, with practical and executive ability and thorough knowledge of the business from stump to market. Operation about 20,000,000 Pine annually. State age; business record.

Address—Lumber Manager
Care of Canada Lumberman - TORONTO, ONT.

Review of Current Trade Conditions

Ontario

The volume of business at present among lumbermen in Ontario is quite extensive. In fact throughout the month of August and part of September, in many respects, the volume of business has been excessive. Always at this season of the year, however, business is in a state of uncertainty, because it is just at the point when millmen find their stock probably at its highest point. The first stock manufactured during the summer does not commence to get into shape for shipping until the piling space begins to be congested and there is always about this time a pressure to move stock and a desire to realize. New credits are also being arranged by the banks to cover the winter's operations, and there is under these conditions a noticeable pressure to get piling room. At this time of year also building operations have reached an advanced stage, so that the contractors are also between seasons with their work. Whenever a desire to move stock of this sort is noticeable purchasers begin at once to speculate upon any possible change in the market, and there is always a disinclination to place orders until the future is assured, both as to the volume of business and price conditions. It is clearly to be expected that price conditions will settle down until the end of the sawing season, late in October, when the millmen find out how much they have for sale.

During the past two or three weeks trade has shown a tendency to slacken. Unfortunately, conditions in the northern States are affecting the lumber situation over here. Manufacturers are convinced, however, that the situation is sound, as the large consuming power of the country is not in any material manner changed. Credits are good throughout Ontario and collections are being readily met. Manufacturers expect confidently to close up the year with a good record of trade.

Log production last winter was relatively light, and as a result there are no large stocks of lumber now on the market. The probabilities also are that there will only be a very light input this winter. Some of the Georgian Bay firms are reducing the number of their camps this winter. The reason for this is the experience of the past two or three winters which has taught them the folly of producing more than the market needs. A second reason is the increasing cost of woods operations, which make it imperative to estimate closely the probability of being able to sell at an advantage whatever is taken out during the winter operations. Stumpage costs have been increased so extensively and labor is so much more expensive that the operators are compelled to exercise the greatest economy and care in their work. An increase in the cost of labor has taken place since last winter. Wages in the Georgian Bay camps will vary from $28 to $32, whereas last year they ran from $26 to $30.

Business in the Georgian Bay district is exceptionally brisk. One of the largest mills was obliged during the last fortnight to shut down its sawing operations in order to catch up to its shipments. Hemlock is about the only weak point and still remains very unsettled. White pine is extremely strong. A traveller visiting one of the largest mills in the Georgian Bay district in search of pine was met with a refusal to sell at present prices. The manufacturer at this mill is holding straight mill run stock, of which he has a large quantity, for higher prices. Lath every traveller during the past week reported excellent business. Lath are weak and so are New Brunswick shingles in Ontario.

There is an extremely strong demand for long telegraph poles in the Ottawa Valley. Poles over 50 feet in length are very scarce, in fact can hardly be obtained. Ottawa companies in search of poles have had to bring in British Columbia cedar, for which the freight amounted to just about the same as the cost of producing the poles. At Ottawa poles 60 feet long, 7 inch tops, are selling at from $15 to $18.50. Everything over 35 feet is in good demand. A 25-foot pole, 6-inch top, brings from $1.15 to $1.25, and 35-foot poles vary from $2.40 to $3.75, according to the size of the top. Railway ties are quiet and stocks are heavy.

In lumber the Ottawa markets continue active and strong for everything better than shipping culls. New York buyers are taking large quantities of 1 1-4 x 9 inch and 10 inch spruce, 12 to 16 feet long. There is not much doing in box lumber. Lath are quiet and shingles are active.

Eastern Canada

A beginning has been made by New Brunswick manufacturers with the work of getting out the logs which are to be sawn next year. Of course, in most cases the work is only of a preliminary nature at present, being confined largely to the building of camps, improving the rivers, etc. There are a few operators, however, who have assembled their crews and are now chopping logs. It is not expected that the cut of logs during the coming winter will be as heavy as it was during the winter of 1909-1910. This will probably apply in a large measure throughout New Brunswick and the sections of Maine and Quebec which border on that province. The present situation of the markets does not encourage manufacturers to increase their raw material in a number of important lines. There is no doubt that the cut of cedar will be considerably reduced this winter because of the poor demand which has prevailed for cedar shingles in the New England States. The same may be said of deals for the New York market. It is probable that 45,000,000 feet of "American" logs will be the most that will come down the St. John next spring. Much will depend upon the conditions of the English spruce deal markets during the next two months. The outlook at present is that there will be no increase over last year's cut. The trade in "English" deals at Miramichi points is adversely affected at present by the reported decline in the demand. Freight rates have also advanced from 4s. to 5s. lately, and this has had its natural effect upon trade. "English" spruce deals are quoted, for the usual specifications, at $13.50 per M, but buyers are more frequently asked from $14 to $14.50.

A better demand for eastern spruce is reported at Boston and prices have advanced slightly. Some buyers are of opinion that the recent advance will not hold. The largest mills have a fair volume of orders on hand and are not anxious to sell at present. A few of the manufacturers are still in need of orders, and they are sometimes selling at a little less than $23. Random is firmer, but there is no great improvement in the demand. Sizes under 7-inch are bringing about $20, but some sales have been made at $19.50. There is a fair demand for spruce boards. There is a slight improvement also in the demand for shingles, but trade is still inactive. Prices are firm at the recent advance. The best brands of cedar extras are being held at $3.40, but sales of extras are reported at $3.10 to $3.25. Lath continue strong, although the demand is not very active. Manufacturers, however, are not forcing sales unless they can get their prices. The price of 1⅝-inch ranges from $3.90 to $4 and for 1½-inch, from $3.60 to $3.70.

Great Britain

There has been considerable activity at the London wood receiving docks of late. The city offices, however, are reported to be rather quiet. Prices are ruling steady to firm, but importers are showing a tendency to meet their customers in the matter of prices in a reasonable manner. A rather heavy autumn shipment is expected, but so far it is not affecting market quotations. Deliveries at the London docks for the week ending Sept. 10th amounted to 8,243 standards, as compared with 5,342 in the corresponding week of last year. At Churchill 'Sims' latest auction sale 3 x 11 third Quebec spruce sold for £9 10s, and fourths at £8 15s. 3 x 9 brought £10 and unsorted bright was sold for £10 5s. 3 x 8 brought £8 5s; 3 x 7, £8 5s and £8 10s.

A better outlook is reported in the lumber trade at Liverpool. There is nothing like a boom on hand, but the extreme dulness which has been characteristic for some time past is disappearing. Spruce deals continue unchanged, so far as contracts for arrival are concerned. Large steamer cargoes from St. John, with the customary specification of 60 to 65 per cent. of 3 x 7 and 8-inch, are being sold at £6 2s. 6d. to £6 5s. per standard c.i.f. Other shipments at the usual reductions are being disposed of. Ocean freights and insurance are advancing as the season advances. The advance in freights is due largely to the customary diversion of tonnage to the cotton trade of the Gulf ports. Canadian importations are about of the usual quantity. There is a somewhat better demand for pine goods, and customers are apparently convinced that the market has seen its worst, making it advisable for them to come forward with their purchases. At Manchester, trade during the last fortnight has been uneventful. Prices show very little alteration in spite of the uncertainty prevailing in so many labor quarters. Floorings, which are rather scarce at Manchester, are selling at £10 5s. basis c.i.f. Bristol has had a busy fortnight so far as imports are concerned. At Southampton the timber trade is fairly active.

The fortnight's trade at Glasgow has been rather quiet as a result largely of the trouble among the laborers in the shipping yards. If the lockout should be of long duration the demand for wood goods would decline considerably. Very few, however, take this extreme view of the situation, and the laborers are expected to give in at an early date. Recent arrivals of spruce have only met with a moderate demand, as dealers have fairly large stocks. Prices, however, are being kept firm as importers' stocks are light. Birch has been selling well and stocks are scarce. Prices are expected to advance, especially for logs, of which the holdings in first hands are practically exhausted. Sales of pine are scarce, trade being confined almost entirely to the higher grades. There is only a dull demand for American hardwood, as buyers are well stocked. There is a steady movement in plain and quartered oak, but white wood is quiet.

United States

Reports from Chicago are to the effect that the slight lull which took place in the local yard demand a few weeks ago has passed entirely away and that the demand from the country has also increased. Many retailers in the Central and Western States are buying stock for their fall trade. A gradual and steady improvement is reported at Chicago from

"Cleveland-Sarnia QUALITY"

WE OPEN THE WAY

to a growing and steady patronage the day we ship your first order. We have the key to your success in our stock of

White Pine - Red Pine and B. C. Fir

It should be some satisfaction to you to know that when you order lumber from us you will not only get stock of quality, well manufactured and properly graded, but you'll also get it promptly.

Special Bills Cut to Order in Any Size 10 to 60 Feet Long

J. M. DIVER, General Manager
E. C. BARRE, Assistant Manager

the northern pine mills, with slight increases in sales. A shortage of logs is reported by some of the manufacturers. White pine shipments to eastern markets are extensive. The demand for Norway has improved slightly and the prices are stronger. There is continued activity in the trade in cedar poles with firm prices resulting. The demand for hemlock is active and prices are firmer than they have been for some time. Stocks have been considerably reduced during the summer, and the situation is looked upon as very satisfactory. Poplar is improving gradually, with an increased demand and steady prices. Enquiries by the railways for fir timbers have been increasing, but orders are still scarce. Spruce is doing fairly well, but is met with strong competition from western pine. The southern pine market at Chicago is still in the hands of buyers. Sales are extensive, but prices are low. The cooperage situation shows no improvement. The hog crop will be light and the cooperage market is easing up again.

At Buffalo, trade in northern pine is reported fair, and improvement is expected during the fall. The low grade problem, however, is still rather distressing and is not being solved at all rapidly. Lower prices are reported in the cheaper grades, but the high grades are selling well. Hardwoods are moving fairly rapidly, but birch is scarce. It is expected that oak will be plentiful enough, as several yards report good receipts, both of plain and quartered, and the south-west Michigan hardwoods are arriving in good quantity. Their prices, however, are somewhat stiff, especially for maple. White ash is quiet. Hickory is moving slowly. Black ash is quite scarce. Hemlock is plentiful at Buffalo and prices are inclined to sag. It is doing a fair trade, however, as it is underselling spruce and yellow pine. Stocks are fair and there is a plentiful supply of boards. Yellow pine is weak and no advance is looked for at present. There are heavy arrivals of Pacific coast shingles and prices are low.

Market Correspondence

Telegraph Poles Scarce at Ottawa

Ottawa, Sept. 27.—The active demand for telegraph poles of the longest variety is an outstanding feature of the Ottawa Valley lumber market. Railway and electric companies have been unable to get supplies in lengths over 50 feet, even at high prices. For the first time a shipment of British Columbia cedar poles has reached Ottawa for the Ottawa Electric Co., which formerly obtained poles much nearer home. The freight for the long haul is understood to be just equal to the value of the poles at the starting point. Similar stock in Ottawa (60 feet long, 7 inch top) is quoted from $15 to $18.50 each. The British Columbia poles differ from the white cedar poles produced in the East. They are long, slender pieces, and, while conforming with the specifications as to size at the tops, they taper so gradually that the lower portions are much smaller than poles cut in the forests of Ontario and Quebec. Local lumbermen have expressed an opinion that the poles brought in are inferior to the home product in respect of strength and durability. It is claimed that poles which have to carry the great loads of all 60 foot lengths require the extra measurement near the base. The British Columbia shipment is not large, but if the poles give satisfaction it is probabe that, with the growing scarcity of long cedar in the East, purchases of this kind will increase. At present there is a brisk market for all poles over 35 feet long. The small pole, 25 feet long, 6 inch top. sells from $1.15 to $1.25. Thirty-five-foot poles, according to isze of top, range from $2.40 to $3.75. For all larger sizes the prices advance rapidly. The lowest quotation for 40-foot poles, 7-inch top, is $4.50; 45-foot, $6; 50-foot, $9; 55-foot, $12.50; 60-foot, $15.

The demand for railway ties is very slow and there is a considerable quantity on hand. Railway construction did not go ahead as actively as some makers of ties had expected, and the result is a sluggish market. J. R. Booth turned out the usual quantity for the season, 100,000, and they were disposed of to the Grand Trunk Railway in advance.

There is no change in the buoyant state of the market for all grades of lumber better than shipping culls. Spruce, 1¼ x 9 in. and 10 in., 12 to 16 feet long, is selling rapidly to New York buyers. Box lumber is not selling as rapidly as some dealers expected it would from indications early in the month.

Lath trade is quiet. Brisk building has an appreciable effect on the shingle business. British Columbia shingles are sold readily. The production of white pine shingles in Ottawa Valley mills is at a low ebb, there being more money in manufacturing pine in most any other form. A considerable quantity of blocks from J. R. Booth's mills are shipped for match blocks, which are in good demand.

The James MacLaren Co., of Buckingham, Que., closed the season's operations on September 16. The company sent a gang of men to build a large log slide at High Falls. J. R. Booth ceased night sawing recently, but will run the mill in day time for some weeks more.

Ottawa shippers are benefitting from a reduction in the American canal boat rates on spruce, which cuts the charge from $2.65 to $2.50 per thousand. This makes the tariff the same as for pine. While the lumbermen made a strong fight before the Railway Commission for better treatment of lumber originating in the Ottawa Valley and sent to Montreal for export, some of them regard it as a favorable circumstance that the rate, 5 cents per 100 pounds, from the city of Ottawa to Montreal will be maintained in winter as well as in summer when the water route will not be competing for business.

The Central Canada Exhibition witnessed a larger display from lumber and kindred industries than on any former occasion. Nap. Page, Crown Lands agent at Nominingue, made an exhibit of ash, maple and basswood, which showed the fine resources of that territory. W. C. Edwards obtained the wood for manufacture. J. R. Booth had a splendid display of news print, card board and pulp, and the E. B. Eddy Co. showed in the process building a couple of machines making paper bags of various sizes. J. R. Booth and the W. C. Edwards Co. both closed down a day to enable their employees to attend the exhibition.

Logging Commenced in New Brunswick

Chatham, N.B., Sept. 23, 1910.—New Brunswick manufacturers have commenced the getting out of the logs to be sawn at their mills during the season of 1911. While the work done thus far is, in many cases, in the way of building camps, improving rivers by the building of dams and in other ways preparatory to driving the logs next spring, and making preparations for the commencement of chopping, there are a number of contractors who have gotten their crews together and are now chopping logs.

That the total volume of logs cut in the New Brunswick woods and in the sections of Maine and Quebec adjoining this province during next winter will be as large as that of the winter of 1909-10 seems scarcely probable. In many of the principal lines the prospects in the markets are not such as to cause any eagerness on the part of the mill owners to load up with raw material. At this particular time the men who own the mills look the situation over very carefully and make their plans for the winter more or less in accordance with trade prospects. When these prospects are not promising, the result is at once apparent in the curtailment of the quantities mentioned in contracts and in logging plans generally.

It is certain that the cut of cedar will this year be much lighter than was the case last winter as a result of the lack of stimulus in the cedar shingle trade of the New England States. The somewhat bearish feeling which exists in regard to the New York deal market will have a similar influence upon the owners of sawmills at St. John who operate on the Maine side of the St. John River or along some of that river's branches which extend into that state. The probabilities are that not more than 45,000,000 feet of "American" logs will come down the St. John next year.

The volume of operations on the New Brunswick side of the St. John, on the Miramichi, the Restigouche and other rivers will depend to a very great extent upon the conditions which arise in the English spruce and deal markets during the next two months. Judging from present indications, there will be no particular incentive for an increase over last year, and should any circumstance arise that would have a tendency to cause a lack of confidence, the result will no doubt be apparent in a still further curtailment of the logging operations of those who market their deals in the United Kingdom. The indications for the local trade in "English" deals are not as bright as was the case a month ago. Rumors are rife to the effect that there has been a considerable slump in this line and local prices are showing the effects of this adverse influence. The recent increase of from 4s. to 5s. per standard in freight rates is also having the natura leffect upon the provincial trade. Little trading is being done in this section, although the shipments previous to the date when the deck-load law goes into effect have been fairly large and quite frequent.

A manufacturer and dealer in long lumber stated to your correspondent a few days ago that "English" spruce deals on the wharf on the Miramichi, in the usual specifications (50% sevens and eights, 35% nines, balance elevens) were worth $13.50 per thousand superficial feet. While it might be possible to buy at figures closely resembling this price, there is a strong probability that an enquirer would be quoted $14.00 or even $14.50 per thousand.

Mr. George Uplegger, of the Canadian Cooperage Mfg. Co., recently made what probably constitutes a world's record in cutting staves. Mr. Uplegger's cutting feat was 83,200 24-inch elm staves, six staves to two inches in thickness, in ten hours, on Friday, August 12th.

Canada is a pretty good customer, and it will pay to keep on good terms with her. In the first seven months of the current calendar year we sold her goods to the value of $135,156,616, while we bought from her goods to the value of only $52,631,295.—U. S. Exchange.

Lumber Matters in the Law Courts

Important Decision Regarding Contract for Sale of Lumber —Damages Caused by Mill Dam Flood—Interswitching Case

Contract for Sale of Lumber.—An action recently determined in the Circuit Court of New Brunswick, in the case of McKean v. Dalhousie Lumber Company, involved a point of much importance to lumbermen. By contract, the defendant company had agreed to sell and the plaintiff to purchase "from seven to eight millions superficial feet spruce lumber, consisting of deals, boards, scantling, fourth quality deals, and deal ends, all of the above being gang or rotary cut," etc. The contract stipulated further: "The above deals, etc., to be cut and manufactured at the Dalhousie Lumber Co., Ltd., mill, at Dalhousie, N.B., during the season of 1905, commencing about the 12th of May, 1905, at about the rate of 1½ million superficial feet each month. To be ready for shipment not later than November 10th, 1905. . . . All spruce lumber remaining over on sellers' wharf after November 10th to be paid for by the purchaser on or before November 15th, 1905." Other clauses in the contract material to the action were:

"It is agreed that for and in consideration of any and all advances that may be made by the purchaser on the above-named deals, etc., the purchaser shall have a lien on the said deals, etc., either at place of manufacture or in transit for shipment, and also on the logs from which the said deals, etc., are being manufactured, wherever they may lay.

"All contracts made subject to delays brought about by accidents, strikes, fires, or other causes beyond seller's control.

"In case of the destruction of their mill from any cause, all orders and contracts are to be considered off."

The plaintiff sought to recover for breach of this contract in that defendant company delivered only 4,717,440 feet, and neglected and refused to deliver the balance contracted for.

A part (about one million feet) of the winter's cut of logs of the defendant company for the season of 1904-1905 was hung up in the stream and did not reach the defendant's mill until the next year.

The defence of the defendant company was that it was only bound to deliver the produce of such logs as were cut and hauled by it in the winter's operation of 1904-1905, and could be driven to its mill during the season of 1905, together with a quantity of logs, estimated at about two million feet, at the time of the contract, in its boom.

The defendant also entered a counter-claim for balance due on the lumber delivered to the plaintiff.

After reviewing the evidence exhaustively, Mr. Justice White concluded, in part, as follows: "I therefore find that the intention of the parties, as evidenced by the contract, was, that all lumber to be delivered under it should be delivered during the season of 1905, and be ready for shipment not later than November 10th, 1905; that the failure to deliver all of the seven millions specified in the contract, which the defendants' logs in the mill boom and in the woods were capable of producing, was owing to the hanging up of part of the drive, a cause beyond the defendants' control, and that for such failure arising from that delay the contract provides that the defendant shall not be liable."

In regard to defendants' counter-claim, judgment was given in their favor for a balance due them of $355.76 on account of an excess of certain sizes in the lumber actually delivered.

Flood Caused by Mill Dam.—In the case of Margaret Cain and a number of others against The Pearce Co., Ltd., which came for trial recently before Judge Teetzel, the defendant mill owners, having mill privileges on Crow River, had built a new dam across the river. Plaintiffs brought action, claiming damages for flooding their several properties, claiming that the new dam was considerably higher than the old dam. Evidence was received as to the height of both the old and new dam. Teetzel, J., found in favor of defendants on the evidence that the new dam was in fact no higher than the old dam, but that the old dam was in a very leaky condition, therefore the new dam raised the level of the water on the neighbors' lands. Reference ordered to ascertain the damages sustained by plaintiffs. Having regard to the great delay of which all plaintiffs were guilty, and in their failure to establish that defendants raised the height of their dam, injunction was refused. Costs reserved until after report of referee.

Interswitching charges.—A suit was heard by Judge Clute in the High Court at Toronto on Sept. 22nd, brought by the Grand Trunk Railway to recover from the R. Laidlaw Lumber Company, of Toronto, the sum of $284 for switching performed by the C. P. R. on shipments originating from Grand Trunk points. The switching was between the junction points at Bathurst St. and Parkdale to the company's planing mill on Dundas St., Toronto. The charges were for a period running from February 16, 1907, to April 20, 1907. The R. Laidlaw Lumber Company contended that the railway company had no legal tariff in force at that time and that the tariff under which they claimed to collect this sum was only an arrangement between the railways themselves, which could not be applied against the public. They furthermore asked for a refund of the excess charges over and above what the Board of Railway Commissioners ordered on July 8, 1908. This excess amounted in all to about $800, the company charging one cent a hundred pounds instead of half cent. Judge Clute decided in favor of the railway company.

Canadian Manufacturers' New President

W. H. ROWLEY, Ottawa.
New President of C. M. A.

The Canadian Manufacturers' Association and the lumber industry of Canada are mutually to be congratulated upon the appointment of Mr. W H. Rowley to the position of President of the Association. This is the second year in succession that this important office has gone to a representative of the lumbering interest of Canada, the retiring president being Mr. John Hendry, of Vancouver, B.C., one of the best known lumbermen of Western Canada.

William Horsley Rowley was born in Yarmouth, N S., in 1851. His father was a native of London, Eng., and held the rank of Lieutenant-Colonel in the army. On his mother's side he is descended from United Empire Loyalist stock. When a youth Mr. Rowley entered the Bank of Yarmouth as a clerk and remained there until an opportunity for advancement opened in St. John, N.B., where Mr. Rowley took a position in the Merchants Bank. At the age of 20 he went to Montreal, still in the service of the Merchants Bank, and five years later was transferred to Ottawa. He was promoted to managership in 1880.

Six years later, after he had had a career of 20 years in the financial world, Mr. Rowley was chosen for a huge task in a field that in many respects was new to him. The E. B. Eddy firm, a great manufacturing concern, which had close business relations with the Merchants Bank, was in need of reorganization. The person who seemed most capable of accomplishing what was needed was the energetic and resourceful bank manager. No enterprise had ever before seemed too formidable for him, and in a little while he was installed as secretary-treasurer of the famous match and paper concern. From 1886 until 1906 Mr. Rowley continued in this office. Then the founder of the company, E. B. Eddy, died. Naturally his mantle fell upon the shoulders of the man whose activities and genius had been instrumental in building up the company. With Mr. Rowley as president and joint manager the Eddy Co. has been making strides in the manufacture of paper, fibre ware, matches and numerous other goods of similar kind.

For many years Mr. Rowley has been an influential member of the Canadian Manufacturers' Association. His aggressive manner, strong personality and direct methods of doing business and expressing himself give him prominence in any body to which he belongs. Four years ago he was appointed to the executive committee of the Canadian Manufacturers' Association. In all matters pertaining to policy on pulp wood, conservation and export, his voice has been very powerful. Mr. Rowley is an ardent advocate of keeping the resources of Canada for her own people and compelling all others who want to derive a benefit from them to become citizens of the country.

Mr. Rowley finds time to render aid to many movements of a philanthropic character. He has frequently been among the most prominent laymen attending Anglican Synods. He holds membership in the Rideau, Laurentian, Country, Hunt and Golf Clubs of Ottawa; National and Albany of Toronto, and Mount Royal of Montreal. His recreations are angling, bowling and riding.

The following officers for the ensuing year were chosen at the annual convention of Hoo Hoo at San Francisco recently: Snark, H. J. Miller, Index, Wash.; Senior Hoo-Hoo, Jeff B. Webb, Grand Rapids, Mich.; Junior Hoo-Hoo, G. A. Graham, Portland, Ore.; Bojum, A. J. Russell, San Francisco, Cal.; Scrivenoter, J. H. Baird, Nashville, Tenn.; Jabberwock, C. P. Walker, Oklahoma City, Okla.; Custocatian, Jerome H. Sheip, Philadelphia; Arcanoper, J. F. Judd, St. Louis, Mo.; Gurdon, T. H. Calhoun, Beach, Ga.

A further conference between Chairman Knapp, of the Inter-State Commerce Commission, and J. P. Mabee, chief of the Dominion Board of Railway Commissioners, with respect to the international regulation of railroads, will be held at Washington before the U. S. Congress convenes. The two officials held a conference in New York in August, in which a tentative agreement was reached.

Head Office in Toronto at 7 and 9 Adelaide St. East

EDGINGS

Ontario

James E. Wilson will erect a sash and door factory on Riverside Ave., Ottawa.

The assets of Steele & Company, sash and door manufacturers, Smith's Falls, Ont., it is stated, are to be sold.

William J. Woods, lumbering contractor, of Port Arthur, was found dead in the woods seven miles from Fort Frances. Heart failure is believed to have caused his death. He leaves a widow and six children.

Toronto City Council is having quite a discussion regarding the quality of lumber supplied to the city by contractors. Accusations are made that the contractors have not lived up to their contracts; that inferior lumber has been supplied and top prices charged. It is probable that a judicial enquiry will be made into the charges.

Mr. C. Kocot, of Sault Ste. Marie, is on a visit to Victoria, B.C., for the purpose of considering the establishing of a cooperage factory there. He is expected to outlay about $100,000 upon the plant, which will be one of the largest in the Dominion. Secretary McGaffey, of the Vancouver Island Development League, has been negotiating with Mr. Kocot and hopes to persuade him to undertake this proposition.

Mackenzie & Mann, proprietors of the Canadian Northern Railway, have secured the incorporation of the Canadian Power and Paper Company, a $10,000,000 concern, with headquarters in Toronto. It is said that the timber limits which the company have acquired are located in the provinces of Quebec and British Columbia. In Quebec the Canadian Northern Railway takes out the great bulk of the pulp wood and manufactured pulp and paper.

Fire broke out in the extensive lumber and stave mills of J. S. Ainslie and Brothers at Comber, Ont., recently, and in less than one hour the entire plant was destroyed. Fire was first seen issuing from near the smokestacks and the alarm was given, but before assistance arrived it was beyond control. The destruction of the Ainslie stave and lumber mill marks the passage of the last mill in the district for the manufacture of elm staves, hoops, heading, etc. Twenty years ago the section was dotted with such institutions, but as the heavy elm timber disappeared the mills also disappeared one by one. The Messrs. Ainslie & Brothers established the business in 1874 and it was a success from the beginning. The loss will be over $6,000, with no insurance. It is not known whether the mill will be rebuilt or not, as the senior member of the firm, Mr. J. S. Ainslie, is touring the West.

Eastern Provinces

Alcide Bodard, lumber and mill owner, Port Daniel, Que., is stated to have retired.

The T. Paradis Saw Mill Company, of Levis, Que., intend building a wood working factory.

The premises of the Maybee Woodworking Company, at St. John, N.B., have been destroyed by fire. The loss is $20,000.

New Brunswick reports state that good lumberjacks are scarce. Operators are expected to cut only sufficient logs to keep their mills running.

J. D. Chenard's saw mills at Berthier, Que., were damaged by fire last week, and for a time the whole town was threatened with destruction. The mills suffered a loss of $30,000.

The Wilson Box Co., Ltd., have bought the buildings and plant of the Dunn Pork Packing Company at Fairville, near St. John, N. B., and are converting them into a box making establishment. They have also bought the Crawford saw mill property at Westfield.

A destructive forest fire that raged in the central part of Nova Scotia for some days was brought under control by the timely rains about the middle of September. The fire broke out in the Chapman settlement of Cumberland County and swept over a thousand acres of valuable timber property. Over one hundred fire-fighters were out fighting the flames.

The Templeton Lumber Company is the name of a new company which will operate the Lewis McLaurin mills at that place. A short time ago the McFadden Bros., of Ottawa, purchased the mill at East Templeton, which belonged to Mr. Lewis McLaurin. They have reopened the mill and will operate it throughout the winter. The logs are all ready to be cut in the mill.

A report from Chicoutimi, Que., states that the Chicoutimi Pulp Company have completed extensive additions to their mills. The capacity of the plant has been increased to 2,000,000 spruce logs, or 40,000 tons of dry pulp yearly. Its output for the next five years has been contracted for by English and French houses. The increase in output is expected to find its way to United States markets.

At the annual meeting of the shareholders of the Laurentide Paper Company, held recently in Montreal, Sir William Van Horne was re-elected President; Mr. George Chahoun, jr., Vice-President, and Mr. Charles F. Smith, Chairman of the Executive Committee. Quarterly dividends have been declared upon the company's capital stock—the usual 1¾ per cent. upon the preference stock and 2 per cent. upon the common stock, the latter being increased from 7 per cent. basis to 8 per cent. per annum.

Western Canada

Logs scaled at Vancouver during August surpass all previous records by about 8,000,000 feet.

Theo. A. Burrows, lumber dealer, Grandview, Man., it is reported, will open branches at McNutt and Wroxton.

The sheds and machinery rooms of the Telford Lumber Mills at Leduc, Alta., were gutted by fire recently with a loss of $3,000. J. M. Telford, M.P., is the owner.

The plant of the Powell River Paper Company will be completed by May 1st, or July 1st next, at latest. It will represent an investment of upwards of $2,000,000 and will produce 400 tons of paper per diem, the payroll of the mills exceeding $500,000 annually.

A verdict of accidental death was returned by a coroner's jury at the inquest held on the body of the Chinese killed recently at the Michigan Puget Sound

lumber mill. The jury added a rider that mill machinery should be provided with guards for the protection of life.

Penticton, B. C., is to have another important industry in the shape of a box manufacturing company. Outside capitalists are now negotiating with the council for a site. At this factory it is proposed to turn out all the material necessary for the boxing of Okanagan fruit.

The Walsh Sash and Door Company, of New Westminster, B. C., are planing the erecting of a large new sash and door factory with a capacity of 1,000 doors per day. The proposed plant and machinery will cost several thousand dollars and will give employment to a large number of men. A small saw mill will be operated in connection with the new plant.

The B. C. Gazette gives notice of the incorporation of the following companies: Canadian Holding Co., Ltd., capital $1,250,000, incorporated to carry on the business of loggers, contractors, dealers in bricks, cement, lumber, etc.; The Bridges Lumber Co., Ltd., capital $125,000; Notch Hill Builders' Supply Co., Ltd., capital $75,000; Shurly Dietrich Co., Ltd., capital $350,000, incorporated to manufacture, sell and deal in saws, mechanics' tools, etc.

The monthly record of timber receipts as reported to the crown timber branch of the lands department shows a total of 523 timber licenses issued during the past month for lands west of the Cascade range, the incidental receipts aggregating $73,600. East of the Cascades the number of licenses issued was 468, with a total of receipts of $54,629.40. Timber transfer fees were $940; coal transfer fees amounted to $75 and the penalties totalled $500.

The McGoldric Lumber Company, of Chase, B.C., have purchased the land known as the Crawford Bay townsite near Nelson, B.C., to use as a logging station for logs cut from their limits at the head of Hooker and Canyon Creeks. The company are now in position to go ahead with the construction of their mill at Fairview near Nelson. They have surveyed a route for a logging railroad eight miles in length, from the lakeshore to the head of Canyon and Hooker Creeks.

All previous records made by British Columbia coast loggers were surpassed in August, Supervisor of Scalers Hamilton reporting that the enormous total of 78,000,000 feet had been measured during the month. This is 8,000,000 feet ahead of the best previous total, and nearly double the output for the same month a year ago, when the quantity scaled was 42,000,000 feet. The large production will have a tendency to force down the price of logs, the demand for lumber on the prairies just now being light owing to the immense quantities being shipped in by United States mills.

Representatives of German, French and Australian capital are now visiting British Columbia with a view to purchasing timber limits. Several deals are pending. The agent of a French syndicate recently arrived after making an inspection trip through Oregon and Washington. After looking up the question of title he concluded that foreign capital would be better protected in British Columbia than in the United States, and he will recommend the purchase of several tracts. An Australian agent has recommended the purchase of a tract on Vancouver Island, estimated to contain three billion feet.

Ninety-three timber limits on the Naas and Kitsumgalum Rivers in British Columbia have been purchased by an Ottawa capitalist, William Gamble, acting for British and American interests, from A. F. Sutherland, of Vancouver, for $490,000. Mills will be erected at once, and already several hundred men have been engaged for the logging of the limits. The timber in the limits has been highly reported upon by the expert cruisers who went over the property previous to the purchase. The spruce is of high grade and stands well. The larch is tall and clear. The Western pine is much the same in quality.

The Dominion railway commission will station men at all divisional points in British Columbia to inspect railroad engines running out of terminals. This is the direct outcome of the large number of forest fires caused by the railways throughout the west this season. Mr. Richardson, acting secretary of the railway commission, explains that the board are not appointing additional inspectors, but an arrangement is being made with the Provincial departments, particularly in British Columbia, to supply them with a list of their fire rangers and their stations. The inspectors will then instruct the rangers how to inspect locomotives.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1327. Pine boards—A Lancashire firm asks for prices and dimensions of pine boards from Canadian exporters.

1328. Oak spokes—A Manchester firm asks for dimensions and prices of oak spokes from Canadian manufacturers.

1329. Match splints—A Lancashire firm asks for prices of match splints from Canadian manufacturers of same.

1343. Lumber—An Antwerp importer desires the addresses of lumber exporters in a position to export to Belgium and Holland.

1344. Timber, lumber, etc.—A Brussels firm desires to enter into business relations with Canadian firms in a position to ship timber and lumber of various grades and qualities. Further particulars may be obtained upon application to the Department of Trade and Commerce.

1367. Lumber—A Montserrat firm wishes to hear from Canadian exporters of lumber, especially pine and spruce.

1371. Collapsible wooden boxes—An English firm desires to sell the patent rights for Canada for manufacturing collapsible wooden boxes, cases, crates, &c.

1375. Pine and spruce lumber—A South African firm of wholesale general merchants, desires to be placed in communication with Canadian manufacturers and exporters of pine and spruce lumber.

1376. Hubs, spokes, wheel rims and carriage trimmings—A South African firm of wholesale general merchants, desires to be placed in communication with Canadian manufacturers and exporters of hubs, spokes, wheel rims, and carriage trimmings.

1399. Flooring blocks, hardwood and pitch pine—Particulars of an enquiry for the above goods for the Austrian market have been received. These blocks must be made up to special sizes and designs.

1420. Birch logs—A Manchester firm wishes to correspond with Canadian exporters of Quebec birch logs.

1421. Pine doors.—A Manchester firm asks for prices and dimensions of pine doors from Canadian manufacturers.

1427. Pine deals.—A Lancashire firm asks for prices and dimensions of pine deals from Canadian shippers of same.

For Sale to Close an Account
Crown Granted Timber Limits and Lands

in the

Province of British Columbia, Canada

The undersigned has received instructions from the owners who desire to close the account, to sell by private treaty

Forty Timber Limits and Lands

situate in the Salmon River Valley, West Kootenay, British Columbia, from thirty to forty-five miles north of the United States border, and upon, or contiguous to the Nelson and Fort Sheppard Railway which runs between Spokane, Washington, and Nelson, British Columbia, connecting with the Great Northern and Canadian Pacific Railways, and affording access to the United States and Canadian markets.

The limits contain in the aggregate thirty-eight thousand acres, and are comprised of bottom lands and benches of hills, constituting one of the best bodies of timber in the Central Southern part of British Columbia. Subdivision of the tract has hitherto been consistently refused. Individual limits contain from two hundred and fifty to twenty-one hundred acres, with from three million to forty-five million feet of Cedar, Pine, Hemlock and other woods of excellent quality upon them, in addition to large quantities of Cedar Poles—prices run from $5,000 up according to Stumpage and Location.

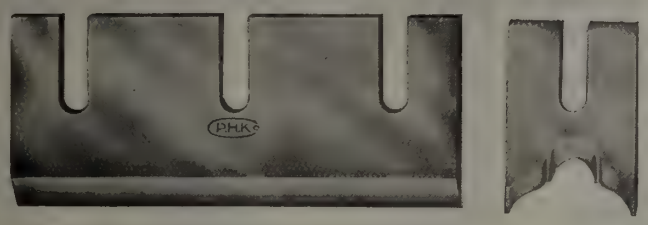
Some of the limits are essentially Cedar Pole Propositions, and contain large quantities of the very best quality of Cedar Poles from twenty-five to seventy-five feet in length, free of limbs

The properties are Crown Granted, and the timber upon them may be exported. The Timber is subject to a Royalty of fifty cents per thousand feet, when cut.

A considerable quantity of the land is available for fruit land when cleared, and the owners are prepared to give a deed of land and timber, or a license to cut timber only for a term of years, at the option of the Purchaser.

TERMS OF SALE:

In order to close the account, very easy terms of purchase will be given, namely, twenty-five per cent. cash, and the balance in four equal annual instalments, and twenty per cent. cash with balance in six equal annual instalments—interest at six per cent.—with operating privileges which will assist purchasers to pay for limits out of stumpage.



The character of the properties together with the easy terms of payment present a unique opportunity to persons of moderate means to acquire valuable limits for either operation or investment.

Prices and further information may be had upon application.

Shimer Cutter Heads and Cutters

Our "Best of All." Figs. 202 and 203 with Four Bits to each Head

Are You Fair to Yourself?

If you are a user of wood-working machine tools and have never tried the Shimer Cutter Heads you haven't been quite fair to yourself or your product.

Because it is only fair to yourself and customers to make your product the best possible, and you cannot do the best work without the best tools.

You should also see that you are manufacturing as cheaply as possible —that your men are provided with tools that save time in getting started on a job—that will cut smoothly at the highest speed consistent with safety —that will practically eliminate splintered edges and torn-out knots from your product.

Ask yourself the question: is MY mill giving SUCH results? Where can I better the service and output and so get a greater return for the time and money expended. Then remember the thousands of mills that have been made up-to-date by adopting the Shimer System of tools.

Write at once giving measurements of your machines and enclosing order for any of the tools found on this page, or in our catalogue and they will be made to your order and sent on 30 days trial.

DO IT NOW!

Rosette Cutter Head

Our new Head and other tools for the purpose of making Rosettes should interest you if you do any work in this line. The Head is made with interchangeable milled Bits and turns any substantial wood turning lathe into a Rosette Making Machine with large capacity. Corner and Plynth Blocks with turned Rosettes are always in good style for interior house finish and are quickly and neatly made with this new Head.

Price, Head complete, $11.75.

Filing Stand and Tracker

This is a neat little device to fasten to a work bench for holding a Head when filing the Bits. It holds the Head with a stub spindle and is better than the ordinary pinch vise which, in time, mars the surface of a Head. The Tracker Attachment sets the Bits to share alike in the cutting.

Price, plain Filing Stand	$ 4.87
Price, Filing Stand, with Tracker	11.37
Price, Extra Stub	1.00

In ordering give the number stamped on your Shimer Cutter Head.

Cutter Head for Matching Reversible Glue Joints

turns out a most satisfactory fitting of the tongue and groove, interlocking from the same piece of matched material, requiring but one Head with Bits to produce. The jointed material will fit together when the pieces are sawed to length by simply turning the one piece end to end.

Glue Joints must depend upon accuracy as well as permanency of pattern. We guarantee both.

Prices range from $15.54 to $17.30 for a four-bit Head, and from $19.96 to $22.60 for a Head with six bits complete.

Bolts, Wrenches, etc.

We carry a full stock of supplies and can fill orders promptly for anything in our line, such as Wrenches, Planer Head Bolts, Nuts, Washers, Gauges, Set Screws, Brass Washers for under Bits, etc.

We make two styles of Grinding Machines to lighten and hasten the work of the filing room. Particulars sent upon request.

Our "Best of All"

The most popular of The Shimer Cutter Heads are Figs. 202 and 203. The Bits are held within conical duplex bit seats, self-centering, arranged with the very complete Expansion feature for the fine adjustment of tongue and groove thicknesses.

Price with 4 bits to each head, the set.....	$40.95
Price with 6 bits to each head, the set.....	49.27
Price with 8 bits to each head, the set.....	57.60

Complete with Flooring Bits. The Heads will also receive Bits for thin Ceiling—⅝ at $1.30 each, and Bits for 2-inch thick plank at $1.63 each.

The Shimer Cutter Head for O. G. Batten and Siding

These heads are especially designed to work O. G. Batten or O. G. Siding, having three circular cutters in line of the cut, seated and firmly bolted to one side of the head flange.

We make them to suit any matcher or moulder. They turn out O. G. Battens as regularly as our matcher heads work tongue and groove flooring. Give measurements same as for flooring heads; or, if flooring heads are already in use on your machine, give their record numbers, and send a cross section of the batten—wood sample or drawing.

Price for each Cutter Head, without bits, $9.75. O. G. Batten Bits to mould ¾-inch deep or less, net each $2.08.

Jointer Heads

For jointing plain edges we make several styles of Jointer Heads provided with shearing effect to produce the easiest and at the same time the smoothest work. Made of Steel Forgings they supply the strongest and best. Our very reasonable prices put the tools within the reach of all.

Price, with 4 bits to each head, the set, 1¼-inch.....	$31.20
Price, with 4 bits to each head, the set, 2-inch.....	32.28

Ship Lap Heads

to give you the best service must be of a kind that is always ready and to interchange with matcher and other Heads you may have fitted to your machine, thus avoiding a change of machine guides. This is one reason why the Shimer Ship Lap Heads are so generally used. The other reason is that they do work so satisfactorily that all who know their convenience take them in preference to others.

Price, with 4 bits to each head, the set, 1½-inch thick....	$34.84
Price, with 4 bits to each head, the set, 2½-inch thick....	35.88

Double Ceiling Heads

These heads have a special design to suit the purpose of double tonguing and grooving, with overlapping of the bit cutting edges to produce perfect clearance and to protect the leading points from unnecessary friction and wear.

They double the capacity of any matcher or moulder and provide a means of turning out single surfaced ceiling or flooring upon the most economical basis.

Price, Double Ceiling Heads, complete with Bits, net.... $40.94

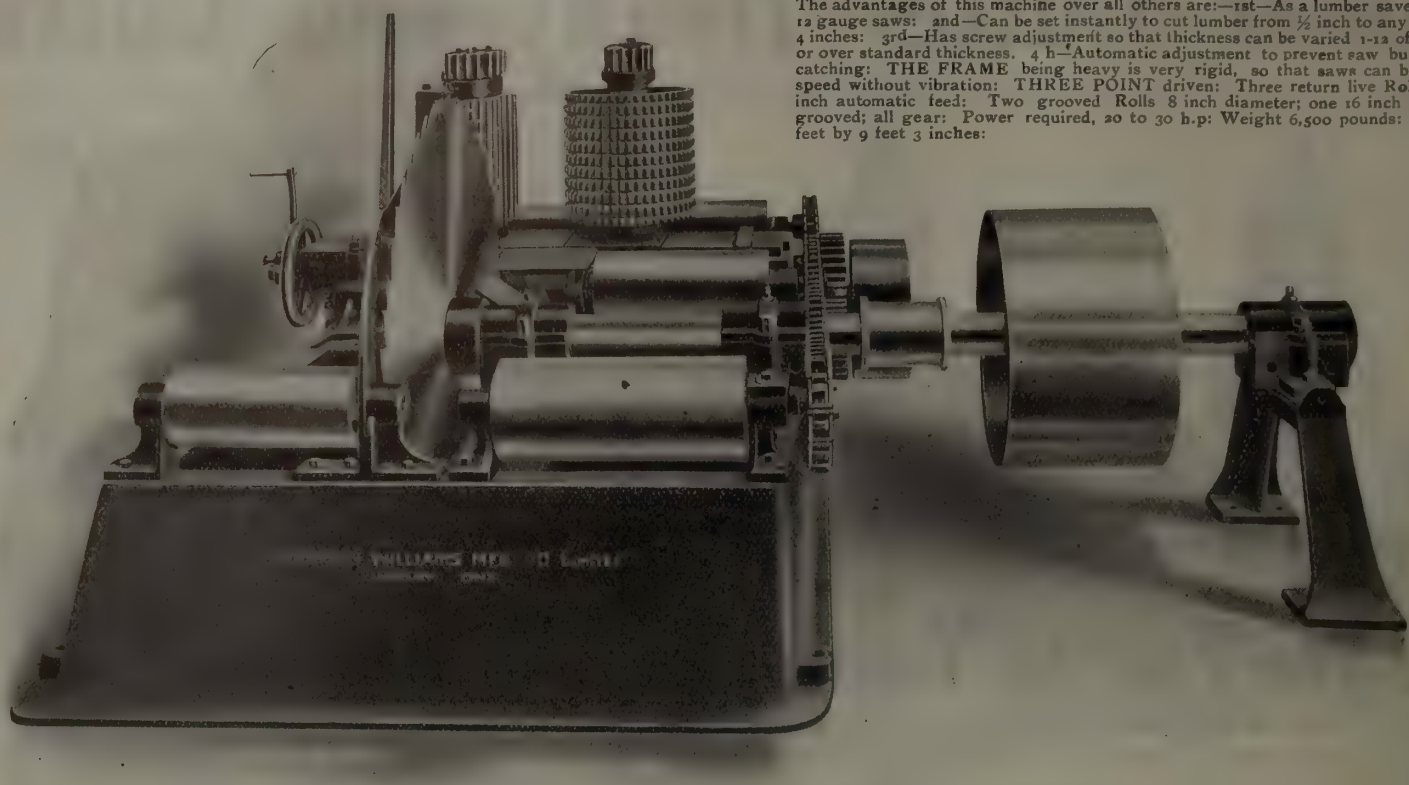
Door Sash and Coping Tools

That save all the hand fitting. No changing of patterns, therefore, no trouble in framing the door and sash parts when they are matched up with the Shimer Cutter Head. We relieve you of that detail of the business when we place the mould in counterpart within the contour of the Bits. The Bits are filed only to sharpen and being set by means of a gauge give accurate and uniform results. Prices very reasonable.

Reversible and One-Way Cutters

The Shimer Reversible Cutters for Single Spindle Shapers, Variety Moulders or Friezers, are carefully moulded opposite to the shape of the mould to be produced, in such a way as to have only the cutting edge touch the lumber. They are complete—inexpensive—time saving. We also make One-Way Cutters for the Double Spindle Shaper.

SEE THAT YOU GET THE GENUINE



Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

Canada Machinery Corporation Limited

GALT, ONT.

The Chief Market Place for Lumber is the "Wanted and For Sale Department" of this Paper!

If you have a special lot of lumber, some second-hand machinery, a mill property or timber limit for sale, just put an "Ad." in the Wanted and For Sale Department of this paper.

This small investment will put you in touch with other people who are in the market for what you have for sale.

If you wish to conceal your identity you may use a Canada Lumberman box number for your "Ad." without extra charge.

You **have** something for sale now, if you haven't you must **want** something, just send us an advertisement about it and see what a valuable department this is.

Canada Lumberman and Woodworker

TORONTO, CANADA

A Double Circular Saw

(Rip and Cross-cut)

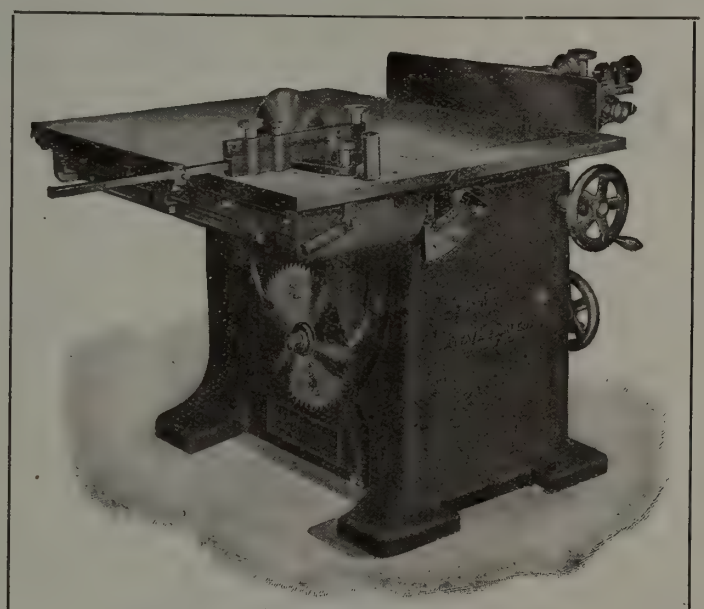
is a handy thing in a furniture factory—because of the time it will save and the convenience in changing from one operation to the other.

Our No. 205 Double Circular Saw

is made for quick and accurate work with especial emphasis on the word ACCURATE.

It is constructed like an iron-working tool, every detail is carefully worked up to give ACCURACY.

In changing from rip to cross-cut sawing, or vice versa, all that is necessary is to turn the hand-wheel at the front when one saw goes below the table and the other comes up.



Note that the saws are always ***out in front,*** easy to change when wanted a different gauge or style of teeth.

Then to tilt the table or to adjust the fences the operator need not move out of his tracks.

Fine adjustments of the fence can be made on this machine owing to the micrometer device on it.

Our Circular Sheet No. 10-R Tells all About the Construction of Our No. 205. Let Us Send You a Copy of it

DON'T BUY A DOUBLE SAW UNTIL YOU COMPARE OURS, FOR YOU WANT THE BEST

Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground saws can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easy.

ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

Disston Principles

Seventy years of activity in manufacturing and selling; seventy years of uninterrupted development, imparts to an organization a good many common sense ideas of business.

For nearly three quarters of a century we have been formulating, from time to time, and setting down in simple language some of the ideas and ideals which, carefully followed, have contributed to our growth.

They may be of interest to **YOU**—They have been to a good many of our friends. Here they are:—

"We have always striven to manufacture the **best** saws. **Now** we manufacture not only the best, but the largest line in the world."

"Our aim is to manufacture Disston Goods of superior quality and at a price to make them purchasable by all users."

"Perfection comes with long experience."

"The manufacturer who makes his own steel can watch the quality closest."

"What do you put in your saws that makes them so good?" Henry Disston was often asked. "Good steel and honest work," was his invariable reply.

"A man who has made a reputation for his goods, knows its value as well as its cost and will maintain it."

"The world recognizes Disston Saws as the standard by which all others are judged."

"Having a thorough knowledge of the requirements of saws, we make them to meet those requirements."

"A constantly increasing demand is the best evidence of efficiency."

"Quality is the best selling agent."

"All lumber is thoroughly seasoned in our own yards before being manufactured into handles, stocks or frames."

"Disston Saws are always made so they will run easiest, cut fastest and last longest."

"Strictly first quality goods may be slightly higher in price, but give better satisfaction and longer service to the user. Thus, in the long run they cost less than cheaper grades."

Henry Disston & Sons

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

Hanchett Band Swage

Filers! Millmen!

Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

Heavy Duty Lath Machine

This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

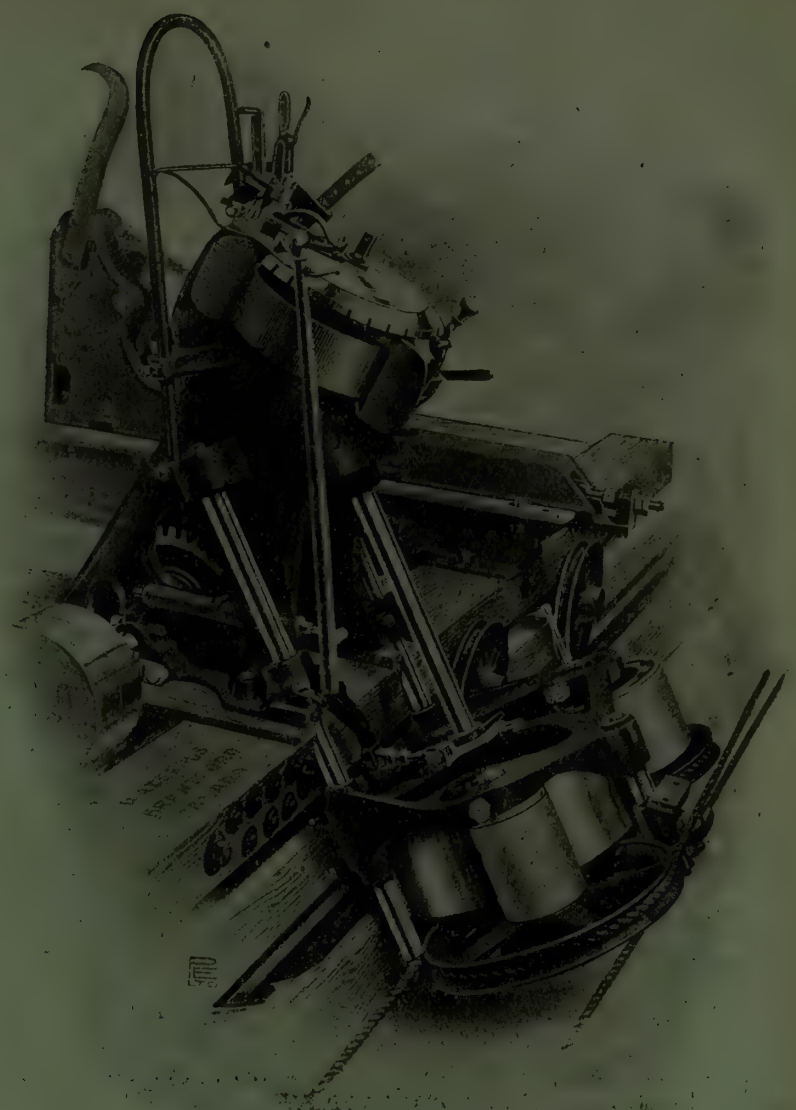
4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.

The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.



The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

THE TROUT POWER SETWORKS

No Work—

No Heat—

No Lost Motion—

THE MOST POWERFUL AND EFEICIENT SETWORKS MANUFACTURED

A continuous acting rope-driven set and receding works that will turn out more lumber and better lumber than any other setworks on the market. Just for these reasons. There are only two levers to operate. Setting is accomplished without stooping or bending. There is no heat from steam cylinder. Rope drive is continuous acting when carriage is stationary or in motion. With nothing to tire or distract him the setter can give his undivided attention to the sawyer's signals, and cut as much lumber at the end of his shift as he did at the beginning. No lost motion can possibly develop. Working parts are of finest selected steel throughout. The operation is without rack or jar, eliminating any wear that would affect the setting accuracy.

Will set by 1-32″ up to 6″ at one manipulation of the setting block. Can be attached to any size Carriage, Rack or Screw.

This Setworks is fully detailed in Bulletin No. 107—Send for it

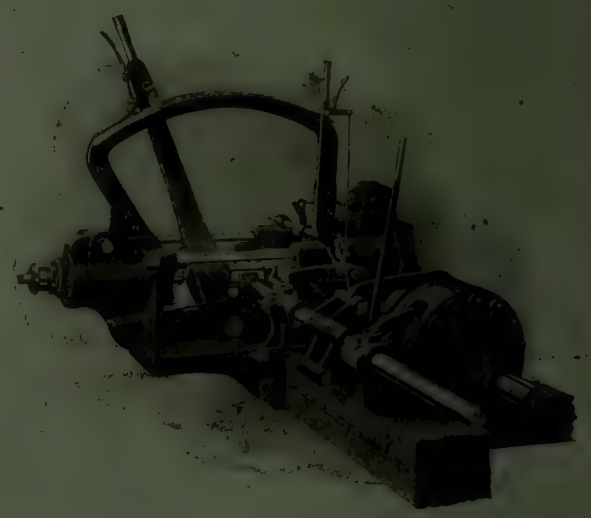
What Experience in Building Sawmill Machinery Means to You

Our Twin Engine Steam Feed

Quality in sawmill machinery is simply the result of experience. It is an easy matter to build cheap machinery—anybody can do it.

But it is not easy to make sawmill machinery **right**—so it will stand up to the hard work it has to do, and at the same time always cut perfect lumber. And it requires a good deal of experience before any firm can make **uniformly good** machinery.

We have had the experience—54 years of it.



This means two things;

The knowledge we have gained in that time enables us to turn out machinery which is absolutely sure always to work properly—we know exactly what will be required of it.

It proves we have always made good machinery—otherwise we wouldn't be in this business now.

We **know how** to build sawmill machinery, but we are continually doing everything possible to turn out better machinery. Parts that appear to be even slightly imperfect are not fixed up and used, but are thrown out, and we are quite willing at all times to give any guarantee in respect of material and workmanship our customers desire.

One thing is certain—you cannot possibly buy anywhere, at any price, better machinery than we make—and cheaper machinery is not good enough for you.

440 Square Miles Timber Limits
on Georgian Bay, Ontario

To be Sold by Auction in Blocks of 5 to 36 Square Miles

On account of their President and Principal shareholders being engaged in other large enterprises, and not having the time to give to them all, THE PARRY SOUND LUMBER COMPANY, Limited, have decided to sell by Public Auction, to be held in the rotunda of the Board of Trade in the City of Toronto on the **Seventh Day of December, 1910,** all of the timber lands, mills and town property situated in the Town of Parry Sound also Tug Scow and full Camp Equipment for five camps. Ontario Timber Limits

TO BE SOLD

comprise some 440 square miles of licensed and deeded Pine, hemlock, spruce, birch and other timber. The licences from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows: Saw Logs, White Pine, $1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods, 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Montieth, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners. A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

Dimension Bill Stuff in
Pine, Spruce and Hemlock
A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors
We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.
Door Making is our Specialty
We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**
Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.
If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

Snow Plows

The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate, Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9" wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12" of loose snow each time the plow passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

BETTER WRITE FOR OUR INTERESTING LITERATURE

Geo. W. Reed & Co., Limited, Craig Street Dept, B. West, MONTREAL

Canadian Manufacturers

As far as the cutting edge is concerned the Inserted Tooth saw ought to show up best, for the reason that each tooth is a separate unit and can be made with a higher temper than the tooth which is solid with the plate.

Simonds Insertable Saw teeth are very finely and accurately machine milled (both bit and shank) to fit into the plate and they are brought to a high temper by a very skilful process — **this temper is always uniform.**

There is one kind of timber in sawing which Simonds Inserted Tooth Saws show a big lead and that is—frozen timber; one reason is that the points are held exceptionally firm in the plate by the Simonds way of insertion, so solid that they cannot spring sideways and cause the plate to dodge.

Again, Simonds Points or Bits have a better clearance from the cutting edge both backward and downward than other makes of insertable bits—and the clearance is so uniform that Simonds Points may be worn down full length of swage without side filing or materially varying the width of kerf.

You know the name **Simonds**—now know the **Saw Simonds.** Every kind used in mill work, woodworking machinery and lumbering—Cross-cut, Gang, Band, Solid or Inserted Tooth Circular.

Your very next order should be for **Simonds Saws.**

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, October 15, 1910 No. 20

Needless Loss of Life and Wealth

The loss of life resulting from the forest fires in the Rainy River District last week will make that terrible event go down into history as one of the most disastrous forest fires in North America. It is impossible at present to think of anything but the pitiful human suffering that has resulted. The property loss, however, will have to be borne in mind immediately, and it is in this connection that, as a lesson to the country, the event will have a forcible moral. The property loss of this great fire alone, if it had been wisely spent in the establishment of fire protection services, would have been sufficient to do everything that human ingenuity can devise for the prevention of forest fires. It is a humiliating reflection upon human nature that after an event of this nature we are so often ready to pour out our resources, yet beforehand, even with the lessons of experience to assist, we (that is to say, our governments, who are primarily responsible) will dispute and haggle and procrastinate indefinitely over the apportionment of ridiculously inadequate sums of money for the protection of the forests.

The international nature of the Rainy River fire may be the means of showing the problem in its proper light. There should be no contentment with one or two provincial or state forest protection services. An international commission should be established, with power and means to handle the question. There is no use in one country or province protecting its forests, unless all neighboring forests are protected. Had the Province of Ontario protected its forests properly they would not have been saved from the flames starting across the border and sweeping everything before them. The same problem has presented itself to individual lumbermen who have not been willing to spend money in protecting their own timber limits, when all adjoining owners have not been compelled to do the same. Many lumbermen in Ontario to-day would be glad to burn the slashings left after their woods operations, if the law would compel their neighbors to do likewise. But the law simply provides for the appointment of fire rangers to guard the forests and makes little or no provision for removing the cause. One might just as reasonably leave his premises in a highly inflammable condition and spend a lot of money upon a fire alarm system.

The same thing applies to the international aspect of the problem. Co-operation among all the governments of the two countries should be effected and no time lost in putting the whole question on its proper footing. No more time should be wasted in conventions, wher the changes are interminably rung by expert politicians upon the old tune of conservation. Conservation conventions are well enough, if they could only be brought down out of the clouds and deliver their goods. The conservation conventions should long ago have learned that forest protection needed more than talk, that it should be removed at once from the realm of experiment and discussion. There is nothing mysterious about forest fires. Their conditions are well understood and their remedies are plain. The conservation commissions therefore should long ago have said, "Here is a good problem to start on. Appoint at once great national forest protection services, co-operating with one another, and finance them with a liberal hand." If they had done so and a strong forest protection service had been established, the Rainy River fire and its disastrous predecessors in Idaho and Montana, could have been prevented. The fires which caused the Rainy River disaster had been smouldering for months and no one seemed to consider it his duty to extinguish them. Public opinion and government interest seem also to have been smouldering. It is to be hoped that this recent calamity will stir people up to an understanding of their duty.

Railroad's Arrogance Rebuked

The peculiar behavior of the Canadian Northern Railway in the matter of the carriage of lumber for the Rat Portage Lumber Company very properly aroused the disapproval of the Board of Railway Commissioners. The plain facts of the case as recited by Mr. D. C. Cameron, president of the Rat Portage Lumber Company, and other witnesses on his behalf, were that the railway company charged an excessive rate for switching lumber cars at St. Boniface, and that, although the charge for moving the freight cars from Rainy River to Winnipeg was $2.50 per thousand feet, the railway company charged more for moving them from points between Rainy River and Winnipeg to the latter place. In addition to this the situation was greatly aggravated by the behavior of the railway company to Mr. Cameron personally. According to Mr. Cameron's evidence he was treated by Mr. Mann as one expects to be treated by an officious understrapper. He was, he says, plainly told that he could get no better treatment in the future than he had received in the past. In conversation with Mr. Mackenzie a little later he received better treatment and the promise that matters would be remedied, but he waited in vain and the promises were never kept.

In 1898, when the Provincial Government of Manitoba entered into a contract which led to the construction of that section of the C. N. R., the railway company agreed, in view of the aid given to it, that the freight rate on logs from Rainy River to Winnipeg should not exceed $2.50 per thousand feet board measure. This rate is in force to-day, but from intermediate points to Winnipeg a greater charge was made. The Rat Portage Lumber Company had cut thousands of feet of logs, which it expected to take to its mill for conversion into lumber, but on account of the excessive charges for freight they have been obliged to leave many of them rotting in the woods. Six years ago the Rat Portage Lumber Company bought a considerable tract of land in St. Boniface and erected a modern mill. One-half of this mill plant has been installed and the other half could be installed at a cost not exceeeding 15 per cent. of the sum already invested. In spite of this fact, during the past four years Mr. Cameron claims that the railway company has only supplied them with enough cars to run the mill for one-third of each year, or 125 days.

These facts seem to have been pretty clearly substantiated in the hearing of the case, and from the tone of the Chief Commissioner's remarks it looks as though the railway company has had a valuable lesson as to its importance and power. The decision of the Board was in favor of the lumber company, and the statement of Judge Mabee, Chief Commis-

sioner, was as strong as he could make it. He ordered that the through rate from Rainy River to Winnipeg must be granted also on intermediate traffic. The Canadian Northern is required to file a tariff with the Commission showing the rate from intermediate points to Winnipeg for the carriage of logs. If it is unable to make an agreement for proportionate rates with the Minnesota and Manitoba Railway, which is the name of the C. N. R. in Minnesota, it must quote a rate for the Canadian end of the line which will make the rate from Minnesota points to Winnipeg not more than $2.50 per thousand feet. In regard to the switching charges of $2 per car in St. Boniface, the Chief Commissioner stated that neither custom nor statute justified such a charge. He, however, decided to submit the matter to the expert of the Commission, and if his report was that the charge was justifiable the Board would not interfere. With reference to the failure of the C. N. R. to supply cars for the transportation of logs, Judge Mabee read the federal law on the obligations of carrying companies, and indicated that if Mr. Cameron could prove in court the truth of his statements there was little doubt that he would be able to recover in the courts substantial damages from the railway company.

It is difficult to understand how a railway company like the C. N. R. could have blundered into so foolish and unfair a course of procedure towards one of its large customers. If it were not for the high standing of Mr. D. C. Cameron throughout the country, one might be inclined to think that he was exaggerating slightly, but this is out of the question. Mr. Cameron is a well-known public man, who is held in high esteem in Winnipeg and indeed throughout Canada, for he has taken a wide interest in public affairs. The only ground upon which such a course as that of the C. N. R. could be understood is that Mr. Mann considers the Canadian Northern Railway as the absolute property of the company. If this is his belief he has made a grave mistake. The same parliament which granted the company permission to build their railway also passed an act in 1903 giving the Board of Railway Commissioners an extensive and comparatively absolute jurisdiction over the whole system of the company in the way of hearing complaints and ordering redress. It is impossible that the interests of a large company such as the Rat Portage Lumber Company, or in fact of any company carrying on a legitimate business should be permitted to be endangered by a railway company seeking, for a reason best known to itself, to collect more than it is entitled to. If the Canadian Northern is well advised it will immediately put things to rights in this case and not oblige Mr. Cameron to resort to the courts to secure his rights in the matter of the switching charges at St. Boniface.

Lumberjacks Request Better Sanitation of Camps

A movement is on foot among the employees of lumber camps in British Columbia to bring to the attention of the Government the necessity for providing better sanitary arrangements in the camps. The public will sympathize with the lumberjack who believes that he is entitled to the best possible care of his health and well-being that can be provided by modern scientific knowledge. The trouble in those camps which have not provided properly for their employees is that camp equipment was designed many years ago and has not improved as time passed. Compared with the possible comforts, the camp arrangements of to-day are still far behind the times. There are, it is pleasant to note, many camps which are splendidly equipped, but the lumberjack ought to be certain of meeting proper sanitary conditions in any camp.

The case of the employee is well put in the petition which is now in the hands of the provincial authorities at Victoria. Complaint is made that "The Health Act" is not enforced with regard to the lumber camps of British Columbia. It is stated in the petition that section 60 of the Health Act was amended so as to read: "The health officers of any municipality, health district or outlying district *shall* in every year in the month of April or May visit all logging, lumber, railway, sawmill and mining camps in their district and examine into the sanitary conditions thereof, and shall also examine the water supply of said camps." The petition points out that, "so far as the health and well-being of this great army of laborers and nation-builders is concerned," this legislation might as well never have been passed. The petitioners ask the attention of the Legislature to what they describe as "the deplorable and utterly insanitary conditions which to-day exist in the logging, timber, construction and mining camps everywhere throughout the province," imperilling the health of the loggers, and threatening some of the most important industries in the province. Enforcement of the existing law is asked for, and amendments are asked for to secure that (1) "bedding owned by the company be made subject to sanitary inspection, dealt out to each man on joining the camp and charged to him, with rebatement of cost of same on his departure; (2) bath houses and wash houses to be at least 50 feet from bunk house, and to be of modern construction, and so furnish to the white laborers conveniences which to-day are provided in many camps to Hindoos and Chinese; (3) modern and sanitary bunks with springs and mattresses, and comfortable, well-ventilated quarters for the men; (4) a fully equipped medicine chest with bandages and splints; (5) launches or boats in every camp to take the injured or sick at once to the nearest hospital or doctor, instead of waiting the call of the regular boats, which are in many cases one a week; (6) that it shall be unlawful to pay the men otherwise than in cash, or, if this be inconvenient or impossible, by ordinary bank cheque or time cheque, payable at par and on demand at some bank or reputable place of business in the nearest town or city, and that the men shall, in any event, receive on departure from camp full cash transportation to the said town or city."

An Important Step in Railway Freight Regulation

It is important news to the lumber manufacturers of Canada that negotiations have been commenced for the creation of some kind of a court or commission of an international nature, upon which Canada and the United States will be represented, and which will have for its object the regulation of those problems connected with transportation which involve international trade. Both in Canada and the United States great advance has been made of late years in the matter of regulating the railroads. The Interstate Commerce Commission in the United States has much the same powers as the Dominion Board of Railway Commissioners in Canada, and each of these bodies has proved itself of incalculable value both to the shippers and the railroads. Problems which in former years were permitted to drag along without solution from year to year are now quickly disposed of and trade is enabled to progress with far less friction. International trade has been growing with great rapidity, and, if anything comes of the movement now being promoted in the United States for reciprocal trade relations with Canada the trade between these two countries will increase still more rapidly. This is a state of affairs which makes the consideration of the creation of an International Commerce Commission, having especial jurisdiction over the railroads, all important.

Negotiations were recently opened betweeen Chief Commissioner Mabee of the Dominion Board of Railway Commissioners and Chairman Knapp of the Interstate Commerce Commission. An agreement has already been reached that some system of joint regulation is desirable, but it will of necessity be a very complicated problem to devise an acceptable and practical scheme of joint action. Such problems, however, have already been solved in each country, and there is no reason to doubt that their international features will also be susceptible of regulation. Probably a railroad tribunal will be established which will have jurisdiction over international business in much the same manner as the two national institutions have in their respective countries.

That there is great necessity for this step is well known to all

business men who ship goods across the border. In Canada a case which only recently came before the Dominion Commissioners was settled, so far as it concerned a Canadian railroad, but the section of the same road in the United States could not be regulated, and so, to some extent, the solution is incomplete. Had there been an international body to deal with the question it would have been readily disposed of at one hearing and no further complications need have been feared. Without this international body it seems just possible that the railroad with its infinite capacity for protracting a contest may be able still to use its United States road as a lever to secure its own ends. This is only a minor instance. Others will be readily conceived by business men. It is not perhaps, however, in the solution of existing difficulties that an international body would find its greatest usefulness, but rather in preventing the occurrence of difficulties which can be foreseen and provided against. Further negotiations respecting the matter will probably be arranged for in the near future.

Editorial Short Lengths for Busy Readers

A Washington, D.C., despatch shows that the Government is busy collecting reciprocity bait for Canada. The report says: "The Tariff Board is now investigating the paper and pulp question. John Norris, of New York, and President Lyman, of the International Paper Company, were examined yesterday. There is a strong desire to hasten forward work on the pulp and paper schedule in order to get something definite in hand before the time when the Canadian reciprocity negotiations open. These, it is presumed, the administration actually intends to take up in real earnest, as communications which have been had with Canadians would commit it to some such action. It is now too late to withdraw, according to present feelings."

In the United States retail lumber associations are making rapid progress. So extensive and influential has the movement toward association become that three large state associations are now proposing to amalgamate. These are the associations of Michigan, Indiana and Ohio. The reasons given for amalgamation are as follows: (1) The united effort and strength that may thus be given in support of the maintenance of trade ethics. 2. The economy of operation because of one office only being required for the administration of the business of three states. (3) The tremendous factor of potent influence caused by increased membership as a natural sequence of tangible results which are only possible where necessary funds are at hand to carry on the association work.

Pulp and paper manufacturers are divided in their opinion as to the effect pulp legislation will have on the export of pulpwood in the province of Quebec. Some hold to the view that this new policy of the government will mean the practical prohibition of the export of pulpwood, while opponents of the policy point out that in the past only 15 per cent. of all the pulpwood cut in this province was cut on crown lands. As the legislation applies only to crown lands, they claim that 85 per cent. of the output is available for export. They also point out that private parties have been accumulating pulp wood for the last two or three years and have large supplies on hand available for export. Developments in connection with the amount of pulpwood exported under the new law will be watched with interest.
made."

In a report on the spruce forests of Newfoundland, by George Johnston, F.S.S., the Dominion statistician, the following information is set forth: "It may be said that while there are some sections of the island wherein the white spruce is found to be fairly abundant, the chief spruce of New foundland is the black spruce, which is seldom found anywhere in the New England States ar Canada. But while the black spruce of the island is small it is in some respects more valuable for the paper-maker's use than the white spruce, from the fact that a log of black spruce is said to contain from 20 to 25 per cent. more fibre, which is what the paper maker and pulp maker is after, than a log of the same size of white spruce, owing to the larger size of the wood cells of the white spruce. Moreover, the Newfoundland spruce is evidently a more durable wood than the white spruce of Canada and the United States, as may be seen by its use as railway ties by the Reid-Newfoundland Company, the white spruce of Maine, the New England States and Canada not being considered suitable for ties. The black spruce is considered to be better than the white for pulp; indeed it is probably the most valuable of all woods for pulp and paper purposes."

The United States Forestry Service has issued the following bulletin on the matter of fire prevention:

"One of the lessons which will finally be drawn from the trying experience of the present forest fire season, in the belief of officials of the United States Department of Agriculture, is the need of wider organization among private owners of timber to safeguard their holdings. It is pointed out that already in the Northwest, both on the Pacific Coast and in Montana and Idaho, timberland owners have formed themselves into associations which assess the members on an acreage basis and thus meet the cost of maintaining a regular patrol and fire-fighting organization. Only by getting together can private owners usually assure themselves protection, for fire is no respecter of boundary lines, and the man who undertakes to keep it out of his own timber will want it kept out of his neighbor's too. Wherever possible the Government's forest officers co-operate with the force put in the field by the associations, so that the employees of the Government and those of the private owners are handled practically as a unit in fighting the common enemy.

"This co-operation is advantageous to both sides. Protection of the national forests necessarily carries with it a good deal of protection of adjoining or interior holdings. If the private owners would everywhere shoulder their reasonable share of the burden, the public would gain both through more general forest conservation and through relief from the necessity of paying for the protection of private timber in order to protect its own."

In connection with the recent statement of Sir Wilfrid Laurier that, if loggers were compelled to burn their brush, many large fires might be avoided, the remarks of A. A. Richardson, insurance adjuster, of Vancouver, B.C., are of interest: "All over the province," he says, "the summer has been the driest in many years, with the result that bush fires have been more prevalent and more destructive than ordinarily. Of the general loss in standing timber I have no statistics, but traveling back and forth among the affected areas, it would seem that almost all the areas burned are of lands that have been logged and that only in few instances have the fires penetrated the standing timber to any depth. The reason for this would seem to be that the logged areas are open and dry, whereas in the standing timber the dense undergrowth conserves the moisture and offers less encouragement to the flames. The problem of preventing bush fires does not receive the general practical attention that it should in view of its importance, and there is too great a tendency to regard them as inevitable. Lack of system in fire fighting contributes to the annual loss. So does the negligence of lumber companies, the railroads assist, and private individuals by their carelessness tend to the same result. Among the chief offenders are the lumbermen themselves, logged off lands as a rule being covered with highly inflammable material, the dried bush burning like tinder. The precautions that the lumbermen do not seem disposed to take of their own motion should, I think, be imposed and enforced by law. In my opinion the law should require the burning of brush as it is cut. Furthermore, every log should be taken out. Wherever one travels he finds old logs rotting, usually with brush piled on them, and when the fire gets in this dry stuff off it goes. If the logged tracts were properly cleared as the work of logging proceeded many of the bush fires would never occur, or would not reach large proportions. With a thorough inspection system and co-operation, in addition, the annual loss of lumber and mill properties by fire should be reduced to a minimum."

Ontario Mills Will Have Average Cut

Log Output for the Coming Winter to be About the Same as Last Year's — Supplies of Logs Well Used Up — A Satisfactory Outlook

The lumber manufacturers of Ontario are busy now with their preparations for the coming winter's operations in the woods. Many of the camps are already in operation. The scarcity of labor will be an important factor this year. The railway construction camps in all parts of the country have drawn off large numbers of the men who formerly went to the lumber camps. Practically every camp is finding it difficult to obtain a full force. In the light of this it might have been expected that the cut of logs this winter would be lighter than usual. This, however, is not likely to be the case. According to information received from a number of large manufacturing companies, the cut this winter will be about an average one. Replies received in answer to enquiries are largely to this effect. A few operators are reducing the number of their camps, but expect to have just as large a cut as usual. Some important operators are not putting in any camps. The Ontario Lumber Company at French River, for instance, will cut no logs. The Parry Sound Lumber Company, which is about to sell its plant and limits, will also probably not be cutting any logs, as no preparations have been made by the present owners, and the auction sale is not to occur until early in December, when it will be too late to go in for opening camps. On the other hand, some of the large operators intend to increase their cut. Geo. Gordon Co., Cache Bay, for instance, intend to increase their cut by 50 per cent.

Stocks of lumber at the mills have been pretty well worked off during the summer. The outlook for trade therefore is encouraging. Stocks of logs also have been satisfactorily turned into lumber. Nearly all the logs cut in the woods last winter were driven successfully to the mills and manufactured. The companies are therefore approaching the winter's operations under exceptionally favorable conditions, and with an average winter's cut of logs they should improve their situation materially between now and this time next year. It looks more than probable in fact that by the fall of 1911 stocks of lumber will be light, logs well used up and market conditions generally satisfactory. Following are quotations from a number of letters received by the Canada Lumberman upon the subject:

The Muskoka Wood Mfg. Co., Huntsville, Ont., write as follows: The season of 1910 and 1911 promises to be particularly busy in this section of Ontario. Many more camps are already engaged than since 1906 and 1907. Many of the firms intend increasing their cut of hardwood, as there is a decided scarcity of hardwood lumber through the districts of Muskoka and Parry Sound.

The price of hardwood at the present time is from $2.00 to $5.00 per M. higher than in 1909, and the stocks at the mill are very light. Stocks of hemlock at the mill do not appear to be greater than at this season in 1909, and while sales are brisk the price is not as high or satisfactory as the situation warrants. We look for an advance as soon as a few who must realize on their lumber get their stocks sold.

Low-grade pine and spruce are lower than in 1909, and we think this has the effect of keeping the price for hemlock down to some extent. Wages for bushmen are about $7.00 per month more than one year ago, and the manufacturers will have to realize greater prices during 1911 for the material taken out in order to show any profit.

We manufactured about five million feet of rough lumber during 1910 at our mill here and expect to increase the cut slightly for 1911.

The Edward Hines Lumber Co., Owen Sound, Ont., write as follows: Our firm just buys the output of the Carney Lumber Co., but we might say that they intend to put in about the same amount of stock as last year, namely, 10 million of merchantable. All the other mills in this vicinity, that we know of, are going to put in as much as last year at least. Do not know of any curtailment of the logging operations at the present time. There will be no logs carried over at this point this winter, and the stock of lumber at the different mills will be about the same as was carried over a year ago.

While the market conditions, at the present time, are somewhat slow, still we are hoping, and looking forward to a busier season in the near future, and while the movement has been slow compared to former years, the prices have not receded to any great extent. We have had a good year as far as the low-grade lumber is concerned, and have no stock of this grade on hand at the present time. The good lumber, of course, will take care of itself on any market.

A. Barnet & Co., Brule Lake, Ont., write as follows: During 1910 our mill has been idle. We have nothing unsold on the yard, and we expect that 1911 will be a busy season with us. We have men in th woods now taking out hardwood, and we expect to have a very large output of first-class birch lumber to market in a year, and altogether will have a very busy season. We expect to have 5,000,000 feet total, birch and pine.

We have a large number of men in the woods now, taking out hardwood logs, and expect to manufacture three million feet of hardwoods next year. We have the greatest confidence in the market for birch lumber, and we have a very large quantity of standing timber for future cutting. We are the only people in the Algonquin Park district whose license permits the cutting of birch, and it is recognized that the quality of birch in this district is the best in the market. Because of the general improvement in the market for birch lumber, we hope to be able to make the hardwood branch of our business much more profitable.

The Colonial Lumber Company, Pembroke, Ont., write as follows: We have about the same number of camps as last year, and are carrying over about the same quantity of logs at our mill. We do not expect our bush work will exceed last winter's operations to any great extent, and are only calculating to provide logs so that the mill cut may be kept at about the usual quantity, viz., twenty millions. Our stock of lumber is much lower than a year ago. We are not carrying at the present time over one-half the lumber in our yard that we had this time last year. We have no definite information as to what other lumbermen are doing, but from what we have heard would judge that the general tendency in the Ottawa Valley is to curtail bush operations considerably.

The Cleveland-Sarnia Saw Mills Co., Sarnia, write as follows: We expect to put in this winter about twelve million feet of logs, which would be about the same as last winter. We have about twelve to fourteen million feet of logs here at our mills, but as we run the entire year round, we could not consider this as being carried over, as we keep a supply ahead at all times. The stocks of lumber compare favorably with a year ago, and I should say there is about the same amount on hand. The outlook for trade at the present time is not flattering, although there is considerable lumber moving all the time and prices in common and better grades, on account of the deplorable condition of the yellow pine market, are somewhat weak.

Keenan Bros., Owen Sound, Ont., write as follows: As far as our operations are concerned, they will be practically on the same scale as the past winter. We take out from our own woods nothing but hemlock and hardwoods. We expect to get out this winter and cut at our own mill about four and three-quarter million feet, which will be the same as last year. We will have no logs carried over this winter in Owen Sound ourselves, nor do we think any of our fellow mill men will, as all will be cut before the mills close. Excepting pine, we think the timber is moving very nicely, and we have no complaint to make. We look for good trade in hardwoods, and, in fact, we look forward to years of prosperity for business in general.

Geo. Gordon & Co., Cache Bay, Ont., write as follows: Our own firm will increase their output in the woods about 50 per cent. this season over that of last, and that of the Strong Lumber Co., which is a subsidiary company, will be about the same as last season. Between the two firms, we will carry over 125,000 pieces, which will be sawn in the early spring before the arrival of the other logs at the mill. The outlook at the present time is not too promising, but we think, owing to the conservative buying of many of the firms, that the spring ought to open out fairly well. At the present time, we have slightly less in our yard than we had last season. As far as our own firm is concerned, personally, the shipments have been very good up to date.

Eddy Brothers & Co., Blind River, Ont., write as follows: We are operating just as strong this year as we were last. We put in, in the neighborhood of seventeen millions last year, and expect to do about the same this season. We carried over last year about six millions, and as we did some custom sawing this year, we will carry over about three millions of our own logs. Our plant has manufactured this year thirty millions, and we expect to cut about five millions more before we shut down.

A large Ottawa Valley Company write as follows: We are making somewhat less than an average cut this year. We have seven camps running. Cannot say what is being done by others, but do not know of any in this district doing more than this. We see nothing in the market to warrant any extra supply or any extra expense in getting out logs.

The Spanish Mills Company, Spanish Mills, Ont., write as follows: We will probably manufacture about the same amount of lumber next year that we have this, perhaps slightly less. Out entire cut this year is sold, and we expect to cut all our logs. From general reports in this vicinity, we believe that there will not be as many logs put in as last winter.

Graves, Bigwood & Co., Byng Inlet, will not cut so many logs this winter as last. Last winter they had a large cut, but were unfortunate with some of their best logs, not being able to get them down to the mill. These will be ready for the mill early next year.

The Algoma Commercial Company, Sault Ste. Marie, Ont., write as follows: We intend cutting about twenty million feet of white pine this year, which is a little in excess of last year. We will carry over very few logs of last year's cut.

The Victoria Harbor Lumber Company and **Waldie Brothers, of Spragge,** are not putting in so many camps this winter, but their cut will be just as large as last year, and possibly somewhat larger.

Barr & Morris, Pembroke, Ont., write as follows: We expect to take out this winter about a million and a half feet of white pine and half a million feet red pine and spruce.

The Hope Lumber Co., Blind River, Ont., intend taking out twenty millions back of Blind River this season.

The Ontario Lumber Co., French River, cut no logs last winter, and will not operate this winter either.

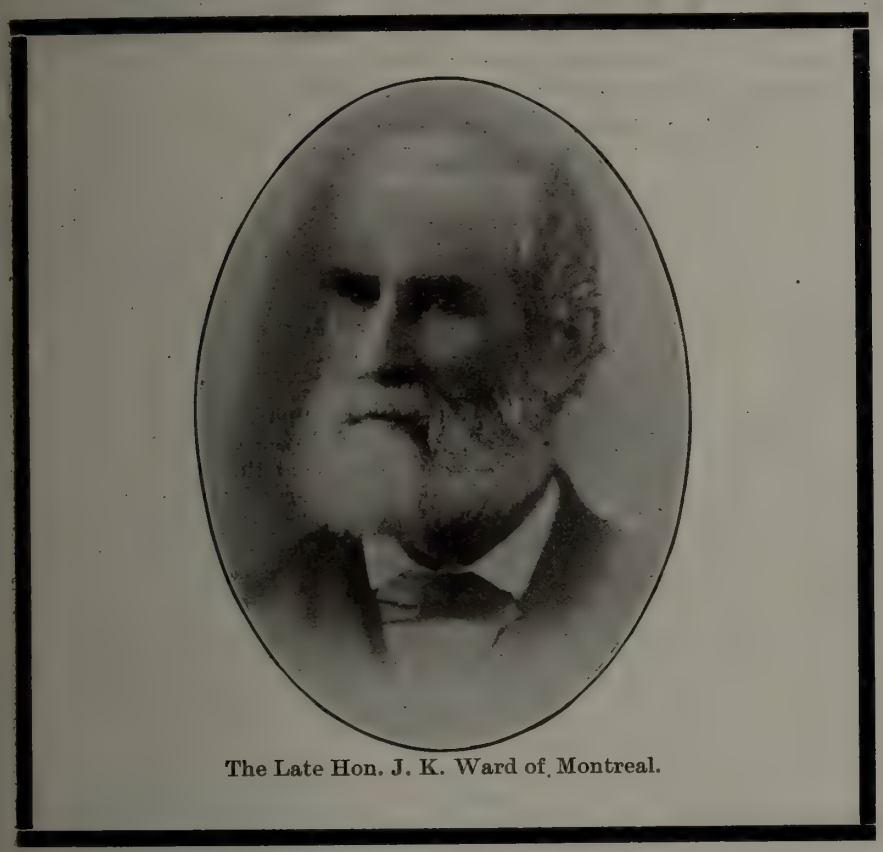
The Empire Lumber Co., Latchford, Ont., are not putting in any camps this winter.

The Carney Lumber Co., Owen Sound, will operate on about the same scale as usual.

The Hettler Lumber Co., of Indian River and French River, will have a large cut.

The Cavendish Lumber Co., Lakefield, will have about the same cut as usual.

Playfair & White, Midland, will have a smaller cut than last winter.



The Collins Inlet Lumber Co. will have an average cut.

Statistics have just been compiled showing that it requires 12,000,000 acres of timber lands to furnish Canada's annual export of pulp wood, and over 8,000,000 acres to supply Canadian railways with ties. This gives some idea of the tremendous inroads which are being made on Canada's forest reserves.

Death of a Pioneer Lumberman

Hon. J. K. Ward of Montreal Passes Away at the age of 91—Outline of a Useful Career

The death of the Hon. J. K. Ward, which occurred at Montreal on October 2nd, leaves a blank in the ranks of the Canadian lumbermen which can never be filled. Mr. Ward, who was 91 years of age, was one of the earliest pioneers in the lumber business of Canada. In respect to number of years and achievement of commercial success, he stood as an illustrious example among the pioneer lumbermen of the Dominion. Born in the Isle of Man in the year 1819, he was at an early age apprenticed to the trade of carpenter and joiner. Having completed his tenure of apprenticeship, he decided, when twenty-one years of age, to emigrate to the United States, and after being employed in different pursuits for three years, he secured a position as second clerk in a saw mill at Troy, N.Y., later leasing the mill and operating it on his own account. In 1853 he decided to prospect in Canada, and bought a saw mill and property on the Maskinonge River, in the Province of Quebec, where he spent ten years lumbering, adding during these years somewhat to his possessions. Ten years later he moved to Three Rivers and acquired the limits and mills built and owned by Norcros, Philips & Company.

The Late Hon. J. K. Ward of Montreal.

This property he operated successfully for several years and sold to advantage to an American company.

Encouraged by previous efforts, Mr. Ward obtained a large area of timber land from the Quebec Government situate on the Rouge River, a tributary of the Ottawa, and established a large saw mill at the Lachine Canal. This he operated from 1870 to 1900, when he transferred the business to a company in which his eldest son was largely interested. The annual cut of this mill was about 15,000,000 feet. Mr. Ward shipped largely to England, the United States, South America and the West Indies. As an instance of the proportions of his business, it may be stated that in 1886 he shipped 116 cargoes of lumber.

Mr. Ward was always a strong advocate of preserving the forest, and was the author of many interesting papers on Canadian woods. Addressing the Natural History Society in Montreal, on April 29, 1895, he said: "While not an alarmist as to our supply of pine timber, I cannot but consider the wanton waste of it a sin. A mistake is made by our millmen in not having more sawing capacity than the fast mills now in use possess, sawing as they do in twelve hours 40,000 to 50,000 feet with one circular saw. Too much haste is required to do this, when more money might be got out of the same logs by employing two sets of saws, with the necessary trimming machinery, and doing the work with less speed."

In 1888, Mr. Ward was named a Legislative Councillor by the late Mr. Mercier, Premier of Quebec, probably the first case recorded where a practical mechanic, a man who had sprung directly from the working classes, had held this exalted position.

Mr. Ward was one of the founders and most generous benefactors of the Protestant Hospital for the Insane, at Verdun. He was also a life governor of the General Hospital, of the Women's Hospital, of the House of Industry and Refuge, and of the Western Hospital, and also a director of the Sailors' Institute and of the Society for the Protection of Women and Children. He was a prominent member of the Board of Trade, and had been a member of the council of that body. He was also a member and supporter of the Mechanics' Institute. On September 26, 1907, Mr. Ward made a gift of a free public library to his native town of Peel, in the Isle of Man.

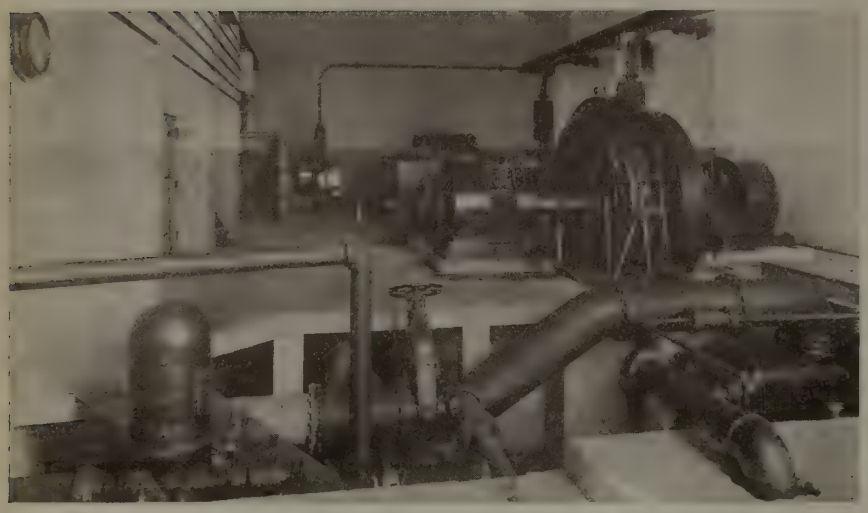
In politics, the Hon. Mr. Ward was a Liberal. He was defeated in the general elections of 1882-87, and was appointed to the Legislative Council in 1888. In 1903, he was made a member of the Council of Public Instruction.

A Strong Protest Against Reciprocity Dangers

Editor "Canada Lumberman," Dear Sir,—It is said that "Shakespeare never repeats," but I do. And anent the reciprocity discussion I desire to repeat, what has been heretofore said, "that there will be no interchange between the U. S. and the Dominion of Canada, so far as forest products are concerned, especially spruce pulpwood." And the reason why has been clearly set forth several times.

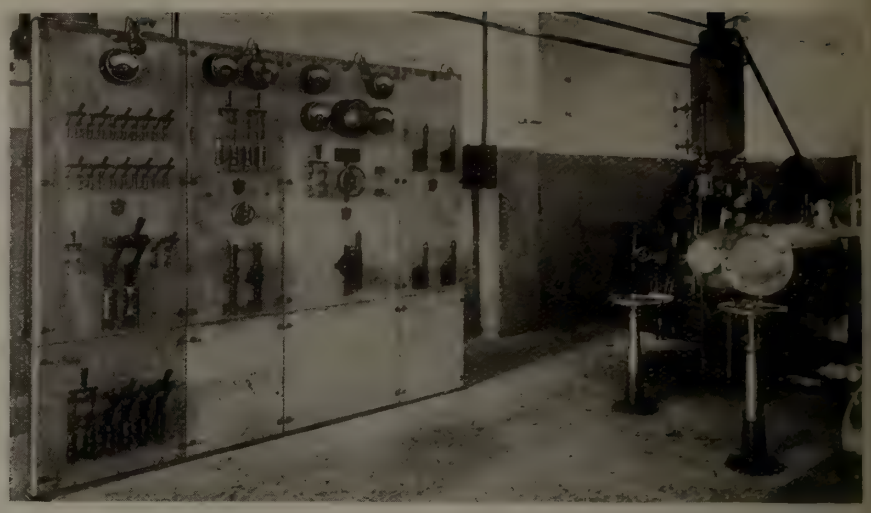
In the first place, provincial rights and state rights are synonymous terms. And the Dominion authorities at Ottawa can no more repeal provincial acts of legislation than Washington authorities can interfere with state rights. Both the Provinces of Ontario and Quebec have decreed that all their timber shall be manufactured in Canada, and there is no appeal. There is no duty on pine sawn logs from Ontario to Michigan—there never was any duty, either export of import on pulpwood from Canada to the States, although some reciprocity advocates on the other side say "they" hope the duty will be taken off pulpwood "any way." It is easy for a practical forester to see why the forest products are foremost in reciprocity propositions from the other side. Cut out forest products from tariff consideration and little interest will be manifest in reciprocity from that direction.

Reciprocity is simply a straw which President Taft is "grabbing at" in his effort to save himself and his political party from drowning. Any tariff negotiations or reciprocity arrangements between Ottawa and Washington after November next will have to be carried out with a Democratic Congress, and the broken promises made to the people by the Republican party will be repaired by a Democrat Administration by revising the tariff downward.



No absolute free trade need be looked for till there is a general clamor for it on the part of the people, just as there is for a lower tariff on necessaries of life to-day.

The "dilemma" seems to be that the New England manufacturers of pulp and paper must eventually either transfer their manufacturing plants to the provinces where the raw material is to be obtained or persuade the provincial authorities to rescind the order in council requiring "all timber to be manufactured in Canada." The latter, at the present time, seems out of the question. Reciprocity between the two Governments, therefore, can afford no relief for the pulp and paper manufacturers or paper users in the States. The removal of the duty from wood pulp and paper imported into the States may help a little, but in any event it looks to "the man up the tree" as though pulp and paper might go—in the language of "Chairman Mann," "sky high," and the raw material sky higher.



O. E. ELSMORE.

The Mackenzie & Mann Pulpwood Project

The Canada Paper & Pulp Company, in which Messrs. Mackenzie & Mann are largely interested, and which recently secured a federal charter with capital of $10,000,000, involves the erection of a large paper, pulp and carbide plant on the Saguenay River, near Lake St. John on the line of the Quebec and Lake St. John Railway in Quebec. Speaking of the project in a recent interview Mr. Mackenzie said: "Near Chicoutimi, on the Saguenay, there is a water power which can, according to the reports of engineers, be made to produce anything between 150,000 and 200,000 horse-power. This is also reasonably close to Lake St. John. There is any quantity of good pulp timber in the country contiguous, and as Lake St. John is the natural basin for all the streams in the district, it will be seen that there should be no great difficulty in floating the raw material in, no matter where it might happen to be cut. Those capitalists who have looked into this matter have the idea that there is the greatest possible opportunity for the development of a great industry. They are of the opinion that with the immense water power which is reported to be available there could be erected a plant where could be manufactured paper, pulp and carbide, while surplus power might be supplied to other industries in need. I have not gone over the ground myself, so, of course, I cannot say anything authoritative, but it looks to me like a good prospect. I am not in a position to say who the capitalists are who are really interested in the venture. However, it is now so late in the season that operations will hardly be commenced this year. A certain amount of development work has already been done.

Power Equipment of a Modern Sawmill

First Large Plant in British Columbia to be Operated Throughout by Electricity—An Object Lesson for the Progressive Manufacturers that is being Taken Note by Many

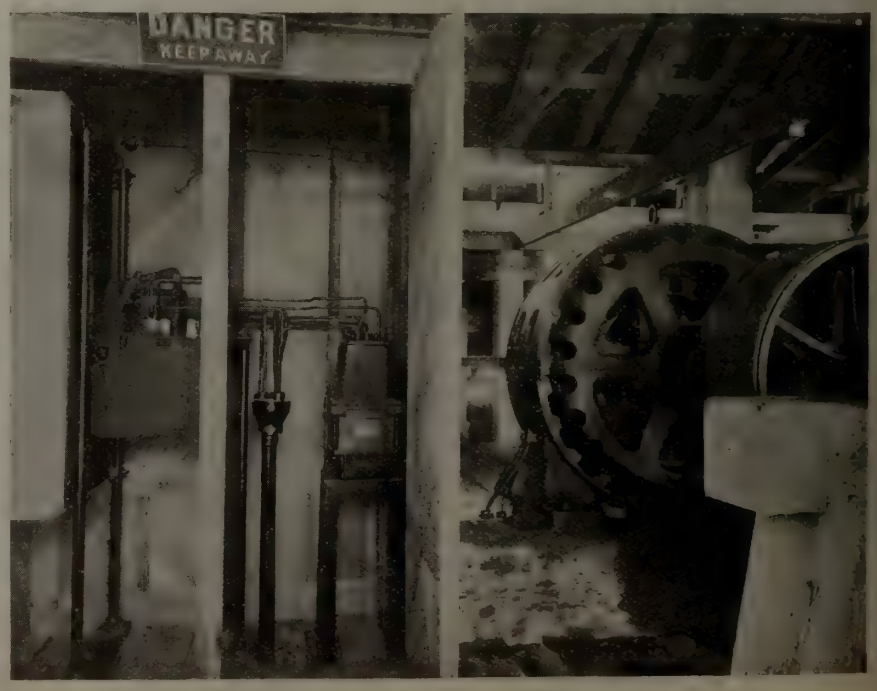
The widespread interest shown in the application of electric power to sawmills makes timely a description of the power equipment of the North Pacific Lumber Company's new mill at Barnet, B.C.

The general arrangement is to drive the main part of the mill directly from one high speed Goldie Corliss engine of 1,000 h.p. capacity, the outlying groups being driven by induction motors, current for which is supplied by one Allis-Chalmers-Bullock, 600-kilowatt, 3-phase, 60-cycle, 2,200-volt generator, direct connected to a high speed compound Goldie Corliss engine. Both of the above mentioned engines are equipped with steam operated dash pots on valve gear, and are run condensing. The speed of these engines is considerably higher than that of the ordinary Corliss engine, as the piston speed is 750 feet per minute.

In addition to the above equipment the engine room contains one Allis-Chalmers-Bullock, 100-k.w., 125-volt direct current generator, direct connected to a high speed Ideal engine, which supplies the current used for lighting the mill, yards, offices, etc., for motors used in the machine shop and filing rooms, for driving of power house ventilating fans, and for exciting the fields of the large alternator.

The 4-panel switchboard, built by Allis-Chalmers-Bullock, Ltd., is of neat and attractive design. It is made of blue Vermont marble, highly polished, and is mounted on a steel framework. The panels, looking from left to right, as shown in the illustration, control (1) all of the direct current lighting and motor circuits; (2) the direct current exciting generator; (3) the main generator; (4) the four main feeder circuits by which three-phase current is distributed to the various motors.

Owing to the scarcity of good feed water for the boilers, a surface condenser is used so that the water may be utilized over and over again. Economy of the fresh water supply is the keynote of this part of the equipment, all the pumps being made compound on the steam end and exhausting into the condenser. Sea water is used for cooling the condenser, and is supplied by centrifugal pumps. The fire pumps, circulating and air pumps, and condensers, are located in the basement of the power house, as shown in the foreground of the illustration. The hot well is constructed of reinforced concrete, adjacent to the condenser. The total capacity of the boilers is 2,400 h.p., and fuel storage bins are provided above the boilers, the firing being done mechanically.



The plant is provided with induced draft, thus eliminating a high smoke stack, the cost of maintenance of which has been found to be extremely high in this climate, owing to the heavy rainfall during the winter months. The furnaces are designed so that by using the induced draft the smoke and spark nuisance is done away with—so much so, that under ordinary circumstances scarcely any smoke issues from the stack.

The power house, together with the machine shop and boiler house, is of reinforced concrete, with iron roof; and one noticeable feature is the minute attention that has been given to details tending to insure continuity of operation. In the event of fire in the mill or yard, the entire building can be completely enclosed, and air supplied to the operating staff by means of two electrically driven fans, whose intakes are located at the sea level, thus making sure that the fire pumps can be kept in operation.

The alternating current motors used are wound for 2,200 volts, this being the standard voltage on the Pacific Coast for motors of 40 h.p. and larger, and the total capacity of these motors aggregates 999 h.p. Each motor is provided with a suitable control panel located conveniently to the motor. All these panels are enclosed in neat asbestos lined cabinets, with hinged doors on both sides to admit of ready access to the switch gear, etc. An important point in this connection is the attention that has been given to details tending to safe-guarding from fire and danger to employees. The cabinets are placarded with warning signs, and insulated stools are provided for use in starting the motors. Pails of sand are also kept handy, sand being the most effective extinguisher of electric fires.

Owing to the general excellence of the apparatus it was felt that the work of installation and the materials employed should be of equally high standard. Consequently it was decided that the regulations of the National Board of Underwriters should be observed to the letter. This decision rendered necessary the use of 3,500-volt, lead-covered cable, which was drawn in unlined steel conduits, and the end sealed with the most modern type of cable pot heads. An illustration of the motor wiring shows the details very accurately.

All the high voltage work in the power house is of the same quality, and the outside pole line distribution system is built according to the most modern practice. All the wiring in the power house for light and the small motors, is enclosed in steel conduits with conduit fittings, making a neat and substantial arrangement. The lighting of each section of the mill, planer and sheds is controlled from an asbestos-lined cabinet. The wiring is run in conduits in all damp and exposed places. Thirty-two candlepower incandescent lamps are used throughout, and an excellent distribution of light is obtained. The extra expenditure for this cause was found to be fully justified by the increased efficiency of the staff in working by artificial light. The lighting of the sorting

Wiring of Motor and Starting Panel, North Pacific Lumber Company.

platforms and yards is by arc lamps erected on poles of varying heights from the ground, according to the strength of illumination required.

Great care was taken during the installation of the equipment, and the entire electric system was put into operation without the slightest hitch. It is gratifying to note that the results obtained from the flexibility of this plant are considerably better than expected by the most sanguine exponents of electric power, and amply repay the lumber company for entering this almost unexplored field.

The designer of the mill is Mr. Robert Hamilton, of Vancouver, who personally supervised the entire installation. Messrs. Mather, Yuill & Company, of Vancouver, were the electrical engineers.

Pulpwood Sentiment in the United States

The pulpwood and paper situation in the north-eastern United States is made the subject of a breezy but forcible and instructive letter in the Toronto Globe from its travelling commissioner, Mr. M. O. Hammond. Mr. Hammond is studying the conditions in the United States and contributing a series of letters upon the political situation. Writing from Boston recently he said:

"Canadians travelling through the northern latitudes of the Eastern Provinces have usually accepted at face value the political orator's praise of their 'inexhaustible timber resources.' To journey for days and see nothing but spruce trees seems almost proof that the last one will never be cut. Then some day the traveller sees a flotilla of small logs being towed down a stream towards the waters of the St. Lawrence. If he follows he will likely see them land in one form or another in some paper mill south of the boundary. That is the tragedy of 'our inexhaustible timber resources,' for Uncle Sam, having pretty well stripped off his own spruce trees, and having a great appetite for reading matter, particularly newspapers, is helping himself to the raw material across the line.

"It is a tragedy in two senses. It is a blow to national pride to see the raw timber taken away and the manufacturing done in a foreign country, often by people who left Canada supposedly to better themselves where there was more employment. It is an economic tragedy, for it feeds an industry in New England that ought to be in the country which has the spruce and the water-power and the labor—the market will last as long as people read and presses run.

"Realizing the economic and national injustice of this condition of affairs, there has been an agitation in Canada for years to secure for the land that grows the trees the right to make them into paper. The situation, however, is complicated. Part of the forests are on private lands, and the remainder are lands owned by the various Provinces—whose governments have a variety of timber policies and who cannot deal directly with a foreign government interested in the question. It has come about, therefore, that, following the example of Ontario, the Canadian provinces possessing pulpwood, except New Brunswick, have prohibited the export of such wood when grown on Crown lands, and New Brunswick now has the matter under consideration.

"This, therefore, is a question which influential United States interests would like to see adjusted in any tariff or trade negotiations with Canada. As it stands Canada has the whip hand. It has the forests and its provinces have large rights of control of the timber. If Uncle Sam wants to be real nasty be will only spite himself, while if Canada could secure a good paper market it would be a permanent outlet, and the business of reforesting the Laurentian area would enable the industry to be carried on ad infinitum.

"There is a strong demand on the part of American publishers and job printers that news print paper be placed on the free list. The paper interests on this side have always opposed this, and even to-day an effort is made to minimize the importance of the Canadian pulpwood for their needs. For example, it is stated that out of the 1,200,000 tons of news paper used in the United States yearly only 53,000 tons comes from Canada, and that, in view of the restrictions by Canadian provinces against the exportation of pulpwood cut on Crown lands, the paper interests here are looking elsewhere for supplies. For example, a United States Government official has just returned from Newfoundland, where he looked into the question of a possible supply of pulp. Another move is the series of experiments under way to make the cheaper kinds of paper out of other woods than spruce and out of certain grasses.

"The paper consumers in the United States meantime are in a rather bad way, for their country has imposed a retaliatory duty of $1.67 per ton on mechanical pulp from provinces which prohibit the exportation of pulpwood cut on Crown lands. In spite of this the importations of mechanical pulp increased since the passage of the Payne law, showing that the spruce forests of Canada are becoming increasingly important to this country. The hope of the paper consumers now is that Congress, at its December session, will pass the Mann law, removing the paper duty on imports from provinces which remove the restrictions on the exportation of pulpwood. They also hope that a satisfactory solution of the whole thing may be reached in the proposed negotiations betweeen Ottawa and Washington.

"Whatever the paper kings of Holyoke may say, however, paper is essentially an industry indigenous to Canada, and any treaty that would compromise the principle that Canadian spruce forests should be made into paper at home would be unpopular as well as unjust.

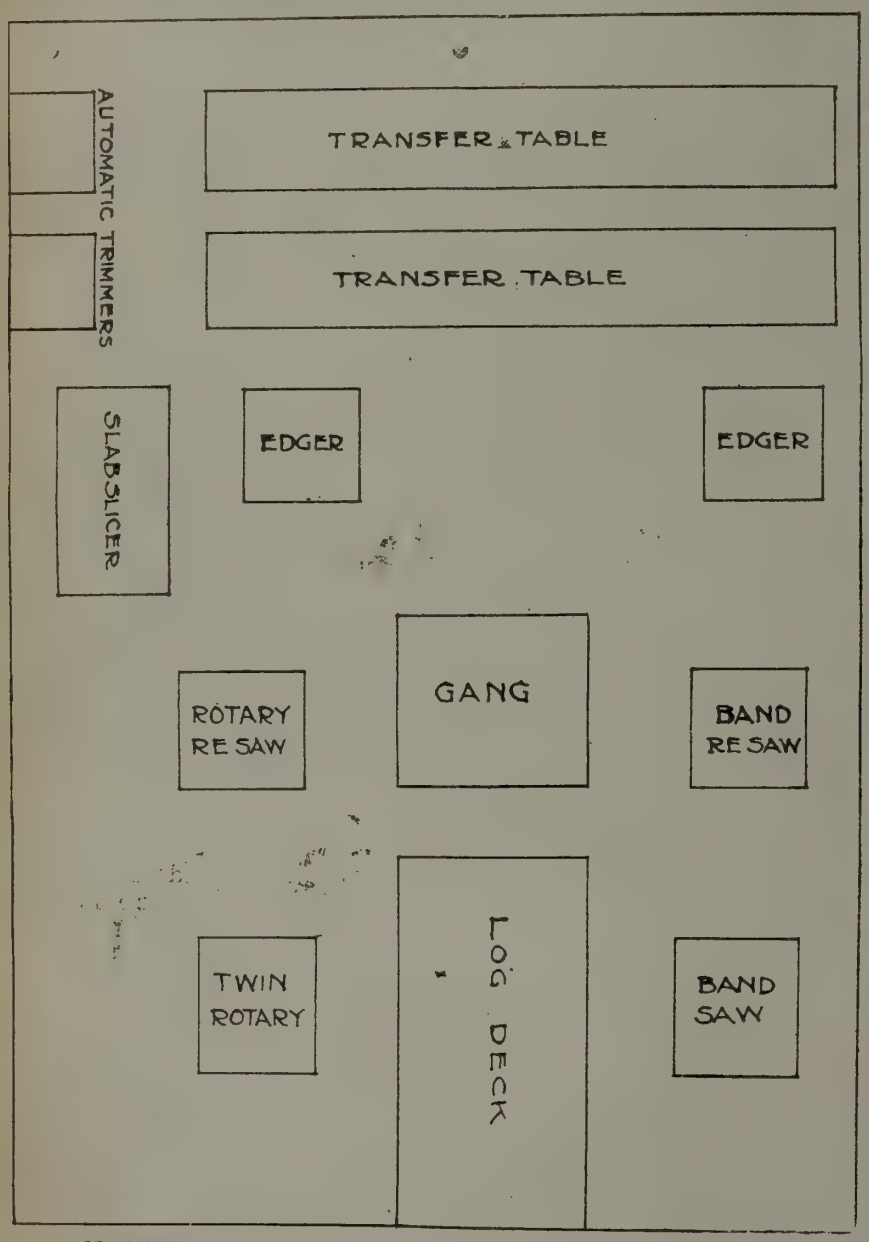
"The publishers of the United States made a temporary gain in the last tariff revision by getting the paper duty reduced from $6 to $3.75 per ton, but this was spoiled by the retaliatory duty of $2 on paper from provinces that imposed restrictions on the export of pulpwood, pulp or paper. This offset the reduction almost wholly, New Brunswick being the only province with pulp forests that it excepted from the retaliatory duty. Even as it is, Canada supplies one-fifth of the pulpwood used in the United States, and the proportion is bound to increase constantly.

"A peculiar feature of the recent reports of importations of mechanical pulp and news print paper from Canada is the fact that a considerable quantity of it is still coming from wood cut on Crown lands, and is paying the retaliatory duty specified in each class. It is said, however, that the paper mills of New England are doing their best to arrange for supplies of pulpwood from privately owned lands, so as to avoid the retaliatory duties. There are still some spruce forests in Maine—the pine tree State—while the middle west draws on Minnesota and Wisconsin.

Starting Panel and Lighting Distribution Cabinet, North Pacific Lumber Company.

Parry Sound Lumber Company to Sell out

The Parry Sound Lumber Co., of Parry Sound, Ont., have decided to sell out their mill and limits. An auction sale will be held in the rotunda of the Board of Trade at Toronto on December 7. The property to be sold will include 440 square miles of timber limits in the Georgian Bay district, which will be put up in blocks of from 5 to 36 square miles. There will also be sold all the timber, logs, mills and town property in the town of Parry Sound, together with the company's tug, scow and full camp equipment for five camps. The timber limits to be sold are held under license and deed and contain pine, hemlock, spruce, birch and other timber. The licenses held from the Ontario Government include all the timbers and are not restricted for time. The Government dues upon the timber are as follows: Sawlogs of white pine, $1.50 per M. feet; sawlogs of hemlock, tamarac and other woods, 75 cents per M. feet. The limits are located in the townships of McDougall, Foley, McLellan, Monteith, Carling, Christy, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The C. P. R., C. N. O. and G. T. R. run through the various limits. The company state that their reason for deciding to sell out is that the president and a number of shareholders are so busily engaged in other enterprises that they cannot devote the necessary time for the lumber business.



Mr. Justice Clement has decided in favor of the plaintiffs in the important British Columbia timber suit of Swift v. David. The judgment is for $171,500. The claim wa sfor $250,000, representing, as the plaintiffs alleged, a shortage in timber on the numerous tracts and limits transferred to the plaintiffs by David when he sold to them nearly all his interests in the then Fraser River saw mills, near New Westminster.

Modern Mill and Plant at Bathurst, N.B.

Nepisiguet Lumber Company's Splendid New Facilities — Latest Types of Machinery Installed—An Automatic Sorter — Equipped to Turn Out 200,000 Feet Per Day

On September 1st, at Bathurst, N.B., the new saw mill of the Nepisiguit Lumber Company, Limited, which is considered one of the most up-to-date mills in the province, started operations. Situated at a point of land where the Nepisiguit River joins the waters of the harbor of Bathurst, the mill possesses ideal shipping facilities both by land and water. The Caraguet Railway, which connects with the main line of the Intercolonial Railway, has its terminus right at the mill property, and by water the largest ships can come up the harbor and load at the company's piers.

The main mill building, which is 64 x 192 feet, is constructed of

Nepisiguit Lumber Co., Bathurst, N.B.—Plan of Mill Interior.

wood frame covered with galvanized iron. The lath room is 24 x 64 feet. The mill is equipped with a twin rotary 51 inch gang, weighing 45 tons, a rotary resaw, 8 ft. band resaw, band saw, automatic trimmer, edgers, slab slicer and lath machine. The layout of the mill will be seen in the accompanying illustration. The gang was furnished by Wickes Bros., of Saginaw, Mich., and the rest of the machinery supplies by Clark Bros. Company, of Belmont, New York. The capacity of the mill is 200,000 feet per day.

The boiler room, which is built of steel and covered with steel, contains six boilers, and the engine room, which is built of brick, is equipped with one of E. Leonard & Son's Corliss engines, and also a twin engine. The burner attached to the mill is 116 feet high, and a water tank on the ground, 20 feet in diameter and 17 feet high, contains 100,000 gallons of water. The mill is equipped with the best fire appliances known, and near the main building is a fire hall fitted with a steam pump ever in readiness for fire purposes.

An expert American mill builder, in the person of A. N. Cole, was brought from the United States to construct the mill, and that he

Nepisiguit Lumber Co., Bathurst, N.B.—Front View of Mill.

has succeeded in erecting a most modern and up-to-date mill is well evidenced by the way everything is working, and the great amount of product the company is already turning out.

One of the most important improvements, found in very few mills in the Eastern Provinces, is the automatic lumber sorter. This is built on the side of the mill shown in one of the illustrations, and is 196 feet long. As the manufactured lumber comes from the machines it is

Nepisiguit Lumber Co., Bathurst, N.B.—Rear View of Mill.

carried along on the sorter till it reaches the trucks on the outside, doing away with all handling and greatly facilitating the conveying of the lumber to the yard.

The yard is being laid out in the most approved way, 16-foot plank walks being laid all around, which greatly facilitates getting around with the lumber trucks.

Ideally located, as the mill is, and possessing every modern facility, it will, no doubt, prove, from the point of cut, one of the foremost mills in the province.

Nepisiguit Lumber Co., Bathurst, N.B.—Interior View.

Nova Scotia Lumber Markets Quiet

Shipments Nearly Finished for 1910—Slight Improvement in Lath and Short Spruce Random

Halifax, N.S., October 10.—Market conditions have changed very little during the last fortnight, except that the English market reports conditions rather unfavorable, stocks being heavier and consumption less than at any time since 1907. So far as Nova Scotia operators are concerned, shipping is largely over for this year, and the conditions of the market at the present time will not greatly affect them, although most contracts for winter and spring shipments are usually made between now and the first of the year. Many of the large dealers prophecy rather a poor year for this market, but it is very difficult as yet to say what conditions will be.

The United States market continues about the same. Receipts continue quite heavy, and demand is only fair. The unsettled political situation is undoubtedly having rather a bad influence on general business, and causing most of the dealers to go slow in buying. Everyone seems anxious to lower stocks.

The lath market is reported slightly stronger, but sales are still around $3.35, which means $2.20 to $2.25 f.o.b. Nova Scotia ports. Good hemlock cargoes are being freely offered at around $17.50 to $18.00, while short spruce random is doing little better.

It is impossible to foretell what this market will do later on or in the coming spring. Many dealers are of the opinion that because of the unsettled political conditions and other causes the markets will not be in good shape for some time to come. No change is reported in South American values.

Several transfers of Nova Scotia timber lots are reported of late.

O. J. O'Brien, of Noel, has sold his Minasville property to a company to be known as "The Minasville Lumber Co." They expect to have a fair sized cut for the coming season, which will be largely for the English market.

Chappell Bros. have sold their property near Windsor Forks to a Parrsboro concern, of which B. L. Tucker is understood to be the head. They expect to operate this property the coming season.

The death occurred at Parrsboro last week of A. D. Mills, senior member of the firm of A. D. Mills & Sons, of Annapolis. Although he had not been enjoying the best of health, Mr. Mills' death was unexpected, he being at Parrsboro to inspect a vessel being built for his firm. Mr. Mills was one of the oldest and best known lumbermen of the Province, and will be greatly missed, particularly in his home town.

A number of the operators from various parts of the Province have been in the city his week, and most of them report a rather dull fall, with little activity in shipping or manufacturing.

Shipments from Halifax are very light, there being nothing going forward except a few deals by the liners. Considerable stock is going forward from Bridgewater and Windsor, N.S., largely to the American market. Apart from these ports, there is very little stock going forward to any of the markets.

Nova Scotia's Market Problems

Mr. F. C. Whitman, Annapolis Royal, N. S., President of the Lumbermen's Association of Western Nova Scotia, in reply to a letter from the "Canada Lumberman" upon the situation of the lumber industry and markets in Nova Scotia, has written an interesting letter giving his views upon the important question of regulating the output of Nova Scotia. It would be to the advantage of the industry if others interested in the trade would contribute their views upon this subject or upon other questions of importance. There is apparently good ground for Mr. Whitman's belief that in the near future the demand for lumber will exceed the supply and there will be serious need for closer co-operation among producers. It is open to question whether such co-operation would not be advisable to-day. Mr. Whitman's letter is as follows:

In regard to the regulation of production of lumber and the cutting of timber, the situation in Nova Scotia is somewhat different from other provinces. The Nova Scotia Government disposed of the timber lands in fee simple except a certain amount that were sparsely timbered or without any commercial timber at all. The Government is now taking steps to conserve and improve the remaining Crown Lands, and has recently adopted a policy of selling stumpage, but, speaking broadly, it will be necessary to wait until the lands now reserved and protected grow up into good timber. In this respect I would say that I believe we have in Nova Scotia thousands of acres of land only fit for forest that if looked after and the fires kept out, will grow commercial timber by natural re-seeding as quickly as any place in North America.

The productive timber lands are therefore in private hands. There is a trade division in the export that up to the present has made the East and West of Nova Scotia quite distinctive. There is also the fact that natural divisions of the territory have prevented and are likely to prevent any large merger or amalgamation of timber or business interests.

It might be possible to regulate, say, the cut of lumber for a particular market, but plans of this kind have not been successful in the past. Competition from abroad, from neighboring provinces, and from Newfoundland, is a factor in South American sales, and the buyers for that market are widely separated. There are some direct sales, but the larger sales are made through London, New York and Boston commission houses. This leads to competition in buying, and in addition the larger shippers in Nova Scotia buy under contract from the smaller mills. The point is that the larger shippers under these conditions prefer to have a free hand to do as they please.

There is this to be said, however, that while in the past lumber shippers have been able to buy largely outside of their own holdings, they have now to confine their operations more closely to their own lands. In fact, the available export supply from Nova Scotia is now under the control of a comparatively few and the holdings of timber land have been increased. It is only common sense to believe that the lumber firms and timber holders, and in almost every case they go together, will to a certain extent regulate prices and conserve the cutting of their lands.

There is another matter that has to be considered when the question of trade or output regulations is advanced. The cut of logs depends almost entirely upon the winter weather. A lot of work can be done if we have two months of cold and snow, good steady weather. But Nova Scotia is not to be depended upon in this respect. Many operators last winter had their output curtailed 50 per cent., and logs left in the woods.

I almost believe it would be as difficult to regulate lumber trade and production in Nova Scotia as it would be to regulate our uncertain winters. However, there is to-day a mutual regard and friendly understanding among the leading lumber operators in this province that did not exist a few years ago, and it is possible in the near future, when I believe the demand for lumber will exceed the supply, that there will be a serious need for closer co-operation on the lines of your letter.

Clarke Brothers, Bear River, N.S., referring to the same subject, write as follows:

As to the advisability of an association in the Maritime Provinces to regulate the production and price of lumber, this has been tried at various times, but with limited success. Some of the parties to the agreement, there not having been a penalty involved, simply paid no attention to their agreement or promise, but went and sold at any price they could get, and those who stood by the agreement were simply holding the umbrella over the other fellows, protecting them at the expense of holding their own stock. This has made some of us, who occupied the latter position, a bit chary about entering into any agreement of this character. We admit the correctness of the principle, but the diffifficulty is in putting it into working shape and holding down to the provisions made by the signers thereto.

Importance of the International Railway

An event of no ordinary importance to the lumber industry of New Brunswick is the completion of the International Railway from Campbellton to St. Leonard's. Starting at the head of navigation on the Bay Chaleurs, it traverses a country covered with a splendid growth of timber, consisting of spruce, birch and cedar, a distance of one hundred and twelve miles to the thriving village of St. Leonard's on the St. John River. To northern New Brunswick the railway opens up splendid prospects for development in the manufacture of sawn lumber, shingles, furniture and other wood products, while the traffic in pulp wood, more especially when the contemplated pulp and paper mills are erected at Grand Falls, as seems now to be a certainty, will be great. The lumber mills on the Bay Chaleurs, both on the New Brunswick and the Quebec sides, will find by the International and connecting railways a much shorter route to the American markets than they have hitherto enjoyed, and with the natural reduction in the cost of transportation thereby resulting, the business along these lines will rapidly increase.

The new line is spoken of in highest terms. The roadbed is first-class, well ballasted, and with easy grades. The ties are of cedar, and unusually large, giving evidence of the splendid growth of cedar adjacent to the railway. All the culverts are of concrete, and the bridges of steel on concrete foundations, while the rails are heavy, weighing seventy pounds to the yard. With the completion of the International there comes to Northern New Brunswick the dawn of an era of great development and prosperity.

Pike Law Abrogation will Affect 1911 Cut

Under the provisions of the old law known as the Pike law, American lumber cut in Maine and sent down the St. John River to New Brunswick to be manufactured into either pulp and timber, was admitted to the United States free of duty. Next August, however, the new American tariff of $1.25 per thousand on all manufactured lumber coming in will be rigidly enforced, thus repealing the Pike law. As the present season's cut will not reach the Canadian manufacturers next summer in time to be shipped under the prevailing regulations the American lumber men are curtailing their output considerably. The cut this year in Aroostook County on the St. John and tributary waters will reach only sixty or seventy millions of feet. Last season the cut was in the vicinity of one hundred millions. The spruce market is also off for the present, while on other grades manufactured lumber is off $1.25 to $1.50 a thousand.

The great destructive forest fires in the Western States and Canada are in a large measure due to the insufficient means taken to prevent the fires. In Nova Scotia there have been few forest fires of late because at last the people are beginning to realize the value of the trees and the forests are being well protected. The inhabitants seem to know, and are not nearly so careless. At present there is a survey party going all over the Province studying the local conditions and the best methods which are most adapted for Nova Scotia in protecting the tree areas.

The Retail Dealer and His Problems

Trade Trouble Remedies—Ideal Yard Conditions

Important Suggestions for Retailers

Editor "Canada Lumberman":

While we are manufacturers only, any improvement that can be brought about in the retail business would have our hearty support. That there is room for improvement there is no doubt. From our point of view, the best directions for these improvements would be:

First—More and better care of stock while unloading and piling in yards. It is not long ago since we made a shipment of No. 1 hemlock, carefully selected. One of our firm, who happened to arrive at the yard about the time the car did, saw the yard men climb on top of the car and proceed to drop the lumber to the ground, a distance of about 16 feet (on account of the track being raised), with the result that much of it was broken and damaged. Our representative did not make himself known, but simply watched the operation and went away. In about three days we got a claim from the yard for cull lumber on car number so-and-so. The writer had the trouble of a trip into town when very busy, and after presenting the evidence we had we were unable to convince the yard man that his own men had ruined the lumber. We simply had to allow his claim or lose his good-will. It is needless to say we paid the bill. How much lumber could these two men ruin in a year without the owner's knowledge? Here, in our opinion, is the most essential point with the retailer. And if they remedy this evil they will unconsciously help their friend the mill man.

Second—Section 3 of circular sent out by the Lumber Dealers' Section of the Retail Merchants' Association, re selling direct to contractors, is a very essential point, both for the mill man and the retail dealer, and should have the careful attention of the master minds of the business. In the first place, the mill man manufactures goods to sell, and if the yard man wishes to handle these goods and make the profit he should make, or thinks he is entitled to, he has simply to make his terms to the mill man broad enough and liberal enough, so that the mill man can sell him the goods at a fair rate of profit, and not try, as some do now, to get the goods in the yard, and then put up a fictitious claim for about 5 per cent. of the invoice, which they know the mill man will stand sooner than remove the goods. In other words, simply act square. Again, the yard can hardly claim protection from a mill they do not buy from. If the retail trade would remedy a few of these points, I don't believe there is a mill man in the country that would bother with a contractor.

Section 6 of the retailers' circular is, in our opinion, in the right direction. Section 7 is also very important. The tendency has always been directly opposite. Don't tell him anything. The result is demoralized business.

I hope these few points will help you. At least they represent the conditions in this section of the country. I would like to call your attention again to section 7 of the retailers' circular re cost of doing business. On page 24, September 15th issue of the "Canada Lumberman," you give the cost of cutting, skidding and hauling logs, total, $6.76. Assuming this to be correct and a fair average of operation, to get the cost of lumber to the manufacturer you must add:—

Cost of river driving, say	$ .50
Cost of sawing and piling, say	3.00
Cost of insurance, say	.30
Cost of loading, say	.50
Cost of stumpage, say	4.00
Cost of cutting, skidding, and hauling, say	6.76
Total	$15.06

Suppose this lumber to be hemlock, how many of the above-named jobs by the retailer could the mill man stand at present quotations and be able to pay his bills, to say nothing of making a profit?

Yours very truly,
CHANDLER, JONES LUMBER CO.

Ideal Retail Yard Conditions

The retail lumber yard is fast becoming a recognized factor in relation to the success of the lumber industry throughout the country, writes J. M. Leaver, Jr., in Pacific Coast Wood and Iron. The great production of lumber which is taking place to-day demands that the lumber manufacturer shall go into the smallest districts to make a market for his output, and to keep the business running on a paying basis. If it were not for these line yards and separate retail yards there would be a still greater cry of "demoralized business" than there is to-day and the lumber trade as a whole would be cutting and slashing prices in order to maintain an existence.

As it is to-day many of our large lumber manufacturing plants have figured out the policy of disposing of the major portion of their cut through the medium of the line yard, and they have placed themselves in position to tide over during dull spells. These yards being controlled by the sawmill management will all furnish some business, even during the most trying times, and through them the manufacturer is enabled to feel the pulse of the market, and make necessary preparations for the taking of advantage of improving conditions.

Not only this, but the line or retail yard is considered in the light of a "scavenger" by many of the sawmill managements. Stock that is not considered of value as a wholesale selling proposition is sold in small lots by these yards, and with a fair share of profit. It might be figured in some instances that if the yards did not show a cent of profit during the course of the year's business, over and above the fixed expense attached thereto, they had been profitable undertakings.

The mills having a coarse lot of stock to dispose of through the line or retail yards are not disposed to bill in the stock to these yards at cost, but rather otherwise; disposed to add a respectable margin of profit per thousand feet of lumber shipped to the different branches. The difficult problem of finding a market for this grade of material is put up to the yard management, and in order to keep the importance of selling this before the responsible parties, a little additional stock, of the undesirable, is always kept coming in and letters of persuasive tendency. If the sawmill management have taken the right course in advising the retail management as regards their feelings in relation to the profit-bearing feature of the yard, and have impressed upon them the importance of disposing of the undesirable stock in preference to other marketable material, there exists a sensibility of participating in results when the manufacturing plant declares dividends and the yards have not been able to make a showing on the stock handled, owing to the prices at which the lumber was billed from headquarters.

In instances where there is keen competition existing, by reason of the intrusion of other manufacturers and woods in a certain lumber manufacturer's coveted field of operations, the line or retail yard keeps the manufacturer constantly posted on the movements and quotations made by the intruder. At times, in the case of a different character of material being offered, the manufacturer finds it necessary, in order to protect himself, to purchase material such as his competitor is handling, and to dispose of same at cost figures. The line or retail yard having the local trade and selling at such prices is generally able to make the competitor "sit up and take notice"—this state of affairs generally culminates in the outsider leaving the field, or there is a mutual understanding as to how business should be conducted in the future.

If there are several yards in a town there is always some good Samaritan who believes in giving things away for the impression he creates, but fails to balance his feeling of generosity with the harm he is doing to other members of the fraternity, who have a right to share in the demands of the trade. Often the line yard is at fault in this respect—the management desiring to raise funds, will overlook the harm they are doing to their fellow operators and will sacrifice stock, creating a state of demoralization in the business of that locality.

The consumer is always ready to hammer down prices when an opening occurs, and when once a local yard establishes a reputation for price cutting the "war is on," and it will take many weeks, nay, months, to repair the damage.

Conservative and well informed business managements will not sanction such methods, as the effects are far reaching. Cut prices a few dollars on any line of material and watch the reaction—it not only deprives the manufacturer of a reasonable profit, but it deprives all others interested in the localities of a just and legitimate profit. However, sentiment does not seem to accomplish the desired result in this respect, and lumbermen of the "conservative policy" type will have to abide the time when more deep thinking and prudent operators will eliminate these objectionable features. It is to be hoped that the yard management of the future will be educated in the school of "Less business and more profit."

Occasionally the wholesale operator will establish an agency in a town containing two or more yards, and it is the object of this agency to get business at any figure. This is an annoying and injurious practice—the wholesaler should not cater to the individual customer, but should endeavor to work in harmony for results with the local yards. This agency does not obtain an appreciable amount of orders; quite the contrary, as the builder does not care to wait a week or more for his material and then run the risk of shortages and inferior stock; but the prices established by this competitor do not allow the local yards any margin.

Agreements as to selling prices are becoming quite general in many localities—the dealers endeavor to maintain the standards set, and are

willing to share with one another in the business offering. This is a good arrangement and permits the local yards to carry on business in a satisfactory manner, while at the same time offering the public material at reasonable figures. They cannot afford to impose arbitrary prices, as outside competition would soon enter the field, and they would lose their prestige and business.

Credit being an unavoidable circumstance in connection with selling the consumer, by the local yard, it is necessary that certain losses be covered up by the margin of profit in the business—if the local yard "runs close to the wind" in selling prices, there is bound to be a change of management or suspension of business. The local yard must do a certain amount of credit business in order to dispose of stock, but if the dealer is posted on credits and collections there will be little likelihood of loss.

Certain classes of contractors are never able to meet their obligations from their own bank account, but figure to settle bills when they have received payments on work they have under construction. It is up to the yard man to keep an eye on the payments and to see that he gets his proportion promptly. The contractor has an elusive memory at times, and it is well to observe some of his business transactions.

This class of trade should show a reasonable amount of profit, as the risk is considerable, and it is well to see that such contractors do not have "too many irons in the fire." Some contractors have a "sleight of hand" method of figuring, and they are never known to clear up any profits on a job, no matter how large or small the specifications. Like some local yard dealers, they take the business for fear that some other member of the trade may make a few dollars.

Most contractors fail through their neglect in taking note of the large amount of extras necessary to complete a building. Experience has convinced the retailer that the general run of contractors do not take into consideration the important matter of extras, and that their profis are absorbed in consequence.

Some local yard men are so familiar with the failings of such contractors that they can sell a bill of material at practically cost figures and then make a reasonable general profit on the extras which are sure to come later. In the construction of a building it is always safe for the local yard man to figure that there will be extras, and if he has cut prices on the bill proper he generally has a chance to balance accounts before completion of the job.

The amount of trade done by the local yard depends largely upon the practical experience and personality of the manager. Any lumberman can quote prices and figure up an estimate, but when the customer is out for prices, and is not familiar with the specifications as submitted by the architect, the practical man gets in his work. He is able, from experience, to suggest ways and means of substituting, without depreciating the value of a building, and saving the customer considerable money. If he is of the line yard staff he does not forget to include a certain amount of the "undesirable" stock, and in doing so he declares a dividend for the manufacturer and makes a friend of the builder.

The retailer across the way has no substitutes to offer, and does not give a rip for the practical suggestion of the other dealer—he has only selected material to offer, and does not understand how the other fellow can exist at the figures he has quoted. The fact of the matter may be that the practical man has quoted a higher figure on certain lines of stock than the impractical man and that his margin of profit is ample and satisfactory. He has obeyed orders in disposing of some of his firm's surplus of undesirable stock, and has not done an injury to his customer.

A practical suggestion here and there on an estimate makes the customer feel that the retailer is posted in his line of work and can be trusted. Very few practical yard men overstep the mark and pawn off inferior stock on the trade—they have an established business, and their reputation has to be considered. The practical and experienced yard man has the best of conditions at every stage of the game—he can assist the manufacturer by his practical suggestions and educate the trade to take material such as will make the manufacturing end of the business profitable.

In order to qualify as a local yard man, a man should be thoroughly familiar with the details of building construction, and the manufacturing operation. It is essential that he understand these points thoroughly if he is to be connected with the line yard management, as the success of the yard under his charge depends largely upon what use he makes of such experience in handling the trade and ordering from the manufacturing plant.

The side issues of lime, cement, shingles, etc., are not as important—the profit making feature of the business rests with the management's method of handling lumber stocks. There might be much said about yard sheds, handling costs, piling, warehouses, etc., but these are minor details, and come under the head of "systematic management."

What the lumber manufacturer wants is yards that are on the lookout for supplying the trade with surplus stocks, instead of working off the scarcer and more marketable lumber. The better grades of lumber are nearly always in demand—it is the common and lower grades that have to be moved, and represent the dividends of the manufacturer.

If the retail or local yard man would ask the customer before quoting, "For what purpose is the material required?" there might possibly be a more encouraging outlook for the sawmill operator, *i.e.*, if the yard man understood the importance of disposing of the undesirable grades.

One of the chief difficulties which the practical yard man has to overcome is the matter of odd work specifications as submitted in plans. The architect has an eye for beauty, but quite often forgets the importance of making his plans, as near as possible, to stock sizes. He will work in any number of odd widths and lengths, irrespective of the heavy extras the builder will have to pay. In a great number of cases the practical yard man can suggest a remedy for such conditions, and by substituting stock sizes liberally can effect considerable saving. The architect often specifies grades of lumber and millwork of higher quality than necessary, and where the purchaser is informed of the fact there is, at times, a change made in the program which favors all concerned.

The "tricks of the trade" are many, but aside from these we find that our greatest interest should be centered in educating the public to a more thorough understanding of their needs and thereby promoting the interests of lumbermen as a whole.

The Management of Collections

The question of how best to attend to collections is an ever green one with the retail lumberman. H. G. Hansen, of Williston, N.D., in an article in the American Lumberman, makes the following pithy remarks:

There is no part of any business that requires more care and thought on the part of the operator, than collections. It is the end that one never can afford to let become dormant. A vigorous pushing during the fall and early winter months alone, when money is most abundant, especially among farmers, is not sufficient. If the outstanding accounts are to be kept inside of a reasonable limit, they are an all-year problem. Constant effort must be put forth at all times to prevent delinquencies from accumulating.

When making a sale, the first thing to consider is how to collect for it. If all deals were cash and all customers above suspicion matters would be simple, but it is in making time sales to strangers and people of questionable or slow credit that matters become complicated. The stranger must be studied, and the only way to form an opinion of him is to draw him into conversation and have him tell all he will about himself and his affairs. From this you base your opinion as to the amount, if any, of the credit he is worthy of having extended him. One needs to be firm and explicit and impress on him that such favors are not dealt out to everybody with a generous hand, consequently it is your privilege to ask a few questions regarding how and when he is to make settlement. If securities are deemed necessary, make the proper arrangements for them. The time when this is to fall due must be thoroughly agreed upon. It is also well to know from what source he expects to get the money. If he fails to turn up at the specified time, when you expect the payment to be made, you must not fail him. If writing does not bring him, see him, if possible, and be just as firm as when you made the sale. Give him to understand that you expect that money. The slow credit man is often a bigger problem than the stranger. He must be dealt with more gently. The questioning to which the stranger was hazarded would offend him. How to get matters fixed up at once so you are reasonably sure of getting your money when due is the question. You may in some cases be able to close the accounts with a short time note, making it non-interest bearing if paid when due.

To be posted and acquainted with every man's financial standing, as much as you can, is absolutely necessary. To keep a bulletin gotten out by the abstractor showing everything goes on record is a most reliable way of getting information in this line. A rating book that has been passed on by two or more good business firms is always a help. On notes, especially those that fall due in the fall, it is well to try to secure the earliest possible date. Even if you know your customer can not handle the payment until later, secure the earlier date anyway. If he has other obligations to meet, you stand a chance of getting yours first. You can also begin to remind him of his delinquencies a little sooner.

Never neglect sending monthly statements to those who need them. It saves many disputes as to correctness of amounts when settlement comes and reminds those who are slow of their unbalanced account. Open accounts should not be left running long. If a customer can not settle, induce him to give his note. A note bearing interest will make him come to time sooner than the open account.

All customers can not be handled in the same manner, but precaution in dealing with all insures a certain amount of success. By planning your collection when making a sale, you gain ground. Then, being ever on the alert, always keeping a watchful eye on all doubtful cases is necessary. Courteous treatment must be extended to all, but firmness must not be omitted.

Any man who possesses some sense of honor will not become ruffled if reminded of his agreement, consequently if you have your agreements made at the right time, a dun may be turned into a gentle reminder only, and with sensitive customers, it is not so apt to call forth provocation.

THE WOODWORKER

Memoranda of a Machine Woodworker

Do solid milled or molded cutters, such as are used for shaper work and matching, cut or grind off the stock? Mill operators differ so much on this point that one maker takes the opportunity of advising not to "grind your flooring," says H. C. Haner in Wood Craft.

In considering this claim it would be well to look at both sides of the claims thus made. A straight knife cuts at an angle of nearly 45 degrees, and the solid cutters can be filed to an angle almost ten degrees less on the cutting face, while the clearance on the back is always greater than is possible with a straight knife when any strength is left at the cutting point.

Milled cutters stand in a good deal of favor at present, and it will take a good deal of work to affect the favor in which they are held for certain classes of work.

A new roller bearing for shafting, having a small roller between the bearing rolls, has overcome one of the stock objections to the use of the roller or ball bearing in mill work. The ball bearing as commonly used on bicycles was not thought capable of carrying the load of mill shafting, for the reason that the balls might cut each other when subjected to heavy duty. The new bearing has a smaller roller between the large rollers, which is intended to take off friction between those rollers on which the shaft rests, thus preventing their contact and cutting.

Step boxes on matcher spindles are out of sight but had better be kept in mind. Some machines have the step cone held by only one setscrew. That may jar loose some time, spoiling a lot of matching, if not closely watched.

Leather is often used as liners for the caps of boxes in places where the liners are to be thick, but it will not do on quarter boxes, as an engineer I know found out. The thrust of the engine shaft soon packs the fibre of the leather and you are worse off than ever. Sheet steel or brass for liners on engines are best.

Taking Chances

A planing mill employee I know had his hand cut off at the wrist by the top cylinder—trying to make some adjustment while the machine was running. Wonder if machine operators have all to be maimed before they learn to be careful? So many of one craft are short of parts of their anatomy that they might be called the remnant brigade.

A planer man I know has had a trial of local shop work on a planer cylinder. Three times the cylinder cut out the bearings, and each time it was found to be sprung in the journals. Then the job was sent to the makers of the machine. On trying it for true, they found the journals were turned out of centre nearly 1-32 inch because the small shop man tried to centre by the journals instead of by the collar on end of the cylinder.

When starting a cut in a piece of shaper work, do not try to enter right up to the collars at first. Take the cut gradually to ease the strain of entering and prevent the draw of the knives catching on stock back of the cut. That, of course, is only possible where the work is being run from the centre, as on circular head sash rails or similar work. Where the cut has to show finished on both ends, it is a good plan to have a stop to enter from, as many good shaper men have been hurt from just this cause. Something to stop against gives one more confidence in handling the work, and it can be done much faster.

Sometimes a lubricator has a bad habit of letting the oil out in such a manner that it runs up the glass instead of going up in drops through the water. A short piece of very fine wire inserted in the feed nozzle will carry the drop up high enough to overcome the attraction of the nozzle, and let the drop go up clear.

Hemp is a rather poor sort of packing to use around a water glass. Cheap rubber gaskets for the same purpose can be obtained. An engineer relates a story of how he got his glass "partly" obstructed when using hemp. It resulted in the glass filling, showing high when really there were ony two gauges of water. He must have been in error, for the steam would go through an opening only partly obstructed. It is likely he had the whole end of the glass stopped up. Using the rubber rings for this purpose will obviate all difficulty along that line.

One may get credit for good intentions, but it takes action to bring the cash. This "road to the other place" is what is holding back a good many men in the shop as well as in the office. They lack positive action, or, in other words, results. Some of the best shop men I ever knew were not worth overly much unless they had a good boss.

Tire in Band Saws

F. D. Pierce writes in the *Woodworker* as follows: "Although I have never heard the phrase 'tire in band saws' used before, I think it a very good name. There must certainly be something to hold the tension in a band saw, and that is the two edges, otherwise there would be no tension in the saw. That 'tire,' as he terms it, might vary in width. A man might tension a saw out to the very edges, but I assure you that very edge has no tension, and is the tire, or the part to hold the tension. The wider the tire, the longer the tension will last; but it is not well to have the tire too wide, for, if you do, the extreme edge will not be stiff enough to do the work required of it. On the other hand, if the tire is the very edge, it brings so much strain on that part that it is liable to cause cracks. The fire is what keeps the edge of either band or circular saw stiff and makes it stand up to its work. Both the back and tooth edges of a band saw are the tires. When one is taken away out goes the tension. This may be done by either filing or grinding on the tooth edge.

"How many filers can explain just why a band saw becomes long on the tooth edge? They simply say, 'It is caused by grinding.'. The idea never enters their heads that the centre of the saw has been expanded or made longer nearly up to the two edges. When the tooth edge is ground or filed away, that brings that edge down into the part that has been made longer, and as it reaches that point that edge naturally takes that shape. As the very centre has been made the longest, the nearer that edge reaches that point the longer it gets. It is exactly the same with a circular saw. When you cut away the edge it lets out the tension, the edge becomes too long, and the saw becomes fast or 'tight,' as the sawmaker terms it."

Cost-keeping in Handle-making

Cost-keeping is no effort. It is simply preserving a record of all things pertaining to the manufacture of anything, says G. B. in The Wood-Worker. There has been a great hoodoo regarding this subject for a long time, a great deal of unnecessary speculation, until each manager has his ideas gauged to the above opinion and considers his way and his figures the simplest and the best. But the old adage, "Many men of many minds," interferes to a disturbing effect. It is like a balky horse—sometimes he is all right and sometimes he is all wrong.

Communications upon this subject, I notice from time to time, seem to run largely to the manufacture from the sawed lumber, which is comparatively an easier starting point than we, as handle manufacturers, have to contend with. Handle factories get much of their stock direct from the log, as well as a portion from the plank, consequently making the cost subject a mixed problem. A log, no matter how fine it looks, is an unknown problem; part of it may bring fancy returns on account of color and quality, and the balance produce only an ordinary value. There is no even amount of returns to calculate upon. The difficulty is increased, as there is no chance to gauge the unknown defective parts. The eye may say it is first-class, but when opened up it may, and frequently does, prove to the contrary. To be sure, the log rule allows a gain in sawing, which only materializes on certain sized logs, and on others does not. Years ago they could count upon a reasonable certainty what could be expected, but now that timber is decaying so fast, it is entirely different.

This condition being unavoidable, it has forced buyers to enlarge upon all noticeable defects until the poor, ignorant farmer cries "fraud," "deception" and "theft," and often seems to prefer to lose money by selling in job lots rather than risk the chance of a genuine honest measure. I have known managers to start with the strongest confidence to master this intricate problem, only to fall back after meeting the difficulties described, and accept the old way of "doing their best and trust to luck" for the final result.

I am now considering from the standpoint of the small factories, not where the sawed stock can be dropped in volume to the foot of each lathe, and kept ready for constant running upon one item for a day or week; where definite records can be easily kept, and where piecework is easily arranged for; but where different varieties of stock come from the same log, bringing values of one-fourth, one-third, one-half extra value, or possibly an actual loss, where lack of stock suitable for certain grades and the urgency of delayed orders demands the lathe to be set and re-set for different handles during the day to meet the requirements of the hour. How can anyone count upon a sure basis working upon conditions as just stated, which are not uncommon, for most of the smaller factories are daily working in this manner?

Lumber for cabinet work or building purposes is applicable anywhere, provided it is first-class, while handle stock is different. The white, tough, straight-grained second-growth blanks bring a good value, but all off-color, cross-grained and defective blanks go into a cheap or No. 2 grade, which must be shoved off upon the market at whatever it will bring, from a trade that is independent, and on account of the overstock offered makes its own price as it feels inclined. Thus this second grade

has to be gotten rid of at a loss, and become a leech upon the profits of the first grade. A careful estimate can be made, I admit, from the results of the past year, but a fluctuating purchased stock and a market equally as fluctuating knock the foundation to pieces.

There is a constant shrinkage in many other ways that accumulates to complicate all calculations and disarrange the would-be exact results. It is mighty easy to make an assertion, but an entirely different thing to prove it. After many years of experience under difficulties above named, I still fail to find anyone in the handle business, of such limited conditions, able to master the situation. Many investors rush into it, only to find the gilt and polish to soon tarnish, and I must confess I am one of that number. My present efforts seem to be more favorable, and, being a good sticker, I may find satisfactory results if I live long enough.

As a result, I say the following: Be careful of investments in machinery. Be sure of sufficient experience to control your own enterprise. Make up your mind to stick, and time will bring many unexpected favorable avenues to aid your business. Have courage in your own cost estimates; others may be perfectly honest, but the best are liable to make mistakes. Above all, keep a cool, clear head, and then you are as near a safe basis as any of your competitors. Don't tie too tightly to any manager because he is a well-rounded man. His absolute assertion that a thing can't be done does not make it so. Another, in a different way, may reach success. Talk certain points of your business with your men; to a certain degree your interests are theirs, and they may help you over many difficulties; what one can't think of, other practical men may.

I always have been, and probably always will be, searching for the manager I want (am forced to accept the best I can get), one whose cost calculations come within reasonable expectation, and who still is confronted with unexplainable conditions.

Circular Saws and Saw Mills

The condition one finds some saws in that are used in some of the smaller circular mills is certainly interesting to the man who has them to fix up, doctor up, fit up, or anything you wish to call it; perhaps to shape up would be a very good word to use, says J. W. Ball in The Wood-Worker. Sometimes I think it would be better to call him a "shaper" man, for he is not unlike the Jew man who had just been "cussed" by an Irishman to the full extent of the latter's English language, and turned and said to Pat: "You are no gentleman; you are a fool!" By this time he was getting mad, and wanted to make out that the Irishman was a much worse man than himself, and in his excitement said: "You are vot there never vas words made for." So it is with the man who has other people's troubles to adjust to their satisfaction: He sometimes wishes he was an angel. I will leave this for others to determine.

It is remarkable how some of these small mills manage to make lumber at all. For instance, you find one saw bent over the collar, with a ridge showing up on the log side near the teeth and the tension pulled out in spots. These are symptoms that lead one to think that a log must have come loose from the dogs and rolled onto the saws. Lots of care should be exercised in fixing up such a plate.

Such a saw can be fixed very easily if you have a good place to work on it and a good man to help hold the saw; but when you have only a portable place for the anvil, only a shed roof, with no sides, which gives poor light, then is when a man is up against the real thing. It makes one wonder why all these little mills could not get together and build up right, like the large mills, and have a good place to fit saws.

Many of these small mills have trouble with hot arbors, but it seems these little mills are cutting a great figure in the lumber business. The mountains are full of them, and as long as there are trees to saw the saw doctors will have such saws to work on. Most of these mills try to run the saw too fast. Better run portable mill saws about 500, or somewhere near that speed.

The worst thing I find in connection with these small mills is the equipment with which they have to fit the saws. Many have no eccentric swage, no shaper, no grinder, nothing but an upset and a file, and the arbor is the file room. There is no jointing rig; in fact, they have "vot there never vas words made for." There is plenty of room for improved machinery to fit up these saws with.

Recently someone asked what caused cracks in certain circular saws. I have seen some very queer cracks, but find that if plenty of throat room is maintained it is a great help. Of course, the throat should be circular shape, so the dust can chamber nicely and be easily discharged. The tooth must have plenty of steel to stand in frozen timber, especially when the thermometer stands at 35 degrees below zero; even at zero the timber is hard enough to cause trouble if the teeth are too slim or of improper shape. A low swage should be used, with keen corners. The tooth must not be too blunt, or it will cut too hard. The steel must be good, the saw kept round, fitted square, and not too much speed used.

If the sawyer is not a man who has had experience in sawing frozen timber, there is sure to be trouble. He must know what the saw will stand, and give it about that much. There can be no baby work when timber is frozen, especially when cutting frozen black birch or beech logs. These will try your saws. I would recommend small solid-tooth saws for this kind of sawing, run at about 500 r.p.m., 54-in., 8-gage, not very fine teeth, and feed rather fast.

I think the tooth Mr. Miner advocated is a very good one. I don't think a saw tooth should be cut under much for winter sawing, and not too much hook, nor the backs too high.

Don't forget the round saws. They are just commencing to make them. They are not things of the past. There are more round saws shipped now than I ever knew before. Small lots of timber are being sawed with circular saws now that a few years ago would not pay to cut. This is perhaps the reason they are being used so extensively at this time.

Gang Saw Fitting

Some time since a correspondent asked for information on the subject of keeping gang saws in order. Replies appeared from several gang filers, all of whom would, in all probability, have given more information if the inquirer had given a more detailed description of the condition under which his saws work. He is right, however, in saying that gang saw filers do not give their ideas in The Wood-Worker as freely as they might.

I will try and give a few hints on that subject that may possibly be of interest to some readers. To get best results from gang saws (or any other kind of saws) it is necessary to have not only the saws, but the machine or mill also, in good condition. I have found the most important things to be considered in gang saw filing to be shape of teeth, tension, overhang, keeping back of saws straight, having greatest strain on cutting edge, and having saws commence cutting at the right time.

Most gangs in this country (New Zealand) have intermittent feed, the feed movement being developed by an eccentric on the shaft of gang, and the time at which feed rollers feed the timber forward being determined by the position of the eccentric. The timber should begin to feed just after the crank-pin has passed the bottom centre, and the saws should begin to cut just after the crank-pin has passed the top centre. The amount of overhand should be governed by the amount of feed to be carried and the length of the stroke, never by length of saw.

For instance, if length of stroke in 16-in., and you wish to carry 5-16-in. feed to the stroke, you require $\frac{3}{8}$-in. overhang to every 16 in. of saw; in other words, the overhang should be one-fifth more than the feed in the length of the stroke. That is for intermittent feed; for continuous feed just half the above amount for the same amount of feed is right—at least that is how I found it with a Wickes gang I had charge of for two years.

I have found one-fifth hook to give good results in almost any kind of timber. I never make the depth of teeth equal more than one-half the space; that is, teeth $1\frac{1}{2}$ in. apart should not be more than $\frac{3}{4}$ in. deep.

The backs of the teeth should be low and straight. A gang saw requires some tension, but it is not necessary to put in all the tension the saw will hold. The buckles (tabs, I think they are called in the United States) should be much nearer the front edge than back edge of saw, and should be moved back from time to time as the saw wears, so as to keep the front edge tight.

Gang saws should be examined frequently, for if a whole lot of saws are allowed to get into bad condition it is a big job to get them right again. The backs soon become hollow if neglected, and, though a hollow-back saw will work for a time, provided the front edge is strained sufficiently, there comes a time when the back has to be drawn out, and then it will be found that the front edge has become about as hollow as the back edge was before, and there is another big job of grinding, etc., to get the front edge straight.

A few years ago, when the only swage we had was an upset 5-16 in. to the stroke was considered fast feed, but since the introduction of the eccentric swage we have improved on that very considerably; but there are still some mill owners here who refuse to provide anything but the old-fashioned upset. They say they have no money to waste (?) on fancy swages.

The writer is a self-taught filer, and the above ideas are the result of a good many years' experience. To borrow an expression from Mr. Chas. H. Liebe, I have written of these things just as I have found them.

M. J. Graham.

The census of the forest products of Canada, to be taken on June 1, 1911, will embrace square, waney or flat timber, logs for lumber and miscellaneous products. In the first class are included ash, birch, elm, maple, oak, pine and all other timber cut as square, waney or flat, and the enumeration will be reported for cubic feet and value. Logs for lumber, which are included in the second class, are in such woods as elm, hickory, hemlock, oak, pine and spruce. They will be enumerated in the census by quantities of one thousand feet board measurement, with value in the same unit.

did Nathan Paine, of th their NEW plant?

did the Bowman-Hicks Lu ment for their NE

Why have we orders for and have installed over 218 fast feed matchers in the past fourteen months?

As a boy would say, "What's the answer?"

All of the splendid orders above were placed within 60 days of each other.

Everyone knows of the enormous size of the Potlatch Lumber Co., and their output of 750,000 feet daily.

The Virginia & Rainy Lake Co. is a fifteen million dollar corporation just starting in Virginia, Minnesota.

The Paine Lumber Co. is known from Australia to London. Their product is everywhere.

The Big River Lumber Co. are not yet as well known, but are building one of the largest mills in Canada.

A year ago the Potlatch Lumber Co. decided to build several new plants. Machinery men got busy.

Mr. Deary said to three machinery manufacturers, "We're not going to buy a pig in a bag. Put your latest machine in, we'll run them ourselves and we'll decide which one we want. We want the best there is."

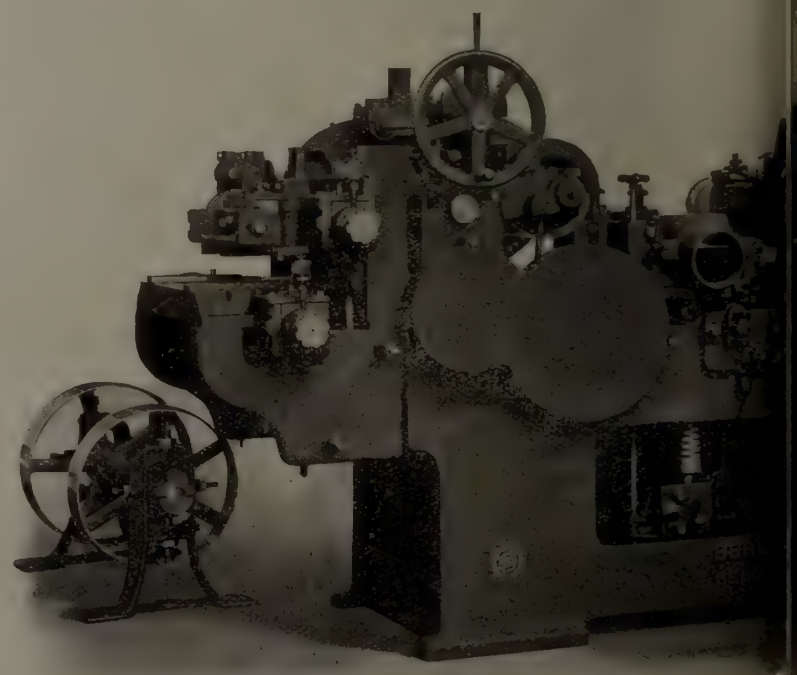
Three machines went in. The others went in with a hurrah. A bet was offered our Spokane Mgr. that we never would put in a machine on the side-by-side test.

We shipped a Berlin "90"; a 200 feet-per-minute racer with fast feed OUTLINE attachment. All three machines were put in condition and started off.

Six to nine months tells a pretty straight story of what a machine is, and here's the story, straight and true.

Number 1—Matcher was characterized as a machine so complicated that it took an expert to care for it. Took an extra man to oil it. Number 1—eliminated.

Number 2—Matcher racked itself to pieces at fast feeds. Impossible to keep the bearings in alignment and the oil flooded the belts.



Number 2—eliminated.

Number 3—The Berlin "90" was run night and day for between six and nine months. It was not tied up for repairs, not complicated and ran continually, turning out a fine product all the time and the Potlatch men liked it because "it was always going."

Remember this—all three machines were run by Potlatch operators. The test was fair to all, it showed accurately the practical value of each matcher.

The entire reason why SEVENTEEN Berlin "90's" go into the new plants of the Potlatch Lumber Co., is because a "90" will do more work, is easy to operate and keep in condition.

We do not know how much more work the "90" turned out per minute. The test was run and they decided what was what.

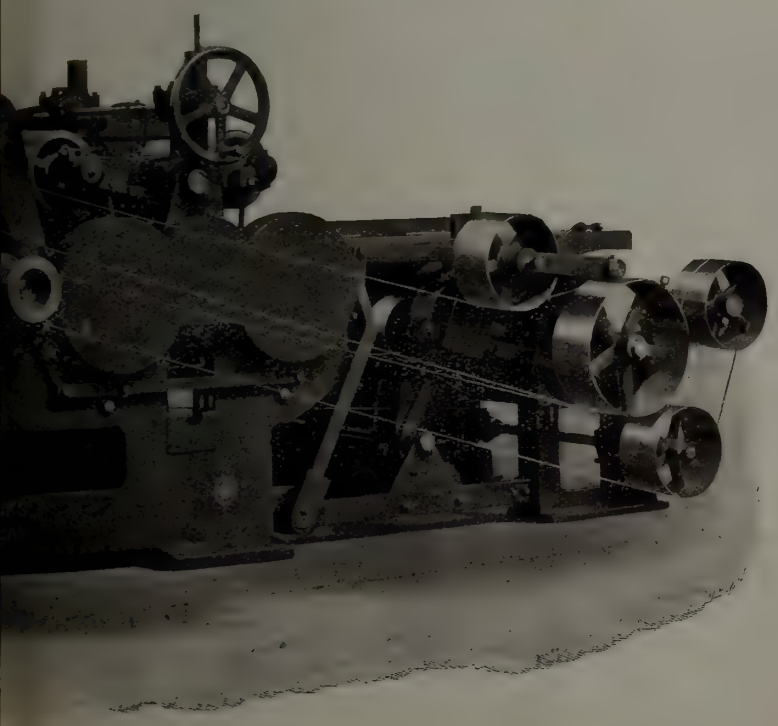
Big River, Sask., buy seven Berlin fast-feed matchers among their plant?

r of the Potlach Lumber Company, Potlach, Idaho, buy 17 Berlin eir new plants?

ger of the Virginia & Rainy Lake Lumber Company, Virginia, Minn., Matchers for their NEW plant?

ie Lumber Company, Oshkosh, Wis., buy 34 Berlin machines for

Co., Lorain, La., buy four Berlin fast-feed matchers among the equipnt?



A few months ago, the Virginia & Rainy Lake Lumber Co. bought their equipment. Mr. Cusson wanted the best there was and did not buy on price.

He is too good a business man for that. But the fact that TWELVE Berlin fast-feed matchers were ordered with sizers and surfacers and other equipment means something.

The Paine Lumber Co. considered all makes of tools carefully. They bought SEVEN Berlin Resaws in preference to any other. They bought TEN Berlin Sanders. They bought Berlin Matchers and Moulders.

The Big River Lumber Company investigated, and that investigation was exhaustive and conclusive. They purchased EIGHTEEN machines all told. And all Berlin.

Why was this? Men of the character of Wm. Deary, S. J. Cusson, Nathan Paine, Wm. Cowan have had too much experience to buy unwisely. They cannot afford to take chances, they want dependable material.

You can buy a Berlin "90" at a reasonable price. Here's a few reasons why we have sold 218 Berlin 94-X's and 90's lately.

The "90" is equipped with cylinder heads carrying 6 self-hardening steel knives. There is no head so perfect.

The side-heads are our 12-bitted type, the only 12-bitted side-heads in the world. The construction divides the cut so that the side-head work is clean and knots and cross-grained places are not torn out.

Our Automobile feed drive eliminates the nest of gears found on other tools. The chain drive runs smoothly and quietly and doesn't give trouble. Easy to reach, no tearing down of machine.

Our system of top, bottom and side-head belt tighteners keep the belts tight every minute. Easy to slip belt off or on.

Our head grinder saves time in sharpening the cylinder knives. It is quick, always ready, a wonderful little tool.

Our beading or stationary profiling attachment requires but one 8-inch belt to drive it. Two pulleys, tightener furnished, driven from above, below or countershaft. Very simple.

You can change from a run of drop-siding to beaded ceiling in two minutes. End thrust provided for everything so a boy could understand.

Full equipment of heads for your work furnished. Make anything you like in profiling work at fast-feeds and by jointing the knives secure work you never dreamed of. This is not bunk, but facts.

It is the field against the Berlin always, but we're not worrying. If you want a proven machine, a UNIT matcher, right in every detail, you want a "90." We are installing one every working day.

We will appreciate very much your inquiries.

CAMP DEPARTMENT

High Efficiency in the Woods

At a recent meeting of the Oregon and Washington Lumber Manufacturers Mr. J. P. Van Orsdel read an interesting paper upon "Highest Efficiency in Woods Operation." In the course of his remarks Mr. Van Orsdel spoke as follows:

"It is well, in my opinion, to divide your sections into 40-acre tracts by actual surveys, which I hope to bring out later. This can be done with surprising accuracy with an open-sight Jacob staff compass in the following manner:

"First, a party of four men, made up of a compass man, who also chains at one end, a chainman, a swamper and another axman who blazes up the line run out the section lines to ascertain the proper course and the distance of it. This is made necessary in the western country on account of the irregularity in the government surveys and the necessity of knowing where this irregularity exists, if any does. It will take such a party an average of three days on a section to run the exterior lines and set the boundary 1-16 corners; after this is done the compass man can go ahead without assistance of anyone and run the cross lines and blaze the same out, as he knows from the boundary survey what course to run these lines on. Of course, the plan I always use is to run all forty lines in one direction first, and then the others at whatever point these intersect to set the inside 1-16 corners. This subdivisional survey will cost under this plan of doing the work 10 cents an acre.

Falling and Bucking

"One way, and a very important way, to conserve the forest is to use the proper amount of care in falling and bucking your timber. During the last month I have had the pleasure of looking over two active operations, side by side, and in going over their old cuttings I find one cleaned up in good shape, practically no excessive loss from breakage nor timber left on the ground, while on the other there is from 10,000 to 15,000 feet an acre left to absolute waste, and still they wonder why their estimate does not show the same overrun as it did on previous or present operation.

"It is often necessary to break timber a little in falling, but a good timber faller will, by some means or other, make an effort to give a square break across a stump rather than falling across a dip in the ground or a ravine.

"But the only way to get results in this department is to a certain extent by compulsion and it can be done in this way: You have at each camp either a timekeeper or head bucker or a head faller, either one of which can keep these records. It is a very common practice to make fallers and buckers turn in the number of trees or logs bucked or felled, but it is quite a joke among these men as some of them are not honest and turn in just about what they think will pass, while an injustice is done by such men to those who are honest. When the timekeeper goes over the woods he can make the men actually show the trees or logs they have cut and mark them, or the head bucker or faller can do this, whichever would be most convenient; and again, should you desire to keep a forty-cut record the hook tender at each machine should keep track of the forty lines and scale the log before it leaves the woods. In this way you are keeping track of the amount of timber cut from each forty and also making your fallers and buckers do their best in the woods or, better still, making them 'deliver the goods,' which is what we are after.

"I know a set of fallers who felled sixty-two trees in six days, the average tree containing 8,000 feet of timber or 496,000 of lumber, an average of 82,666 a day. They were not working for a record, but simply ran into a good bunch of timber where the chances were good. A good set of fallers should average 50,000 a day in timber that averages from 5,000 to 7,000 to the tree or seven to ten trees 40,000 a day in timber that averages 3,000 to 5,000 to the tree or eight to thirteen trees, 30,000 a day in timber that averages from 1,000 to 2,000 or from fifteen to thirty trees, so that it is very evident that the size of the timber makes a material difference, but when the timekeeper or head bucker checks them up in the woods he can scale the trees or logs on stump and turn in with number so that the woods superintendent can tell whether or not they have done average work. Two or three buckers should follow each set of fallers. If there are very few windfalls and the slopes or ground is fairly regular so that they do not have to do much undercutting, two of them do the work, but if the other condition exists it will require three to each set of fallers.

"Three sets of fallers are required for each two yarders, and do not think you are doing good work because you are getting along with one set for each yarder. The yarder is not getting the amount of timber it should, is why it is wrong. Keep the fallers separated if you possibly can so that you can tell who is responsible for the breakage, but, again, this should be shown in the daily reports above described.

"The falling and bucking of timber which averages from 5,000 to 7,000 a tree should cost 45 cents a thousand; timber that averages from 3,000 to 5,000, 55 cents; timber that averages from 1,000 to 2,000, 65 cents. The above figures should take care of filing, new saws, axes, sledges and equipment.

Donkey Yarding

"The problem that is and should be given the greatest consideration and that there is the greatest difference of opinion about is donkey yarding. Another dip into logging plans: If you have your logging planned out you know what kind of machines your country and timber will require and they, as well as rigging, should be bought accordingly.

"Nine in ten operations we have done work on the machines have been used until they are old rattle traps or they were never large enough to do the work required of them properly. I know of several operations where the output is curtailed 20 per cent. by the lack of large enough machines and still they wonder why the other fellow is logging cheaper. At that rate it would not take long to buy new machinery throughout. All the following argument will be based on the fact that your machinery is large enough so that it is not necessary to block any logs out of the woods and that the breakage of lines on a yarder is eliminated. The main line for a 10 x 12 yarder should be $1\frac{1}{8}$ inches in diameter and the trip or haulback line 9-16 or a 11 x 13 or 12 x 12 compound should be $1\frac{1}{4}$ inches and the trip line $\frac{5}{8}$ of an inch, and the above lines on either sized machine should log 5,000,000 before breaking. My plan is never to let the line break on a yarder; as soon as it begins to show wear transfer it into a road machine, where it will last a considerable time. With regard to the distance it is proper to yard, that should be governed to a great extent by the stand of timber and such other conditions as will alter any set rule. Nine hundred feet of working line is a good average length to work on, and if the conditions are such in regard to location of railroads, pole roads, etc., then I should say that this distance will get the highest practical results.

"A yarder logging in timber where logs average from 1,500 to 2,000 feet to the log with 900 feet of line should average forty-five logs a day or 67,500 to 90,000 feet a day; logs averaging from 1,000 to 1,500, fifty logs a day, or from 50,000 to 75,000 a day; logs averaging from 500 to 1,000 feet a log, fifty-five logs, or from 27,500 to 55,000 a day; logs averaging less than 500 feet, sixty-five logs a day, or about 30,000 feet. And I will say here that in a great many instances where the timber runs this small there are several other methods that are cheaper to log with than machines, providing the ground will allow.

"To make the above amounts more definite the following log averages are given:

Feet.	Per day.	Feet.	Per day.
2,000	90,000	1,000	55,000
1,750	78,750	750	41,250
1,500	67,500	500	32,500
1,250	62,500	250	22,500

"The above amounts are arrived at from time records rather than the other methods used. In the above figures proper allowances are made for moving yarders from one setting to another.

"A yarder crew usually is and should be made up as follows: One driver, one fireman, one-half wood bucker, one chaser, one hook tender, two rigging slingers, one swamper and sniper, or an average daily expense for labor of $26, plus $10 a day for unkeep of machinery, blocks, rigging, lines, etc., or a total of $36 a day for each yarder.

"Hence, taking the above as a basis, it will give you the following yarding expense as a result, in timber average to each log:

Feet.	Per M.	Feet.	Per M.
2,000	$0.40	1,000	$0.65
1,750	.45	750	.87
1,500	.53	500	1.12
1,250	.59	250	1.60

"The above calculations are based on the following time: Trip or haulback line, 425 feet a minute; main line, 225 feet a minute, or if the yarder is working at an average distance of 450 feet the actual time the machine is hauling logs a day is about two hours and thirty minutes, which with the necessary short starts and stops to straighten the logs out of the woods would make five hours of actual machine work, so that four hours is allowed in these figures for the placing of chokers, unfastening of logs by chaser, and pulling windfalls, wood logs, etc., out of the way and changing head block on trip line. One hour being the allowance that I make each day for an accumulation of time to move donkey engine when the setting is completed, so that on this basis one day in every ten is allowed for moving the yarder to a new setting.

"In ordinarily rough country a donkey should be moved from one setting to another, a distance of 800 feet, in seven hours.

(To be continued)

A Heavy Cut in Prince Albert District

From estimates which have been prepared by the Prince Albert lumber companies, the cut in that district of Saskatchewan next winter will go over 100,000,000 feet. Of this amount, the Prince Albert Lumber Company will cut 40,000,000 feet, and in addition that concern has 10,000,000 feet in the woods, which might be termed the clear-up of last year's cut, but which, owing to the shortness of the season, was not brought out. The Big River Lumber Company expects to cut 50,000,000 feet in the coming winter. The Big River Company, whose camps are situated 100 miles north of Prince Albert, and are now reached by a C.N.R. line, will operate their 500 square mile limits for the first time, giving employment to between 1,000 and 1,500 men through the winter.

Besides this great lumber activity, tie and cordwood camps will be scattered all over this district during the winter months. It is estimated that the total men required for winter work is about 3,000. The camps are now being prepared, and men are being engaged. During the past summer it had been necessary to shorten the running time of the mills owing to the scarcity of water in the rivers tributary to the Saskatchewan and the consequent extension of the driving operations. This has put the mills to an enormous expense, but has enabled them to clean out these streams, which will give them better facilities for the driving work of the spring of 1911.

At the recent Conservation Congress held at St. Paul, Minn., the following resolutions were passed, among others:

We approve of the continuance of the control of the national forest by the federal government, and approve the policy of restoring to settlement such public lands as are more valuable for agriculture.

We earnestly recommend that the states and federal government acquire for reforestration lands not more valuable for other purposes, and that all existing forests, publicly and privately owned, be carefully protected by state and federal government. We recognize the invaluable services of the Forest Service to the people, and earnestly recommend that it be more generously supported by the federal government, and that state, federal and private fire patrol be more generously provided for the preservation of forests and human life, and appreciate and approve of the continuance of the use of the United States army in fire control emergencies.

This is in marked contrast with the course of the Ontario Government, which recently saddled the cost of fire protection entirely upon the license owners.

Machinery Trade News

The R. H. Smith, Co., Limited, St. Catharines, Ont., have issued a new illustrated price list which sawyers and mill owners will appreciate. The book contains, in addition to the price list section, a few pages devoted to useful information regarding the care and management of saws. All users of saws should secure a copy of this list.

A Hand-Book for Millwrights has been published by Frederick J. Drake & Co., of Chicago, of which the author is Mr. Calvin F. Swingle, M.E. The book will prove of much interest to all who are concerned in the planning and arrangement of mill buildings. It deals, in detail, with such important subjects as the strength of materials, journal bearings, couplings, horse power to be transmitted by shafting, pulley location, belts and belting, wire rope transmission, gear wheels, electrical installation, and many other subjects directly connected with the installation of mill machinery. The book is profusely illustrated and is written in a manner which makes it readily understood by all who will be interested in the subject .

The Canadian Linderman Company have started the erection of their new plant at Woodstock, Ont. The building will be 250 feet by 100 feet. They will use Niagara power and also in all probability a small amount of steam power. They announce that they are in the market for a full line of machine tools, such as planers, lathes, grinders, universal boring machines, milling machines, etc. The capital stock of the company is $160,000. They will manufacture the Linderman Automatic Dovetail Glue Jointer exclusively. This machine is largely used by box manufacturers, furniture manufacturers and all lines of jointing, where lumber is to be made from any other width, such as chair seats, table tops, etc.

The Linderman Machine Company, of Muskegon, Mich., have issued an extremely attractive booklet descriptive of their Automatic Dovetail Glue Jointer. This machine is one of the most interesting inventions that has ever been made in connection with the woodworking industry, as it performs the operations formerly necessitating the use of a jointer, a glue pot, an edger and clamps. With one handling, on one machine and in one operation this work is performed in a perfect manner, and it produces a joint with a permanent internal clamp. The booklet referred to is produced in the same excellent fashion as all the other products of this company. It is attractively printed and handsomely illustrated, and upon its cover there is a beautiful design showing in a handsomely embossed and colored illustration a bit of the finished product.

The Making of

Disston Files

Thoroughly Well Made Service-Giving FILES

In the DISSTON WORKS, from the making of the Crucible Steel itself to the finished file, every operation is carefully performed and rigidly inspected.

We use 30,000 dozen DISSTON FILES annually in our Saw, Handle and Machine Shops. As a result of using them we know what a good file should do, and make the DISSTON FILES so they will DO IT.

Lumber Directory

FOR SALE—DIRECTORY OF LUMBER consuming Factories of America, a most complete and valuable book for wholesalers and manufacturere. Will accept $6, which is one-half regular price The CANADA LUMBERMAN, Toronto. tf

FOR SALE

SEVENTEEN ACRES OF SECOND GROWTH White and Red Oak. Suitable for piles or ties and small square timber. Close to Railway track; also 100,000 feet of White Pine, 70,000 feet of Hemlock, 30,000 feet of mixed Hardwood inch, 500 telephone poles 25 feet to 35 feet. Apply to E. TODD, Box 16, Caledonia, Ont. 20

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & Co., LIMITED, St. John's, N. F. 23

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other Pulpwoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

tf. WILLIAMSON, Publisher, Toronto.

A new system of administration, whereby the output of teak from the forests of Siam will be somewhat curtailed and the supply protected, is announced by Vice-Consul-General Carl C. Hanson of Bangkok, in a recently submitted report. Beginning with December, 1909, leases of teak forests have been lengthened from six to fifteen years. The smaller leases have been consolidated and regrouped, the larger of these areas being divided into halves, one of which is reserved, and the other leased for fifteen years with the right to work all mature trees during that period. In view of the greater economy made possible by this new ruling, the government royalty per log has been raised from $3.65 to $4.38, an arrangement which will very likely effect a material reduction in stumpage manufactured, at least for the first term of lease.

British Oak

In the good old days when British men-of-war and merchantmen were built exclusively of wood hundreds of trees were used in the building of a single battleship of the line. British oak and elm were largely utilized for that purpose. Nowadays, even for those vessels still constructed of wood, very little British timber is used. English oak is, of course, still world-famed for its durable qualities, but American oak, which, though not possessed of the strength and wearing qualities of the home-grown article, is very much used to-day, because it is cleaner, straighter, and more easily worked. The question may be asked, why should wood grown in England be in most cases superior to the imported article? The reason, apparently, is that our climate and soil are better suited for the production of good timber than is that in most other countries. Trees are very susceptible to climatic and meteorological conditions. Age and size depend largely on the situation in which a tree is planted. In dingles, for instance, timber runs up very much straighter and cleaner than in exposed situations. In a dingle there would be less likelihood of the wind deflecting the growth of a tree. A south-west wind is calculated to produce the gnarled and twisted appearance so common in badly planted trees. On the other hand, a north-east aspect favors oak, because there is less wind to affect it, and a tree so planted would enjoy the benefit of the early morning sun, so favorable to plant and tree life of all kinds. Trees to grow well also require to be sheltered from the south-west gales.

A New Method of Felling Trees

A Berlin inventor, Mr. Hugo Gantke, has recently designed a simple device for the felling of trees. The trunks are cut by the friction of a steel wire about one millimetre in diameter, which, as demonstrated by practical tests, is able to cut through a tree of about 20 in. (50 cm.) in thickness in six minutes. The wire, which is carried to and fro by an electric motor, is heated by friction on the tree to such an extent as to burn through the timber, the result being a cut which is both smoother and cleaner than that effected by a saw. The wire will work satisfactorily on the thickest trees without the insertion of wedges into the cut, and the trees may be cut immediately above or below the ground. In the latter case the stump may be left safely in the soil. The motor which actuates the wire is installed outside of the range affected by the fall of the tree, and when electricity is not already available it can be generated by a transportable power plant consisting of a 10 h. p. petrol motor and dynamo, which are left at the entrance to the forest during the felling operations. By this method large tropical trees up to 10 feet in diameter can be cut and felled by a single operator, a considerable advantage being the absence of any waste in the timber.—Times Engineering Supplement.

Notes on Belting

The best speed for main belts is about 3,500 feet per minute, and nothing is gained by running them over 4,000 feet. The lower side of the belt should be made the driving side whenever possible, as the sagging of the slack side increases the arc of contact. By increasing the size of the pulleys increased power is obtained, and the proportion of two pulleys working together should be about 4 to 1. The pulleys should be from ½ in. to 1½ in. wider than the belt, according to the width of the face, and the convexity of driving and driven pulleys should be exactly alike. Vertical and half-crossed driving belts should be avoided. Tolerably long belts are much preferable to short ones, and tight belts should not be employed. If more driving power is required increase the width of the belt in preference to its thickness. Double belts should not be run over small pulleys. Belts should not be allowed to get greasy or glazed over. An application of tanners' dubbin, a mixture of mutton fat and beeswax or boiled linseed oil are good dressings for leather belts. Resin should not be used to prevent slip, as it damages the belt.

Overhead Runways for Sawmills

Switch-trolley pulley blocks have lately been introduced to a considerable extent, and have in some cases displaced stand trucks and cranes in moving goods from point to point. They can be fitted to most buildings without alterations, and loads up to about two tons can be easily and quickly dealt with. The overhead runway usually consists of a rolled steel joint fitted with junctions to serve various points, the trolley being readily shunted into a branch line by a switching lever fitted on it. The runners carrying the pulley blocks should be fitted with ball bearings to ensure easy working, and the side plates of the trolley frame with steel antifriction rollers, as these must facilitate the passing of sharp curves or junctions. In crowded situations, where an overhead traveller is not available, these runways can be made extremely useful in moving timber, etc., and we look for considerable development in this connection.

American Shooks in England

The use of American shooks or packing cases for shipping textiles to the United States has greatly increased of late years, says the Timber Trades Journal of London, Eng., and direct importations of them are now regularly made into Bradford, as also in other British districts whence textiles are shipped to the United States. They were first imported in 1892, but it was not until 1903 that their use became general; since then between 25,000 and 30,000 have been imported and used annually. These shooks are made of planed spruce wood, and in order to protect properly the contents of the cases the wood sent to Bradford is tongued and grooved; at some of the other places the wood is plain. The use of American-made rolling boards, as a foundation on which to roll cloth to be exported to the United States, has also of late years been adopted to some slight extent by Bradford merchants. These patent rolling boards have the advantage over the solid wooden boards in that they consist merely of a skeleton or framework of wood tightly covered with paper.

Non-Dangerous Water Gauges

The ordinary water gauges usually fitted to steam boilers are apt to fly, especially in frosty weather, and if the attendant is near he runs a considerable risk of being scalded by the escaping water. To remedy this as far as may be, a much-improved gauge has been introduced, which is so arranged that should a glass burst the water is automatically shut off and prevented from escaping. In this gauge a ball valve is arranged in the lower fittings, and should the glass break the ball automatically rises to its seat and so cuts off the rush of water. In the upper fitting a spring or ball valve is fitted, which shuts off the steam when the glass breaks, but remains open when the glass tube is being blown through. The cocks should be asbestos packed, and the plug revolve in the asbestos and not touch the metal. We would call the attention of steam users to these improvements, as any little increased outlay in this connection is soon repaid by increased freedom from accidents.

Review of Current Trade Conditions

Ontario

A traveller who recently made a trip through southwestern Ontario reports that right through to Windsor there seems to be a fair trade. The farmers have had splendid crops and have obtained good prices, especially for tobacco. There is no boom apparent, but a good healthy business is in progress, and everybody is satisfied. The box trade continues unchanged with very little activity. There does not seem to be any fear among the dealers about a slump in prices. Hemlock stocks at Sarnia are very low and dealers are obliged to buy more from northern points. Retailers yards throughout Western Ontario continue fairly well stocked. Many of the farmers, having done so well, are paying off their mortgages, which in all probability means further building before long. Collections are satisfactory. The traveller referred to above reports that during September they had practically the best month's business they ever had.

The situation in the Georgian Bay district is rather difficult to sum up. The cut during the coming winter, so far as information can be obtained at present, will be just about the same as last winter. It was thought at first that it would be less, but reports recently received indicate that if there is any reduction it will be very slight. There are practically no logs left over now in any of the Georgian Bay booms. This will mean that most of the mills will be obliged to commence their sawing operations rather later next season than usual. This is about the first year within the last ten years that the logs have been all cleaned up. A further result of this will probably be that next fall there will be less lumber on hand than this fall. The reason the mills have been able to clean up their logs so completely this year is that they had very favorable driving conditions in the streams and practically no logs were hung up.

If there is a smaller cut during the coming winter it will be almost entirely due to the scarcity of labor. All the camps are complaining now that they cannot get enough men. There are already fewer logs on the skids than there were at this time last year.

The only change in market conditions which has occurred during the past fortnight is in lath. No. 1 4-foot pine lath 1½ inch is now selling at about $3.75 at the mills, as a result of one of the large manufacturers having cut prices in order to move a large stock. Other stocks are fairly firm. Trade with United States points is queer, being very spotty. The car companies are holding off and only buying what they need for two or three weeks ahead. It is thought that the railway companies and other large interests have put their heads together and decided to stand pat for a time until the political situation has cleared.

Wholesalers find that prices are being made about as close to the cost of the production as it is possible to get, particularly in regard to pine mill culls, dead, culls, southern pine and hemlock. They report a fair volume of trade, however.

The season's operations of the Upper Ottawa Improvement Company are completed, and it is reported that the number of logs now in the main stream is quite as great as at this time last year. The scarcity of lumbermen to work in the woods, which is affecting the Georgian Bay district, is also felt in the Ottawa Valley, where wages run from $28 to $32 a month. Stocks are being rapidly moved from Ottawa Valley yards so as to obtain the advantage of the water rates. There is quite an active movement of spruce, but the prices are rather uncertain. Box lumber is not doing very well at Ottawa, and it is believed that the substitution of cardboard boxes is hindering the market.

Telegraph poles in Ontario continue in strong demand and supplies are scarce. Large corporations purchasing from manufacturers on the spot are able to secure poles at a little cheaper price than the wholesale market price, but the general asking prices for central Ontario supplies are as follows, f.o.b. Toronto:

25 feet long,	6	inch top....	$1.60	40 feet long,	7	inch top....	$ 6.00
25	"	7	"	1.90	45	"	7	"	7.35
30	"	6	"	2.10	50	"	7	"	9.65
30	"	7	"	3.00	55	"	7	"	12.00
35	"	7	"	4.75	60	"	7	"	17.50

Cedar posts are steady at 17 cents for 8 foot lengths, 4½ inch top and up.

Cedar ties are firm at 55 cents for 6 inch and up face, 6 inch deep No. 1, and 39 cents for 5 inch and up face, 6 inch deep, No. 2.

Eastern Canada

The opening of the logging season in the Maritime Provinces finds the manufacturers with very little to induce them to operate on anything more than a moderate scale. The English market conditions are less promising than they were a month ago, while in Boston and New York there has been no improvement in the demand for New Brunswick lumber. The cost of supplies at present is greater than it has ever been before, and wages also are extremely high, being from $30 to $35 per month. Even at these figures it is difficult to secure experienced hands. One of the largest operating firms has decided to reduce its cut by about one-third. The indications also are that other manufacturers will reduce their operations considerably. It is thought in some circles that the total cut of logs will be less this winter than for many previous winters. A fairly general opinion is that the cut will be about 75 per cent. of that of last winter. It is believed that the result will be a much reduced output at the mills next summer. Unfavorable circumstances in connection with the export of spruce deals to the English market have had much to do with the situation. Freights have steadily advanced and are now being made at 45s. per standard from Miramichi to west coast points. The dulness of the markets has brought on a lowering of prices, and at present "English" spruce deals are quoted from $13 to $13.50 at Miramichi points. Manufacturers and dealers, however, are showing a tendency to hold their stocks rather than sell at these figures.. There is no change to note in the condition of the American markets for Maritime Province lumber. Prices have not suffered the extensive decline which at first was reported, and conditions are in reality what they were in the middle of the summer.

Great Britain

Reports from London indicate that a fair amount of business is in progress, but it is not nearly sufficient to satisfy the inclination of importers, whose cargoes have been arriving rather freely of late. This is the case both with log timber and scantlings. Deliveries, however, continue to run into large figures. The building requirements continue rather meagre, but the wood paving and packing demands are active. Deliveries of deals and floorings at London during the week ending September 24th amounted to 6,833 standards as compared with 5,017 in the corresponding week of last year. At Churchill & Sim's recent auction sale Halifax spruce 3x9 was sold at £9 15s., 3x8 at £8 10s., 3x7 at £8 15s. and £8, and 3x6 at £7 15s.; 3x11 unsorted Quebec brought £10 16s., and 3x7 sold at £8 10s. and £8 5s. Southern States pitch pine 3x9 brought £12 and Oregon pine scantlings were sold for 1s. 9d. and 1s 8d.

The timber trade at Liverpool was very badly affected by the threatening labor complications at the cotton mills of Lancashire. Retailers for a time reduced their demands materially. The improvement in the labor situation, however, was quickly reflected in the lumber trade The advanced freight rates are still maintained, deal freights from New Brunswick and Nova Scotia being rated at about 40s. per standard, to which must also be added the higher rates for marine insurance which go into effect at this time of year. These factors make it improbable that there will be any reduction in the quotations on spruce deals from New Brunswick and Nova Scotia. Large cargoes are now being made on the basis of £8 2s. 6d. and £8 5s. per standard c.i.f. according to specifications. The market for Canadian pine shows no important alterations. Prices continue firm and are likely to do so for the rest of the season. Pitch pine is rather weak, the business being largely of the retail order without any contracts for future delivery.

At Manchester the timber trade continues quite active as a result of the good progress being made upon building jobs. A slight fall in the price of spruce has also limbered up the demand. Other woods fortunately show no signs of a drop. Imports at Bristol have been rather lighter than usual, the heavy rush of a fortnight ago having come to an end. A fair amount of business, however, is in progress. There is quite an active movement on foot at Bristol for the encouragement of trade with Canada, which has been materially assisted by the C. N. R. company and by the recent visit of a commercial delegation to Canada and a similar party of Canadian journalists to Bristol. The timber trade at Bristol may be expected to do what it can to further this movement. At Southampton the trade is continuing along normal lines. Orders are not overnumerous, but are fairly satisfactory. Glasgow timber markets are quiet. Pine is improving slightly and spruce is moving fairly weil.

United States

The unsettled condition of the political situation continues to affect the lumber trade throughout the United States. No relief is now expected until the elections have taken place, early in November. It is believed, however, that no matter what the result, there will be a fairly general reaction towards better conditions. With a Democratic House and a Republican President, which a great many believe will be the situation, there will be a probability of compromise between political extremists, which may materially assist trade. Throughout the Northern States lumber travellers now find the demand for their goods extremely dull, depending almost entirely upon the actual requirements of the consumers. The most important factor in the situation is the attitude of the railway companies and other large interests which have apparently come to a tacit agreement to mark time until the political atmosphere has cleared. They have very largely reduced their consuming appetite, and for the time being trade is feeling the effect considerably. In spite

It should be some satisfaction to you to know that when you order lumber from us you will not only get stock of quality, well manufactured and properly graded, but you'll also get it promptly.

Special Bills Cut to Order in Any Size 10 to 60 Feet Long

CLEVELAND-SARNIA SAW MILLS CO., LIMITED

SARNIA ONTARIO

A. F. Holden, President
F. H. Goff, Vice-President

J. M. Diver, General Manager
E. C. Barre, Assistant Manager

of the political unrest, it is generally felt that the financial situation of the country is on a firm footing, and that manufacturing interests are keen to get started again on a more active basis. Apparently the only person who is hesitating at present is the buyer.

Northern pine and hemlock continue to hold up well in spite of the general quietness of the markets. They represent practically the bulk of the buying by retailers. Dealers continue to purchase only what they need for immediate orders and are giving the preference to those manufacturers or wholesalers who can provide quickest shipment. Pine prices are therefore well maintained, yet this is not true in regard to hemlock prices. The competition of yellow pine is probably an important cause of the weakness in hemlock prices. The quantity of building in progress throughout the Northern States is not up to expectations, and is considerably below the average at this time of year.

There has been a slight improvement during the last fortnight in the demand for yellow pine. Prices, however, have not as yet improved. Some of the mills are finding difficulty in securing cars, and it is thought that this and the better demand may help yellow pine prices. Retailers are beginning to look a little ahead, and some of them shows signs of realizing that the time to buy has arrived, as further concessions appear to be improbable. Like the railroad companies, the factories are buying very little more than immediate requirements compel them to.

It is reported that the production of Northern pine at United States mill points has been largely curtailed by the scarcity of sawlogs at the mills. For this reason it is thought that when the spring buyers get busy they will expose many weak spots in stocks. The higher grades of white pine continue strong, and the demand for lower grades is improving steadily. Most of the northern mills are now working on their last batch of logs, and the end of the month will see them all closed down. Hemlock stocks are reported to be accumulating at mill points, which is the cause of reductions in prices. It is not believed, however, that the demand will continue dull; in fact, a rather vigorous market is looked for when the retailer begins to feel restless about his spring stocks.

There is something of a similarity between the hardwood markets and those for yellow pine. Hardwood markets, however, are somewhat steadier both in regard to price and movement. Collections are rather slow and orders for future delivery are scarce. Current trade is practically of the "rush" order, indicating that stocks generally are low. High grade oak is in good demand throughout the Eastern United States markets, and in fact is generally active. The lower grades, however, are not satisfactory. Maple is reported scarce at lake points, and birch and chestnut are also hard to find.

Market Correspondence

Close of Ottawa Valley's Sawing Season

Ottawa, Oct. 10.—The Upper Ottawa Improvement Company is drawing the season's work of driving and towing logs to a close by getting the various lots of logs into storage. The big boom at Quyon, which holds a million logs, is nearly filled with saw logs and pulp wood for J. R. Booth and logs for W. C. Edwards Co., Shepard & Morse Co., Hawkesbury Lumber Co. and Gilmour & Hughson. The E. B. Eddy Co. have a large delivery of spruce near the point of manufacture also, but it will be kept in Lake Deschenes till needed. In order to facilitate assorting logs at Fort William, Que., the Improvement Co. is extending its boom there. All the logs that will be handled this season are below Des Joachims. Owing to pulp wood being estimated in cords, it is difficult to keep a record of the number of pieces from year to year, but the Improvement Company management report the total number of logs now in the main stream as great, if not greater, than at this time last year. The logs left behind as a result of low water in the tributaries include some of the Hawkesbury Lumber Co., stuck in Wright creek, in the Quinze district. The rest are all on Jocko river, and are owned by the Pembroke Lumber Co., A. & F. Fraser Co., of Pembroke, and a few by Bryson & Campbell. McLachlin Bros., of Arnprior, did not require their Petawawa drive until next summer and purposely abandoned it.

The new tug boat "Hiram Robinson" was employed all summer on the Chats lakes. With the exception of about 150 miles of rough stretches of river the Improvement Co. tow the logs all the way down the river, employing 20 tugs. Five of these work on Lake Temiskaming. Special attention was paid to the raising of "dead heads" this year, and some 20,000 were removed, chiefly from along the booms. This timber was piled up to dry along the shores, and in two years will be turned into the river again to float on to its destination.

Manufacture has been stopped for the season in the two mills owned by Coté & Stearns at L'Orignal and by the Pembroke Lumber Co. The latter had a very short season, having lost a part of the early summer waiting for boilers in the mill and losing two months at the end for want of logs. Plans are made for more extensive operations in the woods the coming winter, and there will be 20,000 logs now in the Jocko river to draw on next spring.

Despite reductions in the number of camps being established by some lumbermen who draw on the Ottawa Valley for labor there is a scarcity of men for bush work. The current wages offered run from $28 to $32 per month. Hiring agents expected a bigger influx of shanty hands after the saving of the crops, than occurred. It appears that the demand for men for railway work took up many job seekers. The 150 men who were released from the Pembroke mill when it closed were immediately offered work in the woods, and many went away with their former employer.

Plentiful rains have maintained shipping conditions fairly satisfactorily. There is activity in the removal of all kinds of lumber in order to take advantage of water rates. Barges on the Rideau canal are carrying only 85,000 feet as compared with an average of 125,000 feet per load owing to low water, but conditions are more favorable on the Ottawa river. Spruce continues to move better than medium grades of pine, although some dealers state it is impossible to make sales without cutting prices to an absurdly low margin of profit. The poor demand among builders in New York is understood to be one of the causes of the dearth of orders from a once fruitful source of sales. Box lumber is accumulating rapidly, while local manufacturers of card board boxes are extending their production. It is assumed here that substitutes for wooden boxes are hurting the market for boxes in all places, and that some other market will have to be found for low grade pine before long.

Ottawa building permits for September numbered 38, as compared with 42 for the corresponding month last year. The value dropped from $172,9000 to $161,000.

The Shepard & Morse Lumber Co. are experiencing trouble getting logs out of the reserve dams owing to low water. Mr. Peter Whelen, the manager, repeats his warning to the Government with regard to having the conservation dams on the upper Ottawa completed before a shortage of water, some dry summer, ties up all factories and mills depending on the Ottawa River for power. The rains which aided navigation increased the water head at the Eddy Co. pulp and paper mills a few inches, but J. R. Booth's pulp plant is badly crippled for want of power. He has been obliged to lay off temporarily some fifty men.

The Ontario Railway and Municipal Board reserved judgment on the appeal of the Hawkesbury Lumber Co. against its assessment of $127,000 on mills and dwellings. The case was heard at Hawkesbury on Sept. 29 and 30. A new valuator had raised the assessment about 50 per cent., making the estimate on mills $107,000. Similar advances were made in some of the other properties, and the town defended the action of its assessor. Mr. H. K. Egan, for the lumber company, claimed the valuation was far too high.

The Ottawa City Council allowed a building permit for a sash and door factory to issue to James E. Wilson on the ground that nothing in the building regulations prevented such a structure, although the residents of the locality vigorously protested against a lumber factory going up in their midst.

The 35th anniversary of the starting of McLachlin Bros.' lumber mill No. 3 at Arnprior was celebrated this month. The mill was built to replace the first steam mill erected on Chats lake in 1871, but which was destroyed by fire in 1875. The same date commemorated the 20th anniversary of McLachlin Bros.' No. 4 mill.

A Small New Brunswick Cut Probable

Chatham, N.B., Oct. 8th, 1910.—The past fortnight has been productive of many features of keenest interest to all who are in any way connected with the lumber trade and industry. The most important of these features is the general commencing for the year of logging operations on the Miramichi, Restigouche, St. John and the smaller rivers of the province. At no time for many years have the lumber manufacturers of this province sent their crews into the woods with less incentive to operate on even a moderate scale. All the important conditions, without a single exception, tend directly against the getting out of even a moderate cut of either cedar or spruce. Conditions in the English market are much less favorable than was the case a month ago. Trade in New Brunswick long and short lumber has shown little or no improvement in the Boston and New York markets. Supplies for the camps are higher at present writing than has been the case in the history of the present generation of lumbermen, and the wages asked by experienced woodsmen range from $30.00 to $35.00 per month, competent men being scarce even at these figures.

A local lumber manufacturer stated to your correspondent to-day that his firm would not get out more than 5,000,000 superficial feet of spruce logs this year, although their usual winter's cut ranged from 7,500,000 to 9,000,000 superficial feet. While this is but one case—and there is no doubt the declaration is absolutely correct—and while, perhaps, curtailment of the winter's cut will not be practised to the same extent in the majority of cases, there is no doubt that every indication points to a shortening of the log crop that will eventually mean the

smallest total volume of a winter's operations that the province has produced in many years. While there are no doubt many directly interested who would state that the curtailment would mean forty per cent. less logs than usual, it would be safer to say that the cut of the coming winter would be not more than seventy-five per cent. of that of the previous winter. Seldom, if ever, has a similar combination of circumstances existed in connection with the trade and industry, and the results will, without doubt, be felt next year in the way of a light output at the mills.

The chief factor in this combination is the conditions which have arisen in connection with the shipment of spruce deals to the English markets. Freights have climbed steadily, until, it is stated to-day, charters have been made at 45s per standard from the Miramichi to the West Coast of Great Britain. A retrograde movement in prices which resulted in a considerable losing of ground several weeks ago has brought values to a lower level, at which they have remained stationary. The present local value of "English" spruce deals would range from $13.00 to $13.50 per thousand superficial feet in the usual specification. This value is nominal only, and there is no doubt that a buyer would find a decided tendency on the part of dealers and manufacturers of this section to hold their stocks until there existed a certainty that the lost ground would not be regained immediately or soon.

Conditions in the American market show little change. Reports of a drop in prices and material slumps have little foundation, the existing conditions to-day being little different from those of several months past.

Steady English Demand for Maple Flooring

The London, Eng., office of the Canadian Trade and Commerce Department, Ottawa, reports as follows regarding maple flooring in England: "The exceptional demand for maple flooring in connection with the construction of roller skating rinks has gradually subsided with the decline in popularity of the pastime. There remains, however, a large and steady demand for maple flooring blocks and strips to which Canadian manufacturers have so far been unable to respond. Several firms who have taken up the matter with Canadian producers and shippers report that they have been unable to conclude the arrangements which they would like to make for obtaining regular supplies. In view of the special natural facilities existing in Canada for the development of this particular industry, another reference to the matter may not be out of place. Maple flooring is being extensively used in the erection of public institutions, hotels, and similar buildings, and manufacturers who possess the capacity for a large and regular output ought to be able to find a profitable market for the material in the United Kingdom. As has been mentioned upon a former occasion, one large firm, which is at present obtaining supplies from the United States, would like to contract for large quantities of blocks, 1-in., 1¼-in. and 1½-in. thick, planed both sides to finish ⅛-in. less, by 3-in. wide, by 9-in. and 12-in. long, with V groove on each side; they also have inquiries for 1¼-in. and 1½-in. by 3-in. rough strips in a prime grade, 18-in. and up long in multiples of 9-in. and 12-in. long, such in Canadian rock maple.

Curtailment Necessary in British Columbia

At a recent meeting of the Mountain Lumbermen's Association of B. C. several important matters were discussed. The following decisions were reached: That it will be necessary for the production of the mountain lumber mills to be considerably curtailed for the remaining months of 1910, that the existing prices will be maintained and that drastic measures may be taken to meet the competition from the American lumber men who are enabled, owing to the unprotected Canadian market to dump common lumber in the prairie provinces. Many interior manufacturers were represented. Members reported that the demand for lumber had suffered a serious hold back during the past sixty days and while the British Columbia mountain mills enjoyed a record business during the first six months of the year, the crop scare on the prairies was followed by a very marked decrease in the demand for the product. The output for the rest of 1910, it is said, will fall considerably short of the milling capacity of the mountain mills.

In connection with the dumping of cheap American lumber on the prairie province markets it was decided that a committee should be appointed to go fully into the matter and report upon the best measures to be adopted for the protection of the interests of the association.

Canadian Northern's Vancouver Route

The Canadian Northern Railway has announced the route which its line will follow on Vancouver Island. Leaving Victoria the line will pass by way of Goldstream to Mill Bay, on Deep Cove, near the north end of Saanich Inlet, where the Vancouver ferry will make a landing. From Mill Bay the line will proceed northerly to Cowichan river, where a turn made to the south to escape a range of mountains will carry the line almost as far as Nitinat Lake, on the west coast, in which district some of the choicest timber on the island is to be found. Extensive virgin forests will also be traversed by the line on the route from Nitinat to the company's ocean terminal on Barkley Sound, on the west coast, where the largest vessels afloat would find ample water and safe anchorage under all conditions. While it has not been so announced, it is understood that the C. P. R. will transfer their proposed Cowichan branch charter to the Canadian Northern and that the latter company will assume the lumber-carrying contract made by the former company quite recently with the American Securities Company, which recently acquired a huge block of timber from the C. P. R. with the intention of erecting a large mill at a suitable point on the east coast. Construction work on the railway will be commenced this autumn, and will continue all winter.

Forest Fire Brings Death to Hundreds in Minnesota

A serious forest fire occurred on October 9th in the country between Minnesota and Ontario in the neighborhood of the Rainy River district. The fire zone covered an area of about 100 by 30 miles stretching along the international boundary. It is estimated that 35 lives were lost and great quantities of valuable timber were destroyed. The Rat Portage Lumber Company's mill and yards were consumed, the loss including between 20,000,000 and 50,000,000 feet of lumber. The Shevlin-Matthieu Lumber Company's plant at Spooner, Minn., was also destroyed, together with a stock of 50,000,000 feet of lumber. A number of towns have been destroyed and thousands of homesteaders have lost all their possessions. The flames were fanned by a gale blowing 70 miles an hour. The loss of lumber will probably have a very serious effect upon the Winnipeg lumber market, as it is stated there are less than 50,000,000 feet of lumber at present in that city. The fire originated from a number of smouldering fires which had been in existence for months in the district, but were supposed to be harmless. When the gale sprang up, however, the smouldering fires were fanned into flames and quickly spread with a velocity which could not be overcome.

Personal News of Interest to Lumbermen

A change has recently taken place in the management of the British American Mills and Timber Co., Limited, Winnipeg. Mr. Sydney B. Smith, of St. Louis, Mo., who has had extensive experience among lumbering interests, assuming control.

Jas. D. C. Smith, of the timber department at Kenora, Ont., and L. V. Rorke, government engineer of Ottawa, have gone to Lake Superior Junction, where they will spend some time inspecting the timber limits in the Sturgeon Lake district.

Mr. A. L. Eastcott has been appointed manager of the Pembroke Lumber Company to fill the vacancy caused by the resignation of Mr. W. H. Bromley. Mr. Eastcott has had an extensive experience in the lumber business in Hawkesbury and Ottawa.

Mr. W. F. V. Atkinson, forester and forest engineer of the Committee on Forests of the National Conservation Commission of Canada, is touring in British Columbia and making investigations in connection with his duties.

The partnership heretofore existing between Hugh M. Williams and A. H. Edwards, under the firm name of Williams Edwards & Co., Ottawa, Ont., carrying on business as wholesale lumber merchants has been dissolved by mutual consent, Mr. Edwards retiring. The business will be continued by Mr. Hugh M. Williams under the name of "Williams Lumber Co."

J. R. Dixon, of the forestry branch of the Department of the Interior, has recently returned after spending the summer in the country to the north and east of the upper end of Lake Winnipeg. A great part of the journey was over the clay belt region of the north which has attracted so much attention of late. Mr. Dixon found that while this region has been covered for centuries with a heavy forest growth, the constantly recurring fires have prevented it from attaining any size except on the islands of the lakes, where there is an excellent stand of spruce in many instances. The prevailing timber is spruce, jack pine, poplar, aspen and birch, but on the whole it is small in size. In the clay belt he was disappointed in finding so little commercial timber, for there have been many reports made of extensive stands of big timber. Many of the existing maps were found to be incorrect in this detail.

Drastic action has been taken by the Interstate Commerce Commission of the United States respecting the proposed increase in the freight rates on lumber and forest products generally from the Pacific Northwest to points of eastern destination. The proposed advances were to become effective on October 16. The commission has ordered the suspension of the tariffs until February 6, 1911, pending an inquiry into their reasonableness.

EDGINGS

Ontario

S. Phillips, 23 Keele St., West Toronto, proposes installing a new 12-inch moulder in his planing mill.

The Canadian Cooperage Company have decided to continue their operations at Galetta, Ont., for one year longer.

The new plant of the Seaman-Kent Company at Fort William has commenced operations, manufacturing hardwood flooring, hardwood house trimmings, etc.

The Strathroy Furniture Company, Strathroy, Ont., are erecting a new drying kiln. The new building will have a capacity for drying 500,000 feet of lumber.

Canadiain capitalists, headed by Wm. Gamble of Ottawa, have bought 93 limits on the Naas and Kitsumgalum rivers for $490,000, and will erect a mill near Prince Rupert.

The Goderich Organ Company's factory at Goderich, Ont., was completely destroyed by fire on October 1. The lumber piles were saved. The loss was about $100,000, largely covered by insurance.

The Foley, Rieger Pulp and Paper Company, Limited, Thorold, Ont., has been incorporated with capital of $50,000. The incorporators are: E. P. Foley, manufacturer, Thorold, and H. A. Constantine, attorney-at-law, Niagara Falls.

The Canadian Box and Barrel Company, Limited, Pembroke, Ont., have secured incorporation. The capital is $100,000, and the incorporators are: John C. L. White, barrister-at-law and Finlay Watt, lumberman's agent, both of Pembroke.

Lickleys, Limited, Toronto, Ont., have been incorporated with capital of $100,000, to acquire and deal in timber limits, saw mills, etc. The incorporators are Hugh M. Lickley, manufacturer, and Arthur G. Randall, Manager, both of Toronto.

The Canadian Linderman Company, Limited, Woodstock, Ont., have been incorporated with capital of $160,000, to manufacture and sell wood and iron working machinery. The incorporators are: D. W. Karn, Woodstock; J. A. Billinghurst, C. C. Billinghurst, bankers, and M. H. Powell and B. A. Linderman, manufacturers, all of Muskegon, Mich., U.S.A.

Negotiations in progress for some time for the reorganization of the Gordon Pulp & Paper Company, of Dryden, Ont., have resulted in a tentative agreement under which its assets and obligations will be assumed by a new concern, known as the Dryden Power Company, with $1,500,000 capital. The leading men in the new organization are Bonfield, Chicago; David, Vancouver, and Fellows, New York.

The large lumber operators in New Ontario, such as the Rat Portage Lumber Company, the Keewatin Lumber Company, J. W. Short, D. L. Mather, and others, have commenced to put in their winter camps and their operations will be at least double on account of the large quantity of timber burned during the past summer. A number of smaller operators will also double their cut, and some who were not in the business last year will be cutting during the coming winter.

Mr. J. Carling Kelly, a noted engineer and promoter, formerly of Ottawa, but now of London, England, together with Major W. A. Calhoun, M.I.A.C., one of the leading pulp experts of North America, are visiting Newfoundland and Labrador in the interest of a large London and Paris syndicate. The syndicate has under consideration a plan for the erection of a one hundred thousand pound pulp mill at Labrador, and also several saw mills. The plans for the mill have been approved and construction work will be commenced in the spring. An enquiry will also be made by Major Calhoun into the outlook for the lumber industry. The syndicate already have secured an option on some thousands of acres of timber lands, mostly spruce, and the engineers will report on the possibilities for the development of this industry.

Eastern Canada

Mr. G. C. Poulin, of St. Johns, Que., is opening the lumber mill at Evans Creek, B.C.

Guertin & Fils, saw mill proprietors, Grand St., Esprit, Que., are reported to have assigned.

O. J. O'Brien, lumber manufacturer, of Noel, N.S., has sold his stationary mill and about 1,200 acres of timber lands at Noel, to McDonald Bros., of Parrsboro.

Fire at the Doughterty Mill, Orford, Que., recently resulted in the total destruction of the mill, which was owned by the Fletcher Lumber Co. The loss will be over $10,000.

The Silliker Car Company, of Halifax, N.S., have secured a contract from the Canadian Northern Railway for the construction of 250 freight cars at a cost of about $250,000.

A Sydney, N.S., despatch says: Major Calhoun, M.I.A.C., and J. Carling Kelly, famous English engineers, passed through here on their way to Labrador where they will erect a hundred thousand pound pulp mill. Lord Northcliffe is interested in the project.

Mr. Cutler, of Stetson, Cutler & Company, St. John, N.B., has indicated his willingness to go on with the Mispec Pulp Mill if the city will give him an option to buy the property at $30,000. In the event of Mr. Cutler purchasing the proporty, he would either sell or organize a company to start a paper mill, employing 130 hands.

Western Canada

The next annual convention of the Pacific Logging Congress will be held in Vancouver, B.C., in June, 1911.

A lumber yard will be started at Moose Jaw, Sask., by representatives of some of the coast manufacturers.

A new saw mill with a daily capacity of 40,000 feet and extra modern machinery is to be erected at once at Canford, B.C.

The Edgewood lumber mill at Castlegar, B.C., which commenced operations on September 9 last, is turning out lumber at the rate of 60,000 feet per day.

Iowa people who hold a timber tract at the mouth of the Skeena river may build a mill. To report on the situation, A. C. Voss, of Cedar Rapids, made a trip recently to look over the ground.

A large saw mill is to be erected at Roche Point, B.C. It is expected that the mill will have an output of about 500,000 feet of lumber weekly. The building and plant will be completed in about four months.

The B. C. Gazette gives notice of the incorporation of the following companies: Bridges Lumber Company, Ltd., $125,000; Canadian Mills and Timber, Limited, $1,000,000; Lincoln Sawmills Company, $50,000.

W. J. Foley, a well-known timber cruiser, is erecting a saw mill at Nanoose Bay, east coast of Vancouver Island, with a capacity of 40,000 feet daily. It is expected that the mill will be in operation by November 1st.

A match factory is to be erected in Neepawa, Man., to employ 25 hands. Construction will begin at once. Business men of Neepawa have subscribed $40,000 of the capital. The names of the promoters have not yet been made public.

Messrs. Moore & Whittington, of Victoria, B.C., intend to remove from Yates Street to the upper harbor, in the vicinity of Bridge Street, and erect a new factory of larger dimensions than the persent premises, on the site of the old Adams' mill.

A. E. Watts, President of the Wattsburg Lumber Company, Wattsburg, B.C., is arranging for the construction of a logging railroad which will tap 50,000,000 feet of fir, cedar, yellow pine and larce in limits which he owns near the boundary line in Southeast Kootenay.

Three hundred million feet of timber in British Columbia have been purchased by Carstens & Earles, of Seattle, Wash. The timber is on the Copper River, close to the Grand Trunk Pacific Railroad, on a stream tributary to the Skeena River. Mr. Carstens reports that it was purchased as an investment.

The wreckage of the Columbia River Lumber Company's mill at Golden, B.C., which was destroyed by fire in July last, has been cleared away and rebuilding commenced. It is expected that the new mill—which is to be second to none in the mountain country—will be ready to commence cutting when the season opens next spring.

The Jordan River Lumber Company, Limited, have opened up offices in the Board of Trade building, Victoria, B.C. D. E. Smith, the manager, announces that his company has not yet commenced logging operations on the island. In the early spring it is their intention to erect a saw mill, the location for which has not been decided on.

The Maple Grove Lumber Company's saw mill near Clayburn, B.C., has been destroyed by fire, the plant being a total loss. The loss will be about $10,000, with very little insurance. The capacity of the mill was about 10,000 feet. Lately it had been engaged in cutting ties for the British Columbia Electric Railway Company.

Canford, B.C., is to have a saw mill, constructed along the latest improved lines and with a capacity adequate to meet the growing demands of the different centres of building throughout the district. The new mill will cost in the neighborhood of $25,000 and will be capable of cutting 40,000 feet of lumber daily. It will employ a large force of men and the company plan to operate on the big scale.

A report has been received by the B. C. provincial authorities from M. V. Allen, divisional fire warden in the Mabel lake section of the Okanagan, who has collected evidence forcing the conclusion that some one has deliberately been attempting to fire the extensive timber limits of the Enderby Sawmills Company. Several fires have been started in these limits in various points, but all within a five mile radius, and the tracks of a man, the same tracks apparently, have been discovered.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope, and stating number of enquiry:

1428. Oak hubs.—A Manchester firm asks for prices of oak hubs from Canadian manufacturers.

1431. Wood pulp—A Manchester firm asks for samples and prices of wood pulp from Canadian exporters of same.

1434. Chair seats—A Manchester firm asks for prices of chair seats from Canadian manufacturers of same.

1462. Wood pulp—A Yorkshire firm makes inquiry for the addresses of Canadian manufacturers of wood pulp for paper making.

1472. Birch chair seats and birch square—A London firm seek supplies of Canadian birch chair seats and birch square, and invite quotations from manufacturers.

1473. Maple logs and hardwoods—A timber importer in Bremen would like to get into correspondence with Canadian shippers of maple logs and hardwoods generally.

1480. Agents—A Sheffield firm are desirous of appointing agents at Montreal, Toronto, Quebec, St. John and Vancouver for the sale of their circular saws and machine planting irons for converting timber.

1490. Woodworking machinery—A Swiss firm manufacturing woodworking machinery and accessories is desirous of opening up business connections in Canada.

1496. Lumber—A South African firm of timber merchants and manufacturers of joinery, desires to be placed in communication with Canadian manufacturers and exporters of red Canadian pine, or fir, and white spruce of the following dimensions: 3 x 11, 3 x 9, 3 x 6, 3 x 5 and 4 x 4½ in 17 feet to 18 feet average lengths, 6 feet and up. Also spruce deal ends 3 feet and up in above sizes. Quotations f.o.b. Montreal and St. John, N.B., or c.i.f. Port Elizabeth and Durban. Definitions of grading and terms of payment requested.

Canada's Forest Resources

A forestry expert in the employ of the Dominion Government makes the following unofficial estimate of the Dominion's timber resources:

	Total acreage.	Publicly owned.
British Columbia	50,000,000	49,200,000
Manitoba, Alberta, Saskatchewan and Territories	100,000,000	94,000,000
Ontario	70,000,000	52,400,000
Quebec	100,000,000	43,800,000
New Brunswick	12,000,000	2,400,000
Nova Scotia	4,000,000	None.
Prince Edward Island	100,000	None.

CONGO NEVER LEAK ROOFING

Congo on Maryland Terra Cotta Company's Buildings—Baltimore, Maryland

Guaranteed Roofing

We don't suppose you care a rap what Congo is made of—what interests you is *how long it is going to wear.* What it is made of interests us because we give with every roll a *Surety Bond Guarantee,* the like of which no other manufacturer has offered.

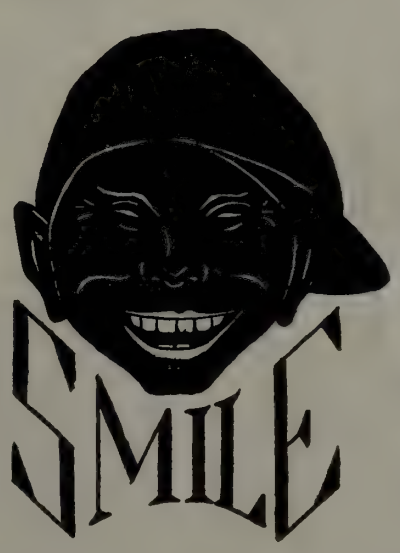
Herewith are a few of the features that make it possible for us to guarantee Congo 2 or 3 ply for *10 years.*

It never gets hard or brittle. It never breaks or peels off. It is giving as perfect satisfaction in Europe, India and Australia, where we ship thousands of rolls, as in America.

Congo doesn't run, rot, buckle up or shrink.

The caps, nails and cement which we furnish free, are the best money can buy.

We don't use the old style *tin caps* for Congo, but *galvanized caps* which never rust.



FREE SAMPLE

You can satisfy yourself as to its lightness, pliability and wonderful waterproof qualities by writing today for a Free Sample. As to its wearing properties—we guarantee them. Can any reasonable man ask more?

United Roofing & Mfg. Co. PHILADELPHIA, PA.

Starke-Seybold Ltd., Montreal; Mechanics Supply Co., Quebec;

P. Payette's New Patent

Mill Dogs

Over two hundred now on the market

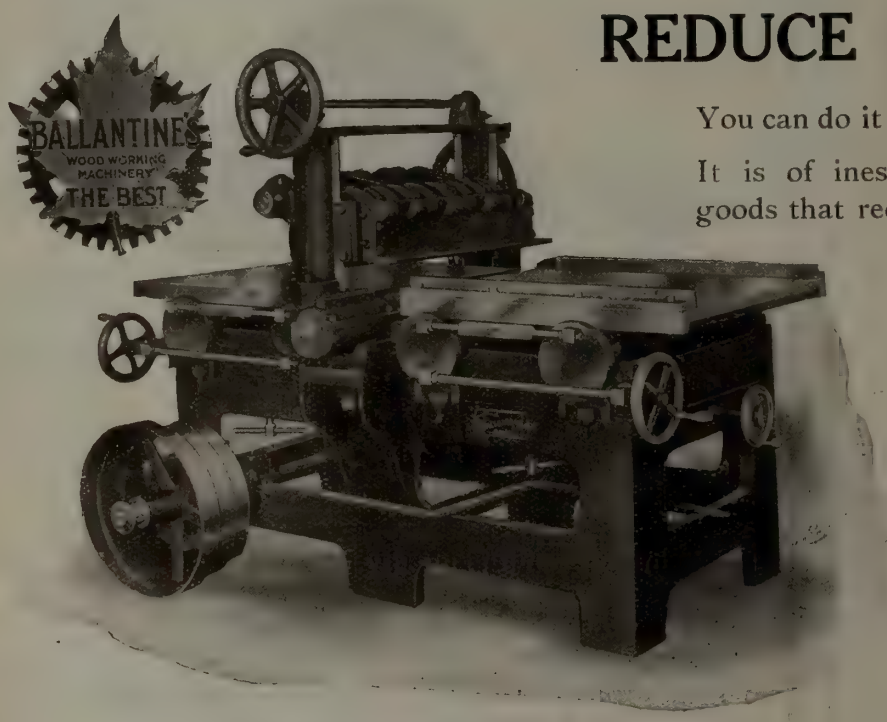

Fig. 1.

Will dog in all classes of timber, whether hardwood, pine or frozen timber, of any description. Booklet for same mailed free to any address upon request.

P. Payette & Company
Penetanguishene, Ont.

REDUCE YOUR FACING COST 75%

You can do it by installing a **FALLS UNDERCUT PLANER.**

It is of inestimable value on all classes of manufactured goods that require straight surfaces and wherever the hand planer is used for facing. Stock of any width, from the narrowest to the full width of the machine, may be run. Narrow strips can be straightened as well as on the best hand planer, which proves that the roller control is perfect. In fact, on it every class of facing can be done as well or better than on the best hand planer, **at three or four times the rate of hand work.** We absolutely guarantee this result.

Besides, it is absolutely safe. Accidents are impossible on it, no matter how careless the operator may be.

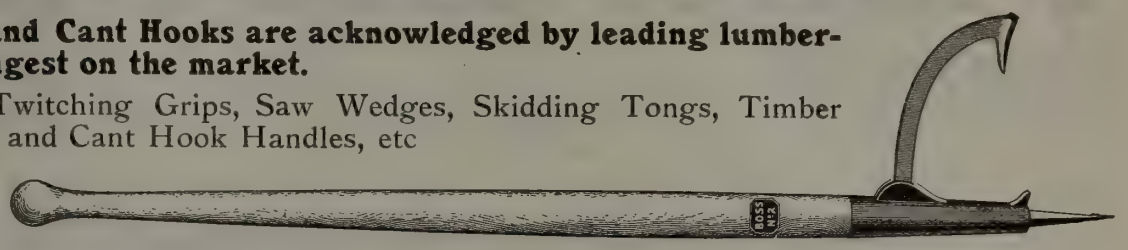
Boss Line Lumbering Tools



Manufactured by

The McFarlane-Neill Mfg. Co., Ltd., St. Mary's, N. B.

Forged Steel Socket Peaveys and Cant Hooks are acknowledged by leading lumbermen to be the lightest and strongest on the market.

Try our Steel Loading Blocks, Twitching Grips, Saw Wedges, Skidding Tongs, Timber Carriers, Split Rock Maple Peavey and Cant Hook Handles, etc

Catalogues furnished and prices quoted on application

KEYSTONE

Two or Three Saw Double Edgers

are in a class by themselves

Heavy, solid, well proportioned frame

Built with driving pulley, setworks etc.

The above cut represents the most up-to-date and accurately constructed edger on the market to-day.

THE KEYSTONE

The arbor is made of forged steel and runs in long self-oiling boxes, is double key seated, and carries two saws.

Feed works are very simple.

Wheel-set works.

Spiked rolls on tables and fluted on the machine always keep the lumber in place.

Send to-day for our literature.

The "Modern" Mill Operator is not satisfied with "old time" production from his machines. "Increased production with improvement of quality", is the slogan of the man who is determined to get results. Our No. 101 Planer and Matcher will give you results which will satisfy your most fastidious customers and be profitable to you.

Special Features:—Frame heavy and well ribbed. Cutter Heads are placed directly over floor supports. Feed consists of eight 9 inch rolls. Side Heads are located between delivery rolls giving long belts and making it possible to work very short stock. Radial Knife Setting Gauge, for setting the knives without measuring. Platen is adjustable and of wedge pattern making it possible to instantly change the cut, distributing it between the top and bottom heads as desired, without altering the finished thickness of stock or location of matching. Cylinder knives are accurately jointed while in motion. :: :: :: :: :: :: :: :: ::

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense.

HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers Circ· Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

A Double Circular Saw

(Rip and Cross-cut)

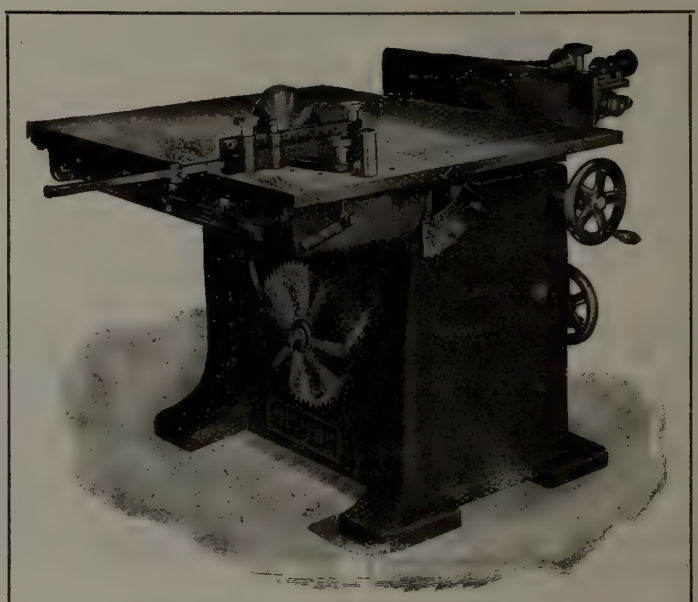
is a handy thing in a furniture factory—because of the time it will save and the convenience in changing from one operation to the other.

Our No. 205 Double Circular Saw

is made for quick and accurate work with especial emphasis on the word ACCURATE.

It is constructed like an iron-working tool, every detail is carefully worked up to give ACCURACY.

In changing from rip to cross-cut sawing, or vice versa, all that is necessary is to turn the hand-wheel at the front when one saw goes below the table and the other comes up.



Note that the saws are always ***out in front,*** easy to change when wanted a different gauge or style of teeth.

Then to tilt the table or to adjust the fences the operator need not move out of his tracks.

Fine adjustments of the fence can be made on this machine owing to the micrometer device on it.

Our Circular Sheet No. 10-R Tells all About the Construction of Our No. 205. Let Us Send You a Copy of it

DON'T BUY A DOUBLE SAW UNTIL YOU COMPARE OURS, FOR YOU WANT THE BEST

"Jumbo"
Combined Gang and Edger

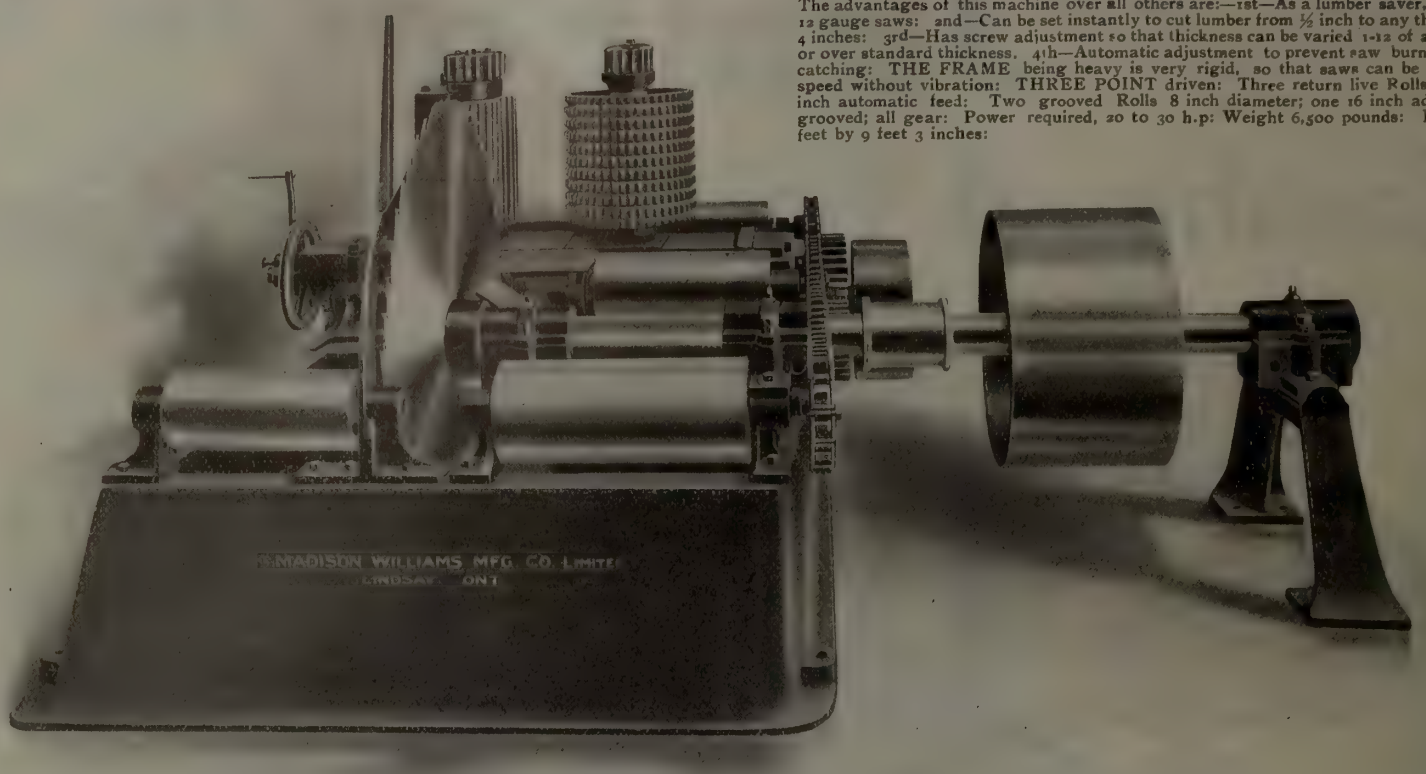
We have made several improvements since this cut was made, less gearing is used than shown in the cut.

This is a very complete machine and embodies every detail of construction essential to an adequate gang edger.

We have sold a great many of these machines and hear nothing but good said of them. We have some very flattering remarks for our "Jumbo."

Some of its good points are:

MANDREL: 4½ inches by 10 feet 6 inches long.
DRIVE PULLEY: 20 inches by 20 inches.
SAWS: 2 Movable Saws on Edger side (more if desired) 8 stationary saws on gang side. 2 Water Boxes.

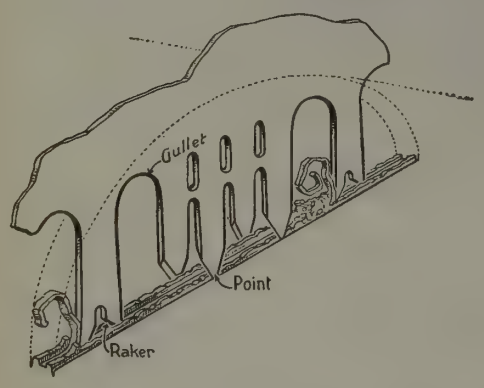


This machine is 5 feet 7 inches inside of frame; reverse friction is supplied in case cant binds and prevents saws from being burned. Supplied with Press Rolls and impossible for Cant to fly back.

Prices Cheerfully Quoted

MOWRY & SONS Gravenhurst Ontario

JOHNSTON RE - SAW is a Lumber Saver and a Money Maker



The advantages of this machine over all others are:—1st—As a lumber saver, using 10 and 12 gauge saws: 2nd—Can be set instantly to cut lumber from ½ inch to any thickness up to 4 inches: 3rd—Has screw adjustment so that thickness can be varied 1-12 of an inch under or over standard thickness. 4th—Automatic adjustment to prevent saw burning by slivers catching: THE FRAME being heavy is very rigid, so that saws can be run at high speed without vibration: THREE POINT driven: Three return live Rolls 8 inch by 20 inch automatic feed: Two grooved Rolls 8 inch diameter; one 16 inch adjustable Roll grooved; all gear: Power required, 20 to 30 h.p: Weight 6,500 pounds: Floor space 8 feet by 9 feet 3 inches:

Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground sa s can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easy.

ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment-Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

"The HOWARD" Vulcanizing Process

The quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto

A Hard Pair to Beat

Two Saws that have proved great favorites in the lumber camps on account of their unquestionable superiority

THE "SAW KING" CROSS-CUT

Please note the shape of the RAKERS OR DRAG TEETH, and the GULLETS. The drag teeth are so constructed that they curl the sawdust into gullets, and the gullets, by slanting from the rakers, throw the sawdust out more freely and keep the cut perfectly clear from sawdust.

The **Saw King** has merits possessed by no other saw. By looking at the above cut you will see that the chip spaces are wider and deeper in the centre than they are in any other part of the saw, thereby giving a capacity for the accommodation of the largest accumulation of sawdust, which is always in the centre of the saw. The chip spaces decrease in size from this point to the saw, as also does the quantity of sawdust. All users of saws know that the teeth at the centre wear much faster than they do at the ends, as the teeth are longest at the centre, it gives greater wearing capacity to the saw, and as the teeth are smaller at the ends of the saw and leaves the saw blades wider between the teeth and at the back. Where the blade is narrowest, it gives more strength and stiffness at the point where it is most required. This saw is tempered by our new improved process, giving it a keener cutting edge than any other cross-cut saw made. This saw is thoroughly warranted. Any defective saws will be replaced by the seller.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention

THE NARROW "SAW KING" CROSS-CUT

The Narrow Saw King Crosscut Saw is specially adapted for small timber or a falling saw, and has the advantages of both a wide or hollow back Crosscut Saw.

The Narrow Saw King is a straight back saw, being bevel ground three gauges from the teeth to the back, making the saw thirteen gauge at the teeth, seventeen gauge at the back, and is only one quarter inch wider than a Hollow Back Saw.

Please note the shape of the RAKERS OR DRAG TEETH, and the GULLETS. The drag teeth are so constructed that they curl the sawdust into the gullets, and the gullets, by slanting from the rakers, throw the sawdust out more freely and keep the cut perfectly clear from sawdust.

The Narrow Saw King has merits possessed by no other saw. By looking at the above cut you will see that the chip spaces are wider and deeper in the centre than they are in any other part of the saw, thereby giving a capacity for the accommodation of the largest accumulation of sawdust, which is always in the centre of the saw. The chip spaces decrease in size from this point to the saw, as also does the quantity of sawdust. All users of saws know that the teeth at the centre wear much faster than they do at the ends, as the teeth are longest at the centre, it gives greater wearing capacity to the saw, and as the teeth are smaller at the ends of the saw and leaves the saw blades wider between the teeth and at the back. Where the blade is narrowest, it gives more strength and stiffness at the point where it is most required. This saw is tempered by our new improved process, giving it a keener cutting edge than any other Crosscut Saw made. This saw is thoroughly warranted. Any defective saws will be replaced by the seller.

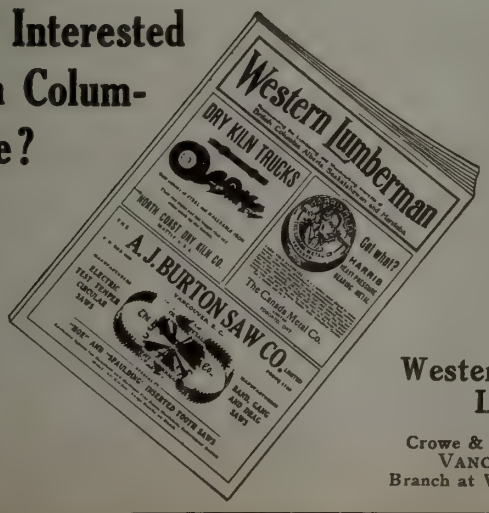
Every Hour Saved

on a Job adds to the working capacity of the Mill

The "make-ready" built into the SHIMER CUTTER HEADS lessens the labor and expense of keeping your work up to standard, and cuts down the time required to do the job. The time of the man who usually has to look after the "fitting and trying" or adjusting Bits for different kinds of lumber, can be utilized in more important ways.



The expansion feature provides for quick changes in size of tongue or groove without removing the Heads from the spindles. To change the fit of the tongue in the groove it is only necessary to turn the Expansion Ring—to the right to make it thinner—to the left to make it thicker. Each stop equals one-third of one sixty-fourth of an inch. This delicate adjustment is much appreciated where the lumber varies in degrees of dryness, or when changing from one kind of lumber to another.

The pattern of the work having been turned into the Circular Bits, the shape never changes when they are sharpened. The alternate Shearing cut insures perfect work on any lumber, hard or soft. Cross-grained and knotty lumber is finished with well formed edges much to your satisfaction. You can use them and profit. Address

Heavy Duty Lath Machine

This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

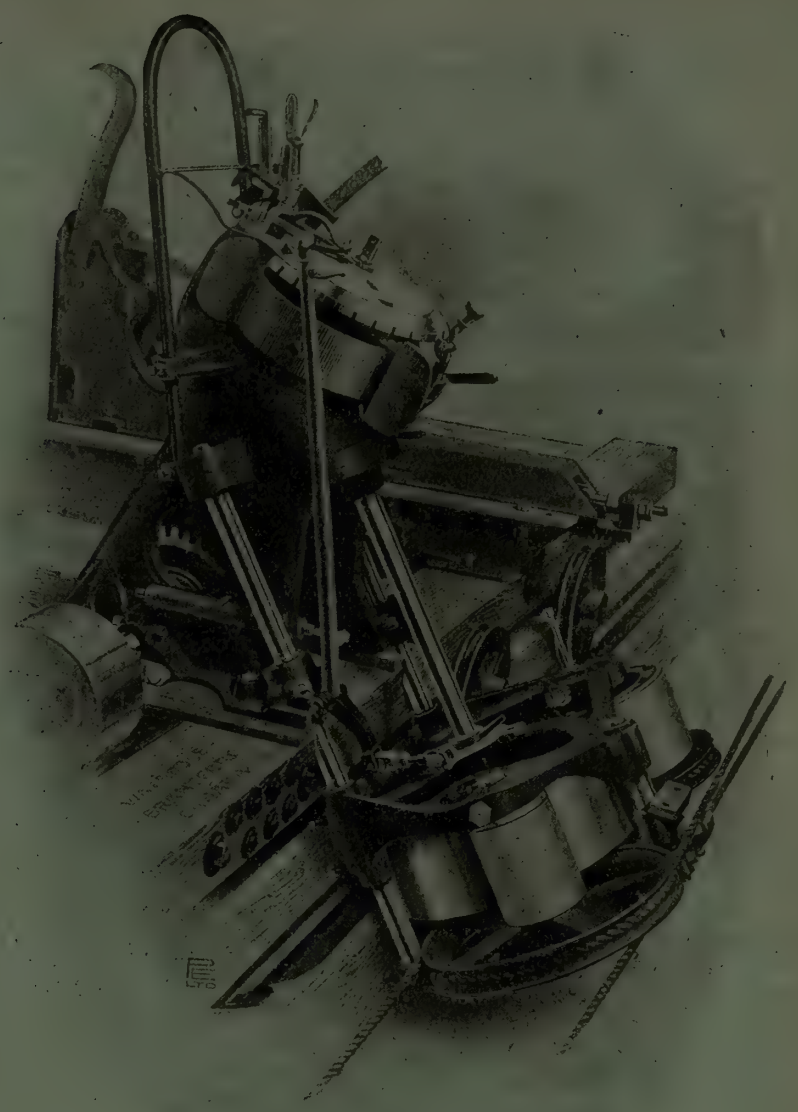
4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.

The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.



The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

Manufacturers of Saw Mill, Shingle Mill, Lath Machinery, and Fittings. **Drawer 712**

THE TROUT POWER SETWORKS

No Work—
No Heat—
No Lost Motion—

THE MOST POWERFUL AND EFFICIENT SETWORKS MANUFACTURED

A continuous acting rope-driven set and receding works that will turn out more lumber and better lumber than any other setworks on the market. Just for these reasons. There are only two levers to operate. Setting is accomplished without stooping or bending. There is no heat from steam cylinder. Rope drive is continuous acting when carriage is stationary or in motion. With nothing to tire or distract him the setter can give his undivided attention to the sawyer's signals, and cut as much lumber at the end of his shift as he did at the beginning. No lost motion can possibly develop. Working parts are of finest selected steel throughout. The operation is without rack or jar, eliminating any wear that would affect the setting accuracy.

Will set by 1-32″ up to 6″ at one manipulation of the setting block. Can be attached to any size Carriage, Rack or Screw.

With this Machine You Can Cut 2,000 Feet More Lumber Every Day Next Year

It is our four inch Steam Set Works, and it will set up to four inches with one throw of the lever. Your setter has only to operate the controlling lever—the hard work is done by steam.

This extra 2,000 feet of lumber is not a guess of ours—it is what the users tell us they have actually obtained. Some have done better.

But even 2,000 feet extra every day at no increased operating cost to you, means a big addition to your profits at the end of the year, and it will a great deal more than pay for the machine.

440 Square Miles Timber Limits
on Georgian Bay, Ontario

To be Sold by Auction in Blocks of 5 to 36 Square Miles

On account of their President and Principal shareholders being engaged in other large enterprises, and not having the time to give to them all, THE PARRY SOUND LUMBER COMPANY, Limited, have decided to sell by Public Auction, to be held in the rotunda of the Board of Trade in the City of Toronto on the **Seventh Day of December, 1910,** all of the timber lands, mills and town property situated in the Town of Parry Sound also Tug Scow and full Camp Equipment for five camps. Ontario Timber Limits

TO BE SOLD

comprise some 440 square miles of licensed and deeded Pine, hemlock, spruce, birch and other timber. The licences from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows: Saw Logs, White Pine, $1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods, 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Montieth, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners. A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

Mr. Lumberman

if you wish to build up your fall trade nothing will help you to do so like a good line of shingles

If you want the BEST SHINGLES on the Canadian market order a sample car of our FAMOUS METIS Brand.

One car will convince you of what we say, that they are the BEST on the market. If you want a car quick wire us the order. Do it now before you forget.

In SPRUCE we hav quality 2nd and better planed and matched, prepared to perfection.

We have a snap on 5/8 Sheeting,—get our prices, it will pay you.

Our idea is, "That a satisfied customer is our best advertisement," and every one is satisfied with our METIS SHINGLES and 2nd and better SPRUCE.

We also have a large stock of PINE and HEMLOCK FEATHER EDGE CLAPBOARDS and Lath.

Get our prices before buying—It will pay you

Pine, Spruce and Hemlock
A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors
We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.
Door Making is our Specialty
We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**
Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.
If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

The Disston Saw A Triumph of Organized Skill

A writer in the October number of the Railroad Man's Magazine says:—

"Times have changed. In pioneer days we took the large-bore shotgun and bagged all sorts of game because it scattered, and we could not miss. Now, it we scatter, we are likely to get something we do not want, and muss up the sport besides.

The mechanic and artisan become skilled by one particular movement. A thousand bits of special work contributed to the aggregate produce a finished article that is the wonder of the world.

No one man can build it all. Every man gives the best of himself to a single one of the thousand parts. When assembled the product is the highest possible attainment of the human head and hand."

Had this been written to describe the reason for the superiority of the Disston Saw it could scarcely have come closer to the mark.

It is because of the superiority of each individual piece of workmanship that goes into a Disston Saw that "the product is a wonder of the world."

Some of the men whose efforts go toward establishing the highest known standard of efficiency have been with the Disston Works for many years. Others have been employed from time to time because of their special ability in certain departments.

Not one man—not primacy in the field—not alone the experience of three fourths of a century—

But ORGANIZATION-EFFICIENCY is the result of the leadership of Disston Saws, so consistently maintained.

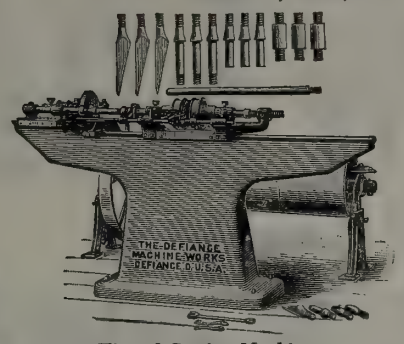
Henry Disston & Sons

INCORPORATED

(Keystone Saw, Tool, Steel and File Works)

Philadelphia, Pa., U.S.A.

Canadian Works: Fraser Avenue, Toronto, Can.



The easiest way to cut the cost of production is to equip your factory with the most up-to-date machinery.

"Big Fires From Little Sparks Grow"

Every stack and chimney in the lumber and woodworking industry should be equipped with a

"Thompson Improved Spark Extinguisher"

This is the only attachment for this purpose that is guaranteed to extinguish all dangerous sparks and not affect the draft. They are being used very extensively throughout Canada and United States.

BETTER WRITE FOR OUR INTERESTING LITERATURE

Geo. W. Reed & Co., Limited, Craig Street Dept. B. West, MONTREAL
Canadian Manufacturers

Isn't it Better to Investigate

"The HOWARD" Vulcanizing Process

than to wish you had

Positively the quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

---

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto

Snow Plows

The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate, Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9" wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12" of loose snow each time the plow passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

As far as the cutting edge is concerned the Inserted Tooth saw ought to show up best, for the reason that each tooth is a separate unit and can be made with a higher temper than the tooth which is solid with the plate.

Simonds Insertable Saw teeth are very finely and accurately machine milled (both bit and shank) to fit into the plate and they are brought to a high temper by a very skilful process — **this temper is always uniform.**

There is one kind of timber in sawing which Simonds Inserted Tooth Saws show a big lead and that is—frozen timber; one reason is that the points are held exceptionally firm in the plate by the Simonds way of insertion, so solid that they cannot spring sideways and cause the plate to dodge.

Again, Simonds Points or Bits have a better clearance from the cutting edge both backward and downward than other makes of insertable bits—and the clearance is so uniform that Simonds Points may be worn down full length of swage without side filing or materially varying the width of kerf.

You know the name **Simonds**—now know the **Saw Simonds.** Every kind used in mill work, woodworking machinery and lumbering—Cross-cut, Gang, Band, Solid or Inserted Tooth Circular.

Your very next order should be for **Simonds Saws.**

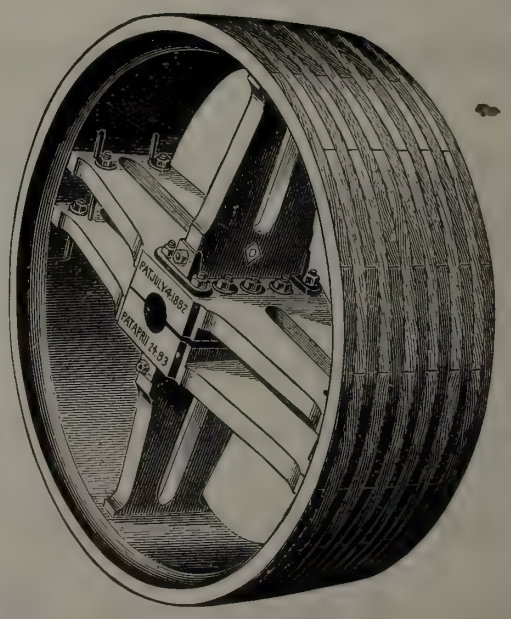
Simonds Canada Saw Co., Limited

Vancouver, B.C. **Montreal, Que.** **St. John, N.B.**

In the United States, Simonds Manufacturing Co.

Pulleys for Saw Mills

Every pulley is thoroughly nailed



Every pulley is guaranteed for heaviest Double Belts.

Our Arms and Hubs are made of Hard Maple. Rims Soft Maple.

If for very damp place we bolt the Rims.

Strongest pulley on the market—no Slip.

Send for Catalogue.

We make and sell more pulleys than all other makes put together.

We have the largest and only complete Pulley Works in Canada.

Might as well have the best.

Cheapest in the end !

We also manufacture
Shaftings, Hangers, Pillow Blocks, Friction Clutches, etc., etc.

Dodge Manufacturing Co., Toronto, Montreal

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, November 1, 1910 No. 21

Large Increase in Lumber Exports

The lumber industry of Canada, according to the statistics published in the annual report of the Department of Customs for Canada, has had an excellent year, so far as the volume of business is concerned. The exports of forest products for the fiscal year ending March 31 last amounted in value to $47,688,256. This is an extensive increase over the exports for the previous year, which amounted in value to $39,893,350. The principal increase occurred in the exports of lumber which amounted in value to $38,495,181, as compared with $32,395,315 in the year previous. The exports of shingles, in spite of the much higher duty imposed by the United States, did not show much of a decrease. The total value of singles exported for the year ending March 31, 1910, was $2,331,443, as compared with $2,581,755 in the previous year.

The exports of pine deals amounted to $1,653,437, as compared with $1,694,277 in the previous year. Exports of spruce deals increased from $5,321,790 to $6,461,280. Exports of planks and boards increased from $19,178,091 to $23,253,219. Exports of square timber declined from $1,386,224 to $1,099,094. The exports of wood for pulp show an increase in spite of the fact that the province of Quebec has prohibited the export of pulpwood in an unmanufactured state when cut from Crown lands. This prohibition, however, was only in effect for a portion of the year under consideration. The exports of pulpwood amounted in value to $6,076,628, as compared with $4,356,391 in the year previous.

Exports of manufactured wood products also showed a material increase. They amounted in value to $6,171,093, as compared with $5,155,230 in the year previous. Of this increase the principal item was mechanically ground wood pulp, the exports of which increased in value from $2,703,923 to $3,545,751. Exports of chemically prepared wood pulp also increased slightly. They amounted in value to $1,658,846, as compared with $1,603,006.

Imports of forest products coming into Canada free of duty increased in value from $6,176,005 to $7,998,523. Imports of dutiable manufactures of wood increased in value from $356,093 to $476,303.

Statistical tables of the imports and exports of forest products will be found in another part of this issue.

Overproduction and Trade Depression

The old bugbear of the lumber industry, over-production, seems at last to have brought the manufacturers of British Columbia to a realization of the fact that they cannot keep on forcing sales on a dormant market unless they are prepared to accept less than the cost of production. At least this is the situation as it appears from the discussion of the subject in an interesting letter from Mr. A. E. Watts of Wattsburg, B.C., which appears elsewhere in this issue. Mr. Watts is a man who has given a great deal of attention to the financial and economic problems which confront the lumber industry, and he has evolved a system of profit-sharing and co-operation with his employees which at the present time bids fair to become a success. His views, therefore, on any question relating to trade conditions will be read with interest.

It is refreshing to come across Mr. Watts' views because to a large extent they have the merit of being original and at the same time, although they bear rather hardly upon some of the larger manufacturers who have been accustomed to believe in their own infallibility, Mr. Watts has no hesitation about expressing them both in print and before the people whom he criticizes. A time-honored argument among lumber manufacturers has been one to the effect that in bad times much of the depression is due to the existence of a large number of small mills, which, in many cases, not only cut bad lumber, but also cut prices. This argument has acquired all the dignity and respect due to old age, but Mr. Watts has another view of the matter, and he is no respecter either of dignity or antiquity in an argument. Briefly, his views are as follows: It is not the little mill that is responsible for the slump in demand and the weakness in prices now prevailing in many parts of the prairies. The responsible party is the large mill with great quantities of capital and modern equipment. These mills have large dividends to pay. They can ill afford to allow their plant to lie idle. They have splendid facilities to market their products, and a simple order to their representatives in different parts of the country results in the price of lumber either advancing or declining according to their will. Where does the small mill man come in under such circumstances as these, asks Mr. Watts, and we would like to have the answer of some of the large manufacturers to this question. When prices are cut by a large manufacturer the small man has to follow suit. When he wants higher prices he can only get them if the large manufacturers are willing.

And what is it that brings about a dull market quicker than anything else? Is it not the forcing of the market when times are fairly good? At least this is the view Mr. Watts takes of it, and he blames the large manufacturers for doing the forcing, because they do not know when to slacken in their production. The market, from being active, presently becomes sluggish. It has more lumber to digest than its system can manage, and prices drop. The large mills at the same time, with the enormous capacity of which they are so proud, take some time to realize the true state of affairs and stocks at the mills accumulate until a recovery for the market becomes a matter of many months and great difficulty.

Present conditions in Western Canada are a strong argument in favor of Mr. Watts' point of view. Last fall, winter and spring, the manufacturers of British Columbia reported continually increasing business, and prices advanced rapidly. The selling organizations were kept on the move day and night, and it is to be presumed that the mills were run as continuously as possible, for in Eastern Canada the representatives of the Western mills for a time were unable to take orders, as they could not deliver the goods. Matters have changed since then. The demand has fallen off. It has been satisfied, in all probability more than satisfied, and prices are dropping. The manufacturers have held a large meeting and talked at length about the competition of United States lumber. The competition they have most to fear, according to Mr. Watts, is their own competition; in other words, over-production. They have probably realized this too, for they came to a decision that it would

be necessary to curtail their production for the remaining months of 1910. If they live up to this decision and extend the curtailment well into 1911 perhaps some real good will be effected.

It may be practically impossible for the large manufacturers to act more speedily than they have in this instance. They have done the right thing in deciding to curtail. They also decided to maintain existing prices, but this may be no easy matter. There is no fault to be found with them for trying to stave off a dull period of trade, but it looks very much as though Mr. Watts had the right side of the argument and that the large manufacturers were much to blame, rather than the small mill men, for any evil effects resulting from over-production which might have been foreseen and in a large measure prevented.

Slight Curtailment Probable in Logging Operations

The information which has been received from lumber manufacturers in Ontario, and which was published in the last issue, has been supplemented by further details, from which it appears now that there will possibly be a slightly smaller cut of logs this winter than last. Before the winter is over, however, as so often happens, it may be that the estimates made by the various companies will have been increased and that the cut will be as indicated in the last issue, about an average one.

The outlook for next year's lumber trade in Ontario therefore is rather encouraging so far as it can be forecasted from the indications at present available. In addition to an only average, and possibly smaller than average cut, there are other conditions which will assist in producing a satisfactory market. Not the least of these is the fact that the manufacturers during the season of 1910 have done well both with their sawing operations and with the marketing of their product. The drives last spring were unusually successful, and as a result there are practically no logs left at the river mouths. Moreover, the logs which reached the mills will all have been converted into lumber. The manufacturers therefore are starting with a clean sheet for the coming season's work and business.

Not only have conditions for manufacture been improving, as indicated above, but there has been a decided improvement in the conditions of stocks since this time last year. Stocks have been considerably reduced in nearly all lines that were long, and there has been a noticeable improvement in the movement of the low ends, so that the manufacturers are able to look forward to the coming year with some degree of confidence of making a reasonable profit on each line of product.

It is to be regretted that the same cannot be said of the outlook in other parts of the country. In Eastern Canada the depression in the United States demand for spruce has had an evil effect upon the outlook. Political and other conditions have become so uncertain that it is impractical to attempt to forecast market conditions. Naturally the manufacturers of Eastern Canadian spruce are not figuring upon a heavy output this winter. The revocation of the Pike law moreover, under which United States logs have been turned into lumber in Canadian mills and exported to the United States free of duty, will have the effect of reducing the operations in the Maine woods adjoining New Brunswick.

In Western Canada, particularly in British Columbia, curtailment is also being proposed by many of the large operators, as a result of the falling off in the demand from the prairie provinces and from Eastern Canada. In Quebec the uncertainty resulting from the political disturbances in the United States and the changes in trade caused by the prohibition of the export of pulpwood are having the effect of inducing manufacturers to go cautiously about their winter operations. Practically the only part of Canada from which reports of large or increased cuts are received is the Rainy River district of Ontario, where serious forest fires have made it necessary to operate heavily, so as to save the timber which has been injured. Curtailment on a more or less extensive scale may therefore be anticipated according to present indications, and the lumber trade will be decidedly the better for a period of reduced output.

The Importance of Fire Protection for Lumber Dry Kilns

Next to incendiarism the most common cause of lumber plant fires, is the dry kiln, says "Lumber Insurance." Probably no greater source of danger exists on the majority of lumber plants than the kiln. The more nearly fireproof a kiln is the better, and the best and only satisfactory kiln is the absolutely fireproof one such as the best lumber plants are using. Such kilns when equipped with all standard appliances, including the automatic steam-jet, are the safest and "best risk" of any section of the lumber plant, and as such are receiving the lowest insurance rates on the plants where they occur. A remarkable change is this from the day when many reputable companies generally refused to insure kilns at all, and if they did so charged a 10 per cent. rate on all alike. However, the tremendous improvement in kiln construction is no less remarkable. If the reader has ocacsion to build a kiln we strongly advise the fireproof variety. If this is not possible the kiln walls at least should be of brick, with as little wood as possible in the interior construction and none at all close to steam pipes. A kiln should always be kept clean.

Coming to special fire protection for the kiln. Aside from water barrels, always advantageous outside, a good hydrant system and hose which should be quickly available, plenty of space between kiln and rest of plant and efficient watchman service, there is still something needed to quickly stop a fire inside. For this nothing can take the place of the automatic steam-jet properly equipped. Ordinary non-automatic jets with outside valve have often proved efficacious when the first was discovered soon enough; otherwise they have failed. Automatic sprinklers have sometimes been found unsatisfactory in a kiln full of lumber, as the boards have obstructed the free play of the water.

Not long ago a letter was received at this office from a Western lumberman. Referring to our article on kilns, this writer opposed the use of steam-jets in kilns, giving as his reason that live steam turned loose in a kiln only served to create a draft, raise the temperature and encourage the fire. He cited one instance where a steam-jet (not automatic) seemed to produce this result. We cannot see how a steam-jet in a properly constructed, closed kiln can create a draft to fan the flames, and it is evident that this writer forgets that live steam is only another form of water and it is as impossible for a fire to exist in an atmosphere of steam as in water. If the steam-jet is only used in time (which is assured with an automatic head), and if the pipes and connections are of proper size, and the opening located near the centre of the kiln if there is but one, the filling of the kiln compartment with steam should take but little over one minute and should absolutely smother any fire inside. That such a result has been often obtained every insurance company can testify, and hence it is that steam-jets for kilns are almost universally advocated.

All inspectors of the lumber specializing companies recommend steam-jets and frequently report instances of their effective work. Here is a quotation from an inspector, which is an example of reports frequently received: "The fire started in one compartment of a series of frame kilns from an unknown cause. It was discovered promptly and the steam-jets put into action. There was no other assistance. The fire was extinguished with but little damage. This is an example of the value of steam-jets properly equipped and put into use at the right time."

One of the oldest and most experienced inspectors, describing a kiln fire which occurred in Quebec, writes as follows: "The fire had worked its way into the kiln when discovered, but was effectively controlled by a 2-inch steam-jet which was installed at the suggestion of the writer about four years ago. The steam-jet proved very effective, and is regarded by many as the best possible protection for a dry kiln or any other small tight building."

We recommend for kilns what is known as the "Jumbo" one-inch

sprinkler head attached to a 1½-inch pipe leading off a 2-inch pipe, carrying steam direct from the boiler. The pipe leading to the sprinkler is filled with water, thereby protecting the head from the hot steam. Heads may be obtained which open at any desired temperature, thereby guarding against excessive overheat as well as being ever ready to fight a fire automatically.

Fire Prevention Methods Adopted on Dominion Forest Reserves

The greatest problem of Canadian forestry to-day is the protection of the forests from fire, and it is one that the Forestry Branch of the Department of the Interior is trying hard to solve.

This protection has naturally been more fully provided for on the forest reserves than on the immense areas of forest which are still unreserved. On these reserves there is a force of rangers, permanently employed, who keep up a constant and careful patrol of the beat assigned them. Like the other fire rangers, these post up notices (printed on a patented sort of cloth, practically indestructible) cautioning against the setting of fire, warn settlers in the neighborhood of reserves against carelessness in setting fires to clear land, or for other purposes, and "keep tab" on campers and sportsmen going into the reserves and impress on them the need of caution

But in addition to this special measures have been put in practice on the reserves for the prevention of fires. In a word these measures comprise the burning and ploughing of fire-guards, the making of roads, the supervision of settlers in the making of their slashings and the disposal of the resulting brush and the supervision of the spark-arresters placed in locomotives which pass through the reserves.

In the early spring, when the snow has gone from the open country, but while it is still lying in the forest, the rangers burn the grass along the boundaries of the reserves, so as to prevent fires from coming from outside and getting into the reserves. A total of ninety-one miles of such fire-guard was made on various Dominion forest reserves during 1909. The rangers also supervise the burning by the railways of grass and brush along their rights-of-way.

Ploughed fire-guards are also made where possible, not only along the boundaries of the reserves, but also in the reserves themselves. In making these guards a strip eight furrows wide is ploughed, and on the danger side another strip, four furrows wide and distant from the first strip four rods, is ploughed. The strip between the ploughed strips is disc-harrowed in spring and fall. During last year the Cypress Hills reserve, in Alberta, was surrounded by a guard of this description, several miles of guard being constructed. The railways have also ploughed guards along their lines where these cross the reserves.

As opportunity offers, the rangers construct roads through the reserves. These are found of the greatest usefulness in case a fire breaks out. Not only can men and supplies be conveyed to the various parts of the reserve reached by the road with despatch, but the roads themselves will often stop a fire, provided it has not attained a large size. Where the fire has reached large proportions, the road can be used to back-fire from. Along the roads, too, the rangers can more efficiently patrol the areas under their charge. During 1909 almost two hundred miles of road were cut along the boundaries of the reserves, at an average cost for a road nine feet wide of $12.73. Eleven miles of sixteen-foot roadway was also made into the interior of the Moose Mountain reserve in Saskatchewan, and 78 miles of road cleared in the Porcupine reserve.

By these and other measures the management of the reserves is striving to do away with the constant menace of fire. Further information on these and other points may be obtained in the annual report of the Superintendent of Forestry (especially in the report of the Inspector of Forest Reserves) which forms part of the annual report of the Department of the Interior, lately issued.

Editorial Short Lengths for Busy Readers

The low water in the Ottawa river has again made serious trouble for the industries which depend upon it for power. Several Ottawa companies were recently obliged to lay off a number of their employees. Heavy rains have only had the effect of causing temporary floods. The urgency for constructing a complete series of conservation dams on the upper reaches of the river was never more apparent.

A "penny wise and pound foolish" policy seems to have been the direct cause of the forest fires in Minnesota which recently destroyed many lives and much property, according to a Winnipeg despatch. Fourteen thousand dollars is the sum which probably would have averted the fires. It would have taken that amount to have maintained the forest rangers in Northern Minnesota, withdrawn on September 1, because funds for their pay were exhausted.

It has been the mistake of unwise, uninformed and unprincipled politicians in leading the people, through the influences of the press and rostrum, to believe that the lumbermen were not only committing an intentional and ruthless waste of the forests but were in a "trust" to cause them to pay far more than they should for their lumber; when the fact is that if forest conservation ever is a success lumber has got to be worth more money than it is now. It must bring what it will cost to produce it. It is our duty to educate the people to this fact, and that if conservation comes the people will have to pay the bill. There is no way of saddling this cost upon the lumbermen. It has got to come fairly upon all classes.—J. B. White.

According to press reports, the still hunt for the lumber trust is again under way at Washington. Certainly the master-of-the-hunt is deserving of better luck than he has had, for he has been persistently pursuing the game for many years and has never yet run it to earth. Following is a recent news despatch on the subject: "To determine if there is any foundation for numerous complaints received at the Department of Justice, alleging the existence of a 'lumber trust,' special agents of the department are quietly investigating the operations of a large number of trade associations and other organizations in all parts of the country connected with the manufacturing and marketing of lumber. It is alleged that the price of dressed lumber is fixed by agreement and unduly raised by 'powerful interests which control the lumber industry.' Charges of blackmailing, elimination of competition, and divisions of territory are also made."

British Columbia timber limit owners, with property to dispose of in the British market, frequently do not give sufficient information to the investigating public there, says Mr. C. E. Pretty of Vancouver, B.C., who is now in England. The result is, he adds, that their propositions are often regarded as wild-cat affairs and do not get the attention they really might merit. Mr. Pretty goes on to say in a letter written to a friend in the city: "London capitalists will gladly invest in British Columbia timber if it is shown to them that they can make a good profit on investments. This would not be difficult, but a great deal of harm is done by owners of timber in British Columbia and brokers sending timber propositions without complete and correct information, and then expecting the English capitalists to close up and pay the money over immediately. I would like to say to timber owners that no English firm will pay any money on property until they know what they are getting, and it will take from three to four months from the time the papers are sent before any money will be paid. It is possible that in the winter season it might take even longer than this, but anyone that has timber lands in good shape, so that there is no question of delivery, and who can send maps and certified reports of their properties, will likely be able to sell the same if they are presented through reliable firms who have a sufficient time to handle the deal. There is plenty of money here for good investments, and the feeling towards British Columbia is exceptionally good. Of course a reasonable price must be put on the timber, as the investors here are wide-awake men who know the ruling values of British Columbia timber."

Lumber News from Maritime Provinces

Rapidly Expanding Trade of Windsor, N. S.—Louison Lumber Company's Progress at Jacquet River, N. B.—Substantial Increase in September Shipments from Maritime Ports

Recently a representative of the "Canada Lumberman" visited that picturesque and growing town of Windsor, N.S., situated on the Avon River. Shipping operation were in full swing and he readily gathered

Shipping Lumber from Windsor, N. S. on the Avon River.

that the outlook for 1910 in the lumber industry was exceedingly bright. 1909 was a record year for the lumbermen of Hants County, the quanity of lumber sawn being estimated at 70,000,000 feet, or nearly double that of the preceding year. The quantity of lumber shipped to the several markets and sold for local use was 65,000,000 feet.

Possessing as it does, ideal shipping facilities, Windsor is the shipping point for practically all the mills on the Midland Railway, besides those located around the county. It is estimated that about 45,000,000 feet of lumber is cut in the mills along the Midland Railway annually. Several large firms are operating in this vicinity. Chappell Bros., with mills at Clarksville, cut this year about 3,000,000 feet. The Parrsboro Lumber Co., at Windsor Forks, have cut about 7,000,000 feet. The Windsor Lumber Co's. output is in the vicinity of 10,000,000 feet; the St. Croix Lumber Co., operating at St. Croix, cut between three and four million. Last year this company installed a new pulp plant, which is operated in connection with its lumber business. The estimated cost of the new plant is from $12,000 to $15,000, with a daily output of 16 tons. J. B. Campbell & Sons also operate mills in the vicinity, with an output of about 3,000,000 feet. Besides the mills operating, several large American firms have offices at Windsor for buying the products of the smaller mills. Among the most extensive shippers at this port is the R. S. Coryell Lumber Co., of Newark, N. J. This well known firm opened a branch there last year, with G. H. Boyce as their representative, and their shipments alone this year will amount to over 10,000,000 feet of hemlock and spruce. Mr. Boyce is looking forward to a more extensive shipment next year and is now making arrangements with that end in view. Dunn and Allan, of Dodridge, are also large shippers from this port this year, totalling about 7,000,000 feet.

The majority of the lumber shipped from Windsor finds a market in the United States, but a large quantity is also shipped to the South American and West Indian markets. 1909 found Windsor taking third rank in Nova Scotia in the shipment of lumber, and 1911 will not find the town behind in this respect. Besides lumber shipping the town is also the centre of industrial life, which includes mining, agriculture, manufacturing and commerce, and the representative of the "Canada Lumberman" could not fail to be impressed with the fact that this town of 4,000 inhabitants is rapidly growing and likely to take front rank among Nova Scotia centres.

At new lumber company, The Flemming, Gibson, Ltd., was organized recently at a meeting held in Woodstock, N.B., when the following officers were elected: John Gibson Benton, President; M. L. Hayward Hartland, Secretary-Treasurer; Hon. J. K. Flemming, Managing Director. The other members of the company are Gordon Neal, of Debec, and Chas. F. Rogers, of Woodstock. The capital stock of the company is $24,000, and it is their intention to deal in lumber and lumber lands. The company have obtained a lease of 6,000 acres, near McAdam Jct., and have already made arrangements to erect a mill to manufacture lumber the coming winter. They have a crew of men now at work in the woods and other camps will be added later. About 2,000,000 feet of lumber will be manufactured the coming winter. They also have a contract for supplying 25,000 railroad ties.

Nova Scotia Trade Continues Dull

Halifax, Oct. 24, 1910.—All branches of the trade continue very dull, with only a fair amount of shipping.

South American shippers report fair markets from some quarters, while others advise that they are holding some stock over for next year. Shipments from the eastern provinces have been much lighter.

While some dealers seem rather pessimistic as to the English markets, because of heavy stocks and unsettled labor conditions, others seem to think this will not seriously affect the market. Up to the present sales have been very fair and the heavy shipping for this season will soon be over.

The American market, if anything, is slightly stronger, and some very nice sales have been made of stock that suits the market. Two spruce cargoes from the same port in Nova Scotia were sold on the Sound last week, one for $17.50 and the second for $21.00, illustrating the difference between short random and what the market wants.

The same remarks as to desirability apply to hemlock. Good schedules are bringing $19, while it grows increasingly hard to give poor ones away, owing to the large amount of poorer stock on hand.

Laths are slightly stronger and will probably advance as the season advances.

There is very little activity in the logging end of the business, but the average lumberman in Nova Scotia does very little before December. Indications point to a fair-sized cut, but at this writing any forecast as to the size of our cut is simply a guess, as climatic conditions have a much larger effect on the size of the cut than markets have.

Mills are pretty well through their sawing. Only a few of the larger ones and some few portables are now being operated.

J. G. Gray, of Gray & Bullivant, Mosherville, N.S., has sold his interest in this business to his partner, who will continue along the same lines as heretofore.

Burpee L. Tucker, of Parrsboro, has just returned from a visit to Boston and New York.

R. M. Hall, Maritime representative of Stetson, Cutler & Co., is on a visit to the Boston and New York offices of his company, and expects to return about the 1st of November.

Messrs. Chappell Bros., Windsor, N.S., who recently sold their property near Windsor, N.S., have purchased, along with other parties, W. K. McKean's property at St. Omar, Que., which they expect to operate the coming winter.

Mulhall, Mack & McClean, Limited, have completed the erection of their sluice at Pleasant River, Lunenburg County, and will now be getting out a considerable quantity of lumber from their mill, which has been in operation some time.

Marked Process at Jacquet River Mill N. B.

The Louison Lumber Co's. mills at Jacquet River, N. B., of which Mr. John Fenderson, jr., is manager, are anticipating a good year for 1910. Their mills, an illustration of which is here produced, have a daily capacity of 80,000 feet, and the output for the year will be at least

Louison Lumber Coy's Mill, Jacquet River, N. B.

10,000,000 feet. The company are making preparations for the coming winter's cut in the woods, operations for which will be on the same large scale as heretofore, notwithstanding the fact that many firms in New Brunswick are this winter curtailing their logging operations because of the questionable state of the American market.

Increased Shipments to Trans-Atlantic Ports

The shipments of wood goods from St. John to trans-Atlantic ports for the nine months ending September 30, 1910, show an increase of upwards of 9,000,000 superficial feet, as follows:

	Total to Sept. 30th.			
	1909.		1910.	
Ports.	Spruce.	Birch. lumber.	Spruce.	Birch. lumber.
Liverpool	15,535,156	415,888	17,787,860	18,142
Manchester	26,740,938	613,339	28,654,972	221,208
Fleetwood	1,616,676	.....	1,044,560	.....
Channel	32,004,577	566,924	33,238,608	155,528
Glasgow	9,187,012	138,071	9,038,022	.....
London	9,280,878	1,885,768	10,625,640	3,204,116
Other Ports	983,684	.....	4,061,473	11,837
Ireland	15,281,995	.....	13,852,179	.....
Continent	.....	.....	.....	.....
South Africa	992,879	.....	2,209,413	.....
Total	111,623,795	3,619,990	120,512,727	3,610,831

There were in 1909 3,293 tons of birch, of which 2,930 went to Liverpool. In 1910 there were only 852 tons, of which 485 went to Liverpool.

The shipments for the month of September show the increase was largely during that month, the figures being:

	September.			
	1909.		1910.

Recent lumber shipments from St. John, N.B., have been as follows:

Oct. 1.—Irma Bentley, Barbadoes	176,324	sup. ft. pine boards.
	222,028	sup. ft. spruce boards.
	21,791	sup. ft. hemlock boards.
	800,000	shingles.
Oct. 1.—E. Mirriam, Bridgeport, Conn...	340,364	sup. ft. spruce plank.
Oct. 4.—Hunter, Boston	198,093	sup. ft. spruce boards.
Oct. 6.—B. B. Hardwick, St. Croy, Danish West Indies	9,128	sup. ft. pine boards.
	2,035	sup. ft. spruce scantling.
	65,017	sup. ft. sppruce boards.
Oct. 7.—Georgie Pearl, New Bedford, Mass.	1,000,000	cedar shingles.
	300,000	spruce lath.
Oct. 8.—Manuel R. Cuza, New York	238,447	sup. ft. spruce boards.
Oct. 8.—Arthur J. Parker, Pawtucket, R.I.	1,563,500	cedar shingles.
Oct. 11.—Indrani, Glasgow	3,214,253	sup. ft. spruce deals.
Oct. 11.—Pontiac, Brow Head, f.o.	3,249,353	sup. ft. spruce deals.
Oct. 11.—Nellie Eaton, Boston	102,308	sup. ft. spruce boards.
	150,000	cedar shingles.
Oct. 11.—Aldine, New York	93,913	sup. ft. spruce deals.
	1,109,000	spruce lath.
Oct. 12.—Swallow, Boston	111,313	sup. ft. pine boards.
Oct. 12.—Flyaway, Boston	149,199	sup. ft. spruce boards.
Oct. 14.—Orozimbo, New Haven, Conn.	146,285	sup. ft. spruce deals.
Oct. 14.—Tay, Lynn	113,738	sup. ft. spruce plank.
	760,000	cedar shingles.

Nelson Box Company Actively Engaged

The Crawford Sawmill at Westfield, N.B., on the River St. John, 15 miles from the city of St. John, recently purchased by the Wilson Box Company, Limited, to be operated in conjunction with their new box factory at Fairville, a suburb of St. John, is now busily engaged sawing box lumber, which is being piled out in their lumber yards. Among the improvements being installed by the new owners is a railway siding, which runs right in to the lumber piles, where the lumber can be shipped directly into the cars for transportation to their new box mill at Fairville, at which point they are also installing a siding, which provides for the cars being shunted right to the mill door.

While this new company, which has on its directorate some of the most energetic men of St. John, will cater especially to the local trade in nailed up boxes, etc., it will also export shooks both by rail and water. In this connection the company is most advantageously situated for handling a large export business, and the question of cheap raw material which is always so vital with the box-shook manufacturer seems to have been favorably settled by having the whole river St. John district from which to draw its supply.

Coastwise Freights Very Low

A St. John, N.B., despatch says: A comparison of Atlantic port coastwise lumber freights shows that conditions have reached the lowest ebb in some years. Since 1907 the rates varied from $3.80 or more to New York and as low as $2.75. This latter figure was considered exceedingly low, but the bottom seems to have been reached, if it has not fallen out, at $2.50, which is the more recent figure. During the early part of this season freights were between $3.25 and $3.50, as the competition for tonnage was more keen, in spite of the fact that the lumber market was poor. Some shippers weer able to command the available tonnage, and this made it necessary for others not so fortunate to offer inducements in the money line. On the other hand, with a better lumber market last year, freights generally were not so good, but their lowest point was a quarter of a dollar better than this year's lowest.

Going back to 1907, freights that year ranged from $3.50 and $3.62 to the Sound, which, allowing for the 25 cents more allowed for New York, would bring the New York freight up to something like $3.87. In 1908 the figures were $3.25, $3.50, and down to $2.75, and last year $3.12, $3.00, $3.25 and $2.75, and, as already stated, this year as high as 3.50 in the early season and down now to $2.50.

Disturbing Factors in United States Trade

F. C. Whitman, Annapolis Royal, N.S., in reply to an enquiry from the "Canada Lumberman" regarding market conditions for Eastern Canada lumber, recently wrote us in part as follows: "I have your letter of the 2nd inst. in regard to the falling off of the demand for spruce at Boston and New York. The spruce shipments are mostly made from St. John, N.B. From western Nova Scotia the shipments are mostly hemlock, hemlock scantling, and hemlock boards, also spruce lath. It has been customary for New York brokers to come to Nova Scotia in the spring and make contracts for quite a large quantity of hemlock. If the market keeps good, shipments go forward without any trouble; but if the market goes bad many of these brokers throw up their contracts altogether, and there has been a good deal of this in Nova Scotia. I understand that one of the larger shippers to the New York market has not been forwarding any lumber for some time. The reports received from New York and Boston would indicate that the trade is stagnant. Outside of one or two firms this does not have much effect in western Nova Scotia, as very little dependence is placed upon the American market. The poor trade this year does not seem to be a case of overproduction, but a lack of demand for building materials in the United States."

Favors a Maritime Lumberman's Association

I. C. Prescott, Albert, N.B., referring to the letters which have recently been published in the "Canada Lumberman" upon the lumber market situation in the Maritime Provinces and the Eastern States, writes as follows:

"I can hardly agree with all that is said in these letters, for I have shipped some cargoes to the New York market and have got very poor returns, nothing like as good as they were last year, and as the old saying is, 'the proof of the pudding is in the eating.' I do not know what reason there is for a bad condition there. I presume that there is not so much lumber being used and consequently the demand is not so great. Perhaps the political conditions that are at present agitating that country may have something to do with the market.

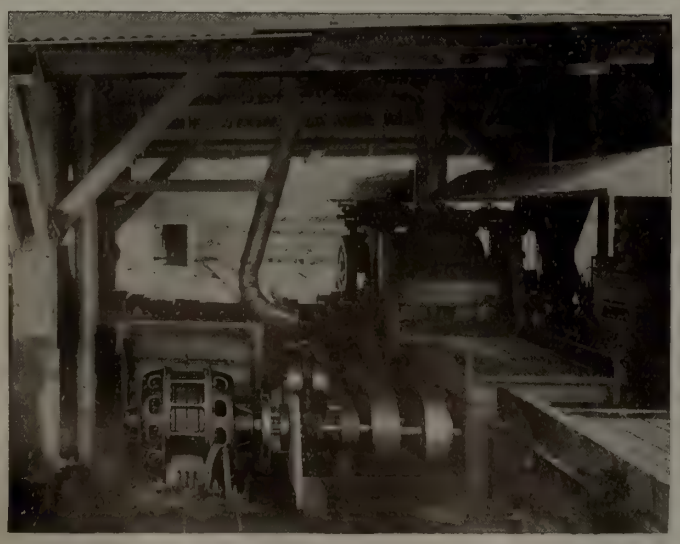
In regard to the need of a lumberman's association in the Maritime Provinces. I think it would be an excellent idea to have one formed, and I would be willing to give whatever assistance, however small it might be, that I could to the forming of such an association. I might saw that a few years ago a few lumbermen, myself among the number, got together and tried to form such an association, but we did not have the active support of the lumbermen in this province, and it only lasted two years. The Nova Scotia lumbermen seemed to take quite an interest in it and quite a delegation from Halifax attended and helped to form the organization, but the lumbermen from this province did not seem to want to have anything to do with it, and the scheme fell through.

Now that the money has been appropriated jointly by the Province of New Brunswick and the State of Maine for an international bridge across the St. John River betweeen Van Buren, Me., and St. Leonards, N.B., and the new International, 113 miles long, between Campbellton, N.B., and St. Leonards, has been completed, there appears to be no valid reason why a physical direct railway connection with that great lumber and shingle country which the new railroad will serve should not be established. What is wanted is a railroad bridge across the St. John River at Van Buren, and as there is no engineering obstacle to such a structure it is difficult to imagine why the Bangor & Aroostook Railroad does not force its way across the river and secure the haul along its entire main line for all points south of Bangor.—The Lumberman's Review.

"Berlin Quality" for October contains, as usual, a lot of instructive matter about wood-working machinery. This month the editor is taking a vacation and he celebrates the occasion by breaking into rhyme to the extent of nine stanzas and an illustration on the front page. Among the practical articles are discussions upon the "Correct Shape of Band Saw Teeth," the use of "Single Surfacers for Light or Heavy Work," and "The Advantages of a Short Saw Resaw."

Equipment of a Modern Saw Mill Plant

Splendid Electrical Installation of the Canadian Western Lumber Company at Fraser Mills, B.C.—Development of one of Canada's Greatest Lumber Industries



When the output of a British Columbia saw mill averages 350,000 feet every ten hours, and is capable of being speeded up to 450,000 feet at a pinch, the fact stands for an immense plant and a superb equipment representing every aid that mechanical genius has devised and made applicable for the speedy and economical transformation of forests into merchantable lumber and kindred products.

Such a plant is that which the enterprise and wealth of the Canadian Western Lumber Company, Ltd., formerly the Fraser River Lumber Company, have created on the banks of the Fraser River, about two miles above New Westminster. Here is to be found what probably is the most modern saw mill plant on the American continent, together with a model town comprising the homes of the five hundred employees and the various company buildings—office, stores, hotel, club house, post office, etc. The town possesses both water and electric light systems, and at night the brilliancy of the illumination betokens a flat rate and an abundance of current.

Arrangement of Motors on an Intermediate Floor. In the centre a 40 H.P. Motor Belted to 60 in. Great Western Exhaust Fan. The others are: 20 H.P. Motor diving a Band Rip Saw, 40 H.P. Motor driving a Band Saw and 20 H.P. Motor driving a Cross Arm Pounder and Borer.

The immense three-storey saw mill stands on the river bank, adjoining 1,200 feet of deep water dockage having a depth of 100 feet. Here ocean vessels take on cargo for all parts of the world, while on the land side a few feet away are spur tracks for the shipment of lumber by rail to the prairies and eastern Canada. From morning until night, week in and week out, a never-ending procession of huge fir, hemlock, spruce and cedar logs passes up the jack-ladder at the north end of the mill. The logs groan and shudder as they meet the remorseless, keen-toothed saws, to emerge farther on as a multitude of boards of varying widths, which are swept away by rapid action chain carriers to the sorting table—just in time to afford room for other floods of boards vomited from the saws. These saws comprise two 9-foot Allis-Chalmers Company double-cutting bands, one 11-foot Allis-Chalmers Company single-cutting band, and a 60-inch Wickes gang fitted with 52 saws, turning out 52 inch boards at one operation when timber of sufficient size is fed to it. One of the carriages is capable of handling long timbers up to 100 feet. There are also two Allis-Chalmers Company edgers, a double 84 x 10 and a single 60 x 10; one 40-foot trimmer carrying 20 saws; one 50-foot fuel slasher, and one 44-inch trimmer carrying 22 saws. The saws on the trimmers are operated with Sumner Iron Works compressed air lifts. There are also two 66-inch Mershon resaws in operation on the sorting table. The slabs and other refuse from the trimmers drop onto conveyors running to a huge steel-jacketed burner, the stuff fit for firewood being removed while en route, by men stationed at convenient points.

50 h.p. Motor Coupled to Stetson-Ross Sizer.

The lath mill in connection has a capacity of 50,000 lath or 12,000 1 x 3-inch fence pickets in ten hours. The equipment comprises a Peterman gang bolter and lath stripper built by the Schaake Machine Works, of New Westminster.

The common lumber, after passing over the sorting table, is taken care of by two Stetson-Ross sizers and two No. 24 15-inch Wood Company matchers. The clear lumber is all kiln-dried in eight standard kilns, each 20 x 120 feet, with a combined capacity of 125,000 feet per day, before passing through the planing mill and on to the colossal drying sheds, 1,200 feet long and 100 feet wide, with a capacity of 7,000,000 feet. Here the various grades are carefully sorted and stood on end ready for loading into cars on either side of the building.

Only common lumber is piled in the yards, which at present contain about 25,000,000 feet, and before spring may hold 50,000,000 feet. The yard embraces 13 broad plank alleys each 1,400 feet and five of 700 feet, opening off the main plank roadway leading up the centre from the office to the mill. The driveways and lumber piles rest on cedar piles driven by the company's machine, so that the winter rains cause no inconvenience or loss.

Where the Power is Generated.

The boiler and engine room, which supply life and energy to the big plant, are interesting places to visit. Steam is furnished from a battery of sixteen 72 x 18 tubular boilers with Dutch oven setting. Only 12 of these are used in summer, but the full number is necessary in winter, owing to the loss in radiation and the extra stiffness of the mill machinery. The furnaces are fed automatically, the fuel being sawdust and planer shavings.

The fireproof engine room is large and well arranged. The fine plant comprises one pair Allis-Chalmers Company Corliss twin engines 22 x 42 inches; one pair Allis-Chalmers Company Corliss twin engines 18 x 42 inches; one 24 x 30 slide valve Hamilton engine, and one 750 kilowatt Allis-Chalmers Company turbine generator, separately excited by a 15 k.w. steam set and motor driven exciter set. The indicated power of the above (including a 24 x 30-inch slide valve Hamilton engine used in operating the Wickes gang), is 4,000 horse power. The main drive belt is 60 inches in width, 3-ply, 172 feet long, and was manufactured by Sadler & Haworth, of Montreal. The turbine engine is a beautiful machine, automatic and self-oiling, and since its installation has not given a moment's trouble. Visitors to the engine room invariably comment upon the absence of the slightest vibration—only a low hum indicates that the huge machines are in operation. This result is achieved by the use of immense cement buttresses and piers planted deep in the ground. The 750 k.w. turbine engine is guaranteed to operate best with a 25 per cent. continuous overload, and is therefore capable of developing

Planers and Moulders driven by 13 Motors ranging from 20 to 50 H.P.

1,300 h.p. The load at present is about 600 k.w., or 750 h.p. This operates all machinery outside the saw mill proper.

Electrically Driven Individual Machines

The Canadian Western Lumber Company is the only big concern in Caanda operating the full equipment of planers, moulders, sizers and fans with electric power furnished by direct-connected motors. Two 2½-inch conduits carrying six 350,000 circular mill cables reach from the power house, a distance of 600 feet, to the green lumber sizers and shiplap machines on the sorting table. The wires carry current to one 75 h.p. motor driving a huge fan; two 50 h.p. moters direct-connected to two Stetson-Ross ready sizers; one 40 h.p. motor driving chains and rolls and chain on sorting table; two 40 h.p. motors direct-connected to shiplap machines; a 50 h.p. motor driving fan and chains and back rolls carrying lumber to and from the machines; a 5 h.p. motor driving the cut-off saw, and another 5 h.p. motor driving the chains at extreme end of sorting table.

The planing mill is a delight to the eye of the visiting lumberman and electrician, being the only electrically operated plant of its size in Canada, and not excelled in its equipment or number of machines by any mill in the United States. The building is 220 x 150 ft. in size, and on the work floor, in one long row, stand 13 Berlin and Woods matchers and moulders, four of the machines being the new fast feed type—two 94-X Berlins and two No. 22 Woods. In addition there are one 40-inch band ripsaw, one 66-inch band resaw, one small circular ripsaw, and one cross-arm borer and rounder.

Two 3-inch conduits carrying six 500,000 circular mill cables are carried beneath the loading gangway, a distance of 800 feet, to the planing mill, furnishing current to the numerous motors. One 50 h.p. motor drives a large double fan, which sucks the shavings from nine machines. Another 50 h.p. motor drives a single fan that collects the shavings from two planers, the cross-arm machine, resaw and ripsaw, depositing them in the pipe connecting with the double fan; and a 20 h.p. motor drives a fan taking the shavings from three moulders. Seven 40 h.p. , three 50 h.p. and two 20 h.p. motors, direct connected, operate the matchers and moulders. One 50 h.p. motor drives the band resaw; one 20 h.p. motor, the band ripsaw; one 10 h.p. motor, the cross-arm machine, and one 10 h.p. motor, the circular ripsaw. Two motors, 15 h.p. and 10 h.p., operate the 16 trimmer saws.

The motors are all protected with oil circuit-breakers. In the second storey of the building is a junction box 14 x 9 x 4 feet, asbestos and iron lined, with front and rear openings. The box contains individual switches and fuses for each motor, and a similar safeguard is provided for the motors driving the machines in use on the green lumber sorting table, in this case the junction box being located beneath the platform. Separate conduits lead from the junction boxes to the various motors.

Other motors in use about the plant are one 10 h.p. driving the wood conveyor; one 5 h.p. driving the blower in connection with the engine room ventilating system; one 5 h.p. operating the filing and grinding room machinery; and one 5 h.p. operating the air compressor system used in dusting the motors. In all, the motors at present in use number 38, the majority being supplied by the Allis-Chalmers-Bullock Company, of Montreal, through their Vancouver representative, Mr. E. M. Breed.

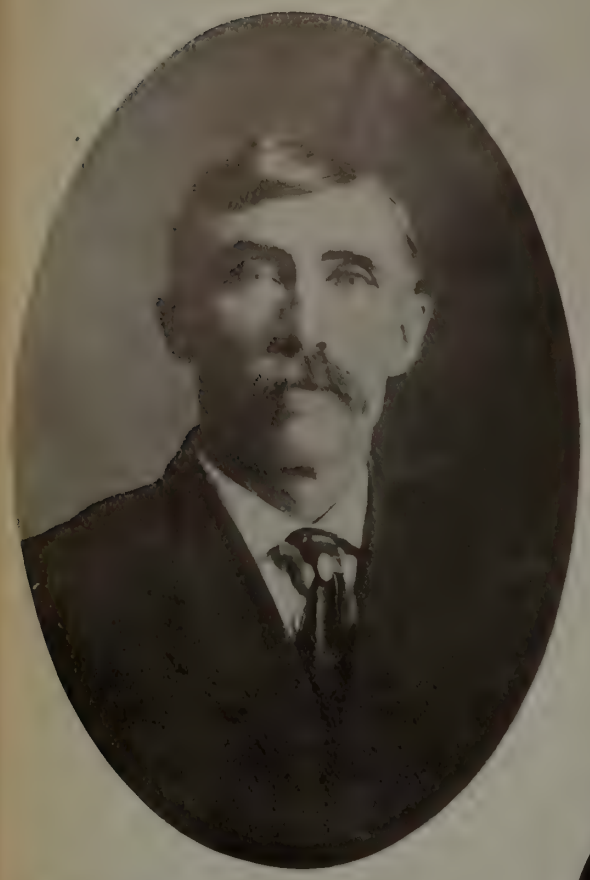
Plant will be Vastly Enlarged

Plans are now being finally revised preparatory to starting work on a new cedar, lumber and shingle mill and sash and door factory, which is expected to be in operation by the first of the new year. The cedar mill will have a daily capacity of about 100,000 feet, and will be equipped with two 9-foot double cutting bands, an edger, slasher and trimmers. The shingle mill in connection will have 12 upright shingle machines, with a capacity of over 360,000 shingles daily. There will be four 20 ft. by 120 ft. dry kilns to take care of the cut The sash and door factory will have the enormous capacity of 1,000 doors in 10 hours, and will be equipped with the latest and best machines known to the trade. Both of the new plants will be electrically driven throughout, the power being furnished by a new 1,000 k.w. low pressure Allis-Chalmers Company turbine generator to be installed in the present power house. The new turbine will use the exhaust steam from the Corliss engines, which will be a great economy.

The Electric Lighting Plant

Three 15 k.w. step-down transformers are used in connection with the mill lighting plant and boiler and engine room requirements, while three 35 k.w step-up transformers supply current through step-down transformers for the lighting of the planing mill, sorting tables, machine shop, lumber sheds, yards, company buildings, private residences and streets. In all, current is supplied to about 2,000 incandescents and 17 arc lamps, most of the street lights being tungsten lamps of 100 watts capacity. A direct current 15 k.w. generator in the boiler room of the mill supplies current to about 200 incandescent lights for the pilot circuit.

New Lumber Handling Device



There is now being built an electric travelling crane which will operate on tracks laid on the 1,200 foot platform paralleling the deep water dock on the one side and the common lumber car loading track on the other. The crane, which will weigh about 55 tons, will stand on a car 26 x 80 feet in size, moving on four standard gauge tracks. It will have a mast 60 feet in height, from which will project a steel boom 105 feet in length. Three motors of a combined capacity of 110 horses will be required for the proper operating of this powerful new loading device, which will handle timber and lumber with amazing ease and quickness. A 60 h.p. motor will operate the car, moving it 600 feet per minute if required. A 40 h.p. motor will manipulate the hoist line, and a 10 h.p. motor will be used for slewing the boom. This powerful machine will be capable of handling 200,000 feet of timber or lumber in 10 hours, the haul averaging 1,000 feet. The crank was designed and is being constructed by R. L. Hunter, of Seattle, and is the largest of its kind on the Pacific Coast. The only one that approaches it in size is used by the St. Paul & Tacoma Lumber Company, of Tacoma, Wash. It has a wood boom 100 feet long. The crane is stationary. Only two men will be required to operate the machine, which is expected to displace 18 men and one horse.

Where Breakages are made Good

The machine shop is a roomy building, sufficiently well equipped with machinery to cater to the repair work of a large manufacturing town. It contains one 32 inch x 20 ft. lathe, one 48 inch x 20 ft. gap lathe,

Two 50 H.P. Motors direct connected to 15 in. Matchers.

James D. McCormack, Secretary-Treasurer Canadian Western Lumber Co.

one 24 inch x 24 inch x 8 ft. planer, two 26-inch power drill presses, one 24-inch shaper, two forges and miscellaneous blacksmithing tools. There is a carpenter shop in connection. Seven first-class mechanics are kept constantly employed, and some very clever work is turned out.

Sundry Items of Interest

The Canadian Western Lumber Company is officered as follows: Col. A. D. Davidson, President; A. D. McRae, Vice-President and General Manager; Jas. D. McCormack, Secretary-Treasurer; F. E. Burk, Assistant Secretary-Treasurer; W. S. Rogers, Manager of Manufacturing; H. J. Mackin, Sales Manager; Thos. McLarty, Manager Logging Department; Charles Richter, Electrician.

The big mill contains some miles of belting, conveyors, chain carriers, etc., yet "kinks" are almost unknown. This is the result of careful supervision.

The beautiful finish of the planing mill work arrests the attention of every visitor. The boards emerge from the machines presenting that smooth and "satiny" surface, which is a sure indication that the knives in use have perfect cutting edges. Superintendent Rogers is particular about this and all other matters having to do with the quality of the lumber turned out.

On the company's marine ways just north of the saw mill half-a-dozen men are constructing a scow 34 x 100 feet, with a depth of 9 feet. This will make the third barge of similar capacity—300,000 feet of lumber—owned by the company. The scows are used for transporting lumber and other material to Vancouver, where the company maintain a big yard. The towing is done by the firm's large and powerful tug, the Senator Jansen, whose mission it is to keep the big mill supplied with logs from the company's extensive limits on Vancouver Island.

A. D. McRae, President Canadian Western Lumber Co.

Some 26 head of horses and a raft of wagons, buggies and other vehicles are required for yard work, delivery of local orders, etc. Like everything else around the big plant, the stable accommodation is good, and the animals are kept in the best of condition.

The store is of the departmental class, almost every known want being procurable. All goods are of high quality, and the service is beyond criticism.

The French-Canadian employees are willing and steady workers, and stand high in the esteem of the management. During the recent loading of the Russian ship, Marieschen, it was demonstrated that a French gang could handle more lumber than three times the number of Hindus, and do the work better, too.

Ball playing is the popular summer sport of the mill men. Several good senior and there is something doing on the ball teams were organized early in the season, diamond almost every evening. Great interest is taken in the matches by the villagers, who are well up in the fine points of the game and "roast" the umpire after the most approved style.

The mill buildings and yards are protected by a complete modern water system, the supply being secured through a 10-inch main from Lake Como, two miles distant, at an elevation of 450 feet. The

H. J. Mackin, Sales Manager, Canadian Western Lumber Co.

Thos. McLarty, Logging Manager, Canadian Western Lumber Co.

W. S. Rogers, Manager of Manufacturing, Canadian Western Lumber Co.

system comprises 50 hydrants, the pressure obtained being 130 pounds, to the square inch. Hose stations are located at intervals throughout the plant and yards, and the protection is to be further augmented by two powerful 1,000 gallon Underwriter's fire pumps. The powerful pumps of the tug Senator Jansen also afford protection to the mill and waterfront property when the vessel is in port, and it is now proposed to connect the main with the hollow steel boom on the electric travelling crane, which would give a five inch stream of tremendous effectiveness. Fire practice is held regularly, in order that the men may become proficient and know just what to do in a time of emergency.

Electrician Richter has a treasure in the form of a portable Westinghouse Polyphaze Watt Meter, fitted with potential and current transformers, which he uses for making power tests on motors. By means of it he can tell in a moment just how much work a motor is doing. Supplies for all motors are kept in stock.

Including the men engaged in the mill and the company's lumber camps, the total number on the pay roll is close to 900, to whom between $60,000 and $70,000 is paid out monthly. The mill pay roll alone calls for about $45,000 monthly.

A census taken recently of the population of the town of Fraser Mills showed 877 persons of all ages and nationalities, practically all of whom are in some way connected with the company's huge mill. At present there are 168 Hindus, 57 Japanese and 20 Chinese on the pay roll, the rest of the employees being mostly French-Canadians.

Every married French-Canadian employee has been granted an acre of land by the company just outside of the townsite. He is given all the lumber and nails he requires, and it only remains for him to pay the carpenters to erect his house. The men repay the company at the rate of $7 or $8 per month, which includes interest and insurance. Some 25 or 30 families have already erected neat dwellings, and others are being built.

Rev. Father O'Boyle, of New Westminster, is beloved by his French-Canadian parishioners at Fraser Mills, he having been instrumental in inducing them to come West. Father O'Boyle is now superintending the construction of a pretty church building for the use of his flock.

While the citizens are proud of the large hotel erected last summer by the company, they take still greater pride in the fact that no liquor can be purchased nearer than New Westminster. The hotel is for the accommodation of unmarried employees, and many boarders take meals there. The building contains 90 sleeping rooms, large dining room, rotunda, tub and shower baths, etc. The office staff make their home at the club house.

The company are now installing an ice-making plant. Two tons per day will be manufactured for the use of the townspeople.

The new sash and door factory and cedar mill will be erected to the east of the saw mill, fronting on the river.

During the six months ending 30th June last the company established what is thought to be a record for large mills in the matter of constant operation. Out of 1,540 working hours, from Jan. 1st to July 1st, with one day off for New Year's day, the big mill worked 1,538 hours, being only two hours short of full time for the half year period. The mill was shut down for a few days last winter on account of ice, and again on the day of the late King's funeral, but this lost time was made up with the exception of two hours.

The daily shipments of lumber run from 10 to 15 car loads, or about 300 cars per month, the cargo sales and retail yard in Vancouver taking the remainder. Sales Manager Mackin hopes to increase this record materially on next season's operations.

Vancouver Shipments to the United States

During the first six months of 1910 the value of lumber, rough and finished, declared at Vancouver for shipment to the United States amounted to $652,201, a decrease of $254,894 as compared with the first six months of 1909. The principal exports in 1910 were shingles, $283,259, a decrease of $350,755; cedar logs, $228,463, an increase of $107,724; trap piles, bevel sidings, spruce logs, etc. Since the tariff of August 5, 1909, went into effect the following articles show decreases and increases in shipment to the United States: Shingles, clapboards, and bevel sidings, decreases; cedar, fir, and spruce logs, increases.

It is not easy at present to note the exact effect of the American tariff on British Columbia lumber shipments to the United States. Owing to the demand for lumber in the prairie provinces this season it has been found impossible to meet it with the home product.

In many instances American lumber has been sent to Vancouver from the Puget Sound mills, and large shipments have also been made to the prairie provinces. It is stated that at present the demand for lumber from the prairie provinces is somewhat light, but as the stocks have become almost exhausted none of the mills have been closed down, but are busily engaged restocking their yards.

Labor has been in demand, both in the woods and mills. This is due to the fact that a vast amount of work is being carried on in Vancouver and surrounding towns in building and street improvements of all kinds, and the building of entirely new roads in the outlying sections.

Lumber Situation in the West

Over Production Blamed for Present Dullness of Trade Conditions—TheInfluence of the Large Mills

By A. E. Watts, Wattsburg, B.C.

Trade conditions in Western Canada are afflicted with the same disease that troubles the trade in other places, *over-production*. The inevitable law of supply and demand is supposed to regulate matters, but in the lumber business that law is slow in working out a balance; I presume owing to the fact that so many are not able, even if willing, to restrict their output owing to financial reasons. Therefore valuable timber is slaughtered and sacrificed without yielding any profit to the operators, who are worse than slaves working for and acting as buffers between the upper and nether millstones, labor and capital.

I attended a great meeting of manufacturers a few days since and the complaint was aired that small operators were to blame for the glutted market and ruinous competition. I pointed out that the opposite was the case. The manufacturers in a large way of business, most of them with enormous overhead expenses for management and interest on bororwed capital, many of whom will admit that a long shut-down spells ruin, simply have to keep going, even if they sell their product for less than cost, and it is not in the power of the small operator to glut the market, and that he, as a rule, can restrict his output without going to the wall. Further, the small operator can successfully compete and beat the great overgrown concerns in spite of their most modern labor-saving devices, for a very simple reason.

A mill cutting enormous quantities of logs very soon has to go far afield to keep up the supply, and the extra costs entailed are quickly felt. The small mill man carries a small stock. Even if he wishes he could not glut the market, and he is in a much better position to hold his stock and cease production. What is the reason? We see big milling concerns attempting flotation of huge interests, to shift the burden of their responsibilities on the public, who, if stupid enough, get caught on the finely baited hook of glowing prospectuses, showing 30 to 40 per cent. profit on sawing wood, will be lucky if they get any interest, and may say good-bye to principal.

The generosity of the lumberman is proverbial, but we see him under a new phase when he is so full of the milk of human kindness as to offer widows, orphans or other deluded victims a glittering opportunity of sharing his burdens.

The lumberman of the past was a manly man, but intense cultivation appears to have transformed him into a disciple of high finance, which, translated, means that he finds it easier to saw the public than to saw wood. I have been upbraided for speaking, writing and criticising this kind of thing. I am told my action is detrimental to the interests of the trade, that it needs more capital for development.

It is already over-developed, when for years past production has exceeded consumption. Further, it is a fact already demonstrated that big concerns, supplied with an abundance of capital out of the pockets of the public, find the money comes easy and goes the same way. That acts as a detrimental factor to the trade, as such concerns pay the highest salaries, which are not earned. They use their easily gotten funds for illegitimate competition in many ways. Therefore the benefit is not to the trade, and it is a doubtful benefit and one that will be of short duration to the recipients of the unearned lucre.

The Wattsburg Lumber Company, of Wattsburg, B.C., will restrict their logging operations fifty per cent. this winter, both for the Proctor and Wattsburg mills. The owners would rather keep their timber than slaughter it and give it away at present prices. They think timber too valuable an asset to part with, without profit, and that it would be wise for all operators to restrict their output in times of depression, as that is the only possible way to regulate prices.

The Wattsburg company are making additions to their Sash and Door Factory and Wood Pipes Works at Wattsburg; also irrigating several thousand acres of land there, which they propose dividing into small farms for employees who wish to make permanent homes. They are now grading for a logging railroad four miles along the valley at Wattsburg. Both sides of the track are heavily timbered with fir, pine and larch. For the Proctor mill they are grading a logging road up the valley of Rykert's Creek, near the international boundary line on the Kootenay River. The heaviest grades in both places are only two to three degrees for a distance of four to five miles.

The lumber shipments by water from British Columbia during the months of April, May and June, 1910, aggregated 28,581,013 feet, and were as follows, in feet: To Australia, 9,732,404; China, 7,132,740; South Africa, 4,613,130; South America, 4,126,241; United Kingdom and the Continent, 1,936,476; Japan, 761,613; Fiji, 145,388; Mexico, 133,021.

Statistics Show Large Trade Increase

Exports and Imports of Lumber and Wood Goods for Fiscal Year Ending March 31, 1910

The following tables which have just been published by the Department of Customs show the imports and exports of forest products for the fiscal year ending March 31, 1910:

A Few Ontario Camps to Curtail

Further Reports Regarding Operations for the Coming Winter—Cut will be Either Average or Somewhat Smaller

A few more reports have been received from Ontario lumber manufacturers regarding their operations for the coming winter. They would indicate that possibly there may be a slight reduction in the total cut of logs this winter, although, taken in conjunction with the letters which have already been published, the probability seems to be that the cut will be nearly an average one, or perhaps only a little smaller. Following are the letters which have been received since the last issue:

Playfair & White, Midland, Ont., write as follows: We do not think that there will be as much timber put in this coming season as there has been for the past few years. We are not putting in anything ourselves, and other companies in which we are interested are cutting down from 30 to 40 per cent., and we know of several other companies that the same remark applies to. We also think that the number of logs carried over at the mills or at the different boom company's sorting grounds will be considerably less than a year ago. We do not know exactly how the stock of lumber compares with last year, but we do think that there is less of good lumber, that is dressing and better, and perhaps a little more of the lower end, although a good deal of the lower end seems to be moving and going into consumption.

The Wolverine Cedar & Lumber Co., Sault Ste. Marie, Mich., report as follows: We expect to have about the same cut on Berth 111 as we did last year, viz., twelve to thirteen million feet of logs, government scale. We are carrying over about two million feet of logs, which were hung up last winter, but are not carrying over any logs at our mill, and from what we can learn, think that practically no one else on the north shore is.

From the information we have at hand, we think that manufacturers on the north shore have sold their lumber a little closer to the saw this year than they did last, and that probably there is not to exceed 65 to 75 per cent as much lumber in first hands now as there was a year ago, although the amount of lumber on docks is about the same. In our own case, we have unsold at this time about three million feet, as against six and one-half million at this time a year ago.

The Riordon Paper Company, Montreal, write as follows: We expect to make a cut of about 35,000,000 feet of logs, as compared with 57,000,000 feet last year. The decrease is not due to any decrease in our production of lumber, pulp, or paper, but last year was exceptional, as we wanted to increase our surplus. We are carrying over a little more than 30,000,000 feet of logs in the Rouge and its tributaries.

We understand that the cut of logs this winter will be unusually heavy, and this is shown by the fact that men are rather scarce. We will carry over a smaller stock of lumber this year than our predecessors have ever carried before.

We have found prices on both lumber and pulp rather better this year than last year, although the improvement is only slight, but at these prices the demand has been much more satisfactory, and we think that there will be a decided improvement before the end of next year.

Mickle, Dyment & Son, Gravenhurst, Ont., write as follows: We are curtailing to the extent of one-third this winter, as compared with last. We could not say as to other stocks, but our stock of lumber on hand is very similar in quantity to what was on hand at this time last year.

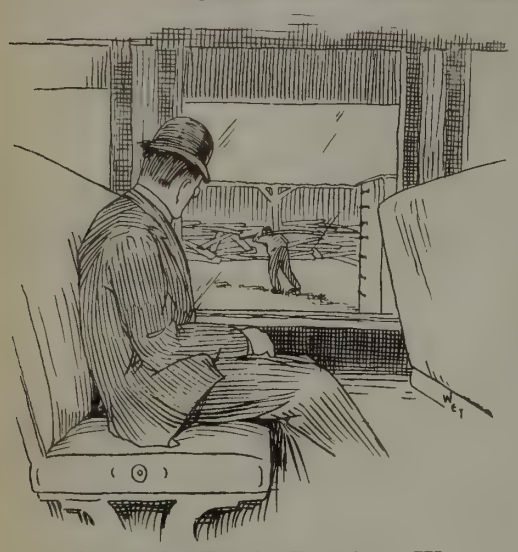
From estimates made by Prince Albert, Sask., lumber concerns the cut in that district this winter will go over 100,000,000 feeet. Of this amount it is said that the Prince Albert Lumber Company, Limited, will cut about 40,000,000 feet, and in addition that company has 10,000,000 feet in the woods which might be termed the clear-up of last year's cut, but which, owing to the shortness of the season, was not brought out. The Big River Lumber Company expects to cut about 50,000,000 feet during the winter. Some idea of the amount of work the timber operators have planned to execute during the next six months may be gained from the fact that the Prince Albert Company will require 600 head of horses, three steam log haulers and over 1,000 men. The management states that the shipping department and planing mill will be kept running all winter.



There is practically no demand for beech flooring in England at present, but there is a moderate market for white oak flooring, both plain and figured. The dimensions of the stock usually required are 1 or 1¼ inches thick by 3¾ or 4 or 4½ inches wide, nominal measure, to finish after manufacture, 1 1-16 inches thick by 3¼ or 3½ or 4 inches wide, and 4 feet and up in length, with an average from 8 to 9 feet. This flooring is tongued and grooved on the sides, backed, bored for secret nailing, and steel scraped. It is shipped in bundles, the number of pieces in each varying according to the thickness of the flooring. A prominent London factor estimates the value of 1-inch plain white oak flooring to be about $62.50 per thousand feet c. i. f. London, about $87.50 for 1-inch quartered white oak, 1¼-inch being worth $5 more per thousand feet.

The Canadian Box and Barrel Company of Pembroke, recently incorporated, has purchased a site on the Thos. Mackey estate for a sawmill and factory. They will make a collapsible box.

The Retail Dealer and His Problems

Yard Management Problems—Maxims for Dealers

Jones, He Writes About Retailers

Wondered Who the Proprietor Was.

As I was whisked along on the train late this afternoon, we passed a little jerk-water station, and I saw a car on a siding and men were unloading it. I could not help wondering who the proprietor of the yard was, for the men were simply taking the boards and shoving them through an opening in a dilapidated shed where I saw a pile of them lying criss-cross, topsy-turvy, helter-skelter, as though the only thought was to get them out of the car. It is not for me to say there was not some excuse for it, but I never before saw such a method. There was no great haste, either, for the men were not hurrying—just taking a board, chucking it through the opening, and going for the next. One time I appeared before a car-service commission to put in a good word for longer time in unloading cars, but was told we ought to put on more men. This retailer evidently had heard of that advice and was acting on it. One gets a pretty good idea of the rural yard when passing on a train as they are as a rule near the track and one can't help seeing how they are kept. It does not take much time to size up a yard. Some of them are models of neatness and orderliness, while others are truly "lumber" yards, using the word in its original meaning, as we speak of "lumbering" up the garret with cast-off clothing, "busted" trunks, disabled furniture, and so on. We often hear the lumber dealer spoken of as the aristocrat of the retail world, and we know that a millionaire is the only person who can afford to dress shabbily, so apparently some of the men engaged in this calling feel it is up to them to show their aristocracy by a total disregard of anything approaching fastidiousness in their business. Be that as it may, the prosperous retailer has a yard that is spick and span, but which is cause and which effect, I shall not attempt to say, but if forced to give an opinion, I would, without any hesitation, ascribe his prosperity to his spick-and-spanness. There seems to be a pride among the successful retailers in the appearance of their yards and the first thing the proprietor shows me is the care he puts on his driveways, the space between the piles, and the shed where he keeps his dressed stuff.

In some of these talks I have referred to the annoyance of having to take back lumber. Last Thursday I called on a good friend in eastern Iowa and we brought up this subject. There is a phase of it that we ought not to lose sight of, namely, if you take back stuff that has been left from a job, it is very unusual to find that it can go into the same grade that it was sold from, and so you have to drop it down into the next grade, and so are put to a loss, which ought to be figured in making your price. Of course it may be possible that even then you are getting as much as you paid for it, but what of the interest on your money, the cost of delivering it and calling for it, and the handling? I suppose you are accustomed to think it does not amount to much, but did you ever stop to think that it is in what may be called the "by-products" of your yard that you may make a nice profit? Then why throw them away? The pork packers are said to utilize every part of a hog but the squeal, and if the large corporations do it, they do it because experience and careful accounting shows that it pays, and don't let it get out of your noodle that you are in business because it pays. When it stops to pay you are not in business, but in bankruptcy. Well to get back to this conversation, Mr. Jackson said:

"Heard Some Talk Behind Me."

"Yes, we are asked to take back lumber. Only the other day we were asked to call for some flooring that had been delivered as much as four months ago. I don't suppose we ought to have done it, but we did, and found that he had left it outdoors where it had been rained on, then when things got dry, dust had settled over it, and we don't know what to do, except to throw it away. It is so discolored that no one would buy it."

"Why don't you charge off a percentage when you take it back?"

"Well, we have never done that, but I suppose we really ought to."

"My suggestion is," I replied, "that you let your customer know when he orders that if he wants to return anything, that you will be obliged to deduct a considerable amount in order to reimburse you for the loss in handling, delivering and calling for it, and also for the deterioration in the lumber itself. Don't you find that the carpenter usually selects the best pieces and that what you get back is not really what would go out as that grade?"

"Yes, we do, that is the worst feature of it. There is a difference in the boards of any grade and when the carpenter picks them over, some times with the owner of the building watching him, he, of course, picks out the best, and what we get back won't fit in anywhere."

I have brought that subject up with practically every one I meet, and with astonishingly few exceptions, they are being gouged by their customers when a little backbone would cut out all this waste. Doing business is largely a matter of education. When pine got scarce, you had to educate your trade to other woods, and found you could do it, and I hold that you can educate your customers to using more care in ordering. It is nice to have the builder ask to have plenty sent up, but if you have any volume of business at all, this "plenty" means that you are delivering more than you ought and more than you get your pay for. All it takes is a little sand, some diplomacy, and plenty of "stick-to-ativeness" and you can get your carpenters trained to order what they want and not go at it slip-shod, leaving the burden for you to bear. In those yards where it is the rule to take back "overages" at a good reduction, the builders either figure closer or keep the stuff for the next job.

"This is What I Want."

It seems to me that this "talk" is getting pretty pessimistic, but there is still another "holler" I want to put up. The next time you go into the yard, look at the piles of boards and shingles and see if they are clear and bright right down to the bottom. It seems too plain to need comment that unless you sell each car completely, you are losing a lot on the left overs, yet a large percentage of the yards have piles of shingles that have never reached bottom. In some yards they are wiser and each car is piled separately and not touched until the pile containing the previous car is entirely sold out, and the result is that all the stock is clean and bright. To get an idea of what these old, faded, dirty, weather-worn piles are costing you, estimate how much stock you have in them, the length of time the stock has been lying there, and the money originally invested. I am sure it would surprise you. Clear them out and adopt the plan suggested, and it is dollars to doughnuts you will come out money ahead at your next inventory. After a pile has begun to show the weather it is hard to get a customer to look at it, and each day it gets worse and worse, occupying ground that is not paying you, and eating up interest to beat a kid eating jam. The country dealer is apt to say: "That's all right for the city yard, but we don't have to cut corners as close as that." Maybe he doesn't use just that language, but that is the gist of his remark. It is all tommyrot to think that because your yard is small that you are not under the same obligation as the large yard in a sizable city. You owe it to yourself to make each dollar you invest work for you, and you are a mighty poor overseer if you let some of them shirk. The dollars are not in any union, and you can keep them on the jump morning, noon and night if you only get after them.

One of my late visits was with a lumber dealer who brought up a fine distinction between right and wrong. It was this way: he had been buying white pine, but was induced to put in some nice Western spruce. One day a customer came in and wanted some pine and my friend told

him that he had some spruce that he knew would answer the purpose, but could make no headway. It was pine he asked for and pine he would have. Well, they finally went into the yard, but before they had gotten far the retailer felt that it was not his business to select lumber for his customer, but if the customer found what he wanted it was up to him to sell it. They looked at some pine, but the price was a bit high, so in a minute or two they came to this car of spruce, and without waiting for any comment the customer said: "This is what I want. It's just the thing"; so they turned over a few boards to get a better look at it, and finally the deal was closed, and that man is using the very spruce he would not listen to when in the office, and the dealer was wondering if he ought to have said anything more about it. It simply goes to show, in my humble opinion, that the business of the dealer is to let his stock sell itself, only avoiding claiming qualities that he knows the wood does not possess, but think what arrant foolishness it would have been to have said: "Why, that's the spruce I was talking about!" He would in all probability have lost a sale and turned a customer away who would have gone elsewhere, bought spruce without know it, and been perfectly satisfied.

This matter of substitution was brought to my attention recently. As I settled down in the smoker for a nice time with a "Nick Carter" penny shocker, I got a slap on the back and one of the boys traveling for a pine outfit slipped into the seat beside me and we fell to discussing the ups-and-downs of the game. He was hot, not physically, but mentally, and when he had borrowed a match to get a Pittsburg stogie going, he related his experience that day.

"You know C. & B., don't you? Well, I dropped in there to-day and asked Mr. C. if he wanted anything, but just as he was saying he was stocked way up a customer took his attention. This man wanted some pine for a piazza floor, and I thought Mr. C. would sell him some, but what do you suppose he did?"

"iGve it up. Sold him Paroid roofing, I suppose."

"He told him that he didn't want pine at all; what he wanted was North Carolina; and away they went into the yard to see it. Now what gets me is that he would not give his customer what he wanted, and when he came back he went right on to say there was little or no call for pine flooring, that all his customers wanted yellow pine. Now, if I should sell a car of white pine to any contractor in his town he would raise high jinks with me, but yet he is doing his best to prevent me selling my lumber to him by switching his customers off onto something else. Of course he did it because he can buy the other cheaper and can make a bigger profit on it, which I suppose is all right, but what am I going to do? I am getting sick of it."

This is one of the ways a house that would rather deal with the regular trade gradually gets into the scalping business. It was not three weeks after that conversation before I was in a trolley between two towns and heard some talk behind me that sounded familiar. Pretty soon I was sure they were lumbermen of some sort, and turned around to get a look, and sure enough there was the same salesman talking with a contractor and I should judge just about ready to take his order when they reached the next station. I have not been in that territory since, but expect the next time I am there to hear some one find fault with that salesman for disregarding the niceties of the trade. Perhaps he ought to stick to the line and keep his lumber if the dealers won't buy it, but did you ever stop to think that it is not human nature to do that? A wholesaler has his lumber and must sell it. If one class of trade won't take it, he must find another. Talk about the ethics of the case is all right, but in its last analysis it is a matter of give and take, and if you won't give the wholesalers your patronage in sufficient volume so that they consider your favor an asset, they will disregard you in spite of all you can say.—The Southern Lumberman.

Maxims for the Retailer

An outsider, knowing of the discussions among the retail lumbermen concerning credits and collections, would wonder that they do not go to a cash basis as the retailers in all other lines of business are rapidly doing, says E. D. Whiteside in the American Lumberman. The initiated, however, know that it is practically impossible to confine the lumber business strictly to cash, and therefore the question of collections is always with the retailers of lumber.

While it is, as stated, practically impossible to do a strictly cash business in the selling of lumber, still it can be so nearly accomplished that the matter of collections need give the dealer no worry. Most lumber businesses are started with the intention of keeping as closely as possible to a cash basis. The dealer soon realizes that he can get better prices from the man to whom he will extend a credit of thirty, sixty or ninety days than he can from the man who comes to the office to cash up as soon as the material is on his wagon. He also learns that he can increase his sales by perhaps 25 per cent. by extending the more liberal credit, and as a rule yields to the desire for the added profit and enlarges his accounts.

Having decided, as most dealers do, to follow the latter plan, it is well to adopt some maxims to follow in making sales.

Do not sell any bill if you think you will have trouble in the collecting.

Look out for the man who comes to you with a lot of stories of your competitor.

Turn down the man who tries to obtain credit on account of his lodge or church membership.

Have a definite understanding regarding the time of payment.

Never sign a contractor's bond on a job you are furnishing.

Do not make sales to be paid for upon the sale of some particular property of the buyer.

Keep in touch with your banker and rely on him to furnish you a rating on applicants for credit.

Make up for your own use a mailing list covering your territory, adding a rating to the other information.

In writing down sales on your sales book, mark the time agreed upon, doing this in all cases where practicable in the presence of the purchaser.

Always keep ledger postings up to the minute, and knowing whom of your customers will want itemized bills, keep postings up on these bills each day, ready when called for.

Do not allow your sympathy to override your judgment.

All of the foregoing may seem to be beside the mark, for the reason that we are supposed to write of methods used in collecting, and not in making sales. Well, if the proper precautions are used in making the sales, the collections will take care of themselves.

Present all bills for payment at the agreed time, if possible.

Have collector note on the back of all unpaid bills the time when the debtor agrees to make the payment, and have this notation made in the presence of the delinquent. Then be there at the agreed time.

Mail the bills of those whom it is inconvenient to call upon at the time they are due. As a rule these are the people that are slowest in paying, and some become so calloused that they pay but little attention to statements. I have frequently brought such a one in post haste by raising the amount of his bill in sending him a statement. After the "error" has been explained I always made the collection.

I have at times "accidentally" mixed the mail of brothers or other relatives, resulting in a prompt settlement.

I use no rubber stamp duns nor no lengthy explanations why the collection is wanted, just a terse, respectful statement to the effect that the bill is due and payment is expected.

Following along these lines and carrying a rather too large line of credit, the record shows within a given time a sale aggregating $300,000 and a total "charged off" of $132.11, part of which has since been collected.

How much stock should a retail lumberman carry? Where should he draw the line between too much stock and not enough? Circumstances alter cases always, so that no hard and fast rule can be laid down. There is one rule, however, that can be safely followed by any ruler who is really wide-awake and careful, namely, that it is better to err on the side of having a little too much than not enough. By having a little more stock than may be needed, there may be a continual or an occasional loss from depreciation, which would not otherwise occur, but by not having enough stock or a sufficient variety a good contract may be lost and a customer wasted. The loss in this direction would be many times greater than in the direction of depreciation from having a rather large stock than seems absolutely necessary. Depreciation of this sort, in fact, should be expected and looked upon as a cheap form of insurance against the loss of valuable trade. There is no more important question for the retailer than this, and it should occupy any spare time which he cannot employ to more direct profit.

In the "Canada Lumberman" of October 15 an unfortunate typographical error occurred in the quotation of a letter from the Cleveland-Sarnia Saw Mills Company, of Sarnia, Ont., upon the lumber trade situation. The letter as it appeared contained the following sentence: "The outlook for trade at the present time is not flattering, although there is considerable lumber moving all the time and prices in common and better grades, on account of the deplorable condition of the yellow pine market, are somewhat weak." This sentence should have read as follows: "The outlook for trade at the present time is not flattering, although there is considerable lumber moving all the time and prices in common and better grades of lumber are really firm. The prices of the lower grades, on account of the deplorable condition of the yellow pine market, are somewhat weak."

The demand for telegraph poles continues strong, and it is not possible at present to quote prices, as stocks of good lengths are so scarce. The Hydro Electric Commissioners of Ontario have been obliged to import poles from as far as Colorado. Ottawa consumers are buying British Columbia poles, on which freight charges are nearly as heavy as the original cost of the pole. Central Ontario dealers are almost cleaned out of long length poles and are only selling what they have when buyers will take a proportion of the shorter lengths also.

CAMP DEPARTMENT

High Efficiency in the Woods

Continued from previous issue

"It is ideal, of course, to yard every stick of timber directly to the railroad and load it on the car, but that is out of the question in a great many instances and other methods have to be resorted to in the way of pole roads and shutes. The method of building pole roads or chutes and the cost of them vary a great deal and are built a great many times where there is no need of them, because the logs could have been logged better and cheaper had a railroad been laid into the country—but that does not enter into the question here under discussion as we already have decided that it must be done.

"Two and three-log pole roads should not cost to exceed 27½ cents a foot and be built in such a way that they would require no care. A running chute will cost 55 cents a foot for large fir timber if built to give entire satisfaction. A running chute is the most satisfactory where the logs go into a pond and are loaded on the car from the water. A dam of this kind will cost $1,600. Another advantage in having a dam, aside from the fact that it saves the timber from breaking, is that in case anything happens to delay the operation of the railroad you have some place to store a few logs.

"Clarence Powell, woods superintendent for the Falls City Lumber Company built 1,000 feet of two-log pole road for $250.75, with two engines, one placed at each end of the road and building toward each other. The country was a steep sidehill with two small canyons over which two spans of 100 feet each were built. The time required was six working days, from June 5 to 10, inclusive, 1908, or at a cost approximately of 25 cents a lineal foot. This cost does not include wear and tear on machinery, line, rigging, etc., or timber used.

"A road donkey crew usually is made up of an engineer, fireman, wood bucker, chaser and a grab man, where the turns are made up. The average length of haul of a road engine generally is 3,000 feet, and at this distance the machine should be large enough to take care of the output of two yarders, and where the distance exceeds this would advise the placing of a swing donkey in the road. The average cost of labor and deterioration of machinery and rigging on a road will run about $32.50 a day, or if a road engine is taking care of two machines yarding you will have the following cost for roading different sizes of timber, according to the following averages to the log:

Feet.	Cents.	Feet.	Cents.
2,000	18	1,000	30
1,750	21	750	40
1,500	25	500	50
1,250	26	250	70

Loading Logs

"Some of you are loading on flat cars for rail shipment while others use trucks from which the logs are dumped into the water, and necessarily where your logs are shipped over other lines than those owned by the logger greater care has to be used in placing them on the cars.

It has been my observation that as an average if the cost of rollways, gin poles, lines, blocks, etc., are charged up to loading as they should be the cost a thousand of loading logs is 50 cents in round figures. It is a question in my mind whether a steam loader ever can be used to advantage in a fir operation on account of the weight of the timber and the additional cost of the machinery and operation. There is no sort of a question but that in a pine operation a steam loader is an essential and economic investment, but the small number of logs taken from the woods each day in a fir camp leaves me still in doubt on this point. Of course, the use of a steam loader would eliminate the necessity of building rollways, but as far as I know there is no loader on the market at present that is large and strong enough to handle the larger yellow fir logs. And again, the fact that it never is advisable to have more than two machines to one logging railway, and that after the chance becomes a pole road, and in a great many instances just one so that the machine could not be run to its full capacity. Hence it seems to me that it is still the gin-pole method that is cheapest and best.

"The unloading of logs is such a small matter compared to getting the logs to this point that I am not going to take up any more of your time with a discussion of this unless so wished by those present, but I will place the cost of the department at 15 cents a thousand, and will say that I have arrived at this cost from watching and keeping a record where half a dozen different methods were used.

"The conclusions that I have come to from my observations are that it is the size of the timber and the proximity of your railroad to the timber that makes the cost of logging; and again, there is another phase which I do not feel competent to talk on and that is the difference the stand of timber to the acre would make on the cost of logging on account of having not been able to keep very close records on this subject. There undoubtedly is a considerable difference in logging land that averages 30,000 and that that averages 100,000 an acre, but leaving that out we have the following charges to make against each size of timber to get out to the boundary of the tract of timber or into the millpond or boom, provided the millpond or boom is not removed to exceed four miles from the edge of the lands owned.

"In compiling the following figures the railroad expense is figured at $1 a thousand. Preparing the tract for operation in the way of surveys, buildings, superintendent, etc., 10 cents a thousand, and the other figures are based on the size of the timber.

"Yarding timber directly to the railroad, average to the log:

Feet.	Per M.	Feet.	Per M.
2,000	$2.55	1,000	$2.90
1,750	2.60	750	3.07
1,500	2.68	500	3.47
1,250	2.79	250	3.95

"Yarding to a pole road 3,000 feet long with two yarders will make the price as follows, with a proper allowance made for the construction of pole roads, timber average to the log:

Feet.	Per M.	Feet.	Per M.
2,000	$2.78	1,000	$3.25
1,750	2.86	750	3.52
1,500	2.98	500	4.02
1,250	3.10	250	4.70

"With one yarder on a 3,000 foot pole road this cost would be:

Feet.	Per M.	Feet.	Per M.
2,000	$2.96	1,000	$3.55
1,750	3.07	750	3.92
1,500	3.23	500	4.52
1,250	3.36	250	5.40

"The next unit of 3,000 feet will be arrived at as above shown."

Shantymen's Y. M. C. A. Branch at North Bay

By request of a number of prominent men in North Bay, a meeting was called by Mr. T. Yellowlees, Secretary of the Shantymen's Christian Association, on Tuesday, 11th October, at the Methodist Church there. At this meeting a local branch of the above Association was formed, with Mr. D. Purvis as Chairman and District Superintendent; G. A. McGaughey as Secretary, and A. G. Browning, Treasurer. These are three of the most prominent men in the city, and it was agreed that the ministers of every Protestant Church in the North Bay District be ex-officio members of the committee, along with one lay representative from each congregation. It was also agreed that the third Sunday in November be devoted in all the churches to the interests of this work, and a special envelope collection be taken up on its behalf.

This branch association purposes looking after the interests of all the men in the district, employed in lumber, mining and railroad construction camps. They aim to have at least one monthly religious service in every camp, and provide men and means necessary to attain this object. In order that the bounds of their district be clearly defined these friends are anxious that similar organizations be formed without delay in Parry Sound, Sudbury and Cobalt districts. The prime mover at the above meeting was A. D. McInnes, of Cache Bay, whose position as J. R. Booth's agent enables him to speak with authority on all matters pertaining to camp life.

At a public meeting in the evening Mr. D. Purvis drew attention to the fact that the association was not merely for religious purposes, but to take steps to improve conditions generally, in relation to this class of men. By way of example he stated that in the two years that he was Mayor of North Bay there came before him, when acting in his magisterial capacity, hundreds of men who had been sent to the bush by employment agents in the cities, who were quite unfit for the work, and consequently had been discharged by the foremen to make their way back to the city in the best way they could. He felt that something should be done to stop the employment agents sending up such cases, which would not only be in the interests of the employers, but prevent hardship to the men.

The above moveemnt shows that the aims and plans of Mr. Wm. Henderson, as outlined in some of our former issues, have received the endorsement, not only of the ministers of the North, but of business men in constant touch with this class of work. North Bay is fortunate in having business men willing and able to give time to this organization work. Similar men might not be easy to find everywhere, but if well-known men would act as a committee it would probably be a simple matter to raise the salary necessary to secure good organizers to do the work needed.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

WANTED TO BUY—ASH, ELM, OAK AND Basswood, for export. Payment will be cash. Address with full particulars to ROBERT COX & Co., Hope Building, Ottawa, Canada. 23

WANTED—BASSWOOD, B. ASH, BIRCH, Maple, Elm, Oak and Chestnut, for immediate shipment We are always in the market to buy good lumber. Apply BARTRAM BROS., Limited, Citizen Building, Ottawa, Can. 23

NO. 2 INCH AND 2 INCH LUMBER ALSO lath No 2. Mention facilities for sizing, matching and dressing. Box 144 CANADA LUMBERMAN, Toronto, Ont. 21

WANTED

PARTIES TO CONTRACT FOR DELIVERY of several million of Birch and Maple Logs to water or rail in vicinity of Georgian Bay, during the coming winter. Apply Box 130 CANADA LUMBERMAN, Toronto, Ont. 24

Wanted White Pine Pump Squares

Must be Quarter Cut

Sawdust Valuable in Norway

Spruce and pine sawdust, thrown aside by American millmen as worthless, commands a steady price in Norway. There it is ground into holzmehl, or wood flour, kiln dried, packed in sacks made in America for the purpose, and sold to linoleum and blasting powder manufacturers. It sells for about $12 a ton, and in 1907 the exports of this material from Norway were valued at nearly $80,000.

In France a new process, which is said to have proved successful, is employed in extracting an excellent grade of alcohol from sawdust. About twenty-seven and a half gallons of alcohol and forty-two pounds of acetic acid are extracted from each long ton of sawdust, while the residue is sold for fuel in briquet form.

Defeated the Kaiser

Frederick the Great was once compelled to compromise with a humble miller at Potsdam, who objected to the confiscation of his property, and reminded the warrior-king that "there were still judges at Berlin." History has repeated itself in the case of the Kaiser, who has just been vanquished in a lawsuit before the Imperial Supreme Court at Leipsic by one of his subjects.

The case concerns the sale of timber cut from His Majesty's forest domain at Bradenburg. A wood dealer named Heinrichs had contracted to purchase 15,000 feet of lumber "on the stump." Shortly after concluding the bargain the forest authorities informed him that it would be necessary to cut 22,000 or 24,000 feet instead of the 15,000 for which he had contracted, and they would expect him to take the surplus.

After accepting the delivery of 18,000 feet, however, the dealer declined to receive any more. The 3,000 feet over and above the amount contracted for, he explained, was only the customary 20 per cent. surplus. Having paid for the 18,000 feet, the dealer instituted suit against the Kaiser for the restitution of certain securities deposited as evidence of good faith at the beginning of the transaction.

The lower court rejected the dealer's claim, but his appeal from that decision has just been sustained by the Supreme Court, which has ordered a retrial of the case before the tribunal of First Instance.

Qualities of Woods

Not very long ago, states the Builder, timber was selected entirely according to its external appearance. The diameter and length of the piece, the straightness of grain, sometimes the weight, sufficed to determine both its commercial value and its destination. The diversified industries of the present day require a corresponding diversity in the wood employed. For one purpose, the important quality is hardness; for another, elasticity; for a third, ease of working, or resistance to attack by external agencies. The hand magnifying glass, which was first employed, has ceased to suffice for the exact determination of the structure of wood. The compound microscope is now used for the minute and careful examination of longitudinal and transverse sections of a specimen of timber, the commercial value and the proper industrial employment of which it is desired to determine. Fine grain and thick-walled cells assure the solidity and resistance which are required in carpentry, and these qualities are incompatible with an abundance of parenchymatous tissue, filled with starch.

Circular Saws Snaking

There are a large number of reasons for circular saws running out of truth or "snaking," as it is often called, says the Timber Trades Journal. Powis Bale gives the following as the chief:

1. Too high or too slow a speed for which the saw is "tensioned" for. If the speed is too high the rim of the saw will expand too much and become more or less pliant, and will "snake" in the wood. On the other hand, if the speed is too slow the centre of the saw may be too full and have a tendency to run out of the log.
2. Saws of too thin a gauge for the work.
3. Irregular or insufficient setting.
4. Too rapid a feed of the timber.
5. Improperly shaped teeth or insufficiency of gullet space to allow the sawdust to escape freely.
6. Saw plate not round or improperly hung.
7. Saw overheated from defective bearings, too long a fence binding the wood, etc.
8. Improper packing.
9. Collars or steady pin out of truth.
10. End play of saw spindle or travelling carriage.

There is no doubt that if saws are carefully sharpened—and not burnt—with an emery wheel they can be run without further preparation, says the Timber Trades Journal. On the other hand, many sharpeners claim that finishing with a file is necessary to remove any feather edge or hard spots made by the emery wheel, and if filed the points of teeth stand better, and there is less liability to their cracking.

Review of Current Trade Conditions

Ontario

The condition of the lumber trade throughout Ontario is rather encouraging at present. Travelers report that they are finding it difficult to place orders for extensive lots. Retailers apparently have come to the conclusion that stocks of lumber at the mills are plentiful and that they need not be in a hurry to increase their own holdings. They are in fact continually inclining toward a more and omre hand-to-mouth class of business, being content, and in fact better pleased, if they can keep stocks pretty well on the move and avoid an accumulation in their yards. This policy is well enough when manufacturers' stocks are plentiful, as they have been of late, but it is a doubtful question whether it can be carried on safely very long. Any tendency towards stiffness on the part of the manufacturers, when they begin to feel that their stocks are satisfactorily reduced, is very likely to find retailers unprepared for advances. The situation at present apparently is that manufacturers and retailers alike believe that they are justified in allowing trade to go slow. Many manufacturers are reasonably ensuring against being caught with heavy stocks next summer and are operating in the woods on a moderate scale only. If all the manufacturers were to follow the same plan the retailers would not be safe in holding aloof very much longer. In all probability, the coming winter will witness about an average cut in the Ontario woods, and the future condition of the markets will depend solely upon the urgency of the demand for lumber next spring. Retailers in Western Ontario are almost unanimous in taking this point of view, and when travelers visit them they say that they will not be giving any more extensive orders until after the new year. When these orders do commence to appear it is likely that many of them will be for goods that are not to be delivered until the spring. An important factor in bringing the retailers to this point of view is that the fact that some three years ago they were caught with very heavy stocks when the business depression commenced, and this lesson has been well kept in mind ever since.

Altogether, compared with September, October was a quiet month, the latter end of October witnessed a slight improvement. Good lumber has become very scarce and is being held firmly. Manufacturers and wholesalers also claim that the low ends are looking slightly better. In mill culls, for instance, there is a better feeling. Box makers on the other side of the boundary line have commenced to turn their attention once more to white pine mill culls and are now giving them the preference. It is thought that it will not take long after they have commenced to use white pine exclusively to reduce the surplus to a point where manufacturers will not feel them a load.

Norway pine is reported to be growing a little scarcer and to be advancing in price. Within the last two or three weeks prices have improved to about the extent of $1 per M. One lot of Norway, amounting to about 2,500,000 feet, was recently sold at a price which was $2 higher than it could have been sold for three months ago. There is a little better inquiry for dead cull hemlock. Shingles continue erratic, with the possible exception of No. 2 clear New Brunswick, which are being held firmly by manufacturers, who find them in good demand for local trade. The United States demand for Canadian lumber continues unsettled, largely on account of the political situation, which cannot be expected to improve until after the elections on Nov. 8.

The scarcity of upper grades of pine in the Ottawa valley district has led to an unexpected advance of about $1 per thousand on several varieties of lumber. The market for the lower grades is also strong. In fact it is reported generally that there is almost a famine in many lines and an actual famine in the upper grades. One prominent manufacturer reports that for the highest grades of pine he can secure $10 per M. more than he could a year ago. During the month of October 1-inch good white pine sidings have been sold steadily at $50 per M., and recently they have advanced a few dollars above that price. The quotations now are from $52 to $55. For 8-inch widths and over an even higher price is being obtained. There is a splendid demand for good strips, 1¼ and 1½ inches thick, and stocks are rapidly decreasing. The quotations by some of the manufacturers for this line range around $50 per M. There is a scarcity also of good pine shorts. Another satisfactory feature of the trade is the small but steady advance which has taken place in the price of shipping cull pine. The demand for this class of lumber has been made by the scarcity of the better grades. With the improvement in the lumber trade, however, there has come a car shortage. The improvement has also extended to lath. Stocks of good quality white pine lath are well sold up. This general improvement is expected shortly to extend itself into the box lumber and mill cull trade. During the last few weeks considerable quantities of these stocks have been moved. Prices are steady but firm.

Eastern Canada

The outlook for the production of lumber during the coming winter in the Maritime Provinces is materially affected by the rapidly increasing cost of woods operations. Reports indicate that manufacturers and owners of timber areas are considerably perturbed about the stringent measures for the collection of stumpage dues, which the Government has rigidly enforced during the last two seasons. They claim that these dues when enforced so strictly are too heavy a burden for the industry and are far more conservative than necessary. Other factors will contribute this winter towards making operations expensive. The most important of these is the scarcity of labor. In fact labor can no longer be secured at the prices which prevailed in former winters. All the principal classes of supplies have also advanced in price. For competent woodsmen the wages are now from $28 to $35 per month, and for teamsters from $23 to $26. A suitable team of horses costs $450, whereas in many cases as high as $500 must be paid. An example of the cost of provisions is afforded by the price of pork, which ranges from $28 to $30 per barrel. Hay and oats, however, are rather more satisfactory to the operators, as they cost less than they have for some years.

Market conditions are practically unchanged. The market for "English" deal is decidedly unsettled. There is no uncertainty, however, about the stability of freight rates. The recent advances in freight rates have been maintained, and there is an indication now that they may become even higher.

Receipts of random spruce at New York have been heavy during the past fortnight. The demand, however, has not improved. Receipts of late have been light, with no change in the demand. There does not seem to be any immediate prospect of an increased demand in either line. Country buyers are reported to have secured sufficient stock for their winter needs.

The demand for Eastern spruce at Boston has been rather quiet, the car trade being light and cargo orders intermittent. Some manufacturers are asking $23 for frames, and others have been accepting $22.50 and report that even this is hard to get. Many of the mills will close down shortly, and this is expected to improve the market. Random is only in moderate demand. Prices for 2x7 and under vary from $18.50 to $19.50. Larger sizes are somewhat better. A fair amount of new business is reported in spruce boards. Shingles are still strong, being held firmly at Boston, but the demand has not improved. A few manufacturers are asking $3.40 for cedar extras. Quotations generally range from $3.15 to $3.25. Lath are not showing any important change, prices being well maintained, but the demand only steady. For 1⅝ inch the prices are from $4 to $4.10; for 1½ inch they range from $3.50 to $3.65.

Great Britain

Business has been rather more brisk during the past fortnight in London than formerly. Deliveries have been quite encouraging, though not so heavy as they were a year ago. Deliveries from stocks of deals is still satisfactory, but fears are entertained that when the weather breaks up they will slacken materially. Useful sizes in good condition continue in fair demand, and prices are well maintained. Forward buying is not very active. Deliveries at London for the week ending October 8 totalled 7,358 standards, against 8,812 standards for the corresponding week of 1909. At Churchill & Sim's recent auction sale prime unsorted Oregon pine was sold at prices ranging from 1s. 6d. to 1s. 7½d. 4x12 good merchantable pitch pine sold at £10 15s. and £10 10s. Dry Montreal pine, 3x7, 2nd, sold at £14 10s., and 3x9 3rds brought £12 10s. 3x7 3rds sold for £11 5s. and £11. Quebec 3x11 unsorted bright spruce brought £9 5s.

The settlement of the cotton and shipbuilding strikes has improved the condition of the timber business at Liverpool. The disturbing effect of the strike, however, will be felt for some time. The spruce deal market continues unchanged. Higher rates of insurance and increased freight rates make it improbable that there will be any lowering of prices. Holders of spruce deals, therefore, are not trying to force sales. An inquiry for special sizes, such as 2½x7, could be easily met, and even small inquiries for 14 and 15 feet. The market for Canadian pine deals continues firm. All importations are in the hands of the chief shippers. Stocks on hand are larger than those of last year, but do not show any excessive predominance in particular qualities. Pitch pine remains dull, as it has been for some time, and contracts for future arrival are scarce.

At Manchester the depression in the timber and building trades is still noticeable, and improvement is not expected before the new year. Flooring is being offered freely at £10 2s. 6d. and £10 5s. basis c.i.f., but the demand is dull. The principal holders of best quality pine have advanced prices all round to meet the advances in shippers' figures. Best pine over 10 inches is almost prohibitive. One large firm in Manchester, which at one time used rock pine for their pattern-makers, have lowered this quality and now use "3rds" Quebec goods.

At Glasgow the trade is becoming a little more favorable and business is increasing slowly. This is attributed both to the laying in of stock by merchants who believe that prices are about as low as they will become

and to an improvement in the local demand. The increased freight rates from New Brunswick and Nova Scotia ports are expected to advance the prices of low port pine, spruce and birch about 10 per cent. Transactions during the past fortnight have been fairly numerous and have covered a satisfactory variety of stock. Canadian pine deals which have been somewhat of a drug on the market, are in better demand. Anything in the shape of 12-inch and up in almost any quantity is widely sought for. Values are well maintained, with the possible exception of fourth quality pine.

United States

Reports from Chicago indicate a better demand locally for immediate delivery than has prevailed for some time. The excellent weather is largely responsible for this. The lumber business to-day, however, is not by any means as satisfactory as it was this time one year ago. Northern pine at Chicago is in good demand so far as the good lumber is concerned, and stocks are scarce. In fact, there is considerable difficulty in securing enough stocks to satisfy the retailers. Lower grades, however, are plentiful and in only fair demand. The hardwood market at Chicago is firm, and retailers are looking forward to a good trade during the rest of the fall and winter. Dry oak at southern mill points is reported to be scarce. Prices on plain oak at Chicago are firm. Quartered white oak continues active. Birch is still in strong demand and prices are firm. Maple is fairly active. Rock and soft elm are scarce and steady. Basswood is slow. Hardwood flooring manufacturers have plenty of orders. The demand for hemlock shows a slight falling off, and prices are being shaved. There is a little more activity in west coast products at Chicago. There has been a slight improvement in the condition of the yellow pine business at Chicago during the last fortnight, and considerable stock has been sold to country yards and also for order material. Cedar shingles are unsteady, the demand being slow and prices a little easier. Clears are selling at from $3.15 to $3.22 and stars from $2.59 to $2.69, Chicago basis. White cedars are slightly improved, extras being scarce and selling at $2.90 to $3. The demand for lath continues strong and prices are firm.

At Buffalo, northern pine continues active, with stocks rather scarce. This applies, however, largely to the good lumber, the box grade being weak. The demand for hardwoods at Buffalo has improved, and retailers are increasing their stocks of birch, basswood, elm and ash. Plain and quartered oak are doing well and are coming in from the south in fairly plentiful quantities. Cherry and walnut are in small demand. There is a good supply of hemlock at Buffalo and prices are not very strong. Canadian hemlock is being kept out of Buffalo by the tariff.

Market Correspondence

Ottawa Lumber Prices Advance

Ottawa, Oct. 25.—Quite unexpectedly, several sorts of lumber have advanced a dollar or so per thousand in the Ottawa valley. These advances are a welcome sign of more active buying in medium quality of pine. There is a veritable famine in upper grades, and with the more buoyant market for inferior quality that famine grows acute. A manufacturer states that he can get $10 per M. more for high-class pine than at this time last year. No one-inch good white pine sidings have been sold this month, it is stated, less than $50 per M. Lately they have advanced a few dollars above that figure, and now range between $52 and $55. There is a still higher price for this stock when the widths are 8 inches and over. Next to this brand of lumber, good strips, 1¼ and 1½ inches thick, are most in demand, and there has been a steadily declining supply in the yards. Some manufacturers are quoting $50 per M. for it. Good pine shorts are hard to buy also, and dealers are watching manufacturers very closely to see that they get whole outputs of mills when such have been contracted for. Buyers are so persistent that it is difficult to keep certain kinds of lumber away from them.

The brisk condition existing in the market for good lumber is no more gratifying to the trade than the modest advances that have taken place in shipping cull varieties of pine. Orders are more plentiful than a month ago. The dearth of better lumber has influenced the situation. Trade has improved to such an extent that the lumber shippers of the Ottawa valley are making serious complaints about car shortage. As far as possible the water routes are used, but in many instances the point of destination is not accessible by boat. Fortunately the Ottawa river is in splendid condition for navigation considering the lateness of the season. The water is two and a half feet deeper than at the lowest period of the summer. Barges will continue to haul lumber for another month.

The lath market is improving, and the good quality of white pine is well sold up.

Dealers incline to the view that it will not be long until box lumber and mill culls will benefit from the general revival of trade. Several million feet have been moved in the last few weeks which the owners had expected would remain in their hands till next season. There is no evidence of advances in prices, but the trade will be satisfied with an improved demand.

A rough estimate of the lumber cut in the Ottawa valley mills for the summer is 450,000,000 feet. It is probable the quantity will be less, according to some calculations that have been made. Three of the smaller mills are closed already and dropped a month or so of their usual season of cutting. The first big mill to close is likely to be that of McLachlin Bros. of Arnprior, who are hampered by a tie-up of their logs in Schneaux boom. J. R. Booth has also been running at less than full capacity for several weeks, owing partially to low water, but chiefly to having stopped some of the night saws in order to release the hands for shanty work. The scarcity of shanty hands was very marked. The fact that the Whitney Lumber Co. is out of business, too, contributes to a reduced cut. Even with all natural conditions favorable and the usual number of mills in operation, production is curtailed by the care taken by manufacturers to get more out of logs than formerly. Every year the logs are handled less speedily in order to get the best results out of pieces that are growing constantly smaller and poorer in quality.

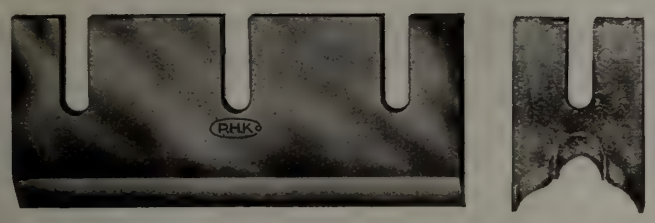
Mr. W. H. Rowley and Mr. Peter Whelen advocate construction of upper Ottawa conservation works as an improvement to the Ottawa city water supply. The plan of spending $2,500,000 on a system to connect with McGregor's Lake, 40 miles north of the city, is engaging the attention of Ottawans, and a New York expert has reported on the project. The Ottawa river water is suspected by some medical authorities, both on account of the fast-increasing population of the suburbs in the vicinity of the intake pipe and the low state of the river at certain seasons. Mr. Whelen asserts that the volume of the Ottawa river could be increased by 360,000 cubic feet per minute by diverting the flow of the Askikwaj from the Hudson Bay to the Ottawa. This stream and adjoining lakes are 20 feet higher than the Ottawa river, and it is said a channel and dams could be built to bring the water where it is most needed for $120,000. The lumber and paper interests claim this conservation scheme is one that should be considered in connection with the proposed big expenditure.

The Federation of the Canadian Boards of Trade met in Ottawa on October 19 to reaffirm its desire for the construction of the Georgian Bay Canal at the earliest possible date. Sir Robert Perks, who was in Ottawa recently in connection with this project, said the canal could be built in about eight years, during which it would employ some 15,000 men.

Unfavorable New Brunswick Logging Conditions

Chatham, N.B., Oct. 24.—There is every indication that the Provincial Government officials will continue to enforce the more stringent measures for the collection of stumpage commenced and carried out during the past two seasons, throughout this province. While supporters of the present provincial administration claim that, under conditions previously existing, stumpage collections were not nearly so large as they should have been considering the quantity cut, lumbermen now make the statement that conditions have reached the other extreme and that the present system is too conservative. While such a feeling exists, there is no doubt that it will have a tendency to cause a carefulness in regard to the total quantity when planning the winter's logging operations.

A prominent local lumber manufacturer stated that the present winter is the most expensive in his thirty years' experience, wages and the prices of all the principal lines of supplies being remarkably high. Competent woodsmen ask from $28 to $35 per month, teamsters from $23 to $26. The lowest figure at which a pair of horses suitable for the work may be purchased is $450, and these would be only ordinary. In many cases $500 is asked and given in exchange for a span of really good animals. Beans are worth $2.25 per bushel, beef is selling at $22 per bbl., pork ranges from $28 to $30 per bbl. and lard is worth 18 cents per lb.



More favorable features are the prices of hay and oats. Hay has not been as cheap for a number of years. The price is from $10 to $12 per ton. Oats are selling at the reasonable price of 45 cents per bushel.

Lumber operators say that so far the season has been a most favorable one, chiefly on account of the dryness of the weather and the ground, which latter condition permits the getting of logs on soft and swampy ground.

The market situation shows no changes which affect local conditions. Views of a somewhat divergent character are rife in regard to prices and conditions in the "English" deal trade, and the situation in this department is very unsettled. The development of the most interest in this connection is the advance in freight rates, which show signs of more decided firmness. Quotations per standard on deals to Great Britain range from 42s. 6d. to 47s. 6d.

The Rat Portage Lumber Co., Winnipeg, report under date of Oct. 18: The market here has been very quiet for the past month, and prices have had a tendency to weaken. The prospects are, however, that they will hold at the present list for the balance of the season and prices will improve after the beginning of the year.

Sudden Death of James D. McLaurin

The Late James D. McLaurin, Ogdensburg, N. Y.

Lumbermen in all parts of Canada will learn with regret of the sudden death of Mr. James D McLaurin of Ogdensburg, N.Y., vice-president of the Campbell McLaurin Lumber Company of Montreal. The late Mr. McLaurin was intimately known to the lumber trade both in the United States and Canada. He was a man of the most cheerful disposition, which, together with his genial manner, made for him a host of friends with young and old. One of his chief characteristics was his goodness of heart and his desire to help others, and those in trouble found a good friend in him. Not only was his advice cheerfully given, but in a financial way he was ever ready to give assistance, and his many deeds of kindness will live long in the memory of many by whom he will be sadly missed.

James D. McLaurin was one of the many brainy and enterprising Canadians occupying high positions in the industrial life of the American Republic. He began business with McLaurin & Blackburn, of East Templeton, Que., in 1877. Three years later he joined the Skillings, Whitney & Barnes Lumber Company. He spent seven years in the Burlington branch, and three years in Boston. In 1890 he went to the New York office as manager, and was later appointed director of the company and treasurer of the corporation. He had very extensive business interests, as shown by his connection with the following companies: vice-president of the Campbell McLaurin Lumber Company of New York and Montreal; director of the following companies: George Gordon & Co., Limited, of Cache Bay, Ont.; Strong Lumber Company of Orillia, Ont.; Cavendish Lumber Company of Lakefield, Ont.; the Temagami Lumber Company of Callander, Ont., and the Marine Transportation Company of Ogdensburg, N.Y. Mr. McLaurin was married in 1885 to May Currie, daughter of John Currie of Ottawa, Ont. He is survived by his wife, one son and one daughter.

Personal and Trade News

Messrs. A. E. & R. L. Clark, of Edward Clark & Son, Toronto, are on a business trip in Quebec province, where they are making extensive shipments of hardwood to the United States.

D. C. Cameron, president of the Rat Portage Lumber Company, which lost a splendid mill at Rainy River during the recent forest conflagrations, says his company will rebuild at once. Most of the good timber had been cut off his fire-swept regions.

Mr. Ralph Loveland, of Loveland & Stone, Cutler, Ont., visited Toronto last week on his way to his home in Detroit, after a trip to the mills. Mr. Loveland reports that trade is fairly satisfactory and stocks are being disposed of steadily.

On October 5 Mr. W. A. Anstie, of Nelson, B.C., the well-known secretary of the Mountain Lumbermen's Association, was married to Miss Dora Anderson, eldest daughter of Mr. and Mrs. E. Anderson, of Nelson. Mr. and Mrs. Anstie left for a wedding trip of a few weeks, which will be spent in New York. The readers of the "Canada Lumberman" who know Mr. Anstie will all join in wishing him and his bride a long and happy wedded life.

W. F. V. Atkinson, Superintendent of the Forestry Division of the Canadian Conservation Commission has returned to Ottawa from British Columbia, where he has been studying the methods of the forest protection service of the West. Mr. Atkinson visited Toronto on his way home and honored the "Canada Lumberman" with a visit. He reports with enthusiasm upon the progress which has been made in British Columbia in the direction of forest protection.

Mr. Walter C. Laidlaw of the Laidlaw Lumber Company, Toronto, is on an extensive trip through Europe. Mr. Laidlaw sailed by the Lusitania from New York on Oct. 19. In addition to making a trip through England, he will visit France, Egypt, India, Ceylon, China, Japan, Russia, Germany, and finally will spend a few weeks in London and other interesting parts of England. He will remain abroad until about March 1, 1911.

The John Donogh Lumber Company, Limited, wholesalers, Traders Bank Building, Toronto, have decided to go into voluntary liquidation. Mr. John Donogh will continue business under the name of John Donogh & Co., and Mr. J. B. Cunningham, his former partner, will organize a company to be known as the Cunningham Lumber Company. Mr. Cunningham has taken quarters in the Traders Bank Building, Toronto.

Low Freight Rates in Danger

Ottawa, Oct. 22.—The freight rates which Ottawa enjoys owing to the navigation on the Ottawa river and Rideau canal competing with the railways, appear to be threatened by the C. P. R. scheme to cut off the connection of the Rideau with the Ottawa river. General Manager McNicoll of the C. P. R. explained the railway project to a joint meeting of the Ottawa Board of Trade and City Council on October 21. The railway wants to build a tunnel a mile long connecting its present stations, thus shortening the route of the transcontinental trains. The bed of the canal from the "Deep Cut" would be needed to complete the scheme. The city wants the improvements if there would be no bad effects. Before they decide an expert railway engineer will advise them. Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, contended that the closing of the canal would remove a factor that kept down freight rates on lumber shipped from Ottawa to the St. Lawrence and Lake Ontario points. In view of the recent judgment of the Railway Commission confirming the advanced railway tolls of three years ago, the caution of the lumbermen seemed warranted. Mr. G. F. Henderson, a legal authority, added that comparatively low rates had been given Ottawa by the Railway Commission, purely owing to the existence of the water routes. His remedy would be a clause in the Act transferring the canal end, compelling the railway to continue low rates. The C. P. R. engineers argue that the Ottawa river is the only water route which is ever considered a serious competitor of the railway.

President Peter Whelen of the Board of Trade said that many years in the lumber business was sufficient to convince him that a proportionately small volume of lumber was shipped by the Rideau. It is claimed, on the other hand, that the bare existence of the water route insures the moderate tolls of the railways.

The October issue of Farnworth & Jardine's wood circular says: New Brunswick and Nova Scotia spruce and pine deals.—The import to the Mersey during the past month, including Manchester, was very heavy, and largely exceeded the arrivals of the corresponding month last year, viz.: 20,570 standards against 13,430 standards in 1909. The consumption has been fairly satisfactory, but stocks have increased and are now too heavy; values rule fairly steady.

The prices quoted are for St. John and Miramichi spruce from £7 17s 6d. to £8 10s.

A Handy Tool

We are pleased to call our readers attention to a Horizontal Hollow Chisel manufactured by J. A. Fay & Egan Co., which will be found a handy and durable tool for the class of work intended. This machine will mortise to a depth of 3 inches; or by reversing stock 6 inches. It accommodates chisels from $\frac{1}{4}$ inch to $\frac{3}{4}$ inch square. The frame is a single piece casting with good floor support, and is perfectly rigid. The

Fay & Egan's No. 270 Horizontal Hollow Chisel Mortiser.

table is 6 inches wide and 36 inches long. It is moved by foot treadle and raised and lowered by crank. The illustration shows it to be provided with an adjustable fence. The chisel mandrel is made of crucible steel and runs in long self-oiling bearings. Almost any kind of woodworking plant will find this machine a suitable tool for their purpose. Woodworkers are invited by the manufacturers to write for their large illustrated circular. Their address is 465-485 W. Front St., Cincinnati, Ohio.

EDGINGS

Ontario

H. T. Milne, saw mill proprietor, Brown's Corners, Ont., is stated to be giving up business.

Mr. D. A. Leach, of Sunbridge, Ont., is considering the establishing of a veneer plant, basket factory, saw mill, stave and hoop mill, at North Bay. The estimated cost is about $25,000.

The Excelsior Lumber and Construction Co., Ltd., Toronto, has been incorporated, with a capital of $100,000. The incorporators are: J. W. Heffernan, F. C. Carter and A. Fleishman, all of Toronto.

The planing mill business conducted by Steele & Co., at Smith's Falls, Ont., will be taken over by Mr. Fred A. Crate, of Smith's Falls, on November 1st. Steele & Co. will continue in the wholesale and brokerage business

A charter has been applied for under the name of Pacific-Burt Company, Limited, and a new company is being formed, in which the F. N. Burt Company, of Toronto, will have an interest, and which takes advantage of the management and organization of a company called the Pacific Manifolding Book Company, which has been operating in that territory for years. The directorate of the Pacific-Burt Company will include Mr. S. J. Moore, president of the F. N. Burt Company; Mr. A. E. Ames, vice-president; Mr. F. N. Burt, managing director, and Mr. James Ryrie, a director of the same company.

Lickleys, Limited, Toronto, who were recently incorporated, have secured powers to acquire lumber limits, run saw mills, and do anything in the woodworking line. Their principal basis of operation at present will be at Gravenhurst, Ont. They have acquired, and are already running in full operation, the factory at Gravenhurst, known for some years as the Clark factory. They are devoting this factory specially to the manufacture of high-grade interior fittings for churches, schools, banks, and better class dwelling houses. To handle this business thoroughly they find it necessary to have their own lumber specially manufactured. For this purpose they are meditating installing at that factory a plant which is used principally in the Old Country for the cutting of high-grade hard wood logs. They have secured for immediate wants a sufficient supply of hardwood and pine logs to cover their own requirements for a considerable time.

Eastern Canada

The carriage factory of A. S. Fillmore, at Athol, Cumberland County, N.S., has been destroyed by fire, the loss amounting to $35,000. The factory will be rebuilt.

The McLellan-Smith Lumber Company's mill at Burton, Sunbury County, N.B., was recently destroyed by fire. It was valued at about $8,000 and insured for $4,000. The owners will probably rebuild.

The fire which recently destroyed the former premises of the Mabee Woodworking Company, at St. John, N.B., was not such a serious matter as at first reported. The Mabee Woodworking Company went out of existence over five years ago, being absorbed by Murray & Gregory, Limited, who removed the outfit to their own mill premises. The fire destroyed only the building formerly occupied by the Mabee company.

Price Brothers, of Quebec, are offering an additional issue of bonds to the extent of $6,000,000, the object being to establish a large paper mill at Riviere au Sable, in the vicinity of Chicoutimi. Such a mill would serve the Saguenay limits owned by the company. Price Bros. have also acquired the controlling interest in the Jonquieres Pulp Company. Work on the construction of the mill will begin in the spring. It will probably have a daily output of 150 tons and will employ something like a thousand men.

James H. Chappell, Windsor, N.S.; George A. Chappell, Amherst; William Chappell, Windsor, and R. R. Chappell, Sydney, who have been carrying on business for a number of years at Tignish, N.S., and afterwards at Windsor and Sydney, under the name and style of Chappell Bros., have recently sold their lumber property at Hants County to Hugh Brown & Sons, and have purchased from W. K. McLean three lumber berths in the Province of Quebec, located in Bonaventure County, on Chaleur Bay. The berths cover a tract of land containing over one hundred and thirty-three thousand acres, with seven hundred million feet of lumber. The present mill on the property is seven miles from Dalhousie. The transfer of these leases is one of the largest lumber deals put through in the Lower Provinces for some time.

Western Canada

F. Adam, Camrose, Alta., lumber merchant, is stated to have sold out to the Globe Lumber Company, Limited.

The Hill Mfg. Co., planing mill, etc., Saskatoon, Sask., are stated to be selling out to the Saskatoon Lumber Company.

Carstens & Earles, of Seattle, have purchased 300,000,000 feet of timber for investment on the Copper River, tributary to the Grand Trunk Pacific Railway, in British Columbia.

The Tilly, McKinley, Norton Co., Ltd., of Manitoba, capital, $100,000, have been incorporated to conduct a general wholesale and retail lumber, sand and gravel business.

The B. C. Gazette gives notice of the incorporation of the following companies: Canadian Mills and Timber, Ltd., capital $1,000,000; Lincoln Sawmills Co., Ltd., capital $50,000; Standard Lumber Co., Ltd.

The City Council of Nelson, B.C., has decided to give considerable assistance to Mr. W. H. Kreycher and his business associates, who contemplate building a new shingle mill and box factory, to employ 20 hands.

The Shell River Lumber Company will shortly commence operations at Prince Albert, Sask., in their new mill, the equipment of which is of the most modern type, and cost about $10,000. The capacity is 40,000 ft. per day.

A large timber deal has been completed by which the Moresby Island timber limits have been taken over by C. A. Frost, of Chicago, formerly president of the Chicago and Milwaukee Street Railway. At present the company have a mill at

Queen Charlotte City, which was to have shut down, according to reports. It will now continue to operate under the new ownership.

The Financial Securities Company, of New York, which firm some time ago acquired from the Canadian Pacific Railway Company some 50,000 acres of timber limits around Cowichan Lake, Vancouver Island, has definitely decided to erect a large saw mill near Duncans, a point close to Cowichan Harbor, on the east coast. The capacity aimed at will be one hundred million feet per annum. Later on the company will erect a pulp and paper mill in order to utilize the slabs and refuse usually turned into fuel. The company may also utilize the saw dust for making alcohol.

Messrs. Carmichael & Morehead, Ltd., of Victoria and Port Alberni, have closed an important deal with the Esquimalt & Nanaimo Railway Company, whereby they have secured from the railway company an option to purchase upwards of 35,000 acres of the best land on the island. The areas include 11,000 acres in the Alberni Valley, 12,000 acres in the vicinity of Englishman's River, and 12,000 acres along the projected line of the Esquimalt & Nanaimo Railway to Comox. Messrs. Carmichael & Morehead have parties in the field making a thorough topographical survey of the land and timber values. When this work is completed they will proceed to open up and develop the lands.

A number of Penticton, B.C., capitalists, who will incorporate under the name of The Pinticton Lumber Company, have taken over the holdings of the Penticton Lumber Syndicate, comprising a valuable tract of merchantable timber in the Okanagan District, and will proceed to establish the first important industry in Penticton. A large saw mill and also a factory will be built and the manufacturing of piping for irrigation purposes and of fruit boxes will be conducted on an extensive scale. The company have 11,000 acres of tamarac and pine, comprising about 120,000,000 feet of merchantable timber. The company will build cottages to house their employees, and will have a capital of $200,000.

R. T. Telford & Co., of Leduc, Alta., whose planing mill and box factory were recently destroyed by fire, have rebuilt a much larger building than their former one. The new building is 20 ft. x 66 ft. x 12 ft. high, and has a 12 ft. x 22 ft. engine house attached. They are at present running some of their machines, and hope to have everything going in the course of a few weeks. Their plant will consist of a planer and matcher, a pony planer, a resaw, and edger, and a band saw. The company make egg-cases and butter boxes, lap siding, drop siding, flooring, and ceiling, and do planing and miscellaneous mill work. When complete the plant will represent an investment in the neighborhood of $4,000.

A million ties will be taken out in the Rainy River District this winter for the Canadian Northern Railway by P. P. Elliott, the Northern Construction Company, and Mackenzie & Mann, the latter operating on the Rainy Lake pulp concession, acquired a short time ago from Graham & Horne. This latter concession was the one which no timber was to be cut unless a pulp and paper mill was erected, but as it is claimed the fire has overrun it, this clause has perforce to be a dead letter in order that the burned timber can be cut without being a total loss. At Banning, the Hines Lumber Company, of Chicago, own a large area, and on account of the fire will be forced to cut some forty million feet. It is said they will put in ten camps and water the logs until another year. The Fort Frances Lumber Company, Lockhart & Co., Rainy River Lumber Company, and Rat Portage Lumber Company will all have a number of camps in, so that Fort Frances should experience one of the best winters yet as far as lumbering operations go.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope, and stating number of enquiry:

1499. White and quartered oak.—A Wellington importer would like to get into communication with Canadian manufacturers of white and quartered oak.

1505. Doors, sashes, frames and builders' supplies.—An Auckland, N.Z., firm of contractors and builders would like to negotiate with Canadian firms supplying doors, sashes, frames and builders' supplies.

1522. Curled hair and purified feathers.—A north of England firm manufacturing curled haid and purified feathers wishes to get into touch with Canadian houses supplying the upholstery and bedding trade.

1533. Birch for chair and cabinet work.—A Bristol furniture manufacturer wishes to get into communication with Canadian firms able to furnish birch cut to sizes suitable for chair and cabinet work. Patterns can be supplied.

1539. Paper, wood pulp boards, &c.—A London firm, one of whose partners will be in Montreal in November, is desirous of getting into touch with Canadian manufacturers of paper, wood pulp boards, &c., desiring to increase their trade in Great Britain.

1554. Wood pulp, &c.—One of the best known firms of export forwarding agents, with world wide connections, desires to get in touch with Canadian manufacturers of agricultural implements, hardware, furniture, desks, etc., who are interested in the Australasian, South African and South American markets. Is also interested in paper, wood pulp, woodenware, etc. The firm has a representative in Montreal who will visit Canadian manufacturers interested.

1562. Prime pitch pine.—A Manchester firm wishes to correspond with Canadian exporters of prime pitch pine.

1565. Pine scantlings.—A Lancashire firm asks for prices and dimensions of pine scantlings from Canadian exporters.

1566. Oak felloes.—A Manchester firm asks for description and prices of oak felloes from Canadian manufacturers of same.

1570. Oak spokes.—A Manchester firm asks for dimensions and prices of oak spokes from Canadian manufacturers.

1572. Pine sidings.—A Liverpool firm wishes to obtain prices and dimensions of pine sidings from Canadian shippers of same.

1573. Pine picture moulding.—A Manchester firm asks for samples and prices of pine picture moulding from Canadian manufacturers.

1575. Spruce deals.—A Liverpool firm asks for prices and dimensions of spruce deals from Canadian shippers of same.

1576. Wood pulp boards.—A Manchester firm asks for samples and prices of wood pulp boards from Canadian manufacturers.

1578. Pine sidings.—A Manchester firm desires to obtain prices and dimensions of pine sidings from Canadian shippers of same.

The Hull branch of the Bank of Montreal is suing the Lowe Lumber Company for $6,740, based on a claim for the recovery of money loaned before the defendants lost their mill and plant by fire.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

"Jumbo"
Combined Gang and Edger

We have made several improvements since this cut was made, less gearing is used than shown in the cut.

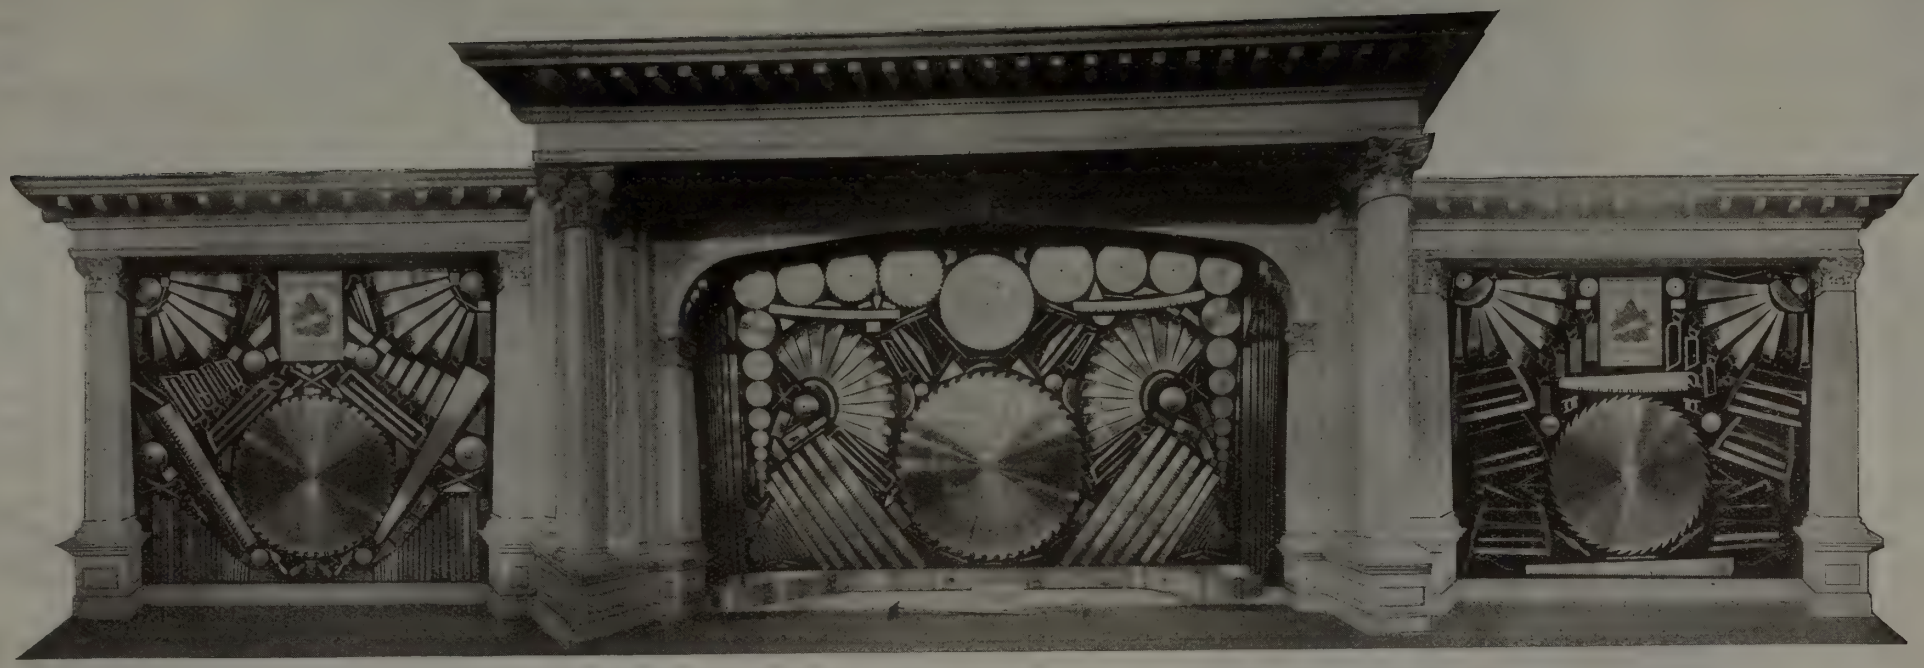
This is a very complete machine and embodies every detail of construction essential to an adequate gang edger.

We have sold a great many of these machines and hear nothing but good said of them. We have some very flattering remarks for our "Jumbo."

Some of its good points are:

MANDREL: 4½ inches by 10 feet 6 inches long.
DRIVE PULLEY: 20 inches by 20 inches.
SAWS: 2 Movable Saws on Edger side (more if desired) 8 stationary saws on gang side. 2 Water Boxes.

This machine is 5 feet 7 inches inside of frame; reverse friction is supplied in case cant binds and prevents saws from being burned. Supplied with Press Rolls and impossible for Cant to fly back.



Prices Cheerfully Quoted

MOWRY & SONS Gravenhurst Ontario

Manufactured from Razor Steel

"Maple Leaf Saws"

Tempered by our Secret Process

Recent Exhibit at the Canadian National Exhibition, Toronto, and Central Canada Exhibition, Ottawa

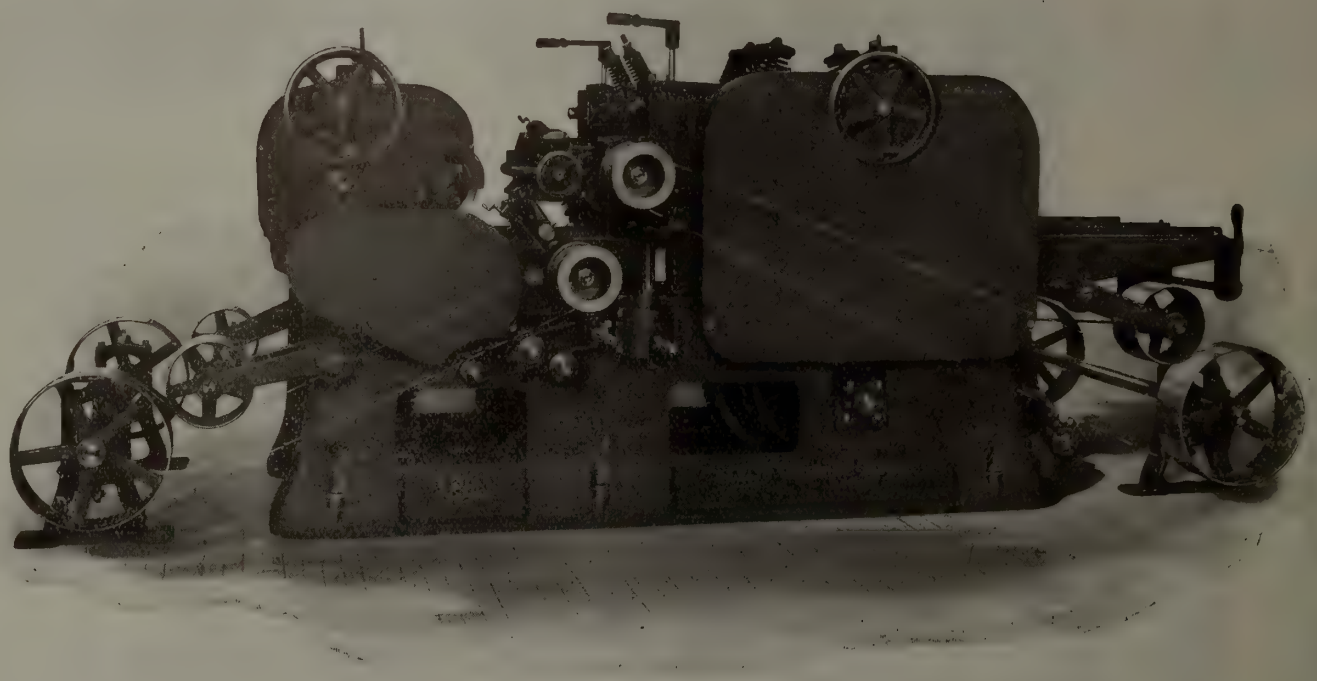
This cut represents the display of saws made by the Shurly-Dietrich Co., Limited, of Galt, at Toronto and Ottawa Exhibitions this year.

This exhibit embraces saws of all kinds and shapes: from a ¼ inch band saw up to one 16 inches wide, and circular saws from one inch in diameter up to the large 90 inch hung in centre of the case, also Hand Saws, Gang Saws, Cross-cut Saws, Buck Saws, Billet Webs and many others.

Improved Cross-cut Saw

During these exhibitions a great many lumbermen inspected and were especially interested in the Improved Racer Cross-Cut Saw, a cut of which appears on this page. This saw is made of Razor Steel and is tempered by our "Secret Process" which gives an absolutely true temper throughout. It is different in its construction to other saws, being made with the slanting gullets which discharge the sawdust more easily and allow every tooth to cut fresh timber. It is a thin back saw and runs free and easy. The Shurly-Dietrich Co. **guarantee** every one of these saws and if found defective will be replaced.

We would also draw lumbermen's attention to our **No. 20 Handle.** This is the strongest and best handle in the market and is **guaranteed** to stand plumb with the saw. It is made of the very best of rock maple. Try a sample.



No. 20 Handle

Shurly-Dietrich Company, Limited

"Maple Leaf Saw Works." **GALT, ONTARIO**

"Berlin" Surfacers

Berlin Surfacers are built for the use of thin knives. A few years ago the significance of such a statement would hardly have been appreciated. To-day, the man who turns out the most lumber in the shortest time, who gets the most from his lumber and his machines, who gets the finest finish, is the man who uses thin knives.

Pyts Steel, used exclusively on Berlin machines, is the one self-hardening steel made to-day which possesses the requisite toughness combined with the right amount of hardness, for the successful use of thin knives.

Thin knives are set at greater angle than the ordinary thick knives, consequently more of a "scrape" is secured. This is further effected by back-bevelling to suit the nature of the wood being worked.

With Berlin thin knife heads, devices are used which grind the knives without disturbing the setting. The heads are then set in motion and jointed or brought to a perfect cutting circle so that each knife does its share of the work.

Thin knives actually make better work possible and will raise the grade from ten to twenty per cent.

The No. 186 is a fast feed matcher with the side-head spindles left out. It is also short-coupled and has six large feed rolls. Belt tighteners are provided for both top and bottom heads—no chance to "stall" them no matter how heavy the cut.

The No. 186 has the capacity of four ordinary surfacers and will produce a finish at 150 feet per minute that cannot be equalled short of a cabinet surfacer at 30 feet per minute. It is built in two sizes—20 in. or 30 in. wide with a 6 in. opening.

The top and bottom heads are very close together—warped and crooked stock can be better and more easily surfaced.

This surfacer gives the satisfaction which prompts the purchase of other Berlin machines.

No. 103 Fast Feed Planer and Matcher

DOES EXCELLENT WORK AT 150 TO 200 FEET PER MINUTE

In our No. 103 we offer to the Canadian public the "last word" in planers and matchers. The design of this machine is up-to-date, right up to the present moment. No planer and matcher yet constructed has a single point of advantage over our No. 103.

Much is being said of late in reference to a "Racer Type" of planer and matcher. If you are a horseman you will know the full significance of the word "racer"—speed at the sacrifice of all else. We have purposely avoided this type which requires expert handling and constant nursing.

For more than thirty years we have being supplying the Canadian demand for wood tools. We have constantly and consistently studied the requirements of the Canadian trade. In our No. 103 we have combined a thorough knowledge of your requirements with our long experience in building wood tools and have produced a machine which will make you money every day. Will produce sheathing or flooring at the rate of 150-200 feet per minute, and will do it every hour of the day and every day of the year.

Manufacturer of Ranges, Heaters, etc., for Lumber Camps, Hotels, and Railway Construction

The Shimer Cutter Head

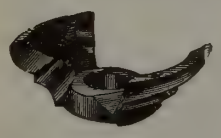
When a Wood-worker discovers that he is Losing Time

or rather needlessly wasting it, by the hand fitting of his cutters and filing them to shape at each and every sharpening, he is then able to appreciate the Shimer Cutter Heads with the "make-ready" for service built into the Heads for all time.

Some mill men make this discovery early in their business career and at once order suitable equipment. Others need to be shown that there is a vast difference in both quality and quantity between the output of a poorly equipped mill and one operated strictly in accordance with the most advanced practice.

Pick out the tools you need from this page or our catalogue and let us have the order at once. You will be surprised at the small amount of money necessary to thoroughly equip your mill.

Our Filing Stand and Tracker



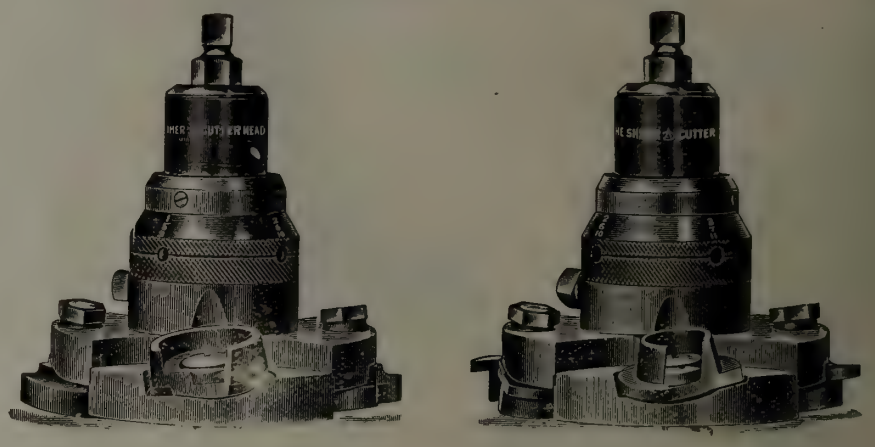
Is an inexpensive, but very useful little device with which to hold the Shimer Cutter Heads when sharpening.

It will hold any head for fitting, filing or setting the knives. It is especially fitted with a tracker attachment to set the knives in perfect cutting line, and for accuracy cannot be surpassed.

Plain Filing Stand	$ 4.87
Filing Stand and Tracking Attachment...	11.37
Extra Stubs	1.00

☞When ordering give the record number you find stamped on the Heads you have.

Don't Burn Your Moulding



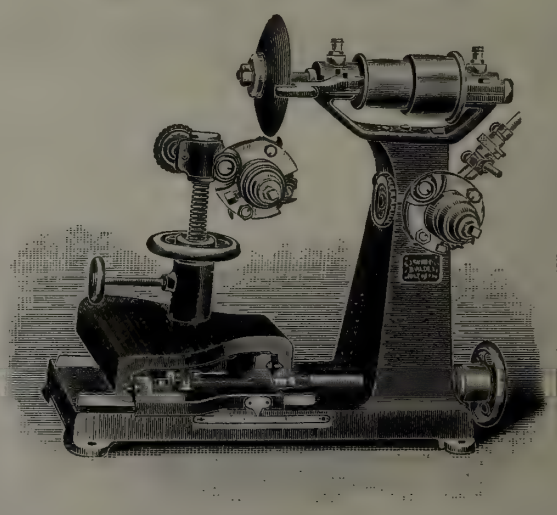
Blackened edges so often found in hardwood Mouldings indicate the use of inferior tools, which friction and burn because of their failure to have proper clearance. The Shimer Reversible and Non-Reversible Cutters are made of the finest tool steel by experienced workmen. In design and construction they are superior to anything on the market. They cut well and retain their shape until worn out. Send us drawings or wood samples for estimates on special cutters. Many useful designs, with prices, are given in our catalogue.

Interchangeable Matcher and Ship Lap Heads

A Cutter Head that is either a matcher or Ship-Lap Head, according to the kind of bits placed upon it. Each kind of bit has its seat on the head which thus does double duty. Works as well for Flooring as for Ship-Lap. A convenience and saving to the man who wishes one pair of heads to serve the purpose of two.

Price, set of two Heads complete with Matcher Bits, $32.24. Ship-Lap Bits, extra, $11.96.

Thin Steel Knives



Advanced ideas referring to the planing and surfacing of lumber have developed into the use of thin blades, made from high speed steel, which when properly tempered and treated, serve for one or two days of work on hard maple, oak or hickory.

These blades are known as our Bedee Knives and are recommended by users as the best that can be procured. For the benefit of those desiring to use this style of a knife we have facilities to furnish them in any length or thickness.

Write us about your requirements.

The Shimer Shear Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

This is a simple and effective machine for grinding the Bits of the Shimer Cutter Head.

It is sensitive in operation and just the thing for sharpening cutters tempered too hard to file.

Every adjustment is provided to obtain the hook position for the cutters as well as the angle for the shearing cut.

After the cutters are sharpened the Head may be placed upon the tracking attachment at the side of the column for quick setting of the Bits to line them up within the same cutting circle.

No. 1 Machine, with countershaft, complete, $104.00.

Following are a few Net Prices of Tools which will be made after your measurements and guaranteed to fit your machine and to match your samples.

MATCHER HEADS—"Best of All."

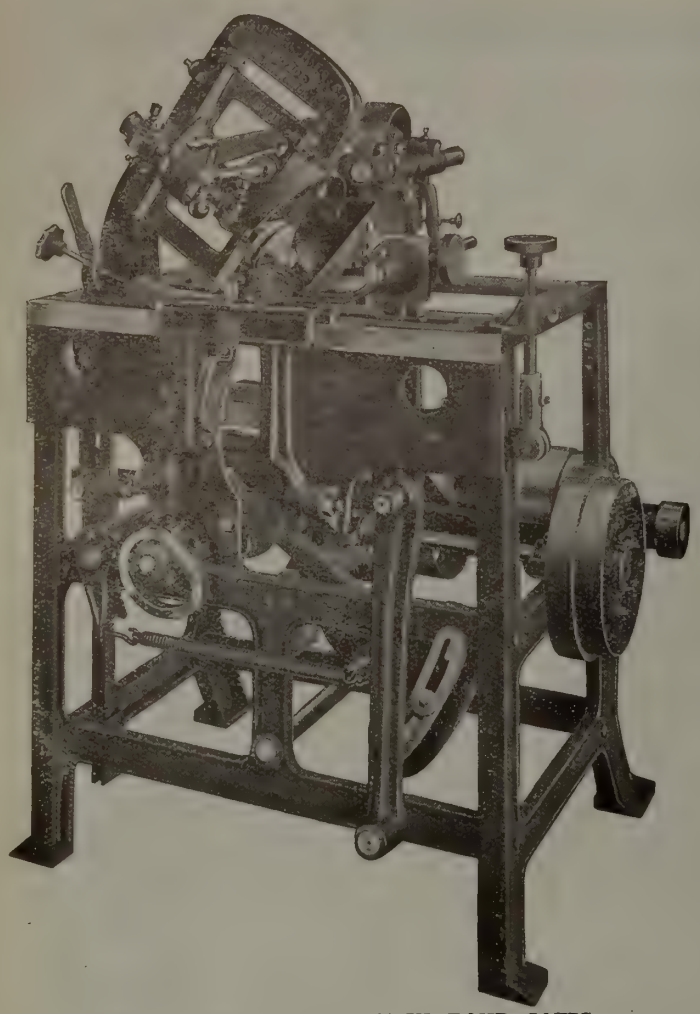
Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground sa s can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easy.



ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment-Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

E. C. Atkins & Company

Makers of Sterling Saws - HAMILTON, ONT.

Home Office and Factory, Indianapolis, Ind., U.S.A.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

The Waterous Engine Works Co., Ltd.

Agents for Canada **Brantford, Ont.**

Hanchett Band Swage

Filers! Millmen!

Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

Hanchett Swage Works

Heavy Duty Lath Machine

This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

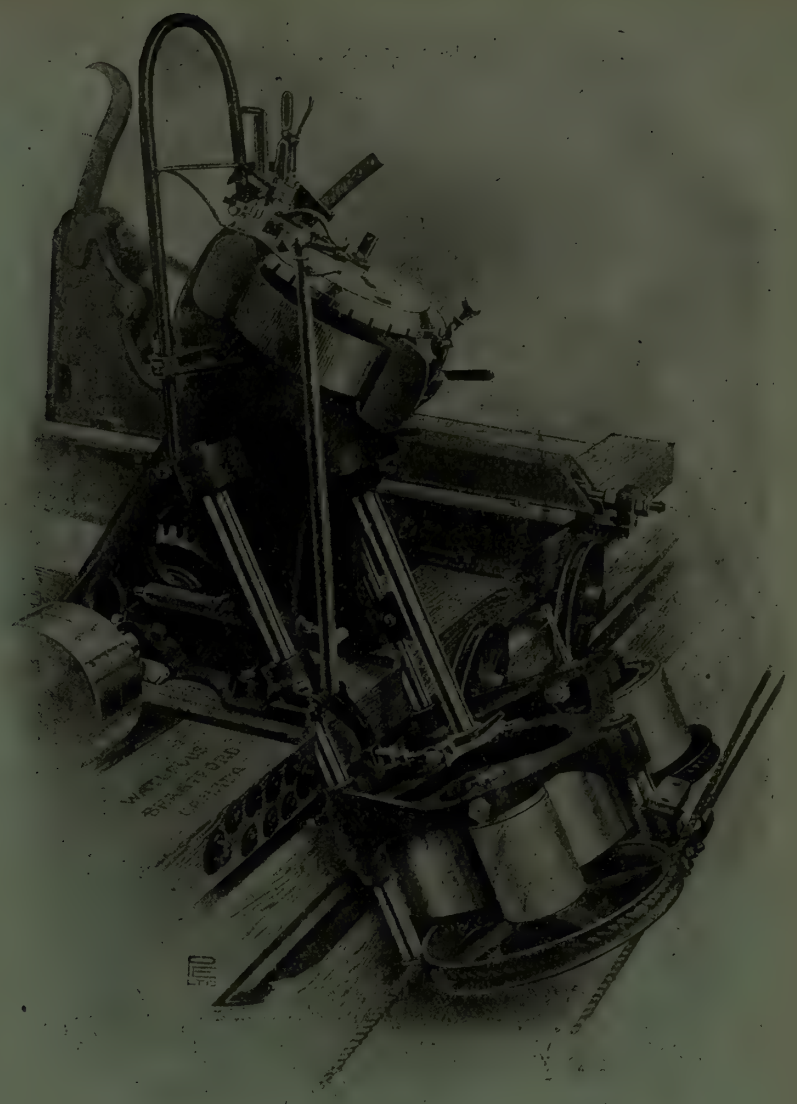
4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few of them:—

The front and rear pressure rollers are power driven.

The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.



The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

The E. Long Manufacturing Co., Limited, Orillia, Ont.

Manufacturers of Saw Mill, Shingle Mill, Lath Machinery, and Fittings. **Drawer 712**

THE TROUT POWER SETWORKS

No Work—

No Heat—

No Lost Motion—

THE MOST POWERFUL AND EFFICIENT SETWORKS MANUFACTURED

A continuous acting rope-driven set and receding works that will turn out more lumber and better lumber than any other setworks on the market. Just for these reasons. There are only two levers to operate. Setting is accomplished without stooping or bending. There is no heat from steam cylinder. Rope drive is continuous acting when carriage is stationary or in motion. With nothing to tire or distract him the setter can give his undivided attention to the sawyer's signals, and cut as much lumber at the end of his shift as he did at the beginning. No lost motion can possibly develop. Working parts are of finest selected steel throughout. The operation is without rack or jar, eliminating any wear that would affect the setting accuracy.

Will set by 1-32″ up to 6″ at one manipulation of the setting block. Can be attached to any size Carriage, Rack or Screw.

Fully detailed in Bulletin No. 107

With this Machine You Can Cut 2,000 Feet More Lumber Every Day Next Year

It is our four inch Steam Set Works, and it will set up to four inches with one throw of the lever. Your setter has only to operate the controlling lever—the hard work is done by steam.

This extra 2,000 feet of lumber is not a guess of ours—it is what the users tell us they have actually obtained. Some have done better.

But even 2,000 feet extra every day at no increased operating cost to you, means a big addition to your profits at the end of the year, and it will a great deal more than pay for the machine.

440 Square Miles Timber Limits
on Georgian Bay, Ontario

To be Sold by Auction in Blocks of 5 to 36 Square Miles

On account of their President and Principal shareholders being engaged in other large enterprises, and not having the time to give to them all, THE PARRY SOUND LUMBER COMPANY, Limited, have decided to sell by Public Auction, to be held in the rotunda of the Board of Trade in the City of Toronto on the **Seventh Day of December, 1910,** all of the timber lands, mills and town property situated in the Town of Parry Sound also Tug Scow and full Camp Equipment for five camps. Ontario Timber Limits

TO BE SOLD

comprise some 440 square miles of licensed and deeded Pine, hemlock, spruce, birch and other timber. The licences from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows: Saw Logs, White Pine, $1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods, 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Montieth, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners. A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

Simonds Crescent ground Cross-cut Saws

SIMONDS CA SAW COMPANY LTD. VANCOUVER B.C. Simond Steel ST JOHN N.B. UNEQUALLED IN QUALITY AND UNIFORMITY MONTREAL QUE

"Best Cross-Cut Saws made"

This is not a hasty statement, but a well warranted unqualified one, made purposely to assure you that by buying a Simonds Crescent Ground Cross-Cut Saw you get a better cross-cut saw than any other saw maker makes; not relatively better for the price, but altogether better, in steel quality, in temper quality, and a far better saw because of the Simonds way of grinding it.

We furnish Crescent Ground Cross-Cut Saws, one-man or regular, with any style saw tooth.

Buy Simonds Crescent Ground Cross-Cut Saws.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, November 15, 1910 No. 22

Legal Interpretation of "Timber"

An important legal decision involving an interpretation of the word "timber" in a business transaction has been given by Mr. Justice Clement, of British Columbia, in the case of Swift vs. David. Lumbermen in British Columbia will be especially concerned in this judgment, as it reduces to a reasonably clear basis the meaning of a term which, in the past has always been open to dispute and has been the cause of many disagreements, and not a little disturbance to trade. Even in the other provinces of Canada it is natural to presume that the opinion of this eminent B. C. Judge will carry much weight and be recognized as a factor in future transactions. The dispute in question arose over the sale of some timber limits, upon which the plaintiffs claimed that there was not so much timber as they were given to understand during the negotiations. Under such conditions it fell to the lot of the Judge to enquire into all the vexed problems of log rules, and he is to be congratulated for not having permitted himself to become entangled therein. He looked at the situation finally from a very practical point of view, directing his attention largely to the question of what constitutes a proper cruise for the purposes of a sale. Setting aside the questions of log rules, he considered the probabilities of the case from a practical point of view. When negotiations of this nature are pending, it is natural for the owners to seek as high an estimate of the property as possible. Clearly upon such a basis it would be impractical to conduct a transaction. The owners should in the present case have foreseen this Had they done so, considerable unpleasantness and loss might have have been avoided. The plaintiffs in the case had sent out a cruiser with instructions to estimate the quantity of raw material, having in mind the actual market conditions. This kind of a cruise if carried out properly, His Lordship, held, would afford the only basis upon which to estimate the value of the limits. It was not the value of the limits as a speculation, nor the total amount of material growing upon them that should be considered, but only the actual present quantity of timber that could be manufactured and marketed satisfactorily by an actual operator. Such a method of valuation, if followed systematically might go a long way toward simplifying the exchange of timber properties. The speculative value is a value of the future and must be discounted in an actual sale. The timber which cannot be marketed to-day is worthless to the owner of to-day, no matter how valuable it may be rendered by the advent of railroads and the changes of demand.

Canadian Lumber Needs Protection

In the early days when pioneers were settling in the uninhabited sections of Canada they needed, more than anything else, cheap material from which to construct their dwellings. The Governments of those days permitted lumber in the rough to be admitted into the country free of duty. Those days have now passed in many parts of Canada, and in other parts, where settlement is still in progress, the facilities afforded by railroads and by the advances which have been made in methods of settlement have made it of little import to the farmer that he should have the benefit of foreign competition when he is purchasing his lumber supplies.

The necessity for a duty upon lumber coming into Canada, on the other hand cannot be denied. In fact, no serious attempt is made to deny it. The sole reason for its continued absence seems to be an unreasonable fear on the part of the Government that they may sacrifice the interests of the farmers. The farmers and the men who are settling in Canada to-day are, in the large majority of cases, men of sufficient means to pay for their lumber, a price sufficient to ensure a profit for the manufacturer. There is no question involved of taxing the farmer. The demand of the lumber manufacturers of Canada for a duty upon lumber coming from the United States is based upon two grounds, either of which should be sufficient to cause the Government to give the situation more serious attention than it has in the past. The most important reason of this demand is the fact that to-day, in all parts of the country, lumbering is being carried on, with few exceptions without any profit, and in many cases with a direct loss. Why do not manufacturers discontinue operating then? Their situation is peculiar. If they discontinue manufacturing and avoid the loss involved, they are obliged to face a greater loss on account of the heavy taxes they have to pay while holding their limits idle, and the serious loss involved because of the idleness of their expensive plants. This loss moreover is supplemented by the more serious one resulting from the unemployment of the men who look to the industry for their livelihood. Lumber mills and logging camps cannot be kept unoccupied and idle from year to year, except at a direct loss, and the owner has two evils to choose between. His choice depends largely upon his financial standing. If his capital or credit are good enough to permit him to continue, he operates as lightly as possible and in as advantageous limits as possible, and hangs on in the hope that better times may someday come when the Governments will treat him fairly or when, for a short time, financial conditions throughout the country will be good enough to enable him to recover a portion of the loss he has been sustaining. At the best, such a method of doing business is discouraging. If on the other hand the lumberman comes to the end of his resources—an event which has happened to more than one important manufacturer in recent months—he must simply go to the wall.

What is the only hopeful remedy for this state of affairs, and what are some of its causes? As to the causes they are not difficult to find and they are not of the Canadian lumberman's own making. The most important cause is the erratic American manufacturer who makes lumber in season and out of season, and when he has secured a fair price for some of his product in his own country, sends the rest over to Canada to be sold at a sacrifice rather than allow it to accumulate. The United States manufacturer has many advantages over the Canadian. In the first plce his stumpage is often cheaper, and it is of quicker growth. His labor cost is less, and above all else he can operate all the year round. He does not have to wait for the winter, like the operators in Canada.

When he thinks the market is going to improve he can commence producing. In Canada the operator waits for the winter, to take out his logs, and he waits for a year or two more to market the lumber after the logs have been taken from the woods.

As to the remedy for the situation, there is only one. A duty is needed on certain classes of lumber coming into Canada from the United States, and a duty of this sort would be all the more fair inasmuch as our own lumber going into that country pays a duty at $1.25 a thousand. The United States lumber which comes into Canada is from three main sources. Yellow or Georgia pine comes from the South. Ordinary and low grade white and red pine come from the middle northern States and fir comes from the Pacific coast States. The yellow or Georgia pine competes in Ontario with B. C., fir. Hemlock which is another wood coming into Canada from the States competes with our own hemlock. On the prairies, the cheap pine of the middle northern States, and the Washington and Oregon products compete with British Columbia lumber. Wherever one goes in Ontario, Manitoba, Alberta, Saskatchewan and British Columbia, he finds United States lumber being imported into Canada, and sold at prices which in a great many cases cannot be met in Canada. For instance, in Ontario to-day yellow pine is being sold at delivered prices for which Norway pine cannot be placed on the cars at the mill.

A duty on hemlock and yellow pine would go a long way towards remedying the situation and putting into the lumbermen of Canada sufficient heart to encourage them to operate their limits more extensively, and by so doing disburse large amounts of money in wages, which is being sent across the line to pay the wages of the laborers for work in United States mills and camps. Even a duty on western fir would not work the hardship which the farmers of the northwest are so fond of imagining. The amount of lumber used by an individual farmer would pay an infinitesimally small duty and this, spread out over fifteen years or more—the reasonable life of the lumber—cannot be said even to constitute a burden. When, for the lack of such a duty a great industry is facing stagnation, and is continually the victim of depression, there is no excuse for not affording a relief so effective and so safe.

A feature of the case which makes the claim for a duty all the stronger is the fact, that the lumberman is a victim of the tariff in connection with practically everything he uses. His machinery, tools, supplies for his mill and camp, everything in fact that contributes in any way to the manufacture of lumber is dutiable, yet the finished product has to be placed on a market glutted with the product from a foreign country, where labor and materials are cheap, and which pays no customs duty.

Algonquin Park Lumber Saved from Destruction

The action of the Government of Ontario in purchasing the Munn Lumber Company's rights to cut timber in Algonquin Park will be commended by all who take an interest in the preservation of this great natural park and in the conservation of the natural resources of the country. The price paid, $290,000 is a mere bagatelle compared to the benefit secured for the people of the province. The situation which confronted the Government in this matter seemed to be a very delicate one, as it involved either the spending of a large sum of money or the destruction of the value of the park. The Munn Lumber Company had rights, which had originally been purchased from the Government, and which included the cutting of pine, spruce, hemlock, black and yellow birch, cedar, ash and tamarac. These rights were not nearly so valuable some years ago as they are to-day. They could have been bought back by the Government ten years ago for a comparatively small sum. They were not exercised by the owners until the last summer. When the lumbermen appeared in the park there was a general outcry, and it became immediately evident that the Government would have to take definite steps to prevent the destruction which was threatened. For a short time it appeared as though the Government would be unable to settle the matter, as it was believed that the price asked by the Munn Lumber Company was greater than the province should be asked to pay. This view was forunately unfounded, and the Government has reached an agreement based on the price asked by the company, with a deduction of $10,000 for the privilege of remaining on the property long enough to remove some timber which they have already cut, and also the small quantity of pine which they may cut between now and January 1.

It will be a distinct relief to the people of Ontario to know that there is no further danger of the destruction of this park. In fact, the province is to be congratulated upon the fact that in addition to preventing any destruction the Government has decided to increase the boundaries of the park by adding 132 square miles to its extent. Now that lumbering on an extensive scale has been stopped in the park, there is no intention on the part of the Government to allow the timber which grows to maturity to decay and become of no value. A scientific system of forestry is contemplated, under which the forest growth will be thinned from time to time to permit the younger trees to grow to the most advantage. This it is natural to presume will result in a considerable source of revenue to the province.

Algonquin Park will now take the position for which it was originally planned. It will become virtually, as well as in name, a game and forest reserve. Its forest growth moreover will ensure for all time that the rivers of Ontario, so many of which have their origin within its bounds will have their water-shed protected. To the people of Ontario this protection of the water-shed is a benefit which cannot be estimated in money. It is insurance of the most effective nature against industrial decay. As a game reserve and great natural health and pleasure resort, the park has no superiors anywhere. Its woods are full of fur-bearing animals and animals of the chase. Its rivers and lakes are celebrated for their splendid fishing. In short, there cannot be imagined a more favorable district to be set aside as a national asset of this nature, and while the Government are to be commended for having solved this problem, they would have been entirely lacking in the performance of their plain duty if they had not done so.

"Financial Times" on Canadian Timber Projects

The lumber industry of Canada probably owes a good deal to the conservative habit of the English public, of looking into a proposition before investing. Considerable English capital has been invested from time to time in Canadian lumber projects, though not nearly so much as the situation warrants. Recently, however, there was a rubber boom in England, and indications pointed for a time to something similar in Canadian lumber. That this did not occur is due largely to the inquisitive nature of the English investor, as represented in some measure by that of the large financial papers. A boom in Canadian lumber might conceivably have worked great injury to the lumber trade, if it had been allowed to reach large proportions. What the Canadian lumber industry, like every other industry in the country needs more than anything else, is the intelligent interest of English men of means, who will come out to Canada, make a thorough study of actual conditions, and invest their capital when they have been convinced of the soundness of an enterprise. Lack of definite information was the cause, more than anything else of the apathy of the English public when recent lumber and timber proposals were placed before them. The information was apparently to be had only by those on the spot in Canada, and the English purses remained closed. The situation was set forth somewhat clearly by the London Financial Times, which dealt with the subject in part, as follows: "In view of the recent flotations of Canadian timber propositions in the London market and the talk of still more, we have made diligent enquiries in quarters intimately connected with the timber trade, with Canadian finance and with Canadian interests generally as to the immediate prospects of this particular line of business. The

special information we desired to elicit was, we discovered, particularly difficult to obtain, though it may be briefly described as such data concerning the financial results of the firms or companies already engaged in the lumbering business, as would facilitate the formation of a judgment as to the future prospects of new ventures in the same line. Definite data of this description is, we have ascertained, not to be had at the present time—which is a point to be recorded against any boom."

After dealing with the extent of the lumber industry in Canada the Financial Times says of the British Columbia situation:—"A few years ago the lumber industry was confined almost wholly to the coast districts, where the big trees attracted capital, but as population increased in the interior and in the prairie provinces the demand for lumber became greater, and sawmills were set up in many localities in the mountains to supply the new market. There are at present about 45 mills in the interior, with a combined output of about 280,000,000 feet annually, representing an investment of nearly $10,000,000. They pay out for wages and supplies $2,500,000 annually. These mountain mills look almost entirely to the prairie country for their market. Of 700,000,000 feet of lumber sold in Alberta, Saskatchewan and Manitoba in 1906, British Columbia furnished 360,000,000. The overseas shipment in 1906 aggregated 67,900,000 feet, the countries to which cargoes were sent, including United Kingdom, South America, Australia, South Africa, China, Japan, Germany, Fiji Islands and Mexico. The report further states that the timber cut for 1907 amounted to 840,000,000 feet, and that from 16 to 20 per cent. of the manufactured lumber is used locally. Now, contrasting these large figures with the statement we recorded on May 25 last, that a shortage of 100,000,000 feet was experienced in Saskatchewan and Alberta, and that that could be pointed to as a chief factor of the coming boom, we are forced to conclude that, though the shortage mentioned was no doubt evidence of brisk trade conditions, the demand was likely to be met with comparative ease by the saw mills already established in the country. It would only mean 50,000,000 feet for the British Columbian mills, or 5.91 of the capacity shown by the cut in other Canadian mills which supply the prairie provinces. Anything like a timbber boom would be consequently quite out of the question, and the talk about it could only proceed from the desire to organize such a boom while the British public was in the booming mood."

Further discussion of a general nature follows, and the article closes with the following:—"Canadians may easily be led to form too high an opinion of their country's lumber prospects by comparing its forests with the denuded timber areas of the United States. Compared with the United States, it has a monopoly in timber, but this monopoly does not extend into the international market. The world's timber demand is met from many sources besides Canada. Mexico is mentioned as one of the chief markets for the British Columbia coast timber trade, but there are huge forests in the Mexican Northwest, and the Mexico Northwestern Railway Company has just erected mills of a capacity of 100,000,000 feet a year, and is building a plant at El Paso with a capacity of 175,000,000 feet more. The company's total cut of 275,000,000 feet will loom very large when compared with the total shipment of 67,900,000 feet from British Columbia to all foreign countries, including Mexico, in 1906, referred to above. The company holds, we are informed, 3,400,000 acres of timbered lands, while the labor expenses in Mexico are stated to be much less than in Canada, the stumpage costing as little as 25 cents per 1,000 feet, whereas in Canada it runs into dollars. This is only one instance. Another is that of Russia, whose timber acreage, according to an American consular report summarized in our issue of sixth instant, shows that European Russia's timber area amounts to 549,800,000 acres, to which must be added 465,000,000 acres in Western Siberia; total, 1,014,800,000 acres, which is not very far below Canada's total (see Official Bulletin No. 21 , published in Victoria, B. C., in 1905) of 1,657,600,000 acres. So that, without detracting in any way from Canada's great timber resources, it must not be thought that these secure it any monoply in the world's markets."

Editorial Short Lengths for Busy Readers

That the tariff experts and politicians in the U. S. are more concerned about pulp and paper matters in their reciprocity proposals than anything else is abundantly clear. The tariff Board are making special investigations in regard to wood pulp, pulpwood and print paper, and their first report to the President will probably be on this subject Nert in importance in the schtme of reciprocity with Canada are lumber and citrous fruits. United States supplies nearly all of the citrous fruits consumed in Canada.

An order has been issued by the U S. Inter-State Commerce Commission suspending the tariffs on staves, headings and lumber, recently filed with the commission by the Transcontinental Freight Bureau's agents. The rates proposed in the tariffs suspended are considerable advances over the present rates from eastern points of origin to destinations west as far as Pacific Coast terminals. The tariffs were to have become effective on November 15, 1910, they are suspended until March 15, 1911. The defendants in the proceeding include all of the important inter-state carriers in the United States, over six hundred in number.

Six billion board feet of lumber valued at about $15,000,000 were destroyed in the recent forest fires in the national forests in Montana and northern Idaho. The total area burned over in this one district was put at 1,250,000 acres. The first rough estimate of the fire loss in the great timber district has been completed by officials of the Government. How much of the six billion feet can eventually be salvaged is impossible to predict. It is believed that last summer's fires either burned up or killed between one and two per cent. of the total stand of national forest timber. At the present rate of cutting from the national forests six billion feet is equal to twelve years' supply, but it is less than one-sixth of a single year's cut in the entire country, or enough to keep all lumber mills busy for something under two months.

United States Consul Willrich, of Quebec, continues to take a hopeful view of the pulpwood situation in the Province of Quebec, so far as it concerns United States importers. He claims that the lands owned by settlers who secured them prior to the passage of the recent act prohibiting the export of pulpwood, amounts to 3,000,000 acres, and that the siegnories of the province include about 2,000,000 acres of forest land. This he believes would provide about 50,000,000 cords of pulpwood which can be exported, or sufficient to supply the United States market for fifty years to come.

Latest reports from Ottawa are to the effect that if any reciprocal trade relations are to be entered into between Canada and the United States they will refer solely to the free interchange of natural products, with the possible exception of farm implements. So far as lumber is concerned—one of the most important of Canada's natural products—it would be very pleasant for Canadian lumber manufacturers to have free access into the markets of the United States, as the lumber manufacturers of the United States now have to the markets of Canada, but there is the preservation of the timber resources of the country to be considered, and it is a question whether the supply of timber in Canada would long remain standing if it were drawn upon freely by the consumers of the United States. Hon. Clifford Sifton, in fact, chairman of the Conservation Commission has given it as his opinion that the timber resources of Canada would suffice to meet the United States demand for only seven years after the supply of that country had been exhausted. The question apparently is not on all fours with other questions, which concern only the trade in products which can be manufactured without fear of exhausting the supply of raw material. If reciprocity in lumber is to be considered at all it would be advisable for Canadians to give minute attention, first of all to a proposal for the imposition of a duty on lumber coming from the United States, similar to the duty now levied upon lumber entering that country.

Algonquin Lumbering Terminated

Province will buy Munn Lumber Company's Right to Cut Timber in the Park for $290,000

The Ontario Government has apparently reached a solution of the vexed question arising out of the threatened destruction of timber in Algonquin Park by a lumbering company. At the conclusion of a recent council meeting, Hon. Frank Cochrane, Minister of Lands, Forests and Mines, gave out the following announcement upon the subject:

"It is well known that the destruction of the beauties and uses of the Algonquin National Park was threatened by certain timber licensees proceeding to cut and remove varieties of timber other than pine, which their licenses gave them the right to do. As soon as the devastation began an outcry arose, and the Government promptly requested the company to cease cutting in order to arrive, if possible, at some arrangement whereby, without injustice to them or the public, the park might be preserved to the people of the province for the uses to which it was dedicated by act of the Legislature.

"The company known as the Munn Lumber Company was asked to submit an offer to surrender its rights. Estimates and values of the timber were made by rangers appointed by the Crown. Negotiations have proceeded, and a settlement has been evolved, which, it is considered, should now be communicated to the people. The company agrees to accept $290,000 for the complete surrender of all its rights, pine timber and everything else, over an area of 350 square miles. It also agrees to remove its mills, to take up the iron on its logging railway, and thus the territory will come back to the Crown absolutely free from all rights of cutting, etc.

"The only temporary delay in this respect is that the company is given leave to remove some timber other than pine it had cut down when stopped, and the small quantity of pine it may cut in its operations now up to the first of January next.

"For these privileges the Crown insisted that the company should reduce its price by $10,000, it having originally asked $300,000. The quantity of timber found by the Government experts was estimated at 231,000,000 feet board measure, consisting of black birch, hemlock, spruce, cedar, ash, and some pine.

"The territory was set apart in 1893 to provide a public park and forest reserve, fish and game preserve, health resort, and pleasure ground for the benefit and enjoyment of the people of the province. A staff of rangers was placed in it, the game protected, and forest fires kept out. All this has entailed a large expenditure. Now the park is alive with game of all kinds, deer and beaver being very numerous. It has become a great pleasure resort. Thousands of people have visited it, and it is undeniably one of the most beautiful natural parks in the Dominion, if not on this continent.

"Several large rivers have their heads within its boundaries: the Muskoka, the Petawawee, the Madawaska, the Amable du Fond, the South river, and a network of smaller streams, besides which there are hundreds of lakes from the Great Opeongo down to the tiniest ponds, studded like emeralds all through the forest, and, therefore, the conservation of the water supply in this great natural reservoir has been deemed of the utmost importance.

"The problem presented to the Government was, on the one hand, the preservation of all these beauties and uses of the park, and, on the other hand, allowing the park to become a waste and withdraw its rangers.

"The Government has elected to preserve the park for the benefit of the public, to extend its area and protect its beauty and contemplated uses, and has taken this step in full confidence that public opinion will approve its action and the Legisature will vote the money.

"It may be well to state that when the park was formed there was no railway near it, and pine was the only commercially valuable timber. The commission that reported on the establishment of the park recommended that timbers other than pine should be withdrawn from the operation of the timber licenses, and this was done by the park act. Subsequently an agitation sprang up to have the rights of the licensees restored, and the park act was amended, restoring their rights for a period of thirty years, twenty years of which have yet to run, so that these park licensees have statutory rights that the ordinary licensees do not possess.

"It would have been an act of wisdom to compensate the licensees when the timber was first withdrawn, as at that time timber other than pine had little or no value. Unfortunately that course was not pursued, and now the value has greatly increased, particularly in that part of the park where this company's limits are situated, a railway running through them and mills having been erected, to which the timber can be taken with a drive of a few miles.

"The territory covered by the Munn Company's licenses amounts to 350 square miles, of which 218 square miles lie within the present limits of the park. It is the intention to extend the park boundaries so as to take in the remainder, 132 square miles.

"Of course, the revenue situation has been carefully considered. In the future, under Government management, the thinning out of the timber and the cutting of that which is matured will bring in a considerable revenue, probably sufficient in the course of time to return to the people the entire investment. A nominal charge is now made for fishing and guides' licenses. These might be increased and a charge made for camping permits and rentals of cottage sites. The fur-bearing animals have increased to such an extent that a reasonable number may now be taken year by year without detriment.

"From a variety of sources, excluding timber altogether, probably an annual revenue of $15,000 or $20,000 might be derived from the park, and this in itself will go a long way towards paying the interest on the money required to purchase the rights of the company."

Personal News of Ontario Lumbermen

Following the announcement by the Hon. Frank Cochrane of the purchase of timber licenses that cover one-seventh of Algonquin Park, another announcement regarding Rondeau Park is probable. The Minister has had this resevration under his consideration for some time and another attempt will probably be made to clear out of it much of the tangled and lodged treee growth, and to remove some of the matured timber that is now decaying

The Court of Appeal for Ontario has confirmed the judgment of the district Judge of Rainy river in the case of Rex vs. Johnston. Johnston was tried on a charge of perjury in connection with returns made to the Government, when acting as clerk for the Fort Frances Lumber Company. He was acquitted on the ground that the acting Crown Timber Agent before whom the return was made had no authority to administer an oath. The Court of Appeal upheld the decision of the lower court.

The death occurred recently of Mr. James Barnet Maclaren, of Ottawa. Mr. Maclaren was in New York on a business visit and had taken his wife and family. He was apparently in the best of health when he left Ottawa, but shortly after his arrival in New York he was taken ill and passed away soon after.

Deceased was the son of the late James Maclaren, one of the pioneer lumbermen of the Ottawa Valley. He was prominently engaged is business in Ottawa, being president of the Ottawa Steel Casting Company. He was in his forty-fifth year. Besides his widow and three young children, three brothers survive. They are David, president of the Bank of Ottawa, Albert and Alexander, of the Maclaren Lumber Company, Buckingham, and one sister, Mrs. Alloway, of Winnipeg.

J. F. Whitson, of the Surveys branch of the Department of Lands, Forests and Mines, and Prof. E. J. Zavitz, of the Forestry Department of the Ontario Agricultural College, are now at Rondeau Park. It is understood that they have been instructed to make a survey of the timber to be removed. Considerable of it is in a low lying section that is quite marshy.

When an estimate has been made of the work to be done it is quite likely that tenders will be called for, as was the case before when a large number of the trees were marked for removal. Such a protest was raised on this occasion that the tenders were cancelled, and the proposal as it was then was abandoned. No announcement is expected immediately in regard to Rondeau Park, but advantage is being taken of favorable weather to do the necessary preliminary work.

Mr. Geo. W. Hurlburt, resident manager of the Long Lake Lumber Company, at Maple Lake, Ont., is not only a successful lumberman, but a clever fisherman. He tries his luck continually in the waters of the Sequin river and its neighboring lakes. One day last August he went forth with a rod and line and upon his hook he placed a live minnow. This was one of his lucky days and before long he was struggling with a large black bass. When the fish was finally landed it was seen to be a beautiful specimen of the small mouth variety, and Mr. Hurlburt entered it in Toronto Daily Star competition. When weighted it tipped the scales at 6 pounds 2 ounces and among the entries it proved to be the largest. Mr. Hurlburt therefore won the Star's prize rod and has ever since been receiving the congratulations of his many envious friends.

Mr. F. H. Harris, formerly of Vicksburg, Mass., has opened an office at 105 York street, Toronto, as Canadian representative of the Chas. R. Ball Lumber Company, of Shreveport, La., U. S. A. The Chas. R. Ball Company manufacture long and short leaf yellow pine. They have three well equipped mills capable of turning out a total of 500,000 feet per day. Mr. Ball has recently made a business tour of South Western Ontario, and reports trade conditions as promising. The farmers seem to have had a sucessful year, and the implement and vehicle manufacturers are doing a good business. Mr. Harris finds a better condition in the yellow pine market in Ontario than in the United States. He is of the opinion, however, that it is time now for buyers to change from smoke dried to steam dried finish. When the rainy season commences in the south it becomes impossible to prepare smoke dried as successfully as in the dry season, and for this reason smoke-dried, though cheaper is not so economical from November on until the following summer.

New Electric Power Plant at J.R. Booth's

Important Economies Effected by Central Installation to Supply Energy to the Various Mills—Noteworthy Development at Ottawa's Big Plant

J R. Booth, of Ottawa, Canada's lumber king, whose mills' daily cut of lumber runs into a million feet, and who has just completed a new 5,000 k.w. hydro-electric installation, has for a great number of years been operating his scattered mills and other plants with waterwheels isolated in flumes about his large property. These many installations and many sources of power supply did not give an efficient development, so the decision was arrived at that the most beneficial method for all his requirements would be to use all the water he could at one point, and put in a hydro-electric development from which power could be delivered to the different mills for motor operation. So it was with this end in view that the present plant was started

S. Morgan Smith Turbines Operating J. R. Booth's Electric Plant, Ottawa

It must be understood that this is not the sum total of J. R. Booth's power at the Chaudiere, for on account of the nature of some of his installations it was impossible to change over to the hydro-electric plant. For instance, in the large pulp mill, he had installed some two years ago, waterwheels aggregating 2,000 horse power. This was a most up-to-date equipment and could not be sacrificed.

Then in the paper mill a steam plant had been installed of 1,800 horse power, of Robb-Armstrong horizontal type engines. This plant, too, will be kept on, as it is modern and efficient in every way, and also in that much steam is required for drying purposes in the manufacture of paper, it is well suited to the requirements put upon it. This new hydro-electric plant, as it is applied here, is the most advanced step in the application to lumber mills, for the source of power supply is isolated at one point, installed in the most efficient manner with nothing but first-class equipment, so the chances of a complete shut-down are very remote, indeed, and it is conceded to-day that individual drive is the most economical both as to efficiency and reliability, for if anything should go wrong with any part of anyone of the plants it is only necessary to shut off power on that circuit till the damage is repaired and not as heretofore to shut out the water from the complete mill. Anyone can well understand the great loss a mill would be put to if for any reason it was necessary to shut down completely, as is bound to happen at times with the old style of power supply

The hydro-electric plant is to supply power to his various mills, such as pulp mill, sulphite mill, paper and paper board mills, saw mill, acid plant, machine shops, etc. All these industries are situated in the immediate vicinity of the power plant.

This development is some three hundred feet below the Great Chaudiere Falls, on the north side of Victoria Island, at the Chaudiere, in the City of Ottawa. Intake is made some 800 feet above the station site. This development when complete will have an ultimate capacity of 9,000 k.w. Water is carried in a closed flume to the power house, giving a head of 27 feet. This is an interesting plant inasmuch as very great quantities of concrete and steel were used on account of difficulties of construction, the power house being built, as it were, on the sheer wall of rock.

S. Morgan Smith waterwheels are used, each unit being made up of four 51-inch horizontal type wheels of 700 k.w. each, connected together upon one shaft. These wheels are rated upon a head of 27 feet at 160 r.p.m. The power house proper is some 125 feet by 40 feet. At present there are installed two Allis-Chalmers-Bullock, 2,500 k.v.a., 600-volt, 60-cycle, 3-phase revolving field type generators, direct connected to the S. Morgan Smith wheels, and one A.C.B. 450 k.w., 125-volt d.c. exciter, direct connected to an S. Morgan Smith waterwheel, controlled by a Lombard type D governor. Several generators and small motors are yet to be installed for special purposes.

The governors in this installation are known commercially as the Type N-14 governors, made by the Lombard Governor Company, of Ashland, Mass. These governors develop 60,000-foot pounds in the act of opening or closing the waterwheel gates. They develop this amount of energy in two seconds, or may be adjusted for slower operation.

Control from the switchboard is arranged i nsuch a way that it is possible, by manipulating fast and slow switches, to make the waterwheels run faster or slower at the will of the operator. This device is of great use in getting the generators into the same angular position for parallel operation. In fact, the distant speed controller on the governors permits of such accurate adjustment of operating speed as to allow of very deliberate paralleling of the generators.

A noticeable feature in this power house in the arrangement for handling the equipment—a large travelling crane mounted upon tracks, which run the length of the power house, and out at one end upon suitable supports. The whole end of the power house is formed of windows, which may be readily removed. Aside from this valuable feature of facility in handling heavy equipment, first class lighting of the power house is secured during all hours of daylight. The construction and installation of this development has been under the direct supervision of Mr. Fred Booth, Mr. Smith being superintendent.

Reorganization of Spanish River Pulp and Paper Company

A reorganization of the Spanish River Pulp & Paper Mill has been effected and arrangements have been definitely made for the building of a paper mill and a sulphite mill, which will cost $800,000. The company already have a splendid pulp mill which has been in operation since 1906, and which turns out 150 tons of pulp a day. The new paper mill will have a capacity of 200 tons of paper per day. Building operations will be commenced next spring. The engineers and architects for the building will be Messrs. Joseph H. Wallace & Company, Temple Court Building, New York. The reorganization of the company is being managed by the Dominion Bond Company, of Montreal and Toronto. Mr. L. M. Wood, the Toronto manager, being in charge of the negotiations. This company will make an issue of bonds for $1,300,000, which will be sold to the public in England. Mr. W. J. Sheppard, of Waubaushene, will continue as president of the company, and the new board will be composed of all the old members and several new ones. The members of the old board will compose about two-thirds of the new board. The timber limits which the company operate are held under lease from the Ontario Government, and are reported to contain about 13,000,000 cords of pulpwood. They cover about 6,000 square miles. The company also own a water power with a capacity of 25,000 horse power. Since the pulp mill started operations the company have been selling their product in Wisconsin and other northern States, and have had a successful business. During the years 1908, 1909 and 1910, the demand for their pulpwood extended greatly, and they were able without the least trouble to sell their complete output. The output of the paper mill will be sold in the United States.

The mills which the company propose to erect will be as good as any now in existence. In order to make sure that they get the best, they are sending their manager and engineer to look over what is considered the best mill in the world, near London, England; and also to take in at the same time the best sulphite mills in Norway and Sweden. As soon as this has been carried out they are ready to build. In fact they intend to have their contracts for machinery let by January 15th next.

Chris. Murphy, of the firm of Murphy & Adliff, tie contractors, who operate a camp at Serpent Creek, in the Rainy River district of Ontario, 15 miles north of Flint Siding, on the Pee Dee, reports that the camps have been in operation for two months, and the work of making ties will be continued until the last week in April. Altogether 55 men will be given employment and 100,000 ties will be taken out for the Canadian Pacific railway. "We anticipate a record-breaking season and look forward to cold, but favorable weather throughout the winter," stated Mr. Murphy. The months of September and October have about made a record in the way of fine weather. It has been almost ideal for the taking in of winter supplies.

Slack Cooperage Plants Moving South

Michigan and Wisconsin Industries Coming to the End of their Resources—Increasing Importance of the Gum Stave—Resume of Trade Conditions Prevailing To-Day

The shifting scenes in the slack cooperage business in the States is of particular interest to the Canadian interested in this line of the lumber business for the reason that it presages a greater prominence for the slack cooperage mill in Canada in the years to come.

Michigan, Wisconsin and parts of Minnesota have for years held the distinction of being the leading states in the production of the slack stave. The centre of the industry moved gradually north from Ohio, Indiana and Illinois and a few other states in that section, but to-day those who are studying the business closely believe that Michigan, and in fact, the entire northwest will soon be compelled to close all of their mills and the slack cooperage buyer will have to look to other sections for this stock.

It is almost pitiful to travel over Michigan to-day. There are the remains of old sawmills, weed and vine covered, desolate looking places once the centre of large lumber operations, now a shelter for the birds to make their nests. Those saw mills now in operation are only the shadow of the large mills that some years ago flourished in that section. The stave plants remaining, with but few exceptions, are operating in a small way only, many of them with only two or three years to run, planning to discontinue at the end of that time or move to an entirely different section of the country.

The slack staves of Michigan are in fact moving into southern territory, into Arkansas, Missouri, Mississippi, Alabama and Louisiana. In this part of the States the timber suitable for this sort of timber products is plentiful, and while that section is coming to the front as the centre of the slack cooperage industry, the Northwest is diminishing in importance. The fact that gum staves are being used by many slack coopers to-day is evidence of the truth of these facts. The south has large quantities of this timber. The slack cooperage manufacturer is beginning to utilize gum in his mill and is shipping the gum stave in large quantities to all parts of the States and to Canada.

This change in the complexion of the slack cooperage business of the States will add to the importance of the Dominion in this particular as many parts of the northwestern territory to better advanage on account of transportation charges other condition being equal.

When the northwestern mills find it unprofitable to operate in that territory, the Canadian manufacturer will begin to feel the increase in his business. Not long ago one of the largest stave manufacturers in Michigan stated to your correspondent that he would never again have as many staves on his yard as he has to-day. Another manufacturer, while not as large, yet quite an important factor in the business, said that he intended to wind up his business within another year as the timber available would not allow him to operate to advantage. He is planning to establish a saw mill in British Columbia.

Diversities of Trade Conditions

The slack cooperage business in the States to-day has some very interesting situations. The hoop and heading market is quite strong, while the stave market is far from satisfactory. The hoop man has been almost unable to supply the demand for hoops, and he is getting increased and more nearly satisfactory prices than at any time for the past five years. It was three years ago when your correspondent, in a conversation with several hoop men, was told that the hoop business would never be what it has been in years gone by. At that time prices were low and, of course the demand was light. These hoop men said that the whole trouble with the hoop business was that the steel and wire hoop had cut into the business to the extent that it would only be a question of time when there would be no demand for the wood hoop, while the wooden hoop manufacturer would be left with a well equipped mill on his hands and nothing for it to do.

This only goes to show that even good business men sometimes weigh their own problems on the wrong scales

To-day the hoop is selling at high prices and many manufacturers could sell twice their capacity, if they could get the hoops. There are practically no patent hoops of good quality to be had on the market, either for immediate or future shipment, at less than $12 per 1,000 based on Minneapolis, which is the big elm hoop centre on account of the large flour mill operations there. Hoops are moving at this high price, for the coopers realize that hoop prices will be high and perhaps higher than at present for the next six months. They realize that there is a scarcity of hoops, and that they must pay the price. It is hoped that prices will not go beyond a fair level, as it would be decidedly detrimental to the cooper to be compelled to make a higher price on his barrel. The tendency is somewhat away from the barrel as a package for flour anyway, and nothing should be put in the way to encourage this, but rather an effort should be made to increase the trade with the flour mills of the country for the barrel is without question an ideal package for flour and superior to any other in the essential points.

The slack handling men have had somewhat the same experience as the hoop men. The past three or four years have been hard ones for the heading mill. Prices have been off, with no demand. The high price of 11 cents, which was paid in Minneapolis for flour barrel heading in 1906, dropped off to 5½ cents to 6 cents, and very little sold at even that low figure.

About a month ago the heading manufacturers of Michigan and Wisconsin awoke to the fact that there was very little basswood heading on hand, and with an increasing demand, which is in evidence at present, these manufacturers will not be able to supply the market. As a consequence of this, heading prices have advanced.

The fact is to-day only a few fortunate holders of heading are able to make quotations at all. Coopers are anxious to contract for all the heading they will need between now and the first of January, as the new stock will not be ready for the market before that time, and it is estimated that the old stocks will just about be cleaned up by January 1. For this reason the price is holding firm, and heading is selling at about 8 cents at the mill.

Slack Stave Makers Still Holding the Sack

Slack stave manufacturers are the only ones who are holding the sack, so to speak. They have never rallied since the panic of 1906. Prices are still too low to admit of a fair profit in the business, and the demand has not increased as many had hoped it would.

There seems to be no doubt but that there was an over-production of this product prior to the panic of 1906, and to this has been added what stock has been manufactured since, for some mills seemingly cannot or will not shut down and wait for better conditions fearing that the other fellow will get entirely too much of the business.

Yet there are signs of improvement in the slack stave market. Prices are a little better, as more manufacturers are holding for their prices rather than selling at the buyer's price, than was the case six months ago. On the other hand it is still necessary for the manufacturer to use judgment in operating his mill, keeping the production down to a minimum so that spring will show a decided improvement in the business. The apple crop in the States this year was not at all satisfactory, and apple shippers did not take as much No. 2 stock as it was estimated they would. The flour mills are not running to capacity and this has a bad effect upon the market. However the glass factories and a lot of miscellaneous manufacturing plants, including the potteries are running to good capacity and a large quantity of stock is being moved in this way.

The National Slack Cooperage Manufacturers' Association, will hold its meeting in Chicago at the Auditorium Hotel, December 15 to 17, and plans are being made to estimate the amount of cooperage stock, staves, heading and hoops, on hand at this time. This may have a good influence on the trade, and when the stave manufacturer sees how many staves are being held and how many may be manufactured during the next sixty or ninety days, he may be induced to curtail production in the hope of getting a higher price for his stock.

The tight stave market is having some trouble all its own. Prices have gone up, largely due to the fact that there is a smaller supply of staves on hand than there were at this time last year. And this too in the face of a rather active market. Tight coopers all over the country have been, and are to-day, very busy. This has given an opportunity to work off some of their old stock and has put many of them in the market for new contracts.

In the West and South, tight stave buyers have been willing to pay the higher price for staves as they could get a corresponding increase for their barrels. In the east this has not been so. The cooper still feels there that he cannot get a higher price for his barrel, and is putting up quite a strong kick at the higher stave prices. On the other hand the stave man knows that his product is worth what he is asking for it, and he is unwilling to contract at a lower price.

The heading market is quite active among tight cooperage stock buyers, and the chances are greatly in favor of a shortage in this product before the year is out. The low prices of the past few years have had the effect of shutting off production, and this has at last begun to show results.

The tight cooperage stock exporter is also having troubles all his own for the reason that the manufacturers in the States are asking prices that are quite out of line on the other side. Foreign buyers are fairly well supplied with stocks and cannot see the necessity for higher prices. Until the foreign market is pretty well cleaned up on old stocks it will be difficult to secure any great volume of business for export.

Quebec Province Lumber Affairs

Can Chemical Pulp be Made Profitably from Saw Mill Waste?—Pulpwood Export—Price Brothers Extensions

Editor "Canada Lumberman":

The manager of a sawmill in the Province of Quebec, writing to me, asks: "Do you know of any firm using slabs and edgings, with the bark on, in the manufacture of common paper?"

Slabwood delivered at a chemical fibre mill, by rail, is usually peeled at the point of shipment. Slabs are being shipped at the present time, for pulp, from Newboro, Ont. The enterprise consists in rescuing pine slabs from Newboro Lake, which were piled up in the water there many years ago, as a foundation for lumber piles. They are shipped by barge to Wadington, N.Y. Thence by rail to the Remington-Martin Paper Co. at Norfolk, N.Y. Newboro Lake is one of the Rideau system, which is connected by canal with the Ottawa river and Lake Ontario. The mill which sawed out these slabs was erected ninety years ago, when the great pine forests of Ontario were first being cut over, and ceased operations about thirty years ago. It is estimated there are from 80,000 to 100,000 cords of the submerged slabs.

The Parsons Pulp and Lumber Co., Parsons, West Virginia, in answer to my inquiries about slabs for chemical fibre, write as follows: "We use spruce and hemlock slabs with the lath stock taken out, and in sizes from 18 inches to 4 feet long. We buy them peeled. The price depends upon how far they are from our mill, our aim being not to have them cost us over $6 per cord delivered." I may say in passing that the above-mentioned mill has a daily capacity of 60 tons of sulphite pulp and uses the by-product of seven different sawmills. Also, it is situated in the foothills of the Allegheny mountains and in close proximity to a large number of sawmills. The slabs are delivered, presumably, by rail. I have mentioned this mill particularly on account of making a good grade of chemical fibre exclusively from mill refuse. Further, in 1908, West Virginia ranked second among the States in the output of spruce lumber, surpassed only by Maine. It stood fourth in the amount of hemlock lumber cut, first in yellow poplar and fourth in basswood; first in cherry and second in chestnut. The above-mentioned woods, with the exception of chestnut and cherry, are all available for paper making.

Now we hear a great deal about the conservation of our forests, "how to take precautions against fires," "do not cut the small trees, let them grow," "our waning timber supply," etc. How about the waste at the sawmill? There are thousands—perhaps millions—of cords of pine, hemlock and spruce slabs that are consumed in the burners annually for want of an available market. The above-named species, in the form of slabs, can be converted into chemical fibre. In 1908 250,000 cords of slabs and other mill refuse were used in the pulp mills of the United States, at an average value of $4.26, only about half the average value of pulp cordwood. Spruce and hemlock supplied most of this material, while the remainder was chiefly pine. There is undoubtedly a large field for the development of methods which will profitably utilize mill waste in the production of pulp. I see no reason why a sulphite mill using slabwood should not be a paying proposition, providing the situation were as follows: First, situated on a line of railroad, and second, in a district where sufficient slabs could be obtained, within a radius of fifty miles, to furnish a mill with a minimum daily capacity of 25 tons; from that up to 100 tons. Under the above circumstances the fir slabwood of the Pacific coast mills and the pine, hemlock and spruce slabs of the mills farther east could be used to advantage for pulp. There are a number of sawmill owners in the United States and Canada who make wood pulp in connection with the manufacture of lumber. The purport of this letter is to call attention to the waste at the mill—refuse going to the burner that otherwise might be made into pulp, and eventually into paper.

I quoted the letter from West Virginia because the mill seemed too far south to be within the pale of the present pulpwood controversy. If this firm can make money turning out chemical pulp exclusively from slabs, why cannot a mill, under similar conditions, do as well in Canada? While we are talking about the conservation of our forests and the wasteful destruction of timber, let us not forget the waste going on at the lumber mills. Geo. B. Oberton, North Bangor, N.Y.

Mr. F. W. Avery, of the Riordon Paper Co., Ltd., reports that all the hardwood lumber his company manufactured this year has been sold out. There is very little left to be shipped. He had more hardwood on hand a year ago. Mr. Avery adds that prices are better than in 1909, and the outlook for trade is very bright. Prices are not likely to decline. The firm cuts about 5,000,000 feet of birch a season, and there is no intention to increase or decrease the quantity in any line of hardwood.

The cut of logs tributary to the Vancouver sawmills has been heavier this season than in previous years. For the seven months ended July 31, 1910, the logs scaled amounted to 346,574,000 feet, an increase of 93,574,000 feet, as compared with the first seven months of 1909, says a U. S. consular report.

Price Brothers to Have 150 Ton Paper Mill

Further information received regarding the extension of the business interests of Price Brothers & Company, Ltd., Quebec, is to the effect that the new paper mill at Jonquiere will have a capacity of 150 tons of newsprint daily, and will consist of the usual ground wood pulp, sulphite pulp and paper mills. The available head of water at the mill site is 282 feet, which will give some 14,000 horse power.

The mills will be of fire-proof construction throughout, and will be equipped with the latest approved machinery. It is expected that by the spring of 1912 paper will be on the machines. Mr. George F. Hardy, of New York, is now at work designing the plant. Mr. Oswald A. Porritt, for a number of years managing director of the Jonquiere Pulp Company, and the Price Porrit Pulp and Paper Company, will be general manager of the mills.

The company have acquired a large tract of land in the immediate vicinity of the new mill site. On this tract of land, which is very suitable for a townsite, houses, cottages, etc., for employes will be erected, and it is expected that a town of considerable dimensions will soon take the place of what is now farm land. The mills' name will be "Kenogami Paper Mills." as it is from Lake Kenogami that the river flows, and the present postal address is Price Brothers & Company, Ltd., Kenogami Paper Mills, Jonquiere, P. Q. The mills are situated about ten miles from Chicoutimi and twenty miles from St. Alphonse, with railway connections to each town. Both of these ports are on tide water, and at St. Alphonse the largest ocean steamers can tie up alongside the wharf. It is expected that the new mills will provide work for about 800 men, beside the men employed in the woods and logging operations.

The Benefit of Pulpwood Export Prohibition

The prohibition of the export of pulpwood from Quebec is commended forcibly in a letter written by Wm. Little, of Westmount, Que., to the Financial Editor of The Montreal Star. The letter bears so interestingly upon the lumber interests of the province that we reproduce it in full, as follows: "I am sure that all right-minded Canadians will note with satisfaction the favorable report of the Laurentide Paper Company for the year ending June 30th, 1910, which shows the remarkable profits made by this company during the past season, having increased its earnings from 9.02 per cent. on capital for the year 1908, and 12.40 for 1909, to 23.20 for the past fiscal year, ending June 30, 1910.

"This report shows that the net mill profits from ground wood, sulphite pulp, paper and cardboard was $669,802, and from lumber and miscellaneous $105,631, making total net mill profits of $775,523, which, after deducting bonds and other charges, amounting to $259,219, left $516,304 as net profits for the year.

"When it is seen that the timber lands that supplied the material from which these profits were derived are inventoried at $609,713, which is comparatively little more than the net profits for the year, $516,304 (and actually $165,810 less than the total mill profits, $775,523), and when it is further known that these mill profits exceeded the entire revenue of the Province of Quebec from timber dues for any year in its history, except that of 1906, which was $776,901, the last reported year, 1907-1908, being $721,984, one may realize to some slight extent the frightful sacrifice the country has suffered from allowing such valuable property to be destroyed by fire and alienated to foreigners for the merest trifle.

"And while we can all rejoice at the fact that these handsome profits go into the pockets of our own people, this is, however, only a part of the benefit derived by the country from this well-conducted enterprise, which doubtless pays out annually from three to four times the amount of its profits, or, say, from one and a half to two million dollars in wages, and employment to labor at home in the preparation of this material for market.

"And although these facts are well known, it is lamentable to find gentlemen, supposed to be of sound mind, remonstrating with the government against its commendable action in prohibiting the export of this pulpwood material, which, together with our water-power, is our chief national asset."

Hon. Jules Allard, Minister of Crown Lands for the Province of Quebec, states that the legislation put into force some months ago, limiting the exportation of pulp wood cut on Government lands, is having its effect. Several prominent paper manufacturers of the United States are negotiating for sites for pulp mills, and it is expected that within the next year several new mills will be established.

In 1909 Quebec exported nearly $1,000,000 worth of pulp wood, the actual figures being $949,549, this being the second most valuable export from the province, an increase in two years of over 100 per cent. The exports of the product to Great Britain in 1908 amounted to $847,176, to France, $82.213, and to the United States, $10,000, a decrease from $38,700 in 1908.

Lumber Matters in the Law Courts

Important Interpretation of the Meaning of the word "Timber"—Status of an Acting Crown Timber Agent

The judgment recently given by Mr. Justice Clement, of British Columbia in the case of Swift vs. David, in which he awarded $171,500 and costs to the plaintiffs for shortages of timber on claims sold by Mr. Lester David to E. Swift and his associates in the Canadian Western Lumber Company, is of great interest to lumbermen, and we publish the reasons given by His Lordship herewith in full, as follows:

"The figures upon which my judgment is based are enclosed hereto, but some explanation of them and of the general principles which I have laid down for myself in deciding in this case is due to the parties. Under the circumstances here I construe 'timber' as meaning what should be included by a cruiser sent out by an operating firm or company desirous of ascertaining their available raw material. The result of such a cruise should be honestly set down as an asset. The timber about which these parties were contracting was entered as an asset in the company's books to the extent in feet and money set out in the statement of April 30, 1907, and attached to the agreement sued on.

"The proper point of view, therefore, in my opinion, is not that of the speculator in timber lands or the optimistic seller, but of the actual operator who looks to present conditions. Mr. Rankin, one of the plaintiff's witnesses, put it fairly and correctly when he said: 'I considered everything I could get on the market,' and in another place, 'a fair cutting estimate.' Acting on this principle I have included 'dead and down' as estimated by plaintiffs cruisers, and have also in one instance allowed a large estimate of shingle bolts because I believe and find that the plaintiffs cruisers have in the main cruised with intent to arrive at a correct estimate of what these plaintiffs could get on the market, and it appears that 'dead and down' and shingle bolts may to some extent be profitably marketed. Pils and poles I have not considered. There is no evidence that they can be profitably marketed from these lands and it is besides practically impossible to reduce any of the estimates on this head to board measure.

"It will be seen by the annexed statement that I have rejected the estimates of defendants' cruisers I do so mainly for the reason that the principle which I have adopted as correct was palpably ignored. Mr. Olts, one of the defendants' witnesses, testified that he cruised 'everything there was on the ground, under a specific direction to that effect from Mr. Walker, who has charge of this litigation for the defendant. Olts didn't cruise it to see what about taking the timber out.' In short, he and the other cruisers for defendants cruised without regard to the two crucial tests, costs of logging and market price; in other words, without regard to present- conditions. In saying so, I do not wish to cast reflections upon the competence or honesty of defendants' cruisers. They acted, I think, under instructions, but the fact remains that they cruised in such a way that their results are of very little use to me in this case, however, honestly their work for their employer was done. Then again they adopted a system of cross-verification which in its result practically put them all in the same boat, as showing identity of aim.

"There is a good deal of uncertainty, too, as to the areas actually cruised by defendants' cruisers. They had not the data which plaintiffs' cruiser had. They cruised moreover on a sixteen foot log basis, giving larger results, as generally admitted, when in fact there is practically no such log in the British Columbia trade. I refer to these matters for fear it might be thought that I consider them of no importance. They are matters to be taken into account, but in view of the general system pursued as above outlined, they do not bulk so large as they otherwise might.

"In the result, therefore, my judgment as to the amount of timber upon the tracts in question here is based upon the estimates of the plaintiffs cruisers. Recognizing that the onus is on the plaintiffs to satisfy me affirimatively that there is a certain shortage I have had in view as to each tract the point where I could say I am satisfied that the timber on this tract does not exceed so much. It seems to me not unfair to debit the plaintiffs with their highest cruise in each case and that is what I have done with something added to make good measure. In some few instances the figures appearing on the estimate sheets put in at the trial are modified by the evidence, but on the whole I have taken percentage deductions with a large grain of salt. I have not taken any account of differences in the scales which the various cruisers were in the habit of using, Doyle's, Scribner's, B. C., etc., because I can find nothing sufficiently tangible in the evidence to warrant me in saying that the work of cruisers is appreciably affected thereby. In actual scaling of logs, there is, of couse, a difference, not very clearly brought out in evidence, but as the witnesses say 'crusing is a different proposition' and the small variations in the different scales cut very little figure.'

"I can find nothing in the evidence to warrant a finding that the plaintiffs at any time accepted the properties in dispute or any cruise or other verification of them or any of them as correct, or that they did anything to work an estoppel.

"Nor can I accede to Mr. Bodwell's argument that the just proportion which defendants agreed to pay in case of a shortage, is to be arrived at by assuming without evidence that some assets of the company were accepted as worth the figure set out in the statement, leaving the timber lands to be taken as acquired for 19c per M. With all respect for the earned counsel, I think the suggestion too fanciful for serious consideration. In my opinion, the language of the guarantee shows with sufficient clearness that the defendant was to pay for any shortage upon the various classes the value per thousand respectively specified in the statement. How one would arrive at a just proportion if one or more of the classes had overrun the estimate does not arise here on the facts for there was, I find, a shortage of at least the amount mentioned in the annexed statements in respect of each and every one of the specified classes.

The Hull branch of the Bank of Montreal has entered action through its attorney, Mr. T. P. Foran, in the Superior Court, to recover the sum of $6,740 from the Lowe Lumber Company, which was recently burned out, suffering the loss of its mill and machinery, together with a large quantity of lumber. The money covers advances said to have been made to the defendant company whilst it was in operation.

The Importance of Destroying Slashings

Editor "Canada Lumberman":

Your issue of October 1st, 1910, contains eloquent figures showing that much work is being done to check forest fires. Over $60,000 expended in British Columbia during July, but in the same time a loss of over $350,000 means that some effective work is required.

Another point which can start "True Canadians" thinking is afforded by the statistics in the same issue, as follows: "Statistics show that, up to date, the amount of lumber manufactured in Canada is equal only to one-seventh of the amount that could have been manufactured out of timber destroyed by fire.

There is certainly room for improvement, and I wish to submit for the consideration of those interested, as well as to executive authorities, a method of protection found very effective, on a small scale, which apparently would be equally as effective in the most exposed parts of the country. This consists in burning at once, when the chopping is done, in the fall, winter and spring months, all branches, tree-tops and rubbish. Once the bon-fire is started this rubbish will readily burn without difficulty. Small fires can be kept going close enough to each other, so that the traveling will not be great enough to inconvenience the operation.

The bush is left clean, facility in logging alone almost pays for the surplus labor of burning the refuse, and on timber limits where a second growth is expected, the soil is left well prepared for it. Inspection of forests should be performed with this in view, in each district, and all south hillsides close to railroads should be cleared. If a fire originates from any cause the work of the fire brigade will then be effective. They can travel through the woods with ease and fires will not propagate with such rapidity that a reasonably equipped force cannot control them.

The Government could encourage such clearing by a reasonable bonus and require it to be done in all districts where found necessary by the inspector.

N. J. Millette.

The advisability of permitting sawmills to be operated in the recently established forest reserve on the eastern slope of the Rocky Mountains is being discussed by Dominion Superntendant of Forestry, R. H. Campbell and by Forestry Inspector, C. W. Knechtel, both of whom recently visited Calgary for the purpose of investigating this and other forestry queston. Mr. Knechtel favors the presence of a few sawmills in the reserve to be kept under rigid inspection. His belief is that it is better to permit the sawmills within the reservation than to compel them to remain on the borders, where they would be compelled to cut every stick of timber to get enough raw material. It is possible that as a further protection from fire the forest will be divided up into sections, the boundaries of which will be rivers and streams and artificial fire guards.

The timber berths purchased by Chappell Brothers, of Windsor, N. S., from W. K. McKean, in Bonaventure county, Quebec, near Chaleur Bay have a splendid location from an operating point of view. Four large drivable streams run through the different sections of these limits, and there is no point on the property that is over four or five miles from a driving stream. The Atlantic and Lake Superior Railway line also reaches different sites of the property so that shipments by rail or water are easy The leases have the advantage of being perpetual in their character and not limited, as in the case of lumber properties in New Brunswick. The Chappell Brothers propose to start operations on two of the berths this coming winter and will sell a half interest in the remaining berth.

Grading Rules on Pacific Coast

Comparison of Methods Adopted in British Columbia and the Western States—Actual Difference not Extensive

In an interesting article in The Timberman, M. C. Cantrell gives a comparison of the grading rules of British Columbia and of the Coast Associations, in the course of which he says:

"It is generally believed that we make a great many more details or kinds of stuff than B. C., but the actual difference is not great, as will be seen from the following recapitulation of the number of details published on the official sheet of each association:

Association.		British Columbia.	
Ceilings	24 details	Ceilings	12 details
Grooved roofing	24 details	Floorings	6 details
Floorings	5 details	Rustics	8 details
Rustics	8 details	Partition—Same as our double-faced ceiling.	
Partition	None		
Drop siding	2 details	Drop siding	2 details
Bevel siding	None	Bevel siding	2 details
Shiplap	1 detail	Shiplap	1 detail
Grooved roofing	1 detail	Grooved roofing	None
Batts	4 details	Batts	None
Total	45 details	Total	33 details

"We make 5-16, 7-16, 9-16 and 11-16 in. ceiling, and B. C. makes only 7-16 and 11-16, which accounts for twelve details.

"In setting forth the general instructions, rules and regulations of grades, B. C. employs only about 1,600 words against 8,500 words employed by the Association. We use about 80 rules, against 23 for B. C. General instructions are the same in each case. But we describe every defect in character and size, while B. C. gives absolutely no description of any defect. We make a decided distinction in the grades of flooring and ceiling, and another distinction in grades between fir and spruce, of the same kind of lumber, while B. C. covers both flooring and ceiling, in both fir and spruce, with one rule, if rule it may be called. In other words, B. C. covers all grades of floorings and ceilings in fir and spruce by three rules, while we use eight specific and distinct rules to cover the same product.

"There is one instance only where the rules of the Association and B. C. are identical, and that is on factory lumber, which is about the least important item in the list. Barring this one exception, the B. C. manufacturer, it appears to me, has a far greater advantage over the purchaser than the Association manufacturer, as it specifies the exact number, character and size of defects admissible in each grade, therefore must adhere to it. But B. C. may vary this to suit the occasion, and the purchaser, in the absence of a special contract, must put up with it.

"They may not do this, as their grading may be perfectly uniform. But to say the least, unless the prospective purchaser is familiar with their manner of grading, he would not know from their printed rules what he was going to get until it arrived. Not so with the Association.

"Over here the intending purchaser can take the rules and select grades in exact accordance with desires or requirements.

"As to standards in sizes, the only difference of importance is in floorings and finish stock. We finish 1 in. flooring to 3-16 in. and 1¼ to 11-16 in., and B. C. finishes the same to ¾ in. and 1 in., which is quite a saving in both timber and freights.

"In finishing stock we run 1¼ in. to 1 1-16 in., 1½ in. to 1 5-16 in., and 2 in. to 1¾ in. B. C. finishes the same to 1 in., 1 3-16 in., and 1⅝ in.

"The following items, manufactured by the Association and B. C., will work interchangeably, as specifications are the same: Drop sidings, shiplap, V and channel rustics, 7-16 in. and 11-16 in. ceilings and dimension stock.

"On novelty rustics we continue the bevel to the upper edge, and give the rabbett an angle to fit; and B.C. cuts a right-angled rabbett, and runs the first half-inch of the upper edge parallel with the back, to fit the rabbett. Our bevel sidings are finished 3-16 in. thin edge and one-half in. thick edge. B. C. runs the thin edge 5-32 in.

"The Association gives finishing sizes of a number of items not mentioned by B. C., such as pickets, flats, and O. G. batts, lath, etc. We make a difference in grades between fir and spruce, in all kinds of stock, while B. C. covers both timbers with the same rules.

"The Association and B. C. have practically the same rule for No. 1 and 2 vertical grain stepping, but B. C. adds a flat grain stepping, which we do not mention, and puts it and finish under the same rule, which raises the quality of finish above ours.

"Although B. C. makes no reference to car materials of any description, it is presumed that they manufacture it over there, and grade under special rules.

"There is one practice among the B. C. mills that I think could be followed to a good advantage over here, and that is "backing out," or grooving the back of many kinds of finished stuff. They back out all floorings, drop sidings and 11-16 in. ceilings. As freights are an important factor in the lumbering business, our neighbor has the following advantage of us on freight. On account of this grooving the back and finishing several items of their product from 1-16 to ⅛ in. thinner than we do, their product of the following kinds is about as much lighter as indicated:

"Ceilings, 11-16 in.—10 per cent. gain.

"Flooring, ¾ in.—18 per cent. gain.

"Flooring, 1 in.—12 per cent. gain.

"Drop siding, 6 in.—8 per cent. gain.

"Finishing, 1¼, 1½ and 2¼ in.—9 per cent. gain when S. 1 S. or S. 2 S.

"As the above items constitute a large bulk of the finished product, the saving is well worth looking after.

"Another advantage they have in finishing flooring 1-16 in. less than we do is that they can cut 2 in. stock galore, then resaw it, dry it, then have plenty of material to make a perfect finish on. At least a part of our mills are resawing their 2 in. stuff for flooring, but finishing is 13-16 in. much of it must be graded out for ceilings, or have the grade cut down by running it into flooring and failing to get a good finish.

"Is it possible that the market conditions in the territory of each Association are so different that the rules governing the product in each locality are right and sufficient? If so, why so great a difference; and if not, why?"

The Alleged Combine of Manufacturers and Retailers

Reports have recently been published in B. C. and Winnipeg papers to the effect that a combination of lumber manufacturers was being formed to shut out the competition of United States manufacturers. Mr. Allan M. Stewart, secretary of the Western Retail Lumbermen's Association, was recently interviewed by the Winnipeg Tribune upon this subject, and is reported as giving expression to the following views:—

"I have only to say that this is one of a series of articles which have appeared from time to time, all of which originated in Vancouver, and are undoubtedly due to certain differences between the manufacturer and retailer arising from the unsatisfactory way in which lumber is being manufactured; which articles have been extensively circulated throughout our Western territory.

"The last article would imply that some agreement had been entered into between the retailers and the coast manufacturers affecting the price of lumber. It is safe to say that if such an agreement was entered into I would have full knowledge of such an arrangement, and I can say most emphatically that the Western Retail Lumbermen's Association is not a party to any such agreement, nor has such an agreement been placed before it. Our association in no way participates in the making or regulating of prices, or in the running of the retail lumber business. Our sole object for existence is to secure and disseminate to our members any and all legal and proper information which may be of interest or value to them, and to promote the welfare of the rental trade.

"Our association has an insurance department, through which department our members have placed insurance amounting to over $2,000,000 on every dollar of which there has been a great saving in premiums to the members. In addition to this we assist our members in collecting claims against the railway companies. A representative of this department has recently appeared before the Railway Commission at Edmonton, and I trust has been instrumental in convincing the commission that a re-adjustment of rates affecting part of our western territory is necessary.

"I note this article refers to American lumber, and while I can assure you that the Canadian retailer will be loyal to Canadian manufacturers, it is my opinion that he would be very foolish to enter into any arrangement whereby he would bar himself from the privilege of taking advantage of cheap lumber, should it be offered by American mills. It is safe to say that the Canadian retailer will always give the Canadian manufacturer a preference.

Auger & Son, Quebec, report as follows: The present situation of the pulpwood market in this district has improved considerably, owing to the fact that the production of wood cut on private lands this year will be 50 per cent. less than last year. If we add to the shortage wood out on Crown lands, due to the prohibition in the Province of Quebec, the decrease will be very great. There is still quite a quantity of wood for sale, which was carried over from last year, owing to the over production, but we feel almost positive that, by the end or middle of next summer, the American mills will find that there will be practically no wood available in the market. If our predictions come true, as to production, prices will certainly have an upward tendency, and specially during the winter of 1911 and 1912.

A special warrant has been authorized by the British Columbia executive council providing for an extraordinary appropriation of $125,000 to cover the unanticipated high cost of fire-fighting throughout the province during the recent dry weather. A sum of $75,000 was voted for this purpose by the house last session.

The Retail Dealer and His Problems

Personal Requirements in the Characters of Retail Partners

Tact and Talent—The Retailers, Tools

There is so much that can be said on any one subject that is connected with the retail lumber business that I sometimes find it difficult to "boil down," as the saying is, the principal ideas that occur to me as being of interest, and of things that are common in the experience of all retailers, so as to come within the limits of an article in a paper read by business men, writes "an old retailer," in the St. Louis Lumberman. Printers' ink, when used to express thoughts and ideas—like lumber—costs money, and as in the creation of a building every stick of lumber is put therein for a specific purpose, so the contents of a trade paper should be made up of matter in which there is as little waste as possible. If I do not elaborate enough upon some of the ideas that I set forth in my statements, it is because I, in a measure, rely on the intelligence that characterizes the lumbermen in general to "catch on" and follow out my meaning in the lead I have given them. My aim is to be suggestive, leaving my readers to do some of the thinking for themselves.

Touching Tact and Talent

In my last article I spoke of the facilities of Tact and Talent as applied to the business of running a retail lumber yard. The subject is a fruitful one, and a great deal more might be written on it, but I think I have said enough to indicate the reasons why some men are better and more successful in the selling part of the business than are others who are really possesed of great natural ability. There are a plenty of smart men in business who, in the long run, don't "pan out" as successful because they are lacking in the tactful ability to utilize to the best advantage what they know. I shall endeavor in this article to show that these requirements of Talent and Tact may be made to work in harmony and be productive of the best results in a business way, as each note in the musical scale is discordant when out of its proper relation to other notes. So discord exists in the relations of human life when they are not in harmony with environment and conditions. This, I think, is in the nature of a law, which, in its operation, affects the whole tenor of our lives. Its application is shown and felt when two or more individuals form a partnership to carry on a certain line of business. It is very often the case that partnerships are formed without each knowing the other sufficiently to enter into such close relations with him. Men are apt to look too much on the surface of other men's lives, and the money they have got, when judging of their suitability for them to enter into partnership with. A man goes into partnership with another for various reasons, chiefly, however, of a financial character. This is, of course, an essential one, but it should not always govern altogether in the taking of so important a step. If he himself is a good business man, he will know his own defects of ability and temperament and will seek for some one who possesses certain qualifications which he is inherently lacking in, and from which, united with those he has, he is justified in believing in the success of such a combination. All men instinctively feel themselves inherently weak in some one particular part of their nature or character, and therefore seek in others for its compensation. I am aware, though, that this is a reason few men are conscious of when seeking for a business partnership, and is not generally recognized as having anything to do with it, and I believe, furthermore, that because it is not so taken into account and acted on, it is one of the principal causes why so many partnerships in business are failures. The prevailing reasons why partnerships are formed is that of expediency and the insufficiency of capital on the part of one or both of the members to carry on the business by themselves.

When Capital and Experience Join

A good many of these business unions in the retail lumber trade have been formed on this basis. In a good many cases too, one member having the capital and the other experience and knowledge of the business, forms what would be naturally deemed a compatible union. But, unless there is absolute honesty one with the other in a partnership of this nature, no two men can stay long in such relations, on any equality of conditions, for it will only be a question of time when they will be reversed, and the capital will be in the possession of the experienced man, and a lesson of experience will have been taught the other of the folly of going into a business he knows nothing about. This I know, in several cases, has been the ill fortune of a farmer who thus overestimated his own ability to cope with one who had been trained to the lumber business, and who has parted with his own good farm and its hard prosiac life, to come to town and be a business man and wear good clothes. He went into it with the preconceived notion that there was but one honest class of men in the world and that was that to which he and his neighbors belonged, and of their trade and of his brother farmers, he was sure in his own mind of getting and holding. But how quickly was that idea dispelled when the conditions were changed, and he as a business man had to deal with the farmers. They turned on him as one hog turns on another, that is, a stranger in the pen. It was nothing to them if he lost one bill so long as they got the benefit of it. He finds his former ideas as to big profits materially modified, for it is the rule among the farmer-turned-business-man, to imagine at first that all the money he takes in is his own, just as he does when he sells a load of grain; but the application of a sight draft on him a few times soon dispels that illusion. His partner has a "picnic" with him at first as to who shall be "boss," for he naturally considers that as he has furnished the money to run the business he is by right the head of the firm, but, as his experience increases, the fact comes to him that the head of the firm in this case is the manager, and the consequence is that his position is very soon defined as being a secondary one. After the hard, manual labor about the yard falls to his share. It may be, however, sometime before he reaches his own level, but he gets there. And, even though his name is first on the sign over the office, that he was so proud of at first, he realizes what so many have before him, that a painted sign don't always reveal the true conditions existing within.

He Generally Gets Out

It generally hapaens in a case of this kind that disappointment and discontent lead the farmer to seek a severance from the bonds of partnership, and the offer is made to sell out to his partner. This is where he really finds out where he is at, and the chances are that he may have to take what he can get, which, perhaps, is far short of what was expected, which makes him worse off than when he went in. And so he "pulls up" and moves out on the frontier again and returns to the only occupation he is sure of knowing something about. This is not an overdrawn picture of an example of an ill-assorted partnership in the lumber business, for I know of several instances that fit with the description given. Such incongruous elements in partnership in any business in any old-time Western town was not so rare as might be thought. The term, "business man" has an alluring sound and meaning to the rural and unsophisticated imagination and not until they have been scorched with the branding iron of experience do they realize that "all is not gold that glitters."

The grade of "farmers clear" was never made as a recognition of the farmer's knowledge of the lumber business. One of the curiosities of business in this country, and especially in the newer states, is the short-lived partnerships in all lines of business. This is owing in part to the restless, changeful conditions due to the nervousness of the country, and also to the process of the settling down of the different elements brought together and their adjustments to each other. But the chief and principal cause of it is the lack of knowledge of the fundamental laws of business by one or both parties in the co-partnership. It is a rarity to see, now in a western town, a firm which has been doing business there right along since the town was first started; and this statement will apply also to the lumber business. There were more partnerships operating single yards in those days than there are now. And as a rule, the men who own and run their yards themselves make a better success of it, proportionately, than any of the larger partnership concerns, for these are only necessary where two or more yards are owned by them, or in the larger cities and towns where the volume of business requires the greater capital and a more extended supervision over the whole. Capital and experience, when united in one individual, forms a strong combination in any business, and this united with integrity of character, and tact in his dealings, is almost sure to succeed. Such a one needs no partner if he confines his work and resources to his own line of trade, but let ambition, that curse to many a prosperous business man, lead him into unknown paths lit with glittering promises that excite his cupidity and flatter his vanity only to scatter his attention and means, and diverted from the channel of his prosperity. The inevitable result will be of himself being added to the long list of those who attempted too much and ran counter to the laws of good business, as well as to those of his own being. One of the hardest problems in life is to know when we are well off.

The West the Land of Experiment

It always appeared to me that the west was a country where men came to try and experiment on what they were fitted for. Partnerships sprung up like "Jonah's gourd," in a night as it were, and were as ephemeral and short-lived. Men went into such unions in too much of a hurry to adjust themselves to each other's differences, and the selfish instincts of each were too much taken up in looking out for self rather than for the interests of the firm, first of all; and, as a consequence, failure was written over their agreement as soon as it was signed. The mutual attraction of opposites is a large factor in the making of a

harmonious and successful co-partnership. In such the positive element is as essential to the negative as the element is to the positive. One acts as the counterbalance to the other. Each will know his place, and his part in the business will be governed accordingly. One will be inclined to take more chances than the other, but the latter acts as a check to undue speculation. The tendency to discount too freely the future with the one is met by the take-care-of-to-day's spirit of his partner, and so a happy medium is thus effected and a smooth-running business is kept up without any serious jars to the machinery. A well-balanced partnership between two men is a good illustration of the operation of the laws of the centrifugal and centripetal forces of the universe, which are adjusted so perfectly as to be beyond our grasp and comprehension. These laws provide everything of a material and human nature. In such a business union as this, the mutual advantages that Tact and Talent are to each other is best demonstrated. The tactful partner is always the manager and executive of the concern, as his abilities are brought into play by his daily contact with frequently conflicting interests with those of his firm. Talent is the thinker and planner. His judgment in all matters of vital interest is final, although he often differs from his partner in those of a minor character.

In such a combination of faculties in a business partnership, nothing but the strongest of outside causes can prevent the continual success of it, for it was a success from its formation. It is one of the triumphs of our complex civilization. There are few things grander in the progress than the existence of some of those old firms that have lived and prospered through succeeding generations in the older countries, for they are the forces which have acted on and moved the world. The business men of the newer country have many things yet to learn of the true and underlying laws of business. But they are learning through their mistakes that the great fundamental principles of economic laws cannot be violated with impunity. The experiences of one generation is not highly instructive to the next. Young nations and young lives will never profit by the mistakes of the old, for every life and every country must learn its own business.

Toronto Retailers Will Hold a Banquet

The retail lumbermen, of Toronto, will be the hosts at a love feast on Friday, November 18th. At the Hotel Mossop on that evening they will entertain a number of their retail, wholesale and manufacturing friends from the Province of Ontario. It is expected that there will be about 80 representatives of the different branches of the trade present to enjoy the hospitality of their Toronto retail hosts. The guests will include the officers of the Provincial Retailers' Association, representatives of the wholesalers of Toronto, and a number of the prominent manufacturers of the province. The sole object of the banquet is the betterment of the relations between the different branches of the lumber business. In the past there has been a great deal of misunderstanding between the wholesalers, retailers and manufacturers. It is believed that by bringing the various representatives together in this manner, good use will be made of the opportunity to discuss some of the most important problems which confront the trade. It is to be hoped that this will be the forerunner of a long series of similar events, and that in future there will grow up a good fellowship among the branches of the lumber business which will result in mutual benefit to all concerned.

Importance of Skilful Resawing

Box-making, as it is carried on to-day, may be said to consist largely of the art of resawing, says the St. Louis Lumberman. There are some boxes made and some box material manufactured without the aid or use of the resaw, but in the average box factory one of the important essentials is that of resawing ordinary lumber and making two or more thicknesses from it.

Now comes the point where success in the business consists materially in that art of resawing. It is those people who are in the best shape to resaw lumber and get the most out of it with the least waste that stand the best show of making a profit out of the box business. In other words, a box factory properly equipped with a high grade resaw may get two boards, or even three, of certain thicknesses, out of an ordinary inch board of commerce; whereas the man with an indifferent equipment that makes too much sawdust or the saw dodges about in cutting would have to buy the lumber cut to special order a little thicker than the standard stock. And this extra cost would eat up his profits in business when in competition with the other fellow.

In the earlier days of band resaws it was feared that efforts to reduce the kerf too small would result in snaking of the saw blade so that there would be no real economy, for the variations in thickness caused by the snaking of the saw would have to be dressed away at the planer, and thus there would have to accrue more loss than in using a heavier saw that would run straight. This was an early trouble that was more in the imagination than anywhere else, and even where it was an actual trouble it is now being left behind, and we are finding that, along with the reduction of the amount of kerf, we are also attaining a higher degree of perfection in hand saw work. The two really go hand in hand. The man that builds a machine, if he builds it for finer work, does his building better and more scientific, and the operator gets keyed up to the same high pitch, so that the natural result, where the plan is carried out properly, is for finer work and better and smoother sawing to be done with the machines and saws that make the smallest kerf. This gives us not only economy in kerf, but economy in timber on another count, that of making it unnecessary to dress away so much to get a perfectly smooth surface.

Generally speaking, the narrower the set run in a band saw the smoother it will cut, and with a true running saw tightly tensioned and the set reduced down so close that the kerf barely clears the saw by a hair, the cutting should be so close that it could almost be finished to a surface with a sander, and not have to go through a planer at all. Indeed, this is the final goal we are working toward, and some day soon the development of the act of resawing in connection with box-making should carry us to the point where it will be either very light planing, or stock will be so smoothly cut and resawed that it can be finished off with the sander, and thus we will have still more economy in timber and a chance to make more out of an ordinary inch board, and to get a better margin of profit out of the box business.

Maritime Province Lumber News

Interesting Paragraphs Relating Personal and Trade Happenings Down by the Sea—Miramichi Company Reduces Cut

The Shives Lumber Company, of Campbellton, are making preparations to erect a large shingle mill on their property there.

The Oromocto, N. B., mill, of the River Valley Lumber Company, which recently closed its operations for the year, cut five milion feet of long lumber, during the season

The old established lumber firm of Harrison & Singleton, Ltd., Bradford, Halifax and West Hartlepool, England, has found itself in financial difficulties. The business was established seventy years ago.

Mr. Elwood Burtt, of Burtt's Corner, N. B.,, will operate his mill at Cardigan Station throughout the coming winter. A million and a half feet of logs are now on hand and logs will also be hauled direct to the mill from the woods.

A new lumber company has been formed in East Halifax. It is called the Necum Teuch Lumber Company. A mill has been built near the Government wharf at Smith's Cove, and the men who form the company are from Moser River Necum Teuch. The new mill has already sawn quite a quantity of lumber.

Chas. E. Oak, manager of the lands department of the New Brunswick Railway Company, states that there will be a cut on the company's properties this year, about 55,000,000 feet of logs, which is about the average. The Miramichi Lumber Company's cut will not be as large as usual as the mills of the International Paper Company are overstocked with pulpwood.

A Glassville, N. B., despatch says, John McIntosh has about 150 men in the woods and about forty horses. Contractor Young has 150 men and about fifty horses. These crews are working on the main Miramichi under contract with the Miramichi Lumber Company. They will clear the ground completely, taking logs and pulpwood. Some portions of the land are very heavily timbered, one team being able to yard as high as 200 logs in one day. This splendid lumber country was burned the summer before last, and there will be no more logging there for many years.

A despatch from Fredericton, N. B., says that private reports received indicate that the Scott Lumber Company's valuable timber property will shortly be controlled by new owners. The negotiations have been conducted by a syndicate in which A. R. Gould, of Presque Isle, Maine, is interested, and an American company is being formed to take over the property, who will not operate the mills, but will lease the lands. W. J. Scott may manage the property. The Victoria mills may pass to owners other than the syndicate and be operated by the purchasers. It is said the price will be in the neighborhood of $150,000.

Mr. A. E. Clark and Mr. R. L. Clark, of Edward Clark and Son, wholesale dealers in hardwood, Toronto, have returned from a seven weeks' trip to the Eastern Townships of Quebec, where they have been making extensive shipments to the United States, and where they have also made considerable contracts for their next year's stocks. They report that there is a great shortage of all kinds of hardwood in Quebec. Hemlock also they say is rather active in Quebec, but spruce is dull. They also report a general dullness in the demand for pulpwood. Mr. R. L. Clark has left for a selling trip in New York and Massachussets. He expects to wind up his visit with a buying trip. He will be away about six weeks.

CAMP DEPARTMENT

Successful Experiments in Lopping Branches

Under the title of Lopping Branches in Lumbering Operations, in the fifteenth annual report of the New York Forest, Fish and Game Commission, Forester John W. Stephen makes an exceedingly interesting review of the first year's working of the New York statute which requires that the limbs and branches shall be looped in all lumbering operations in coniferous timber in the forest preserve counties. The law reads:

Every person who shall, within the forest reserve counties of the State, cut or allow to be cut any coniferous trees for sale or other purposes, shall cut off or lop or cause to be cut off or lopped from the said trees, at the time of cutting the said trees, all the limbs or branches thereof, unless the said trees be cut for sale and use with the branches thereon. Any person violating the provisions of this section shall be guilty of a misdemeanor and shall, upon conviction, be fined not more than twenty-five dollars or shall be imprisoned for not more than thirty days, or both, for each offence, and in addition thereto shall be liable to a penalty of two dollars for each and every coniferous tree felled from which he shall neglect to cut or lop off the branches.

This regulation is one of the protective measures adopted by the state for the safety of the timber in the forest reserve. No timber is cut on the reserve, consequently the regulation applies entirely to lumbering operations on private lands in the forest reserve counties.

A year is insufficient fully to determine the effectiveness of any regulation, but according to the report of Forester Stephen, who has carefully examined the results of lopping operations, the new law has so far been very satisfactory, as regards both cost and efficiency. The requirement that the branches of coniferous timber shall be lopped is based upon the assumption that if, through lopping the unused upper part of the tree and the branches are brought in close contact with the ground they soon will decay and cease to become a serious fire menace, also that the decaying tops and branches protect young seedlings, increase the humus in the soil and add to soil fertility. Observations show that under New York conditions this assumption is well founded. Ten years ago a spruce lumbering operation was carried on at Nehasane Park. The tops were cut to a 10-inch diameter limit and the branches were lopped to reduce fire danger. Wherever the looping was done thoroughly the tops have almost entirely disappeared and little material is left that will burn. On the other hand, wherever a top was not lopped it still remains supported above the ground by dry, hard branches and will be a source of fire danger for many years.

Contrary to expectations the cost of lopping the branches, as required by the recent law, is not heavy. It is said that 3 cents a standard and 10 cents a cord of pulpwood is average cost under ordinary circumstances, if the lopping is done to the best advantage. In a number of cases looping has resulted in actual gain to the lumbermen. Where branches are lopped, skidding and road-making are facilitated greatly. Lopping also leads to closer utilization of timber, especially when pulpwood is taken out. One operator reports that through the decreased labor required in skidding, and the occasional logs saved, he believes that the actual cost of lopping does not exceed 5 cents a thousand feet of timber. Another operator who cut spruce saw logs did still better. The report says:

He left the lopping until after the logs were removed and then went through lopping the branches and taking the timber out of the tops for pulpwood. In this operation, with a force of eight men and a horse employed six days, ninety-seven cords of pulpwood were obtained that would bring his $7 a cord delivered at the mill. This is an average of two cords a man a day, making a very profitable operation.

The Adirondack patrolmen have found also that fires are much easier to handle in lopped timber, because such fires are closer to the ground and men can get near enough to fight them more effectively.

The present New York law requires that only the branches of coniferous timber shall be lopped, since softwood slash is assumed to be the more dangerous. The indications are, however, that a similar requirement for hardwoods would give good results. Hardwood slash is less durable than softwood slash, and if lopped it would decay in a few years. This is made evident by the condition of the land which has been cut over to obtain wood for the acid plants in New York. These plants take small sized wood so that the remaining slash lies close to the ground and is left in good condition to decay. It is said that three or four years after cutting of acid wood the fire danger is nearly over with. In the cutting of hardwood saw timber there is nearly as much need for lopping the branches as in softwoods.

In conclusion the report sums up the case for lopping branches as follows:

First—Danger from fire is probably lessened from the first by the form in which the brush is left, easier to clear away and not high in the air where it will throw sparks and start crown fires. At any rate, the lopped brush lying close to the ground rots very much faster than unlopped tops. In a few years it is incorporated with the soil and then ceases to be fuel for fire.

Second—As a rule, it would appear that in the Adirondack forests reproduction is promoted.

Third—In most operations some wood is saved that would otherwise go to waste. In some cases it has far more than paid for the cost of the work.

Fourth—The labor of guttering and skidding is lessened to some extent.

Fifth—It is to be noted that hardwood tops decay much faster than softwoods, also that the closer the utilization of timber the shorter the time required for the debris to disappear. Thus, in the case of hardwood operations for acid or cordwood, the debris left is of such small size and gets down so close to the ground that special fire danger is pretty well over in three or four years.

The results of one year's operation under the present law are such that it certainly should be retained.

The above dispassionate and careful report should be of much value to lumbermen in the lake states at the present time, where the heavy fire losses of this year and the much greater losses of two years ago have made it evident that thoroughgoing measures of fire protection and control must be adopted. The burning of pine slash is said to have worked fairly well in Minnesota, but a proposed compulsory burning of hardwood slash in Wisconsin two years ago aroused so much opposition from the lumbermen because of its cost and possible inefficiency that a similar measure is not likely to be proposed again. Timber in the lake states and New York is of much the same character. Moisture conditions are also similar. If lopping the branches proves to be a cheap and effective aid to forest fire control in New York the same method should be given a thorough trial elsewhere.

"News?" said a Duluth employment agent doubtfully, in response to a query. "Ain't any news, but I'll tell you a queer thing about lumberjacks that came to my attention recently. They are crazy about pie. Yep, pie.

"The main morsel on the logging camp bill of fare is pie. While this is not the pie belt by any means, there is as much of that sort of pastry consumed in this portion of the country as in any other. Pie comes before soup and after coffee both, in the lumber camp menu.

"This taste for pie, however, is a cultivated one on the part of the lumberjack. It is not hereditary as is the case in New England. The pastry desire comes in the form of an education to them. It's pie three times daily, and for the pie hater it means starvation, so they learn to simply crave for it.

"Pie does not cost much when it comes to a choice between that and beef, and it fills up mighty gaps with a hurriedness. In other words, it cuts down expenses. So the lumberjack likes pie because he has to.

"The difference between butter and butterine is also an unknown quantity in camp. The 'ine' is of little consequence to the 'jack,' who lathers his bread with a veneer of the golden salve, for it matters little to him whether the cow had any part in the production or not. He never heard of cotton seed, and albeit it costs the company less."

The United States Department of Agriculture is authority for the statement that the paper birch, often called also white birch, or canoe birch, is one of the few timber trees in this country which seem to be holding their own against axe and fire. The average citizen, however, probably takes no particular interest in the paper birch. Yet it is doubtful if any other kind of wood on the face of the earth is found in so many households, for paper birch furnishes most of the spools made in the United States.

Maine is the chief centre of spool manufacture. Its factories turn out 800,000,000 spools yearly, chiefly birch. Few woods as hard as this can be worked with as little dulling of the tools. Its principal recommendation lies in that fact. It is handsome in color, and, after the wood becomes seasoned, it shrinks and warps very little. That is an important consideration, because the delicate machinery that winds the thread would fail to work if the spool changed its shape to a perceptible degree.

The birch wood for spools must be selected and handled with care. The tree's red disk heartwood is objectionable because it will not turn smooth in the lathe, and the color is not desired. Few industries waste more wood in proportion to the quantity used than spool making. Heartwood, knots, and all other defects, frequently amounting to more than one-half of the tree, are rejected. From one-half to three-fourths of the remainder may go to the refuse heap in sawing the bars and turning the spools. Despite this waste the paper birch does not appear to be threatened with extinction. It is a fire tree—that is, it spreads rapidly over spaces left vacant by forest fires. The most extensive paper birch forests of Maine and New Hampshire occupy tracts which were laid bare by the great forest fires which swept the region from 1825 to 1837.

The tree is short lived. At an age when the white cedar, for example, is just beginning to lay on useful wood, the paper birch has passed its prime and is ready for decay. It is placed at still further disadvantage by being unable to compete with other trees for light and soil. It prospers when growing alone, but it gives up the fight after stronger trees begin to crowd it. Nevertheless it is believed that more paper birch is growing in the United States to-day than two hundred years ago.

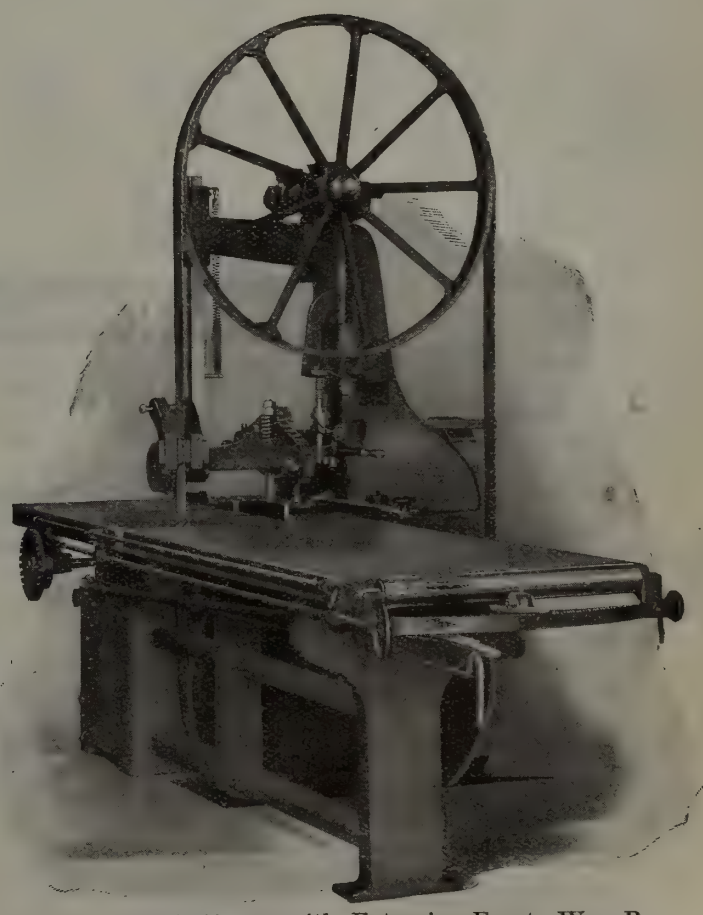
Machinery and Equipment

A. J. Burton Saw Company Make Extensions—A Useful Ripsaw Improvement

A. J. Burton Saws in the East

The A. J. Burton Saw Company, whose well-equipped Vancouver factory is one of the show places of the city, are now invading new territory. Having made good with their solid and inserted tooth saws in British Columbia, the prairie provinces, and in a number of Puget Sound mills, Mr. A. J. Burton, the pushing head of the concern, is now making a determined bid for a share of the trade of the mills in Ontario, Quebec and the Maritime Provinces. Following a preliminary trip through the new territory last fall, which yielded good results, Mr. Burton left again for the east on July 1st last, and since then has been visiting the mills in the several provinces and demonstrating the possibilities of the Burton saws under all conditions, by throwing off his coat, donning overalls. and cutting lumber for a couple of hours at a stretch.

To cap the climax, so to speak, Mr. Burton made a very complete exhibit of the various saws manufactured at the Halifax Provincial Exhibition, where he swept the field, being awarded the gold medal. This success has, of course, greatly increased the prestige of A. J. Burton saws, and orders are flowing in at a rate that has made it necessary to increase the staff of expert machinists employed, a number of whom came from the R. Hoe & Company factory in New York.



A Saw Exhibit which "Swept the Field"

Extension Front for a Band Ripsaw

Wm. B. Mershon & Co., the well-known band resaw specialists, have furnished us with a photograph of their latest production; namely, their No. 1 Band Ripsaw equipped with an extension front—a long table which fits it for the handling of long, heavy plank.

They are now building this machine both with and without the table extension. All adjustments are made from the front end of the table. They claim as a point of superiority, the manner of controlling the position of the guide, or fence. It shifts very quickly and can be set exactly as the operator desires, and they assure us that it is so set as to rip plump or scant, whereas, it is the experience of most woodworkers that the tendency is to rip everything plump, and to lose in plumpness what is saved in saw kerf.

This machine is meeting with remarkable success and we are pleased to be among the first to illustrate it. The manufacturers request interested parties to correspond with them and they will gladly furnish photographs and full particulars.

No. 1 Band Ripsaw with Extension Front—Wm. B. Mershon & Co.

Hickory Supply Threatened with Exhaustion

Warning that the original supply of hickory, the best American fuel wood and the most difficult to replace of American hardwoods, is approaching exhaustion, is given in a bulletin by the Department of Agriculture, compiled by Forest Assistant Anton T. Boisen and J. A. Newlin, engineer in timber tests. It shows that virgin hickory, the chief source of supply, is disappearing rapidly, and that there are no foreign sources which can be drawn upon when the home supplies are exhausted. Prices, it is pointed out, are bound to advance because of the high technical value of hickory, coupled with the fast diminishing supply. The bulletin says hickory has a number of important special uses for which no satisfactory substitute is known; that fully 40 per cent. of the merchantable hickory cut each year is wasted; that the total amount of hickory consumed annually probably is not less than 450,000,000 feet; that the vehicle industry takes about 65 per cent. of the total output; that there are now about 100,000,000 acres of land on which hickory is growing naturally, and that hickory users should co-operate to prevent shortage.

The B. C. Gazette gives notice of the incorporation of the following companies: Poulin Lumber Company, Limited, capital, $100,000; Flanigan & Hart Lumber Company, Limited, capital, $100,000.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word. net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

WANTED TO BUY—ASH, ELM, OAK AND Basswood, for export. Payment will be cash. Address with full particulars to ROBERT COX & Co., Hope Building, Ottawa, Canada. 23

WANTED—BASSWOOD, B. ASH, BIRCH, Maple, Elm, Oak and Chestnut, for immediate shipment We are always in the market to buy good lumber. Apply BARTRAM BROS., Limited. Citizen Building, Ottawa, Can. 23

White Pine Wanted

WHITE PINE 2" AND 3", 6, 7, 8", 10" AND 12", length 10 to 30 ft. for tanks. Also qr. cut Pump Tubing. ONTARIO WIND ENGINE & PUMP Co., LTD. Toronto, Ont. t.f

Cedar Posts Wanted

WANTED FROM TWO TO FOUR CARS Cedar Posts from 3 to 5 inches top end. Name best cash price and point of Shipment. Apply Box 195, Jordan, Ont. t.f.

Quebec Birch Plank

WANTED SMALL PRIME CLEAN QUEBEC Birch Plank, in 2 car lots, sawn as follows: 38 x 3 x 5; 48 x 3 x 5; 20 x 10 x 4; 20 x 12 x 7½; 21 x 7 x 4. Box No. 2510, c/o Gould's Advertising Agency, 54 New Oxford Street, London, England. 23

Basswood, Birch and Elm

FIVE TO 10 CARS 4/4 X 6 AND UP 1S AND 2S Soft Elm Two cars 4/4 x 6 and up 1S and 2S White Basswood. Two cars 4/4 x 10 and up 1S and 2S Birch. LUCAS E MOORE STAVE Co., 11 Broadway, New York, N.Y. 1

WANTED

PARTIES TO CONTRACT FOR DELIVERY of several million of Birch and Maple Logs to water or rail in vicinity of Georgian Bay, during the coming winter. Apply Box 130 CANADA LUMBERMAN, Toronto, Ont. 24

White Pine Pickets Wanted

WE WANT AT ONCE 4/4 x 4/4 x 44" AND 48", 5/4 x 5/4 x 44" and 48" and 6/4 x 6/4 x 48" White Pine Pickets If you have anything in the above write, stating quantity, when cut and best prices. Will buy any quantity from a car to your entire stock. Box 58, Ogdensburg, N. Y. 23

FOR SALE—LUMBER, ETC.

For Sale

6 Cars of 8 ft. Cedar Posts 4 in. up.
1 Car of Cedar Shingles.

JAS. SPUN,
20-tf L'Amable, Ont.

Hemlock for Sale

PROMPT SHIPMENT CAN BE MADE OF Hemlock bill timber and low price will be quoted on good sizes in lengths from 10 to 30 ft. KEENAN BROS, LTD. Owen Sound, Ont. t. f.

For Sale

200,000' 1" Birch common and better.
30 000' 1½" Birch common and better.
100,000' 1" Spruce.
100,000' 2" Spruce.
40,000' 1" Soft Elm.
2,000,000' 1 Hemlock

Also all kinds of Southern Hardwoods for quick shipment from our yard in Guelph.

Shoe Pegs, Shoe Shanks and Toothpicks

"After the spool industry," says Chief Forester Gifford Pinchot, in a report on paper birch in the Northeast, issued by the U. S. Department of Agriculture, "the next most important use for paper birch is in the manufacture of shoe pegs and shoe shanks. This industry, which uses about 11,000 cords annually, is confined entirely to the northeastern United States, and except for a small amount of yellow birch, uses paper birch exclusively.

"Shoe pegs are made in two distinct ways. The more usual method is to cut the bolts into small blocks, which are in turn split up into pegs. The other method is to cut the bolts into peg 'ribbons.' These are manufactured at only two places in this country—or probably in the world, for that matter—it Conway, N. H., and Brownville, Me. The round bolts are first cut into short pieces, usually 25½ inches long, and the barks peeled from them. The peeled bolts are then put into a machine which revolves them against a series of sharp knives, which cut off veneers of the width and thickness of the pegs. These veneers are in the form of long, narrow ribbons, and are cut under considerable pressure so that much of the sap is forced out of them. They are next run through a machine which puts one sharp edge on the ribbons, and finally through a third machine which heats, compresses and toughens them. They are shipped in the ribbon form and are cut into pegs with an automatic machine when used by the cobbler. A marked difference between this process and that used in making spools is that in this case the wood is seasoned when the article is turned out rather than before. In the manufacture of peg ribbons, even more than in the manufacture of spools, it is imperative that only the very best wood be used. Red heart has to be entirely discarded, knots unfit the wood for use, and the bolts must be of fairly good size. Consequently peg wood frequently costs $15 per cord at the mill, while spool-wood usually costs only $5 or $6.

"Shoe shanks, which are used in the insteps of some shoes between the heel and the broad part of the sole, are usually manufactured in connection with shoe pegs. They also require fairly clear, white wood, but not necessarily of so high a quality as for shoe pegs. They are first cut from the peeled bolts as veneers, which are later cut by an automatic machine into finished shanks of various sizes. These are neither polished nor seasoned and are shipped loose in large sacks.

"The greater part of the toothpicks used in this country are manufactured in the Northeast, and, with the exception of a few hundred cords of poplar and maple used for this purpose, are they made entirely from paper birch. Approximately 3,000 cords of birch are consumed annually in their manufacture. The stock from which they are made must be free from knots and red heart, straight, and perferably over 9 inches in diameter. In other words, only the very highest grade material can be used. This material is usually selected from stock which is being cut for other purposes, and sells for from $15 to $25 per cord at the mill. The logs are first cut into 2-foot bolts, peeled, steamed slightly to take out the frost, and then run through a veneer machine, which cuts off thin veneer the length and thickness of the toothpick. From these veneers the toothpicks are automatically cut out, thoroughly dried, and sometimes polished.

"Dowels, toys and novelties, and various miscellaneous articles, such as clothespins, hairpin boxes, bobbins and shuttles, consume annually about 23,000 cords of paper without losing its capacity for flow-birch. These industries all differ considerably from those previously described in that they use considerable quantities of other woods than paper birch. Chief among these are yellow birch, sugar maple, and beech. These articles can also in many cases be made of an inferior grade of birch. A small per cent. of red heart is usually allowed in most dowels, and cheap toys and novelties are not infrequently made entirely from red heart and knotty wood, which could not be used for any other purpose. This fact is sometimes taken advantage of by combining spool and novelty mills, so that the novelty mill can be largely supplied by the waste from the spool mill."

A Chicago chemist brought to a successful conclusion experiments in the manufacture of lumber and railroad sleepers from sawdust. The only ingredient besides the sawdust used in the process is a glutinous liquid the basis of which is skim milk that contains the substance of bacteria practically created by the chemist. Boards made from this composition in the raw or wet stage resemble greatly corn bread that is ready for the oven. When dried thoroughly the boards are perfectly rigid an dare susceptible of any such finish as is given ordinary lumber. Surfaced or moulded in squares or other forms and glazed in colours, the material makes a beautiful tiling or wainscoting for floors or walls.

Review of Current Trade Conditions

Ontario.

The usual quietness in the lumber trade which is noticeable at this time of year in Ontario is prevalent at present. Some of the travellers report that business is duller now than ever before in the fall, but others claim that they are doing a satisfactory amount of trade. It is probable that the real state of affairs is that business is quieter than usual, but that there is no reason for anxiety. There is undoubtedly a fair amount of business under way. Building operations throughout the province are keeping up well, and the fine weather has assisted this feature of business to continue satisfactorily. Many large new building operations also are being commenced and will be carried on during the winter. Of late there has been quite a tendency to abandon the old custom of ceasing building operations almost entirely when the cold weather sets in, and the lumber trade has benefited accordingly. Travellers report that trade in the cities is fairly good. Woodworking factories are very busy on orders for interior work of all kinds. In Western Ontario trade is reported fairly active. Retail yards, however, are not heavily stocked, and at present are not buying extensively. This, however, is a characteristic of the trade, which has prevailed and has been growing more general during the last few years, as retailers have adopted a policy of buying only sufficient stock to keep them in supplies for actual trade conditions. A few years ago retailers would buy large quantities of stock whenever they thought they could secure a bargain, and it often happened that a general business depression found them with heavy stocks on their hands, which were a serious encumberence.

Wholesalers also have been adopting a similar policy which is resulting in stocks largely being carried by the manufacturers. There is much less fall buying of winter stock by the wholesalers now than there used to be. Trade in the United States continues depressed, but there is a fairly general belief that with the elections over, trade conditions will improve.

Hardwoods continue strong. Basswood is the only weak spot on the market. One-inch birch is particularly strong and almost unobtainable. The prospects now are that there will be a big shortage of birch in all lines before any new stock comes on the market. Although a large output is expected this winter, all of it will be required to fill the shortage of this year's stock and next year's requirements. It is reported that some of the export companies which supply the English markets are becoming anxious about their supplies of birch. There seems to be little doubt that this anxiety will be reflected in prices when the time comes to secure stocks for the United States markets. A traveller who recently returned to Toronto from the Eastern Townships in Quebec, reports that he never before saw the mills in that district so thoroughly cleaned out of stocks as they are at present. The mills in the north side of the St. Lawrence, he reports have been oversold for some time, and require all the stock they can get to fill their standing orders. ing orders.

There is quite an active movement of lumber from Ottawa to Montreal, which is taken as an indication that outside dealers expect an average winter's trade. New business is largely for the upper and middle grades of pine, and there have been a few advances in price of late, amounting to about 50 cents a thousand. There is a steady demand for spruce, basswood and birch, and prices are firm. Low grades of pine are dull and are affecting the demand for hemlock and inferior spruce, which in some cases have declined a dollar a thousand within the last month. Ottawa valley planing mills are doing a good business, with a firm trade, as a result of continued favorable weather.

Eastern Canada.

The conclusion of the sawing season on the Miramichi finds the total output for the season somewhat smaller than the average, though greater than was at first expected. All the important operators have closed their mills, and the indications are that they will start up next spring at about the usual time, i.e., as soon as the ice is out of the river. Stocks of manufactured lumber being wintered by Miramichi firms are also lighter than usual, amounting to about 11,500 superficial feet of spruce deals (English), 7,000,000 feet of spruce lath and 2,250,000 cedar shingles. There has been a good season so far for getting out logs. Dry weather has prevailed, and successful results have been obtained. Present indications are that the manufacture of long and short lumber at portable mills this winter will be light, as both the New York lath markets and the spruce deal markets are not favorable. The lumber trade at Miramichi points is quiet and shipping has practically come to an end. Spruce lath are being quoted now at from $2.10 to $2.20, f.o.b. Chatham. The market for spruce deals is rather uncertain, and prices vary from $14.50 to $15 per thousand superficial feet.

There is a little improvement in the tone of the Boston market for eastern spruce. Buyers do not show any inclination to give higher prices than they are asked, as they seem to expect that as soon as the winter mills begin to operate offerings will be heavier and prices will decline. Spruce manufacturers, however, who have recently advanced their prices feel certain that they will be able to maintain them. The closing of the summer mills is responsible for the better tone of the market. The general price asked for frames is $23 though some have been bought at $22.50. There is a fair demand for spruce boards. There have been increased consignments of spruce to New York from the east recently, but market conditions have not improved. Lath are fairly firm, but frequent reports are heard of prices being shaded. The poor condition of the yellow pine market continues to depress the spruce situation.

Great Britain.

London reports of the lumber markets are not so satisfactory as they have lately been. The financial embarrassment of Harrison & Singleton, of Bradford, has had considerable effect on London business, where the company had extensive dealings. The overside business at London continues extensive and fresh cargoes are disposed of largely as they arrive. During the week ending Oct. 22nd, London deliveries totalled 7,477 standards, as compared with 6,397 during the corresponding week of 1909. At the recent auction sale held by Churchill & Sim, prime Oregon scantlings varied from 1s. 5d. to 1s. 6½d. Prime 1½ to 1-inch pitch pine board brought £14 10s. to £15 15s. First bright Quebec broad pine was sold at £29 10s. The timber trade at Southampton has been rather dull in spite of the most favorable weather conditions. At Cardiff the timber business is brisk in all branches and prices have been fairy satisfactory with a tendency to firmness.

The financial embarrassment of the old established firm of Harrison & Singleton, of Bradford, Halifax and West Hartlepoole, has had a serious effect upon the timber trade at Liverpool, and in fact at many other important centres. Market conditions, however, have not shown any improved alteration of late. Generally speaking, prices are firm in all branches, although the inquiry is somewhat restricted. Shippers continue to hold their quotations firm. This, together with the advanced freight rates, prevents any likelihood of lower prices. Pitch pine timber and lumber are unchanged and the same thing applies largly to spruce. although prices for this wood are very firm with an upward tendency. Quebec pine continues strong as is usual at this time of year. Shipments are normal and buyers are being advised to profit by the lesson of the last few years and not to be caught "short." Spruce deals are steady.

At Manchester the improvement recently noted in the lumber trade continues. There is, however, no improvement in the demand for spruce. 3 x 4 to 6-inch scantlings have been sold at £7 10s. c.i.f. Stocks of spruce are heavy, but many sizes are short. Long lengths in all dimensions are scarce. Birch deals show some improvement and have advanced about 5s. per standard. Pine goods are also somewhat better. Floorings and matchings continue steady at £10 2s. 6d. basis c.i.f.

United States.

The amount of lumber going into distribution in the United States is probably greater at present than it was a month ago. Building requirements in the cities continue to call for large quantities of lumber, and the consumption in the woodworking lines is continuing favorably. Operators and jobbers also report that their books for October trade show a greater movement of lumber than during October of 1909. In the middle west and the northwest the retail trade has improved somewhat, as a result of the marketing of the grain crop.

The retail trade in Chicago is feeling the scarcity and high prices of good white and red pine. As a result they are buying only small quantities. Stocks in Chicago yards are fairly representative of all varieties. Lower grades are very heavy and prices are weak. Hardwood dealers in Chicago are quite active. Prices are steady with a tendency towards firmness. This applies both to northern and southern hardwoods. Plain red oak is in the best demand, and there is also a good call for No. 1 and 2 common. Quartered white oak is steady for 1sts and 2nds and also for commons. Quartered red oak is also selling well. Ash is scarce and firm. There is an improvement in 1sts and 2nds of gum. Good prices are being obtained for birch and the movement is free. There is a steady demand for soft elm and rock elm and maple also is moving actively. The demand for maple flooring is better than ever before. Stocks of hemlock at Chicago have been considerably reduced of late and assortments are rather broken. The demand for western fir, spruce and cedar, at Chicago is quiet, though some rather encouraging inquiries are being received. A shortage of cars has prevented the sourthern pine manufacturers from filling all their orders at Chicago. The southern pine market does not show any improvement. Red cedar shingles are steady at Chicago and so are Northern cedar shingle

which are selling at about $2.90. The cooperage market continues exceedingly quiet.

The demand for northern pine at Buffalo continues strong. Box makers and door mills report that they have had a satisfactory season, though as usual they are complaining of the competition of yellow pine. Supplies received from lake sources during the season have been large, but are now almost at an end. The hardwood situation in Buffalo continues encouraging though not extremely active. Most of the buying is in small lots. Better grades continue firm with plain and quarter-cut oak in the lead. Chestnut also is in good demand and slightly firm. There is a scarcity of some thicknesses of maple. Supplies of birch are rather small, and there is a good demand, especially from the door mills. Large amounts of hemlock have recently arrived by lake at Buffalo. Prices continue unchanged. The building trade continues to use large quantities of hemlock. The southern pine situation at Buffalo shows no improvement though there has been a better supply of cars recently. Prices continue low. Redwood shingles are in fair demand at Buffalo, but red cedars continue to be the favorites. With the conclusion of the lake shipment season there has been the usual increased demand for slack cooperage at Buffalo as usual. The reduced apple crop is responsible for this. Hoops are high and heading is moderate, but staves are inclined to weakness.

There is a somewhat improved tone in the demand for northern pine at New York. Stocks in the yards are small and also orders are not extensive though they are fairly satisfactory. Prices are being well maintained. In the hadwood market at New York the demand continues firm though prices are not satisfactory. Orders are coming slowly. There has not been any improvement in the demand for hemlock at New York. Prices are still irregular and retail yards show no inclination to fill up with stocks. Transit shipments of southern pine in large numbers have interfered seriously with the demand for this class of lumber at New York.

Good Movement of Lumber from Ottawa

Ottawa, Nov. 7.—Lumber is moving rapidly from Ottawa Valley yards to Montreal. Between this date and December 1st, when payment for many large cuts will be due, the stocking up process in yards supplied from Ottawa, will go on briskly. There is evidence that outside dealers expect an average winter's trade. New orders are mainly for the upper and middle quality of pine, a trend of business which keeps up monotonously. Several advances of half a dollar or so are recorded in recent transactions. Spruce, basswood and birch are selling at an average pace and quotations tend upward. The sluggishness in demand for low grade of pine has hurt the market for hemlock and inferior spruce. Some of these have dropped a dollar per M. in the last month.

The planing mills are busy with farm trade and local orders consequent upon brisk building. If the season is as favorable to outdoor work as last seasoin, factories turning out fine lumber, sash and doors will be busy during the winter. The extent of the building operations in Ottawa during the last year was evidenced by the assessor's report issued this month, showing the increase in real estate valuation to be $8,500,000, a record amount, partially due to activities in construction. The great number of dwellings being erected furnish orders for lumber factories turning out stairs, doors, windows, mouldings verandah material, etc., to such an extent that some of them have abandoned the Saturday half holiday for men in vogue earlier in the summer. Prices in this stock are steady.

Fraser & Company's saw mill, at Deschenes, closed the last of October, or about ten days earlier than last year. The company manufactured early in the summer for Shepard & Morse, but lately had been sawing their own logs. The W. C. Edwards Company reports its intention to continue sawing until December 1st. J. R. Booth is curtailing operations only on account of having sent a number of men to the shanties and will continue cutting in proportion to the number of men available as long as the season will permit. The Shepard & Morse Lumber Company will also saw until frost comes. J. Davidson closed at Fort Coulonge after running the usual five months.

The improvements in water conservation on the Ottawa river are proceeding on the Quebec side of Lake Temiskaming, the work on the Ontario shore having been finished. The dams at Kippewa were completed some time ago, and the beneficial effects are felt at manufacturing points. The next work to be undertaken is at Quinze rapids for which tenders are soon to be called. The lower stretches of the Ottawa river will benefit also from a new dam under construction at Gull lake, the first conservation scheme of the Mississippi River Improvement Company. This will preserve the water in spring time for use on the Mississippi during the dry season, and the flow of the tributary will be correspondingly large when the Ottawa runs low.

The Ottawa publicity commissioner, H. W. Baker, has just investigated Ontario water power with a view to justifying a slogan for Ottawa: "Twice as much power as Niagara at half the cost." The city bureau was not satisfied with the result and changed the wording to: "More power than Niagara at less cost." Mr. Baker had estimated the water power available within a radius of 30 miles of Ottawa at 934,000 horse power. In this territory the amount developed and in use was 75,000 horse power. He reported Niagara power at 415,000 horse power on the authority of the Hydro-Electric Power Commission. Owing to the many prices quoted for limited service, wholesale quantities, cost without delivery, etc., a comparison of prices was reported very difficult. The wholesale cost of Niagara power at 15 points in Ontario ranged from $17.50 to $29.50. The average was $23.84, which Mr. Baker increased by $7 to cover cost of delivery. He quoted the Ottawa and Hull Power Company, offering energy at $15 retail and continuous service or $5 less for limited service. These figures turned out to be cost at the development station. A closer examination of Mr. Baker's statement showed that the $15 price would not apply to many factories likely to come to Ottawa, as few of them would require sufficient quantity. The current price actually charged for power is $22.50 to $25 continuous service for small quantities. Service in daylight alone could be bought for $17.50, apparently less if much were required. The largest private electric plant in the Ottawa Valley is that of J. R. Booth, which generates 9,000 horse power. Much of this is used for paper, cardboard and sulphite factories.

Lumbermen's wages show a tendency to decline. Only select men are now paid over $30 per month. There are plenty of inexperienced men available at $26.

Miramichi Season Comes to an End

Chatham, N. B., Nov. 8.—The sawing season on the Miramichi is practically at an end. The season has been slightly below the average so far as total quantity of output is concerned, although the quantity is greater than was estimated would be the case earlier in the year.

Geo. Burchill & Sons' plant, at Nelson, ceased sawing on October 19th. John O'Brien's plant, which is located at the same place, was closed down on the 16th. The Miramichi Lumber Company will close their Douglastown mill on November 10th. A. R. Loggie's mill, at Loggieville, ceased sawing about three weeks ago, and the box mill owned by the same firm will cease for the winter on November 20th. The two mills owned by the J. B. Snowball Company are also closed, the larger or "lower" mill having finished on October 9th.

In answer to inquiries as to the probable date of resuming sawing operations in the spring, all the manufacturers mentioned above stated that their plans were no different from those of ther years, and that they would begin sawing as soon as the ice was out of the river, and it was possible to get logs to the mills. In some cases local firms have logs in their mill-booms while others will be obliged to wait until the first of the new logs arrive from up-river. The quantities of old logs being held over are somewhat lighter than usual, one million feet being the largest quantity mentioned in this connection.

The quantities of manufactured lumber to be wintered by local people is also on the light side. Shipments from New Brunswick ports were frequent and large during the early autumn, the result being a corresponding lightness of stocks.

The quantities of different lines of long and short lumber which will be thus held over by manufacturers of this section amounts to about 11,500,000 sup. feet spruce deals (English) 7,000,000 spruce lath and 2,250,000 cedar shingles.

The season thus far has been quite favorable for the getting out of logs. The weather has been dry and good work is being accomplished.

The coming winter promises to be a quiet one so far as the manufacture of long and short lumber at portable plants is concerned. When the lath market is productive of sufficiently high prices, it is possible to manufacture lath from the round wood and sell the product at a profit. During the winters when lath were worth as much in New Brunswick as they are this season in New York City, the product of round-wood lath at portable mills in this province totalled to many millions. Under present market conditions, such undertakings are impracticable. While the existing conditions in the spruce deal market do not bear so heavily upon the operator of the portable deal-mill, there seems little prospect of such a plant being run at a profit, and every indication points to the conclusion that the output of such plants, usually a factor in the winter trade, will cease to be so this year.

Local lumber trade circles are exceedingly quiet. The season's shipping from Miramichi ports is practically at an end, and local manufacturers and dealers are consequently displaying less interest than usual in trade developments. For available local stocks of spruce lath an enquirer would be asked from $2.10 to $2.20 per thousand, f.o.b. Chatham.

In regard to values in "English" spruce deals, information is rather diversified and different opinions in regard to values in this line seem to be prevalent. $15 per thousand superficial feet would meet the views of some active participants in the trade, while 50c per thousand less would come nearer to the views of others, who figure largely in the local trade in spruce deals.

Grand Rapids Veneer Works

Grand Rapids, Mich.

Consumption of Cross-Ties Increases in U.S.

There was a substantial increase of about 10 per cent in the number of wooden cross-ties purchased for consumption by the steam and electric railroads in the United States in the calendar year 1909, as compared with the number purchased in 1908. In 1909 the total number of cross-ties of all kinds of wood, reported as having been purchased, was 123,754,000, costing $60,321,000 at the point of purchase, as compared with 112,463,000, costing $56,281,000, in 1908, and 153,700,000, costing $78,959,000, in 1907. The latter year does not, however, represent the true standard of comparison, as it was one of unusual railroad development. The decrease in 1908 was about 26.8 per cent., but in 1909 the balance swung back to 80.5 per cent. of the 1907 record, and was, as stated, an increase of about 10 per cent. over 1908.

While there was considerable variation in the number of cross-ties purchased during the three years, the average cost per tie remained close to 50 cents. A significant feature is the fact that in 1909 there were 16,437,000 cross-ties reported as purchased for new track, as against 7,431,000 in 1908, and 23,557,000 in 1907.

The oaks continued in 1909 to lead by a wide margin all the other kinds of cross-tie material. Moreover, in the general return of the industry toward the 1907 record, owing to renewed activity in railroad extension, the oaks have come back faster than any other species. In 1907 the total number of oak cross-ties reported was 61,757,000; in 1908 it was 48,111,000; and in 1909 it was 57,132,000. During those years the proportion of oak cross-ties in the total number purchased ranged from 40 to 46 per cent. Southern pines, which numbered more than half as many as the oaks in 1907, dropped to considerably less than half in 1908 and decreased a little further in 1909. The figures are 34,215,000 in 1907; 21,529,000 in 1908; and 21,384,000 in 1909. In each year the oaks and southern pines together formed about two-thirds of the total number purchased. Douglas fir, while showing a material gain over 1908, was in 1909 still short of the number purchased in 1907, which was 14,524,000. In 1908 the total was 7,987,000, and in 1909 it was 9,068,000. From third place in the ranking order in 1907, Douglas fir dropped to fifth in 1908, but came back to third in 1909. In 1907 cedar, with 8,953,000, was fourth in rank; in 1908 it rose, with 8,172,000, to third place, displacing Douglas fir; but in 1909, with 6,778,000, it gave way to western pine, and took fifth rank. In 1907 chestnut was fifth, with 7,851,000; in 1908 fourth, with 8,074,000; and in 1909 sixth, with 6,629,000. Cypress held the sixth position, with 6,779,000 in 1907; seventh, with 3,457,000, in 1908; and seventh again, with 4,589,000, in 1909. Western pine was seventh from the top, with 5,019,000, in 1907; ninth, with 3,093,000, in 1908; and fourth, with 6,797,000, in 1909. Tamarack was eighth in rank in 1907 and 1909, but sixth in 1908. Hemlock was ninth in 1907 and 1909, but eighth in 1908. Redwood has held tenth place each year.

A marked increase is noticeable in the use of gum and beech woods. Of the former, there were 15,000 cross-ties purchased in 1907, 262,000 in 1908, and 378,000 in 1909. The total number of beech cross-ties purchased was 51,000 in 1907, 193,000 in 1908, and 195,000 in 1909.

Fire Advice for Slack Coopers

Building slack cooperage plants to-day to avoid fire is one of the problems of the slack cooperage stock manufacturer, says a writer in The Barrel and Box. The loss by fire can never be fully repaid by insurance. A plant is never insured for its full value, besides there is the loss of business during the time the plant is being rebuilt. The inability to take care of customers often gives an old customer an opportunity to look around and make connections in other territory. For these reasons the matter of building to prevent fire is becoming a more important question to the manufacturer every day.

In visiting a plant recently a unique device to take care of the shavings and sawdust at the plant was seen. Near the boilers, and entirely separate from the rest of the building, was erected a square brick tower. The blower system of the plant fed into the top of this tower, there being no other opening, except a door at the bottom, where the sawdust could be shoveled out directly under the boilers.

The advantages of this system are many. In this plant the boilers could not take care of all the sawdust that was cut during the day, consequently at times it would be piled up around the engine room. Having the tower avoided this possibility and enabled the fireman to keep his room clear of all inflammable material at all times.

Another advantage of this is, that if fire should start while the door of the tower was open, igniting in some way from the boiler room, this door could be closed immediately and the fire choked out without any possibility of the conflagration being communicated to other parts of the plant.

Perhaps this system would not work or be advisable in some plants on account of peculiar conditions existing, but in other plants it would be an excellent idea and should be investigated by other manufacturers who could use it advantageously.

It is well to look after these matters and "Lock the Stable before the Horse is Stolen."

EDGINGS

Ontario

Charles Greer, of Fort William, will operate a camp near Fort Frances this winter, and expects to take out 300,000 ties for the Canadian Northern Railway.

The Backway Pulp Timber Company, Ltd., Toronto, Ont., has been incorperated with capital of $250,000. The incorporators are: Duncan D. McLeod and James Aitchison, students, both of Toronto.

The property of the Fisher Lumber Company, Dryden, Kenora district, in liquidation, is offered for sale by tender up to November 30. It comprises their mills and plant at Dryden and a quantity of logs.

The Rock Lake Lumber Company, Ltd., Superior Junction, Ont., has been incorporated with capital of $100,000. The incorporators are: Thos. N. Dunn, Strathroy, Ont., manufacturer and John Thomas, Inwood, Ont., banker.

The Cunningham Lumber Company, Ltd., Toronto, Ont., has been incorporated with capital of $40,000. The incorporators are: James P. Cunningham, lumberman, Jno. D. Bissett and Theodore H. Peine, barristers, all of Toronto.

James Hardy, of Fort Frances, will operate five camps this winter. He expects that the coming winter will be a busy one in the woods. Large quantities of supplies, he reports are being taken up the Rainy river and extra camps are being put in to cut the burned timber.

The Goderich Organ Company, whose factory at Goderich, Ont., was recently destroyed by fire, will immediately rebuild on their former site, with additional buildings 12 feet by 48 feet and 46 feet by 48 feet. They will have 30,000 square feet of floor space in the new part.

The Canadian Cooperage Company, Galetta, Ont., are considering a proposal to establish a plant at Smith's Falls, Ont. They have been offered a site byl the town and are investigating the supply of raw material, available in the district. The town also offers a fixed assessment of $3,000 and a favorable water rate. each year.

The Niagara Lumber Company, of Niagara Falls, is being wound up. The company was incorporated on May 11, 1907, with nominal capital of $40,000, of which $13,704 was paid up. The business was continued until March, 1910. Rowan, Jones & Sommerville, Toronto, are acting for the company. The company also have a mill at Burk's Falls, and hardwood limits, which are being offered for sale, and are estimated roughly to be worth from $6,000 to $10,000.

J. E. Cutler's lumber and planing mill, at Welland, with a large stock of finished and partly finished lumber, and valuable machinery, have been totally destroyed by fire. The loss is about $15,000 and the insurance $3,500. The cause of the blaze is unknown. The firemen succeeded in saving lumber nearby at Lambert's saw and planing mills, and other buildings. Mr. Cutler's loss will be particularly heavy, as the mill was crowded with work. He will have difficulty completing many of the contracts.

The influx of young farmers to cities looking for work in the lumber camps has to some extent relieved the labor stringency in the Ottawa Valley. Expert shanty men, however, are still very scarce. Consequently the good wage of $32 per month, free in the spring, fare paid one way, is still offered by many firms. P. H. Wright, veteran hiring agent of Ottawa, says this wage is positively the maximum, and there is likely to be a drop of a couple of dollars before long. Common hands are more plentiful than at this time last year.

A new $5,000,000 pulp and paper company has been incorporated at Ottawa. This is known as the Wayagamack Pulp & Paper Company. The company is being organized by Messrs. J. N. Greenshields, Rodolphe Forget, of Montreal, and C. R. Whitehead, of Three Rivers, and a number of other capitalists are interested in the venture. The company will have an authorized bond issue of $5,000,000. Of this amount $3,000,000 has already been underwritten, and the balance will be reserved to provide for future requirements. The mill company is taking over the Baptiste timber limits, situated on the St. Maurice river and its tributaries. These limits are very extensve and very valuable. As an evidence of this the underwriting was practically all taken in two days, thus showing the confidence the underwriters had in the project.

The prediction that this winter will be the busiest in the history of the Rainy River district gives promise already of being more than fulfilled. It is estimated that in the portion of the district tributary to the Lake-of-the-Woods there will be over two thousand men employed in the various camps. In the portion of the district to the north and east there will also be a large number. Contractors are now daily securing men to make up their camps, and the local supply of labor has so exhausted itself that hundreds of men are being brought in from Winnipeg and other western points. The dearth of labor is being keenly felt by lumber companies anxious to procure bushmen. As a result of this shortage wages this winter will be considerably higher than ever before, and will range from $35 to $40 a month and board. The usual rate has been $26 to $35 a month and board.

Eastern Canada

The Dupis Pulp Lumber Company, Ltd., Parish of St. Hermenegilde, Que., has been incorporated, with capital of $100,000. The incorporators are: A. Dupis, St. Hermenegilde; G. Langlois, journalist, A. Handfield, manufacturer and N. Sauriol, financial agent, all of Montreal.

The subscription list for the £1,000,000, 5 per cent., first mortgage bonds, issued by Price Brothers and Company, Ltd., of Quebec, was opened to the public for three days, commencing November 14. The Royal Securities Corporation, of 164 St. James Street, Montreal, conducted the offering.

The Eastern Pulp and Paper Company, Ltd., of Murray Bay, Que., have given to the Bishop Construction Company, Ltd., of Montreal and Toronto, the contract for the construction of a water power development and a pulp mill. The contract price is $290,000, and the engineer is Geo. F. Hardy, New York.

A despatch from Campbellton, N. B., says that the following establishments are being rebuilt: I. C. R. works, the Harquail woodworking establish-

ment, the McLennan machine shops and the W. J. Duncan foundry. There are also good prospects for the building of six saw mills in the town and vicinity in the near future.

It is expected that the Albert Reid Company, of Newfoundland, will begin the manufacture of pulp about Christmas. Its plan is to start with half its grinders and machinery in the winter, and install the other half next spring. When this has been completed the company count upon beginning the installation of their paper-making equipment.

At a meeting of the shareholders of the Silliker car company at Halifax, it was decided to accept the offer of F. B. McCurdy & Company on behalf of J. R. Douglas and J. R. Leamy, of Amherst, N. S., and other interests to purchase the company with all its assets and franchises. The purchasing company will be the Nova Scotia Car Works, Limited, with a total issued capital of $1,743,100.

A special committee of the St. John, N. B., Water and Sewerage Board has recommended the accepeance of the offer made by Mr. Geo. C. Cutler, to lease the Mispec pulp mill at a rental of $2,500 per year, with the option of purchase for $30,000. The committee, however, recommended also that the sale should not include any water rights. The operation of this mill involves the payment of $25,000 in wages annually.

The ownership of a large tract of land, 23 miles from Quebec, has been decided by a judgment given by the New York State court of appeals in favor of the Bayless Pulp & Paper Company, of Binghampton, N. Y. The action was brought by the Firman Anderkirk Company, of Herkimer, to recover the property purchased by the Bayless Company in 1905, on the ground that the Herkimer Company held a previous option on the land. The title of the Bayless Company having now been established, they are expected to begin extensive improvements.

Western Canada

H. E. Almas is establishing a lumber yard at East Collingwood. B. C.

The Big River Lumber Company, of Prince Albert, Sask, expect that their new mill will be completed in April or May, 1911.

A. C. Voss, of Cedar Rapids, Iowa, who is a member of a company owning a timber tract near Prince Rupert, B. C., reports that they do not intend to put up a saw mill at present. Mr. Voss recently visited the limit, and it was at first reported that they might soon build a mill. He reports, however, that the prospects of that district are very bright.

A New Westminster report says that the yards of the Canadian Western Lumber Company's mills at Fraser Mills, B. C., are being enlarged to secommodate the immense amount of lumber of all kinds the company has on hand. The export demand for lumber has been very small for the past three months. The company are experiencing no difficulty in getting logs and about 22,000,000 feet of them are now at the mills ready to be sawed.

The Royal Lumber Company, of Nelson, B. C., owners of the Crawford Bay townsite, near Nelson, were recently reported to have in view the use of this property as a logging station for logs cut from their limits at the head of Hooker and Canyon Creeks. It was also reported that they were in a position to go ahead with the construction of their mill. It is now authoritatively stated that they have no immediate intention of beginning operations.

Vancouver reports state that construction will be commenced immediately on the Cowichan branch of the E. and N. Railway, and that the agreement has been completed whereby the American Securities Company through a subsidiary company to be known as the Empire Lumber Company will erect at Crofton a saw mill to cost in the neighborhood of $1,000,000. The company recently purchased 52,000 acres of timber land in the Cowichan Valley from the C. P. R. Mr. W. E. Oliver, of Victoria, represented the lumber company in the negotiations.

The plant and assets of the Canadian Wood Pulp & Paper Company, which include a large mill at Port Mellon, on Howe Sound, and a tract of 56,000 acres of wood pulp limits on Quatsino Sound, have been disposed of by that company to a syndicate of English capitalists. It is the intention of the new owners of the property to operate the mill and extend the scope of the manufacturing part of the concern to a considerable degree. The deal was put through by Mr. W. I. Paterson, who, with Messrs. Joseph Martin, K. C., M. P., James S. Harvey, K. C., and T. F. Paterson, was interested in the deal.

A London, Eng., despatch says that a resolution has been passed for the winding up of the Canadian Pacific Sulphite Pulp Company, Ltd. This company, registered in London, with a nominal capital of £107,000, was formed for the purpose of taking from the Canadian Finance Syndicate, Ltd., of London, the whole of the issued capital stock of the Oriental Power and Pulp Company, Ltd., Vancouver, B. C. The latter company was the registered holder of about 84,000 acres of pulp timber land on Princess Royal Island and the adjacent mainland of British Columbia, together with a water power and about 500 acres of freehold land. The liquidator appointed is Mr. Limebeer, chartered accountant, of 65 London Wall, London, E. C.

Dominion Saw Mill and Lumber Company, an English corporation, already controlling the Mundy Lumber Company, of Three Valley, B. C., is reported to have acquired the interests of the Bowman Lumber Company, the Revelstoke Saw Mills Company, and the Yale-Columbia Lumber Company. This is the largest timber deal in the history of Kootenay, and involves over a million dollars. The deal includes four saw mills, one at Nelson, and 240 square miles of timber limits, on which are three and a half million feet of standard timber. The new company, which was incorporated last year in England, is one of the most important lumber firms in British Columbia. It has a capital of $5,000,000, and owns six miles with a capacity of 150,000,000 feet annually.

The Active Gold Mining Company, owners of the Porcupine timber limits, as well as the Union Jack and other mining interests near Ymir, are making preparations to install a saw mill at Porcupine creek. P. V. Loth, secretary-treasurer of the company, has been looking over the the situation during the past fortnight, and has the matter in charge. The tract consists of something more than 5,000 acres, white pine, cedar, hemlock and fir being well represented, not to mention a large amount of material for poles, fence posts, etc. Mr. Loth figures on putting in a plant well equipped for the manufacture of all kinds of lumber, including the best grades for finishing purposes, mouldings, brackets and shingles. Plans for the erection of the plant have not yet been prepared, and the capacity will be determined later on, as much depends on other matters that have as yet not fully developed. There are thousands of acres of the best lumbering material waiting for the saw.

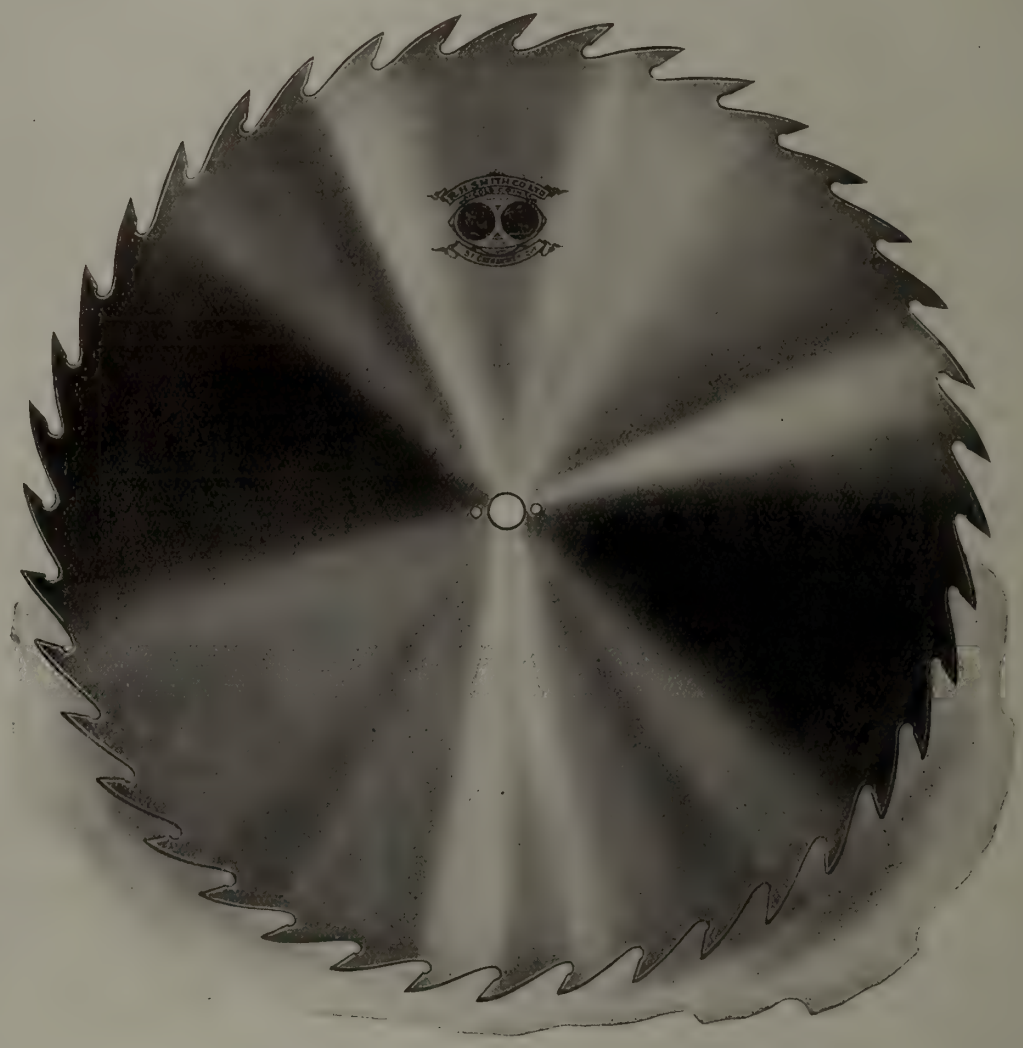
White Pine



We make a specialty of the famous MLB Brand manufactured by Messrs. McLachlin Bros. Ltd., of Arnprior, Ont.

Red Pine

We hold the LARGEST STOCK in CANADA of this WOOD, and can give prompt shipment in any size.

Solid and Inserted Tooth Circular Saws

We make a specialty of these lines

We remake old Solid Tooth Saws into new Inserted Tooth Saws

Write to us for quotations

Our saws have been before the public of Canada since 1855, and have won a reputation far excelling any other make of saws, combining as they do so many points of marked superiority.

By the old method the tempering of circular saws was to a great extent a matter of chance.

By our Patent Process that uncertainty is entirely avoided.

Being tempered and straightened by heat and pressure in air tight ovens, at a uniform heat between heavy revolving plates, we produce a perfectly even temper throughout the plate, and being free from that uneven strain or tension caused by so much unequal hammering they are not so liable to buckle, which was a great source of trouble and expense in the old style of saw.

These saws will stand up to their work better under all circumstances, and being made of a higher quality steel than it is practical to use by the old method, they hold an edge longer and will do more work than any other saw on the market.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

We Pledge You—

that when you adopt

Fenderson's "Quality" Policy

You are adopting a policy which insures you increased patronage; insures your doing business without the trouble, friction, complaints and discounts of old.

Insures you a better profit on your stock; easier and quicker sales.

Insures you pleasant business relations with your customers.

This "Quality Policy" is one you cannot afford to pass by.

It isn't a question of whether your business can get along without this Policy, IT IS a question of the big assistance it would be in anybody's business.

"QUALITY IS THE BEST POLICY"
is our motto and we live up to it

Largest and Best Assorted Stock of Dry Spruce in Canada

No. 103 Fast Feed Planer and Matcher

DOES EXCELLENT WORK AT 150 TO 200 FEET PER MINUTE

In our No. 103 we offer to the Canadian public the "last word" in planers and matchers. The design of this machine is up-to-date, right up to the present moment. No planer and matcher yet constructed has a single point of advantage over our No. 103.

Much is being said of late in reference to a "Racer Type" of planer and matcher. If you are a horseman you will know the full significance of the word "racer"—speed at the sacrifice of all else. We have purposely avoided this type which requires expert handling and constant nursing.

For more than thirty years we have being supplying the Canadian demand for wood tools. We have constantly and consistently studied the requirements of the Canadian trade. In our No. 103 we have combined a thorough knowledge of your requirements with our long experience in building wood tools and have produced a machine which will make you money every day. Will produce sheathing or flooring at the rate of 150-200 feet per minute, and will do it every hour of the day and every day of the year.

Canada Machinery Corporation Limited, Galt, Ontario

Machine Knives
AND
Cutters

In our Woodworking Department we use large numbers of Machine Knives and Cutters on hardwoods. By reason of this practical experience and test in the working, together with the fact that the steel itself is made in our own Steel Works under a DISSTON formula which produces a material peculiarly suited to withstand the strains to which knives are subjected, giving in the hardening and tempering process a perfect combination of hardness, toughness and edge-holding quality, we are warranted in claiming the **Disston Knives** are **Superior** in **Quality, Efficiency** and **Durability.**

We manufacture a full and complete line.

CONGO
NEVER LEAK ROOFING

Congo on Maryland Terra Cotta Company's Buildings—Baltimore, Maryland

Guaranteed Roofing

We don't suppose you care a rap what Congo is made of—what interests you is *how long it is going to wear.* What it is made of interests us because we give with every roll a *Surety Bond Guarantee,* the like of which no other manufacturer has offered.

Herewith are a few of the features that make it possible for us to guarantee Congo 2 or 3 ply for *10 years.*

It never gets hard or brittle. It never breaks or peels off. It is giving as perfect satisfaction in Europe, India and Australia, where we ship thousands of rolls, as in America.

Congo doesn't run, rot, buckle up or shrink.

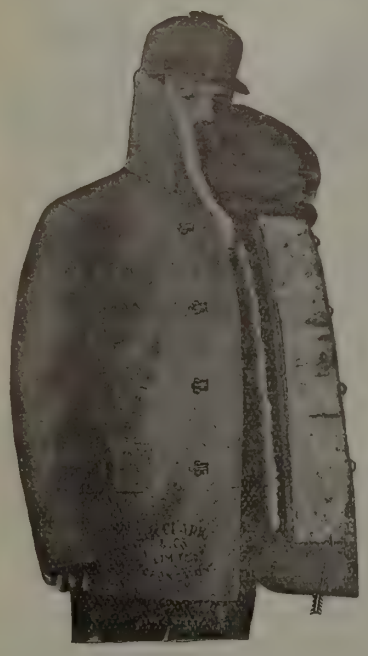
The caps, nails and cement which we furnish free, are the best money can buy.

We don't use the old style *tin caps* for Congo, but *galvanized caps* which never rust.

You can satisfy yourself as to its lightness, pliability and wonderful waterproof qualities by a little investigation. As to its wearing properties — we guarantee them. Can any reasonable man ask more? Further information on request.

United Roofing & Mfg. Co. PHILADELPHIA, PA.

Stark, Seybold, Ltd., Montreal. **Mechanics' Supply Co., Quebec.**
S. Hayward & Co., St. John, N. B. **Hobbs Hardware Co., London, Ont.**



Not altogether what we say but what Users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

"Berlin" Surfacers

Berlin Surfacers are built for the use of thin knives. A few years ago the significance of such a statement would hardly have been appreciated. To-day, the man who turns out the most lumber in the shortest time, who gets the most from his lumber and his machines, who gets the finest finish, is the man who uses thin knives.

Pyts Steel, used exclusively on Berlin machines, is the one self-hardening steel made to-day which possesses the requisite toughness combined with the right amount of hardness, for the successful use of thin knives.

Thin knives are set at greater angle than the ordinary thick knives, consequently more of a "scrape" is secured. This is further effected by back-bevelling to suit the nature of the wood being worked.

With Berlin thin knife heads, devices are used which grind the knives without disturbing the setting. The heads are then set in motion and jointed or brought to a perfect cutting circle so that each knife does its share of the work.

Thin knives actually make better work possible and will raise the grade from ten to twenty per cent.

The No. 186 is a fast feed matcher with the side-head spindles left out. It is also short-coupled and has six large feed rolls. Belt tighteners are provided for both top and bottom heads—no chance to "stall" them no matter how heavy the cut.

The No. 186 has the capacity of four ordinary surfacers and will produce a finish at 150 feet per minute that cannot be equalled short of a cabinet surfacer at 30 feet per minute. It is built in two sizes—20 in. or 30 in. wide with a 6 in. opening.

The top and bottom heads are very close together—warped and crooked stock can be better and more easily surfaced.

This surfacer gives the satisfaction which prompts the purchase of other Berlin machines.

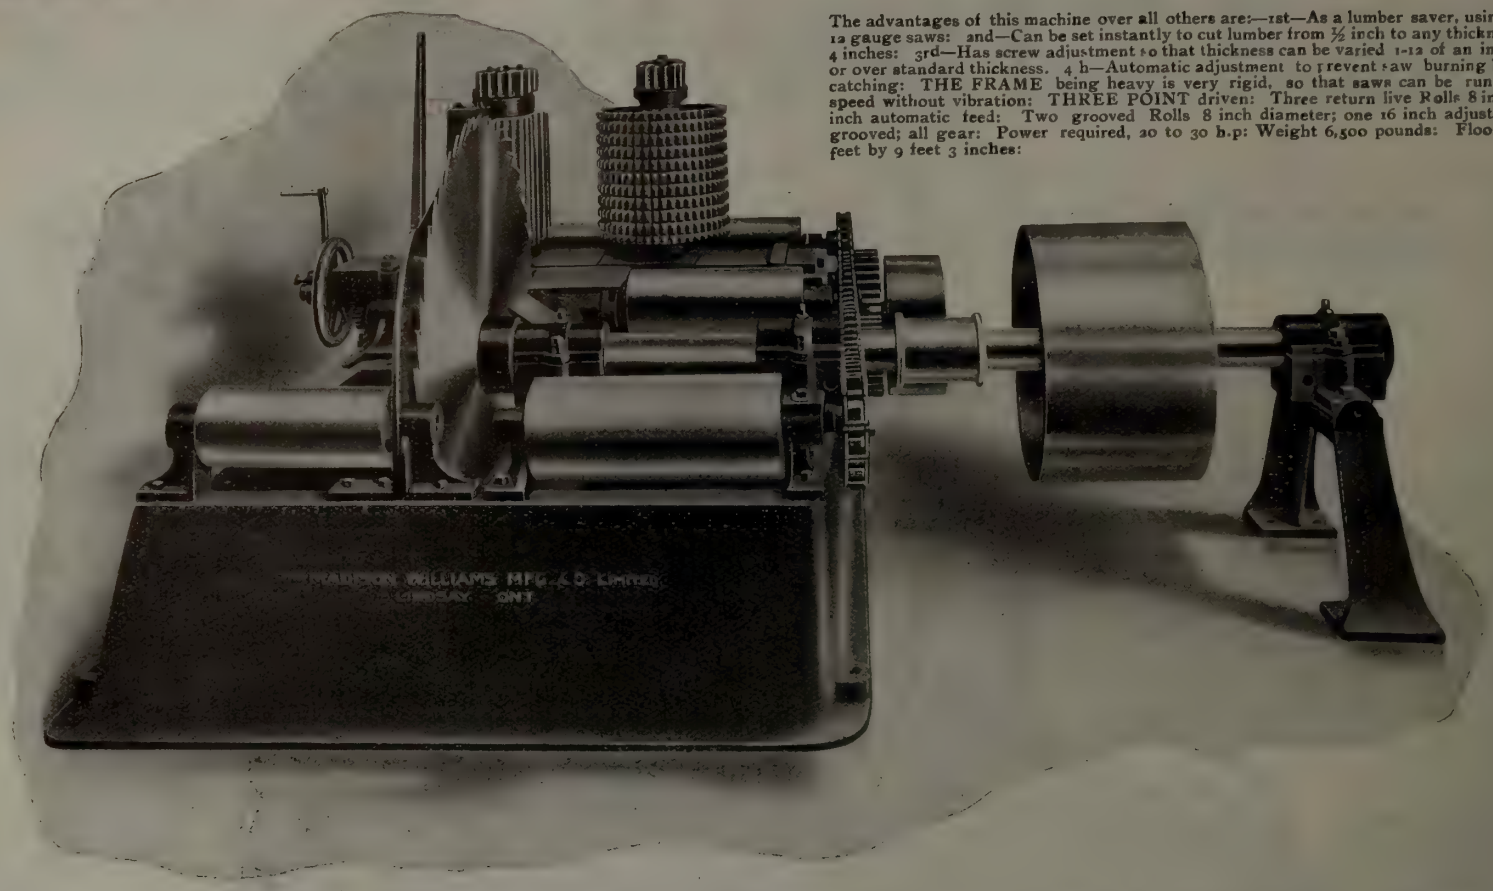
"Jumbo"
Combined Gang and Edger

We have made several improvements since this cut was made, less gearing is used than shown in the cut.

This is a very complete machine and embodies every detail of construction essential to an adequate gang edger.

We have sold a great many of these machines and hear nothing but good said of them. We have some very flattering remarks for our "Jumbo."

Some of its good points are:



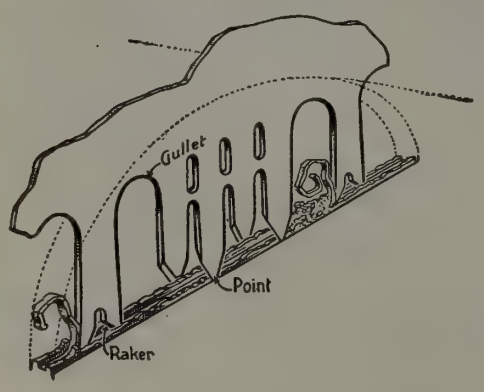
MANDREL: 4½ inches by 10 feet 6 inches long.
DRIVE PULLEY: 20 inches by 20 inches.
SAWS: 2 Movable Saws on Edger side (more if desired) 8 stationary saws on gang side. 2 Water Boxes.

This machine is 5 feet 7 inches inside of frame; reverse friction is supplied in case cant binds and prevents saws from being burned. Supplied with Press Rolls and impossible for Cant to fly back.

Prices Cheerfully Quoted

MOWRY & SONS Gravenhurst Ontario

JOHNSTON'S RE-SAW is a Lumber Saver and a Money Maker



The advantages of this machine over all others are:—1st—As a lumber saver, using 10 and 12 gauge saws: 2nd—Can be set instantly to cut lumber from ½ inch to any thickness up to 4 inches: 3rd—Has screw adjustment so that thickness can be varied 1-12 of an inch under or over standard thickness. 4 h—Automatic adjustment to prevent saw burning by slivers catching: THE FRAME being heavy is very rigid, so that saws can be run at high speed without vibration: THREE POINT driven: Three return live Rolls 8 inch by 20 inch automatic feed: Two grooved Rolls 8 inch diameter; one 16 inch adjustable Roll grooved; all gear: Power required, 20 to 30 h.p: Weight 6,500 pounds: Floor space 8 feet by 9 feet 3 inches:

Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground saws can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easy.

ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment-Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

Isn't it Better to Investigate

"The HOWARD" Vulcanizing Process

than to wish you had

Positively the quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

---

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto

Heavy Duty Lath Machine

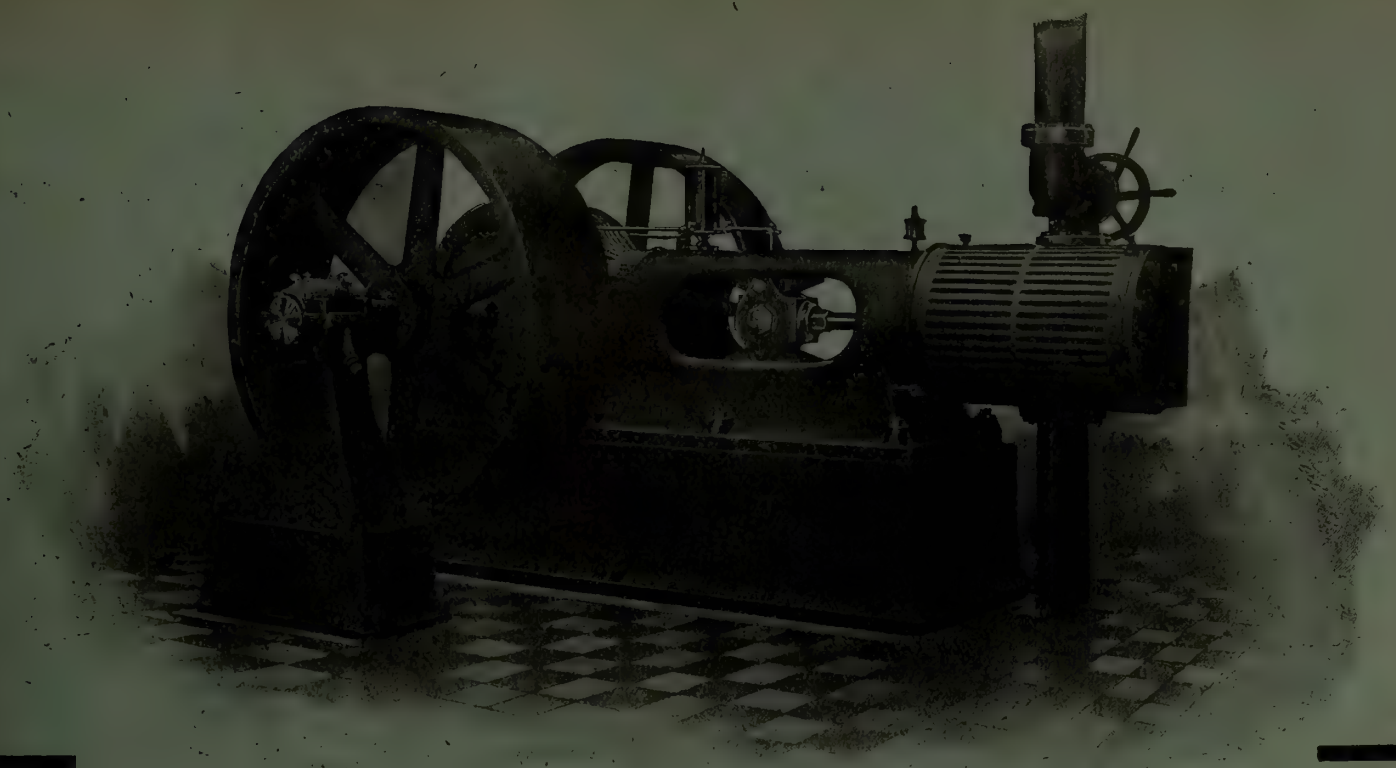
This machine has so many good points that our space will not permit us to tell about them. We will, however, be glad to send a full specification on application.

4-SAW LATH BOLTER

The general construction of this machine speaks for itself.

We believe that more important features are combined in it than in any other Lath Bolter of its capacity on the market to-day. Here are a few o them:—

The front and rear pressure rollers are power driven.



The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Full information regarding this machine or anything else in our line you may require, cheerfully given on application.

The Steam Tension Band Mill

is made with 8 foot, 9 foot and 10 foot wheels. As you know, the top wheel and upper guide are operated by separate steam cylinders.

Some obvious advantages of this are, the great speed with which the guide can be raised and lowered, the extremely sensitive tension on the saw, and the quick time with which saws can be changed.

You will see at once that considerable time is saved in one day, over the usual weight tension mill.

And no tensioning system has yet been made, that is as sensitive as our steam tension ; so that your saw is more easily kept in perfect shape and at the right tension at all times — which means better lumber.

Any mill which will increase your cut, and probably improve its quality is worth your while looking into ; and besides, there are other special features which increase its value to you.

Shall we send our catalogue?

440 Square Miles Timber Limits

on Georgian Bay, Ontario

To be Sold by Auction in Blocks of 5 to 36 Square Miles

On account of their President and principal shareholders being engaged in other large enterprises, and not having the time to give to them all, THE PARRY SOUND LUMBER COMPANY, Limited, have decided to sell by Public Auction, to be held in the rotunda of the Board of Trade in the City of Toronto on the **Seventh Day of December, 1910,** all of the timber lands, mills and town property situated in the Town of Parry Sound, also Tug Scow and full Camp Equipment for five camps. Ontario Timber Limits

TO BE SOLD

comprise some 440 square miles of licensed and deeded pine, hemlock, spruce, birch and other timber. The licenses from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows: Saw Logs, White Pine, $1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods, 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Montieth, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners. A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

White Pine, Spruce, Hemlock

We have sold **"Some"** lumber this year. Can yet fill **Hemlock** orders.

White Pine and Spruce Lath, Cedar Shingles.

Our factory stock in White Pine, S.C. Sidings, strips and shorts is complete in dry 1 in., 1¼ in., 1½ in. and 2 in.

We would like to answer your enquiries concerning this line.

We have some very desirable lines in White Pine for manufacturers of doors, sash, etc., also a nice line in White Pine Mill Run Stocks.

Write us for prices, we are sure we can interest you.

DISSTON

CHISEL TOOTH CIRCULAR SAWS

The many mill men who use Disston Chisel-Tooth Circular Saws KNOW from practical experience and Appreciate these FACTS:

Saw always remains the same diameter
Never requires gumming
"Points" or "Bits" are absolutely interchangeable
Points can be changed in few minutes
After each insertion of new Points saw is practically good as new
Unnecessary to joint, side-dress or sharpen new points before starting work.
Shanks or holders fit the sockets perfectly
Will cut all kinds of timber, frozen or otherwise
Consume less power
Ample throat-room and clearance—cannot be choked down
Will carry more feed than any other inserted tooth saw made
Guaranteed to stand up at any given speed.

AND FURTHER—the best saw is cheapest in the end—THAT'S DISSTON

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, December 1, 1910 No. 23

Companies Act to be Tested

The Act which was passed by the Government of British Columbia and which went into effect on July 1 last, whereby it was enacted that companies not licensed or registered in the province could not carry on business therein, will shortly be made the subject of a test case in the courts at the instance of a number of manufacturers in Montreal. It is a matter for wonder that some such course had not already been taken long ago, as the Act in question is obnoxious to manufacturers all over the Dominion and it is generally believed that in order to have it disallowed by the Dominion Government the only thing necessary is to have it tested in the courts. It is the opinion of many who have given the matter careful study that the law is contrary to the express provisions of the B. N. A. Act and will not stand a legal test.

Briefly, the law as put in force on July 1 requires every company other than those having their origin in the province to be registered or licensed by the Provincial Government before being permitted to carry on business in the province. Thousands of manufacturing companies are adversely effected by this Act, many of them being companies which are interested in lumbering. Heavy penalties are provided for the punishment of those who disobey the law, the most serious of which is that debts due to companies which are not licensed or registered cannot be collected under the law of the province. This Act was passed in spite of strenuous opposition from the Board of Trade of Victoria and the Board of Trade and business men generally of Vancouver.

The testing of the measure will be effected as the result of a resolution passed by a number of manufacturers of the city of Montreal who held a meeting at the office of the Canadian Manufacturers' Association. The resolution was worded as follows: "That, in the opinion of this meeting it is desirable that the association should take such steps as may be deemed advisable, by test case or otherwise, to bring to an issue the question of the validity of the provisions of the Companies Act of British Columbia relative to extra-provincial companies." The British Columbia Government has questioned the right of the Dominion Government to interfere in this instance. It is more than probable therefore that once the matter finds its way into the courts there will be a stubborn, and possibly a prolonged, fight before it is finally settled.

Important Test of Burning Slash

An important announcement has been made by the Ontario Department of Lands, Forests and Mines, regarding the protection of timber limits from fire. It has been decided according to an announcement by the Minister, to conduct during the coming winter a series of experiments in burning the tops, limbs and brush created by lumbering operations on certain lumber limits in the Rainy River District. Experiments along this line have been made in the United States from time to time, and in the great majority of cases it has been proved conclusively that it is a paying proposition to burn the slashings during the cutting operations. That an experiment along this line is to be made in a practical manner on limits in Ontario will be a source of gratification to a number of the more prominent lumbermen of the province who have themselves made similar experiments in the past and have come to the conclusion that such a practice is feasible.

A case in point is afforded by a report which appeared in the Canada Lumberman of Nov. 15, wherein it was shown that the new statute requiring the lopping of the limbs and branches during operations in the State of New York had resulted in general approval of the measure. The law has only been in force for a year, but has during that time proved satisfactory both as to cost and effectiveness. This is only a half-way measure as compared with the complete destruction of the limbs and branches by burning. It goes to prove, however, that by intelligent measures of prevention a great deal can be done to render much less frequent the disastrous forest fires which have devastated the timber resources of North America for so many years.

To the lumbermen of Ontario there is an additionally important feature in this new step by the Government. On May 1 last the Government decided that in future the cost of fire ranging on the timber limits of the province should be borne entirely by the license owners. Formerly the cost had been shared equally between the Government and the license owners. It appeared to lumbermen in general that this was a backward policy, and that the Government would probably soon learn that the best manner in which to keep lumbermen interested in the prevention of fire would be to show their own concern by doing what they could to assist. Possibly this new measure will mean that the Government intend to take up the matter of fire prevention seriously, and after finding out the best methods, to enforce them rigidly. There are many lumbermen in the province, and among them most of the prominent ones, who would gladly join in any arrangement for the burning of their slashings, if they felt assured that all the other lumbermen in the district would follow suit. There is no inducement, however, for them to burn their own slashings while their neighbors do not do so, as there would be no protection against fire if upon neighboring limits the dangerous slashings were allowed to accumulate. If the Government find, after thorough experiment, that the slashings can be successfully destroyed at a cost which will not be a burden to the license owner, they will no doubt receive the support of the best class of license owners in carrying out a policy with this object in view.

At the same time such a measure, to be effective, would require the most rigid enforcement. The fire ranging staff which the province now has seems in the past to have been the object of much criticism. It would be essential, in order to carry out a policy of this sort, that it should be carefully revised and any incapables weeded out, so that the staff might be placed upon an effective and businesslike basis. It has been a more or less general practice in the past to appoint students as fire rangers. This is commendable enough in some respects, but it scarcely works out to the best interests of the province. The proper men to handle the work of fire ranging are those who are actually engaged in lumbering or other

woods work as a means of livelihood. For the protection of the forests from fire, and for the fighting of fires when they occur, the best possible men are those who have been brought up in the woods and know how to travel in the woods and what to do under emergencies. The value of the timber of the province is so rapidly increasing that it is more than time that the fire ranging system be placed upon a serious footing. One of the first reforms in the system as it now prevails is that the Government should show its own interest in the welfare of the lumbering industry by reverting to the policy formerly in force of sharing in the cost of fire prevention. The province is as much interested as the lumbermen in this matter and will not be acquitted of failure to do their duty if they continue to place the whole expense upon the license owners.

Canada's Situation Misunderstood

"Canada's Vaulting Ambition," is the title of an editorial, written from a badly mistaken point of view, which appeared in a recent issue of "The Paper Mill," published in New York City. It is just this unfortunate misunderstanding of the situation by parties to one side of the question at issue which has for so long a time given the people of the United States a mistaken idea as to Canadian affairs in general. In connection with the tariff, Canada has little or no "ambition" so far as the United States are concerned. We know pretty well what we would like in the way of duty, but as to "ambition" we are well content to go ahead and prosper in the future as we have in the past no matter what duty the United States, in their neighborliness, see fit to impose upon our products.

The inspiration of the criticism which appeared in the "Paper Mill" was a news despatch or possibly a number of despatches, which emanated from Ottawa, and quite possibly were prepared especially for the United States news market. The gist of the despatches was that the Dominion Government officials believe the result of the elections in the United States indicates that a majority of the electors in that country are in favor of a much lower tariff than that now in force. The absurdity of this report may not be so apparent to a citizen of the United States as it is to a Canadian. We have probably all formed our opinions in Canada as to the meaning of the United States elections, but it is safe to say that no member of the Dominion Cabinet has been expressing his serious views upon the subject for publication. The real fact of the matter to-day is that Canadians are not expecting any special treatment in the matter of tariff from the United States. The tariff issue is solely one of the United States' own making, in its present form Canadians are not hoping "by stubborness to secure pretty much everything they are asking for." They are simply endeavoring to give the United States a courteous hearing upon the tariff issues and to forget some of the discourtesies with which they were favored in years gone by when the shoe was on the other foot.

Canadians would probably be pleased as the "Paper Mill" suggests to see the duty upon paper entering the United States removed. But they are far from expecting the United States to adopt such a course. The lessons of the past all point the other way. On the other hand there is no disposition in Canada to drive United States mills out of business. The whole question is unfortunately, badly mixed up with the issues of conservation and protection. On Canada's part the most important aspect of the case is the necessity for careful preservation of our pulpwood resources. It is just a question whether giving Canadian paper mills free access to the market of the United States for the sale of their paper would not be a bad policy from the Canadian point of view, as it would result in a serious drain upon the pulpwood resources of the country. The paper manufacturers of Canada would be far better served in the long run if the policy of encouraging the manufacture of pulpwood into paper in Canada were followed to its legitimate conclusion and everything possible were done to encourage the manufacture of paper to take scientific care of their pulpwood resources, and to develop the home market.

The negotiations which have been recently commenced between Canada and the United States do not at present give promise of leading to much that is practical and definite. It is to be hoped, however, that they will at least have one beneficial result—that they will bring the common people and incidentally the press of the two countries to a more sympathetic and sensible appreciation of the aims and ideals of each country.

Increased Cut of Lumber in the United States During 1909

The lumber cut in the United States during the calendar year 1909 was 44,585 million feet, board measure, as against 33,224 million feet in 1908, and 40,256 million feet in 1907. This was an increase of 34.2 per cent. over 1908, and of 10.8 per cent. over 1907. The output of lath and shingles during 1909 was 3,712 million and 14,945 million, respectively, The increase in the production of lath in 1909 over 1908 was 24.3 per cent. and over 1907 1.3 per cent., while the corresponding increases for shingles were 23.4 per cent and 26.4 per cent.

The substantial increase over the two preceding years was general, few of the individual States showing a decreased cut. The figures for 1908 and 1907 were collected by mail, and, while including the commercial mills of the country, did not in many cases cover the small neighborhood mills whose output was consumed locally. The relatively large increase in the number of mills reporting for 1909, together with the increase in the cut for that year, was due largely to the fact that the field force of the Census Bureau, which was engaged in gathering statistics of all branches of manufacture throughout the United States, secured returns from practically every sawmill in operation during the whole or any part of 1909, without regard to its size, and in this way there have been included many small mills not covered by the mail census in the preceding years.

In the group of coast States, from Virginia to Texas, inclusive, together with Arkansas and Oklahoma, there stands probably not less than nine-tenths of the present supply of yellow pine stumpage. The proportion of the total cut of lumber in the United States contributed by this group, together with Kentucky and Tennessee, has been steadily increasing during recent years. In 1907 their output was 17,834 million feet, or 44.3 per cent. of the total; in 1908, 15,056 million feet, or 45.3 per cent. of the total; and in 1909, 22,057 million feet, or 49.5 per cent. of the total. Yellow pine, including the several species, longleaf, shortleaf, loblolly, Cuban, etc., constituted substantially the same per cent. of the total cut of lumber in these States in each of the three years, furnishing 72 per cent. in 1909, 72.8 per cent. in 1908, and 72.4 per cent. in 1907. The large increase in the number of mills reporting from this region in 1909 over 1908, namely, from 12,824 to 23,255, amounted to nearly two-thirds of the total increase in the number of mills reporting for the entire United States between these years. The increases in this group of States, both in the number of mills and in cut, were due undoubtedly in large part to the many small mills in remote localities which were reached by the agents in 1909, but which are difficult to canvass by mail. The limited output of mills of this class and size, however, is almost without exception consumed in the immediate vicinity of its manufacture, and hence exerts little or no influence on supply and prices in the general lumber market of the country.

The proportion of the total lumber cut of the country contributed by New York and the New England States did not vary materially during the three years, being 9 per cent. in 1907, 9.6 per cent. in 1908, and 7.5 per cent. in 1909.

Although the wood-pulp industry continues to make heavy and increasing draft upon the supply of spruce, this tree still practically shares with white pine the place of first importance among the lumber timbers of this region. In 1909 its contribution to the total lumber cut of this group of States was 28.8 per cent., while that of white pine was 31.1 per cent.

The relative importance of the Lake States—Michigan, Minnesota, and Wisconsin—in lumber production continues to decrease steadily, as the supply of white-pine stumpage grows less. These States contributed 13.6 per cent. of the total lumber cut of the United States in 1907, 13.2 per cent. in 1908, and 12.3 per cent. in 1909.

The Pacific Coast States, with an output 28.8 per cent. larger in 1909 than in 1908, and 2.2 per cent. greater than in 1907, nevertheless contributed a smaller proportion of the total cut of the country in 1909 than in either of the preceding years, the per cent. for 1909 being 15.5; for 1908, 16.2; and for 1907, 16.8. Douglas fir was far in the lead as lumber material in these States during the three years, the production from this species constituting 68.1 per cent. in 1907, 66.1 per cent. in 1908, and 68.5 per cent. in 1909. It contributed 79.2 per cent. of the total production in Washington in 1909, and 83.2 per cent. in Oregon, while redwood formed 45.6 per cent. of the total output in California.

Of the total production of lumber in 1909 soft woods supplied 33,875 million feet, or 76 per cent., while hard woods contributed 10,693 million feet, or 24 per cent. Soft woods contributed 1 per cent. less of the total production in 1909 than in 1908 and 1907, in each of which years they formed 77 per cent. of the total.

The reported cut of yellow pine in 1909, 16,277 million feet, constituted 36.5 per cent. of the total lumber output. This proportion was substantially larger than in 1908 and 1907, in which years it formed 33.8 per cent. and 32.8 per cent., respectively, of the total. Douglas fir lumber, which ranked next to yellow pine in 1909, with a reported cut of 4,856 million feet, formed 10.9 per cent. of the total output in that year, as against 11.1 per cent. in 1908 and 11.8 per cent. in 1907. White pine, with an output of 3,900 million feet, contributed 8.8 per cent. of the total in 1909, as against 10.1 per cent. in 1908 and 10.4 per cent. in 1907. The reported cut of oak lumber in 1909, namely, 4,446 million feet, was substantially larger than the output of this species in either 1908 or 1907. It formed 10 per cent. of the total in 1909, as against 8.3 per cent. in 1908 and 9.2 per cent. in 1907. A steady decrease is noted in the proportion of hemlock lumber in the total production during the last three years. It formed 8.4 per cent. of all lumber in 1907, 7.6 per cent. in 1908, and 6.8 per cent. in 1909. A similar showing was made by spruce, which declined from 4.3 per cent. to the total in 1907 and 4.2 per cent. in 1908 to 3.9 per cent. in 1909. Western pine showed little variation in actual or relative production in the three years. Its contribution in both 1907 and 1908 formed 3.8 per cent. of the total, and in 1909, 3.4 per cent. The cut of lumber from no other species reached as much as 3 per cent. of the total output in any of the three years, though a substantial increase in the production of hickory lumber was shown for 1909, when a cut of 338 million feet was reported.

Editorial Short Lengths for Busy Readers

The Financial News, of London, Eng., in reference to British Columbia timber, thinks it not too rash to estimate the appreciation of its value within the next three or four years at threefold.

The folowing interesting despatch upon the tariff situation emanates from Washington, D. C.: The State Department officials, while they have not been yet acquainted with the details of the three-day conference at Ottawa las week between Canadian and American conferes looking to a reciprocity agreement, do not expect a general agreement as a result of the conference. The interests of the two countries are too exhaustive to admit of the violent derangement that might be expected to follow a sweeping readjustment. It is understood that each side at Ottawa contented itself with submitting a very limited list of articles on which the principle of reciprocity might be tried. Included in the Canadian proposal were timber, grain, a whole line of agricultural products, and perhaps live stock and meats. Wood pulp may not be put on the American free list, but in any event it is marked for a substantial reduction. There is reason to believe that the list of articles that Canada offers to admit from America at reduced rates is disappointingly small.

The Victoria, B.C., board of trade through its railway freight committee, is preparing a recommendation to be submitted to the Canadian Pacific Railway, the object of which is to secure for local lumber mills equal opportunities for shipping to eastern points to those possessed by Vancouver shippers. At present there is an extra charge on lumber shipments shipped to the prairies, compared with the rates prevailing from Vancouver. This extra charge amounts to one and one-half cents per hundred pounds, equivalent to about 40 cents per thousand feet. In this way Victoria mills are severely handicapped in competing for the trade of the prairie markets.

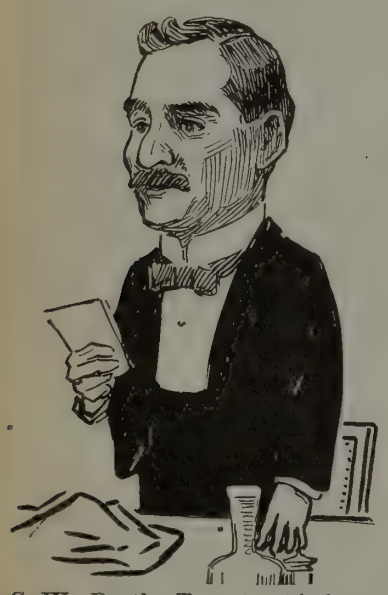
Some years ago the local board of trade fought hard for the establishment of terminal rates from Victoria. At that time, however, the lumber situation was entirely overlooked, the consequence being that the board was under the impression that for all commodities shipped east of North Bend, the freight rate from Victoria was the same as that which prevailed from Vancouver. A general impression prevails that as soon as the matter is brought to the attention of the railway company the disadvantage under which local mills labor will be speedily remedied.

That the Canadian lumberman is quickly knocking the bottom from the New Zealand lumber business is the peculiar charge expressed through Dr. Rayner, a prominent Auckland, New Zealand, business man who recently spent a few weeks hunting in the West.

"During the time of the financial crisis about three years ago a New Zealander came to British Columbia," he said "and bought a shipload of Oregon pine in that province, which he shipped down to Auckland. He sold his load after paying for shipment 7,000 miles at $20.25 a thousand. I can't believe, however, that he paid his legitimate export charge. Every stick of the timber was No. 1 quality, free from checks and knots. It simply floaded the New Zealand market. The lumber manufacturers went to the Premier and demanded that he put a prohibitive tariff on pine. They could not do business under such ruinous competition. This condition, however, has been allowed to prevail even until to-day.

"There are some manufacturers in British Columbia who are shipping all over the world at absolutely ruinous prices. They cannot be receiving an adequate return on their investment at all. The government should put on a prohibitive duty on timber exported from here, or else obtain some return on the extravagance of the cutting. In New Zealand lumbermen pay the government as much as from 60 cents to $1 per 100 board feet bases on the government cruiser's scale of the standing timber and not on the log scale as here, before they can cut the timber. The scale of prices charged by the government for the cutting is based on the location of the timber, as, for instance, timber a long way from transportation would only be assessed at 60 cents, while timber near transportation and easy to log would be assessed at a dollar. By this means we are assured there would be no such waste as exists here. In New Zealand we have 350,000,000 feet of standing kauri, yet, enough to last us for many years and even when that is gone we have enough totari and rimu to carry us on."

Some astounding facts about the supply and demand for lumber in the United States are included in the following pithy paragraph relating to the great fires in the National Forests during the summer which has just passed. "It is believed that last summer's fires either burned up or killed between one and two per cent. of the total stand of National Forest timber. At the present rate of cutting from the National Forests, 6 billion feet (the quantity burned or killed) is equal to 12 years' supply; but it is less than one-sixth of a single year's cut in the entire country, or enough to keep all our lumber mills busy for something under two months." If in two months the mills of the country could produce a 12 years' supply, the quantity which must be exported, and possibly dumped, at sacrifice prices, on foreign markets, must be prodigious.



Toronto Retailers Banquet the Trade

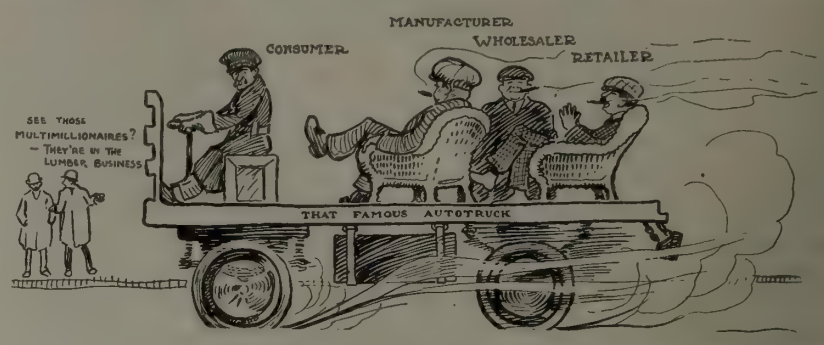
Entertain their Wholesale and Manufacturing Friends—Opinions Interchanged which may Lead to Cooperation and Improve Trade Relations—A Successful Love Feast

The Retail Lumbermen's Association of Toronto, on Friday, November 18, held a banquet at the Hotel Mossop, Toronto, at which they had as their guests, a number of prominent manufacturers and wholesalers from various parts of the province. The banquest was in the nature of a love feast, but it developed before long into an experience meeting and the ideas that were exchanged may go a long way towards remedying many of the unpleasant features of the lumber business in the province.

The main object of the retailers in giving the banquet was to explain to the manufacturers and wholesalers why they had formed an association, and to impress them with their own conviction, that if the lumber business is to prosper in the future it depends more than anything else upon the various branches working together in harmony instead of opposing one another as they have been far too much in the practice of doing in the past It is safe to say that those manufacturers and wholesalers who were present were impressed with the aspect of the situation, and it is reasonable to suppose that they will take the cue given them by the retailers. The wholesalers who were present will probably take into consideration the immediate forming of an association, th primary object of which shall be to cooperate with the retailers in the work of eradicating many of the causes of trouble which have existed for so long.

The representatives of the various branches of the industry and trade were curiously modest in all their own references to themselves and peculiarly complimentary in their remarks about the prosperity which the members of the other sections of the business were supposed to be enjoying. So much was this the case that, had a disinterested observer heard only the complimentary remarks, he would have been firmly convinced that the whole lumber trade was enjoying a life of luxury and touring about in auto trucks. On the other hand, had he listened only to the modest references to themselves he would have been equally convinced that the lumber business was face to face with ruin, and that the members of the business might better give up the fight than go ahead with any proposal for cooperation. The happy mean which was the one to consider seriously was evident from the optimistic spirit which prevailed in general, and the belief that with a fair amount of cooperation, the members could look forward with certainty to a period of comfortable and successful business results, such as would be impossible otherwise.

G. W. Booth, Toronto, Chairman



The repast was a most attractive one and the guests did it thorough justice. When it had been concluded the programme of speeches and musical entertainment was commenced with the toast to the "King."

The Chairman's Address

After the toast to the King had been responded to loyally the chairman, Mr. G. W. Booth, inaugurated the after-dinner speaking.

Mr. Booth delivered a brief and entertaining address. Before the Association had been formed he said there had been those who predicted that it would soon die, but as the first year had now been passed, he thought they would all agree with him that that it was a long way from being dead. It was a question to him whether the banquet they were holding did not indicate that a greater organization might arise from the beginning, which would include not only retail lumbermen of the whole Dominion, but manufacturers and wholesalers, and in fact, everyone who was interested in the progress of the lumber industry. He trusted that the near future would see an organization of the three branches of the industry The lumber manufacturer should see that it was to his best interests to do all he could to further the progress of the Retail Lumbermen's Association. He believed that in doing so the manufacturer would at the same time be materially advancing his own interests. He could just as reasonably make the same assertion in regard to their other friends, the wholesalers.

They had also with them, as their guests at the banquet, the wholesalers. They knew from experience that the wholesaler was a man of great eloquence. How often in the past had he carried them away by his eloquence and made them believe that a "dead cull" was a "good dressing," or that "mill culls" were "No. 1 and No. 2 cuts," or even

that a board which was so shaky it had to be knotted together on the other side to keep it from falling to pieces, was a good "No. 1 clear."

Lastly they had with them at the banquet the "poor retailer," who was always satisfied to take what came his way. He would probably also be heard from during the evening.

Straight Talk by Mr. J. B. Reid

The next toast was "Our Guests," and was proposed by Mr. J. B. Reid, Toronto, chairman of the Provincial Retailers' Association, who said. he had quickly realized that there was no earthly way of getting the different branches of the trade together at a meeting, except to feed them, and so it had been decided to get as many present as possible at a banquet, no matter what the expense or the trouble might be. He thought that he would not be far wrong in saying that in the past the manufacturer and the wholesaler had hardly even known what the retailer looked like. They had always imagined that the retailer was a little man at the other end of the business, upon whom they dumped all their culls and left him to get rid of them as best he could. The retailers, however, had recently come to the conclusion that they were as big as the manufacturer in the woods or the wholesaler in his palatial office. They had found out by getting together—which they should have done when they were young men—that they were the hewers of wood and the drawers of water for the general public, and the manufacturer had never come forward to enlighten them.

What they had brought them together for was to ask their co-operation. The wholesalers could make a profit, no doubt, if they abused the retailer, but they could make a great deal more by helping him The retailers wished the manufacturers and wholesalers to realize that they were anxious to receive the sympathetic consideration of the other branches of the industry.

It seemed to be a common belief among the wholesalers and manufacturers that the retailers were all extremely prosperous. If they looked into the situation closely they would find the opposite was more in accordance with the facts, and that the wholesalers and manufacturers were the men who bought auto trucks. True the retailers were not paupers, but they were pretty near it. He had had 25 years of experience as a retailer and the result of it was that he had come to the conclusion that a man was going to die a pauper unless he got out of the retail business and found a haven of rest as a wholesaler. He had known very few retailers who had been able to retire with sufficient means to live comfortably for the rest of their days, except some who had gone into the wholesale business. It was nevertheless a curious fact that they had the reputation of being millionaires. The truth of the matter was that the manufacturer was the millionaire The wholesaler came next and the poor retailer was away behind.

J. B. Reid, Provincial Chairman

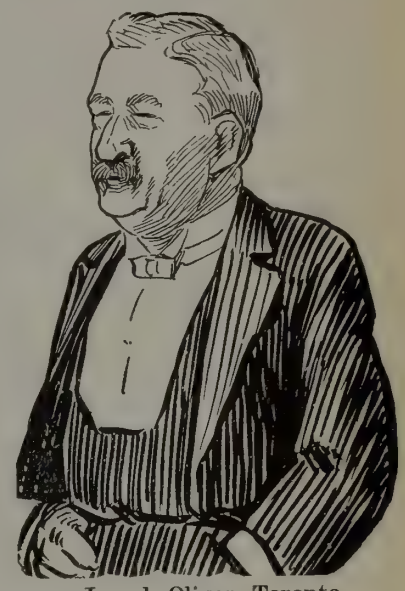
So far as the progress of the Association was concerned he re-

ported that it had gone along very satisfactorily. They had had a great deal of enthusiasm instilled into them by the success they had met and their movement was now spreading to other parts of the province. Several other towns were taking it up and making good progress. The wholesalers would, therefore, see that it was to their best interests to back the retailers up in this matter. In fact the Retail Association movement was becoming so general that it was now up to the wholesalers to give their co-operation.

There was reason in all things. There was good reason in this, that if the wholesalers had lumber to sell and put a fair price upon it, offering it to men who stood by the Retail Lumbermen's Association, they were doing a good work. If they took the opposite course they were doing a very evil work and it would come back, not only upon the retailer, but upon themselves. They did not want to make a hard and fast rule for members to live up to. They all wanted to make a fair profit and they wanted the wholesaler to make a fair profit. Above all, they did not want the wholesaler to sell his lumber to every Tom, Dick and Harry, who made a pretence of being a retailer. The little man in a back office, with no responsibilities, was inpuring the lumber industry more than any other man in the country. There was a class of men in Toronto to-day, which had come into existence of late, who would go to a mill and load up a car of lumber which they would then peddle around the country and sell at prices which demoralized the market. That sort of thing did the wholesalers and retailers more harm than anything else in the trade.

There was also another man whom he wished to complain about. This was the party known as the "kick adjuster." Often when they had a complaint to make to the wholesaler this man would be sent down to the yards to smooth matters over. Probably he knew nothing whatever about the lumber and his instructions were simply to see what was the matter and straighten it out. Once, a man had sold him a certain grade and delivered a lower grade, when a complaint was made he had settled. But what had he said about it when shown that the lumber was of a lower grade than what was ordered? He had said that the lower grade stuff had to be put in and it was necessary to take whatever they could get for it. In other words they just put it in and trusted to the retailer being a poor simpleton and paying for it. Now that sort of thing had been going on all the time. What the retailers wanted was a complete change. They wanted the mill foreman told to put in whatever was ordered. Then the retailer would be able to make a little better profit and before long they would be able to give another banquet better than the one they were having.

C. Beck, Penetang



The toast to "Our Guests" was replied to by Alderman McGuire, who believed that the manufacturer and the wholesaler would be doing themselves a service if they consulted the Retail Association as to whom they should sell their lumber to. If they would do this there was ni doubt at all that both parties would be greatly benefited.

Mr. S. Dyment, of Mickle, Dyment & Son, Barrie, Ont., delivered a brief reply to the toast to our guests.

Mr. W. J. Hetherington, Toronto, proposed the toast to "The Manufacturer," to which a brief reply was made by Mr. C. Beck, of Penetang. Mr. Beck had a good word to say for the retail lumbermen of Toronto. In the last three or four years his company had not lost a dollar on sales in Toronto. This, he claimed, was a very good sign. Most of the Toronto retailers were in the habit of taking the cash discount and the others who gave notes, always paid them when they became due. Surely this was a good indication that the retailers were not bankrupt.

On the other hand he could assure the members of the Association that the lot of the manufacturer was not all as simple and profitable as it was sometimes made out to be. For instance, during the present season they had shipped 40 or 50 men a day into their camps and they came out just about as quick as they went in. His company would probably be handling as many as 2,000 men in their camps this year, and the men, continually going in and out, cost a lot of money, as luberman had to pay their expenses from Ottawa or some other distant point all the way to camp. What with the high wages and the high cost of food and materials he could not see where the money was to come in for the manufacturer to-day. If the retail lumberman was getting a fair profit he ought to be satisfied. Mr. Beck assured his hosts of his sympathic interest in their Association and of his belief that it was of great importance to the trade.

A reply to the toast to the manufacturer was also made by Mr. Thompson, of W. C. Edwards & Company, Ottawa, who thought that the Association could do a great work if they would hold firmly together. Organizations of this kind were invariably a benefit. The manufacturers and wholesalers of Canada had an organization which had been an advantage to all its members. In connection with the proposal that the manufacturers should form an Association of themselves, he had not the slightest doubt that if this were done a great deal of good would result. Unfortunately in the Ottawa Valley the situation was rather complicated. Every lumberman was a law unto himself. He believed, however, that the anufacturers of the Ottawa Valley had stuck together in their prices probably more than any others during the last three years. This had gone a long way to help out the wholesaler. A few years ago, when there had been a general drop in the price of lumber, the manufacturers had given the wholesalers a great deal of assistance and had enabled them to tide over the period of depression.

Joseph Oliver, Toronto

Referring fo the question of price-cutting, Mr. Thompson expressed his conviction that neither the retailer, the wholesaler nor the manufacturer benefitted by this practice. This sort of thing was demoralizing to the trade. If they would all stick together in the matter of price, they would bring about an important improvement. Of ocurse, there were many side issues to be considered. A certain grade of lumber manufactured by one firm sometimes was worth more than the same grade manufactured by another firm, because the former firm had built up an excellent reputation. But these were only side issues, and the general principle was one which they should all support heartily.

Mr. Reid next proposed the toast to the wholesaler. In doing so he made a few references to the wholesaler by way of criticism. About one half of a retailer's time, he said, was taken up with men who came into the office with a long list of figures and wanted to sell lumber. If you happened to get a close glance at the list you would often see that it was the list of some manufacturer with one or two dollars a thousand added. These men went around and passed among the trade as wholesale lumbermen. They kept the retailers from doing their work and did nobody any good. He liked the wholesale people and he liked to deal direct with the wholesale man if the latter could deal with the manufacturer as he should. The wholesalers, he believed, ought to get together pust in the same manner as the retailers had.

The Wholesaler's Point of View

Ex-Mayor Oliver, of the Oliver Lumber Company, Toronto, replied to the toast, saying that the wholesaler was hedged in between the manufacturer and the retailer, and had found it very difficult to make both ends meet. The wholesalers, years ago, had had an organization and while it was in existence it was a benefit to the trade. In his opinion the basic principle of the whole matter was to decide on what the retail price should be The manufacturer, on whom the responsibility rested, should be able to say that the retail price would be so-and-so, and then he should protect the retailer. What difference did it make to the retailer if he sold his lumber at eighteen or twenty dollars a thousand feet, provided that he knew he would be protected by the manufacturer. He was a great believer in the usefulness of associations of this nature. On the other side they had organizations for every branch of the business from the boxmaker up. If there were more of that sort of thing in Canada they would be much better off all round. The wholesalers were trying to carry on a legitimate business. They were told, however, that they were going to be driven out of the business. Now, he had been in the business a good many years and he was going to stay in it for some time, he hoped. He was greatly in favor of the formation of the Retailers' Association and he hoped that they would continue to prosper and that before

Donald Ferguson, London

another year the wholesale men would get together and by holding conference, one with another, be able to put the business on a better basis. It was his own opinion that the lumber business was on a poorer basis than any other that he knew anything about. Every other business had a price list to which the members stuck, but with the lumbermen every man had a list for himself

Mr. J. G. Cane, Toronto, who also replied to this toast, remarked that he believed the retailers had so many wholesalers calling on them all the time that they became tired of them. He believed also that if each branch of the trade would look more closely after its own business it would be very much better for the trade in general. Referring to the cutting of prices he instanced the hemlock men of Ontario. Last summer, he said, the hemlock men had held several meetings in Toronto and had discussed ways and means of maintaining the price of hemlock. He had not gone to that meeting, because if he had he might have had something very unpleasant to say about the salesmen of the hemlock manufacturers.

He hoped that the wholesalers would form an association to work with the retailers and he believed that if the did so, it would be a benefit not only to the wholesaler and the retailer, but to the mill man as well.

Mr. John Donogh, Toronto; proposed the toast to the retailers, and said he believed it would be a good thing indeed if they could provide an opportunity for getting together more frequently in the same sociable manner as they had on this ocasion, and discussing their various business affairs.

Mr. Wm. C. Irvine, West Toronto, replied briefly to the toast.

G. W. Boake, Toronto

Address Mr. E. M. Trowern

The toast to the "Provincial Retailers" was proposed by Mr. E. M. Trowern, secretary of the Retail Merchants' Association of Canada. Mr. Trowern made a very vigorous and forcible address, in the course of which he said that nothing had ever been done which would be more advantageous to the wholesaler, the retailer and the manufacturer in the lumber business than the holding of this meeting where they had such an excellent opportunity of exchanging their views. Everybody had his own troubles, but the trouble with the lumber trade was that they had not got together long ago. He firmly believed that this meeting would bring about a new era in the lumber business, not only of Toronto, but of Ontario, and indeed of the whole Dominion of Canada. Of course, there had been a time, until the fourth of May last, when they were not able to get together. Lumber manufacturers, wholesalers and retailers, the same as all classes of business men, were formerly looked upon as not being fit to meet together. But all this had been removed as a result of the activity of the retailers at Ottawa. Now they could all meet, find out what their troubles and difficulties were and arrange among themselves, as all fair-minded men ought to be able to do, how they should conduct their business. The labor men of Canada had long ago obtained this right. They were organized thoroughly, not only as carpenters or bricklayers, or members of any individual trade, but as a great body of labor, representing the laborers of the whole country. The retailers should organize in the same way. They should look upon themselves as a distinct class, a very large class and a voting class. The lumbermen had a large number of representatives in the House of Commons and in the Dominion Senate and they had a great deal of influence. They, should therefore, he in a position to put the lumber trade of this country upon a proper business-like basis.

They must all admit that at present it was on anything but a business-ike basis. Everybody had been looking after his own particular business. There had been no rules to the game at all. It had been a case of go as you please. They had now to get together and put the thing in a proper business shape and to realize that they must depend upon one another. They should realize particularly that the wholesale man had a duty to perform. If the wholsale business was a legitimate business, if the wholesaler was necessary, they hould not try to put him out of existence, but should try to have the wholesaler, the retailer and the manufacturer live in harmony and carry on their business according to the best principles o fco-operation. If the wholesalers would also form an Association they would find their work simplified by what the retailers had done for them. The way had now been cleared. They had all a right, as business men, to determine what their prices should be and they should not be ashamed to say that they were holding meetings to fix prices so that the lumbermen, the manufacturer, the retailer and the employee would have a good profit.

Mr. Donald Ferguson, of London, Ont., who replied to the toast to the "Provincial Retailers," said that all they had to do was to put their shoulders to the wheel and each one get the retailer in the next town to join the association. When they got them all together they would have a body that would be big enough to talk to the railroads or to anyone else.

Western Retailers' Good Record

Mr. J. L. Campbell, of Campbell & Johnston, Toronto, proposed the toast to "Our Country." He referred eloquently to the great and varied resources of Canada. Among these the lumber industry occupied a foremost place. It was quite natural, therefore, that they should consider a meeting of lumbermen, such as this, a very important one. He himself had been a retailer long enough to be able to retain a great interest in the retail branch of the trade.

The Western Retail Lumbermen's Association had had a wonderfully successful career.

When the Western Retail Lumbermen's Association had been formed the retailer had been making no money. He could not pay the wholesaler and the wholesaler could not pay the banker. Things were improved after the Association came into the field, and illigitimate competition was eliminated. The retailer was then able to have a fair profit, which was something that everyone was entitled to, so as to enable him to live and to pay his debts and to give his customers a good, faithful, service. By means of the Association a condition of affairs had been brought about by which the people got splendid service. The wholesaler was able to make his collections and they had informed him on different occasions that their losses now were so few that they could be eliminated in their calculations at the end of the year.

The Western Retail Lumbermen's Association had taken up the matter of fire insurance. The fire insurance companies had been charging $2.50 per thousand as a basis rate. The Western Retailers' Association took this matter up and formed a fire insurance company of their own. They had reduced the rates to fifty cents and had built up a large reserve fund. They had also made money in the general conduct of their own business. In addition to all this they had accomplished something which counted for much more than money. A friendly spirit has been created among the retailers themselves. This had driven away many of the asperities of business life and had greatly increased the pleasures of carrying on business.

Mr. Hugh A. Rose, replying to the toast to "Our Country," referred briefly to the enormous timber wealth of Western Canada and to the necessity for organizing all the branches of the lumber industry in order to secure the best possible value from these resources. He made a strong point in connection with the necessity for uniformity of grades. With strong lumber organizations formed in all parts of the country, he believed, it would be possible to agree upon standard grading rules. The manufacturers would then cut to these rules, the wholesaler would sell by these rules and the retailer would gladly order his stock by them.

Mr. E. Harding, of the Hines Lumber Company, Owen Sound, Ont., also made a short speech.

Mr. W. J. Lovering proposed the toast to the press in a brief address, in which he called the attention to the fact that members of the lumber trade could profitably make a great deal more use of the trade journals than they did. The reply to the toast was made by Mr. T S. Young, of the "Canada Lumberman."

The chairman, Mr. G. W. Booth, indrawing the banquet to a close, remarked that the meeting had shown that there was great need for a better understanding between the manufacturer, the wholesaler and the retailer. He believed that faith without action meant very little. Yet if they combined belief and action he was sure that in the years to come their bank accounts would be a little larger than if each one tried to carry on his own business in his own way, independent of all the others.

Between the speeches, an entertaining programme of music and recitation was provided, by Messrs. W. A. Davis, Charles Emory and Geo Hager.

The banquet was brought to a close by the singing of Auld Lang Syne and God Save the King.

E. T. Rathbone, Toronto, Secretary

Lumber News From Western Canada

B.C. Forestry Commission Makes Practical Recommendations—Lumbering to be Permitted in Forest Reserve

The B. C. Government's Commission on Forestry and kindred matters have presented their report to the Government. Their findings will form the basis of legislation for the better protection of forests from fire and otherwise, to be presented in January. The report recommends that a bureau of forestry be established under the supervision of a competent forester, that stringent restrictions be imposed as to the cutting of timber, that new rules be made compelling loggers to clear up all debris so as to minimize the danger from fire, and outlines a scheme of reforestation on lines of artificial methods combined with aids to natural growth. The commission is composed of Messrs. F. J. Fulton, K.C. (Chairman), A. C. Flumerfelt, and A. S. Goodeve, M.P. Sittings were held at all the centres throughout the Province and a host of witnesses examined.

Operations at the pulp mill at Swanson Bay, B.C., over 400 miles up the coast, are to be resumed shortly. Improvements to the plant are now being completed. In addition $100,000 will be expended at once in remodelling the company's saw mill there. The proposition is owned by British capital. The original company was recently reorganized under the title of the Swanson Bay Forests, Wood Pulp and Lumber Mills, Ltd., with a capitalization of $3,000,000. New screens are being installed, and operations will be resumed shortly. The output will total about 7,000 tons of sulphite pulp a year. The company own nearly 90,000 acres of spruce forest with a good percentage of merchantable timber.

They are now remodelling their sawmill at a cost of about $100,000. The new plant will consist of band mill and a resaw as well as other machinery, and when completed the plant will be one of the most complete in the province, with a daily capacity of over 80,000 feet. The limits are located on tidewater, ensuring easy and economical logging operations.

Mills in the Riding Mountain Reserve

Mr. A. Knechtel, of the Forestry Branch of the Department of the Interior, who was in Winnipeg recently investigating the advisability of permitting lumbering operations in the Riding Mountain Reserve, announced the department's intentions in the following interview:

"Heretofore mills have been excluded from the reserves, but now it is the intention of the branch to allow a few to locate in the interior.

"The policy, previously followed of keeping the mills out, has had the effect of over-lumbering the borders of the reserves, while in the interior there remains much over-matured timber. The mills will locate upon tracts which the department desires to have lumbered, and will be placed where the forest ranger directs.

"The stipulation will be made, according to forestry principles, that the mills are to pick all the dead timber from the tract suitable for being turned into lumber, and they are to cut only such green trees as are marked by the forest ranger. They are to cut the trees down with a saw, leaving the stems not more than eighteen inches high, and they are to take from every tree cut down all parts suitable for making lumber. Tops not suitable for lumber, but suitable for fence-posts, are to be taken out of the woods and piled near the mill. All lumber is to be disposed of on settlers' terms.

"In getting the lumber, the brush is to be so cut that it will lie flat on the ground, or piled as the forest ranger directs. Poplar tracts are to be lumbered clean. First, the material suitable for lumber will be taken by the millmen. Contracts will then be let for the removal of cordwood and birch bolts. The poplar tracts thus lumbered clean will be taken over by the forest ranger early next spring, when there is no danger of fire destroying the standing timber."

The Canyon City Lumber company saw mill at Canyon City, B.C., recently started to operate double shifts by the aid of electric light, as a modern electric light plant has been installed in the mill. The dynamo is capable of supplying 500 16-candle power lights, which will be ample to provide light for many of the residents of Canyon City in addition to lighting the mill.

There will be great activity in the various camps around Creston, B.C., this winter. It is stated that the Yale-Columbia Lumber company will operate their camps all winter employing about 100 men, while the Huscroft Bros. will open their camp again this winter and employ some 30 men. In addition to this the Canyon City Lumber company will employ some 50 men in their mill. It is stated also that several new camps will open up near Creston.

Forestry Superintendent Returns from the West

Mr. R. H. Campbell, Superintendent of Forestry for the Dominion Government, has returned from a trip through the Western States and Canada. He attended the Irrigation Congress at Pueblo, Col. He also visited a number of the United States Forest Reserves. Among the places which he visited were Denver, Col.; Albuquerque, Texas; Los Angeles, San Francisco, Portland and Missoula, Mont., the headquarters of the forestry sevice for the States of Idaho, Montana and Dakota. The most important result of his observations, he says, was that he found everywhere the conviction that in order to save the forests from destruction it was necessary to put on many more fire rangers than at present. The forestry officers wherever he visited, thought that if they had had a larger staff of fire rangers, they might have been able to hold the fire situation during the past summer. During the dry weather they had small fires here and there and thought they had them fairly well under control, but one day a gale sprang up and carried everything before it. The wind travelled 30 miles an hour and all they could do was to get out of the way and let it go.

The forestry service officers whom Mr. Campbell met were discussing whether they could have fire lines as they have them in Europe. In Montana—although some of the men were strongly in favor of this plan—the others came to the conclusion that to cut the lines, and keep them clean in order to make them effective, the expenditure would be too heavy, and it would be better to depend rather upon the employment of a large number of fire rangers. In California, however, they took the opposite view. They have fire lines through the forest there in a number of places and cut them 200 feet wide. But they have this advantage there, that the Chapparral bush grows very close and thick and after they have cut the lines out they turn sheep and goats on them and thus keep the vegetation down.

At Colorado Springs they were making an interesting experiment upon the effect of the timber upon, the flow of water in the rivers They have two small valleys, one wooded and the other cleared and were making close observations to ascertain the flow of water in each. Mr. Campbell stated that the Dominion Department of Forestry will make some expermients of this nature before long.

In Canada Mr. Campbell visited first of all, the burned area in the Rocky Mountains. "We lost quite heavily in the eastern slope of the Rockies," he said, "although not so heavily as they did on the other side of the line. But we had the same trying conditions, almost impossible to control. One of the worst fires was along the valley of High River. This is a well-wooded valley, one of the best areas of spruce that we have on the eastern slope of the Rockies. A surveyor employed by an Ontario lumberman went up there to survey some of his limits. While he was there he made a smudge fire for his horses. He did not put it out properly and it swept the whole valley, destroying about fifty million feet of good spruce The surveyor was summoned and fined $25. This was good spruce running from twelve to thirty inches.

"We will have to increase the number of rangers there and if we do this I think we will have fewer fires. At dangerous points it is necessary to do this, because the rangers can prevent the fires from starting, whereas if the fire gets started, uness you have some place to fight them from, by back-firing, etc., it is almost impossible to stop them.

"With the extent of country we had to cover and the loss we had, I think we got off pretty well; certainly much better than the United States who have larger appropriations and a much larger staff of men. This season was so dry that it was a very dangerous one. I do not think, however, that we are likely to have another dry season for a few years."

A GOOD SALESMAN

Canada Lumberman and Woodworker

"We have availed ourselves on several occasions, to use your paper as a medium to bring before the buying public, specialties that we have in our yard from time to time, and it has invariably brought the desired results, and on occasions very promptly. For instance we had a list of stock inserted in your last issue, and enquiries began to come in as early as the 18th., only three days after issue, and they are still coming. Much of the stock is sold. We therefore, do not want it inserted in the next issue."

Yours truly,
The Parry Sound Lumber Co. Limited

Canada's Output of Lumber for Year 1909

Statistics of Production, Compared with Previous Year—A Total Increase of Nearly Four Hundred Million Feet—Ontario Still Well in the Lead

The lumber output of Canada for the calendar year of 1909 according to statistics which have been compiled by the Forestry Branch of the Department of the Interior amounted to 3,814,942,000 board feet. This is an increase of 396,776,000 board feet over the output reported for the year 1908, but inasmuch as the former year was the first in which the Department had undertaken the compilation of these statistics the returns in that year were not as complete as they might have been, and the increase for 1910 represents the output of mills which were not reported upon in the previous year, rather than increased production. The increase as given, amounts to 11.9%. Reports were received from 2,085 operating mills.

In 1908 reports were received from only 1,409 mills. The figures for 1909 therefore may be taken as more nearly indicative of the actual output of lumber for the year. The average cut per mill reporting for 1909 was 1,796,000 feet. The total cut in Canada for 1909 was a little less than one-ninth the total cut of the United States for the year 1908 and a little less than the lumber cut for the State of Washington for the year 1907. The per capita production for Canada for the year 1909 was 468 board feet or 27% greater than the per capita production of the United States for the year 1908.

Ontario Still the Greatest Producer

Ontario still maintains a good lead in its position as the first province in point of lumber production. It holds this position by reason of its great annual cut of White Pine, and by reason of its diversified forests, which give it a small annual cut of almost every wood produced in Canada. Ontario has been Canada's greatest lumber producer for a great many years. It produced over one-third of the lumber cut in Canada in 1909, and the increase over the 1908 cut was 11.9%, or exactly the same as the increase for the whole of Canada.

An increase of 22% in the cut, in British Columbia, accompanied by a decrease of 7.7% in the cut of Quebec caused Quebec to drop from second place which it had held for many years. British Columbia now occupies second place, a position which, because of the rapid exploitation of the fir and cedar forests, it will probably maintain. The decrease of the cut in Quebec was due mainly to a much lighter cut of white pine, red pine and cedar. If the cut in Quebec had increased, in keeping with that for the whole of Canada, by 11.9%, Quebec would still have dropped to third place. Had it not been for a great increase in the cut of Balsam, Quebec's showing would have been poorer.

The other six provinces still hold the same relative positions as in 1908. Owing mainly to an increase in the cut of spruce and white pine. New Brunswick and Nova Scotia alike showed an increase in cut of about 26% over 1908. A similar increase for Alberta due to an increase in the cut of spruce brought it close to Manitoba. Manitoba stood about the same, and owing to a decrease in the cut of spruce Saskatchewan showed a general decrease of 4.2%. Reports secured for the first time from Prince Edward Island give it the distinction of having the smallest average cut per mill, about 72,000 feet per year. British Columbia has the largest average cut per mill, 4,597,000 feet per year.

The value given for lumber is the value at the mill. The average price of lumber was lower in Nova Scotia for 1909 than elsewhere in Canada, $11.96 per thousand feet. The average in the other provinces was as follows: Prince Edward Island, $12.24; New Brunswick, $13.64; Quebec, $14.86; Alberta, $15.11; British Columbia, $16.31; Saskatchewan, $16.58; Manitoba, $17.12; Ontario, $19.80. The comparatively high average value in Ontario is due to the large cut of white pine and to the fact that a higher price is charged in Ontario for nearly every species of lumber than is secured in the other provinces.

Relative Output of Various Woods

Nearly one-third of the lumber cut in Canada is spruce; spruce and white pine together make up nearly three- fifths. Spruce in 1909 with an increase of 92,962,000 feet advanced the lead over white pine which only showed an increase of 33,739,000 feet. The indications are that the cut of white pine lumber has reached, if it has not passed the maximum. Within the past two or three years it has dropped from first place. For 1909 it showed the smallest increase of any species saving Jack Pine, Yellow Pine and Hickory, the only species showing actual decreases as compared with 1908.

Douglas Fir, still in third place, showed an increase of 26.2% or 97,813,000 feet over 1908, the largest actual increase shown by any species. Cedar, another wood cut largely in British Columbia, increased by 66,557,000 feet, or 34.2%; this was sufficient to give it fifth place over Red Pine which only showed an increase of 18.6% or 25,058,000 feet.

Woods showing increases much larger than the average were Balsam, Tamarack, Maple, Basswood, Elm, Ash and Beech. The cut of Balsam and Tamarack was almost twice as large in 1909 as in 1908; the cut of Basswood and Beech was almost four times as large in 1909 as in 1908.

Birch still maintains its place as first among Canadian hard woods, though its comparatively small per cent. of increase over 1908, 15.7%, caused it to lose eighth place in the general list to Tamarack.

The only wood of which Canada cut a larger amount in 1909 than the United States did in 1908 is Balsam. The cut of Balsam in Canada in 1909 was 91,065,000 feet, the cut in United States in 1908 was 69,956,000 feet. Comparing the Canadian figures for 1909 with the United States figures for 1908, the latest available, it is found that spruce is the only other timber in the output of which Canada nearly equals the United States. The cut of spruce for the United States in 1908 was 1,411,992,000 feet or 291,043,000 feet more than were cut in Canada in 1909. In other important timbers the cut in the United States was many times that in Canada, there being eight times more Douglas Fir, three times more White Pine, eight times more Hemlock, twenty times more Maple, and nearly four hundred times more oak produced in the United States per year than in Canada. There are relatively more hardwoods produced in the United States than in Canada; there was nearly as much black walnut cut in United States in 1908 as Maple in Canada in 1909.

Soft woods comprise 94% of the total lumber cut in Canada. Hardwoods, and most of them of the less valuable species, make up the remaining 6%. In 1908 the proportions were, soft woods 95.3% and hardwoods 4.7%. In the United States the relative quantities for 1908 were soft-woods 76.9% and hardwoods 23.1%.

Canada is dependent upon the United States for the greater part of her supplies of such valuable hardwoods as Oak, Hickory, Whitewood, (Tulip or Yellow Poplar) Chestnut, Gum, Walnut, Cherry and for all the hard pine which is so frequently used as a substitute for hardwoods. The value of the hardwoods imported into Canada during 1909 exceeded by p9.8% the value of the hardwoods manufactured into lumber in Canada during 1909.

The Output of Spruce

Quebec has been, is, and promises for many years to remain the chief Spruce producing province; during 1909 nearly one-third the total Spruce cut in Canada was cut in Quebec. The cut of Spruce for 1909 should be an increase over that of 1908 in every province excepting Saskatchewan and British Columbia. The decrease in Saskatchewan was only 3,277,000 feet, and the decrease in British Columbia was 16,531,000 feet or 25.2%. The greatest increase was in Nova Scotia where the 1909 cut exceeded that of 1908 by 34,418,000 feet or 26.2%. There was also an increase in Ontario of 31,704,000 feet or 47.2%.

The price of Spruce lumber increased by 46 cents during 1909. It was most expensive in Saskatchewan, at $16.54, and cheapest in Prince Edward Island at $11.53. Spruce is the only lumber in Canada cut in the whole nine provinces.

The 1908 cut of Spruce in Maine exceeded the 1909 cut in Quebec by 3,154,000 feet less than 1%. The average price in Maine was $16.56 per thousand, as compared with $14.28 per thousand in Quebec; the average price in the United States was $16.25 per thousand, as compared with $14.55 in Canada.

Ontario dominated the White Pine cut even more completely in 1909 than in 1908, cutting 83.9% of the total in 1909 as compared with 80.1% in 1908. This increase of 64,445,000 feet or 8.4% in Ontario is accompanied by an increase of 15.613,000 feet or 76.6% in Nova Scotia, an increase of 138,590,000 feet, or 84.4% in New Brunswick and an increase of 22,428,000 feet, or 293.9% in British Columbia. Quebec alone showed a decrease, the White Pine cut being smaller in 1909 than in 1908 by 82,116,000 feet or 56.7%.

The average price of White Pine for Canada increased $1.57 during 1909. It was dearest where only a very small quantity was cut, in Prince Edward Island at $28.13; it was cheapest in Nova Scotia at $13.92.

Minnesota alone of the American States exceeds Ontario in White Pine production. The cut in Minnesota for 1908 was 1,072,613,000 feet, 244,683,000 feet or 29.5% greater than the cut for Ontario in 1909. The average price in Minnesota, 1908, was $18.19 as compared with $21.08 in 1908 in Ontario, and the average price in the United States was $18.17 as compared with $20.08 for the same year in Canada.

The total output of Fir in 1909 was greater than in 1908 by 97,813,000 feet or 26.2%. The increase in cut was entirely in British Columbia; the cut of Fir in Alberta is almost negligible. The price of Fir increased 80 cents during 1909. The average price for 1909 was $14.58. The cut of Fir in British Columbia is yet small, compared with that in Washington and Oregon. Idaho and California also greatly exceed British Columbia in the annual production of Fir lumber. The average price of Fir in the United States for 1908 was $11.97 per thousand, as compared with $13.78 for the same year in Canada.

Increased Manufacture of Hemlock

The production of Hemlock for 1909 exceeded that for 1908 by 43,625,000 feet, or 16.8%. Over one half the Canadian Hemlock is cut in Ontario. The greater part of the 1909 increase in cut was in Ontario where the 1909 cut exceeded that of 1908 by 27,144,000 feet, or 20%. In point of quantity Hemlock is exceeded only by White Pine in Ontario's lumber production. In Quebec and Nova Scotia there was practically no increase in Hemlock production in 1909. British Columbia showed an increase of 10,880,000 feet, or 91.7%, and New Brunswick an increase of 5,732,000 feet, or 62.6%. The price of Hemlock decreased 63 cents during 1909. It was dearest in British Columbia at $13.69, and cheapest in New Brunswick at $10.15.

Five American States, Wisconsin, Pennsylvania, Michigan, West Virginia and New York exceed Ontario in Hemlock production. In each of the three first named, the annual production is greater than the total for Canada. The average price of Hemlock in the United States for 1908 was $13.65; in Canada it was $12.44 for the same year.

There was increase of 66,557,000 feet, or 54.2%, in the production of Cedar for 1909. This increase was mostly due to a larger cut in British Columbia, the province producing three-quarters of the Canadian Cedar. The increase in British Columbia over 1908 was 60,691,000 or 75.5%. Quebec, the second province in Cedar productoin, showed a decrease of 10,093,000 feet or 36.5%, and was nearly approached by New Brunswick, which showed an increase of 14,240,000 feet, or 599.8%. This great increase places New Brunswick third in Cedar production in Canada, a place previously held by Ontario, which for 1909 showed an increase of 1,777,000 feet, or 14.2%.

The average price of Cedar throughout Canada dropped $1.73 during 1909. The decrease was due to a drop of $3.79 in the price in British Columbia; all other provinces showed an increase in the average price. During 1909 Cedar was dearest in Ontario at $15.41, and cheapest in Prince Edward Island where the cut was very small, at $8.

No State in the United States equals British Columbia in Cedar production. The nearest approach is Washington, which in 1908 cut 115,135,000 feet. The average price during 1908 was $22.14 in Washington, $17.22 in British Columbia, $18.03 for the United States and $15.69 for Canada.

There was an increase of 25,058,000 feet, or 18.6% in the Red Pine cut for 1909. This was not sufficient to enable it to maintain fourth place, and in 1909 for probably the first time the Red Pine output was exceeded by the Cedar output. Ontario produces over nine-tenths of the Red Pine cut in Canada. The cut in Ontario for 1909 exceeded that for 1908 by 47,336,000 feet, or 47.2%. Quebec is still second in Red Pine production, but the cut for 1909 showed a great falling-off of 23,366,000 feet, or 72.7%. There was an increase in Nova Scotia of 2,227,000 feet which gave it third place over New Brunswick where there was a decrease of 913,000 feet. The average price of Red Pine in Canada was almost the same in 1909 as 1908, decreasing only 12 cents. It was most expensive in Ontario where it was $17.03, and cheapest in New Brunswick where it was only $9.96.

Balsam Coming to the Front

The growing scarcity of other woods in the East is bringing Balsam to the fore. The cut in Canada for 1909 was 42,577,000 feet, or 87.8% greater than in 1908. Three-quarters of the Balsam cut in Canada is produced in Quebec; the increased cut in Quebec in 1909 was nearly equal to that in the Dominion, being 46,558,000 feet, an increase of 200.3% over 1908. Balsam is now fourth in the list of important woods in Quebec, being exceeded only by Spruce, White Pine and Hemlock. Up to 1909 Red Pine and Cedar were ahead of Balsam in lumber production in Quebec. There was an increase of about 2,000,000 in the Ontario cut for 1909, a decrease of about 7,000,000 feet in the New Brunswick cut, and an increase of about 800,000 feet in the cut in Nova Scotia.

The price of Balsam lumber was about the same in 1909 as in 1908, increasing only 32 cents to $12.85. It was highest in Ontario at $15.39 and lowest in New Brunswick at $9.37.

The cut in Quebec for 1909 was as great as in the whole of the United States for 1908. Maine, the leading American State, produced 45,022,000 feet of Balsam lumber in 1908. The average price of Balsam in the United States for 1908 was $14.36. It was $12.53 in Canada for the same year.

The cut of Tamarack was 35,752,000 feet n 1908, and 68,720,000 feet in 1909, an increase of 32,968,000 feet, or 92.2%. There was a large increase in each of the provinces producing Tamarack; the increase was greatest in British Columbia the province producing two-thirds of the Tamarack cut in Canada, where it was 21,289,000 feet, or 90.9%. Tamarack is now fourth in the list of the British Columbia woods. It had previously been fifth, but in 1909 it passed Yellow Pine.

The average price of Tamarack advanced $1.01 from 1908 to 1909, excepting in Nova Scotia, New Brunswick and Saskatchewan where the cut is negligible. It was dearest in British Columbia at $15.38, and cheapest in Manitoba at $13.11.

The average price of Western Tamarack in the United States in 1908 was $11.81; the price of the Eastern Tamarack was $12.86. In Canada the prices in 1908 were $13.50 and $14.15 respectively. In spite of the lower average price of the western species, it is the superior timber.

Statistics of Hardwood Production

Birch showed only an average increase in 1909, an increase of 7,183,000 feet, or 15.7%. Over one-third the birch cut in Canada is produced in Ontario; the two provinces making up the greater part of the remainder are New Brunswick and Quebec. There was a slight decrease in the cut in Ontario, Quebec and Nova Scotia. This was made up by a large increase of 9,500,000 feet in New Brunswick. This increase gave New Brunswick second place in birch production, previously held by Quebec. The price of birch increased $1.82 over the average of 1908. It was cheapest in Nova Scotia at $11.59, and highest in Ontario at $21.76.

A much larger quantity of birch, as of all hardwoods, is produced in United States than in Canada. Two States, Wisconsin and Maine, each produce annually more birch than all Canada; Wisconsin almost three times as much, and four other States: Michigan, New York, Vermont and Pennsylvania produce more birch annually than Ontario. The average price in the United States in 1908, was $16.42; in Canada, it was $16.86.

Large Increase in Output of Maple

The Maple cut for 1909 exceeded that for 1908, by 12,388,000 feet, or 40.4%. In spite of this large increase Maple is still tenth in the list of Canadian woods, and second in the list of hardwoods. The great increase in the Maple cut was in Ontario, where five-sixths of the Maple is produced. There was a comparatively large increase in Nova Scotia with decreases in Quebec and New Brunswick. The cut in Ontario for 1908 was 12,304,000 feet, or 51.9% greater than in 1908. The average price of Maple remained about the same in 1909 as in 1908, decreasing six cents per thousand. It was lowest in New Brunswick at $10.27 and highest in Quebec at $1838.

Although Canada is "the Land of the Maple," the annual cut in the United States is about twenty times greater than in Canada. In 1908 it was 874,983,000 feet. Michigan, New York, Wisconsin and Pennsylvania each cut more maple lumber per year than does Canada. The average price of maple in the United States in 1908, was $16.30: In Canada it was $16.99.

The cut of basswood in Canada for 1909 was much greater than in 1908, showing an increase of 27,728,000 feet, or 187.6%. This increase enabled it to pass Elm, Jack Pine and Yellow Pine in lumber production, and brought it to eleventh place from fourteenth. Ontario produces about two-thirds of the Canadian basswood; the remainder comes from Quebec. The proportionate rate of increase was about the same in each province. The price of basswood was 42 cents higher in 1909 than in 1908. For 1909 it was $2.23 higher in Quebec than in Ontario.

The United States produces annually about seven times as much basswood as does Canada; the cut in 1908 was 319,505,000 feet. Wisconsin and Michigan each cut more basswood in 1908 than did Canada in 1908. The average price of basswood for 1908 was $1.24 higher in the United States than in Canada.

There were 34,697,000 feet of elm cut in Canada in 1909; this was an increase of 8,389,000 feet, or 31.8% over 1908. Nearly all the elm cut in Canada, 95.5%, is produced in Ontario. The remainder is cut in Quebec. The average price of elm for 1909 decreased 83 cents from 1908. For 1909 the price was practically the same in Ontario and Quebec.

Jack Pine was one of the few species to show a decrease in cut for 1909. There were 27,819,000 feet of Jack Pine cut in 1909, a decrease of 633,000 feet, or 2.2%, as compared with 1908. Nearly one-half the Jack Pine of Canada is cut in Ontario; five-sixths are cut in Ontario, British Columbia and Alberta. These three provinces each showed a small decrease in cut for 1909. The Maritime Provinces alone showed a small increase. Jack Pine is used more largely for railway ties than for lumber. The average price of Jack Pine was 62 cents higher in 1909 than in 1908.

Practically all the Ash produced in Canada is cut in Ontario and Quebec; a little over one-half is cut in Ontario. The cut for 1909 was substantially greater than for 1908. There were 17,144,000 feet cut in

1909, an increase of 5,953,000 feet, or 62.1% over 1908. There was a much greater increase in Quebec than in Ontario; the increase in Quebec was 4,531,000 feet, or 119.3%, the increase in Ontario was 1,608,000 feet, or 22.4%. Nova Scotia, the most important of the Maritime Provinces in the production of hardwood lumber, cut only 39,000 feet of Ash in 1909, and 236,000 feet in 1908. The average price of Ash was 60 cents lower in 1909 than in 1909. During 1909 it was $3.17 higher in Ontario than in Quebec. In the United States the annual cut of Ash is thirteen times as great as it is in Canada. Each of five States: Michigan, Arkansas, Ohio, Indiana and Wisconsin exceed Canada in the annual production of Ash. The average price of Ash in the United States for 1908 was $25.51; in Canada it was $19.00.

The increase in the cut of Beech for 1909, was proportionately greater than that shown by any other wood. The cut for 1909 was 15,036,000 feet, which was an increase of 9,953,000 feet, or 195.8% over the quantity cut in 1908. Ontario produces over one half the Beech manufactured in Canada; about one-quarter is cut in Nova Scotia; the remainder comes from the other three Atlantic provinces. The increase in the cut of beech was general in all the Eastern Provinces. The price of Beech was about the same in 1909 as in the preceeding year, being 17 cents higher in 1908.

The annual cut of Beech in the United States is about twenty-seven times as great as it is in Canada. The average price of Beech in 1908 was $16.27 in the United States, $14.53 in Canada.

There was only an average increase of 16.5% in the cut of Poplar for 1909. Ontario has a strong lead in the production of Popular. Ontario and Quebec taken together, produce about two-thirds of the Poplar cut in Canada. The average price of this lumber was $1.12 higher in 1909 than in 1908.

Oak Production Passed Its Maximum

The increase in the Oak cut for 1909 was 891,000 feet or 15.5%. There were small increases in the production in Ontario and Nova Scotia, a decrease in Quebec. The production in Ontario and Nova Scotia, a decrease in Quebec. The production in each province is so small that the cutting of one Oak groove would have quite an effect upon the returns. Over three-quarters of the Canadian Oak is produced in Ontario, the remainder in Nova Scotia and Quebec. Excepting Walnut, Oak is the most expensive Canadian timber. The average price was $31.72 in 1908, and $29.97 in 1909. United States is the great source of Oak lumber. Oak stands fourth in importance in the list of United States woods. There were 2,771,511,000 feet manufactured in 1908. The average price per thousand was $21.23. The cut of Oak has long passed the maximum in Canada.

The cut of Hickory for 1909 was 835,000; a part of this consisted of logs imported from the United States. This cut was 329,000 feet or 28.3% smaller than that for 1908. The decrease was altogether in Ontario; no Hickory was reported from Quebec in 1908. The scarcity of Hickory seems reflected in its average price for 1909, which was $6.45 greater than for 1908. The production of Hickory in the United States was 197,372,000 feet, valued at $29.66 per M. The production of this valuable lumber has long passed its maximum in Canada.

The cut of Walnut in Canada for 1909 was 51,000 feet; for 1908 it was reported as 28,000 feet. In both years Ontario produced nearly all the Walnut lumber; the average price for 1909 was $47.84 per thousand. The increase in price $11.10 per thousand was the greatest made by any timber. Walnut is still an important wood in the United States. There were 43,681,000 feet cut in 1908, at an average value of $42.53.

Both in quantity and variety the centre of Canada's lumber production is in Ontario, the province which in 1909 lead in the cut of fourteen kinds of wood of high technical value, the Pines and Hardwoods. The cut of Hardwoods in Ontario for 1908 was 143,970,000 feet or 65.3% of the total quantity of Hardwoods cut in Canada. The majority of this Hardwood is cut from farmer's wood lots and lands privately owned. Canada is in a bad way for Hardwoods.

The only figures available as to the amount of square timber cut annually are the statistics of exports furnished by the Department of Trade and Commerce. There is very little hewn square timber used in Canada, and as all the sawn square timber is entered under the head of lumber, the quantity of square timber exported is approximately the quantity cut.

White Pine is yet, and always has been by measurement, the chief square timber exported; in 1909 it was 60.7% of the total. Birch is, and has been, for many year second. The highest price per cubic foot was that paid for Oak, 54 cents, the lowest was Birch at 22 cents. Although the price per ton was slightly higher for White Pine, the price of Red Pine for 1909 was 8 cents higher per cubic foot than that of White Pine.

The square timber trade is declining. It passed the maximum in 1877. It is now difficult to secure in Canada first class clear timber of a quality suitable for squaring.

The average White Pine export for the decade 1871-1880 was about 15 times as great as it was in 1909; the export of Oak was then 194 times what it was in 1909; the export of Birch has kept up better, it was in 1909 nearly one-half as great as it was in the seventies. The export of Elm has decreased largely; it is now only one-thirteenth as great as it was thirty years ago. The other timbers: Red Pine, Ash and Maple are only exported to the extent of about one-tenth the quantity previously shipped.

The decrease in the shipment has been partially made up by an increase in prices. The greatest increase has been in the price of White Pine, which has gone up 208%, from 12 cents to 38 cents per cubic foot; the price of the Elm has nearly doubled, from 24 cents to 43 cents per cubic foot; Oak has increased from 30 to 54 cents, and Birch from 15 to 22 cents per cubic foot.

It is interesting to note that, unless it was exceeded proviously, the greatest export of square White Pine timber was in 1868, when 37,954,788 cubic feet were exported, valued at $2,467,629. The greatest export of Oak was 4,502,521 cubic feet in 1877; the value of this year's shipment was $1,501,020. Birch saw its best year in 1875, when 2,653,966 cubic feet, valued at $454,581 were exported. The greatest shipment of Elm was in 1869, when 1,773,859 cubic feet were exported for $318,107. Since the year of the maximum every species has experienced a steady decline.

There was an increase of 140,562,000 pieces, or 20.9% in the manufacture of lath for 1909. The relative position of the provinces is unchanged from 1908 except reports received from Prince Edward Island for 1909, give it fourth place, previously held by British Columbia. The manufacture of lath is in Prince Edward Island much greater in proportion to the lumber cut than in any other province. One-third of the lath manufactured in Canada comes from Ontario. Ontario and New Brunswick together produce over one-half, or 54.4% of the total lath cut.

The average price of lath for 1909 was 2.46 per thousand, an increase of 25 cents over 1908. The price fluctuated widely in different provinces; it was $1.76 in Manitoba and $3.32 in Alberta. The price of lath in the United States for 1908 was $2.27.

In Ontario the majority of the lath cut are White Pine. Douglas Fir is the principal species used in British Columbia. Spruce leads in the other provinces.

Spruce leads in the lath output by an even greater margin than in 1908; for 1909 nearly one-half, 48.4%, of the lath manufactured were of Spruce. Spruce and White Pine together furnish four-fifths of the lath. The relative rank of the species remains unchanged for 1909, except that towards the end of the list small quantities of Jack Pine and Poplar are introduced.

There was an increase in the shingle production reported for 1909, of 486,357,000 or 32.4%. A part of this increase is undoubtedly due to the more complete reports received for 1909. The value of the shingles produced in Canada, 1909, $3,696,682 is greater than that of the lumber production of any species except Spruce, White Pine or Douglas Fir, and exceeds the value of the 1909 lumber production of the Province of Nova Scotia.

British Columbia Leads In Shingle Output

British Columbia holds by a great lead its position as first, with a cut of 866,275,000, valued at $1,627,624. British Columbia produces two-fifths of the shingles manufactured in Canada. British Columbia and Quebec together produce three-fifths. A large cut reported from Prince Edward Island and a large increase in New Brunswick give these provinces third and fourth places. Quebec stands second in spite of a decrease, and because of a decrease Ontario falls to fifth place.

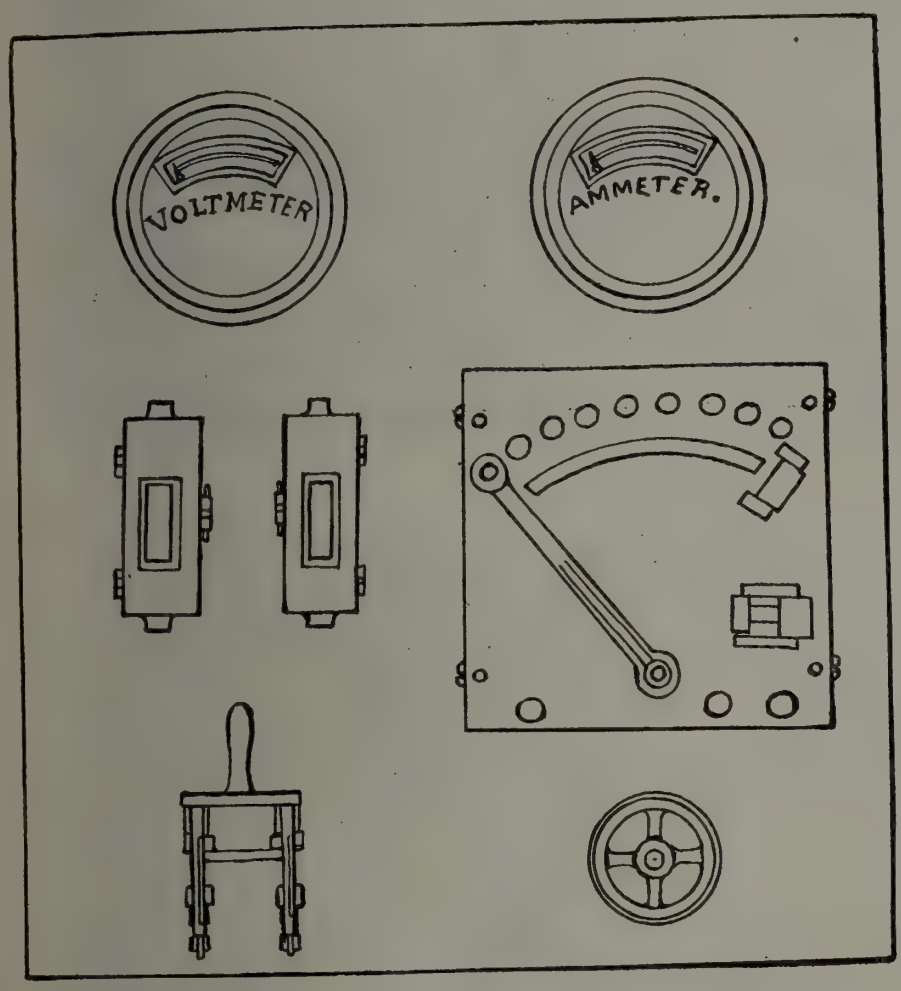
The average price of shingles at $1.86 per thousand is 21 cents lower than in 1908. The price fluctuated widely in 1909. It was $1.15 in Prince Edward Island, $2.57 in Ontario and $3.00 in Saskatchewan. The average price of shingles in the United States for 1908 was $2.55.

Cedar was the chief species used in British Columbia, Ontario, Quebec and New Brunswick. Shingles were most commonly manufactured of Spruce in Prince Edward Island, and Nova Scotia; Spruce, Poplar and Jack Pine are used in the prairies.

Cedar is the great shingle wood. Over three-quarters of the shingles cut in Canada in 1909, 1,507,285,000, were of Cedar; about one-half of these, 769,830,000, were of western Cedar, cut in British Columbia. The increase in the cut of Spruce and White Pine and other species in the Eastern Provinces reduced the proportion of Cedar shingles. It was 96.4% of the total in 1908. Ninety per cent of the Spruce shingles were cut in Prince Edward Island, the remainder in Nova Scotia and Quebec. Three quarters of the White Pine shingles were of Western White Pine (Pinus monticola) cut in British Columbia. Of the Hemlock shingles reported, 11,996,000 over nine-tenths were cut in Ontario and Nova Scotia.

The prices of all species were a little lower in 1909 than in 1908. The lowest in 1909 was Spruce at $1.20, and the highest White Pine at $2.06.

Cedar shingles were $1.91 in British Columbia in 1908. In the Same year the average price of all grades was about $2.50 in the State of Washington.



The Electric Driving of Wood-working Machinery

Although wood-converting machinery presents an immense field for electric driving, it has hitherto made comparatively little headway in this country, says the London, Eng., Timber Trades Journal.

Probably the two chief reasons for this have been (1) the difficulty of getting rid of the wood waste made in the mills in the case where the current is taken from the public supply; and (2) the unfamiliarity of some electrical engineers with the difficulties to be contended against in driving this special kind of machinery, and motors have been erected unsuitable for the duties to be performed, and have consequently proved more or less failures.

The first difficulty can, of course, be got over by saw mill owners generating their own current, which is now being done with much success, as the fuel used practically costs nothing.

As regards the second difficulty, the chief point to be borne in mind

is the great variation in load which may occur on the same machine, owing to (1) the variation in the nature of the timber converted; (2) depth of cut and rate of feed; (3) suitability, condition and sharpness of the saw teeth; (4) the cutting angle of knives, etc. Consequently the load may vary within very wide limits, and motors should therefore in all cases be erected with a considerable margin of power, say not less than one-third above the horse power required for the average load. So each machine must be carefully judged on its merits, as no arbitrary rules can be laid down.

As the question of constant speed in a saw mill is a matter of paramount importance and largely affects the quantity and quality of the output, an individual motor drive is to be preferred, as the starting up of a machine where group-driven may affect those already running, but in many cases the increased first cost precludes this. On the other hand, where there are a number of smaller machines of the same class, group driving may be resorted to.

In cases where the speed of the machine and its motor synchronise, the motor should by preference be mounted on the spindle of the machine, thereby getting rid of all intermediate gearing. With many woodworking machines, however, it is either necessary to gear down or drive by means of a bet and an intermediate countershaft, as the motor's speed in many cases would be too great, and the cost of a slower speed motor prohibitive.

With reference to gearing down, in the case of light machines, ordinary straight-tooth cut gear with compressel leather pinions may be used, but in cases where there are sudden and heavily applied loads, such as in log frames, etc., special methods of gearing down should be studied.

For heavy drives, in the place of straight-toothed wheels, double helical gear can be recommended, as it is much stronger, runs more smoothly, and wears longer.

The best form of double helical gear we have seen for this work is cut from the solid, but the right and left-hand teeth do not meet in the middle of the wheel, but are "staggered," or shifted in relation to each other by half the pitch. These teeth, coming gradually into gear without shock, can be run at a considerably higher speed without vibration. They should, of course, be carefully made and balanced.

With reference to the most suitable type of motor for saw mill purposes, a semi-enclosed motor is in most cases necessary, owing to the amount of inflammable dust floating in the air, and pipe-ventilated motors are also to be recommended. Where three-phase alternating current is obtainable, the three-phase induction motor has much to recommend it.

All motion should be "earthed" as a safeguard against shocks, and their fuses and starting switches enclosed in suitable metal boxes. Where possible it is a good plan to have the meter, switches and fuses and other switchboard arrangements on one distributing panel, thereby giving a much more workmanlike appearance to the mill.

Wooden casing can be used for the leads throughout the mill, but grounded metallic piping is much to be preferred.

The writer advocates that each double-pole switch and motor starter should have its own number, the same numeral applying to the motor as well. By this method in the event of a fuse blowing, even a new hand could trace out each circuit with ease.

It is also a good plan to have some sign, such as "Stop motor when not using," painted on each motor switchbox, as a reminder to the machinist re the advantages of being economical.

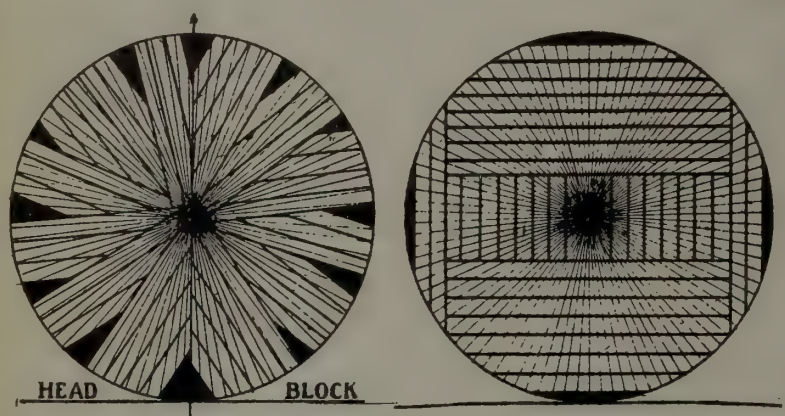
With reference to motor control panels the question is a wide one, and space forbids us going into the matter at length on the present occasion, but we give herewith a sketch of one that should be suitable for most saw mills and wood-converting establishments.

The panel which we illustrate on this page has the usual motor starter fitted with "no voltage" release, field regulator, double-pole switch and cut-outs, also voltmeter and ammeter. These latter are sometimes dispensed with on the score of expense, but it is undoubtedly better practice to have same included. The provision of a "no voltage" release is a sine qua non, as it effectively guards against the carelessness of attendants. An "over-load" release should also be added.

(To be Continued.)

Is Hollow Backing Necessary?

Is hollow-backing for flooring and finish really necessary, or is it more of a habit than anything else? This question is asked mainly because this work is often too indifferently done and the result is seemingly more harmful than good to the work, says the Woodworker. Sometimes one gets flooring from the south with so much of it hollowed out on the back that it really makes against the strength and solidity of the floor. Among the hardwood flooring people a little better care is exercised, and hollow-backing is done in better form, but just visit a retail lumberman's shed and take a look at an assorted stock of flooring and ceiling! Notice the hollow-backed stock here and there. Then, if he has in his stock a lot of flooring dressed two sides and centre-matched, one who is fair-minded can hardly help but feel that this is much more desirable as a flooring material.



One peculiar thing about it, though, is that, while that stock which is dressed two sides and centre-matched looks better and more desirable, there are many old and experienced buyers of flooring who insist on having hollow-backed stock. Whether they do it through habit or through conviction is an open question. Of course, the claim is that it lays better, fits together nicer, and all of that, but isn't it practical in this day and time to so dress stock that it will lay and fit well without disfiguring it with the ugly hollow-back? The hollow-back looks particularly objectionable when one gets thin ceiling and thin flooring. Take ⅜-inch stock in hardwood flooring, which is thin and light enough as it is, and to hollow-back it makes it rather shell-like, and really it looks like it would be much better to dress both sides smooth and even, instead of making it hollow-back and shelly.

To quite an extent the same logic applies to interior finish and to casing and base. There is, of course, an excuse for hollow-backing finish. It is often laid against damp walls and absorbs moisture: is more or less inclined to swell in the back and cause the edges to cup out. Still, the right thing would be to remove the cause of this swelling,

instead of disfiguring the lumber and making it shell-like by excessive hollow-backing. If it is imperative to get protection against moisture swelling the wood, it would probably be better to run a few grooves in the back, like some planing mills do in window and door frames. Take inside casing for doors and windows, for exampe. When it is hollow-backed one has only the edges for a chance to nail through and get a bearing; then if moisture gets into it, it will cup anyway. It looks like it would be safer and better to protect the back against swelling by cutting a few grooves in it with the saw, lengthwise the stock. Or, why not follow the best plan yet, and see that the plaster is thoroughly dry before putting it up, then dress the back smooth and straight? Maybe, some day, we will get to this. Meantime, there are two points that need consideration: First, is hollow-backing a habit or a necessity ? Second, if hollow-backing is a necessity, doesn't it need reforming and refining?

Satisfactory Method of Quarter Sawing

A method of quarter sawing oak which is employed by one large operator with considerable success is illustrated by the cut appearing herewith, showing the log marked for quarter sawing. The distinct medullary rays in the oak extend in vertical plates from the centre of the tree toward the bark, and the method of sawing indicated, running

Illustrating Methods of Plain and Quarter Sawing

closer to the grain line than the ordinary process of quarter sawing, seems to bring out a little better figure and produce a better quality of quarter sawed lumber.

The other illustration shows a satisfactory method of plain sawing oak to get the best possible amount of good lumber out of the log.—American Lumberman.

Cutting Veneers

There is as much difference in cutting veneers right and cutting veneers as day is different from night. One of the great difficulties in

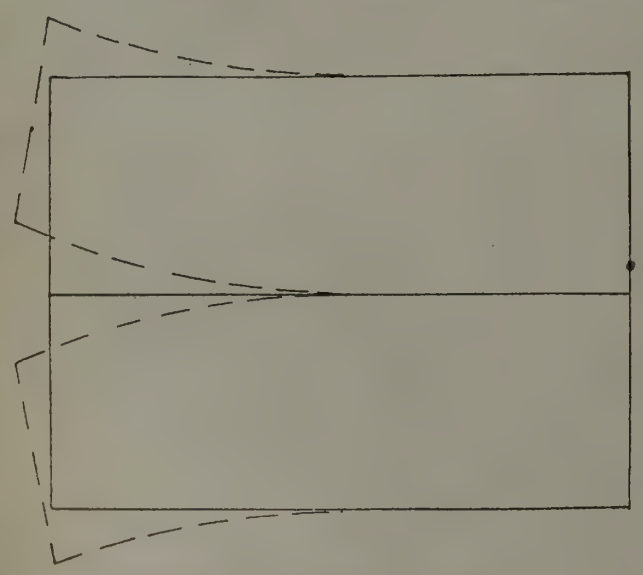


Illustration of Improperly Cut Veneer

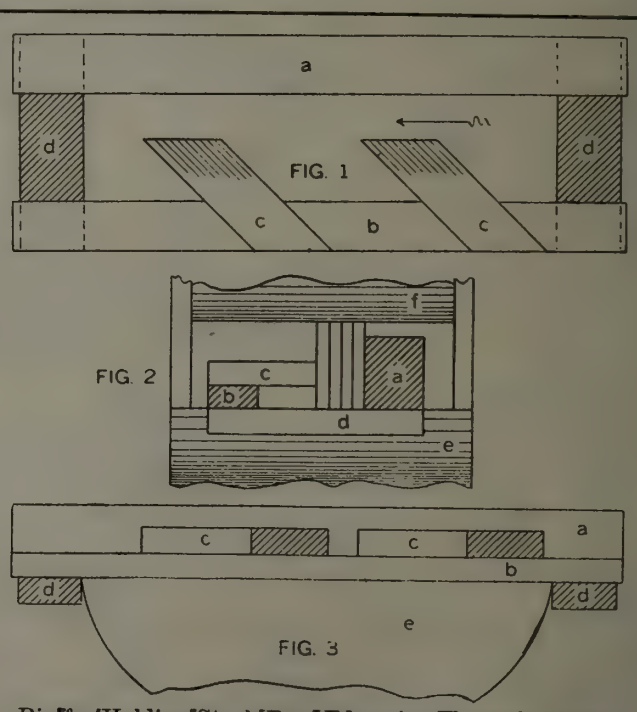
cutting veneers was recently discussed by some veneer men. One man claimed that when veneer stock came from the knife uneven on the surface it could be made flat in the drying. The other man insisted that unless veneer was cut even in the first place it could never be made flat.

The latter contention is probably right. The proper place to correct this difficulty is at the knife in the cutting. The accompanying illustration shows a condition that often exists in cutting veneers. This veneer is cut and scored in the centre, as it is cut. Instead of running straight along as it leaves the knife, it has a tendency to diverge. This is caused by an uneven cut at the knife, or an improper adjustment on the tension bar.

If a long log is placed in the veneer it will have the tendency to buckle in the centre. Of course, this will not be perceptible to the eye. but even if it is a hair's breadth it will have the effect of cutting the veneer uneven or, if made in two pieces, cause it to run crooked as it leaves the knife. The longer the log the more the tension in the centre therefore the more it will have this tendency to buckle. And, of course, the smaller circumference of the log the more effect this will have, so that as the knife gets down to the core the more this tendency will be noted. The only effectual method of overcoming this tendency is to adjust the pressure bar in order to overcome this thing.



All logs are not alike. Some will be more rigid than others, and for this reason the pressure bar will have to be regulated for every log put in the lathe, unless some automatic adjustment can be attached.

This difficulty has presented itself many times to various veneer cutters, and this suggestion may perhaps enable some one to overcome the trouble. It is a very difficult problem to attempt to dry flat a piece of veneer that has not been cut properly in the first place.

A Planer Rig

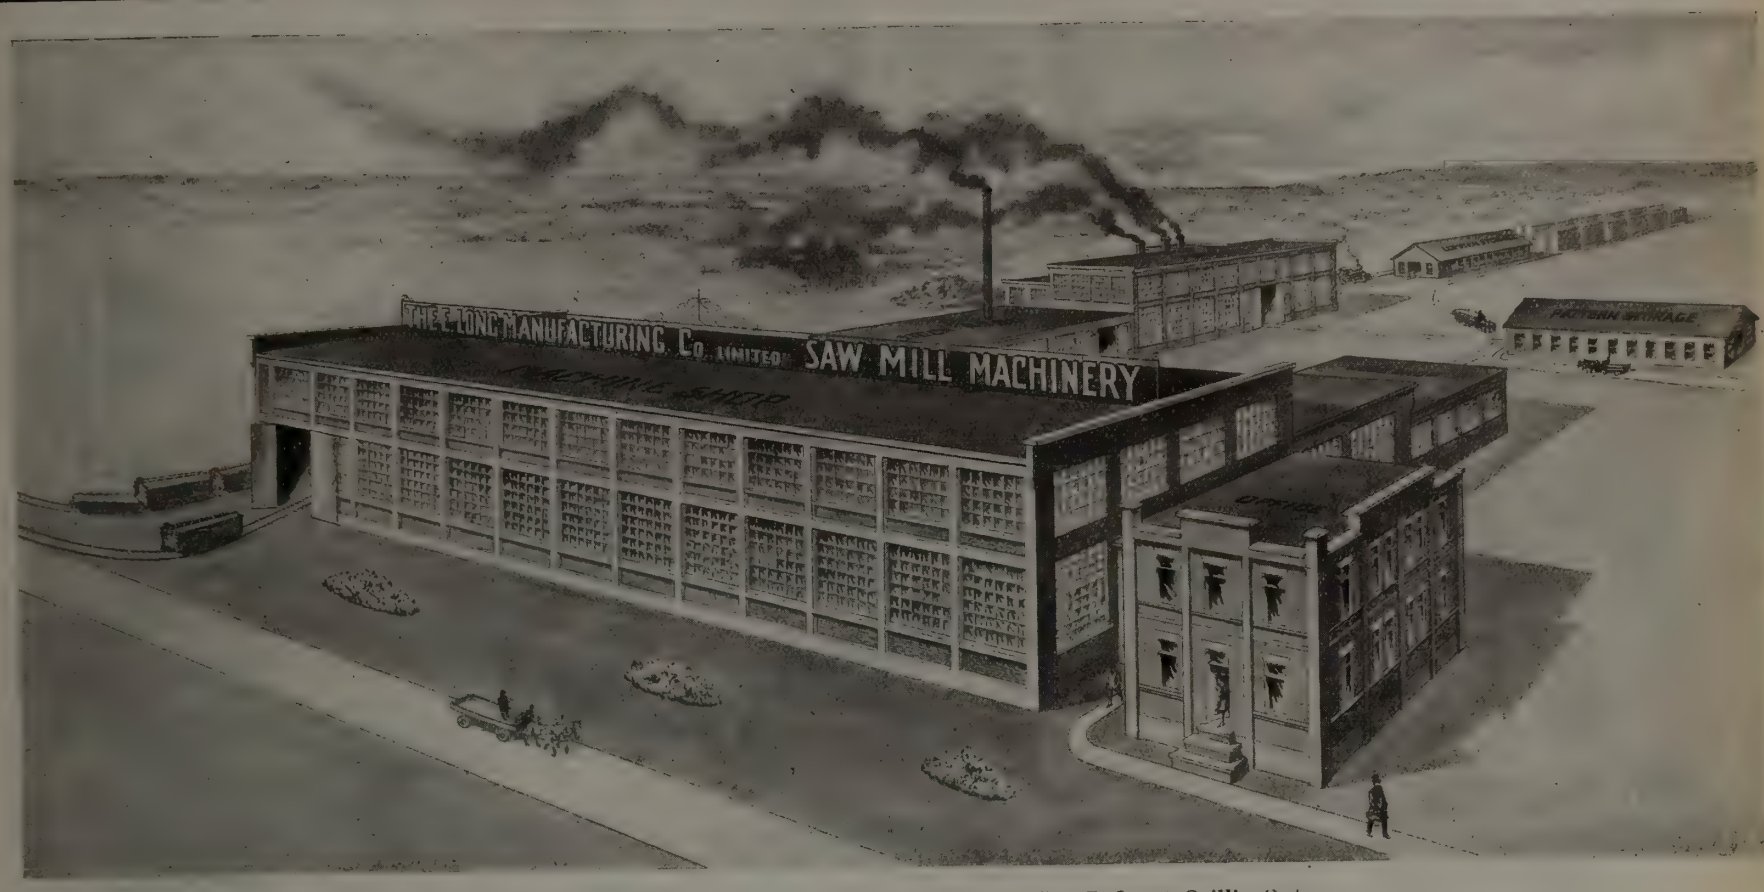
To those who have from time to time been accustomed to run stock edgewise through the planer, it has always been a matter of difficulty to hold it up square and true and prevent the stock tipping over slightly and beveling off the edge.

In order to prevent this, several different rigs have been devised, the simplest of which is to clamp up the pieces in handscrews and in this way get a purchase on it to hold it true in case it showed a tendency to tip sidewise. It is, however, my purpose in this article to show how another rig is made that can be used without taking the time to clamp up

Rig for Holding Stock Run Edgewise Through Planer

each set before the pieces are run through the planer.

Referring to the sketches, Fig. 1 shows a top view of the article as it is put up; Fig. 2 shows, in section, how the work is held in the machine as it feeds to the planer knives, and Fig. 3 shows how the rig sets over the bed of the planer when in position.



Briefly, it is made by squaring up a piece of hardwood, (a) whose thickness is about that of the work to be done and whose length is sufficient to project about 8 inches at both ends of the planer. Get another piece, (b) about half as thick, and nail across the ends with 2 x 8, so that they will be about 12 to 14 inches apart. The end pieces (d) should be so spaced that they will just drop over the ends of the bed and leave the pieces (a) and (b) on the bed, as shown in Fig. 3.

Now the two hardwood springs (c) are fastened on to leave a space of 4 to 6 inches next the piece (a), and when the stock is pushed in, these springs hold it up as it goes through. The section, Fig. 2, shows the feed roll (f) feeding the stock through as it is held up by the springs (c).

By making about two of these rigs, one with the piece (a) about 1½ inches high and the other with the piece (a) about 4 inches high, a wide variety of stock may be run on edge at a minute's notice.

Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

Splendid New Plant of the E. Long Manufacturing Co., Ltd., at Orillia Ont.

The E. Long Co. in Their New Home

An excellent idea of the growth of the lumbering industry in Canada is afforded by the rapid increase which has recently taken place in the manufacture and sale of sawmill machinery. One of the best known firms in Canada, that of the E. Long Manufacturing Company, Limited, of Orillia, has shared extensively in the development of this industry. So great in fact has been the demand for the excellent class of machinery which they manufacture, that about a year ago they were obliged, in order to meet with increasing trade, to erect a new factory of much larger dimensions than the one in which they had been doing business for almost thirty years. The accompanying illustration gives a fair idea of the appearance of the new plant.

The E. Long Manufacturing Company produce every class of machinery that is necessary for the equipment of a saw mill, in addition to full lines for the equipment of lath mills and shingle mills. The business was founded by Robert Brammer, about 1880, and was conducted sucessfully by him until 1895, when it was taken over by Long & Thompson. In 1899 the E. Long Manufacturing Company succeeded to Long & Thompson, and in 1907 the E. Long Manufacturing Company was organized into a limited company under the name of the E. Long Manufacturing Company, Limited. Progressive business methods and conscientious attention to the production of only the most perfect type of machinery have been characteristics of the company's operations, and it is not surprising that in 1909 they found themselves totally unable to meet the demand for their product with the equipment they then had.

The new plant includes the following divisions; machine shop, 140 feet by 65 feet; woodworking shop, 60 feet by 40 feet; foundry, 80 feet by 65 feet; storage room, including the heating plant, blacksmith shop, stock room, etc., 120 feet by 65 feet; pattern storage building, 50 feet by 100 feet, an an office building two storeys high, 30 feet by 40 feet. In the construction of the building, particular attention has been paid to having everything fireproof. The material used were reinforced concrete for the walls, roof and floors, with steel sash for the windows. The partitions throughout the building are also entirely of cement. The cost of the building was approximately $50,000. The heating system for the plant is extremely simple and effective. It was manufactured and installed by Sheldons, Limited, of Galt. It is what is known as the mechanical blast or blower system, the heat being conducted to the different departments through galvanized piping and being produced by the passage of the fresh air over hot pipe coils.

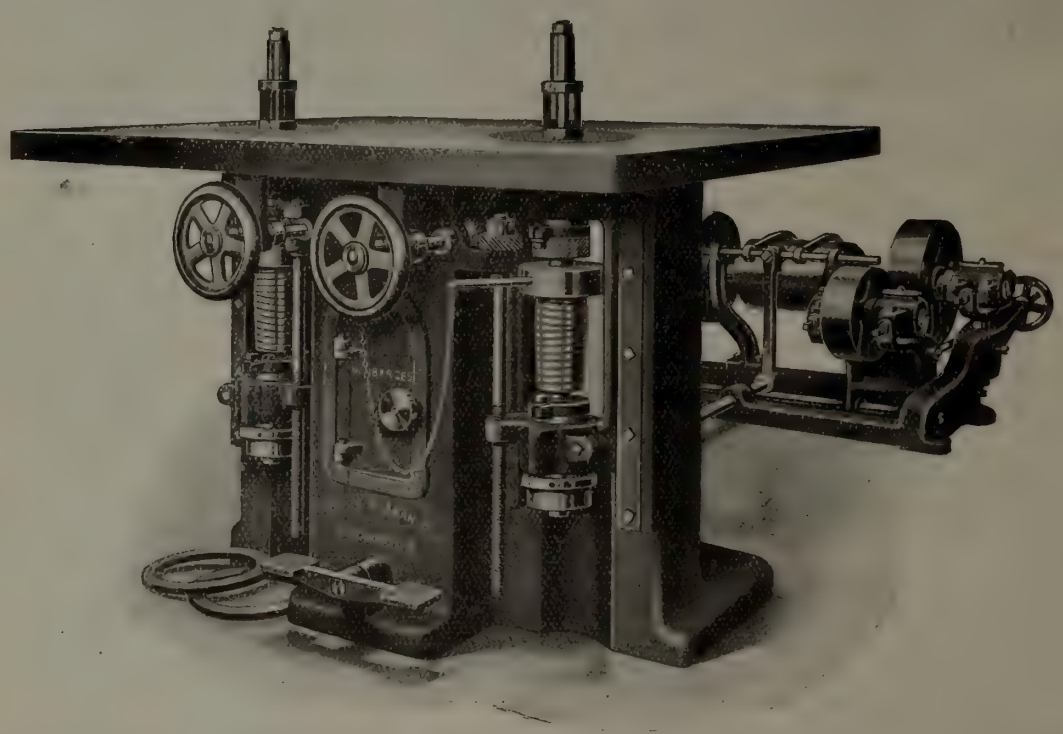
The equipment of the plant includes a thoroughly modern foundry and machine shop, each of which is provided with a travelling crane. Every facility for the handling of heavy machinery is provided, and in addition the company have secured excellent railway facilities, which include one switch running into the factory for shipping purposes and another running the full length of the plant, which is used for bringing in raw material. The latter switch is so arranged as to serve each of the different departments. In addition to the regular equipment of lathes, radial drills, shears, etc., the company have also installed modern heavy machine tools. The plant has been designed especially with a view to permitting further growth, and there is room for some 200 employees.

A detail of the equipment of the plant which indicates the thoroughness with which everything about the place has been designed is the installation of an industrial rail running through the whole plant, upon which trucks are run to carry material from any department to any other department of the building. Another detail indicating the same thoroughness that is to be found throughout the whole plant is the care that has been taken in connection with the electric installations. The

Interior of Machine Shop—The E. Long Mfg. Co. Ltd. Orillia

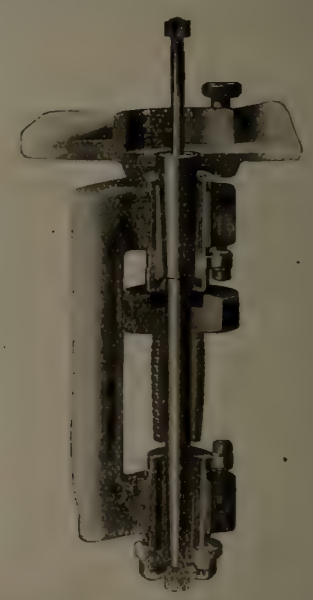
power for the plant is secured from the town of Orillia which develops its own power at Ragged Rapids and supplies it to manufacturers at the very moderate price of $16 per horse power per annum for a 24-hour service. The wiring for the electricity is all carried in conduits. Flaming arc lamps provide the main light, but the building is also equipped with clusters of tungsten incandescent lamps. During the day time the plant is so thoroughly flooded with light from the large windows, that artificial light will seldom be needed unless the company is obliged to operate its plant at night. The equipment of the factory has been so arranged and designed as to give the utmost effectiveness possible and roller bearings have been provided throughout the factory in order to facilitate the operations of all machines.

With such an excellent building and equipment it will be possible for the E. Long Manufacturing Co. to turn out their splendid product at a minimum cost. An important feature in this connection will be the increased ability of the workmen under such improved surroundings. With plenty of operating space and an abundance of daylight they will be able to conduct their operations much more skilfully than under conditions which prevail in many of the older plants. The comfort of the employees has been made one of the most important considerations by the company. Lockers, wash rooms and shower baths have been provided for their use and will no doubt be a welcome as well as an important feature of the company's equipment.



The E. Long Manufacturing Co., Ltd., have paid particular attention to securing a large share of the sawmill machinery trade in all parts of Canada. They have recently completed arrangements with Robert Hamilton & Co., of Vancouver, to represent them in British Columbia. As our readers are aware, this company is one of the best known and most progressive upon the Pacific coast. With a view to developing the British Columbia trade they are going extensively into the manufacture of the particular classes of machinery required on the Pacific coast. Their machinery is handled in Alberta by Gorman, Clancy & Grindley, of Edmonton. In Manitoba they are represented by the Stuart Machinery Co., of Winnipeg. The province of Quebec and the maritime provinces are looked after by Williams & Wilson, of Montreal.

It is almost unnecessary to particularize regarding the machinery manufactured by this company, as it is so well and favorably known in every part of the country. Perhaps, however, they are most celebrated for the excellent saw carriages which they produce and which are noted for giving splendid satisfaction under the most difficult operating conditions and also for standing up to their duty in a manner which has never been excelled. The same satisfaction has been experienced by users of their steam actuated edgers, and lath mill machinery. Transmission machinery is also one of their particular specialties, and they are prepared to provide everything in the transmission line which is needed in a mill. In this connection they have recently issued an attractive and up-to-date transmission catalogue, which they will be pleased to send to any manufacturers who will take the trouble to write for it.



There is nothing about the equipment of a sawmill in fact, which the E. Long Manufacturing Co., Ltd., are not prepared to provide. They make a specialty also of furnishing drawings or plans for sawmills of all kinds, whether portable or heavy, which are of great assistance in deciding where the various machines should be located in a new mill.

The officers of the company are: president and manager, E. Long, Orillia; vice-president and superintendent of plant, F. Smith, Orillia; secretary-treasurer, W. W. McBain.

Readers of The Canadian Lumberman and Woodworker who are interested in saw-mill machinery should read a special advertisement of the E. Long Mfg. Coy., appearing on pages ———.

Fay and Egan Co's New No. 265 Double Spindle Shaper

Spindle Bearings of Fay and Egan Co's New Shaper

An Attractive New Woodworking Machine

We take pleasure in calling attention to another new Fay & Egan machine. This new tool is a Double Spindle Shaper, designed to meet the most exacting requirements of furniture factories and all kinds of woodworking plants. In the company's large illustrated circular treating of this machine, particular attention is drawn to the extreme high speed of the spindles, insuring perfect work and maximum output.

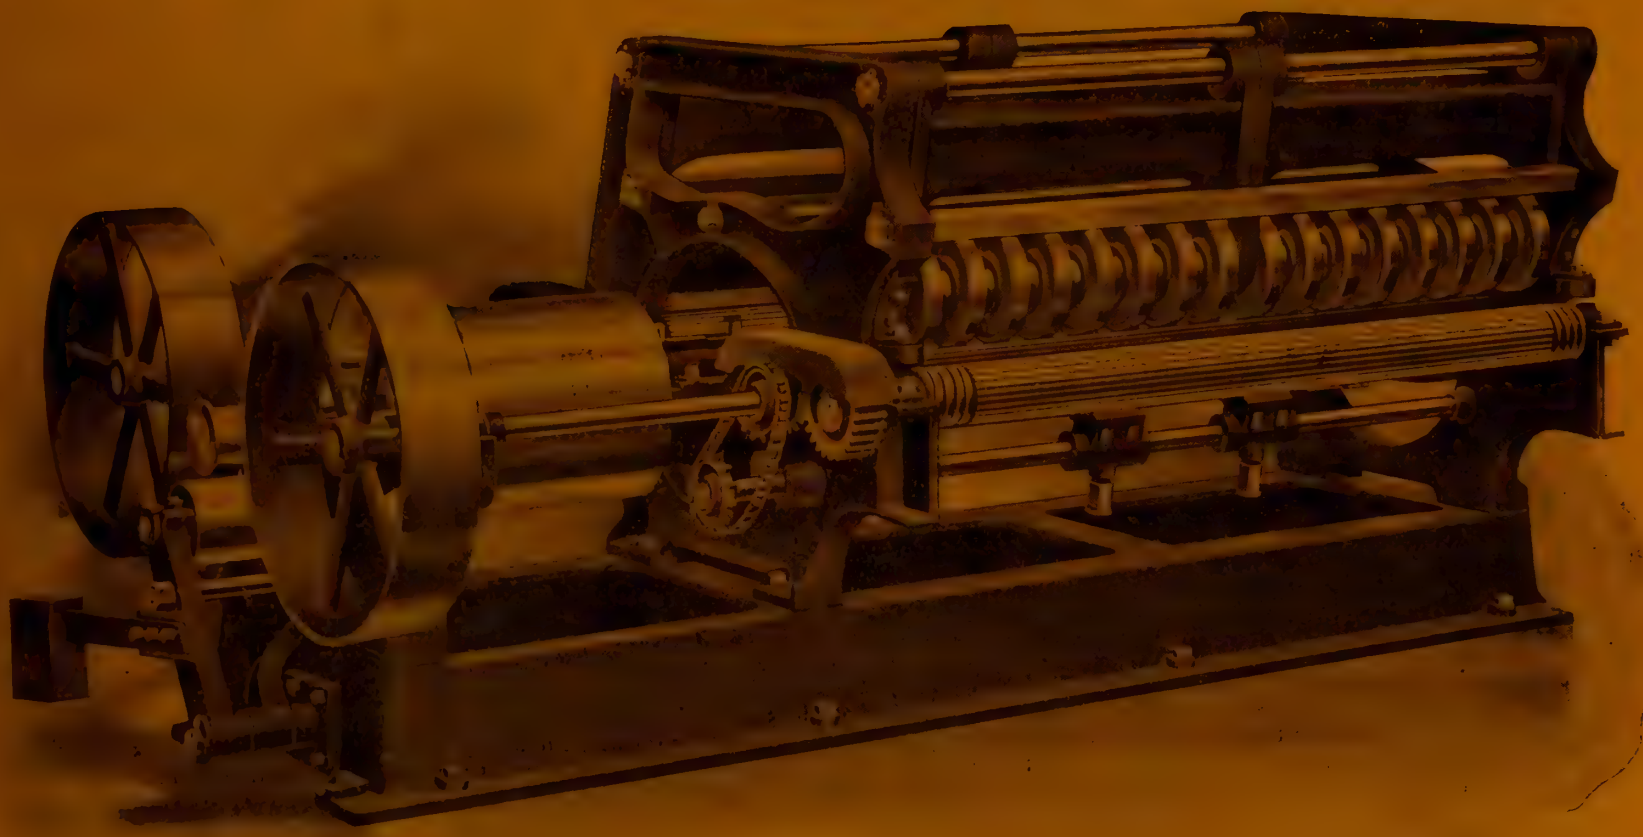
The spindles are made of forged crucible steel and are mounted in very rigid housing which are fitted into planed gibbed ways their entire length. These bearings are adjustable vertically by hand wheel (as will be seen in the illustration) operating through cut spiral gears, thus requiring no extra locking device. Each housing is independent of the other. Both spindles drop below the table.

One of the illustrations shows the details of the spindle bearings, which are tapered and made of phosphor bronze, having oil reservoirs completely around the inner bearing, and designed in such a manner that a continuous flow of oil is assured. Each bearing is independently adjustable by the use of one screw, with provision for taking up wear. The oil reservoir is covered so that no dirt can get into the bearings. This construction is said to insure the highest speed possible.

Another important feature of this machine is the construction of the countershaft, the base of which is cast in one piece, on which all the pulleys and belt shifters are mounted. This, the company assert, is a new feature distinctive of the Fay & Egan machine, and makes the most rigid construction, also eliminating all assembling on arrival at destination. Adjustable independent idlers are provided to take up the slack in either belt, maintaining the proper tension at all times.

The table is planed true and firmly bolted to the column. It is fitted with concentric rings, ten inches in diameter, which are removable. The column is a single-cored casting, very heavy and with broad floor support. It is of such design that it is not in the least in operator's way, and it supports the working parts without vibration.

Further information about this new tool may be obtained by writing the manufacturers at 465-485 W. Front St., Cincinnati, Ohio, for the large illustrated circular.



The McAuliffe Davis Lumber Company, of Ottawa, Ont., are moving into their new and enlarged offices at the corner of Duke and McAuliffe streets. The old office was to small to meet the demands of their growing business.

The Highest Development of the present day.

LONG'S SAW MILL MACHINERY

Records for Cutting Capacity unsurpassed.

Heavy Duty Edger

We Build This Edger in Six Different Widths:—54-in., 60-in., 66-in., 72-in., 84-in., 96-in.

This machine is mounted on one solid base, the three upright frames being securely bolted and dowelled on planed surfaces to the base, which makes it very rigid, and also gives perfect alignment to arbor.

The arbor is 4 inches in diameter on the 54-in. and 60-in. machines, 4½ inches on the 66-in. and 72-in. machines, and 5-in. on the 84-in. machines, and made from the best machine steel.

The arbor runs in three bearings, all of which are water jacketed and lined with the best babbitt. The bearings on each side of the driving pulley are solid in the frame, while the third bearing is arranged so as to be taken out for the removal of saws.

There are two fluted steel feed rollers in front of the saws and two behind. All are powerfully driven by large pulleys in intermediate gear shafts, which power is further increased by a 2 to 1 gear reduction at rolls. The two outside rollers have a 5-in. worm at each end to keep lumber passing through machine out tight to the straight edge when ripping lumber with one straight side.

This machine is fitted with adjustable straight edge or lumber guide, arranged to set in even inches. The two sliding saw shifting rods are driven by chain on small sprockets from mandrel, which makes a very easy and accurate shift.

The E. Long Mfg. Co. Limited

"EVERYTHING USED IN SAW MILLS"

Orillia, Ont.

Agencies at: MONTREAL—Williams & Wilson WINNIPEG—Stewart Machinery Co., Ltd.. EDMONTON - Gorman, Clancy & Grindley, Ltd. VANCOUVER—Robt Hamilton & Co.

SAW CARRIAGES

We Build This Carriage With Any Number of Head Blocks. The Standard Size Has Three.

The bases or log seats are made from cast steel and are fitted on each side of top with steel bars 1⅛-in. x 3¼-in., which form the tongue for groove in the knee, and are held to the log seat with heavy bolts having countersunk heads. The bars are so drilled that they may be reversed and the rear ends brought into service when the front ends become worn, but the wear on these bars does not in the least impair the fit of the knee to the base.

The knees are made from cast steel. They are also faced with steel plates and are accurately machined and fitted to the log seats. They are also provided with heavy nigger guards to prevent nigger from throwing logs over on set works. Lubrication to slides is taken from two large oil pockets on each side of knee. Each knee is offsetting, independent of the others, and the quadrant is cast steel and the lever forged steel.

The racks and setting pinions are steel with machine cut teeth. The pinion is made in two parts, the wider part being keyed to the set shaft, and the narrow part runs loose on the shaft, having connected to it a shaft, held to its place and tensioned by a collar. By turning collar away from saw a strong tension is put on the narrow pinion by the spring; thus gripping the teeth of the rack on both sides so that there is not a particle of lost motion, and all wear is instantly taken up by the spring.

The set shaft is made of steel. It is held in place by heavy, solid, cast iron boxes. These in turn are held to the logseats on planed surfaces, and are adjustable in all directions, but it is impossible for boxes to become loose after being set.

SAW CARRIAGES

Strength
Simplicity
Durability

Accuracy
Easy of
Operation

SECTIONAL VIEW

These Carriages Are Made in 40-in., 44-in., 48-in., 54-in., 60-in. Opening.

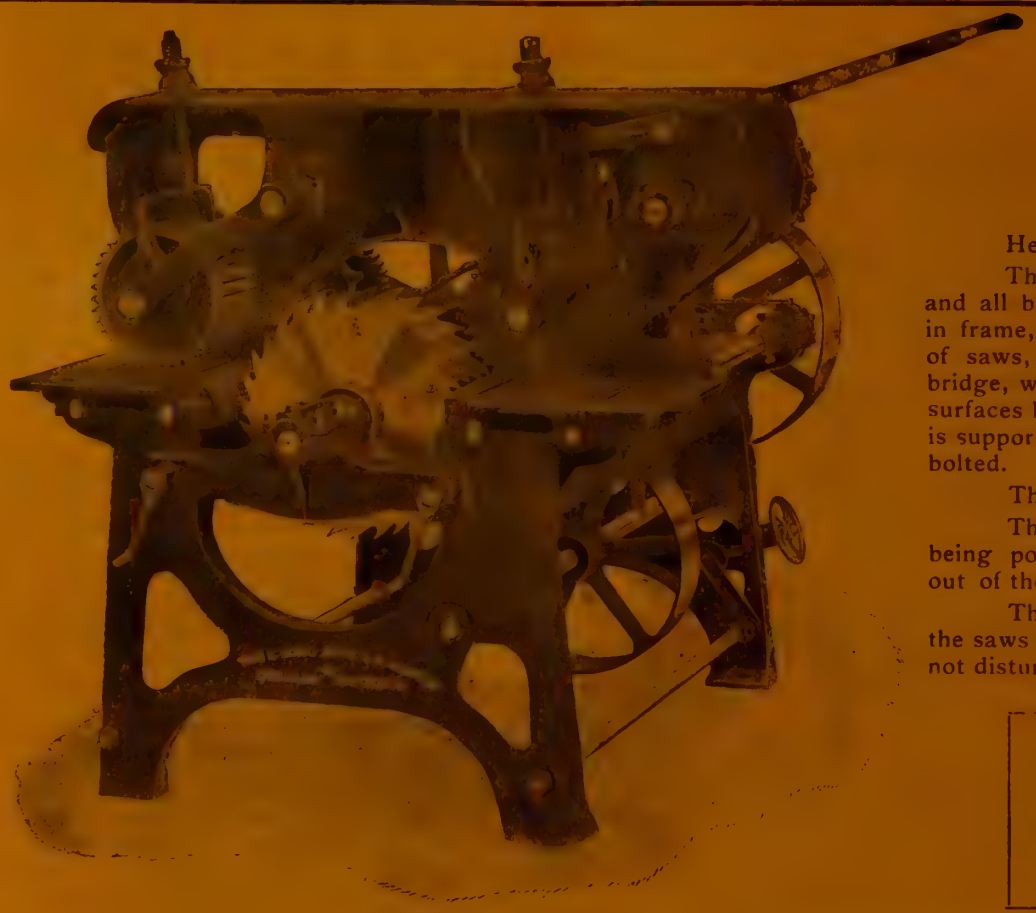
Boss Dogs are used on all knees (except 60-in. opening carriage). We also use hammer dog on centre knee. These boss dogs are operated with three separate levers.

Carriage wheels are 14-in. diameter on the standard carriage, and are fitted to axles running right across carriage frame, two axles under each logseat. The truck boxes are long in bearing and are adjustable and self-oiling from top of carriage.

Knees can be receded by either coil spring or friction, but we strongly recommend our power friction recede.

The carriage frame is made from the best oak timber, with all joints mortised and securely bolted.

Heavy "V" and flat steel track weighing 14 and 12 pounds per foot respectively, is supplied with standard carriage.



The set works is all steel but the frame and wheel covers, and are all enclosed, preventing dirt or sawdust falling on teeth, which in time will cause lost motion. There are five steel pawls on each side, making ten in all, which makes the strongest and most exact set works built to-day.

4-SAW LATH BOLTER

Lath Bolter

4-Saws

Here are a few of the important features:

The frame of this machine is made solid in one piece and all bearings for mandrel and feed roll shafts are cast solid in frame, with the exception of the mandrel bearing outside of saws, which is removable for taking out saws. This bridge, when in place, is held securely in alignment on planed surfaces by large cap screws with wrench handles. Frame is supported by two stands with planed surfaces, and securely bolted.

The front and rear pressure rollers are power driven.

The front pressure roller raises towards the saws and being power driven, prevents any pieces from flying back out of the machine.

The end bearing may be easily removed, which permits the saws being taken off the mandrel for filing. This does not disturb the mandrel.

Manufacturers of

Saw Mill, Shingle and Lath Machinery and Accessories.

Engines, Boilers and Steam Pumps, Transmission Machinery.

Full Particulars Given on Application.

Heavy Duty Lath Machine

This machine is built very strong and substantial, and will suit any mill, large or small where a large output of lath is required. The top or main frame is made in one casting, and is supported by two heavy iron stands, well braced, which makes a very rigid machine.

The bearings on either side of drive pulley are solid in frame, while the third one is so arranged as to be easily removed for the taking out of saws. This bearing, or bridge, when in place is kept in perfect alignment on planed surface, by large cap screws with wrench handles.

Maritime Province Lumber News

Personal and Trade Happenings Down by the Sea—Business More Active—A Good Winter's Cut Indicated

Halifax, N.S., Nov. 22.—Business, particularly along the line of deals, shows considerable more activity than it has for some time past. Quite a quantity of deals have been bought up by the various Halifax and St. John houses at prices ranging from $14 to $14.50, though the general price on deals to-day for shipment by the liners may be said to be $14.25, with perhaps a shade less for next season's shipments.

The outlook for the coming winter indicates rather a larger cut than last winter, if weather conditions are good. No other one factor has such a strong effect on the quantity of lumber got out in Nova Scotia as weather conditions. Last winter and the winter before, there not being very much snow, the cut was not so large as it otherwise would have been, and if the same conditions prevail this season, our cut will be about the same as it has been the last two years.

Shipments to the American market are not particularly heavy, although considerable stock is still going forward; a number of large cargoes having been shipped recently from Ingramport, Bridgewater and Windsor, N.S. Markets for all stock on the American side are now very poor. Poor schedules of hemlock have sold as low as $15, while long, Bangor, random spruce has sold as low as $19.

Laths are varying from $3.25 to $3.40; very few sales being made at the higher figure. Dealers do not profess to be able to form any definite idea of what conditions will be next spring. Some of the buyers are loading up quite heavily and will require nothing for some time to come, unless there is a marked improvement in trade.

Shipments to the South American market are practically over for this year, and the writer has not heard of any contract being made for next year's shipments as yet.

A number of cargoes are being shipped to the West Indies and sold at fair prices.

Contracts are now being put in by all the large companies, and logging for next year, while not heavy as yet, is pretty well under way.

The Davison Lumber Co. are reported to have about 800 men engaged in the woods at present, which is by far the largest operation that any of our manufacturers have.

Wages are reported to be about the same as usual, while provisions are a little lower than they have been for the past few years.

It is reported that a number of Amherst and Antigonish capitalists have sold their holdings at Sandwich Bay, Labrador, to an American concern, who will erect pulp mills and saw mills.

According to local advices lumber operations this year in the Rumford Falls section of the State of Maine will probably be the smallest for several seasons. It is said that only one large contract, that of Emery & Roes for the Berlin Mills Company, is being filled in Grafton. In the lake region, where there is usually so much timber cut, very little, it is reported, will be cut this season. The pulp mills seem to have a large supply on hand, and it is said that they will buy no green pulp on the river this coming season. Usually the farmers all along the Androscoggin put from 25 to 200 cords of pulp wood onto the river during the winter, which brings in considerable cash and provides employment and much labor during the winter season, but this year will be quiet. Plans are being made to cut birch and hardwoods for the local mills, and considerable pine will be hauled into the local mills. On account of this there promises to be great curtailment of business, which, however, may lead to a reaction next year.

Lord Northcliffe has issued a prospectus inviting applications for $2,500,000 5 per cent. debenture stock secured by mortgage on his paper-making plant and properties at Grand Falls, Newfoundland. This is the first public issue of stock in this undertaking, on which, it is said, more than $10,000,000 has been expended. The company has an authorized capital of $7,000,000 in preferred, deferred and ordinary shares of $5 each, all subscribed by the various companies controlled by Lord Northcliffe. The total assets of the company—in timber lands, buildings, railway, wharves, mining operations, logs, paper pulp, cash and money due for paper—are set down at $6,578,600, and the market value of the output at over $3,000,000.

A Fredericton, N.B., despatch says that the Phoenix Mills at the lower end of the city will close for the coming winter. At these mills, which are under the management of Mr. John A. Morrison, shingles are manufactured and it has been the custom for many years past to run the mills the entire year, shutting down only long enough to make the necessary repairs.

This year, however, large quantities of the lumber cut for the Phoenix Mills last winter were hung up in the drives on the upper St John river. The enforced shut-down means the throwing out of work of between 75 and 100 men

---

The Newfoundland office of Canadian Trade and Commerce Department reports as follows:—"Several inquiries have been received by this office recently for hammer, shovel, rake, fork, pick, broom and tool handles. The bulk of the trade in these articles is transacted with the United States, but if prices and quality are right, Canadian manufacturers may hope for a good proportion of this colony's business. Quotations forwarded to the Trade Commissioner's office, St. Johns, will be brought to the notice of probable purchasers."

A St. John, N.B., despatch states that a deal is under consideration whereby Mr. Joseph A. Likely secures possession of a block of land on the Marsh creek for the purpose of establishing a sawmill and lumber pond. It is understood that the Likely firm expect to expend about $45,000 for a new mill and timber pond.

Personal and Trade News of Interest to Lumbermen

The E. B. Eddy Company, of Hull, are applying to Parliament for authority to increase their capital stock.

Mr. Walter Cockburn, Sturgeon Falls, Ont., has removed to North Bay, where he has accepted a position as manager of a planing mill.

The Cummings Lumber Company will build a sash and door factory in Ottawa shortly. The siding has already been installed for the C.P.R. track.

Mr. Cooper, of A. F. & D. Mackay, and Mr. J. H. Lightburne, both of Liverpool, are on a visit to St. John and other New Brunswick ports in order to make their arrangements fo next year's consignments.

The Palmer Lumber Company, who recently took over the business of the MacMaster Lumber Company, Kempville, Ont., are doing a good business in that vicinity and anticipate a heavy year's work.

Mr. Wallace Ritchie, of Laing, Ritchie, Limited, Essex, Ont., who has been suffering from typhoid fever for some weeks past is fortunately convalescent and will, before long, be able to return to his work.

The Jno. Carew Co., Ltd., of Lindsay, Ont., are making extensive additions to their planing mill. They are erecting a two-storey brick addition in order to be able to keep up with their rapidly increasing business.

Arrangements are now under way for holding a Dominion Forestry Convention in Quebec province early in 1911. Particulars will be announced at an early date.

A cargo of Georgia pine was recently unloaded at Three Rivers, Que. Consigned to the Elmitt Lumber Company, of Ottawa, who have the contract for suppling lumber for the large coal dock being built at that town.

The next annual meeting of the National Wholesale Lumber Dealers Association will be held on Wednesday and Thursday, March 1 and 2, 1911. The place of meeting has not yet been decided upon but action in this respect will be taken within a short time.

The report of the Auditor General which has recently been presented to the House of Commons shows that the sum of $125,160 was spent during the fiscal year ending March 31 last upon the protection of timber on Dominion lands.

Mr. John B. Dumoulin, of Owen Sound, Ont., former superintendent of the Carney Lumber Company, at that place has severed his connections with the company and has felt with his family for British Columbia where he will reside in future. Mr. Dumoulin had been with the Carney Lumber Company in the capacity of superintendent ever since they began business in Owen Sound.

Mr. H. M. Gaines has been appointed Canadian representative of The Louisiana Red Cypress Company, of New Orleans, with headquarters at 502 Cass avenue, Detroit, Mich. Mr. Gaines paid a visit to Toronto last week in company with Mr. Fred Davenport, the district manager of the company, who is well known to the Canadian trade. Mr. Davenport informs The Canada Lumberman and Woodworker that the Louisiana Red Cypress Company now operate 21 mills in the south, with a daily capacity of three million feet per day.

Mr. A. E. Watts, of Wattsburg, B.C., has been busily engaged in court of late in connection with one of his damage suits against the C.P.R., arising out of recent forest fires. Mr. Watts, in his suit, is suing for upwards of $50,000. He is understood to have made an offer of settlement along the following lines: The C.P.R. to place in the hands of a committee, composed of the mayors or presidents of boards of trade of the interior, a sum of money equal to the amount he is suing for, said money to be used in advertising the resources of the interior and in bringing in desirable settlers.

Quebec Province Lumber Affairs

Chappell Brothers' Plans for their St. Omer Property— Limit Holders want Twenty Year Guarantee Against Increased Dues

London, Eng., reports state that the issue of £1,000,000, 5 per cent. mortgage bonds of Price Brothers, Quebec, issued at 87, has been fully subscribed. A considerable proportion of the issue was, by arrangement, taken by the sponsors of the issue. A good many of the subscriptions came from Canada; in fact, it is thought probable that about 30 per cent. of the total subscriptions came from the outside investing public.

Chappell Brothers' New Property

The recent sale of the property of Chappell Brothers & Co., Ltd., at Windsor, N.S., and the purchase by Chappell Brothers of the property belonging to W. K. McKean, at St. Omer, Que., marks an important event in the business career of the Chappell Brothers, who have been closely identified with the lumbering industry of Nova Scotia for many years.

The Four Chappells began lumber business very early in life at Tidnish, N.S., near Amherst, nearly 30 years ago in a small way. A few years later they went into the wood-working business and until 1897 carried on, in addition to lumbering, a general wood-working and contracting business. In 1898 they purchased a timber property in Hants County near Windsor, where they have operated under the management of James and William Chappell. George Chappell remained in Tidnish where he continued lumbering and farming till one year ago, when he sold out the lumber business to Messrs. Chapman and Read and purchased a valuable property comprising 80 acres of real estate and several residences in the Town of Amherst, where he now resides.

In 1900 Chappell Brothers formed a joint stock company under name of Chappell Brothers and Co., Limited, to carry on lumber manufacturing and contracting in Sydney, C.B., with R. R. Chappell as Manager and President. The capitalization was $50,000. In 1903 the Company purchased a plant at Glace Bay, N.S., where they have since carried on a wood-working business together with lumber yards and full lines of building materials. In 1905 the wood-working plant in Sydney, which was one of the largest in Eastern Canada was totally destroyed by fire with practically no insurance, but was immediately re-built and has since constantly run the year round. In 1905 the Company secured timber limits and erected saw and lath mills on Sydney River, which gives a yearly output of 2½ million feet of lumber and about two million laths.

The property recently purchased from W. K. McKeen, is situated in Bonaventure Co., P.Q., six miles from Dalhousie, across the Bay Chaleur. It consists of three berths of perpetual lease, virgin timber lands, only about one-tenth of which has ever been cut over, and it is estimated that the whole property with its natural growth, according to the report of expert cruisers, will maintain an output of twenty million feet a year for at least fifty years.

There is a small mill on the property, with a capacity of only five million feet, which will be used next season while the new mills are under construction. It was the intention of the purrhasers to form a Joint Stock Company and buil extensive mills and operate heavily. But having been approached by other parties who wish to purchase timber limits, they are now considering the advisability of selling a 116 mile berth, as the entire property is large enough for two or even three very heavy operations.

The business in connection with the operation is being conducted at St. Omer, P.Q., by Mr. William Chappell assisted by Mr. W. P. Walker, former manager for Mr. McKeen, the late owner. Business appertaining to the formation of the Company, sales of property, etc., is at present being handled by Mr. R. R. Chappell, Sydney, N.S.

Limit Holders Ask for Twenty Years Guarantee

A meeting of the Province of Quebec Limit Holders' Association was held recently, under the presidency of Alexander MacLaurin, Esq. The objects of the meeting were explained by the chairman as follows:—"This meeting is called for the purpose of interviewing the Government to request certain amendments to the new regulations regarding cutting of black spruce and balsam and also regarding the stumpage dues on these woods and also cedar, as well as to obtain a longer term than ten years for the guarantee against increase in stumpage dues, etc., for paper and pulp industries now established and to be established in the province." The various items were placed before the meeting and a discussion took place in which Messrs. Kelly, McMaster, Power, Foy, Champoux, McLean, Anderson, Underwood and Rousseau took part. Finally four resolutions were adopted and it was decided to proceed to the Paarliament building and present them to Sir Lomer Gouin. The resolutions were as follows:—

(1) That there be no restriction on the cutting of balsam as to size. That swamp and black spruce be limited to 7 inches on the stump instead of 8 inches.

(2) That the present rate on balsam and cedar be reduced to the same rate as formerly in force, namely, 65 cents per thousand feet.

(3) That the rate on spruce logs, eight inches and under, at small end, be reduced to 65 cents per thousand feet.

(4) That inasmuch as it is impossible to finance the organization of pulp or paper industries in this province with a shorter term than twenty years:—The Government be asked to guarantee that no increase of dues on raw material coming from crown lands for pulp or paper industries in Canada shall be made for twenty years.

The delegation, consisting of all those present at the meeting, proceeded to the Parliament building where it was received by Sir Lomer Gouin, accompanied by Messrs. Taschereau, Devlin and Caron. The various resolutions were read and discussed by Messr. Kelly, McMaster, MacLaurin, Power, McLean and Champoux.

The Premier read a letter from Wm. Price, Esq., in which the latter pointed out the impossibility of making profit on shingles at present, because of the poor market and the large stocks on hand, but gave as his opinion that it would be unwise to lower the stumpage for the present year. In concluding his reply the Premier stated that he would refer the three first resolutions to the Government experts for their report, and regarding the fourth resolution he would discuss it with his colleagues and try to meet the wishes of the delegation.

Will Manufacture Knock-down Boxes, Barrels and Kegs

The Canada Box and Barrel Company, Limited, which was recently formed at Pembroke, Ont., is composed of the following: President—James F. Munro, Pembroke; vice-president—Alexander Millar, Pembroke; secretary-treasurer—J. G. Forgie, Pembroke; directors—Gerald V. White, M.P., and Major E. A. Dunlop, Pembroke, Mr. J. W. Hennessy, of Fort Colonge and G. S. May, of Ottawa.

The purpose of the company is to manufacture knock-down boxes, barrels and kegs under a patent covering the Dominion of Canada and owned by the company. The main feature of the patent is the making of barrels, boxes and kegs something in the nature of cheese boxes, but instead of having the drum of the article run lengthwise of the grain of the wood, it is to run crosswise and the drum will be constructed of small sections set up like staves of the barrel and thin like the cheese box veneer and having over-lapping beveled edges, so that when being set around the bottom and head of the barrel, they will fit closely together and be held tightly in place by the hoops, which can be nailed to the bottom and a strong inside collar which will hold the head. This principle will also apply to all boxes, kegs, drums and other packages manufactured by the company.

The purpose is, if possible to buy logs of birch, maple, ash, elm, basswood and other woods during the coming winter and go on with the construction of the plant and the erection of the building as early as practicable next spring. An advantage claimed for this system of manufacture is that the packages may be made from a great variety of cheap, unmarketable woods which are everywhere available.

Parry Sound Lumber Co. Issue Beautiful Calendar

The Parry Sound Lumber Company, Parry Sound, Ont., have secured a splendid colored picture of a lumber cruisers' camp for their 1910 calendar. The picture is a reproduction of an excellent oil painting by Philip R. Goodwin, a young man who has made the painting of animals and of scenes from the life of the woodman his particular study. Mr. Goodwin is only a young man, having been born in 1881 in Norwich, Conn. He studied for four years under the famous illustrator, Howard Pyle, at whose suggestion he took up the painting of scenes of frontier life. The picture which adorns the calendar issued by the Parry Sound Lumber Company is especially well conceived and carried out. It shows a couple of cruisers preparing their evening meal. They have apparently concluded a hard day's work and are about to enjoy their well earned repast, before settling down for a sound night's sleep. The scene is a very realistic one and a beautiful sunset glow is faithfully reproduced. As a work of art this calendar will stand in the front ranks of any that will be produced for 1911. The romance which invests the life of the timber cruiser will add interest in the eyes of those who are engaged in the lumber business. Those who secure a copy of the calendar will be very fortunate and the Parry Sound Lumber Company are to be congratulated upon selecting so suitable a souvenir to send to their friends.

The report of the commission appointed by the British Columbia government to select a site for a provincial university has lately been presented to the Lieutenant-Governor-in-Council and recommends the location of the university near Vancouver. In an auxiliary report addressed to the minister of education the commission suggests that not less than 700 acres be set aside for experimental purposes in agriculture and forestry. This is exclusive of a forest reserve for forestry operations on a large scale.

A Pulpwood Klondyke

THE PICK OF THE FINEST VIRGIN timber lands in Labrador and Newfoundland. Advantages on Labrador over other territories: no cutting tax, no royalty, no export duty, pulp making and lumbering free of restriction, limitless water powers. We control valuable timber properties on Labrador and Newfoundland, and are prepared to give prospective purchasers all information regarding same. For further particulars apply to JOB BROTHERS & CO., LIMITED, St. John's, N. F. 23

Timber Limit for Sale

To close an estate

BERTH NO 3 TOWNSHIP OF GURD Parry Sound District, containing Hemlock Birch, Maple, Oak, Basswood, Spruce and Cedar Apply Box 1456, Guelph. 4

Timber Lands For Sale
To Close an Estate

TENDERS WILL BE RECEIVED BY THE uddersigned up to noon on the 15th day of December, 1910, for the purchase of lots 28 and 29, Con. 4; 28, 29 and 30 Con. 5; 29 and 30 Con. 6, Foley Township, Parry Sound District containing 566 acres, estimated to cut about three million feet of timber chiefly hemlock with smaller quantities of black birch, oak, ash and maple; all within easy reach of C.P.R., C.N.R and G.T.R. via Otter Lake. Recent survey by W. Galbraith of Bracebridge to whom reference may be made. Terms 10 per cent cash and balance in 30 day; extension of time if desired, to responsible purchaser. Lowest or any tender not necessarily accepted. Further particulars and conditions on application to HARLEY & SWEET, Vendors Solicitors, Box 344, Brantford. 23

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other Pulpwoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

tf. WILLIAMSON, Publisher, Toronto.

Teak for Interiors

For a thousand years or more in China, as well as other parts of the Orient, teak has been the highest-prized wood for furniture, shrines, and religious objects. The famous blackwood furniture of that part of the world is made of Siam or Java teak. In Europe, more especially in Engand, the highest class of bank fixtures have been invariably made in teak wood. In the southern part of California, in Los Angeles, San Diego, Pasadena and thereabouts, teak is now being used in a large number of the magnificent mansions erected by wealthy eastern people in that section, so aptly termed the millionaire's playground. In the majority of these palaces teak wood is used for interior finishings, staircases, etc., with artistic specially-designed teak furniture to match. One beautiful new residence is being fitted up with doors, wainscoting, beamed ceilings, and floors of teak, and hand-carved furniture of the same wood. One of the San Francisco furniture makers is busy at the present time on a large order of special designs in teakwood furniture for one of the wealthiest and best-known families. The members of this family have always possessed the most correct taste in matters of art, and a number of the designs were drawn by the two talented young daughters of the house.

Consumption of Wood

According to United States Government figures, there has been since 1907 a noticeable decrease in the use of spruce for pulp wood, this species contributing 68.1 per cent. of the total in 1907, 64.5 per cent. in 1908 and 60.5 per cent. in 1909. While there has been this steady decrease in the relative consumption of spruce, the average cost as shown by the same figures has advanced substantially. In 1907 the cost of spruce was $8.90 per cord; in 1908, $9.33, and in 1909, $9.96.

There was also a decrease in the consumption of hemlock, while the use of balsam, white fir, birch, beech, maple, gum and basswood as raw materials for making pulp has increased. For instance, in 1907 we used 44,000 cords of balsam for pulp making, but in 1909 we used 95,000 cords, which may be taken as an indication of the tendency to use comparatively unknown, or not generally used woods for pulp making purposes.

Loose pulleys are amongst the most troublesome things to be found in a saw mill, and numerous more or less successful devices have been introduced to improve their lubrication, and thus get rid of the excessive wear. To overcome these troubles an inventor hailing from Australia practically dispenses with the loose pulley altogether, and substitutes for it a fast pulley on an independent shaft. In place of the loose pulley being part of the machine as at present, it is separated altogether, a loose shaft taking the place and doing the duty of the loose pulley. It is stated that this plan works sucessfully. To apply it to machinery constructed with the usual style of loose pulley you have simply to cut off the shaft or spindle close to the boss of the fast pulley and make the loose pulley fast to the remainder of the shaft, which works when the belt is thrown on the pulley.

Because of the congealing or thickening of the greases customarily used, the oiling of machinery, particularly that used in unwarmed places, is in winter sometimes difficult. Oils thinned with kerosene do not readily thicken or congeal. A combination of cylinder oil, kerosene and graphite will stand a temperature several degrees below zero ing freely. The cylinder oil and graphite should be mixed to the consistency of a thin paste and this thinned by the addition of kerosene until it flows quite freely.

Yate, which is native to western Australia, is believed to be the strongest of all known woods. Its average tensile strength is 24,000 pounds to the square inch, equaling that of good cast-iron. Many specimens, however, are much stronger, and one was tested up to seventeen and a half tons to the square inch, which is equal to the tensile strength of wrought iron. The tree grows to a maximum height of 100 feet, and sometimes has a diameter of 2½ or even 3 feet. Automobile manufacturers are experimenting with the wood.

The toughest wood is that which bears the greatest load, and bends the most at the time of fracture, and the following list shows the comparative toughness of various kinds of timber, ash being 1.00, beech .85, cedar of Lebanon .84, larch .83, sycamore and common walnut each .68, occidental plane .66, oak, hornbeam, alder, Spanish mahogany each .62, teak and acacia each .58, elm and young chestnut each .52.

A magnificent mausoleum is to be built to mark the resting place of the late "Son of Heaven"—the Chinese Emperor, Kwang Hsu. The forests of the Orient were seached for the best and most durable wood, and, after much competition, a Manila lumber company has won what is described as the richest commercial prize of recent years in China. The preliminary contract for the material has now been signed by two of the Chinese imperial princes, and it provides in the first place for the shipment of 50,000 feet of Philippine hard wood. On its arrival at Peking work is to start forthwith on the mausoleum among the tombs of the Ming dynasty near the capital. For the huge pillars of the mausoleum giant trees will be taken from the Mindanao forests. Some of them, already cut, are 60 feet high and 4 feet in diameter, weighing over 17 tons.

Review of Current Trade Conditions

Ontario

Trade conditions throughout Ontario have slackened somewhat, as a result of the approaching end of the year. December is inventory month and retailers can scarcely be expected to be in the market for much stock until the new year has opened and they have been able to estimate the amount of stocks which they have on hand. In spite of this, however, some of the travellers for wholesale houses have had fairly good business of late and report that the oultlook is satisfactory. It is probable that when inventories have been taken, a good many of the retailers will find that they have had a fairly satisfactory year. They have been following the principle of buying only for the immediate future. This has kept trade at a steady level. An important result of this careful buying policy is that wholesalers have found their collections better than usual. At present, collections are being well met and the volume of trade keeps up fairly well, all of which goes to indicate that there will be a good season's trade next spring.

At present, the best demand is for the upper grades of pine. Some sizes of hemock are sluggish; 12 and 14-foot lengths for instance, which are dragging, but there is a good demand for 16-foot lengths and for stock boards. Stocks of these classes are reported scarce. Good grades of common and dessing and all widths of white pine strips are moving well. The demand for No. 2 white pine lath is good.

A great deal depends, so far as the spring trade is concerned, upon conditions across the line. If the United States markets take Ontario stock after the first of the year, it is likely that market conditions will improve. If the United States demand continues dull, however, higher prices will not be easy to secure. A tendency towards higher prices for shingles is reported. Owing to the depressed state of the shingle market, which has prevailed for some months past, many of the B. C. mills have closed down and the reduced production is reported to having a good effect.

One prominent Georgian Bay manufacturer reports that he is having extremely good trade. Stocks are moving out of his yard rapidly and orders are numerous for immediate shipment. This refers to both hemlock and pine. Some of the low grade hemlock has been moving at an advance of about $1 on the prices which were in force during the summer. Lath are maintaining their position, but trade is quiet.

The mill of the Ontario Lumber Company at French River which has been cutting hemlock and pine for the Parry Sound Lumber Company this year, closed down on November 26, after having made a cut for the year of 10,000,000 feet for the Parry Sound Company.

The higher grades of pine continue to sell well at Ottawa. In fact stocks have been considerably diminished. Good stocks dry enough for shipping are very scarce. Stocks in the hands of manufacturers are also scarce. Cull pine and box lumber on the other hand are accumulating, but even of these the stocks carried over will be less than last year. Prices during the last fortnight have remained unchanged. There seems to be a slight renewal of buying from United States points and some dealers look forward to a large export next summer. With this prospect in view operators are counting upon an early start for the mills next season if the weather permits. Some dealers are also looking for a rapid decrease in the stocks of low grade lumber, and if this is brought about, the season of 1911 will be much more satisfactory than former seasons. 1-inch good pine sidings are firm at $58 and 2-inch are in good demand at $65. There is a good enquiry for telegraph poles and operators will probably take out as many as possible, especially long poles. Short poles are plentiful, but the outlook for the demand is also good. Lath are selling well, and there is a fair trade in mill-run red pine and spruce. No. 1 white pine is scarce. Stocks of shingles are lighter than a year ago and quotations are firm.

Eastern Canada

Lumbering operations in New Brunswick have been considerably hampered by the unfavorable weather conditions during the past fortnight, there having been a great lack of frost, and rainy weather having prevailed. The shipping season for the Miramichi points has practically come to an end. Winter liners will now soon commence their trips from St. John. One, in fact, has already arrived at that port. Nothing can at present be said regarding the prospect for shipment of deals by these vessels a severything depends upon developments in the English markets. Unless considerable improvement occurs the shipments will be light. The outlook for the anufacture of long lumber at the portable mills is also rather discouraging. The deand for this class of lumber has diminished recently. Operators, therefore, are not looking forward to an active season.

The close of the sawing season and of the shipping season have reduced the activity of the trade throughout New Brunswick, and consequently there is not much to report. Prices as a result are largely nominal. There is a general feeling however, that the English market for spruce deals is improving. The price for English deals is probably in the neighorhood of $16 for the usual specifications. bSpruce lath are improving sofewhat, though prices are unchanged. Stocks o f laths at New Brunswick points are light but quite suttncient for the business offering. Dutiable spruce lath at Bay of Fundy points are worth from $2.15 to $2.20.

There is considerably more activity in deals in Nova Scotia than there formerly was. Sales have been frequent at $14 and $14.50. The general price is about $14.25, though for next season's shipments it is a shade lower. It is probable that the coming winter will see a slightly larger cut than last winter, if the weather permits. Stock is moving fairly well to the American markets but the prices are none too satisfactory. Some poor hemlock has sold as low as $15 and long random spruce at $19. Laths are selling at from $3.25 to $3.40, though the former figure is the more general. South American shipments have come to an end temporarily.

The Boston market for eastern spruce is fairly firm. A few of the winter mills have opened, but prices are unchanged. Frames 9-inch and under are selling at $23, and good orders have been placed at this price. In a few instances $22.50 has been accepted. Some manufacturers who have good orders on hand are asking $23.50. There is a fair demand for random. Sizes under 7-inch are selling at $19 to $19.50. Larger sizes are firm and boards are steady and fairly active. At New York, eastern spruce remains firm, though the demand for yard sizes is weak. Local supplies seem to be sufficient for the current requirements. The hemlock market at New York is weak and prices are about 50 cents lower than they were a week or so ago. Hemlock boards are not offering extensively at Boston and holders are expecting to get their price. Eastern clipped boards in carload lots are selling at $19. Boards included with a frame are seldom bringing more than $19.50. There is an improvement in the demand for shingles at Boston, and prices are better. Best cedar extras have been sold at $3.40, though some good brands have been sold at $3.15 to $3.25 Lath are firmer and the demand has improved. For 1⅝-inch, as high as $4.25 has been asked. The general price, however, ranges from $4 to $4.15, while for 1½-inch, the range is from $3.60 to $3.65.

Great Britain

The lumber trade at London has been quite active during the last few weeks. The overside deliveries are very heavy, and spot deliveries are continuing actively. There is still a good demand from colonial buyers for deals, and it is thought that this may have a strengthening effect upon the prices for new stocks. It will be a difficult matter, however, to increase the price of deals beyond their present level. If any advance can be made it will be upon prime stock deals, but even here it will only be light. On oversides it would not be surprising if a concession were made to induce business. The usual winter dullness in trade may be considerably aggravated this year by an unsettled political situation.

Deliveries for the week ending Nov. 12th, at London, totalled 7,394 standards, a very substantial increase over those of last year, which amounted to 4.273 standards. At Churchill & Sim's recent auction sale, 3 x 11 and up, unsorted Quebec spruce was sold at £9, 10s. 10-inch brought £9, 5s. and £10.

The political situation is also making itself felt in the lumber trade at Liverpool. Recently, a slow but steady improvement has been noticeable, but since the political atmosphere clouded, trade has suffered a setback. It is fortunate under these conditions that the season of importation from Canada and the Baltic is nearing its close, and consequently there is no necessity for price cutting. Recent advices were to the effect that most of the shipments of spruce deals from St. John, N.B., made upon contract, had arrived, and that during the winter dependence would have to be placed entirely upon the parcel arrivals.

Birch c.i.f. values are very firm, and stocks are scarce. There is a good demand, and spot values also are firm. The scarcity is both in logs and planks. Fresh planks are very scarce and are rapidly sold on arrival.

At Manchester, trade conditions have been set back by the disagreeable weather, outdoor work having been interfered with by a heavy snow storm. There is a fair amount of activity, however, in the spruce trade and converters of spruce, into lap boards and cases, are quite busy. The few parcels of spruce "on consignment" which have been available have been quickly disposed of at standard prices. Converters are taking so much stock that if they continue, the decline of a few shillings which occurred during the past month or two will soon be recovered. Floorings are quiet. At Glasgow the lumber trade has been unusually quiet for the last month. At present there is practically no movement in waney pine, elm, or other ship builders' woods. The business is almost entirely con-

in fact anything in special or regular sizes, cut to order in any size 10 to 60 feet long on short notice.

We also carry a heavy stock of assorted grades in White pine and Red pine as well as LATH.

Wire, Telephone or Write

CLEVELAND-SARNIA SAW MILLS CO., LIMITED

SARNIA ONTARIO

A. F. Holden, President
F. H. Goff, Vice-President

J. M. Diver, General Manager
E. C. Barre, Assistant Manager

fined to the moderate requirements of wagon builders, packing case makers and the furniture trade. Although the market is quiet, prices are firm in most cases.

Recent advices from Liverpool are to the effect that trade in Canadian woods is slightly more active, the demand having improved at the principal import points. Trade, in fact, has been improving steadily for some months, the only disturbing factor having been the strike in the ship building industry, and the limited output in the cotton industry. The consumption of timber, however, has been slightly increasing and stocks at import points have been reduced, while prices show a tendency to firmness. There is an increased consumption of flooring boards, roofing timber, and general woods, and fittings.

United States

There has been no important alteration in the condition of the white and Norway pine trade in the United States during the past fortnight. Good lumber continues to be in excellent demand and to be strongly held. This applies very largely also to the medium grades. Common and cull lumber, however, are still difficult to dispose of. Reports have been received of a slight shading of prices on the higher grades, but it is scarcely possible that this could be at all widespread. It is reasonable at this time of year to expect a narrowing of the demand, as nearly all the large consumers of white pine are cutting down their operations, in order to attend to their inventory making duties. Minneapolis reports that practically all the mills are closed and that stocks on hand are not much more than 50 per cent. of what they were at this time last year. Shipments are somewhat lighter than they were a year ago but are improving. The hardwood markets show signs of improvement. Consuming manufacturers are receiving enough orders to keep their factories going. Plain oak is the leader among the southern hardwoods, and is closely followed by the medium grades of quarter sawed oaks. 1st and 2nd quarter sawed oak are rather quiet. In the northern States rock maple is the most active hardwood, but good birch is also moving well.

At Chicago the building activity continues, and considerable new construction work is being undertaken. City yards have allowed their stocks to become very much broken, which is quite usual at this time of year when inventories are being made. Receipts of lumber by rail, at Chicago, during the week ending Nov. 12th, were 40,126,000 feet against 61,380,000 feet for the corresponding week of 1909. Some price cutting is reported at Chicago in northern pine and also in hemlock. The hemlock trade this year has been fairly satisfactory and wholesalers at present are buying rather freely for country distribution. The yellow pine trade at Chicago has been quiet of late. Retail yards have been purchasing only what they need for immediate shipment. A large inquiry is out for one of the railroads for stringers, timber, siding and lining. Hardly any other railroad inquiry is noticeable. The southern pine trade in the southwest seems to be improving. Red cedar shingles are still very dull at Chicago. Clears are selling at $3.12 and stars at $2.55, Chicago basis. Even at these prices sales are very scarce. White cedars continue at $2.90 with a good demand, and stocks of the better grades light. Lath are strong and selling well.

At Buffalo the stocks on hand at the opening of the winter will probably be the same as a year ago with the demand also about the same. Low grade stock is still plentiful and the high grades continue to bring good prices. Among the hardwoods at Buffalo, oak continues to lead. There is also a steady demand for birch and chestnut, while the movement of elm and basswood is dependent entirely upon the supply. Maple is in good demand for flooring and the movement of elm is improving. There is an active demand for hemlock at Buffalo and large stocks of lake hemlock are expected to be laid in for the winter trade. Prices continue as they have been for some time. They cannot advance or they would permit yellow pine to come in. There has been an advance in the price asked for short-leaf pine at Buffalo, box grades being put up one dollar. It is a question whether the advance can be secured. The shingle trade at Buffalo is steady.

At New York, prices for northern pine are unchanged and fairly strong. Business, however, is quiet. The hardwood business is unsatisfactory, the retail yards and factories being very inactvie and the furniture and piano trade duller than usual.

Market Correspondence

New Brunswick News—Trade Disappointing

Chatham, N.B., Nov. 19.—The past fortnight has been one of very unfavorable conditions to lumbermen. An almost entire lack of frost, and showery weather have created conditions which have made work in the woods exceedingly difficult.

The shipping season at Miramichi ports is at an end, so far as any important quantity is concerned:

A recapitulation of the season's shipments shows the following results:

The Miramichi Lumber Company shipped 33,600 cords of rossed pulpwood, valued at $353,300 and 9,540,200 spruce lath valued at $23,850.

The J. B. Snowball Company shipped 17,294,716 sup. feet of spruce long lumber and 12,066,400 spruce lath, totalling in value $285,350.

J. A. Rundle & Co. shipped 689,687 sup. feet scantling and 1,605,100 spruce lath, valued in all at $13,959.

R. Corey Clark shipped 2,662,541 sup. feet of spoolwood, valued at $66,742.

George Burchill & Sons shipped 1,243,000 sup. feet long lumber, totalling in value $18,112.

F. E. Neale's shipments amounted to 31,565,575 sup. feet, of which 26,661,087 sup. feet was spruce deals and of which the total value was $447,371.

The total quantity of merchantable deals in above statement is 41,150,066 sup. feet. The value of the whole is $1,208,674.

The first of the winter liners, the S.S. Virginia, arrived at St. John during the present week. The volume of shipments of deals through this channel will depend a great deal upon trade developments. Should conditions remain as at present or similar, parcel shipment from and through St. John will be far lighter than average. With the sawing season at that city drawing to an end, there is no necessity to hurry shipments either large or small, and until conditions in the United Kingdom show more indication of improvement, it is safe to say that New Brunswick manufacturers and dealers will ship very lightly.

Another element which enters, to an important extent, into this phase of the trade is the somewhat discouraging outlook in connection with the manufacture of long lumber at portable mills. During the winter months many hundreds of thousands of feet of spruce deals reach St. John by rail from "portables" at inland points and are shipped by the lines. The output of these mills figures largely in trade circles during the winter months. This year there promises to be less demand for their output than usual, owing to the caution displayed by buyers. As much of the winter's sawing is sold in advance, and as it is necessary to secure a good round price to make a business of this nature pay, the outlook for these small operators is the reverse of encouraging.

With the end of the shipping season, closely following the end of the sawing season, local interest in trade and market matters is for the time being lacking in incentive and consequently shows little life. At this particular time, therefore, local values or quotations are purely of a nominal nature. In regard to "English" spruce deals it might be said that the opinions of those who have a direct connection with the English market indicate a growing confidence in developments in that direction. This feeling of confidence has grown more marked during the present month although, it is stated, it owes its existence to the promising outlook for the future rather than to any conditions which actually exist at present. There are expressions now and then of divergent views in regard to values in this line, but careful consideration leads to the conclusion that a buyer of "English" deals could not do business in this section at a less figure than $16 per thousand superficial feet, in a specification containing say 50 per cent. sevens and eights, 35 per cent. nines, and balance elevens and wider.

The indications in regard to spruce lath are no more encouraging than was the case a month ago. There has been no change for the better in price. While it is generally felt by all interested that this line has touched rock-bottom, the uncertainty in regard to the lath trade which is always present, leaves little room for forecast. Stocks of lath at St. John and other New Brunswick points are not heavy but are sufficiently so to provide for all business which is apt to come this way during several months to come. The value of dutiable spruce lath at Bay of Fundy points is from $2.15 to $2.20 per thousand.

News From the Capital—Stocks Moving Well

Ottawa, Nov. 26.—The continued large sales of high class pine have cleared the local yards of nearly all the good stock, dry enough for shipping. This activity tends to prolong the sawing season. Manufacturers have very little of the best stock ahead to carry over the winter. With favorable weather there is no likelihood of any more mills closing before the end of November The only stock which is now accumulating is cull pine and box lumber, and of that, the amount carried over will be less than last year.

Prices have been steady the last fortnight. A large quantity of the lumber contracted for earlier in the summer has been moved in November. The Ottawa river rose six inches during the month and barges are moving freely. Orders from American points indicate a renewal of buying across the border and seem to point to large export next summer. The mill owners are all prepared to resume sawing operations next spring at the usual time, and if possible a little earlier. If the stores of low grade lumber are diminished as rapidly as one of the local lumbermen anticipates the season of 1911 will be brisker in all branches of the lumber

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

industry than any of the past. With one inch good white pine sidings firm at $58 per thousand, and two inch selling rapidly at $65, manufacturers assert that the future of the trade in high grade lumber is assured, independent of prospective tariff changes. If the present duty is removed from lumber going into the United States the box lumber held in the Ottawa valley will soon be reduced to ordinary quantities.

Inquiries are numerous for telegraph poles and lumbermen will take out as many as possible of the long variety. The hauling of 50 and 60 foot poles from British Columbia to the east has aroused the trade to the extent of the market for poles. Short poles are plentiful but railway construction in eastern Ontario promises to be active next summer, and the supply in sight is no more than equal to the prospective demand. Most of the territory that yielded cedar is cut over and material for poles must be brought from a considerable distance.

A healthy demand prevails for lath. There is a fair demand locally for red pine and spruce, mill run. No. 1 white pine is pretty well shipped up. Most of the shingle manufacturers have less stock on hand than last year and are maintaining quotations firm.

The report of the Public Works Department just issued states that the slow progress of the work on the reservoir dam at the foot of Lake Temiskaming was a matter of much disappointment to the Department. More satisfactory speed was made with the dam at Lake Kippewa. Since the report was compiled, both the dams have been finished. The Department comments on the relatively small cost of the Ottawa river improvements compared with those on the Mississippi river, built in 1880 by the United States Government. The Canadian Government, by an expenditure of $600,000 will conserve a minimum of 168 billion cubic feet of water. The American Government stored between 70 and 90 billion cubic feet at a cost of $1,200,000. Five dams were built on the Mississippi, while four are under contract on the Ottawa. The latter will be permanent concrete structures with stop log sluice ways.

The report contains a review of the square and waney timber trade on the Ottawa river from 1807 when the British Government granted a license to cut timber for the Royal Dock Yards. Rafts were floated down the Ottawa and St. Lawrence to Quebec, which was the great shipping point. In 1851, the biggest year, there were at Quebec 3,000,000 feet in cribs belonging to a single lumberman, the late John Egan. The low price of timber in the early days is shown by the quotation of 6 cents per foot in 1841 and 9 cents in 1846. In recent years waney timber, 18-inch average, brings 80 cents per cubic foot and square pine, 30 to 40 feet average, 40 to 50 cents per foot.

Ernest Thompson Seton, in a recent lecture in Ottawa, described the forests of the north of Canada as being rich in white poplar and spruce, the average height being 120 feet. He said there was nowhere in the United States such a belt of wooded lands. On November 18, James Lawler, Secretary of the Canadian Forestry Association, in another lecture, declared that this traveller over-estimated the advantages of Canada as to the United States in respect of forests. True, there was a great belt of timber region, but much of the wood was not marketable. If the United States had Canada's supply of trees, only, they would last her only seven years, while her own timber resources are good for thirty years. Canada had only from one-fifth to one-third the lumber supply of the United States. Mr. Lawler's object was to warn Canadians against wasting their resources.

Lumbermen are favored by a recent reduction of $3 per cwt. in pork, the chief food of shantymen. Beef is also on the decline. Much of the pork and beef laid in for the present winter's consumption in the shanties cost one-third more than the quotations of the latter part of November.

The Ottawa City Council has declined to join the Board of Trade in protesting against the C.P.R. closing the Rideau canal for the purposes of their trans-city tunnel, until advised by an expert. In support of the railway proposal a solicitor has gathered statistics, which he states, show that only two lumber barges use the canal locks at Ottawa, making four or five trips a season, with lumber to Oswego, and returning light. He claims this lumber could be carried as well via the Ottawa and the St. Lawrence.

Old Country Trade—Business More Active

Liverpool, Eng., Nov. 12.—Business in Canadian woods, in the United Kingdom has lately been more active, the demand having improved at all of the principal points of importation. The improvement has not been great, but it has been appreciable, and dealers have been glad of the extra busines which it has brought them. The trade of the United Kingdom has been improving steadily for some months past, and, but for a strike in the ship-building industry on the northeast coast, and a limited output scheme which is being operated in the cotton industry; the principal manufactures of the country might have been spoken of as being in an active and flourishing condition. As it is, the improvement has been so great as to cause some increase in the consumption of timber. This is now making itself felt at the chief points of importation, and has had the effect of reducing stocks, and of giving firmness to prices. Building, though not brisk, is being carried on more largely than a short time ago, so that an increased consumption of flooring boards, roofing timber and general wood, fittings, is now in progress, and leaves the trade in a more satisfactory position.

In London, the chief topic of timber trade interest at the beginning of November, was the coming into operation of the new scale of rates imposed by the Port of London Authority, the newly-formed and August body which now controls the affairs of the Port of London. Rates have been fixed on imported timber, by this new authority, which have given great dissatisfaction to the trade, one ground of complaint being that maximum charges have been imposed at the start. The London section of the Timber Trade Federation of the United Kingdom has accordingly made a formal protest against the rates which have been adopted in the hope of obtaining some relief for the trade. The rates, if retained, will be added to the cost of the timber, and will fall on users, a state of things which, it is assumed, will tend to limit consumption and be of no advantage to anyone but the new Port Authority.

The representatives of the American lumber exporters who have been on a visit to the United Kingdom will have gained much information of value to shippers of timber in Canadian and American ports, in the course of their inspections and inquiries. This will have been especially so, as regards the kinds of lumber most used in the United Kingdom, and as regards the extent of stocks held, in relation to the consumption. The representatives paid their visit at a time when the consumption of pine deals and boards was more active than it had been, and when the consumption of New Brunswick and Nova Scotia spruce deals, was well in excess of the importation. Their visit, in fact, was made at a time when the outlook as regards business in these woods, was decidedly brighter.

At London, at Liverpool and at Glasgow, brokers and merchants reported a more healthy condition of things, stocks being lighter, consumption being greater and the importation being on a smaller scale. At Glasgow the representatives found a good demand for sawn pines and for Oregon, Quebec and waney pine. At Liverpool, rock oak, elm and birch were selling freely, the stocks of birch being the smallest held for several years. Canadian waney pine, square, and in board, was also selling more largely, though the consumption of these woods had been small for some time. The stocks were, however, much smaller than at the corresponding time in 1909 and in 1908, but the importatio nfor the year, had also been smaller. The stocks of Canadian and United States' oak, at Liverpool were one-third less, in quantity, than at the corresponding period in 1909, and were less than one-half the quantity of the stocks held in 1908, while the consumption was greater than at the correspond-

At Liverpool, in view of the healthier condition of things, Canadian, first quality deals, had been raised in price, about 5%. First quality Quebec pine, was being quoted from £22 10s. to £36. 10s. per standard; second quality, £16, 15s. to £26, 0s., and third quality, £13, 10s. to £17, 10s. St. John spruce, was £8, 7s. 6d. to £8, 12s. 6d.: and Nova Scotia, £8, 0s. to £8, 5s. At Manchester, spruce was bringing about £8, 0s. 0d., and floorisgs; best pine sidings, £28, 0s. per standard, which represented a rise of £4, 0d. 0d. within six months. The American representatives, accordingly found things, as regards Canadian woods, in a fairly healthy and promising condition.

At Glasgow, the representatives did some useful business. There, their party included Harvey W. Dickson, John L. Alcock, W. H. Russe, J. A. Wilkinson, and Innis Crichton, and these met the members of the Clyde timber brokers Associations. The social element found expression at a luncheon to which the visitors were entertained at the St. Enoch Hotel, and which was a very agreeable function; and the pure, business element, at two conferences, between the visitors and the brokers. Of the subjects considered, that of the grading and inspection of wagon and railway oa kplanks, was the most important. On this, the brokers decided to co-operate with the American Wagon Oak Plank Association, and to adopt certain rules which should govern all contracts for wagon and railway oak planks.

The rules decided upon were, that planks should be sound oak, sawn full to size and trimmed square on edges, except that wane should not exceed 1½ inches wide in the aggregate, and one place at extreme points one-third from both ends of the plank, should be admitted, if not exceeding ten per cent. of the piece. The planks should be free from grub worm holes, rotten knots and from rafting and pin holes. Sizes, 5 inches and up, thick, to admit heart centres; hearts to be well boxed; sizes under 5 inches thick, to be clear from heart centres; and all planks to be clear from wind shakes, but ordinary surface cracks should not be objected to. With regard to railway oak specifications, the foregoing were to be the only description that exporters bound themselves to quote on supply, except that they were willing to supply, free from heart. Rails required in railway oak specifications were to be kept as separate items in the specifications and to be quoted on as separate items.

These provisions would, it was believed, simplify dealing in the kinds of timber spoken of.

EDGINGS

Ontario

W. E. Lount, Toronto lumber merchant and inspector, has assigned.

The Imperial Paper Company's stables at Sturgeon Falls, Ont., were burnt down recently.

The Cummings Lumber Company will erect a sash and door factory in Westboro, Ont., this winter.

An Ottawa despatch states that Mr. Mortimer Cumming, of Kazubazua, Que., will erect a planing mill and sash and door factory at Westboro, Ont. A siding has been built and site secured. It is expected that construction will start shortly.

The Seaman Kent Company, of Meaford and Fort William, Ont., are now employing 80 men at their new plant at Fort William. At the close of navigation the company had received 5,000,000 feet of lumber for their plant at Fort William since it commenced operations on September 15th.

Manager W. C. Franz, of the Lake Superior Corporation, states that arrangements have been made for the installation of a paper mill at Sault Ste. Marie, to cost one million dollars, although nothing definite is given out as to the site. This contradicts the rumor that an American syndicate had arranged for the construction of a paper mill in the Soo.

It is reported that a satisfactory settlement has been reached in the negotiations between the Ontario Government, the Gordon Pulp and Paper Company, and the Dryden Timber and Power Company. It is now expected that the pulp mill buildings will be completed at an early date. Over 100 men have already been sent out to cut the new Company's camps.

From all reports the timber business will be lively at Fort Frances, Ont., this season. Messrs. Pierce & Oliver have a large force of men at work and are in the market for all kinds and quantities of timber. The Rat Portage Lumber Co. are making preparations to handle that output of logs. It is expected Saunders & Co. will also secure a large stock of logs for the mill at Fort Frances.

Ottawa reports state that the shanties are now pretty well stocked with lumber jacks. The men who have gone to the woods are not immigrants, but are for the most part sons of good respectable farmers. French-Canadians for the most part, who prefer a season spent in the woods, to one doing chores on the snow-bound farm. While the rush was on, the employment agencies reaped a good harvest. One agent paid over $1,700 for the shipment of a large band of "jacks" from Ottawa to Prince Albert, Sask., during one week.

Since last September, the Ontario Government have sold by tender, the damaged timber standing on most of the burned over forest areas. The sales include jackpine for the timber. The areas sold and the date of sale were as follows: September 8th, 38 square miles in the district of Kenora; September 15th, 33½ square miles in the District of Thunder Bay; September 22nd, 72 square miles; October 1st, 30 square miles in the Metagami Indian Reserve; October 10th, 102 square miles; October 15th, 268½ square miles; a total of 544 square miles.

Eastern Canada

The Renous Bridge Lumber Company, of Millerton, Northumberland County, N.B., are building a new saw-mill which is to be completed to begin work next summer.

An accident occurred at Tunmouth Creek, a place ten miles osuth of St. Martin's, N.B., recently, when the boiler exploded in a saw mill owned by J. P. Mosher. One man was killed and several others were seriously injured.

A large deal, affecting the transfer of 456,320 acres of lumber and pulp land in Labrador, has been closed, the purchasers being a party of New York capitalists and the price $200,000. The area is situated on Sandwich Bay, 200 miles south of Hamilton Inlet. It is said that there is not less than 700,000,000 feet of saw log lumber on the property, and five times the quantity of valuable pulp-bearing timber.

The sash and door factory belonging to Philip Saumure, at Montreal, was recently destroyed by fire. The loss is reported as being over $100,000. It was only with difficulty that the lumber yards of Carriere et Frere were saved. The sash and door factory was erected only twelve months ago at a cost of $25,000. Mr. Saumure's insurance only amounted to $2,000. The equipment of the factory was installed at a cost of $15,000.

Western Canada

The Walsh sash and door factory's enlargement at New Westminster, B.C., will require an additional four or five acres of land.

The planing mill of the Elk Lumber Co., Fernie, B.C., will operate throughout most of the winter. The Elk Lumber Co. are operating three bush camps, employing about 250 men.

The Jordan River Lumber Company, Limited, Victoria, B.C., who have been considering the erection of a sawmill on Vancouver Island, report that they may buy a going concern instead.

The fire losses in the two Minnesota towns of Beaudette and Spooner, in the recent conflagragation, have been adjusted by the insurance experts at $700,000, of which the Shevlin-Mathieu Lumber Company lose $400,000.

W. Hayes, capitalist, of Duluth, Minn., has just returned from a trip into the Athabasca country. Mr. Hayes made a careful study of the country, and says there is timber enough there to supply Western Canada for the next half century.

The British Columbia Gazette gives notice of the incorporation of the following companies:—Canadian Timber Co., Limited, capital $1,000,000; Colonial Lumber & Paper Mills, Limited, capital $2,000,000; Poulin Lumber Co., Limited, capital $100,000; The Hage Timber & Investment Co., Limited, capital $50,000.

Dead Man's Island, for many years the bone of contention between Theodore Ludgate and the city of Vancouver, has formally passed into the possession of

the Vancouver Lumber Company, with which Mr. Ludgate is identified. Mr. Ludgate, accompanied by the Sheriff, went over to the Island armed with the decision of the appeal court, and the Sheriff gravely retired from the island.

The Ladysmith Lumber Company, of Nanaimo, B.C., has purchased the saw mill and other property of the Red Fir Lumber Co. It is the intention of the purchasers to overhaul the mill, and with the additional machinery which they intend to add, the mill will be up-to-date in every respect. On or about January 1st the entire plant will be started up with the expectation of keeping it in operation the year around at its full capacity.

Carmichael and Moorhead, Limited, of Victoria and Port Alberni, B.C., who recently have acquired 35,00 acres of land from the Esquimalt and Nanaimo Railway Company, report that at the present time they have survey parties in the field, classifying and examining the land, and that it will be some months before they are able to decide as to the location of their camps or mills. The land is being carefully cruised with regard to timber values, soil and water, and ample capital is forthcoming to clear and put it in shape for agricultural holdings. The project also includes the erection, at a future date, of a sawmill.

The B. F. Nelson Manufacturing Company, of Minneapolis, have opened Canadian headquarters at Winnipeg, under the management of Mr. Frank P. Barker. The company manufacture and deal in a large variety of building and roofing papers. They are also carrying branch stocks at Calgary, Edmonton, Regina and Saskatoon, and are represented in British Columbia by Shalleross, Macauly & Co., of Vancouver. It is their intention to follow the opening of their Canadian business, by the erection of a factory in Winnipeg, for the manufacture of roofing and building papers.

The loss sustained by the Maple Grove Lumber Company, Limited, by the burning of their mill at Maple Grove, B.C., was heavier than at first reported, amounting to about $35,000, upon which there was no insurance. The fire not only consumed the mill, but also the lumber in the yard and several houses. The company have lost no time in repairing the loss. They now have most of their new machinery on the ground, and the frame work for the mill is well under way. They expect to have the new mill in operation by January 1st. Its capacity will be the same as that of the mill which was destroyed, namely 40,000 feet in 10 hours.

Work has been commenced at Nelson, B.C., upon a $4,000 factory building, which Waters & Pascoe, the well-known Nelson contractors, are erecting for themselves on Front street. Excavation has been started for the stone basement, on which will be erected a brick structure one storey high. The building will be 50 feet wide, and 108 feet long. The office will front on the street, while the rear portion will be used for warehouse purposes, and will have track facilities. In the spring, Waters & Pascoe expect to install a complete equipment for a sash and door factory, including the most modern machinery. The architect is Mr. A. Carrie.

Col. Dempster, of Dempster Hall, Warwickshire, and Sir George Doughty, who have recently visited Western Canada with a number of other English capitalists, are reported to have made arrangements for a five million dollar merger of lumber interests. Half a dozen mills, it is reported, will be united under one control, and will be enlarged as the result of the British capital invested in the enterprise. Among the companies are the Cascade and Nelson, the Yale and Columbia, the Drummond and the Munday companies, which have a combined capacity of 150,000,000 feet. The present area of timber limits upon which they will operate is 240 square miles, but the area will soon be greatly increased by new purchases and reservations.

Theo. A. Burrows, lumber manufacturer, of Grandview, Man., has installed a new yard at Anoka, Sask., under the management of J. R. Hume. Mr. Burrows now operates yards at Grandview, Man., Canora, Sask., and Watson, Sask., on the main line of the Canadian Northern Railway, and the new yard at Anoka, which is a townsite 12 miles north of Yorkton, on the G.T.R. Mr. A. R. Dart, formerly of the Dart Lumber Company, of Erwood, Sask., is moving his plant from the latter place and erecting a mill to cut on contract for Mr. Burrows, at Birch River, on the Canadian Northern. This mill will probably be ready for operation on December 1st. It will be rotary, with provision for the addition of a band saw next season. Mr. Burrows' new mill at Grandview is nearing completion.

Further particulars have been received from the Penticton Lumber Company, Limited, of Penticton, B. C., regarding the property which they have recently acquired in the Okanagan Valley. They report that they have recently purchased from the Penticton Lumber Syndicate Company, large tracts of land and timber, situated in the lower portion of the Okanagan Valley, and are erecting a saw mill on the river at Penticton, with a capacity to cut 30,000 feet of lumber per day. The contract for this mill has been placed with the Waterous Engine Works Company, of Brantford, Ont. It will be erected early in the new year. The company are also installing machinery for making wooden pipes, fruit boxes, sash and door and other builders' materials. The capital of the company is $200,000. The first directors are Messrs. E. Bullock Webster, Frank Richardson, Hugh Leir, and Frang C. Bird. The company own some exceptionally fine timber, including pine, western larch and fir.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope, and stating number of enquiry.

1580. **Handles, pick, spade, fork.**—Former railway man who has recently opened business as a broker for Canadian exports in Liverpool, desires to get in touch with a first-class manufacturer of the above handles, made of ash. Excellent Canadian references.

1617. **Axes, edge tools, etc.**—A Newfoundland firm wishes to purchase axes, edge tools, circular saws.

1630. **Red pine laths.**—An Auckland, N.Z., importing firm heretofore buying laths which reach Sydney in bulk from Puget Sound and are then sawn, would like to buy direct from Canada. Must be absolute in measurement, 2½ inches wide and 9.64-in. in thickness, rounded edges. Are used for venetian blinds. Must be dry and free from sap. Should be in 14 feet lenghts, tied in bundles of 5,000 linear feet.

1644. **Lumber.**—A South African firm of agents and importers would be glad to get into direct correspondence with Canadian shippers of lumber suitable for the building and furniture trades.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Keeping Your Mind on Your Business

means a study of the kind of stock your trade requires as well as cost, expense and all other departmental features. In other words, to keep ahead of the game as regards your competitors' efforts. When you give a customer more for his money than your competitor—you're it. You know that. And if you're keeping

Fenderson "Quality" Lumber & Shingle Products

in stock you know that no customer could ask more, **because** from the stump to delivery to you our methods of manufacture, grading and shipment are in line with a broad view and personal supervision of what counts for most in the long run of keeping you as a customer as well as helping you to keep your customer as to price, quality and service.

People Trade with us

Why ?

Not because we want them to, but because they want to. There's a reason, sure enough. They know that our bone dry Spruce or Pine, our beautiful planing mill work, the excellence of our Shingles and stock in general, makes the most saleable, the most profitable, and the most satisfactory stock that they handle.

Have you a line-up that insures quick sales, good profit and absolute satisfaction.

We are in business to give you just this.

John Fenderson & Co., Inc.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

"Jumbo"
Combined Gang and Edger

We have made several improvements since this cut was made, less gearing is used than shown in the cut.

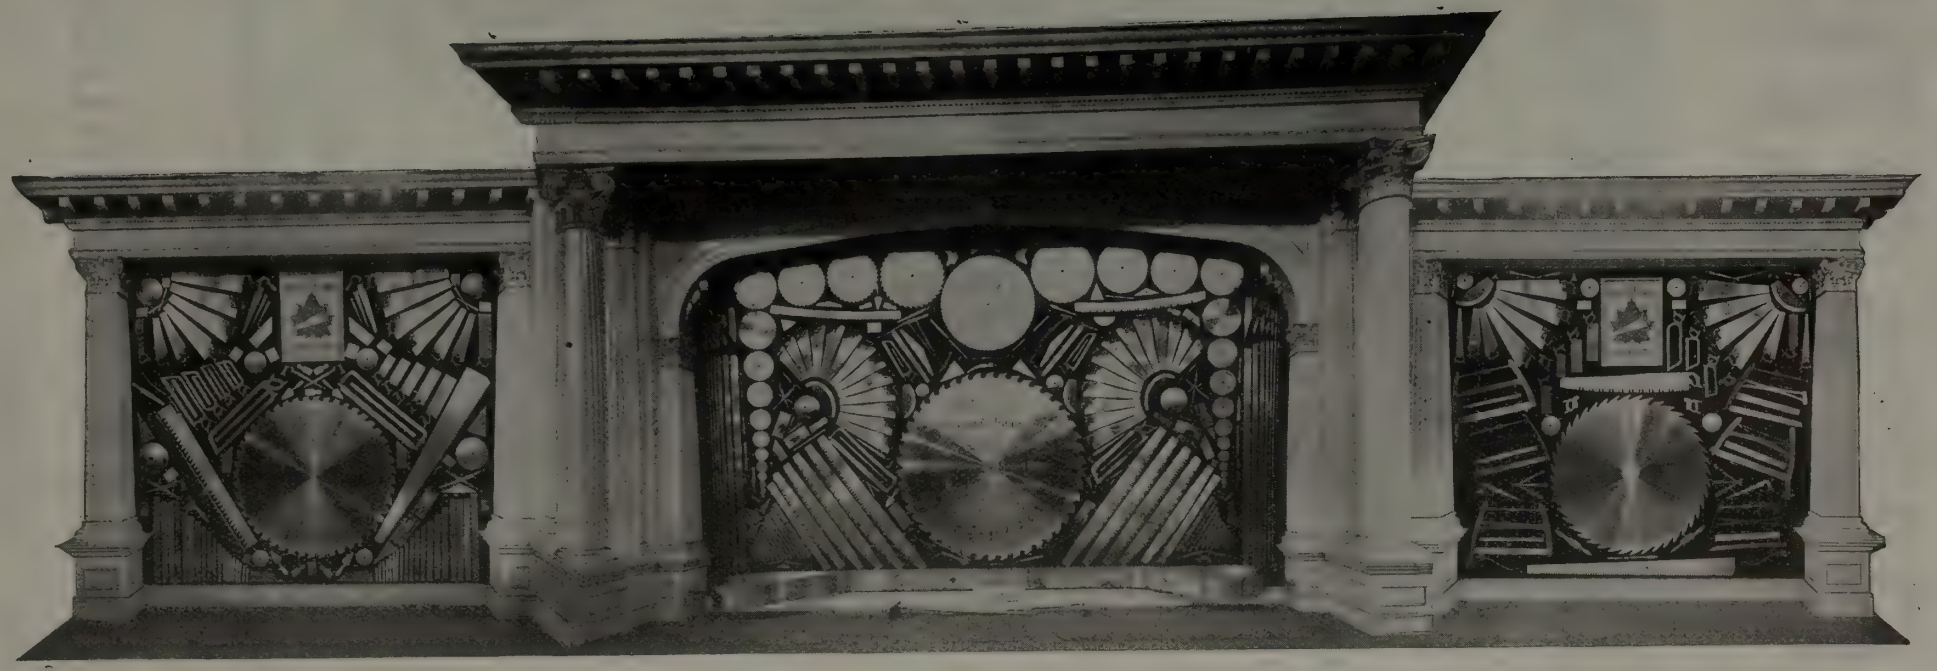
This is a very complete machine and embodies every detail of construction essential to an adequate gang edger.

We have sold a great many of these machines and hear nothing but good said of them. We have some very flattering remarks for our "Jumbo."

Some of its good points are:

MANDEL: 4½ inches by 10 feet 6 inches long.
DRIVE PULLEY: 20 inches by 20 inches.
SAWS: 2 Movable Saws on Edger side (more if desired) 8 stationary saws on gang side. 2 Water Boxes.

This machine is 5 feet 7 inches inside of frame; reverse friction is supplied in case cant binds and prevents saws from being burned. Supplied with Press Rolls and impossible for Cant to fly back.



Prices Cheerfully Quoted

MOWRY & SONS Gravenhurst Ontario

Manufactured from Razor Steel

"Maple Leaf Saws"

Tempered by our Secret Process

Recent Exhibit at the Canadian National Exhibition, Toronto, and Central Canada Exhibition, Ottawa

This cut represents the display of saws made by the Shurly-Dietrich Co., Limited, of Galt, at Toronto and Ottawa Exhibitions this year.

This exhibit embraces saws of all kinds and shapes: from a ¼ inch band saw up to one 16 inches wide, and circular saws from one inch in diameter up to the large 90 inch hung in centre of the case, also Hand Saws, Gang Saws, Cross-cut Saws, Buck Saws, Billet Webs and many others.

Improved Cross-cut Saw

During these exhibitions a great many lumbermen inspected and were especially interested in the Improved Racer Cross-Cut Saw, a cut of which appears on this page. This saw is made of Razor Steel and is tempered by our "Secret Process" which gives an absolutely true temper throughout. It is different in its construction to other saws, being made with the slanting gullets which discharge the sawdust more easily and allow every tooth to cut fresh timber. It is a thin back saw and runs free and easy. The Shurly-Dietrich Co. **guarantee** every one of these saws and if found defective will be replaced.

We would also draw lumbermen's attention to our **No. 20 Handle.** This is the strongest and best handle in the market and is **guaranteed** to stand plumb with the saw. It is made of the very best of rock maple. Try a sample.

Isn't it Better to Investigate

"The HOWARD" Vulcanizing Process

than to wish you had

Positively the quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

---

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto

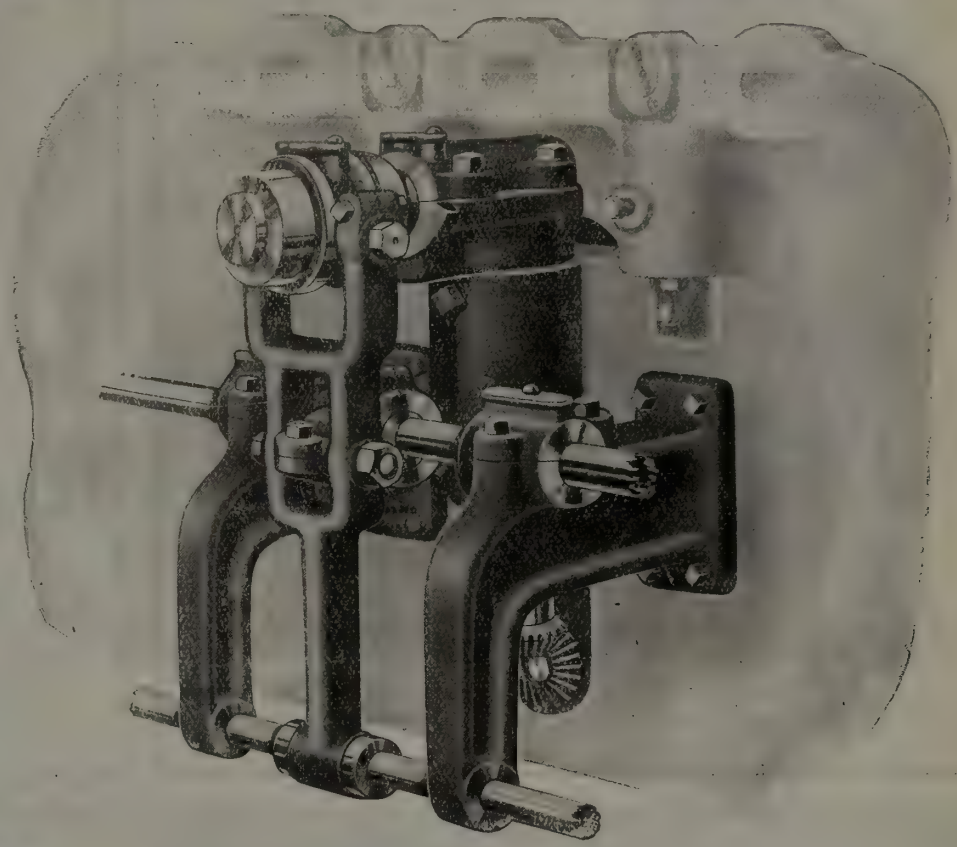
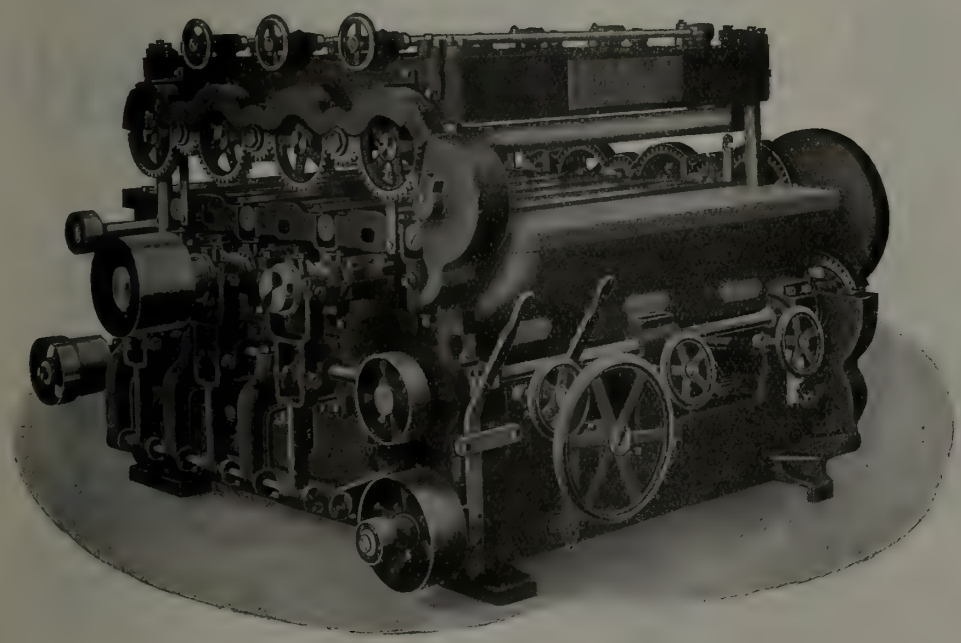
The Troublesome Feature on most Triple Drum Sanders is THE "OSCILLATOR"



Such is not the case with our

New No. 225 Triple Drum Sander



This machine is made exactly with the end in view of overcoming trouble with the oscillator. We have accomplished this by our improved method of eliminating wear in the oscillator bearings—these bearings cannot wear as the shaft does not touch their walls —then, again, they are relieved of all weight by pivoting the oscillators to a rigid shaft, shown in the sectional view.

This feature is not found on other makes and contributes largely to the success of our

New No. 225 Triple Drum Sander

The Oscillator

No. 225 Triple Drum Sander

Our New Catalog

on Sanders illustrates this feature of the No. 225 and other salient points on our machine. It also deals with sanders generally—all kinds of sanders. You ought to have a copy—Free

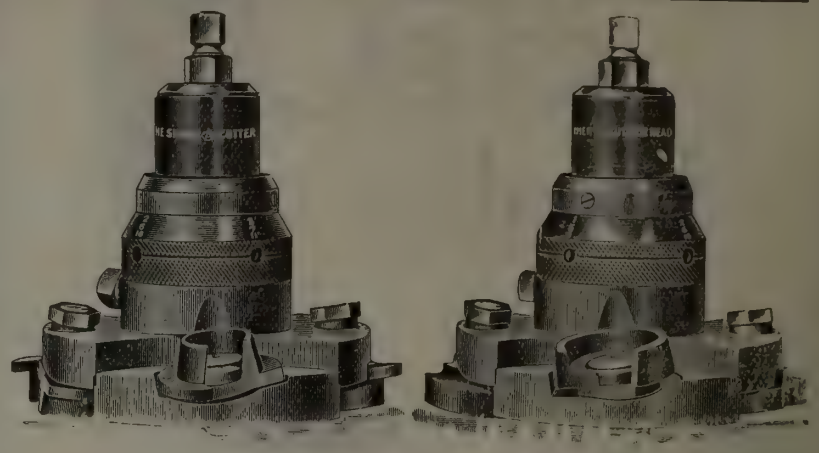
Manufacturer of Ranges, Heaters, etc., for Lumber Camps, Hotels, and Railway Construction

The Shimer Cutter Heads and Special Tools!



True and False Economy

True economy is a prime factor in business success. It recognizes that only the best is cheap. False economy is that which a man practices when he keeps in use obsolete appliances or tools.

Nothing illustrates these facts more forcibly than to see a mill man trying to keep his work up to standard, and get the orders out, by use of Cutter Heads which require hand fitting for every job and at each sharpening.

Shimer Cutter Heads are recognized as economical tools the world over—because of their long life and inexpensive up-keep—their saving of time, material and labor. True economy demands their use—false economy the holding on to methods "out-of-date."

Give these facts your earnest consideration now, at the beginning of your busy season and let us have your order at once. "Procrastination is the thief of Profits," especially in cases of this kind.

These popular tools are the "Best of All" the Shimer Cutter Heads, the Bits of which are held securely within conical duplex bit seats. The "vise like" grip of our fixed bolt and nut assures rigidity and strength for all emergencies, in the working of every kind and variety of cross-grained and knotty lumber.

Price with 4 bits to each head, the set, as cuts above.. $40.95
Price with 6 bits to each head, the set, as cuts above.. 49.27
Price with 8 bits to each head, the set, as cuts above.. 57.60

Complete with Flooring Bits. The Heads will also receive Bits for thin Ceiling—⅝ at $1.30 each, and Bits for 2-inch thick plank at $1.63 each.

Cutter Head for Matching Reversible Glue Joints

turns out a most satisfactory fitting of the tongue and groove, interlocking from the same piece of matched material, requiring but one Head with Bits to produce. The jointed material will fit together when the pieces are sawed to length by simply turning the one piece end to end.

Glue Joints must depend upon accuracy as well as permanency of pattern. We guarantee both.

Prices range from $15.54 to $17.30 for a four bit Head, and from $19.96 to $22.60 for a Head with six bits complete.

Expanding Dado Heads

These tools are arranged with Circular Bits and saw spurs for edging up the square shoulder of the groove when cutting across the grain of the wood. The Bits will expand to nearly double the thickness of the narrowest groove they make, and with wider or thicker Circular Bits their range of expansion is readily increased up to 2 inches or more. We make them to fit any saw mandrel, long or short. Price, complete, 8-inch diameter or less, net, $21.45.

Bolts, Wrenches, Etc.

We carry a full stock of supplies and can fill orders promptly for anything in our line, such as Wrenches, Planer Head Bolts, Nuts, Washers, Gauges, Set Screws, Brass Washers for under Bits, etc.

DOUBLE CEILING HEADS.

These tools double the capacity of a Matcher in working inch and inch and one-eighth stock with two tongues on one edge and two grooves on opposite edge, to be re-sawed for making two ceiling strips.

Price, 2 Heads with 4 bit seats, each	$24.30
Price, Bits extra, 8	16.64

Bit Grinding Machines

For sharpening Bits tempered too hard to file, and to lighten and hasten the work in the filing room, we make two styles of Grinding Machines.

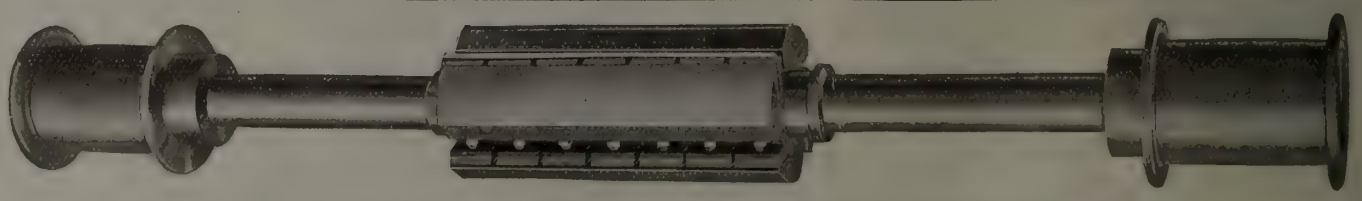
No. 1 is a strong and complete machine with every needed adjustment. Price, net, with countershaft, f.o.b. Milton, Pa., $104.00.

No. 2 machine is lighter yet sufficiently strong to meet the average need. Price, complete, $45.50 net, f.o.b. Milton, Pa.

Rosette Cutter Head

Our new Head and other tools for the purpose of making Rosettes should interest you if you do any work in this line. The Head is made with interchangeable milled Bits and turns any substantial wood turning lathe into a Rosette Making Machine with large capacity. Corner and Plynth Blocks with turned Rosettes are always in good style for interior house finish and are quickly and neatly made with this new Head.

Price, Head complete, $11.75.



Panel Raiser Heads

For $18.20 you can buy a Panel Raiser Head which will work nicely on any panel raising machine with vertical spindles. It carries a heavy shearing cut and works smoothly across end of panel as well the grain.

Wood Forming Cutters

We manufacture Special Cutters of any shape and size desired after the patterns of our Reversible and One-Way Cutters. Let us have your specifications. For odd work not found in our catalogue sent a wood sample or drawing.

The Shimer Shear Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Send for further information, and let us quote you prices. With your inquiry give us the length and diameter of your cylinder, stating whether you use one or two drive pulleys.

SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK "**The Shimer Cutter Head**" stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

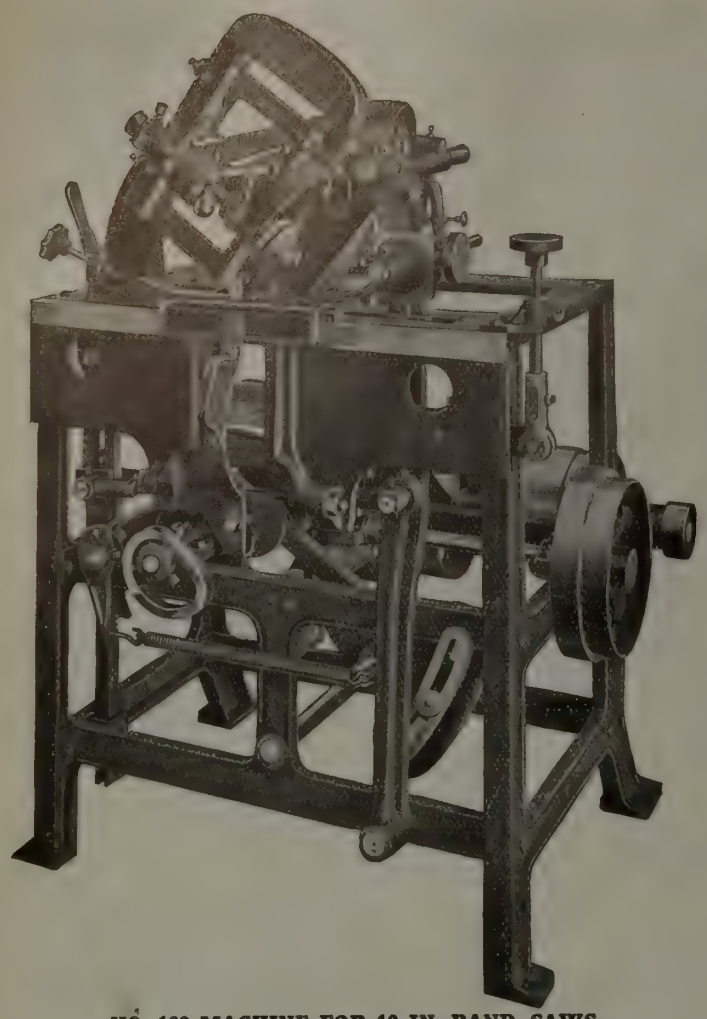
Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground sa s can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easily.



ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment-Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

Makers of Sterling Saws - HAMILTON, ONT.

Home Office and Factory, Indianapolis, Ind., U.S.A.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

Hanchett Band Swage

Filers! Millmen!

Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now, our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

"Berlin" Surfacers

Berlin Surfacers are built for the use of thin knives. A few years ago the significance of such a statement would hardly have been appreciated. To-day, the man who turns out the most lumber in the shortest time, who gets the most from his lumber and his machines, who gets the finest finish, is the man who uses thin knives.

Pyts Steel, used exclusively on Berlin machines, is the one self-hardening steel made to-day which possesses the requisite toughness combined with the right amount of hardness, for the successful use of thin knives.

Thin knives are set a ta greater angle than the ordinary thick knives, consequently more of a "scrape" is secured. This is further effected by back-bevelling to suit the nature of the wood being worked.

With Berlin thin knife heads, devices are used which grind the knives without disturbing the setting. The heads are then set in motion and jointed or brought to a perfect cutting circle so that each knife does its share of the work.

Thin knives actually make better work possible and will raise the grade from ten to twenty per cent.

The No. 186 is a fast feed matcher with the side-head spindles left out. It is also short-coupled and has six large feed rolls. Belt tighteners are provided for both top and bottom heads—no chance to "stall" them no matter how heavy the cut.

The No. 186 has the capacity of four ordinary surfacers and will produce a finish at 150 feet per minute that cannot be equalled short of a cabinet surfacer at 30 feet per minute. It is built in two sizes—20 in. or 30 in. wide with a 6 in. opening.

The top and bottom heads are very close together—warped and crooked stock can be better and more easily surfaced.

This surfacer gives the satisfaction which prompts the purchase of other Berlin machines.

Steel Carriages

This is not a fancy advertisement but a simple statement of essential facts

The Waterous Steel Carriage as illustrated above, is built with knee opening of 36 in., 42 in., 50 in., 60 in., and 72 in, is of steel throughout, and is suitable for use with Steam Nigger and in Mills of the largest capacity.

The standard Carriage is fitted with three head blocks, spaced 9 ft. and 5 ft. respectively, but can be fitted with any number and with any spacing desired. **The frame** is of oak throughout, substantially put together and heavily ironed. Timbers 8 in. x 6 in. **Headblocks** of cast steel, are heavily faced with machine steel plates reversible when worn. Knees fitted with our improved adjustable 6 in. taper movement. **Setting Rack and Pinion** are cut from solid steel, with split pinion and spring take-up to eliminate lost motion. **No. 4 Setworks,** combination setting and receding mechanism, designed so that lost motion cannot develop under any conditions. These can be attached to Steam Setter or be replaced by Trout Power Setworks as shown. **Running Gear** of Steel throughout, has double axles under each logseat and is specially strong.

This Carriage and parts are completely described in our bulletin No. 107. We will be glad to forward the same on request.

The Steam Tension Band Mill

is made with 8 foot, 9 foot and 10 foot wheels. As you know, the top wheel and upper guide are operated by separate steam cylinders.

Some obvious advantages of this are, the great speed with which the guide can be raised and lowered, the extremely sensitive tension on the saw, and the quick time with which saws can be changed.

You will see at once that considerable time is saved in one day, over the usual weight tension mill.

And no tensioning system has yet been made, that is as sensitive as our steam tension; so that your saw is more easily kept in perfect shape and at the right tension at all times — which means better lumber.

Any mill which will increase your cut, and probably improve its quality is worth your while looking into; and besides, there are other special features which increase its value to you.

Shall we send our catalogue?

Dimension Bill Stuff in

Pine, Spruce and Hemlock

A full line of dry lumber in stock for prompt shipment. Let us give you our prices for anything you require in lumber.

Pine Doors

We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.

Door Making is our Specialty

We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**

Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.

If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, December 15, 1910 No. 24

Growth of the Christmas Spirit

With the Christmas season once more upon us, most of us will be casting up the total of our year's blessings and disappointments and proving a favorable balance on the side of the former. As lumbermen, we can in most parts of Canada, indulge in the spread of Christmas cheer with a conviction that it is a duty, inasmuch as, in spite of many causes which might have produced business disappointment, we have come through with a good record. Profits have not been so great perhaps as we would have wished, but there has been a pretty steady stream of business and in a good many districts that old bugbear, "the low end," has shown a creditable tendency to diminish.

Lumbermen have, above everything else, learned the lesson of patience and conservativism during 1910. It is characteristic of the business of to-day that the methods in vogue tend more and more to a steadier market and to a saner appreciation on the part of the producer, of the requirements of the trade. This improvement is due, more than anything else, to the spirit of co-operation which has grown up, and to the numerous trade associations which have been organized. The spirit of co-operation is a business expression of the spirit of good will which marks the Christmas season. Through the trade associations it is being extended and is doing much to lessen those severities which have been all too prevalent in business relations in the past. The fear, so often expressed of late, that the day is coming when on account of the diminished supply of timber, the lumber business will gradually decline, loses much of its force when this spirit of good will is made to prevail in the relations of all the branches of the lumber business. So long as the lumbermen of Canada take reasonable care of their timber resources and refuse to be stampeded into sacrificing their manufactured stock at prices which provide no profit there will be trade enough for all, for many years to come.

There is the best of reason to believe that this condition of business is being approached more rapidly to-day then ever before. In view of this; in view of the hard times which have been safely passed in the last two or three years, and in view above all, of the good promise for a better year's business in 1911, the lumbermen of Canada have cause to feel that the Christmas season of 1910 should be as happy for them as for any other class of Canadians. THE CANADA LUMBERMAN AND WOODWORKER takes great pleasure in extending, to its friends, according to time-honored custom, the compliments of the season and in expressing the hope that they will all enjoy the merry Christmas festivities, as they never have before.

How Easterners View the Tariff

In the matter of the tariff the interests of the lumber manufacturers of Canada are different in various parts of the country, but there is unanimity of opinion upon one essential point, viz.; that Canadian lumbermen are deserving of much more sympathetic consideration of their interests than they have ever received in the past. There is a general agreement also regarding the unfairness of the treatment accorded to Canadian lumbermen, as compared with the treatment given to the lumbermen of the United States. In Central and Western Canada the demand is for a duty upon rough lumber coming into this country from the United States. In the Maritime Provinces, on the other hand, there is a general belief that the future progress of the lumber manufacturing industry depends greatly upon the removal of the duty upon lumber entering the United States.

The lumber situation in the Maritime Provinces is so different from that in any other part of the Dominion that it is impossible to group their interests with those of the rest of the country. In the matter of the tariff there is really only one point which gives them serious concern, and that is the market for their product in the United States. They feel, naturally, that the proper market for New Brunswick spruce and Nova Scotia hemlock is in the United States, and they are to be excused for hoping that the negotiations regarding reciprocal trade relations will lead to the removal of the duty upon lumber entering that country.

That the people of the Maritime Provinces, however, would not stand in the way of the imposition of a duty upon rough lumber entering Canada is well known. They would consider that, if the same duty were charged upon lumber entering Canada as upon lumber entering the United States, they had no reason for complaint, and would probably find in the removal of the competition of United States lumber in the home markets, sufficient advantage to recompense them for any loss they would sustain in the markets of the United States. That this is the case, is illustrated by the reference to the subject in a lettter from a prominent firm of Nova Scotia manufacturers, which is published elsewhere in this issue. Speaking of the anomalous condition of the tariff which permits United States lumber into Canada free, and imposes a heavy duty upon Canadian lumber entering the United States, this correspondent says:—"It may have been, in the early settlement of the West, that it was in the interests of that section to allow free import of American lumber, but we think the time has passed when such a condition should remain." As to the duty upon Canadian lumber entering the United States, this writer believes that the time will soon come when the people of the United States will need Canadian lumber so badly that they will remove the duty themselves.

The eccentricities of the markets for Maritime Province lumber under the influence of the United States duty, and the trade conditions in that country and in Great Britain have been peculiar of late, and if for this reason only, the people of the Maritime Provinces will be glad to see the day when the tariff influence has been relegated to the past. There was a time, about thirty years ago, when Canadian lumber entered the United States free of duty for a period of about two years. As luck would have it, however, the markets of the United States at that time, were not of much value to any one. They were, to put it mildly, demoralized. Canadian lumber exporters made less

on their sales in the United States during that period than they did a few years later, when the duty had been placed at $2 per M.

Since that time the experience has been a chequered one The market for Canadian lumber in Great Britain has been built up by careful attention to the demands of that country. Recently, however, the woods of Russia and other European countries have been competing strongly in the markets of Great Britain, and Canadian spruce and pine have now the prospect of this competition becoming continually stronger, while the quality of the lumber which is procurable in Canada is steadily depreciating. On the other hand there has recently developed, a marked tendency among the manufacturers of Nova Scotia and New Brunswick to regard the United States as their most logical market. They are naturally looking forward to the day when this market will be open to them free, and they believe that this boon will be procured in the natural course of events, before very long, without any sacrifice of Western interests, such as would be inevitable if the removal of the United States duty were made a "quid pro quo," for a removal of the duty upon dressed lumber entering Canada, or for a promise not to put a duty upon rough lumber entering Canada. As has been pointed out time and again by the lumbermen of Canada the lumber industry in practically every part of his country deserves a protective duty. Not only is this the case to-day, but there are large portions of the industry, which are now dependent upon some protection of this sort being imposed. If a protective duty is not imposed many large mills will close and a distressing story will have to be told of employees thrown out of employment and valuable plants allowed to depreciate.

A daily newspaper in Winnipeg recently took up this matter from the other point of view, and attempted to make capital out of an argument which appeared in the Canada Lumberman in favor of a duty upon lumber. The strongest point they made was that the lumber industry had made more millionaires in Canada than any other industry. This may perhaps be so, but we believe the point could not be proved. A few lumbermen who were in the field early made spectacular fortunes, and some of them, who secured their limits in the early days at a comparatively small price, have done wonderfully well. Let any one who is sincere in his objection to a duty on lumber, however, make enquiries into the result of the last sale of timber limits in Ontario. The lumber men who are coming out even on that sale could be counted on the fingers of one hand and those who are loosing money are far more numerous. Because a few men made large fortunes out of lumber many years ago, is no argument for opposing a duty to-day. One might just as reasonably argue in favor of increasing the royalty upon the product of a silver mine after the rich veins had petered out, and the mine owners were thinking of shutting down. It would not be any more unjust indeed, if the Government were to decide to increase the postage upon newspapers when pulpwood was growing scarce and the cost of producing a paper was on the increase.

In spite of all that interested representatives of the farming sections of the country may say, there is an imperative necessity to-day for a duty upon lumber entering Canada, if, it is not soon imposed there will be a serious diminution in the value of the lumber industry to the country, and a substantial decrease in the buying power of many of the markets of Canada which depend upon the lumber industry for their prosperity.

Everything Depends Upon the Point of View

The point of view always makes a great difference in the impression one gets of current events. For example, it is worth while considering the different conception of J J. Hill, the well known railway magnate, a former Canadian who has made his fortune in the United States and Mr. Angus president of the Bank of Montreal. A few days ago Mr. Hill placed himself on record in the press of the United States as believing that hard times were close ahead of the people of the United States. His reason is that he thinks the American people have been living too extravagantly and that the logical result will be financial depression. The American people "spend too freely," he says, "and are greatly inclined to take a rosy view of things entirely unwarranted by circumstances." So much faith had the financial world of the United States in Mr. Hill's prediction th..t the stock markets exhibited a nervous tendency the day after he gave this expression of his views.

The other side of the story was told by Mr. Angus in his address at the annual meeting of the Bank of Montreal. Mr. Angus could see little but prosperity ahead of Canada for some years to come, if the people of Canada acted in their customary conservative manner in the matter of expenditures. Possibly there is reason for the wide divergence of views of these two prominent financiers in the difference of the temperaments of the people of the two countries. That the people of Canada, in general, are very much of the same opinion as Mr. Angus regarding the outlook in this country is borne out by the confidence which the investing public are exhibiting in Canadian securities.

Canada's prosperity is based on its increasing commerce. The following figures tell the story pretty clearly. For the first six months of the current fiscal year, the imports, exports and total trade all show large increases over the corresponding period of 1909, while in comparison with the same period of 1907, which heretofore held all trade records, imports show an increase of nearly 15%, and the total trade an increase of over 8%. Comparing the latest twelve months' period with the corresponding period of 1907, imports show an increase of 14 per cent., exports an increase of 12 per cent., and total trade an increase of 13 per cent. In all respects the twelve months ended September, 1910, was the greatest twelve months' period in the history of Canadian trade. A most satisfactory feature of the export trade is that the class of manufactured goods shows the largest and most continuous increase during any of the periods compared.

Twelve Months Pulp Wood Trade of United States

Some interesting facts are included in the report upon the pulp wood trade of the United States for the fiscal year ending June 30 1910, which has just been published. The relative values of the imports of pulp wood, wood pulp, and printing paper are instructive. The imports of pulp wood from Canada amounted in value to $5,660,542, the quantity being 897,226 cords. Practically the total imports of pulp wood were from Canada as those from other countries added together only amounted to 99,669 cords. The imports of wood pulp also show that Canada is the greatest source of supply. Mechanical and chemical wood pulp were imported from Canada to the value of $4,224,500, while from other countries they were as follows: Germany, $2,769,288; Norway, $2,374,884; Sweden, $1,640,625. From Canada therefore the imports of wood pulp into the United States were almost double those of any other country. From Canada wood pulp imported by the United States was made up as follows: Mechanically ground; free $1,203,153, dutiable, $1,320,130; chemical, unbleached, $1,241,179; bleached, $460,038. The imports of printing paper, valued at not more than 2¼ cents per pound, during the same period amounted in value to $1,568,209.

It will be seen therefore that the imports of the raw material from Canada, amounted in value almost to the value of the imports of all the manufactured products made from pulp wood. This may be a satisfactory enough state of affairs from the United States' point of view, but Canadians must naturally wonder why raw material for paper making is allowed to go out of the country to provide employment for foreign workmen. This raw material, if kept in Canada, would either increase enormously in value if not cut, or it would give employment to thousands of Canadians and help to build up a large paper-making industry in Canada. That the paper market of the United States and

Canada provide a splendid prospect for business is well known. To secure an idea of the extent of the paper-making industry in the United States, the figures in this report should be studied. There were 253 pulp mills in operation in the United States during the whole or part of the year 1909, as against 251 in 1908. Apparently the mills which are in existence are sufficient to keep the trade well supplied. That there has been no important growth in the number of mills is due probably to a number of causes such as business depression throughout the country, and a general interference with the stability of the paper markets by the uncertainty which has recently prevailed regarding the tariffs on paper, pulp, pulp wood, etc. Sufficient is shown by the statistics, however, to convince Canadians that it would be a good thing if our pulp wood could be kept at home. The consumption of pulp wood in the 253 paper mills of the United States during 1909, amounted to 4,002,000 cords, valued at $34,478,000. In 1908 the consumption amounted to 3,347,000 cords valued at $28,360,000. Apparently, therefore although there were only about the same number of mills in each year, the output of each mill increased considerably. Canada could not hope to approach the output of paper that the mills of the United States produce. If such an ouput were secured there would be a serious depletion of our pulp wood resources. But there is every rason to feel, according to the deductions to be drawn from the figures given in this report, that the people of Canada are permitting their birth right to be batered for a mess of potage.

Of considerable interest to Canadians is the report showing the consumption of spruce and other woods by the paper mills of the United States. Since 1907, for instance, it is shown that the consumption of spruce, the best known and highest priced wood had decreased considerably. Spruce contributed 68.1% of the total in 1907, 64.5% in 1908, and 60.5% in 1909. There has been a slight decrease in the use of hemlock and corresponding increases have taken place in the use of woods formerly very little used in the manufacture of paper, such as balsam, white fir, and several of the hardwoods, including birch, beech, maple, gum and basswood. This increase is especially marked in the case of balsam, the quantity of this species consumed in 1909 being more than double that reported in 1908. The decrease in the use of spruce has been accompanied by a substantial increase in the cost of this wood. The average cost per cord of spruce in 1907 was $8.90, in 1908, $9.33, and in 1909, $9.96. The increased cost of pulp wood of all species is also a noticeable feature of the report. Although the consumption for 1909 only exceeded that of 1907 by less than 40,000 cords, the cost was over $2,000,000 more

Editorial Short Lengths for Busy Readers

The lumber trust hunters in the United States believe they are hot upon the trail of their quarry. According to a newspaper despatch. Federal secret service agents under the direction of United States Attorney-General George W. Wickersham, have obtained in Seattle and elsewhere in Western Washington positive evidence of the existence of a "lumber trust" or combination in restraint of trade. Federal prosecutions of a criminal character against the men and corporations which have been found to be members of the alleged unlawful combination is expected within the next sixty days. Indictments, if brought, will be obtained in the federal court in St. Paul. The federal inquisitors have definitely learned that of 809 lumber yards in South Dakota, 526 are lineal yards controlled by half a dozen men or firms with headsuarters in Minneapolis. The yards are said to have been operated by the lumber trust on a scale to absolutely ruin all competitors in that state and to fix prices on Washington lumber, which gives to the trust annually a profit of 25 per cent., or more than double the profit made by coast manufacturers.

The protection of the forest resources of the country is becoming more and more of a science every day. The costly lessons of the past few summers have done more than all the preaching of those who are alive to the urgency for protection, could have done in many years. Among the leading advocates of the careful protection of the forests from fire, none have done more to put their ideas into practice than the River Ouelle Pulp and Lumber Comany, in Kamouraska county, Quebec. The man who is responsible for the up-to-date policy of the company in this regard is Mr. William Power, ex-M.P., whose latest idea is one which on the company's limits along the line of the National Transcontinental Railway, 52 miles of telephone lines which form a circular chain of communication through the heart of the company's limits. The company's fire rangers will be able to keep in close touch with one another and with the headquarters, and there will be no longer be the delay which formerly followed the outbreak of a fire before the fire fighting force could reach the spot.

The study of forest fires has led to one conviction more than any other, namely, that if the fires can be discovered in time, it is a simple enough matter to prevent serious conflagrations. Without the use of the telephone it is frequently impossible to check a fire, as the man who should be doing this work is obliged to take the lesser risk of going for assistance, and by the time he returns with a force of fighters, the fire has sometimes gained such headway as to make its extinguishing a much more difficult matter than if one man could have been fighting it from the first, while the others, summoned by telephone were hurrying to the scene. With the use of the telephone this will be possible. There is good reason in fact to believe that on private limits the telephone will prove to be the most effective means yet employed for the prevention of forest fires.

An interesting letter upon the pulpwood situation in Quebec is published elsewhere in this issue. The author is Mr. O. E. Elsemore of Toronto, a man who has spent his life in the woods of Canada and the United States as a lumber estimator and who is conversant with actual conditions in many parts of the country, as probably few others are. Mr. Elsemore has given the pulpwood situation in the Province of Quebec a careful study for many years and is in a position to speak upon it as an expert. It is interesting to Canadians therefore that he takes it upon himself to refute the reports which have been issued from Quebec of late by United States Consul Willrich, who has been doing his best to make the people of the United States believe that they can look forward to an unlimited and inexhaustible supply of pulpwood from Quebec. The reason of Mr. Willrich's activity is that there is good reason to fear that the people of the United States will not be able to secure Quebec pulpwood in large quantities for their paper mills, in the future. Since the passage of the Quebec Act making it illegal to export pulpwood cut from Crown lands in that province, the United States Consul at Quebec has written two reports to his government and has sought to convey the impression that on account of the large amount of land held by the settlers, homesteaders and the seigniors, it will be possible to export pulpwood from the province for many years to come.

The people of the United States are welcome to any comfort they can obtain from Mr. Willrich's report. If they will send men who understand the matter into Quebec however, they will come to the conclusion that the Government of the province were amply justified in their fear that the pulpwood resources were threatened with extinction, if the Americans were permitted to cut and export the wood to the mills in their own land. The great quantities of pulpwood which Mr. Willrich has imagined to be growing on the lands of the settlers, were there once upon a time; but as Mr. Elsemore aptly points out, potatoes, peas, onions, and other products are now to be found growing on the lands which once bore a dense growth of wood.

It is regretable that the United States Consul should be so zealous in his cause as to misrepresent conditions or to lend credence to stories which are not founded upon actual conditions. He has done no good to his fellow countrymen by these reports and to those who have placed any dependence upon them he will have given a dangerously incorrect idea of the state of affairs.

The Tariff Situation in Eastern Canada

How the Position is Viewed by Lumbermen in Maritime Provinces—Anomalies of the Present Condition Create Opposition on All Sides

The attitude of the lumbermen of Nova Scotia and New Brunswick upon the tariff question is an interesting one to the lumbermen in other parts of the country. The lumbermen of the Maritime provinces do not, of course, see, eye to eye, with those in the other parts of Canada, but as will be seen from the letters which are reproduced herewith, they are patriotic enough to take a broad-minded view of the situation, and to add their voices to the general demand for a duty upon rough lumber entering Canada. In publishing the following letters it is impossible for the Canada Lumberman to publish the names of the writers, as the majority of them furnished their views on the understanding that their names would not be used. The letters are, however, from large manufacturers or wholesalers who for a number of years have studied the situation closely and are well equipped to express their views. We feel confident that the views, therein expressed, are representative of these held by the industry in the Maritime Provinces in general and for this reason they will be read with much interest by lumber manufacturers in central and western Canada.

An Anomalous State of Affairs

The most interesting letter is one from a large firm of Nova Scotia manufacturers, who perhaps place the situation more successfully in a nut-shell than any of the other correspondents. They write as follows:

The anomaly in our tariff regulations which permits United States lumber to enter Canada free of duty, while the United States imposes a tax on our lumber is a condition we think which should not exist. It may have been in the early settlement of the West, that it was in the interests of that section to allow free import of American lumber, but we think the time has passed when such a condition should remain.

Speaking from a Maritime Province standpoint, we do not see that the abolition of lumber duties would materially affect the lumber industry. So far as the output in Nova Scotia is concerned, only a small percentage of it goes to the United States. They take our hemlock and lath. A better market than the United States offers, is readily found for our spruce and pine. This we think is true up to the present time. That the price of lumber must advance in the United States, we believe is generally admitted. The demand is increasing, the supply diminishing, and only one result can accrue, namely increased price. It would only be conceding to us what we have already granted the United States if they abolished the duty on lumber altogether. Our view is, that in the very near future they will be compelled to do this, on account of the decreased supply and increased consumption. The only real advantage which we can see, so far as the lumber industry is concerned would be in the matter of hemlock and lath. The United States affords the best market for these commodities we have yet been able to discover. The entire abolition of the duty would doubtless yield a somewhat better return to the shipper than is now received, although it might result only in a lowering of the price in the United States market. This would be of advantage only to the people of the United States. From a Maritime Province standpoint, therefore, we consider that whatever action the United States take is of little moment to us.

Viewing reciprocity in its wider aspect, there would be, and doubtless are, a number of articles upon which the duty might be so adjusted as to mutually benefit both countries. Unrestricted reciprocity we would regard as a calamity. A mutual exchange of certain natural products beneficial to both countries, and on the balance of the schedule, tariff for tariff, would we think cut the "Gordian knot."

Importance of United States Market

The attitude of the New Brunswick manufacturers is, perhaps best illustrated by a letter received from a St. John firm. The importance of cultivating the United States market is especially brought out in this letter, as it is shown that in the markets of Great Britain, Canadian woods will have a continually increasing competitor in the products of Russia. This writter also outlines the pulp-wood situation, making a plea for the protection of Canadian pulp-wood resources and for the establishment of pulp and paper mills in Canada. This correspondent writes as follows:

Our rough lumber has been subject to a duty of $2.00 per M. for some years past, which duty was reduced to $1.25 within the last year. Away back in the eighties our lumber was admited free to the United States, for, I think a period of two years. Unfortunately at that time the United States markets were in a deplorable condition, and even with a free market, we did not net as much from our shipments as we did two years afterwards when we paid the duty of $2.00 per M.

The natural market for our New Brunswick spruce should be in the United States, as they are right to the south of us, and transportation can be done at very reasonable rates both by rail and water. Our own business has largely been confined to the exporting of lumber to the United Kingdom, but, owing to the increased cost of production of the N. B. logs, and the competition of the cheap Russian woods, our U. K. market has not been as good for us during the last year or so, as in former years. This Russian wood, in the future, I would say will be a very strong competitor and there is a possibility that in the course of a very short time, we shall not be able to produce spruce suitable for the U. K. market cheap enough to compete with the Rigas and leave us any margin. This last year, even with a free market, probably the United States would not have been of very much use to us, but when conditions in that market become normal again, we look for a return of good business, in which case, with a free market, we would expect we could market large quantities of our manufactured spruce there at remunerative prices.

The United States pulp industry has, during the past few years taken up large areas of New Brunswick land, chiefly owned by the Crown, which land is subject to an annual rental of $8 per square mile, and $1.25 per M. stumpage. These leases expire at the end of eight years, and what disposition our local Government will make of the ground at the end of that time, it is difficult to say. Some of these pulp concerns are very large holders of Crown lands. The logs are cut, driven down to the sea board, where the stuff is cut up and rossed, and the raw wood is shipped to the United States. This only gives our New Brunswick people the labor of cutting and rossing, whereas if the pulp and paper mills were established in this province, there would be an additional amount of expenditure for labor, which would be a large amount.

All mills manufacturing spruce deals here, of course, manufacture laths, the quantity of laths being about 65% of the quantity of lumber. There has been a reduction during the last year of five cents per 1,000 on the duty on laths going to the United States, which to-day is about the only market we have for these laths. If we had a free market we would hope to benefit to the extent of the duty, although perhaps not for a year or so after the duty was removed.

Another very important branch of the lumber business here, is the cedar shingle trade. Outside of the local market, the United States is the only outlet for shingles. Last year the United States Government increased the rate of duty from 30c. to 50c. per 1,000, and in addition to the increase in duty, the United States market declined from 20c. to 30c. per 1,000, which made very unprofitable business for the shingle manufacturers.

The Pike Law Abrogation

Another aspect of the case, viz., that involved in the projected abolition of the Pike Law, is dealt with in a letter from a New Brunswick manufacturer in the following manner

The United States lumber tariff is of considerable importance to the lumbermen of New Brunswick situated as they are with American lumber lands drained by the St. John river. What is called the Pike Law, whereby American citizens have the right to cut logs in the State of Maine, manufacture them in the Province of New Brunswick and ship into the United States market, free of duty, has been a great incentive to the lumber business on the St. John river. This law will be repealed on the 1st of August next. Conditions here at the present time are most unsettled. The amount of logs being cut in the State of Maine, to be manufactured in St. John next summer, is far below the average, and unless lumber is put on the free list by the United States the quantity will be even smaller in the years to come.

The duty on shingles at the present time, into the United States is 50c. per thousand, having been raised from 30c. two years ago. This has been most detrimental to the shingle business in Eastern Canada. Before this extra 20c. was put on, we were able to keep western shingles out of what is usually called the "Boston Market," but since the duty has been raised to 50c. we have the western shingles to compete with, and at the present time shingles are lower than they have ever been in the history of the trade, without any prospects of a revival of the business.

The removal of the duty on lumber by the United States would be a boon to New Brunswick and the St. John river district, and we are not without hope that this will occur within the next two years.

Lumbermen Should be more Conservative

The reciprocity aspect of the case is interestingly dealt with by a Quebec manufacturer who, however, turns aside somewhat and takes up the question of over-production, dealing with it in an entertaining manner. He writes as follows:

Reciprocity would be all right for Canada, and if the Americans don't want it a Canadian tariff equal to theirs should be put on all lumber similar to that which we can produce here. They have over-producing spells over there (just as the big mills do here), and then they dump the inferior grades on us.

The lumberman who has confidence in his business to keep right along, furnishing work the year round to enough help, not too much, will find sales during the year for all he can supply. If not, he should wait till next year, and in the meantime improve his plant, build roads, drain swamps, clear the best land for farming and never turn off a good man because he is getting old. The old hand needs no waiting on, like the young fellows who have been out working for some of the big stock companys, where one man holds the reins, one hitches the chain and a third leans on a can't dog, watching them.

By the way, I have had some money invested during the past 5 years in two of these lumber concerns whose prospectuses said they were going to pay 40% without doubt. Not a cent dividend have I received yet, for the very reason that the high salaried managers, etc., don't want their salaries to stop, so they keep destroying forest, and the stockholders loose their money. I might say in justice to Canadians that those concerns are not in Canada. Let us profit by the mistakes the Americans have made and are making just now, and not over-produce or be in too much of a hurry to cut every tree in sight, for what looks more beautiful than a well kept forest, and what better legacy can we leave for those who follow.

It does me good to read the letters from E. A. Watts, of Wattsburg, B.C., in the Canada Lumberman.

One of the most prominent New Brunswick manufacturers takes a strong stand in opposition to anything in the form of reciprocity. There is a great deal to be said for the argument which he makes, that from

now on the people of the United States will be far more anxious to cultivate the Canadian markets that vice versa. He writes as follows:

As far as we are personally concerned we do not want to make any concession to the United States that would prejudice our position as far as our raw materials are concerned.

We think the time for reciprocity, as far as our part of the country is concerned, is past, and since we have been able to get along upon a tariff basis to this date we are now in a position to continue the situation, especially as we hold the raw materials necessary for their pulp and paper business. When we could have benefited by reciprocity they would not talk. Now that they are willing, and even anxious, we should take the position that the time for any such arrangement has passed.

I believe from now on they will want our market more than we will want theirs as their country's growth will be slow while ours will have the rapidity theirs had in the last one. hundred years.

A Few Other Opinions of Lumbermen

A number of other letters dealing with the subject are also reproduced herewith and will, no doubt, be read with much interest.

A Nova Scotia manufacturer says:—"Our idea is, that the effect of abolishing the duty on lumber entering the United States from the Maritime Provinces would be beneficial, to us, as far as hemlock and laths are concerned, but that for spruce and pine, it will not make any difference, as there are better markets, for us, elsewhere than in the United States for these woods.

A large Nova Scotia exporter writes as follows:—Unless there is a special cut made for the American market, the normal export from Nova Scotia would be about 10% of the crop. If the duty is taken off in the United States and our lumber goes in free, it is a question in my mind whether we would gain an advance in value equal to the present duty. It would probably be divided and we might benefit to the extent of 50 to 75c. per thousand.

As to American lumber coming in to Canada free of duty, we are, I believe, importing in Nova Scotia by one firm over 20,000,000 feet of American lumber mostly unobtainable here. Such importation is necessary for bridge work and for car building. More will be wanted in the future than at present.

The chief gain to us if duties were taken off in the States would be on hemlock lumber. In spruce we can do better elsewhere, and in pine our output is limited and the demand strong enough to offset the duty.

The greatest detriment to my mind in Nova Scotia's lumber trade with the United States is that we cannot put our lumber on the market there in carload lots direct from our factories, or saw mills. Water carriage comes in, and at equal prices it will usually be found more convenient, economical and profitable to ship large cargoes abroad, under present established business conditions, than to seek a market in the United States.

A large firm of Nova Scotia Manufacturers says:—It would be a good thing for the Nova Scotia lumbermen to have the lumber going into the United States free of duty. We have already felt the benefit of having the tariff reduced to half, and it would still give us a better chance to have the duty removed altogether.

In reference to pulp, you are already aware of the fact that this is now being shipped to the United States free of duty, and of course the present situation is very valuable for the New Brunswick and Nova Scotia pulp manufacturers. On the other hand, we allow free export of our raw material in the shape of logs and pulpwood. This we think should be restricted, providing we could enforce the Americans to withdraw their proviso under this present new tariff, to the effect that if any country imposes an export duty on raw material, they will put into force their maximum tariff on finished products. In other words, what we want is to encourage the manufacture of lumber, pulp and paper in our own Provinces, as this means so much to all concerned, and to keep our logs and raw material for this use.

A Halifax firm of Manufacturers writes as follows:—Any reduction in the tariff on lumber from Nova Scotia entering the United States cannot but be beneficial to the interests of the lumbermen of this province. Within the past five years a large increase has taken place in the manufacture of hemlock lumber in this province for which the United States affords practically the only market, the English market taking only a small quantity of this kind of wood in the form of deals. This hemlock, entering the United States, comes into competition with hemlock from Pennsylvania and the cheap pine lumber from the Southern States, and this competition has tended to keep down the prices of hemlock from Nova Scotia, but the removal of the duty of $1.25 per M ft. on rough and $1.75 on planed lumber, we think would place the Eastern Canadian lumbermen in a much better position to meet the competition from Pennsylvania and the Southern States.

With regard to spruce and pine lumber the same reasons do not obtain, as most of the spruce and pine cut in the province is shipped to Great Britain, South America and the West Indies. A considerable quantity however, goes to the United States, but we are not so dependent upon the United States for a market for our spruce and pine as we are for hemlock.

The Miramichi Pulp & Paper Company's mill, at Chatham, N. B., closed down until further notice. As the mill usually gives employment to some 250 men with a pay roll of something like $3,500 a fortnight, the sudden stoparge of work will be a very serious matter, not only to the men themselves, but to the trade of the town generally. Hitherto the mill had usuall continued in operation during the winter months, and had been about the only industry to give employment to the hands the year round. Mr. Spaulding, the manager, had nothing to announce as to whether the mill would start again at an early date.

Charles Ashby & Son, Chas Corners, Ont., report that they have cut over 1,100,000 feet of lumber besides a quantity of ties and lath for the J. Thompson Lumber Company.

During the year 1909 Manchester imported hewn timber to the value of $1,037,910; and sawn timber to the value of $5,350,064.

Why a Duty on Lumber is Needed

Great Quantity of Southern Pine imported into Ontario—Competes with Canadian Lumber throughout the Province

Editor Canada Lumberman.

General Handcock when he was a candidate for President of the United States, said, "The tariff is a local question," which remark was ridiculed by the Republican opposition at the time, but the thinking people of to-day have observed the wisdom and truth of that speech and it is no more a fact in the States, than it is right here in Canada now.

The lumber trade has been and still is the predominating busines of Ontario, if not of all Canada. And while there are few "infant industries that need protection, the " adult lumber industries," should demand that a duty be imposed upon lumber now being imported into Canada from the South, say, $2.00 per thousand feet or even equal in amount to that levied by the United States Government on lumber imported to the States from Canada, viz., $1.25 a thousand feet.

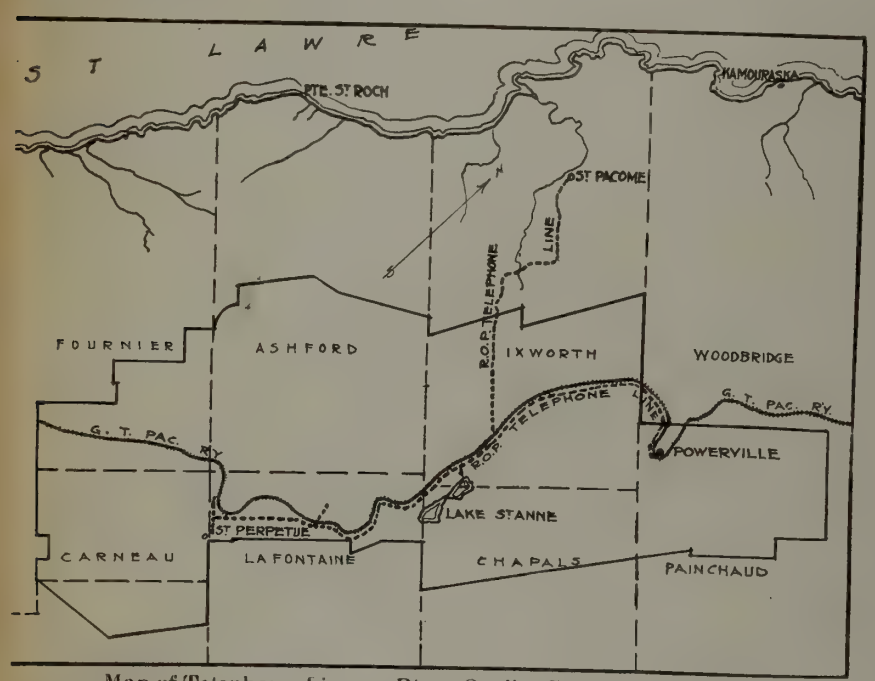
I do not think it any exaggeration to state that about one-half the lumber, handled through Toronto is imported, free of duty of course. I have seen several carloads of lumber from the Southern States in transit three hundred miles north of Toronto, and "Georgia Pine," being used at Haileybury and New Liskeard, and also as far west as Webwood in the Algoma district, the heart of the lumber producing territory of Ontario. This would seem competition of which lumbermen might have just cause to complain to the Dominion Government and demand a tariff on lumber coming into Canada.

But there is another part of Canada where the settlers have been securing their building material cheaper by importing it from the States. And many cases can be cited where the Canadian settlers are almost wholly dependent upon imported lumber from Minnesota, North Dakota, and Washington, States bordering on Manitoba, Saskatchewan and Alberta, where there is not sufficient lumber produced on the Canadian side of the border to supply the demand at the present time. If Ontario could have the "Provincial right" to impose a tariff on lumber coming into Ontario, it would afford protection to lumber producers that they would seem justly entitled to, although it might be called "class legislation" I suppose.

If the Dominion authorities should put a prohibitory duty on lumber coming into Canada, it might please the lumbermen of Ontario but displease the farmers of the Western provinces, thus proving it a "local question." Moreover, it is no secret that the hardwood timber as well as the pine is becoming very scarce in this country. Nearly all big hardwood manufactories depend largely upon stock imported from the States of Kentucky, Virginia, Arkansas, and other parts. If a duty should be imposed on this raw material it might work a hardship to these home industries, of which we are justly proud, and raise this "local" question in Ontario.

However, it is the agitation of such questions that make the most trouble, and the less we have of that the better, on both sides. It is always best to "let well enough alone," until we are "dead sure" of an improvement, before suggesting a change.—O. E. Elsemore.

The Canadian Trade and Commerce reports recently contained the following regarding the wood trade in Norway:—"The market for wood goods is quiet, at all events as far as the sale of floorings from Norway is concerned. The Norwegian floorings mills are, however, in a much stronger position than last year at this time, for during this summer and autumn they have disposed of considerable quantities of goods to the Colonies at much higher prices than English buyers were willing to pay and they have thereby greatly reduced the stock available for spring shipment. Moreover, although the Colonies do not appear to be in the market just now, or, may be, they are making purchases in Sweden their requirements have not yet been satisfied, and the market for floorings will therefore open for next year under favorable conditions from sellers' point of view. When all has been thus placed to the credit of the actual situation, it seems, that the millowners are reckless when paying a considerable advance for their log supply of the comming winter, compared with the prices of last year. This is, of course, not quite so unreasonable, as when the pulp makers have paid a large advance in spite of the wretched condition of their markets, but it tends, nevertheless, to force the felling of trees, which ought to have been restricted in order to give firmness to the market for the various manufactured articles, into which logs enter as the raw material.



Quebracho wood from the River Plate region is being more largely used by American makers of tanning materials, the imports during the first eight months of 1910 amounting to $928,531, against $490,51 worth in the 1909 period and $199,467 in the 1908 period.

Protection of Forests by Telephone

Line and Instruments Installed on Quebec Limits—Effectiveness of Fire Ranging System Greatly Increased.

In view of the many suggestions now offered and experiments tried for the protection of forests from fire, considerable interest is manifested by limit holders and others interested in the consideration of natural resources in the system introduced by Mr. William Power, ex-M.P., upon the timber limits of the River Ouelle Pulp and Lumber Company along the line of the National Transcontinental Railway in Kamouraska county, Que., near the United States boundary. Fifty-two miles of telephone line have been strung, forming a circular chain of communication through the heart of the limits. Telephones have been installed for the use of the fire rangers at five different points along this line, and portable telephones to be adjusted to the line at any point, are to be supplied to the rangers and carried with them in the woods, if suitable instruments can be procured, and if not ordinary wall telephones are to be installed every two miles along the National Transcontinental Railway, where it passes through the limits.

Hitherto, when a fire started in the forest, the ranger finding it has had to hurry to headquarters or the nearest parish to summon help, instead of being able to work at extinguishing it while assistance is coming, and fully a day or more has thus often been lost while the fire continued to spread. Now a ranger can notify headquarters in a minute,

Map of Telephone Line on River Ouelle, Company's Limits.

r even less, and have the other rangers called out to his assistance, a ery few hours at most sufficing to bring them to the scene, accompanied y a cook and camp equipment, if the fire is a serious one. It is expected hat the system will be adopted shortly by many other limit holders, and nd possibly also by the Government for the safety of the most valuable f the remaining Crown timber lands, especially where they are traversed y railways.

Over two years ago the first experiments along this line were made n the River Ouelle Company's limits by Mr. Power, when he built a ten ile line east from Ste. Perpetus village, where it connects with the amouraska Telephone Company's wire. It rendered such valuable serice to the cause of forest protection that it was recently decided to ake a general application of the system throughout the limits, and durng the recent summer the line has been extended by building a line from he office in St. Pacome, crossing the River Ouelle into the sixth range of he parish of St. Onesime, whence it follows the Ste. Anne colonization oad to the National Transcontinental Railway, a distance of approxiately seventeen miles, and then following the railway right-of-way to ake Ste. Anne camp, where two guardians are kept during the summer eason. From thence the line continues west for nine miles, connecting ith the original installation at St. Perpetue. From the Ste. Anne road ne line also runs east, following the railway right-of-way for over fourteen miles to the company's mill at Powerville.

Forestry Convention Attracting Much Interest

As short a time ago as the year 1900 the subject of scientific forest rotection was practically unknown in Canada, but events have moved o rapidly that the announcement that Sir Wilfrid Laurier has issued a all for a Dominion Forestry Convention to meet under the auspices of ne Canadian Forestry Association in the City of Quebec, Jan. 18,19, 1911, has resulted in such an amount of interest being aroused that it is now practically assured that a great working convention will be the result.

As the result of previous conventions and the works of the Canadian Forestry Association, Fish and Game Associations and similar organizations the public mind has been considerably aroused on the question of conservation and the aim of this Convention will be to point out practical ways in which this aroused and enlightened public opinion can work to save Canada's forests and all that depend upon them.

Upon the maintenance of forests on the non-arable lands about the headwaters of our streams depend the evenness of flow, the water-powers and the navigation capacities of our rivers. Hence arises the importance of the forests to the manufacturer for his power and to to the shipper who uses the waters of rivers and canals for the transportation of freight. Agriculture is badly affected by too close cutting, and much more by the ruthless destruction of our forests.

The railways need ties and lumber, the mines the props without which mining cannot be carried on. Cities need power and good water. People need hunting and recreation grounds and health resorts.

The tourist travel to a well-forested back-country will be an immense trade, bringing millions into Canada when properly developed. These are apart from the first use of the forest—that of providing fuel, logs for the sawmills and the raw material for furniture factories, wagon factories, handle factories and a hundred other industries.

The Commission of Conservation, of which Hon. Clifford Sifton is Chairman, will meet in the City of Quebec the same week, so that there will be a gathering of experts and administrators to give the statistics and the technical side, while the Forestry Convention will translate these into practical work and show what the people and the governments of Canada should do to save and develop the great asset this country has in her forests.

The names connected with this convention show how the conservation idea is gripping Canadians. His Excellency Earl Grey is Patron of the Canadian Forestry Association, Sir Wilfrid Laurier is Honorary President, Senator W. C. Edwards, one of Canada's foremost lumbermen, is President, and Mr. Geo. Y. Chown, of Queen's University, Vice-President. The Ministers of Crown Lands in the different provinces are territorial Vice-Presidents, as is also the Archbishop of Montreal. Mr. R. L. Borden, M.P., is also one of the directors.

On this board from the province of Quebec are Hon. Sydney Fisher and Messrs. William Little, E. G. Joly de Lotbiniere, E. Stewart, H. M. Price, Ellwood Wilson, G. C. Piché, Alex. MacLaurin and Carl Riordon. Ontario is represented by Messrs. Aubrey White, Deputy Minister of Crown Lands; Hiram Robinson, Thomas Southworth, J. B. Miller, Hon. W. A. Charlton, Gordon C. Edwards and Dr. B. E. Fernow. Mr. Campbell, Dominion Superintendent of Forestry, is a director, as also Mr. W. B. Snowball of New Brunswick, Mr. F. C. Whitman of Nova Scotia, and Mr. A. P. Stevenson of Manitoba. The secretary is Mr. James Lawler, Canadian Building, Ottawa.

The Premier of Quebec, Sir Lomer Gouin, and the members of his cabinet are taking the greatest interest in this convention.

Hon. Jules Allard, the Minister of Lands and Forests, is personally looking after the details in conjunction with a committee of the Association in the City of Quebec. The railways have granted special rates, and altogether the meeting promises to be one of the most important of its kind ever held in Canada.

Ontario wholesalers are not very well pleased with the quality of the shingles they have been receiving from British Columbia of late. There has been a great deal of complaint in fact, for well on to a couple of years past. A wholesale dealer in Toronto recently referred to the situation in a conversation with the Canada Lumberman. "The British Columbia lumbermen," he said, "although they represent their shingles as being made 6 butts to 2 inches are now cutting them so much below that standard that they will not pass on the market here. One car which we received recently weighed 126 pounds to the thousand and ran 7 butts to 2 inches. Shingles when properly put up should weigh 160 pounds to the thousand. The difference in the weight on this car was therefore 34 pounds to the thousand, which, on a freight rate of 75 cents, makes a saving to the manufacturer of 25½ cents on a thopsand shingles. For the sake of saving this amount in the freight, the manufacturers have reduced the value of their shingles, but they have seriously injured the reputation of British Columbia shingles in eastern Canada. This has been brought about gradually, having been commenced two or three years ago and having been made general since the competition became so keen a year and a half ago, when the United States markets were cut off on account of the increase of the duty from 30 to 50 cents per thousand."

The Alex. Gibson Railway Manufacturing Company, announce that they will have their usual lumber cut in New Brunswick this winter, about 27,000,000 feet.

VIEW AND INTERVIEW

Various Opinions on Lumber Affairs

Western Shingles in the East

Hon. Charles E. Oak, who is in charge of the lumbering operations of the New Brunswick Railway Company reports that the tendency this season will be rather to curtail than extend lumber operations, and this policy will be much more marked in the United States than in Canada. Speaking of shingles he says:

"Conditions have been getting worse for several years, till during the last twelve or eighteen months matters have become decidedly bad. Many reasons have been given. One reason is that shingles manufactured cheaply on the Pacific Coast are being sent east, but what seems more probable to me is the advent of patent roofing, and if the latter reason is true that the present prospects are not very flattering. If the cause is the receipt of shingles from the Pacific, it cannot be otherwise than that they are sending shingles to the market and selling them without profit for the purpose of getting hold of this market."

Curtailment Advisable in Quebec

Mr. A. C. Dutton, of Springfield, Mass., General Manager of John Fenderson and Co., Inc., Sayabec, P.Q., was in Toronto recently and paid a visit to the Canada Lumberman. Speaking of the eastern markets for lumber, Mr. Dutton expressed a rather unfavorable opinion regarding the outlook. He believes that there will be much more cedar cut this winter in the east than there should be. The Fenderson company however, will make only about 50 to 55 per cent. of a normal cut. Mr. Dutton estimates that there will be, throughout the east, about 80 or 90 per cent. of the usual cut, whereas the conditions exising, will not warrant more than 50 per cent.

In a discussion of the competition of United States lumber in the markets of Canada, Mr. Dutton said that the Canadian lumber manufacturer was in a very dangerous position at present. With protection on dressed lumber only, he was finding it difficult to make ends meet. In fact, unless there was considerable improvement in the demand for lumber in the near future, he believed that there would be trouble ahead. In the face of this state of affairs it was incredible that some people in Canada were suggesting that not only should there be no protection for rough lumber but that the duty at present in force upon dressed lumber should be either lowered or removed. Such a step would spell ruin to one of the most important industries in the Dominion. The situation would be simply a farce. If dressed lumber were admitted into Canada free, the manufacturers of the United States would bring in their yellow pine and manufacturers of Canada would have little left but to go out of business.

Russian Timber Competing with Canadian Spruce

A recent visitor in St. John, N. B., was Mr. T. L. C. Tatham, of London, Eng., representative of the firm of Churchill & Sim, of London and Liverpool, one of the largest timber brokers in the world. His visit was of much interest to local lumber operators and shipping men and, although he did not come on business, advantage was being taken of his presence in the city to discuss matters relative to the lumber trade between Canada and the motherland.

Speaking of the condition of the lumber trade in England, especially as it applies to Canada, Mr. Fatham, in a recent interview said: "The general position of the home spruce market is that prices have risen in Canada due to expenses in manufacturing and other such causes, more money is being put by English capitalists into the spruce forests of Russia and consequently a large product is being sent from Baltic ports to the British market. Year by year the amount is increasing and this naturally comes into competition with Canadian spruce. At times this effects the Canadian spruce shipment seriously, but not every year.

A Good Year in East Kootenay

Mr. A. Carney, of Kaslo, B. C., assistant timber inspector, who recently made a trip of inspection through the Kootenay country in B. C., reports that the East Kootenay lumber companies have experienced a far more satisfactory season than was expected and that the demand for products of the mills from the prairie provinces in the spring and summer will be very large was the statement made at the Strathcona last night by A. Carney, of Kaslo, assistant timber inspector and collector of government royalties.

"The people of Alberta and Saskatchewan," said Mr. Carney, "are feeling very optimistic regarding next year's crops owing to the large amount of moisture that has fallen on the land lately. They anticipate that the land as a result of the snow and rain that has fallen will be in first class condition for receiving the seed and that the crops will consequently be heavy. This optimistic feeling in the prairies reacts on the lumberman of British Columbia who knows that if the crops are heavy the demand for lumber will be proportionally so."

"The partial crop failure in the prairies last summer, did not affect the East Kootenay companies as greatly as was at one time feared. The business during the spring was abnormally heavy and a number of companies when they closed down for the winter months recently had not a stick of merchantable lumber in their yards. The Crow's Nest Pass Lumber Company for instance, had 20,000,000 feet at the beginning of the year, but since the late spring have been unable to fill orders. The Taylor Lumber Company's stock is depleted and the same may be said of the Standard Lumber Company. It is true, however, that some of the larger companies have considerable stock still on hand, but these should all be considerably lightened by the early part of the year."

B. C. Timber needs Publicity in England

"The timber of British Columbia is little known in the old country, and the market that should take a great proportion of the timber output of Canada is controlled by the United States and other countries." This is the condition of things in England and Scotland, as found by Mr. James Mullis, who has returned from a visit to his old home in Glasgow. Mr. Mullis is a farmer from Terra Nova, on Lulu Island, B. C.

Mr. Mullis stated that while the displays representing British Columbia in the various parts of the country were well provided with samples of grain and fruit, the samples of logs and lumber were small and of poor quality. Even in the office of Mr. Turner, agent-general of British Columbia, in London, where the best showing was made, the timber exhibit was not as good as it might be. He saw contractors using B. C. lumber full of knots, which they said was all they could obtain from this province. Their better class of fir was brought from the States and Norway. Mr. Mullis informed several of them that the timber they had learnt to believe was a fair sample of what was grown in B. C., would be used for firewood in B. C., and that the best timber in the world had its home in that province.

Mr. Mullis has now brought the matter to the attention of the publicity commissioner at Vancouver, and the latter will take steps to endeavor to acquaint the old country timber buyers with the class of timber grown in B. C., with a view to widening the market. He has already prepared an illustrated article on the subject for an English paper

---

Transit Shipment to be Stopped

"Announcement was made at Seattle recently, that commencing December 24, the transcontinental railroads will abolish transit shipment privileges on all forest products west of the Missouri river. After that date diversions will not be permitted excepts to points east of Missouri river. The new ruling was brought about as a result of pressure brought to bear by the Pacific Coast Lumber Shippers' Association. If the new regulations work well steps will be taken to force the lines east of Missouri river to co-operate with the transcontinental lines in abolishing transits as far east as Chicago."

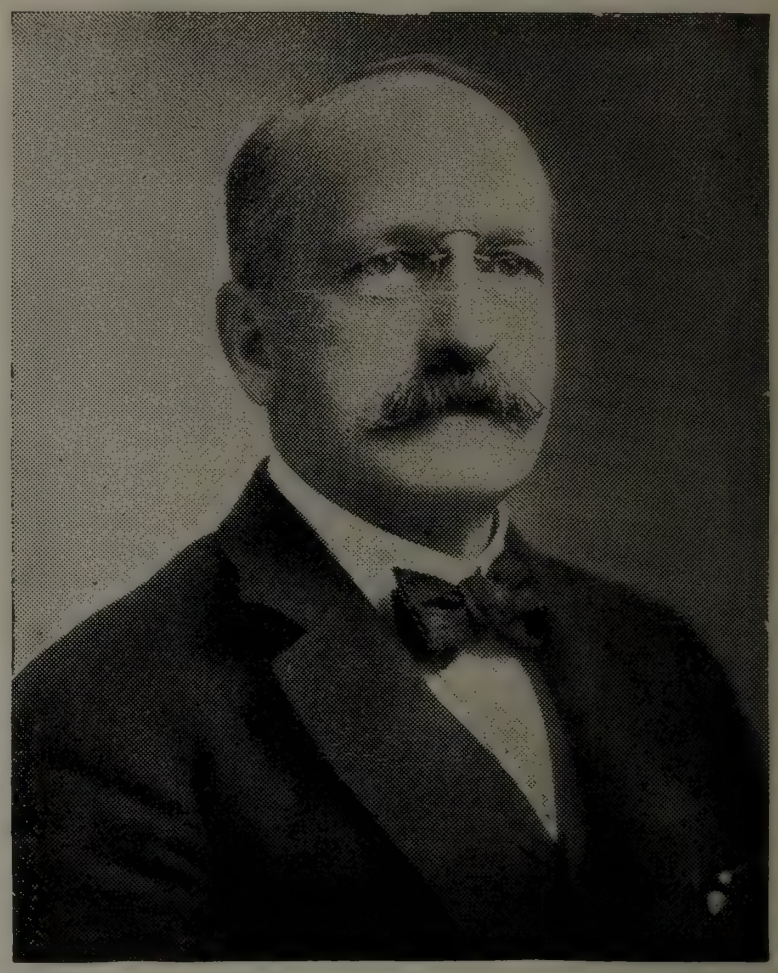
The Canadian Trade and Commerce reports in a recent issue dealt with the trade in carriage wood stock in Australia and New Zealand, as follows:—The demand for carriage wood stock is active and, while some United States makers have reduced their discounts, Canadian brands have secured a fair portion of the orders sent from Brisbane Sydney and Melboune. Indents for general lines of United States and Canadian goods are being freely taken by manufacturers' agents and commission houses. Complaints have been received of the slow delivery of special lines of furniture from some Canadian furniture factories, thus interfering with importers trade and obviating repeat orders. Wholesale distributors are now enjoying exceptional activity and the business outlook throughout Australia has rarely been so favorable as at the present time.

From time to time the lumber dealers are flooded with quotations by some company that wants to move a special stock or something with which they are overloaded. In order to do this, special prices are quoted which do incalculable wrong. Recently a firm of wholesalers on the Missouri river sent out such a circular. It specified many thousand pieces of dimension and quoted at prices perhaps twenty to twenty-five per cent. below the market. The price was not only cut, but in addition the circular stated that there should be no extra charge for long orders. The prices quoted are below what wholesalers are willing to pay for such stock. A letter was addressed to the wholesalers, asking why they sent out such a circular. In reply, they said: "We believe the West Coast market is stronger and will continue to improve; at least we hope so. As to our quotations, they were made on some surplus stock that it was found necessary to move in order to realize on same, and we did not ourselves consider the quotations made a criterion of the market."

Nevertheless, such quotations are always injurious, unsettle the market and cause uncertainty in the minds of buyers who do not always know the reasons for these special quotations.

One of Quebec's Flourishing Companies

Great Progress made by Fassett Lumber Company since Establishment five years ago—Splendid Equipment and Good Location of Plant



Office of the Fassett Lumber Co., Fassett, Que.

Many towns throughout the Dominion of Canada owe their existence to the lumber industry, and nowhere is this more forcibly shown than in the case of Fassett, Quebec. Situated on the Ottawa River, midway between Montreal and Ottawa, this town, possessing now a population of over 1,000, stands where five years ago only a solitary farm house was to be seen. About that time the Fassett Lumber Company, Limited, decided to locate their mills there.

Possibly nowhere in Eastern Canada could a better location be found for saw mill operations. The mill buildings are situated about a quarter of of a mile from the Ottawa River, and only fifteen miles distant from the company's 68,000 acres of timber limits, which are all situated on lands adjacent to the Ottawa Valley. Directly connected with these limits, is the Salmon River & Northern Railroad, a standard gauge railroad, owned and operated by the Fassett Lumber Company, Limited, which conveys the logs, direct from the woods to the mill pond. The railroad equipment consists of three Shay-geared Locomotives, one of fifty-five tons, one of sixty-five and one of seventy tons, besides one saddle tank switching engine of twenty-five tons, two Bernhardt steam loaders, forty-five logging cars, and twenty-six flat cars. By the use of this railroad and a hot pond 400 x 150 feet, adjacent to the mill, which is kept open during the winter months by means of exhaust steam from the mill, the company are in a position to carry on operations throughout the entire year. This is, as far as we are aware, the only mill operating continuously in eastern Canada.

The claim of the Fassett Lumber Company that they are in a position to turn out manufactured lumber cheaper than any other concern in Eastern Canada, is well backed up by an inspection of the mills, which contain the most modern machinery and labor-saving devices known to the lumbering trade.

The mill is equipped with two Clark Bros.' 8′ single bands complete with steel carriages and steam niggers; one Clark automatic overhead trimmer, to trim from six to twenty-four feet; one heavy double edger, and one over-head slab slasher, with five saws. Attached to the saw mill is a planing mill and shingle mill, fitted out with all the latest machinery.

J. Sloat Fassett, President

The engine room is equipped with a 450-h.p. Clark Engine which supplies the power for the saw mill, and a Westinghouse 600-volt generator, which supplies light for the mill, power for the planing and shingle mill, and light for the town.

One of the important features in connection with the mill, is the splendid fire-fighting equipment. One of the latest model fire pumps is located in the engine room, and is connected with the mill pond by a twelve-inch pipe. This pump has a capacity of 1,000 gallons per minute. On every floor, and at places within easy reach, are to be found coils of hose, and right through the lumber yard is installed a system of hydrants which can be turned on at a moment's notice.

Fassett Lumber Co., Office of the Manager Mr. J. R. Collins

Fassett Lumber Co., General Office

General View of Fassett Lumber Co.—Showing Mill, Log Pond and Burner

Plant of the Fassett Lumber Co.—where the Elevated Tramways Meet

The 350′ sorting and grading table, is equipped with live rollers, which run the full length of the table, and enable the operator to deposit the lumber on the particular trucks or cars, without any lifting whatever. As the manufactured lumber leaves the sorting table it is placed on the different trucks by the live rollers and transferred to the docks by means of a transfer table or car, and from there by rail to the lumber piles around the yard. No haulage is necessary by ordinary push-trucks, the yard being honey-combed with a system of rails and switches, both ground and over-head. The yard is fitted up with eight railroad docks and has a capacity of 15,000,000 feet which is constantly being enlarged.

Owing to the many labour-saving devices employed, only 75 men are necessary around the mill and yard, which is now turning out over 25,000,000 feet per year. Arrangements have been made for a cut of 30,000,000 feet this season, and on January 1st it is intended to commence to double tower which will place the company in the unique position of running day and night summer and winter.

The shipping facilities are excellent, switches being laid between each row of lumber piles for standard guage cars, by which lumber can be loaded in cars without any haulage. Shipment is made either by rail or water; by the former by means of a spur from the C.P.R., and by water over trackage direct to the dock on the river bank. It is a notable fact, that around the mill, the comapny have no need for horses, their perfect rail system doing all the work.

All kinds of pine, spruce. hemlock, and different kinds of hardwoods are manufactured, and the company specialize in long timber, cutting lengths up to 40 feet. With their railway system they can convey the timber to the mill at any time of year for special orders.

The Fassett Lumber Company's officers have long been connected with the lumber business. The President is Hon. J. Sloat Fassett, Vice-President, of the Second National Bank, Elmira, N.Y., who has long been successfully identified with lumbering interests in the United States. Mr. A. E. Edgecomb, Knoxville, Pa., is Vice-President, and Mr. Harry S. Thayer, Elmira, Secretary-Treasurer. The Manager of the business at Fassett is John R. Collins, a native of Pennsylvania, who has had a life long experience in the lumber business, in the United States, and as a result of whose successful management the success at Fassett has been obtained. He is ably assisted by Mr. S. J. Staniforth, also a practical lumberman, and Mr. Geo. M. James is the travelling salesman.

Mr. Hugh A. Rose, Toronto representative of the Canadian Western Lumber Company, has returned from a trip to Montreal and Quebec, and reports that he found business encouraging. Mr. Rose is making a special effort to interest eastern dealers in fir. He reports that, as a material for sash and doors, first and second clear fir is rapidly gaining favor, and that architects are commencing to specify it to take the place of plain oak. He recently sold the first car of clear fir in Toronto to John B. Smith & Sons, Ltd.

The following interesting despatch from Washington, D.C., recently appeared in the daily press:

Assistant Secretary of the Treasury James F. Curtis has incidentally, it would seem, uncovered a practice of the lumber trade which may be of interest to consumers. The facts in the case are not all clear, and the department is not drawing too hasty inference from those it has in hand. Nevertheless, if things are what they seem, the protective tariff can show more than one way to keep up prices.

The case concerns itself with a shipment of lumber from Canada which came in at Plattsbury, N.Y., sold and invoiced at 1¾-inch, but when it reached New York the measurements showed that it ranged from 1¾ to 2⅛ inches in thickness. One story is that some of the boards were 1¾ at one end and 2⅛ at the other. However that may be, the local practice at New York was followed, and the duty assessed on a measurement of two inches. The importers appealed, and the Board of General Appraisers decided that the duties should have been levied on a basis of 1¾ inches board measurement. Assistant Secretary Curtis, in view of what he regards as the importance of the case, has directed D. Frank Lloyd, Assistant Attorney-General at New York, to file an application for review of the case with the United States Court of Customs Appeals.

According to some of the Treasury experts on lumber, this case before it is finished will show whether the public is buying two-inch scantling when it orders it or getting only 1¾ inches. It seems that when lumber began to grow very scarce in Maine the thrifty Yankees, instead of raising prices too far, compromised with their consciences by cutting a quarter of an inch off their two-inch boards. They said nothing, but sawed wood. The New York market evidently has adjusted itself to the Pine Tree State skimping, but the Canadians have not. When they received an order to send down a shipment of two-inch boards, they cut it full measure or perhaps a little more; and when their product reached New York it was found to be out of tune with that coming up from Maine. The Treasury Department is a little confused over the difference in the Canadian and the New York practice, hence the appeal to the Customs Court.

Plans have been completed for a 200-ton paper mill at Grand Falls, N.B., by a company comprised of Jas. Robinson, of Millerton, N.B., and the Van Horne interests who control the Grand Falls Development Company. The company control 2,050 square miles of railway lands in New Brunswick.

The Modern Slack Barrel Cooper Shop

Essential Considerations in the Manufacture of Slack Barrels by Machinery—Lay Out and Operation of Machinery—Plan For a Model Plant

By E. F. Beugler.

The subject of manufacturing slack cooperage stock has been so thoroughly discussed in our trade journals as well as in Mr. Wagner's excelent work on that subject that it seems impossible to add anything of interest or value.

The manufacture of slack barrels by machinery is, however, quite another matter and which may prove of interest to those manufacturing cooperage stock who may contemplate engaging in the manufacture of finished barrels.

It has been suggested by a prominent cooperage stock manufacturer that if large machine cooper shops were established at important distributing points and the trade supplied within a shipping radius of, say fifty miles, the results would be much more satisfactory than the present method of making barrels by hand and in comparatively small quantities.

In discussing this matter we need not take up the question of handling the stock before it enters the shop, or of the storage of the finished barrels, since this varies with local conditions and does not affect the cost of operations within the shop . It is, of course, absolutely necessary that adequate receiving and shipping facilities, together with sufficient storage room for stock and finished barrels be provided and that labor-saving means be employed for the economical handling of the material.

While the machinery installed should be of the most modern and efficient type, the buildings themselves need not necessarily be new or of up-to-date factory construction. In fact fully 75 per cent. of the barrel factory plans or "layouts" made under my supervision have called for the conversion of old hand cooper shop buildings into modern machine plants.

A good floor strong enough to support the machinery and weatherproof sides and roof together with plenty of light are prime necessities, all of which can be had with comparatively little cost or trouble.

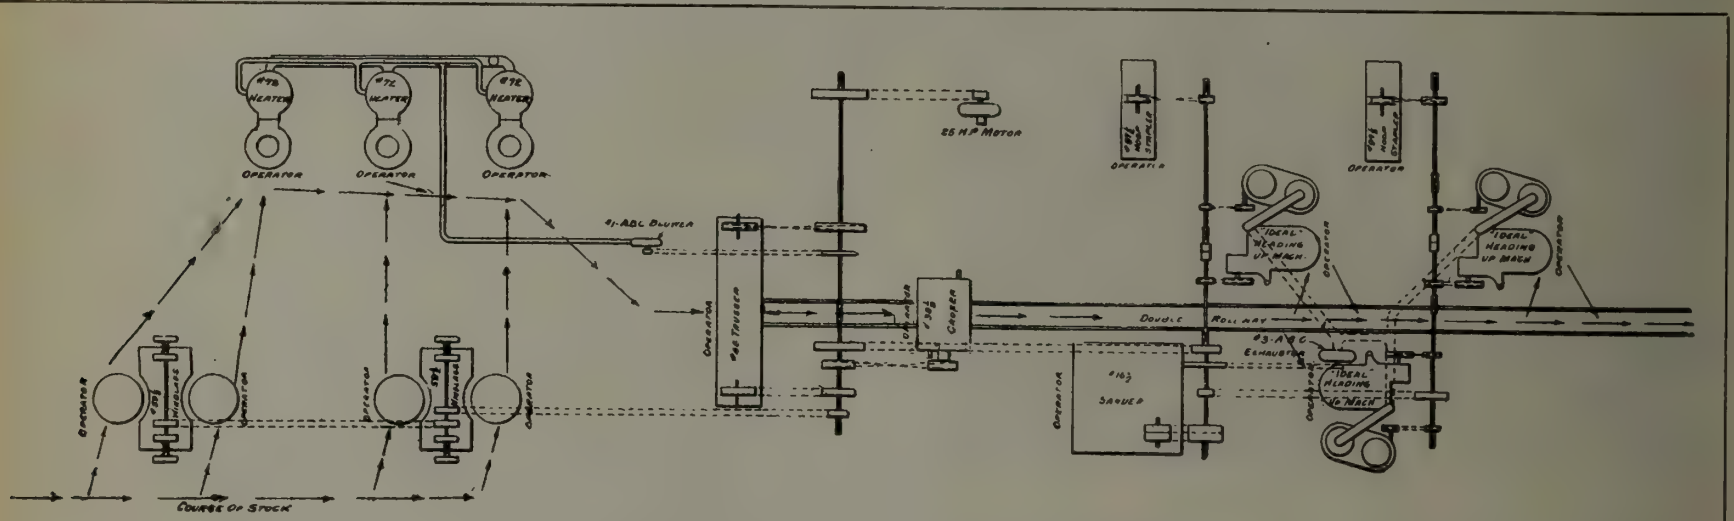
Electricity as a Power.

The question of power in these days of electricity is easily disposed of, since in the majority of cases electric motors can be cheaply installed and operated. While individual motors can be used if desired, it is better to group the machines when possible and use one motor for each group. Where single machines are placed at a considerable distance from the group a separate motor of sufficient size can be used.

Modern Cooper Shop.

I have here a blue print showing a floor plan or a layout of a machine cooper shop having a capacity of from 1,200 to 1,600 barrels per day, which will serve to show the kind and number of machines used and their relation to each other. Generally speaking, the stock should enter the factory at one end and the finished barrels pass out at the other, thus keeping the material moving in one direction.

This particular plan calls for a building 30 feet wide by 100 feet long, but these dimensions can be varied considerably without seriously affecting the efficiency of the plant. The capacity of this shop could easily be increased to 2,000 barrels per day by adding another barrel heater and an Ideal heading up machine, and if the barrels are to be polished, possibly another sander.



Should the factory have a daily capacity of from 300 to 500 barrels the No. 95 upright double end trusser can be substituted for the No. 48 trusser shown on the plan.

The upright machine occupies but little room and can be placed close to the crozer, thus enabling one to run both machines.

The two No. 59½ double setting up and windlassing machines could be replaced by one single machine of the same kind. Two of the heaters could be dispensed with and two of the ideal heading up machines and one of the hoop stapling machines left out, which would bring the factory down to the size desired.

The course of the stock through the factory is indicated on the plan by arrows, but should it be necessary to deliver the finished barrels at either side of the building cross skids or rollways could be placed back of the ideal heading up machines and the barrels rolled in either direction.

That portion of the rollway next to the heading up machines is double, the lower one being for shells and the upper one for finished barrels.

Plan for Model Cooper Shop—1500 Barrels Daily Capacity.

The heading should be delivered at the rear end of the heading feeders, which stand at the right of the ideal heading up and hooping off machines.

The wood hoops, after being sized and stapled, are to be taken where used; the bilge hoops going to the trusser and the head hoops to the heading up machines.

The head truss hoops, which are removed from the shell by the heading up machines, can be either wheeled back to the setting up and windlassing machines or preferably carried back by a combined hoop elevator and rollway, which, however, is not shown on the plan.

This rollway is carried overhead entirely out of the way of the operatives and is a very simple and easily constructed affair.

Operation of Barrel Machinery.

The first operation in the making of barrels by machinery consists of setting up the staves in a circular form atached to a windlassing machine. This form carries a fixed bilge hoop and a steel head truss hoop in which the staves are placed, and is mounted on ball bearings which permits it to move toward the machine, as the staves are drawn together into barrel form and the section head truss hoop put on. We now have a shell, which when taken from this machine has a head truss hoop on each end and is ready to be placed on the exposed platform of a barrel heater, provided with a turntable, which when rotated half a revolution, brings the shell directly over the fire and removes the one previously heated. The counterbalanced bonnet or drum is lowered, which causes the heated air to pass upward through the shell and downward between the drum and the outside of the staves, thus heating them thoroughly on both sides.

After the shell is removed from the heater the staves are tapped out evenly and the permanent bilge hoops of either wood, wire or flat

steel, are put on. The shell is now placed in the trussing machine, which levels it and drives the bilge and head hoops in consecutive order.

In this machine the bilge hoop drivers close automatically on the shell, and, bring swiveled, will conform to its somewhat irregular shape and drive the bilge hoops equally tight, regardless of the varying bilge or the distance the hoops are driven.

The shell now passes out of the trussing machine into the crozing or working off machine, where it is chamfered, crozed and a proper chime formed on both ends, the machine being double ended and fitted with stationary cutterheads carrying suitable "V" croze cutters and chamfering knives.

The shell is rotated by means of geared chuck rings and the cutters are brought into contact with it by a hand lever, making a smooth and uniform croze and chamfer, regardless of the quality of the stock. The superiority of the stationary cutterheads over the rotating heads formerly used is marked, while the power consumed is but a trifle of that required to drive the old style rotating heads. The shell now passes out of the crozing machine on its way to the ideal heading up machine, where it is headed up and hooped off, which completes the work, and we have the finished barrel.

This machine is almost entirely automatic in its operation, the bundle of heading being placed in a circular case or hopper mounted over a sliding platen having a recess deep enough to receive and carry out one head at a time. A suction or lifting plate, slightly smaller than the heading and connected with a suction pipe leading to an exhaust fan is used to pick up the head and carry it over the barrel.

After a shell has been placed in the machine the head truss hoop is first forced off, which permits the staves to open enough to receive the head. The head being lowered in the shell the staves are then closed up by powerful gripping jaws, which encircles the shell nearly opposite the head, and the head hoops are then put in and driven by the driving plate, which is carried on parallel arms and drawn down by revolving rolls, which frictionally engage a bar attached to one of the parallel arms. If additional bilge hoops are needed this machine will drive them uniformly tight, regardless of variation in the size of the bilge of the barrel. Should it be necessary to sand or polish the outside of the barrel a barrel sanding machine can be placed between the crozer and the heading up machines, and the shell passed through it before being headed up.

Should flat steel hoops be used a riveting machine and a sizing or hoop expanding machine will be necessary, but if flat wood hoops are wholly or partially used a hoop stapling machine will be required. This machine sizes and staples hoops at a rapid rate, driving and clinching three staples at once. The wire is fed in the machine from three separate coils, mounted on suitable reels. The hoops being previously soaked are placed on the expanding, sizing form, clamped by foot power, which automatically starts the machine, the sizing, stapling and clinching operations follow in rapid sucession, when the machine stops, with the sizing form closed ready to receive another hoop.

Having thus briefly described the process of making slack barrel by machinery, it only remains to consider the cost as compared to that of making them by hand.

For the purpose of comparison, we will assume that the shops are of equal capacity and that the overhead cost and that of handling the stock is the same in both cases.

The cost of the machine method will vary somewhat, depending upon location, good or bad management, etc., but for present purposes we will say that the direct labor cost of making barrels by machinery will be from 3½ to 4 cents per barrel.

Ascertaining Cost of Barrels.

It is much more difficult to ascertain the cost of making barrels by hand for the reason that it varies with the kind of barrel and the demand, it being the usual custom of the hand cooper during the rush season of getting "all the traffic will bear" and frequently a little more. I think it will be fair to say that no hand shop could show a total cost that would not exceed the above at least 50 per cent.

While a considerable saving is shown in making barrels by machinery it is not this alone which should be considered, for even if the costs were the same in both cases the advantage would be with the machine shop.

In the first place, machines are a tolerably certain quantity, while the average hand cooper is a rather uncertain quantity at times. Machines are always on the spot on Monday morning, while hand coopers are generally conspicuous by their absence. Should it become necessary to change the help in a machine shop a new crew can be quickly broken in, while it takes a long time to make a hand cooper.

Making barrels by machinery is really a very simple operation, the machines employed having been brought to a high state of perfection and made as nearly automatic as possible.

It has been found preferable to operate the machine cooper shop with unskilled labor rather than to employ hand coopers for this purpose, for it is practically impossible to "teach old dogs new tricks," and furthermore they regard labor saving machinery as their natural enem and consequently a thing to be shunned.

This was clearly shown in the case of a portland cement compan some years ago, who having changed from a hand to a machine coope shop, tried for several weeks to to operate the plant with their forme hand coopers, but found it impossible to secure a satisfactory outpu They finally "fired" the entire lot and brought in some active youn laborers from the cement mills ,and within a few days the machine was being operated nearly up to its full capacity and making better an tighter packages than had been formerly made in the hand shop and practically one-half the labor cost.

It is, of course, necessary to have a skilled man to adjust the cu ters and keep the machines in proper running order. With ordinary ca the depreciation due to wear and tear is very slight.

All machinery requires ample lubrication, but not in the way th green Irishman oiled the buggy. It will be remembered that aft being told to oil the buggy he reported that he had done so, except thos parts where the wheels went on. He couldn't get at the ———— thing

*Address delivered before the National Slack Cooperage Stock Manu facturers at Chicago, Nov. 15.

Saskatchewan Timber Lands Sal

Results of Auction of Twenty One Berths—Prices Ranged from Fifty Cents to Nearly Eighteen Dollars per Thousand

There was sold by auction recently in the office of the assistan crown timber agent, the right to cut fire-killed and green timber unde permit on berth No. 1678, comprising lands in Saskatchewan alon the Prince Albert branch of the C. N. R. near the stations of Mistatin Greenbush and Prairie River. There were 21 births offered, and the brought prices varying from fifty cents to $17.85 per thousand fee board measure. This whole district which is in Townships 45, 45 and 4 west of the 2nd meridian, expect three otherwise described was burne over last year. The timber must be removed one year from the date sale. The following is a description of the berths, and to whom sold :-

3.25 sq.-mile, Township 45, Range 7, to Shaw Bros., Dauphin.
¼ sq.-mile in Township 45, Range 7, to Shaw Bros., Dauphin.
1 sq.-mile in Township 45, Range 7, west, to Shaw Bros., Dauphin.
2.50 sq.-miles in Township 45, Range 4, 5 and 6, west, to Great We Lumber Company of Winnipeg.
½ sq.-mile in Township 45, Range 6, west, to Great West Lumber Cor pany.
8.89 sq.-miles in Township 45, Range 6, west 2, to Great West Lumber Cor pany.
9¾ sq.-miles in Township 45, Range 4 and 5, west 2, to Western Lumbe Company of Neepawa.
12½ sq.-miles in Township 45 and 46, Range 5, west of 2, to Great Weste Lumber Company.
1 sq.-mile in Township 6, Range 5, to Great West Lumber Company.
8¾ sq.-miles in Township 45, Range 7, to Shaw Bros. of Dauphin.
6¼ sq.-miles in Township 45 and 46, Range 7, to Shaw Bros. of Dauphi
9 sq.-miles in Township 44 and 45, Range 9, to Thomas Embleton, Jr., Gilbert Plains.
1 sq.-mile in Township 45, Range 9, to Thomas Embleton, Jr., of Gilbe Plains.
1 sq.-mile in Township 45, Range 9, to Cowan Construction Compan Limited, Winnipeg.
13 sq.-miles in Township 44, 45 and 46, Range 9, to Cowan Constructi Company, Limited.
9 sq.-miles in Township 44 and 45, Range 10, to Cowan Construction Cor pany, Limited.
1 sq.-mile in Township 45, Range 10, to Cowan Construction Compan Limited.
1 sq.-mile in Township 44, Range 26, west of 1st meridian, to R. J. Speer Winnipeg.
1 sq.-mile Township 43, Range 24, west of 1st meridian, to R. J. Speer Winnipeg.
¼ sq.-mile in Township 44, Range 27, west of 1st meredian, to R. J. Speer Winnipeg.
½ sq.-mile in Township 45, Range 8, to Shaw Bros of Dauphin.

A dry season followed by an early closing in of winter has made poor year for lumbermen at Strathcona, Alta. Sawing operations ha to cease at two mills during the second week in November although the is at least 5,000,000 feet of logs stranded along the banks which we taken from the woods last winter, with the expectation of making record summer's work at the mills. The bulk of these logs are sti waiting for the drivers. Many of them are now frozen in the boom above the mills. Operations at mills had to be stopped on account of shortage caused by 6,000,000 feet of logs being stranded by low water i Poplar Creek, sixty miles west. When the rains came it was too late drive the logs down and the early freezing of the river stopped eve securing the logs in the booms. One lumberman reports that his tot this year at two mills will not reach over 7,000,000 feet, which is abo 5,000,000 less than last year.

Report of B.C. Forestry Commission

Important Recommendations for Management of Timber Lands—A Permanent Forest Protection Service

The report of the Forestry Commission apointed by the Government of British Columbia on July 9, 1909, has been presented by the commissioners, Messrs. F. J. Fulton, K. C., of Kamloops; A. C. Flumerfelt, of Victoria, and A. S. Goodeve, M. P., of Rossland. The report is usually voluminous and thorough. The most important section is that devoted to recommendations which the commissioners make as a result of the information which they have gathered. The recommendations are as follows:—

(1) That a complete cruise of all crown grant timber lands should be made by the government; that in future the department of forests should co-operate with the assessors; and that an annual return should be made of the valuation of all such timber lands.

(2) That as far as possible timber leaseholds should be placed, upon renewal, upon a parity with licensed timber lands, and that they should be subject to the same forest regulations.

(3) That the rate of rental and of royalty upon special license should at no time be fixed in advance for more than one calendar year.

(4) That the land act be amended so as to empower the government to grant the right of cutting sawmill timber to pulp lessees, and that a new form of license be provided for this purpose in the manner described by your commissioners.

(5) That the same form of license as that provided for pulp lessees be issued to holders of tan-bark leases who may desire to cut mill timber upon their leaseholds.

Present Reserves.

(6) That the present reserve upon unalienated timber land be continued indefinitely; and that when special circumstances necessitate the opening of any portion of this reserve for immediate operative, licenses to cut timber thereon should be put up to public competition, upon a stumpage basis.

(7) That licenses to cut timber upon fractional areas adjoining or surrounding leased or licensed timber lands should be put up to public competition and that a "fractional area" be defined with great care in the wording of the land act."

(8) That the record of every cruise and survey made by the government in timbered areas should be accompanied by a report concerning the suitability of the land for agricultural purposes, that the power to compel licensees to cut and remove timber from good land be retained and that at the time of renewal the same provision be inserted in every timber lease.

(9) That the issue of handlogging licenses be discontinued.

(10) That no divided interest in a special timber license be recognized.

(11) That for the convenience of holders one day be fixed in each month or the renewal of all licenses expiring in that month.

(12) That royalty be collected on all merchantable timber not removed rom crown lands in the course of logging operations.

(13) That operators be required to dispose of debris.

Forest Fires.

(14) That the protection of forests from fires be undertaken by the government through the agency of a permanent forest organization upon the lines of the Northwest Mounted Police, and that it be compulsory for all able-bodied citizens to assist in this work when called upon.

(15) That the cost of fire protection be shared between government and stumpage holders in the manner proposed by your commissioners.

(16) That the provincial government should co-operate with the Dominion Railway Commission; that a vigilant patrol of all railway lines and inspection of locomotives should be established; and that all railway construction should be supervised by provincial forestry officials.

(17) That special licensees should be instructed to proceed with the survey of their holdings; and that all such surveys should be completed not later than Dec. 31, 1915.

(18) That all operators should be required to make periodical returns concerning their operations to the forestry officials in their district, and that the collection of information should be undertaken upon much wider lines than hitherto.

(19) That the government should also proceed with the establishment of a department of forests.

(20) That royalties upon crown timber should be paid into a forest sinking fund in the manner described by your commissioners.

(21) That by suitable changes in the customs tariff the utilization of low-grade timber should be encouraged.

B.C. Forest Fires During the Year 1910

W. C. Gladwin, Chief Fire Warden for the Province of British Columbia, has presented his report for the year, in which he states that the number of fires reported was 1,184. Of these, 219 were caused by C. P. R. engines, 184 by settlers clearing land, 162 by campers, 103 by lightning, 63 by donkey engines, 53 by Great Northern locomotives, 17 by hunters, and 9 by prospectors. The total estimate of damage is $629,910, of which $193,976 was to standing timber, $63,974 to cut timber, and $371,965 to improvements.

The number of men employed to combat fires that did damage was 4,452. The cost to the government in wages was $35,000, and to private parties $37,398, making a total of $72,398. There were also 502 fires in dangerous places which were extinguished without doing any damage. For this part of the service 4,211 men were employed at a cost of $92,000. In addition 615 fires were put out by the fire wardens without help.

The area burned over was 218,388 acres. Of this burned area there are 91,220 acres only fit for forest land. Part of this had been burned over years ago and was coming up in a fine growth of young timber. The remaining 127,168 acres are fit for agricultural purposes. Most of this had been logged and was covered with brush and refuse from logging operations.

After referring to the chief causes of fire, the report says: "There is only one cause of fire that cannot be controlled, and that is lightning. All other causes can be minimized so that no great loss will be incurred. Carefulness on the part of logging operators, persons clearing lands, campers, fishermen, prospectors and railway companies would so reduce the danger that no repetition of the great fires of the past need be feared."

Miscellaneous News from Western Canada

The entire eastern slope of the Rocky mountains, from the international boundary northward to the middle of township 61, west of sixth Dominion meridian (longitude 118 west), is now reserved from settlement or occupation, and will be managed entirely with a view to the proper utilization and reproduction of the forest, the protection of the water supply of the prairie provinces and other related objects.

James A. Magee, one of the best-known lumbermen of the Northwestern States and Western Canada, and the founder of the town of Chase, B.C., died on Monday, Nov. 14th, at Revelstoke, where he had gone to attend a meeting of lumbermen. Death was due to heart disease. Mr. Magee, who was born in Wisconsin 52 years ago, went to the Pacific Northwest in 1889 and immediately entered the lumber business. He moved to Seattle in 1899, residing there until 1907 when, as managing director and secretary of the Adams River Lumber Company, he founded the town of Chase. Large mills were erected there under his supervision, a number of Spokane and British Columbia capitalists being associated with him in the project.

Anxiety among coast and mountain timber men interested in timber leases within the Dominion railway belt on the mainland in B. C., is reported as a consequence of action on the part of the Federal Government looking towards a cancellation of certain leases. It is reported among timber men in Victoria that the Federal Government has of late years been increasing the annual rental fees on a number of leases in the railway belt and that recently several notices of cancellation have been served. So serious is the situation reported to be, from the point of view of those affected, that it is declared coast and interior men interested in railway belt timber are making arrangements to send a representative to Ottawa to lay their case before the Government. An extension of time for the removal of timber from leased lands will, it is stated, be sought. Years ago when the timber lands in the railway belt were leased, it was, the understanding that the timber was to be removed within a stated period. It is reported that in some cases logging has not been carried on and the agricultural interests are said to have petitioned the Government to throw the lands open to entry for farming purposes.

Following the sale of its mill at Nanimo, the Red Fir Lumber Company has completed its agreement to build at Roche Point, B. C., near the place where the Imperial Car Company has begun construction of a 15,000-ton dockyard. The Red Fir Lumber Company, which is capitalized at $400,000, fully paid up, was reorganized four years ago. It owns about 11,000 acres of timber land, half of which is held under the old leases. The new mill at Roche Point will be an exclusively cedar mill, the company having been cutting up red cedar only for some months past, and having opened up an extensive market for its products. The mill will be one of the most modern on the coast, with a capacity of 100,000 feet per ten-hour day. It will cost $100,000. Electric power will be used. The close association of the company with the Imperial Car Company, from whom it is obtaining its site and with whom it is under agreement to run a car ferry and operate tracks connected with other industries, when established, along the waterfront, has made a change of name advisable. When it begins operations at Roche Point it will be known as the Imperial Cedar Company, Ltd. The officers and directors of the company are: President, C. C. Michener, Victoria, B. C.; Vive-President, Chas. C. Kimball, New York City; Secretary and Treasurer, Percy D. Hillis, Victoria; Geo. H. Robertson, Victoria, and D. Wishard, New York City, directors.

A government trade bulletin just issued shows that $1,500,000 worth of free lumber (including timber, planks, boards, etc.,) was imported from the United States by Canada in May and June of this year. There is an increase of $600,000 over the corresponding months last year and $800,000 in 1908. The dutiable lumber imported during May and June for the last three years ranged between $8,000 and $20,000.

Over 275,000,000 feet of lumber was cut on New Brunswick crown lands last year, on which the stumpage dues will amount to $300,000.

Dry Kiln Operation—Important Factors

Modern Requirements Lead to Scientific Study of Effect of Heat Upon Wood Moisture—Rapid Drying Rendered Possible Without Twisting, Checking, etc.

By Ernest H. Scammell

There is usually more money lost through the dry kiln than in any other department of a wood-working factory. In other departments modern labor-saving appliances are introduced, and care is taken that waste is reduced to the vanishing point, though, until everything, including shavings and sawdust is turned into money instead of being devoured by the capacious orifice of the hungry furnace, there must be some degree of waste. Efforts are constantly being made with a considerable degree of success, to utilize and turn to profitable account all the by-products. The dry kiln, however, one of the most important sections of a wood-working factory, is, in the majority of instances, left as it was. All that is considered necessary to dry lumber effectively is to subject it to a certain degree of heat for a limited time, and this, is expected to render it fit for the manufacture of furniture, flooring, doors or other products.

We hear a good deal to-day concerning science in various directions. In order to arrive at the most successful methods for the conduct of any business, it is well to call the scientist into our counsels. There is one important difference in those who are engaged in the wood-working industry and other manufacturers; the latter will usually recognize the value of modern methods and improvements and will adopt the same if possible, while the proprietor of a planing mill or furniture factory, though willing to introduce machinery of an up-to-date nature, in nine cases out of ten thinks himself a veritible Solon in regard to the drying of his lumber. The Conservative Englishman will say that the only way is to "allow nature to take her own course," or he will add that his grandfather left his lumber in the sheds for from three to five years before using it, and he sees no reason why he should not do the same. Others, a little more advanced, extol the virtues of a dry-kiln which simply bakes the lumber until it is "cooked." Again, others maintain that unless you have a sufficient current of air to carry off the moisture from the kiln, as it is drawn out of the wood by the heat, you cannot effectively dry the lumber at all. There are kilns which are simply warm rooms, kilns with hot blast fans, kilns with steam, kilns with "natural" draughts and many others. All of these have their advocates, but none of them will accomplish properly what they are designed to do. To dry any lumber effectively, the following points have to be considered:—

a. The tissues and other physical properties of the wood.

b. The amount of moisture originally in the wood and the amount it is desired to retain after drying.

c. The effect of heat on the fibres and knots.

d. The time and temperature necessary for drying.

e. Twisting, checking, case-hardening and honey-combing in the kiln.

f. The effect of drying on the strength and stiffness of wood.

It is not the purpose of this article to deal fully with these points, but merely to call attention to them.

The Tissues and Other Physical Properties of the Wood.

A large amount of waste would be avoided if the average manufacturer made it his business to understand the general structure of the wood he uses in his factory. The tissues vary very much in form and in physical properties, and exert their own peculiar influence on the behavior of the wood during the process of drying. Pronounced medullary rays also further complicate matters. The various ways of cutting the logs make a difference, for instance, plain oak and quartered oak require somewhat different treatment. Even in mahogany, jarrah and other tropical woods, which are outwardly more homogeneous, various kinds of tissue are differentiated. As a miner will do better work if he has a knowledge of engineering and geology, so the proprietor of a wood-working factory will secure better results and save money if he has a knowledge of botany in relation to the growth and structure of trees.

"In the living tree and green wood there is a large amount of water. Part of this is closely held in the material of the cell walls, and cannot be removed without affecting the physical condition of the wood. The rest, which fills the pores of the wood, is free water. In drying, the free water within the cells passes through the cell walls until the cells are empty, while the cell walls remain saturated. When all the free water has been removed, the cell walls begin to yield up their moisture. Heat raises the absorptive power of the fibres, and so aids the passage of water from the interior of the cells.

Air-dried wood, under ordinary atmospheric temperatures, retains from 10 to 20 per cent. of moisture, whereas kiln-dried wood may have no more than 5 per cent. as it comes from the kiln. The exact figures for a given species depend in the first case upon the weather conditions, and in the second case upon the temperature of the kiln and the time during which the wood is exposed to it. When wood that has been kiln-dried has been allowed to stand in the open, it apparently ceases to reabsorb moisture from the air, before its moisture content equals that of wood which has been merely air-dried in the same place and under the same conditions."

A very important point is the amount of moisture it is desired to instance, for England or British Columbia, where the climates are much into consideration his particular market. If he is building furniture, for instance, for England or British Columbia, where the climatt is much more humid than it is in Ontario, he should have a greater degree of moisture in the wood than if he is building for the Ontario market.

The Effect of Heat on the Fibres and Knots.

Usually when a board comes out of the dry-kiln, if the knots it contains are not actually loose they are in such a condition as to render it necessary to cut them out. The fibres may also be so twisted as to render the board of little value. These defects are, sometimes, partly due to improper piling, though generally to the fact that the atmosphere of the kiln was too dry. They can be easily avoided.

The time taken in drying is one of the most important questions in a factory, for this it is which determines the amount of stock which must be carried and capital locked up. A manufacturer using oak which must remain in the kiln for three weeks, would free a large amount of capital if he could put it through in 6 days. It, therefore, behooves him to have a kiln which will cut his drying down to the shortest possible time. The temperature, also, plays no small part. Where the kiln is very dry and the contents are hardwood, 140 degrees is as high as can be reached with safety, but where the air is humid, a much higher temperature can be turned on

Modern improvements in drying have shown that it is possible to dry rapidly all kinds of lumber without any twisting, checking, case-hardening or honey-combing. The average waste in a factory using hardwood is in the neighbourhood of 35%. This waste can be greatly reduced. Further, when the boards come out flat and without being case-hardened, they are much easier to plane, the knives will last longer without sharpening, and the board will finish about an eighth of an inch better.

The Effect of Drying on the Strength and Stiffness of Wood.

"The strength and stiffness of wood depend largely upon the degree to which it is seasoned. Roughly speaking, strength is the capacity of wood to sustain a load without breaking; stiffness, the degree to which wood under a load resists distortion of form. As seasoning progresses the strength increases, so that by simply drying a piece of green pruce it is possible to multiply its strength four times. Stiffness is similarly increased by drying, though less markedly."

To dry lumber in such a way as to cut down waste and obtain the best results it is necessary to construct a dry kiln in which there is both humidity and heat, both of which must be under the control of the man in charge. It is advisable to equip the kiln with a registering thermometer, which can be purchased for a comparatively small amount, and also a hygrodeik for determining the amount of moisture carried.

It is absolutely essential that the kiln should be air-tight, so that air can only be admitted or discharged as required by the operator. The three main factors are sufficient radiation, regulated moisture and scientific ventilation. Where a kiln is erected or remodelled by a competent expert, detailed instructions should be given, dealing specially with the class of lumber employed in the factory and with the special purposes to which it is to be put. All the wood should come out plump and soft. Warping, splitting, honey-combing, and checking, should be practically eliminated.

The medical remedies concocted by our grandmothers served their day and generation, but now we require expert medical knowledge in matters of health and hygiene. In the same way the old style dry kiln has had its day, and the modern factory requires to be equipped with the most up-to-date methods and to take advantage of the latest expert advice. Then, instead of leaving the control of the kiln to the foreman, who has many other duties to perform, this should be in the hands of a man who devotes his whole time, in the case of a large factory, to this branch of the business: or it might be arranged, if there are several factories in the neighbourhood, that an expert be jointly employed. An arrangement of this kind would effect an annual saving of several thousand dollars above the cost.

The Retail Dealer and His Problems

Watching Credits—Jones Views on Types of Retailers.

Entering Up Credit Sales

How often it happens that lumber goes out of a retail yard on a credit sale and is never entered up in any credit book. Some retailers will say that this occurs so seldom that it is not worth bothering about. It is safe to say, however, that most really successful retailers make a strict practice of making an entry of everything in the form of a credit that is secured by his customers. It is easy to fall into bad habits in this matter when one is very busy for a moment. After the customer has gone some one else has perhaps to be attended to and the entry is not made. It would not be a very difficult matter for the owner of a yard to have his employees make a practice, as soon as a sale is made, of jotting down on a pad of paper, kept specially for the purpose, details of the deal. If it is a cash sale the money and the record can be handed in to the manager, or if it is a credit transaction the account can be entered up from the note. This sounds like a simple matter and one scarcely worth bothering about, but it is just one of those simple matters of system which make all the difference between successful, satisfactory business and a business which is a continual worry and a possible source of financial embarrassment.

If any reader of this article should think that failure to enter up credit sales is so rare that it can be neglected, let him rake his memory a little. He will probably be able to remember a case, not very long ago, when he entered his grocer's store or some other retail merchant's and asked for a little bill which had been running some time and which he wanted to settle. It is not at all improbable also that he will remember a case where the retailer, after making a vain search of his books, was unable to find the item and had to ask him to call again and he would have the matter looked up in the meantime. There are always people who are ready to take advantage of this sort of a merchant, and the only way to keep on the safe side is to see that everyone on the staff makes an immediate entry of every sale.

Jones—he Writes About Retailers

Sometimes when I get to my room on the top floor of the local Waldorf-Astoria, I think I will write a book. Now don't get the notion that a treatise on the best sort of crayon or the flexibility of the yardman's rule is about to be perpetrated, for all that is agitating the spoonful of gray matter poked away somewhere in my cranium is a desire to keep a record of the varieties of retail lumber dealers I bump up against as I wander about the landscape. There are times when after my Oom Paul pipe is lighted and I begin to check up the day's receipts in smiles and frowns, I feel like philosophizing on the very abstruse question, "Why is a retailer?" At other times, the day's experiences make me feel like ringing for a drink. To-day I came across two distinct types, both in the same town, doing business not far from each other, yet so absolutely dissimilar as to make the existence of the one cast doubt upon the existence of the other.

This was my first visit to the town and perhaps more extended acquaintance would change here and there some of the opinions gathered, but as I have great faith in first impressions, I shall jot down the experience just as it came to me. I came in on a late train and did not get a chance to look around. I like to walk about a place after business hours, see how the yards appear when in repose, so to speak. However, I had plenty of time this morning, for the room so thoughtfully assigned me by the potentate of the hotel register was on the railroad side of the house, and the mayor had evidently arranged with the railroad to run an unusual number of trains that night to impress properly the newcomer. Whatever the cause, I got out early and started to prospect. It was a prosperous place with a general air of up-to-dateness. Cars were good, pavements clean, and on the whole I have seldom been better impressed with a place—just the location for a good business. With this feeling in my mind, I set out to visit the lumber yards. There were four of them, and I rather expected to run across a new one, but was sure that whatever I found would be well worth attention.

After stocking up with some cigars I thought in keeping with my dignity and importance as the peripatetic reporter of the Southern Lumberman, I asked a good-natured looking cop for the quickest route to the yard I wanted to visit first. I always walk, for that is the only way to get local flavor, and, incidentally, to keep down expenses. There were half a dozen blocks ahead of me, so sauntering along, I began speculating on the type of man the owner would prove to be. His was the smallest yard, and for some reason, I felt it was the newest. What sort of a retailer was he? Did he keep a good assortment? Was he a young man or elderly? A hustler or a dead one? While entertaining these fleeting fancies, I saw ahead of me a sign across the sidewalk. Then I began to watch for teams or some of the other signs of a lumber yard. Nothing doing. Upon reaching the place, it presented a first-class appearance, but had a holiday air. As the office was on the farther side of the alley, I took a turn down through the shed. There was no sign of a customer, team, yardman, or even a dog. Walking up the other side, I turned into the office. A man about fifty or fifty-five was sitting before the window, his feet on the sill, a cigar stuck Joe Cannon fashion between his teeth. He did not turn his head but continued to look across the street, watching for Halley's comet, possibly, surely not for customers with that nonchalant, preoccupied air. In such an office one instinctively steps lightly, you feel oppressed, impending doom presses down heavily upon you. I pitied the salesman who had to buck up against such a proposition. However, I remembered that a butternut is not easy to crack but repays the elbow grease expended in breaking the shell, so I piped up as cheery a "Good-morning" as I could muster, and held out my card. He took it, looked at it, grunted a bit, whether in approval or not I cannot say. Something had to be done, so I began on the weather. This was really easy for the day was fine, but even talk of the weather falls flat when it brings no response. Next I tackled the general appearance of the town, reminding him I was making my initial visit. I thought local pride would get a rise out of him. During this time no one came in, the 'phone did not ring, the bookkeeper did not deign to look around to see what caused the excitement, for in such an office my entrance could not be otherwise described. From this I went to conditions in general, business, building prospects, labor situation, phases of the market—anything to get him started. It reminded me of a fishing trip when one tries all his flies but gets "nary a rise," but there was this difference—when fishing, one can cuss his luck. Finally I ventured on what I consider dangerous ground—the other lumber dealers. This provoked a flow of language, that is, for my friend the Sphinx. He informed me they were rascals, untrustworthy, underhand, price-cutters, in short, had a monopoly of the vices of the business world. Finally a customer entered. He was received with the same sort of "suppressed enthusiasm." Said he was fixing up a little and wanted some pine and a little moulding. Without deigning to go and show the stock, the boss told him where he would find it and that there was a man out in the yard somewhere who would attend to him. That was the clue I had been waiting for. Here was a man blaming his competitors for loss of trade, when in reality he was dying of dry rot. He waited for customers to come and when they did come, had to wait on themselves. No wonder the place was deserted and the proprietor sour on the world. He had not changed with the times and conceived his business to be sitting in the office waiting for trade to be thrust upon him. He had a good plant, fair location, reasonable facilities and ought to be doing a good business.

As soon as I got out, I shook myself to get the atmosphere of the place out of my system, lighted a new piece of Havana rope, and looked about for some one to direct me to the next yard. A few minutes saw me headed in the direction and after a few blocks I heard the welcome hum of a planer, saw the smoke from a good sized stack, and turning a corner came upon a lumber yard in full swing. In walking the short distance from the corner, two teams with well loaded waggons passed me. I always look at the "rolling stock" of a yard. Good horses, well painted running gear, a well adjusted load of all point to intelligent management, and these teams had all three of these marks. My spirits began to ascend, I was at length going to see the real thing. My last visit was beginning to have the far-away look of the dream of a rarebit fiend. As I drew near, several customers went into the office, employees were stepping around as though they knew the value of time.

No need of opening the door of this office. I doubt if it was ever closed. The clerks were right on the job, and upon asking the youngest boy for the proper man to see, I was directed to his office. I always make it a point to ask the office boy. If you ask an important looking clerk, he may be offended because you do not assume he is the proprietor, and so get in wrong at the start. Within I could hear talk, hearty laughter, and evidences of enterprise and hustle. Here, I thought, is the real lumber dealer of this burg. Soon the owner came out with his customer, shook him warmly by the hand, told him his wants would receive immediate attention, called a young man to him and gave him instructions to take the customer out and see that he got what he wanted at once and that it be sent up on the first load going that way. He then turned to me and with outstretched hand, ushered me into his office. After glancing at my card to get a line on my mission, motioned me to a chair and sat down himself. He was bubbling over with goodfellowship; instantly we were on good terms: firing questions at each other and getting quick replies. Every sentence, however, was interrupted by a ring of the 'phone, and from the language used, I knew this man was on good terms with his customers. After a short time, he asked me to look around the plant, as he thought he had a few ways of doing things that were pretty good. On our way out, we met a salesman and he was greeted in the same cordial manner I had been, told to wait just a

minute and he would receive attention. Some pleasantry was passed regarding their last meeting at the lumber dealers' convention, and the salesman sat down with a happy grin on his face that showed he appreciated that sort of a customer. After a walk through the yard, where everything was in good shape and the best of goodfellowship between owner and employee, I bade him good-day, and with an invitation to be sure to drop in on my next trip, I departed.

Here was a contrast with a vengeance. The one yard dying from malnutrition, the other full of red blood and vigorous. A little questioning of different persons met during the day and evening developed the fact that the first yard was the oldest, had at one time been fairly prosperous, but now it was the common joke that if you wanted dry lumber, go to No. 1. It was sure dry. Not the artificial dryness of the kiln, but good, old-fashioned air dryness from long standing in the piles. Another pleasantry was that the proprietor in his younger days when he had a slight semblance of hustle to him, would stand on the knots and sell the board for clear. Years ago the farmers brought in lumber cut from their wood lots, but no farmer went to him a second time if the other yards could possibly take the lumber. He had a way of finding a shortage, no matter how conscientious the farmer had been in the measurement. He was well known, but when introduced as a topic in conversation the usual remark was: "Do I know ———? Well, I should say so. That is, not in a very close way, but I know who he is, and, say, he's a caution! Bought some shingles there once, but never again!" This same song would be sung by each person, varied according to experience. That evening as I sat in the lobby, I ran across ———, one of the bunch that travelled that section. Shortly we drifted onto the lumber situation, and then I got another line on the grouch. No salesman could sell him anything; he knew it all. The only time he ever limbered up and cracked a joke was when he had a complaint to make, and took this way of making the salesman feel doubly humiliated. True he had to buy some lumber, but the best salesmen passed him by or called him on the 'phone on the gamble that he might want something.

Now what's the use of spoiling a tale with a moral? If the tale is any good, the moral is self-evident, but I cannot resist the impulse to do a little moralizing myself this time. The first yard was an exception. I know other yards where one does not get a very cordial greeting, but most lumbermen know that success means hustle, and they mean to succeed. This man was a remnant of the days when trade came to you, but did not realize that times have changed. To get trade to-day, one must go after it. He had kept his plant up in pretty good shape and the yard ought to be a hummer, but the personality of the proprietor stood as a Chinese wall and his trade was confined to the least desirable sort of customers. Then, too, referring to his competitors as he did was bad. I saw in an office not long ago a card which read: "If your competitor talks about you, put him on your payroll. Never mind what he says so long as he talks." To have a busy yard called a den of thieves means that the majority of your fellow townsmen are dupes, fools, or worse, for it is their trade that makes it busy. Sharp practice would never build up a permanent business. When I buy, I go with the crowd, and if I were running a lumber yard, I would get the crowd coming my way if it was in the cards to get them.—The Southern Lumberman.

How To Handle Collections By John S. McCay

Prompt collections are a vital feature of business—no matter how great the volume of sales, the profits will not be in equal ratio unless collections are kept up to a standard consistent with the volume of business done. Profits are made by quick turnovers of capital, but unless collections are promptly made, turnovers cannot be had as frequently as they should be.

Interest on capital consumed by bills being paid sixty to ninety days after they fall due instead of on their due dates is an item of importance, so that prompt collection of accounts receivable is a matter which needs careful attention, as it enables the executive head of the business to take advantage of discounts in paying bills, as well as affording an opportunity to branch out and secure larger returns on capital invested.

The interest of the manufacturer or dealer in collections is not confined merely to his own business, but to the business of his customers as well; especially customers seeking credit. Customers having an excessive amount of outstanding accounts based on yearly sales will likely be slow pay—in some cases dangerous risks. A customer who keeps accounts collected closely will be more likely to discount bills from profits made, instead of anticipating profits, as is frequently done where purchases are made on extended terms.

Each month in any business an estimate should be made covering cash that should be collected, in order to give the collection department a definite objective. Estimate is to be based on the outstanding accounts for the corresponding month of the previous year, collections for same month, the balance outstanding at the time of estimate, and existing conditions of the present year, for which previous month is used as a guide. This works out on a percentage basis, allowance being made for probable increased or decreased results according to indications of the previous month.

Each month a collection comparison is made with the corresponding period of the previous year, by taking the balance of the accounts receivable on the first of each of the two fiscal years, adding to each balance the sales to date for the respective years, and dividing each into total collections to date for each year. This shows how collections compare with the previous year on a percentage basis.

After statements are made up they are placed on the desk of the credit manager, who communicates with the debtors whose accounts require attention. Communications regarding accounts of customers are filed in a folder with credit information pertaining to them, thus giving a complete history of the accounts. The credit folder bears the same number as the customer's account, as a result of which the card index for accounts is also an index for credit information files.

To follow up letters the Credit Man's Diary is used, memoranda being made under the date on which correspondence is to be brought out. A memorandum of the date placed in the diary is placed on the copy of the letter written the debtor, so that should it come out by payment or otherwise before that date, the diary is turned to and the memorandum is crossed off—it being no longer needed. This plan works automatically, making it unnecessary for the credit manager to tax his memory with details; it also keeps his desk clear of matters of this character.

Every ten days, or as frequently as necessary, the ledgers are gone over to note the condition of each account. Account cards are carried in trays, and such accounts as should be noted by the credit manager are automatically brought to his attention by standing them on their sides, so they will appear above the other accounts, and the tray placed on his desk in order that he may go over the cards and give each such attention as is needed. This also reduces the work of the credit man.

Many concerns have found the personal collector does not accomplish as much as correspondence, as he often has to make several calls before seeing the proper party, whereas letters usually reach the desired destination.

It has been found advisable to avoid using printed or typewritten forms in series; a debtor who has once gone through this process knows as much about it as you do, and will wait until the last form is received before giving the matter serious consideration.

Collection letters should be short and diplomatically worded in order not to offend the debtor, for it is hard to accomplish anything when he gets in a disturbed frame of mind.

Where extensions are asked, it is usually advisable to grant them, provided you are convinced it is desirable, but they should be made in the form of interest-bearing notes. If the account is large it is better to take several notes falling due in successive periods rather than one note for the entire amount and take the chances on it not being paid at maturity.

Optimism is a necessary adjunct to the collection department. It is unwise to feel an account will be lost simply because it has become slow, or has assumed larger proportions than the responsibility of the debtor seems to warrant. If the credit manager becomes pessimistic, the chances are that recipients of his letters, who are already discouraged on account of adversities may take on an additional amount of pessimism and be fit subjects for bankruptcy.

It is frequently advantageous to attach the stamp of the Credit Men's Association to letters of the collection department. This shows the debtor with bad intentions that this creditor is a member of that organization and the debtor assumes that the member's collection experience will likely be furnished other inquiring members.

When an account is placed with an attorney the credit folder containing all information regarding him is taken out of credit information file and placed in a vertical file containing accounts in the hands of attorneys, and account card of the customer marked "No further credit." A large red "A" is placed on the account indicating that it is in the hands of an attorney.

The folders are filed numerically, original index card of customer still serving as an index by marking it "Attorney's File."

Chief Fire Warden W C. Gladwin, of Victoria, B.C., in his report for the month of September, gives the total fires for the month under review as 189, 189,000 feet of standing timber being destroyed and 10,000,000 feet damaged, together with 50 cords of shingle bolts of a value of $1,500. The timber destroyed was of good quality and estimated as worth approximately $5,000; while in addition the fires consumed a $2,500 hotel, one logging railway, bridges to the aggregate value of $10,000, five houses estimated to have been worth $10,000 three government bridges representing $3,500. During the month 592 men were engaged in fire fighting, their wages amounting to $7,920.51, in addition to which $4,000 was disbursed by the owners of threatened timber lands in their protection from fires. The total number of miles travelled by the fire wardens is given as 23,909; fire wardens' salaries for the amonth amounted to $8,618, and their expenses to $2,687.20.

CAMP DEPARTMENT

The Logging Situation in British Columbia.

By J. S. Emerson, Vancouver, B.C.

Having been mixed up directly, indirectly, individually and otherwise with the timber, logging and lumber industry for the past fifteen years on Puget Sound and on the Coast of British Columbia, I have seen the business in all its phases on both sides of what I have heard termed the "imaginary line," although I look on it being a little more than "imaginary," as others will find out if one compares the price of lumber on the south side of the line with what is being realized on the north side, and will be further surprised if he looks at the difference in the price of logs on the different sides of this "imaginary line," which I think will convince anyone that the "line" is a real, existing, tangible fixture, that can be seen and felt, as British Columbia loggers having logs to sell oftentimes find out as they look longingly over to the log market of Puget Sound and heartily wish for some log-carrying airships willing to make night trips with their products.

Conditions in the logging business have undergone a radical change since I was first identified with it in 1894 on Puget Sound. Then it was if you saw a seedy-looking but husky individual, mentally depressed, with all the appearances of having seen better times, you would probably guess that he had been up against a logging proposition of some sort, and was heartily sorry for it.

The Old Order Changeth

But time brings radical changes in most things, and it has produced big changes in the logging operator, for if you go into any of the cities on Puget Sound now and see a well-dressed fellow in a very attractive motor car, smoking a huge Havana cigar, wearing a large diamond stud, see him stop at a manicuring establishment to have his finger nails made presentable, and then toss the lady manicurist a ten-dollar gold piece with a "Keep the change for yourself, dear," expression, you can set that fellow down as an operating logger whose output is being handled by a well-known logging organization in Seattle.

When inquiring the cause of this startling alteration in the status of the logger, the sawmill men will express the opinion in subdued tones that they fear there must be some kind of an association or combination formed somewhere, although the logging operators strenuously deny that any such thing was ever thought of, and intimate that too much talking in certain quarters might cause an increase in the price of logs, which seems to make the sawmill man, with no available timber of his own, clined to be sad, silent and thoughtful.

If there is a logging combination on Puget Sound I feel rather inclined to like it, for several reasons, one of which is that as a lumber manufacturer on the Canadian side of the line, I feel interested in our competitors, and wish to see them paying a good, healthy price for their raw material, and realize that the price of the manufactured article must be somewhat above the price of saw logs (with shingles, of course, this rule does not apply), figuring that so long as the price of logs is kept up to a good healthy price on the American side, that lumber cannot be very cheap in that market, which is a point in favor of the Canadian manufacturer, as most of you doubtless know. Logging conditions on the Coast of British Columbia, unlike Puget Sound, have not changed materially from what they were fifteen years ago, except that more improved and modern methods of operations are used now than formerly.

There is no effective, concerted action among operators to maintain or steady prices in British Columbia and I do not think that there will be for many years to come. The reason for this is not hard to find, and may be explained by stating that on the American side to be a logger implies being more or less of a capitalist, who must own his timber and be prepared to put a large amount of money into logging equipment, necessary when going comparatively long distances into the woods from waterways, on which his product can be floated to the mills.

He must also have money to enable him to close his camps down and pay his labor and other accounts when the log market does not justify operations, and also have capital to hold his logs until he considers the price is right. But in British Columbia it is dfferent, because in the first place most of the logging operators are poor men, who, by paying a small sum to the provincial government to start with, and small annual payments (less than the taxes on Puget Sound timber), have been able to acquire timber upon which to operate, which timber is, as a rule, close to the tide water, where a comparatively cheap logging plant will suffice to put his logs into the water.

As a rule the Canadian logger starts out in debt for his plant, and very often for his camp supplies, so when he gets his logs in the water he is forced to sell for the best price he can get, and if log market conditions are unsatisfactory it is often a shame the price he gets, reminding a person somewhat of conditions prevailing among the operating loggers on Puget Sound fifteen years ago or less.

So if our British Columbia logger meets conditions in his log market where the output of logs is in excess of the demand, his condition is often pitiful. He can't suspend operations, for "shutting down" means "settling up," and he has to keep going, hoping for better conditions to help him out, and if a chance does not occur soon, in the words of the Good Book, "The last state of that man is worse than the first," or as a good deacon once said: "One damned thing follows another until the victim has to change climates." So when the surplus of logs goes on increasing and prices going down in proportion to this increase, and when, to augment the poor logger's predicament, in case he tries to wait for a better market, the teredoes attack his logs from below, and the sun checks them above, so if his creditors will only wait until the sun checks and teredoes meet there is liable to be an all-around unpleasant combination formed, so that he has to sell his logs for what price they will bring when they are ready for sale, which is often below the cost of production.

A few jars like this and he goes out of business, and other similarly situated accompany him, leaving only a few of the stronger concerns operating. Then, after a while, the production of logs being considerably reduced, the surplus soon becomes exhausted and, there being comparatively few logging camps in operation, logs become scarce and up goes the price to such an extent that the British Columbia mills have to go over to Puget Sound and buy their logs there to keep their mills going. Then it is that a new crop of ambitious men, seeing the price of logs here, consider that the "Logging Route" is the true and only road to wealth, and soon the woods resound with the sound of the axe and the swish of the bucking saw, and the whistle of the donkey engine is heard on the sides of the green hills, but about the time our new crop of loggers get in their second or third boom they find themselves just about where their predecessors left off, and the same sad scenes are all enacted over again.

People who hear this might naturally think that British Columbia is not a safe place for an operating logger, but this is a mistake, as the fault usually lies in the method, and not in the opportunity.

I know that I operated dozens of logging camps before I became a manufacturer of lumber, and always made my camps pay well. The principal explanation I have for this lies in the fact that I operated differently from the majority of those engaged in that line of business in British Columbia.

Opportunity for Brains and Capital

But to resume, I consider that anyone going into the logging business in British Columbia who is possessed of good business sense, with sufficient capital and an intimate knowledge of the logging business, should do well; in fact, it is his own fault if he does not, as the opportunity is here beyond question. It is true, however, that to make a success of logging in British Columbia a man must be possessed of knowledge as to conditions affecting the timber, as well as the increased cost of wages, machinery and supplies on this side of the line as compared with the cost of these essential commodities on Puget Sound, and will say that a "logging chance" that would look good to a man on the American side would probably break him trying to operate in British Columbia, which is the reason that so many competent operators who make good money on the American side of the line had a sad experience after trying their hand at the business here.

Another thing, a man coming over here is liable to get badly fooled in the timber, particularly in old growth cedar, which, on account of over-ripeness, often falls 40 to 60 per cent. below the estimate based on the cruisers' reports, who judged the quantity by methods adopted on Puget Sound. A mistake of this kind is invariably fatal; in fact, I have known many sawmill men, as well as loggers, to go broke as a result of mistakes made on this very point.

It may be said, too, that another difference in logging conditions between what is found here in British Columbia and on Puget Sound and further south, is on account of the different physical conditions of the respective countries, for it may be said that your timbered land on the Coast portions of Washington and Oregon is comparatively level, whereas, up here on the Coast of British Columbia the land is to a large extent broken up, and the timber is found not in large bodies on level stretches or on gently sloping hillsides, but is found in gluches, steep hillsides, up narrow valleys traversed by mountain torrents, too steep and broken for the successful operation of railroads, so that this timber, to be taken out, has to be done by hauling by donkey engines, and by sliding the logs down steep inclines, which costs more money to operate and is far more wasteful on the timber, as more timber is left in the

woods, and considerable loss is occasioned by injury to logs in the chutes, as is well known here.

There are, of course, large tracts of level timber lands here in British Columbia, but they are not common, neither are those the lands from which the mills derive most of their timber supply from at present nor in the past. So you can see reasons why logging is more expensive here than on the American side, speaking generally, although the price of logs is usually cheaper here, but why this should be might be explained by two methods, one of which is timber on the stump here is not worth half the price paid on Puget Sound, the other reason is the loggers are not onto the modern method of selling logs, although a movement is now on foot to try and arrange methods of selling along the lines adopted on Puget Sound, but I have private reasons for thinking that efforts in this direction are predestined to failure.

I may also say in this connection that I know, as a sawmill operator myself, as well as being familiar with the views of sawmill operators generally, that millmen, as a rule, do not want to see cheap logs on the market, or logs offered below the cost of production, for the reason that the smaller mill concerns who buy only from hand to mouth, as soon as they buy a cheap boom of logs straightway, as a rule, cut the price of lumber, making it very uncomfortable and awkward for the larger concerns who have to pay regular prices for logs through all seasons, in order to insure a supply for their mill, so that anticipation of a slump in the price of logs is looked upon by most sawmill men as a menace to their business, so that for this reason I am sure that the Sound method of selling the product of the woods is looked upon as being somewhat philanthropic.

However, be this as it may, without doubt the Puget Sound method of handling logs acts as a balance wheel in steadying the market conditions of the lumber industry on Puget Sound.

I could write a great deal more on this important topic, but do not want to be too long-winded or tedious. I will say, however, in conclusion, that I consider it in the best interests of the lumber business in its ramifications as effecting timber owners, sawmill men, logging operators, etc., that those engaged in this business on both sides of the line meet in friendly conclave to discuss the conditions of their business together, and learn from each other, as we know that success in business flows from the co-operation of competitors. That we can't hope to prosper unless our competitors allow us to do so, to a large extent goes without saying. The fellow who tries to "hog" it all usually goes broke and leaves this world hating himself, and, as the old grave-digger remarked when a stranger asked him, "Who is the deceased and what was the complaint?" "No complaint; everybody satisfied."

Lumber Matters in the Law Courts

Responsibility for Measurement of Pulpwood—Conflict About Scale of Logs—Fire Caused by Employee

DISPUTED MEASUREMENT: An interesting suit was recently heard by Mr. Justice Hutchinson at Sherbrooke, Que., in the case of Denault et al Asbestos vs. Napoleon Gregoire, of Lemieux Station. A contract was entered into between the parties under which plaintiff was to supply the defendant between three and four thousand cords of pulpwood at $7.50 a cord, to be delivered at Asbestos. In accordance with this contract the plaintiffs furnished the defendant with 3,500 cords of wood, and this with other incidentals came to the sum of $27,171.92, of which amount the defendant paid $22,210.00 leaving a balance of $4,961.92, which the plaintiffs sued for.

The defendant claimed that the quality and quantity of the wood was not as agreed upon, and that there was a difference in the measurements at the mills of the International Paper Company, at Berlin, N. H., to whom the wood was sold by the defendant.

The main point at issue was as to where the measurement was to take place, the plaintiff contended that it was to be at Asbestos, while the defendant held that it should be at the mills in Berlin, N. H. The Court held that there was no mention made in the written contract as to where the wood was to be measured, although the defendant had mentioned the word "mill" in his letter accompanying the contract. It was held that the place of delivery was Asbestos.

The judgment of the Court also held that there was shrinkage of the wood while on the voyage to Berlin to the amount of about five per cent. between the measurement at the place of delivery and at the mill. This would amount to about 175 cords on the whole shipment. Since the institution of the action the plaintiffs had reduced their measurement to allow for this shrinkage from 3,500 cords to 3,293 cords, a total of about 207 cords. In view the fact that the defendant had accepted the wood and used it, he could not now refuse to pay for it at the price agreed upon. The Court held that the tender of the defendant was insufficient and condemned him to pay the plaintiffs the sum of $3,213.90 with interest and costs.

DISPUTED SCALE OF LOGS.—In the case of Martin vs. Beck Manufacturing Company, which was recently heard by Judge Latchford, judgment has been given for the plaintiff with costs. The plaintiff brought action to recover for a certain quantity of logs alleged to have been cut by the plaintiff on a certain island in Georgian Bay, for the defendants, and shipped to the defendants' mill. Defendants claimed that a number of logs were culls. Judge Latchford held that the measurements made by the Government cullers were independent and impartial as to the quality and quantity of the timber cut and should be accepted, and as the plaintiff's claim was based on these meaurements, judgment should be entered for the plaintiffs for the amount of the contract price. The logs were scaled by the Government scalers without any intention that their scale should be used between the plaintiff and the defendant. The defendant's only scale was made by the man at the top of the Jack-ladder at one of the defendant's mills. This man measured the logs as they passed him by, and he regarded as culls 573 of the logs. Judge Latchford, however, could not accept his estimate of the logs and believed that the scale given by the Government scalers must be the only possible one upon which a settlement could be made.

RESPONSIBILITY FOR FIRE: A stated case under section 5 of the Bush Fires Act, of B. C., as amended in 1910, is being heard by Mr. Justice Murphy, and it will depend upon the interpretation of the court whether the act will be further amended at the next sitting of the legislature. It has become a question of whether the language of the section means all that it was intended to—making the owner or occupier of land within a fire district responsible for the acts of his servant or contractor in setting out a fire without a permit between the 1st of May and the 1st of October. The question arose in the prosecution of Mr. R. P. McLennan, who was fined for a fire started by his servants on his land at Gambler Island. Mr. McLennan claims that he gave no authority for setting out the fire. The section of the act says that it shall not be lawful for any person, whether such person be the owner or occupier of land, or be the agent, servant, or contractor of such owner or occupier to set out, cause to be set out, or start a fire, etc.

DAMAGE FROM BREAKING OF DAM.—The award of the arbitrators in claims for damages made against the Patrick Lumber Company by Charles F. McHardy and Mark Campbell, arising out of the breaking of the dam on the Slocan River opposite the Patrick lumber mill at Crescent Valley last year, was handed down recently. The river on that occasion washed away part of the land and trees of the McHardy and Campbell ranches. The arbitrators have awarded Mr. McHardy $742, and Mr. Campbell $954.25 as damages, to be paid by the Patrick Lumber Company. The board consisted of William Waldie and W. H. Bullock Webster, of Nelson, and A. B. Buckworth, of Ymir.

DAMAGES FOR INJURIES TO FINGERS: A verdict of $1,100 has been given by a special jury in Vancouver, in favor of Hans Galneck, a logger, whose fingers were crushed while working in Anderson's logging camp up the north coast this summer. The verdict was against the Vancouver Timber & Trading Company, who were alleged to be the owners of he camp, though the defence was that Anderson was only getting out logs under contract for the company.

SALE OF TIMBER LIMIT: An action has been started by Mr. E. R. C. Clarkson, before Chief Justice Meredith, in the Non-jury Assize Court at Toronto, to recover $2,500 from Theodore F. Chamberlain. The case arises out of the sale of a timber limit on Duke's Island, French River.

Legal Notes.

The Ontario Railway and Municipal Board has rendered judgment on the long standing difficulty between the town of Hawkesbury and the Hawkesbury Lumber Company. By its decision the board raises the assessment of the Hawkesbury Lumber Company's mill property from $37,500 to $75,000. It maintains the assessment of $18,475 on the eighty-five dwellings belonging to the company and fixes at $45,000 the business assessment. It is considered as a decisive victory for the town of Hawkesbury and puts an end to a dispute which has been going on for the last ten years. It is stated, however, that the case may be appealed.

Judgment for the plaintiffs in the amount of $1,100 has been awarded by Mr. Justice Murphy in the case of McKinnon & Norton vs. Lee. The action was one for trespass for entering upon and removing logs from timber limits claimed by plaintiffs. The case concerned a timber license to lot 49, range 1, on Jackson Bay, B.C. The defendant admitted the trespass, but said that it had been made in error, on account of the boundary line between the lot and the one he had been working on being loosely drawn. Judge Murphy held that the trespass had not been wilful and assessed the defendant only for the timber cut.

An action for $5,000 has been entered in the Superior Court at Sherbrooke, Que., by the Brompton Pulp & Paper Company, against the Great Northern Lumber Company. The action is in connection with the cutting of timber on the limits of the comapny in the Township of Ditton.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

White Pine Wanted

WHITE PINE 2" AND 3", 6, 7, 8", 10" AND 12", length 10 to 30 ft. for tanks. Also qr. cut Pump Tubing. ONTARIO WIND ENGINE & PUMP CO., LTD. Toronto, Ont. t.f

Cedar Posts Wanted

WANTED FROM TWO TO FOUR CARS Cedar Posts from 3 to 5 inches top end. Name best cash price and point of Shipment. Apply Box 195, Jordan, Ont. t.f.

Basswood, Birch and Elm

FIVE TO 10 CARS 4/4 X 6 AND UP 1S AND 2S Soft Elm. Two cars 4/4 x 6 and up 1s and 2s White Basswood. Two cars 4/4 x 10 and up 1s and 2s Birch. LUCAS E MOORE STAVE CO., 11 Broadway, New York, N.Y. 1

WANTED

PARTIES TO CONTRACT FOR DELIVERY of several million of Birch and Maple Logs to water or rail in vicinity of Georgian Bay during the coming winter. Apply BOX 130 CANADA LUMBERMAN, Toronto, Ont. 24

Birch, Basswood, Ash, Elm

WANTED FOR SPRING DELIVERY TWO to thirteen million feet of Birch, Basswood Ash, Elm or other hardwoods. Would advance sufficient cash to help pay for logs and manufacture of same. Apply Box 175, CANADA LUMBERMAN, Toronto, Ont.

Wanted

Two Million Hard Maple Lumber

1 INCH TO 4 INCH THICK FOR SHIPMENT soon as dry or can accept quantity soon as sawn. Spot cash. Inspection at mill. Apply for further particulars to Box 164, CANADA LUMBERMAN, Toronto, Ont. 4

Wanted to buy the following:

200M 1 X 4 and up. w.p.d.c. state approximate average width and length
200M 1 X 4 and up w.p.m.c. state approximate average width and length.
200M 1 X 10 X 12 w.p m.c. 10 ft. and up
200M 1 X 10 X 12 " " d.c. 10 ft. and up

Quote Price for cash. P.O address
PETER GOUGE, Kelso Mines, New Ont.

WE WANT TO PURCHASE DRY SOFT Elm, Black Ash, Basswood and Birch in car lots of each. Also a few cars of 6/4 and 8/4 Birch, No. 1 and 2 Common, for immediate shipment.

Will also contract for present winter cut of all kinds. Give full particulars, and address, THE LONDON LUMBER CO., London, Ont. 2

FOR SALE—LUMBER, ETC.

For Sale

SLACK BARREL HEADING. BOX 166 CANADA LUMBERMAN, Toronto, Ont. 4

For Sale

6 Cars of 8 ft. Cedar Posts 4 in. up.
1 Car of Cedar Shingles.

JAS. SPUN,
20-tf L'Amable, Ont.

Oak Piling for Sale

ONE TO FIVE CARS OF OAK PILING from 16 to 50 feet long. Address BOX 174 CANADA LUMBERMAN, Toronto, Ont. 24

WATEROUS ENGINE WORKS CO., LTD.
Brantford, Canada. 15 t.f.

For Sale

HALF PRICE—LARGE QUANTITY OF wood pulleys all sizes from 6 inches up to 60 inches in diameter of different manufacturers, also a good wood sticker machine and circular saw and table complete. Also a large quantity of wheels and pins and iron work complete for dry kiln trucks also drum and gears for elevating and drawing heavy weights on the level such as railway cars, etc. Also various parts of machinery and shafting of different kinds. Other wood working machinery for sale, also a pair of fans. These goods we are satisfied to dispose of at a great sacrifice on account of not having any use for them. Apply NATIONAL CASKET CO., 107 Niagara Street, Toronto, Ont. 24-24

WANTED—EMPLOYEES

Advertisements under this Heading two cents a word per insertion.

GOOD MAN WITH EQUIPMENT TO CONtract to take out and deliver to Mill Three Million Feet Logs Four Mile Haul, commence Sept. 1st. Box 115, CANADA LUMBERMAN, Toronto, Ont. tf

WANTED A FIRST CLASS AND COMpetent superintendent, to take charge of wood-working plant in the United States. Must have wide experience and first class recommendations Address Box 171, CANADA LUMBERMAN, Toronto, Ont. 2

WANTED LUMBER SALESMAN for New York and Mass. States. Must be a hustler and know the White Pine and Spruce trade as manufactured in Canada. A splendid opening to right man. State age, married or single, salary expected past experience and any other necessary information. Applications treated confidentially. Apply Box 163, CANADA LUMBERMAN, Toronto, Ont. 2

WANTED—EMPLOYMENT

Advertisements under this heading one cent a word per insertion. Box No. ten cents extra.

IF YOU WANT AN EMPLOYEE FOR ANY branch of the lumber or woodworking trade the best, quickest and cheapest way to get him is by placing an advertisement on this page. CANADA LUMBERMAN AND WOODWORKER, Toronto, Ont.

LOG BAND FILER or "Resaw" wants position, good references. W. Hollingshead, Barrie, Ont. 24

WANTED POSITION AS LUMBER INspector or manager, seventeen years experience with large wholesale lumber firms. Address J. HECTOR LATOUR. Midland, Ont. 24-4

ONTARIO LICENSED LOG SCALER AND Lumber Shipper; with knowledge of bookkeeping, strictly temperate and reliable, open for engagement. Apply stating salary offered.
BOX 172, CANADA LUMBERMAN. 24-1

SITUATION WANTED. Man experienced in lumber trade in England wants position in lumber merchants' office with a view to securing salesman's position. Has several months' practical experience in yard work. References given. Apply Box 169, CANADA LUMBERMAN, Toronto, Ont 24

BUSINESS OPPORTUNITIES

ESTABLISHED NEW YORK OFFICE wishes to represent a first class Canadian White Pine account in N. Y. on a strictly commission basis. Address Box 173, CANADA LUMBERMAN, Toronto, Ont. 24-1

SAWMILL FOR SALE

IN New Ontario, north of New Liskeard, on T. and N.O. Railway. Surrounded by good timber. Capacity 10,000. Address Box 142 CANADA LUMBERMAN, Toronto, Ont. 1

OLD SAW MILL FOR SALE

ON Black River at Fawkham Siding, on Canadian Northern Railroad, County Ontario Capacity 20m. Quantity of good timber in vicinity. Will accept $500 to close Estate. W. B. TISDALE, Orillia, Ont. 24

Timber Limits For Sale

CAN BE QUICKLY AND PROFITABLY disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. CANADA LUMBERMAN, Toronto, Ont. t.f.

Saw, Shingle and Stave Mill for Sale

AT UTHOFF STATION G.T.R., CAPACITY 15 thousand with 13 acres of land, Residence, Store and 4 mens houses, also 500 acres rough timber land partly stripped.

Considerable timber in vicinity, must be sold now. W. B. TISDALE, Orillia, Ont. 2 4

Timber and Land Investment

FARM OF THREE HUNDRED ACRES within 35 miles of Toronto—one hundred acres of which is timber land—Pine, red and white Oak, Maple, Beech, Basswood, etc. Balance of farm is under cultivation, thirteen acres bearing apple orchard. Buildings cost over five thousand. Price, $29,000. Box 160, CANADA LUMBERMAN, Toronto, Ont. tf

MISCELLANEOUS

Timber Limit for Sale

2,600 ACRES, ESTIMATED TO HAVE thereon the following standing timber: 3,000 cords pulp wood 2 million Pine, 30 000 Cedar Ties. 40 000 ft. Black Oak, 100,000 ft. Hemlock, 2 million ft. Birch and Maple. 5 miles Haul to River and Rail, back of Bruce Mines. $3,000.00 for quick Cash Sale. Box 165, CANADA LUMBERMAN, Toronto, Ont. 24

Cresol Calcium

PATENT NO. 115,933, FOR THE PRESERVAtion of "Railroad Ties, Telephone and Telegraph poles, Wood Paving Blocks, etc." For terms of Royalty, etc., apply to BLAGDEN WAUGH & Co., 4 Lloyds Avenue, London, E. C., England. 50-50

Timber Limit for Sale

To close an estate

BERTH NO 3 TOWNSHIP OF GURD Parry Sound District, containing Hemlock Birch, Maple, Oak, Basswood, Spruce and Cedar Apply Box 1456, Guelph. 4

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address CANADA LUMBERMAN, Toronto.

Newfoundland Timber Limits for Sale

85 SQUARE MILES ON THE FISHELS Brook, 12 miles from tidewater on the Bay St. George. Ocean going boats within 500 feet of mill site. River through centre of tract to float logs to mill at tidewater with no expense to put same in shape. 10,000 horse undeveloped water power. Timber large and sound. Cruises 160 million feet of Pine, same amount of Spruce and 700,000 cords of pulp wood, the finest in the world. Will sell entire tract or half interest to experienced lumberman who will operate same. C. A. LARNED, Phoenix, N.Y. 24-1

For Sale

Freehold Spruce Lands

SIX HUNDRED ACRES, WELL COVERED with Spruce and other Pulpwoods, also in a promising Mineral Belt.

Being held in fee simple; there are no restrictions as to export, and being close to Lake Superior and intersected by the Canadian Pacific Railway it offers great convenience for shipping. For quick Sale to close an estate. Special price quoted.

tf. WILLIAMSON, Publisher, Toronto.

What's in a Name

A prominent furniture dealer of Boston displayed in his window several pieces of beautiful furniture, says the St. Louis Lumberman. Hanging on the back of one of the chairs was a placard with the words: "Tabasco Mahogany." I wondered whether he really knew what he was advertising—went into his place and asked him what he really meant by "Tabasco Mahogany."

"Why," he answered me, "Tabasco mahogany is the best and most expensive cabinet material we can buy, and——"

"But why the name, Tabasco?" I interrupted.

"Simply a name—just a name—a trademark as it were, that the English use to designate a certain quality or grade of mahogany; a technical matter, you know, that wouldn't interest you. The really important thing is that this wood has the finest grain, takes the best finish, and costs us more than any other."

But the name did interest me, and while he talked of costs and prices and quality, I stood again—in memory—on the low banks of the Usumacinta and again saw the great river flowing down from the mountains of Guatemala, through the fertile plains and deep jungle of Tabasco and on to the sea. Through great forests where "caoba" and "cedrella," sisters of the "monte," bent their heads above the waters to see themselvse reflected there. In that moment I had left the bleak hills of New England and was living again in the land of "caoba"—mahogany. For here, in the fertile

valleys of the Grijalva, the Usumacinta, the Candelaria and the Mamantel, grows Tabasco mahogany.

When little trading schooners began to poke their noses into these harbours of the gulf, the natives cut and floated down to them great logs of a beautiful wood; and in honour of the state from which it was first shipped, the traders called it "Caoba de Tabasco" or "Tabasco Mahogany." Thus it was that all the product of this great section, from the mountains of Guatemala to the Gulf, came to be known by the same name.

New Zealand Timber Supply

The present position of the timber supply in New Zealand is as follows:—Out of a total area of 66,568,876 acres in New Zealand, about 17,074,003 acres are covered with forest. In 1886 the forest area was estimated at 21,196,966 acres. In 1909 it was estimated that there is growing within the Crown and State forests, and on private and native freehold lands, the gross total of about 33,000,000,000 superficial feet of timber, that is or may eventually prove suitable for commercial requirements. The output of sawn timber for the past year amounted to 413,868,919 superficial feet. It is estimated that this quantity will advance to an average quantity of 450,000,000 superficial feet for the next fifty years, thereby giving an anticipated period of about forty years within which the indigenous forests can meet the demand. As against this, the stock of the trees in the state nurseries and plantations amounted to 47,835,217 on March 31, 1909, of which 16,231,479 had been planted during the preceding twelve months. The total area of land planted with forest trees at the same date was 12,175 acres, of which 2,709 acres had been planted during the previous year.

Electric Cranes for Saw Mills

The duty of a crane in a saw mill and timber yard being intermittent, after considerable experience we are of opinion that the best crane for this work is an overhead electric travelling one, which can be arranged to run right through the mill and timber yard. The chief advantages of an electric crane are that the power is always ready when wanted, and can be immediately switched off when done with; at the same time it is rapid in action and very convenient in use.

A considerable variety of arrangements are in use, but speaking generally, we know of nothing which gives better results than a multi-motor system in which each of the motions is worked by a separate reversible motor. The first cost may be a little higher than some other arrangement, but the result in working is generally more economical and satisfactory.

In many cases it would pay to buy current from a public supply to work a crane where it would not be economical to drive the whole mill electrically.

Wood Structure and Tree Location

Trees growing in bottom land or in particularly rich soil are generally more open in grain and will not be so suitable for manufacturing purposes where strength is required as trees of the same kind growing on higher and drier ground. This is noticeable in such lumbers as mahognay and quarter-sawed oak.

The Cuban or San Domingo mahogany coming from the hillsides and mountains is always better than that coming from the bottoms or flat, rich jungle. Similarly oak from the Mississippi river bottom lands or from the delta is not so good as that coming from the rolling land and hills farther back from the river.

The wood from the high ground is always heavier than that from the low ground when both have been thoroughly dried under the same conditions. In the can form a pretty good estimate as to the length of time the stock has been cut by inspection, and in that case the weight will indicate where the wood grew.

Cutting Out Ships' Timbers

When ships' timbers or ribs are being cut out for the bows they require to be cut to forms of double curvature to suit the bilge of the vessels, from the keel upwards; and in conjunction with that they must be adapted to the tapering shape of the bow. The variations of curvature are marked in degrees upon the timbers at intervals along the curved line to be cut on one face, the degrees expressing the successive angles of obliquity. In cutting these the saw is usually arranged to work horizontally, and swivelled on a fulcrum having its centre at or near the surface, is set by the aid of a graduated scale successively to the necessary angles. The laborious use of the adze is thus dispensed with. The travelling table, on which the wood to be sawn is placed, is fitted with a self-feeding motion.

Half Crossed Leather Belting

Half-crossed belting is not good practice, and should not be used unless absolutely necessary. In this case we recommend a belt specially made for the purpose, so as to secure as far as possible an even tension on both sides of the band. To effect this the belt is made with two or more longitudinal strips of equal width and placed above each other so as to form steps. The upper strip lies partly on the second one, which increases the radius of the pulleys for the thickness of the leather, thus equalizing the way whereon the edge of each strip is running around the pulley to the curve described by the outer edge of the corresponding strip. The belt should be kept as pliable as possible.

There are a number of reasons for band saw blades oscillating and running untrue, but the two chief ones are from the back of the blade becoming untrue or irregular and out of line, and from uneven tension or "tight" and "loose" places and ridges or twists in the blade. Again, if the saw gullets are allowed to get too small, so that the sawdust cannot be readily chambered and escape freely, untrue running will occur.

Maple is a wood that takes up moisture readily, but it takes it through the end, not the side wood. For this very reason choice maple is stood on end for drying, so that the moisture may run out. We may add that a good way to prevent maple in joinery or cabinet work, from taking up moisture from the atmosphere is to paint, varnish, or fill the end pores with something.

Review of Current Trade Conditions

Ontario

The lumber trade is in a holiday mood. Orders continue to be made, but most of them are for shipment after the first of the year. A prominent wholesaler, discussing the situation remarked that the condition of the lumber market was a queer one. You never knew exactly where you were, or what the other fellow was going to do. Everything at present depended, he said, upon whether the Americans were going to come over here to buy stock after the new year. For this reason there is nothing new to note in trade conditions. The demand for good lumber, of course, continues strong, and it is difficult to dispose of the low grade stuff. Lath and shingles are quiet.

In hardwoods, the trade continues active. The good ends of basswood are very scarce, particularly in the thicker sizes; inch and a quarter and thicker. The only thing slow in basswood is a little local low grade stock. Good lines will bring the price at any time, particularly in the wide stock. Good grades of soft elm are scarce. The demand is good and the offerings are small, as practically all the dry stock has been a dealer could dispose of low grade stock on th pretense that it was shipped up. There is a little low grade stock offering, but the day when better than it really was, has passed, and the low grade is hard to dispose of. In the market for basswood particularly, the time is approaching when the consumer will buy by grades or will insist upon a guarantee of the quality of the lumber. Soft maple is advancing and keeping in touch with the advance in basswood and other lines which are used in similar classes of work. Hard maple, generally speaking, is off the market in almost every thickness, until the new stock comes in. There is a general indication of a good active business in hardwoods unless there is an over-production. If the producers use good judgment this year they are almost certain to get high prices next season. At present there is nothing to indicate an increased production. There has been, on the other hand, a great deal of snow in the woods, which in some sections of the country is hampering the getting out of logs. Operators cannot draw out their logs at present, and they are working at a disadvantage in making more logs, because of the depth of the snow. In the neighborhood of Powasson, for instance, there is 2″ of snow, and it is usually difficult to skid or cut logs.

A seasonable quietness prevails in Ottawa Valley lumber circles, largely on account of the prevalence of stock taking. Negotiations, however, have been opened by some of the export firms, with old country buyers, and the indications are that there will be about a normal demand, though hardwoods will be more widely sought after. It is impossible at present to say whether prices will advance, though there is a belief that for the upper grades for shipments to the old country, higher prices will be required. Lower grades have been worked off fairly satisfactorily and a continued improvement in the demand is expected. Winter operations are now pretty well in full swing. Wages continue high at from $30 to $32 with transportation included, and in some cases as high as $35 is being paid. For a man and team $2.75 per day has been paid. The prevailing price, however, is from $2.25 to $2.50. Hay and oats are somewhat cheaper, but flour, pork, dried fruit and beef are higher. Beans are about the same as last year, in price. Ottawa planing mills are not quite so busy as they were a year ago, but the prices they are receiving are about the same. In fact, prices of planing mill products have changed very little during the last ten years.

Eastern Canada

With the exception of the demand for the English market, there is not much activity in the Nova Scotia lumber markets. The English enquiry is entirely for stock to be delivered during the winter, spring and coming summer. Nova Scotia exports to England have been quite up to the average throughout the year just closing, and it is believed that during 1911 they will, if anything, be a little heavier, on account of a contemplated decrease in the New Brunswick cut. Small operators have been disposing of their winter cut at from $14 to $14.75, according to the percentage of 9-inch and 11-inch. There is a fair demand for good birch in England, but hemlock and pine are dull. No change can be noted in the American market, although inquiries are being received for spring delivery. Shippers are inclined to hold over their stocks for the spring trade in the hope of higher prices. The South American demand is dull and the same applies to the West India markets. English importers are expecting a fairly good market next year with a corresponding firmness in prices.

A good trade is reported from Montreal. The excessive amount of building in progress is making a good demand for hardwoods and interior finish and floorings in general. There is a tendency among operators in Quebec and Ottawa Valley districts to curtail their output on account of the unsatisfactory demand which has prevailed in the British markets. The demand for shingles continues disappointing. Lath, however, are unusually strong and stocks are small.

There is a firmer tone to the Boston market for eastern spruce. Prices are not changed but are well maintained. Spruce frames 9-inch and under have been quoted at $23 for several weeks, though small concessions from this price have been made. The number of mills operating at present is less than a year ago. Some of the winter mills have not started up. Retailers are not showing much interest in large lots and cannot be expected to buy in any but a conservative manner until after the new year. Cargo business has disappeared. There is only a moderate demand for random. Spruce covering boards are active and prices are steady. At New York, the offerings of eastern spruce are plentiful, but the yards are not buying heavily. Building is much less active than usual at this time of year. Retailers are not looking for much improvement before spring. The demand for hemlock at Boston is quite active, but stocks are well held. The mills in Maine shut down about a month earlier than usual. Prices for eastern clipped, range from $19 to $19.50. The demand for random is fair. Eastern random is being held at $18.50, though a few lots are offering at $18. There is a fair demand for hemlock at New York, and prices are steady with stocks low.

Shingles at Boston are quite active and prices firm. For the best brands $3.40 is being asked, though for good brands $3.25 is the ruling price. Clears are quoted at $2.75 to $2.90. Lath are somewhat firmer, though the market is rather shaky. For 1⅝-inch the prices vary from $4 to $4.10, and for 1½-inch from $3.50 to $3.60.

Great Britain

The spot business at London is particularly quiet, although deliveries from the docks have been much better than they were during the corresponding period of 1909. The only explanation of this is that stocks are probably being taken from the docks into the merchants' yards. Prices of deals have been stiffening, but batten prices on the other hand have been shrinking. The demand for battens is dull and so is the demand for flooring, probably on account of the dullness in the demand from the building trade. Sawn pitchpine timber is steady but firm. At Churchill & Sim's recent auction sale a quantity of American hardwoods was offered without reserve and was quickly cleared. At Southampton the trade continues quiet with a dull demand and very little prospect of improvement until after the new year. Arrivals have been practically nil. Stocks, however, are large, and as the output is small there is reason to feel pleased at the lack of arrivals.

Nothing new can be reported regarding the Liverpool market. Values are being fairly well maintained but there is a noticeable easing off in the demand, probably due more than anything else to the political unrest. It is expected that the balance of the year will be unusually dull from a business point of view. Spruce is unchanged. The demand on the spot continues moderate and there is good competition for whatever business is offered. Stocks on hand are well assorted, with no shortage in any particular size. There is a fairly good demand for 3-inch by 9-inch, and for long lengths in 3-inch by 7-inch and 8-inch. Nothing new can be predicted as to the future market. C.i.f. values for parcels to arrive from Halifax are maintained, but the offerings are scarce. Values for birch plank are well maintained on the spot. Old stocks are rapidly being taken into consumption and stocks of 2-inch and 2½-inch have run very low. New arrivals, therefore, are in good demand. For future shipments 1908, c.i.f. is being named. Values for birch logs are also firm as stocks on hand are small. New arrivals would meet with an active demand. Floorings are reported steady with very little business in progress, either in the spot or in the c.i.f. market. There are no indications of change in this regard. Pitchpine timber is reported firm with an improved demand. The trade in timbers at Manchester has slackened considerably, but this is to be expected at this time of year and under the present political conditions. Prices, however, without exception are firm. For the 10 months ending October 1, timber imports to all sections of the Manchester canal totalled 453,288 loads, whereas for the corresponding 10 months of 1909 the total was 455,091 loads. The decrease, however, is largely in wood pulp. There has in fact been a considerable increase in the quantity of timber imported.

At Bristol business is rather slack, imports being scarce and politics having interfered with trade. Better things are looked for after the new year. The withdrawal of the Canadian Pacific line during the winter has resulted in a hardening of spruce prices. Riga agents are accordingly looking for the business which cannot be satisfied from St. John.

United States

The sudden arrival of cold weather has materially reduced the volume of the lumber trade. City retailers, however, are still doing a fair amount of business. Northern pine is reported fairly strong at Chicago by the wholesalers, but city dealers are sacrificing their stocks on account of unnecessary competition. Box material is weak, with stocks large. The hardwood trade at Chicago is only moderate. Factories are running full but are using reserve supplies. Wholesalers report a considerable falling off in orders and enquiries. Plain oak is in good demand and firm. Quartered white oak is steady and doing a fair trade. Gum and cottonwood are comparatively active. There is no change to note in northern hardwoods. Birch is in good demand, both plain and red. Soft elm and rock elm are fairly active. Hard maple is in good demand with stocks small. There is a steady and active demand for maple flooring. The enquiry for hemlock at Chicago is strong, and arrivals are plentiful. Hemlock operators will probably put in a normal stock of logs this winter. Prices for southern pine at Chicago are irregular and the market continues weak.

At Buffalo, receipts of northern pine recently have been large, but business is rather quiet. There is reasonable prospect for greater activity after the new year. Building continues active and box factories have enough work on hand for a month to come. Prices are unchanged, but in the lower grades show a tendency towards uneasiness. Hardwoods at Buffalo have been rather quiet. This is to be expected at the end of the year. As soon as the holidays and the inventory season have passed. trade will probably improve. Oak and maple are in good demand, and birch also is moving well. Prices of hemlock at Buffalo are steady, though not as high as a year ago. Shingles have been moving more extensively at Buffalo of late than they have before. Prices are stronger and sales continue active.

Market Correspondence

Ottawa Valley News—Stocks Well Reduced

Ottawa, Dec. 10.—The holiday season and the tendency of lumber firms to have their stocks as small as possible for stock-taking on the new year, have been responsible for considerable quietness in the lumber dealings in this district. The firms exporting lumber to the old country have in many cases opened negotiations with buyers and indications so far, are that the demand will be about the same as last year, with an increasing requirement for hard woods. It is somewhat too early to state whether or not there will be any advance in prices, but the general opinion is that in the best grades (the chief variety shipped to Great Britain), any advance will not be very great. Most of the manufacturers however, anticipate a larger demand for the lower priced stock, arguing that the surplus of this variety is being worn down to quite an extent.

Booth's mill closed finally on the 26th, after running about half force for a time on account of the number of men the firm sent to the shanties. With the exception of a short time in September when the water was somewhat low, the mill's water power was good throughout the summer. The dam already built for the conservation of the water farther up the river resulted in more water during the autumn.

Few horses have been shipped to the woods as yet. J. R. Booth has sent up some of his own horses for the rolling up, and a carload of horses were sent to Massey for the Carney Lumber company, which has some early work to do in portaging. Most of the teams and teamsters will leave about the first of January. The employment officers state that the supply of horses is good. Wages remain pretty stiff. Two or three carloads have been engaged at $2.75 per day for team and man. However, these are the exceptions, as the usual prices are between $2.25 and $2.50. The hiring agents continue to give the preference to city teams which have been working for supply companies and the like during the summer. These are already hardened and fed-up and prepared to begin the heavy work at once, while farmers' horses, except in some instances, have to be prepared for it after reaching the woods.

Men's wages are about the same as last year, around $30 to $32 for the large firms, with transportation of course, and some jobbers have had to pay as high as $35. However, there is a pretty fair supply of labor. Booth's have about 3,000 men in the bush, 1,500 of whom came from this vicinity and the remainder from the Upper Ottawa.

The cost of operation in the lumber camps will be slightly higher, if anything, than last year. Hay is somewhat cheaper than it was last fall, but is not of quite so good a quality as a rule. Oats are from 10 to 15 per cent. cheaper than last year. Flour is about 50 cents a barrel higher, and pork, in spite of the recent drop, will average higher than last year. Dried fruit is about 50 per cent. higher, beef is higher and beans are about the same. Wages are about the same.

The Upper Ottawa Improvement company has ordered a new steel hull for the warping tug, Mink, which operates near Quyon. It is coming from Kingston from the Collingwood Shipbuilding company. The company will begin work on the new sorting ga atp Fort William opposite Pembroke as soon as the weather freezes sufficiently.

Since A. F. Fraser is erecting a new mill at Pembroke. Three companies will now be operating in that town, the other two being the Pembroke Lumber company and the Colonial Lumber company.

Work has been discontinued on the log chutes at High Falls on the River Lievre. This chute is for pulp logs, to avoid the 150-foot fall. It will be 750 feet long and is being constructed for the James Maclaren Lumber company. It is of concrete and has been sufficiently advanced for work to be resumed in the spring, regardless of high water. Mr. J. B. McRae is the engineer.

Fever is reported in the camps on the Gatineau, and a case of small pox in the Shepard and Morse company's camp on the Montreal river. The officials of this lumber company point out that special care is always taken to select a fine, healthy class of men and to keep their camps clean and healthy. The man who has smallpox acquired the disease before he went to camp at all.

There is considerable public interest and regret that Controller James Davidson of Ottawa should be disqualified for that position on account of selling lumber to a contractor who was doing work for the city. Controller Davidson pointed out in his statement that while he had always refused to tender for contracts for the city while in the council or board of control, yet he never considered it wrong to tender to supply contractors doing work for the city. However, the regulation is there, although he did not know it, and he felt it was his duty to resign.

The planing mills are not so busy as at this time last year. The demand then, however, was unusually strong and this December is fully up to the average. Prices with them remain substantiallly the same. The price of window sash, etc., is practically the same now as it was ten years ago, the improvement in methods of manufacture keeping pace with the advance in the cost of lumber. So far, the mills have been running full time with no men laid off. The mill owners hope to continue until February when the new orders come in, without reducing the output.

Nova Scotia News—English Trade Active

Halifax, N.S., Dec. 10.—The only market that is attracting much attention just at present, for buying, is the English market, and this for stock to be delivered through the winter and next spring and summer. Contrary to general expectations, the exports from Nova Scotia during 1910 to the English market have been equally as large as last year, in fact, slightly in excess. Indications now point to the Nova Scotia cut for next season being equally as large, since the New Brunswick cut will in all probability not be any larger next year than it has been this year. The fact that the English market has been able to take care of this quantity during the present year, would indicate that with the elections over, even though the cut were slightly larger, fair prices will be maintained.

A great many of the small operators along the I. C. R. have sold out their cuts for this winter at prices ranging from $14 to $14.75, depending on the percentage of 9″ and 11″ stock. Hemlock and pine are reported dull on the English market, while good birch seems to be in fair demand.

The American market shows absolutely no change, except that some dealers are making enquiries for stock for spring delivery, as anything that can be bought at present values, will probably bring considerably more in the spring. Most shippers are holding over any stock they have for spring shipment, and seem inclined to wait to see what changes there will be in the market before disposing of any stock.

Shipments from Windsor have been very large of late, and in all probability very little more will be shipped from there this season.

Some stock has been going forward from Bridgewater, and one fairly large vessel has been chartered to load at Halifax this month.

The shipments to the American market from Nova Scotia this year have been fairly large, although I have seen no statistics as yet that would show what the amount was. One consignment house reports that their business is larger than it has been in any previous year, being about twenty-five millions.

Very little is being shipped to the South American market now, the only charter I have heard of recently, being a cargo to be shipped from Halifax next month.

Some shipments are going forward to the West Indies, but dealers here report the market being in rather an unfavorable condition.

Charles Tyrer of Smith, Tyrer & Co. has been in Nova Scotia for the past week, and left yesterday to return to Liverpool. He reports that conditions will probably be fairly good on the English market next year, and prices maintain a fairly good level through the season.

Most of the operators have started logging, and in most cases will endeavor to get out as large a cut as the winter will permit.

Very little lumber will be cut this year on the eastern shore of Nova Scotia. The cut here, probably will be about the same as last year. Throughout the rest of the Province, operators are endeavoring

CANADIAN WESTERN LUMBER CO. LIMITED
F
FRASER MILLS. B.C.

to get good sized cuts in most cases, which will probably be quite as large as last year, with the probability of a considerable increase.

Gratifying Trade Conditions at Montreal

Montreal, Dec. 10.—Trade conditions in the lumber industry in Montreal and vicinity are of a gratifying nature, both in the wholesale and retail branches. Dealers report that trade is brisker than it was at this time last season, the demand in several lines being almost unprecedented for any time of the year. Now that the real cold weather has set in, it is expected that the increased demand for the heavier class of lumber will show a falling off, but the abnormal amount of building will keep up the requirements in the finer lines to an exceedingly high level. Hardwoods especially are in good demand, and dealers are optimistic in their opinions as to the future of market conditions in flooring and kindred classes. They point out in support of their opinion the great number of large buildings that are nearing completion.

The tendency this season, however, on the part of the large limit operators, will be to curtail their output, rather than make any larger cut than last year. The British market has been anything but good, while the American, from reports gleaned here, has been very poor indeed.

At the special stockholders' meeting of the Diamond Match Company, an issue of $2,000,000, ten years, 6 per cent. convertible debentures was authorized, as was also an increase of stock from 16 to 18 million dollars to take care of these bonds.

One large dealer commenting on the shingle market, gives some interesting views. "Conditions have been growing worse in the shingle market for several years," he said, "till during the last twelve or eighteen months matters have become decidedly bad. Many reasons have been given for this state of affairs. One was that shingles manufactured cheaply on the Pacific coast were being sent east for sale, but what really seems the more probable to me, is the advent of patent roofing, and if the latter reason is true, the present prospect is not very flattering. If the cause is the receipt of shingles from the Pacific coast, it cannot be otherwise than that they are sending shingles to the market and disposing of them without profit for the purpose of getting hold of the market." Several other dealers when seen agreed with the foregoing.

The lath situation is very strong. There are no laths at present in the manufacturers' hands, all having sold out and shipped the season's cut very close. What few they kept in the mills are now in second hands. From the outlook it seems as if there will be higher prices for laths for the spring and midwinter shipments.

More than five hundred thousand Christmas trees are on their way from the province of Quebec to the Eastern States, most of them consigned to New York and Boston. The farmers and small wood lot owners along the division of the Canadian Pacific between Lake Megantic and Sherbrooke, and along the Quebec Central, are reaping a golden harvest. Many carloads of trees have passed through Montreal already.

The trees are called spruce in New York, but as a matter of fact they are generally balsam trees, or "sapina" as the French-Canadians call them. They are cut from the hill sides and the pastures, mostly and the industry does not threaten the forests. Some real spruce trees are of the kind known as "pasture" or "bull" spruce, and the cutting down and removal of them from the pastures is a benefit rather than a loss, as they are full of limbs from the ground up and are useless for any other purpose. The trees are contracted for mostly by one New Englander who has visited the section for many years and has a strong hold on the trade through the personal acquaintance he has built up. The trees are all bought, as a rule, in August, and the season for shipping is during the first weeks of December.

Mr. A. H. Campbell, managing director of the Campbell McLurin Lumber company, Montreal, is on a visit to New York.

Mr. Adelard Lemay, of Megantic, Que., has sold his saw mill on the Lake shore to Messrs. George Gunn and Allan McDonald. The mill was recently entirely renovated, and new machinery installed.

MACHINERY AND EQUIPMENT

Office and Warehouse of The General Supply Co. of Canada, at Ottawa.

The accompanying illustration gives the reader a good idea of the splendid new building of the General Supply Company, of Canada, Limited, at Ottawa, Ont. This concern besides making a specialty of furnishing all classes of machinery, boilers, engines, steam and power pumps, accessories and supplies for mills, factories, machine shops and contractors, are also sole Canadian representatives for the well known brands of belting "Vi-Balata" and "Beardmore," which are becoming so popular among mill men all over Canada. The company was incorporated in June, 1906, and has had a very successful career under the able management of G. B. Green, Jr. So successful has it been in fact that the present substantial and spacious building was recognized to be an absolute necessity. The building is four storeys high, built entirely of steel encased in concrete, which is strictly fireproof. The floors have a carrying capacity of 1,600 pounds per square foot and are constructed of reinforced concrete. The roof and foundation are also of the same material The walls are 18 inches thick and so constructed that at any time four extra storeys may be added without endangering the safety of the building. If the business of the company continues to increase as it has during the past couple of years, further accommodation will be necessary in the near future.

The ground floor is used for shipping offices, shipping room and for the storage of heavy machinery. A very strong trolley capable of handling four tons and operated with ease by one man, is erected on this floor and is a great time and labor saver in moving heavy machinery. The front portion of the first floor is entirely taken up with the large general offices, board room, manager's office, drafting room, blue print room and vault, while the rear portion is utilized as a store-room. The top floor is used entirely for the storage of the many lines of goods handled by the company.

J. A. Fay and Egan Issue New Catalogue

J. A. Fay & Egan Company., have just issued a new catalogue No. 84, containing 384 pages in two colors, profusely illustrated with fine half-tone plates, elegantly bound in a five-color cover. This catalogue is a reduced reproduction of the company's large general catalogue. It will make a valuable addition to any woodworker or mill man's library, as it shows the latest models in all kinds of machinery for working wood. The catalogue will be sent free to any address. The address of the company is 465-485 W. Front street, Cincinnati, Ohio.

Publications and Calendars

The Calendar for the year 1911 which the Parry Sound Lumber Company of Toronto have prepared as a seasonable reminder of their good will to their friends, will be received with pleasure by all who are fortunate enough to receive a copy. Its design and coloring are unusually beautiful and effective, and the subject of the illustration, "The Cruisers," will prove of interest to every one who has had anything to do with the lumber business.

West and Peachey, Simcoe, Ont., manufacturers of the well-known Alligator Steam Warping Tugs, are among the first to distribute a calendar for the year 1911 among their friends. Their calendar illustrates the utility of the Alligator in lumbering operations. The reverse side contains a description of its abilities and of a number of important improvements which have been added to it during the past year, as well as an interesting assortment of testimonials from satisfied users.

The Charles C. Thompson Company, 338-344 Wabash avenue, Chicago, Ill., have published a valuable work in Dustman's Book of Plans and Building Construction. The book is 9½ by 13 inches and contains 240 pages. It gives designs and suggestions for house building, together with costs estimates. The various departments of building, such as stair work, slope of rafters, window frames, etc., are explained in detail and illustrated with examples so that anyone can readily understand them. Tables showing how to make estimates on all the work are given. The carrying strength of iron beams of varying sizes is shown, and in fact there is a mass of technical information. An excellent chapter is devoted to "Figuring Labor and Material for a Building," and a set of specifications is included, drawn up in such a manner that anyone can fill them in or alter them to suit any sort of building. The illustrations show the ground plans, elevations and floor plans of the various buildings included in the book.

EDGINGS

Ontario

S. J. Pickinson's planing mill at Humberstone, Ont., was recently destroyed by fire. The loss was about $7,000, and the insurance only $500.

The Dominion Cooperage Company's plant at Brigden, Ont., was destroyed by fire recently. Nothing was saved. The loss is about $13,000, and is partly covered by insurance.

The steamer Alaska, bound from Owen Sound, Ont., to Windsor, Ont., with a cargo of lumber from the Carney Lumber Company, was recently destroyed by fire at Tobermoray, Ont.

The Dryden Timber & Power Company, Limited, Dryden, Ont., have been incorporated with a capital of $3,000,000. The incorporators are: F. Singer, G. Waters and H. Hill, all of Toronto, Ont.

The Loomis-Morden Cooperage Company, Limited, of Trenton, Ont., capital $30,000, have applied for incorporation. The head office is at Trenton and they will manufacture cooperage products, woodenware and lumber. The directors are Chester Loomis, Mich.; H. B. Loomis and W. A. Loomis, Trenton.

Owing to the fact that the Imperial Paper & Pulp Company, of Sturgeon Falls, has gone into liquidation the town officials cannot collect enough school taxes to run the Public School and the teachers are handing in their resignations. The paper company paid more than one-third of the total school tax in the town.

A $500,000 water power development and pulp mill is to be constructed on the Malbaie river, above Murray Bay, Que. Excavation work has been already commenced by a large force of men and the equipment necessary for the construction of the mill is being shipped to the site of operations by the Bishop Construction Company, Limited, Montreal, under a contract with the Canada Power & Pulp Company.

The Shevlin-Clarke Company will build a plant for the manufacture of lumber, lath, shingles, and other wooden ware at Fort Frances, Ont., if the town passes a by-law limiting their assessment to $25,000 for a term of 10 years. The plant is to include a saw mill capable of cutting from fifty to sixty million feet per year, and a planing mill. Empoyment will be given to 400 men. The proposal to limit the company's assessment will be submitted to the ratepayers on January 2, 1911.

The reorganization of the Spanish River Pulp and Paper Company into the Spanish River Pulp and Paper Mills, Limited, which was announced exclusively in the Canada Lumberman of November 15, is progressing favorably. The new company will have an authorized capital of $2,000,000 of 7 per cent. pref. stock, of which $1,500,000 will be issued; $2,000,000 more of common stock, of which $1,650,000 will now be issued, and there will also be an authorized amount of $2,500,000 of first mortgage bonds, of which it is the intention to issue $1,300,000. The first board of directors will include W. J. Sheppard, Waubaushene, Ont.; J. B. Tudhope, Orillia, Ont.; C. Kloepfer, Guelph; Jas. Playfoir, Midland, Ont.; Thomas H. Watson, Toronto, and John R. Barber, Georgetown, Ont.; Garnet P. Grant, Toronto.

Eastern Canada

W. F. Klugkist, lumber dealer, of Montreal, has retired from the business.

The cooper works of Taylor & White, St. John, N. B., were recently damaged by fire to the extent of about $5,000.

The cooperage plant of Taylor and White, at St. John, N.B., was recently damaged by fire to the extent of $5.000. The plant was insured for $7,000.

The Mercantie Lumber & Supplies Company, Limited, Montreal, Que., have been incorporated with a capital of $50,000. The incorporators are: P. E. Brown and E. E. Kent, of Ste. Anne de Bellevue, Que.; P. Deslauriers, E. L. Davis, Secretary, J. J. L. Brown, manager, and Frank Wilfred Johnson, buyer, all of Montreal, Que .

Utilities, Limited, Montreal, Que., have been incorporated with a capital of $50,000. The incorporators are. J. A. Williams, physician, A. Gillies, engineer and M. A. Williams, of Montreal; and J. S. Gillies, and D. A. Gillies, lumbermen, of Braeside, Ont.

The Canada Gazette announces the incorporation of the "Grand Falls Company, Limited, of Grand Falls, N.B. The purposes of the company include the construction and operation of pulp, cardboard, paper and lumber mills. The capital is $1,200,000. The incorporators include Sir Wm. C. Van Horne, H. S. Holt, H. Samuel, R. Proctor, G. F. Underwood, B. E. Kingman, J. Robinson and A. J. Gregory.

The Emberton Lumber Company have recently sold out all of their property at Scotstown, Que., to the East Angus Company. The Emberton Lumber Company's property consisted of the land which was formerly owned by Mr. M. B. McAuley and the waterpower which at one time was used to operate the old pulp mill, which was burned down. The Emberton Lumber Company has had possession of the property for nearly two years.

Western Canada

The Abbottsford Shingle Company, Abbotsford, B. C., are stated to have assigned to J. W. McCallum.

Joseph Lynn, planing mill owner, Moose Jaw, Sask., is reported to have sold his business to C. Francis.

Craig & Anderson, lumber and implement manufacturers, Kinistino, Sask., are stated to be dissolving partnership.

Mr. Larter, of Bathgate & Larter, Chilliwack, B. C., lumber manufacturers, is reported to have sold out his interests.

E. J. Dobson, lumber and implement dealer, Bladworth, Sask., is stated to have sold to H. E. J. Meillicke & Sons, Limited.

The Security Lumber Company, Limited, of Winnipeg, Man., have been

incorporated with a capital of $500,000. The incorporators are: John P. Jansen, manager; Lorne. J. Elliott, barrister-at-law, both of Winnipeg.

The Riverside Lumber company is opening a new branch yard in the new Canadian Pacific industrial sub-division in East Calgary.

Chennells & Quesnelle, lumber dealers, Maple Creek, Sask., are stated to have been succeeded by the Pioneer Lumber Company, Limited.

The mill property at present occupied by the Rat Portage Lumber Company, and two wood lots belonging to the estate of the late John Taylor were sold at public auction recently. The successful bidder, William Richardson, secured the property for $6,500.

The B. C. Gazette gives notice of the incorporation of the following companies:—The Hage Timber & Investment Company, Limited, capital $50,000; Canadian Timber Company, Limited, capital $1,000,000; Poulin Lumber Company, Limited, capital $100,000.

James C. Shields, head of the Monarch and Sovereign Lumber Companies, operating in the interior of the province, has bought 10,000 acres of timber on Queen Charlotte Islands. The timber consists chiefly of spruce and yellow cedar, the latter being very valuable.

It is reported that a sale of 105 sections of timber land near Fort George, B. C., has been made by Mr. C. E. Mahon, of Vancouver, for the sum of $1,500,000, to an English syndicate. It is also announced that mills will be erected to manufacture the lumber on the spot.

Arrangements have been made for the building of a saw mill at Quatsino, B. C., this winter. Behind this enterprise are James Guyer and Gustave Moerman, both residents of Quatsino. The mill men will start in a small way, catering principally to the home market.

The shingle mill and box factory which will be erected by the Western Box & Shingle Mills, Ltd., at Nelson, B. C., will be a frame building with iron roofing. It will be 36 feet by 48 feet and 2 stories high. The estimated cost of the building is $1,000, and the machinery $4,000.

A new sawmill with a capacity of 25,000 feet daily, has just been completed at Port Hammond, B. C., for the Bailey Lumber Company. The cost of the new mill is $25,000. It is expected that the plant will be augmented in a year by a planing mill, lath mill and dry kiln.

Work is going ahead on the new planing mills and sash and door factory of the South Alberta Lumber Company, Lethbridge, Alta. The plant will be complete in every detail and it is said that with the exception of the Cushing factory in Calgary, it will be the largest in the province.

The Imperial Fir Company, of Imperial, B. C., the new town near Vancouver, are erecting a hotel in the town and have made considerable progress in the securing of machinery for the new saw mill, which they are under contract to build. The president of the company is Mr. C. C. Michener.

A timber deal has been effected between G. C. Poulin, as purchaser, and Messrs. McPherson and Nelson. The limit sold lies on the western side of Slocan lake, opposite Rosebery, B. C. It is said Mr. Poulin proposes the formation of a company for the operation of the sawmill at the mouth of Evans' creek.

The Rat Portage Lumber Company have suffered another serious loss through fire. On Dec. 7, flames destroyed the saw mill, engine house, box factory and drying kiln of their plant at St. Boniface. A considerable amount of lumber was also destroyed. The sash and door factory and the stables were saved. The loss is estimated by Mr. D. C. Cameron, president of the company at $90,000 with insurance amounting to 75 per cent. of the loss.

The extensive construction programme of the Brooks-Scanlon Company, in connection with the erection of their pulp mill and paper manufacturing plant at Powell river, B. C., is well advanced toward completion. Upwards of 1,200 men have been continuously employed all summer, the great sea wall and mills being now nearly ready. The latter are of steel and concrete exclusively and the entire plant is modern and complete in equipment.

Timber rights on 100 sections of land, principally in the Fort George district of B. C., have been purchased by British capitalists from C. E. Mahon, of Vancouver and associates, for $1,500,000. This is said to be the largest price ever paid in a single timber land deal in British Columbia. It is said that there are over 2,000,000,000 feet of fine spruce, cedar and fir on the sections. Most of this lumber land is on the Willow river, 20 miles east of Fort George. One-half is to be paid in cash.

Walter Mariott has purchased from Messrs. Dickie, Van Norman Haycroft and J. W. Vipond, of Nanaimo, B. C., their interests in the Quamichan Sawmill Company. Mr. Marriott has organized a joint stock company to take over the holdings, which include the timber limits. The capacity of the mill will be in the neighborhood of 10,000,000 feet per year, a large portion of output going to the northwest. Mr. Marriott has lately completed the purchase of 100 acres of timber lands from the E. & N. Railway Company.

There will be great activity in the various camps around Creston this winter. It is stated that the Yale-Columbia Lumber Company will operate their camps all winter, full blast, employing about 100 men within a few miles of Creston, while the Huscroft Bros. will open their camp again this winter and employ some 30 men. In addition to this the Canyon City Lumber Company will run their mill double shifts this winter and will employ some 50 men. Besides these works it is stated that several other new camps will open up this fall near Creston, so that judging from present appearances there will be several hundred men employed in the timber and saw mill industry in and around Creston.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Rearders of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope, and stating number of enquiry.

1734. Pine boards and sidings.—A Manchester firm asks for dimensions and prices of pine boards and sidings from Canadian shippers.

1738. Oak hubs.—A Manchester firm desires dimensions and prices of oak hubs from Canadian manufacturers.

1739. Pine deals.—A Liverpool firm asks for prices and dimensions of pine deals from Canadian exporters.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense.
HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

U. S. Consul Willrich Misinformed

United States Consul Willrich at Quebec is quoted as saying that there are 3,000,000 acres of land owned by settlers and homesteaders the title to which was obtained prior to the passage of the act prohibiting the export of pulpwood to the States.

Very likely. The titles to those homesteads and settlers' holdings were obtained some fifty to one hundred years before this act was passed, requiring "all pulpwood to be manufactured in Canada," but potatoes, peas, onions and other products will be found growing on 90 per cent. of these lands instead of spruce pulpwood.

Mr. Willrich also says:—"The seigniories of the Province (whatever that is) include about 2,000,000 acres, making 5,000,000 acres, on which there are 50,000,000 cords of pulpwood that can be exported to the United States from the Province of Quebec." A large territory when "Ashuanipi and Mistassini" are included.

However, Mr. Willrich estimates that this 5,000,000 acres will provide 50,000,000 cords of pulpwood which can be exported, an average of 10 cords to the acre. "Sufficient," he says, "to supply the United States market for fifty years to come."

Mr. Willrich's estimate of ten cords to the acre on 5,000,000 acres of the land described is most ridiculous and extreme.

I have travelled over several thousand miles of virgin forest in the Province of Quebec from time to time, but do not recall of ever having made a report or an estimate of ten cords as an average on even one hundred square miles (64,000 acres) of spruce suitable for pulpwood purposes.

Such reports and estimates of timber as that given out by Mr. Willrich are too often made in an office, with the aid of a typewriter, and utterly regardless of the actual facts, and are oftimes misleading. And it is no wonder that English capitalists hesitate about investing large sums of money in pulpwood properties in Quebec on such information. They could get more reliable data from the "man behind the compass," who spends the most of his time in the woods, instead of holding down a Government job in an office.

If Mr. Willrich's estimates are correct there is no need of any reciprocity negotiations so far as pulpwood is concerned, and the pulp and paper manufacturers in the States can rest easy, as their supply of stock is assured for the next 50 years anyway, so it will not be necessary to import any from Canada Crown lands, even if the order in Council is rescinded. But if Mr. Willrich knows anything about this question at all he would know that the 5,000,000 acres (7,812½ square miles) would not average one cord of spruce pulpwood to the acre, and that 90 per cent. of this is not accessible, and therefore not exportable.

I conclude that those who are contemplating the investment of large sums of money in the wild forests of Quebec had better secure the opinion and rely upon the judgment of those who have some name and fame as a forest cruiser and pulpwood estimator instead of Mr. Willrich's opinion, who, I take it, has very limited experience as a forester.

The Hon. Clifford Sifton, Chairman of the Conservation Commission, has given it as his opinion "that the timber resources of Canada would suffice to meet the United States demand for only seven years after the supply of that country had been exhausted," while the United States Consul at Quebec proposes to supply that country for 50 years from farm and homestead lands in Quebec Province alone. O. E. Elsemore.

No Sale of Parry Sound Company's Property

The meeting held for the sale of the mill, limits camps and equipment of th. Parry Sound Lumber Company of Toronto, in the Board of Trade Rotunda, Toronto, on December 7, proved something of a surprise to a good many of the lumbermen who attended. Although Mr. Peter Ryan, of Toronto, exercised his most persuasive powers, he was unable to extract from anyone present a single bid which would be considered by the owners. There were about a hundred in attendance, many of whom were from Toronto, but there was also a good attendance from other parts of the province and a few from the United States. Among those who were noticed were Messrs. C. Beck, Penetang; Geo. Gladman, Peterboro; Allan McPherson, Longford Mills; Geo. Tennant, Bracebridge; J. P. McKenzie, North Tonawanda; Maurice Bingham, secretary-treasurer, of McLean Brothers, North Tonawanda; F. N. Waldie, Toronto; W. B. Maclean, Toronto; N. J. Hocken, Otter Lake; L. Kauffman, Shawanaga; Alex. Wood, Carling; J. N. Williams, Parry Sound; W. D. Lummis, Toronto; Alvin Peter, Toronto; J. McNeil, Toronto; Patrick McDermott, Toronto; A. J. Hills of the Canadian Northern Railway, Toronto; John Gray, Toronto; C. W. VanDuzer, Toronto.

Mr. J. B. Miller, President of the Parry Sound Lumber Company, after the meeting, stated to the Canada Lumberman that the failure of the auction to result in any sale, would not affect the company's plans. They would operate during the coming winter only in a very small manner, taking out perhaps a million or two feet, but they had decided definitely not to continue their operations in the future. They will hold their limits, mills and other property until they can dispose of them by private sale.

Snow Plows

The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate, Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9″ wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6″ wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12″ of loose snow each time the plow passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Solid and Inserted Tooth Circular Saws

We make a specialty of these lines

We remake old Solid Tooth Saws into new Inserted Tooth Saws

Write to us for quotations

Our saws have been before the public of Canada since 1855, and have won a reputation far excelling any other make of saws, combining as they do so many points of marked superiority.

By the old method the tempering of circular saws was to a great extent a matter of chance.

By our Patent Process that uncertainty is entirely avoided.

Being tempered and straightened by heat and pressure in air tight ovens, at a uniform heat between heavy revolving plates, we produce a perfectly even temper throughout the plate, and being free from that uneven strain or tension caused by so much unequal hammering they are not so liable to buckle, which was a great source of trouble and expense in the old style of saw.

These saws will stand up to their work better under all circumstances, and being made of a higher quality steel than it is practical to use by the old method, they hold an edge longer and will do more work than any other saw on the market.

We are prepared to make prompt deliveries of all Saw Orders—Rush Orders by mail or wire receive immediate attention.

R. H. Smith Company, Limited

Saw Manufacturers **St. Catharines, Ont.**

Cheapen Your Logging

By Using the

Lidgerwood Skidding Method

The machine shown in the cut above will pull itself on snow or bare ground wherever a pair of horses could take a drag sled, dray, jumper, skidding or single sled. From any location alongside such a road it will reach to the stump a distance of one-quarter of a mile or less in every direction and will skid all trees in full length or in log lengths. It will place the logs on skids or sleds or in the stream or lake as desired. It will re-yard logs, either taking the logs direct from the teams or from the skidway, or where left by itself at a previuos setting. It operates throughout the year and is absolutely independent of ground conditions ; that is, such as windfalls, underbrush, rocks, cliffs, ravines, or the steepest slopes, operating under such conditions almost as cheaply as over smooth ground.

All swamping, rolling, sliding and expensive cant dog or other hand work is eliminated. It does not fill the logs full of gravel and it does not brake or otherwise damage them.

It requires a skidding crew of eight men, uses for fuel one and one-half cords of wood per day. It will skid the largest tree or a cord of pulp wood, or several small logs at each trip. It will clear 40 to 60 acres at each setting, moves itself quickly from setting to setting, operates independent of weather conditions, does not "eat" when not working, does not have to be "sprung out" and has a working life of fifteen years.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

No. 103 Fast Feed Planer and Matcher

DOES EXCELLENT WORK AT 150 TO 200 FEET PER MINUTE

If you are a Manufacturer

of **Hardwood Flooring, Sheathing, Softwood Flooring** or **Matched Lumber** you cannot afford to be without our No. 103 Planer and Matcher—it is a **"trade getter"** and a **"money maker."**

Canada's Best in Wood Tools

MacGregor Gourlay Co.
John Ballantine & Co.
Hespeler Machinery Co.
Goldie & McCulloch Co.
Sussex Manufacturing Co.

If **Price Alone** is your "ruling passion" you probably will buy some other machine.

If both **Price and Quality** count, we can interest you.

If **Quality** is the deciding consideration, your order is as good as ours.

Canada Machinery Corporation Limited, Galt, Ontario

There are more DISSTON Brand Band and Circular Saws used than any other make and by a large majority

WHY?

Because millmen and sawyers recognize by the use of the Disston Saws they obtain the greatest results for the least cost

We make this statement without fear of successful contradiction

Points of Merit

Material Disston Crucible Steel
- Uniformity.
- Toughness.
- Greatest Tensile Strength and Elasticity.

Hardening AND Tempering Disston Method

Being manufacturers of our own steel, and thoroughly familiar with its make-up, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing-up qualities" for which the DISSTON SAWS are renowned.

Grinding Disston Method

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws whether tapered or of even thickness are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

Tensioning Disston Method

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions than any other brand of saw.

In the DISSTON BRAND OF SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself —the superiority of which has been demonstrated for the past fifty-five years—to the finishing operation, each process being performed by mechanics of long experience and highest order of skill.

We Have Been Making

A Big Bargain

A DETROIT 'Mule" works in any kind of woods or weather.
With its own power will go practically anywhere in the woods.
Will work with equal advantage in connection with a Logging Railroad, a Sleigh Haul or a Wheel Haul.
Skids all the timber your operatives will permit it to hook on to.

We have this Machine in Canada and will sell CHEAP to move it QUICKLY

Detroit Hoist and Machine Company

Detroit Mich. U.S.A.

Not altogether what we say but what Users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

Preparations for Horses are all sold on a Spot Cash Guarantee

Let us figure on furnishing you the following supplies for the coming season.

International Stock Food
We guarantee that your horses will do more work and keep in better order on less feed if they get International regularly.

International Silver Pine Healing Oil
Especially recommended for Sores, Bruises, Kicks, Inflammation and all flesh wounds.

International Worm Powder
Will quickly expel all kinds of worms.

International Distemper Cure
For Coughs, Colds, and Distemper.

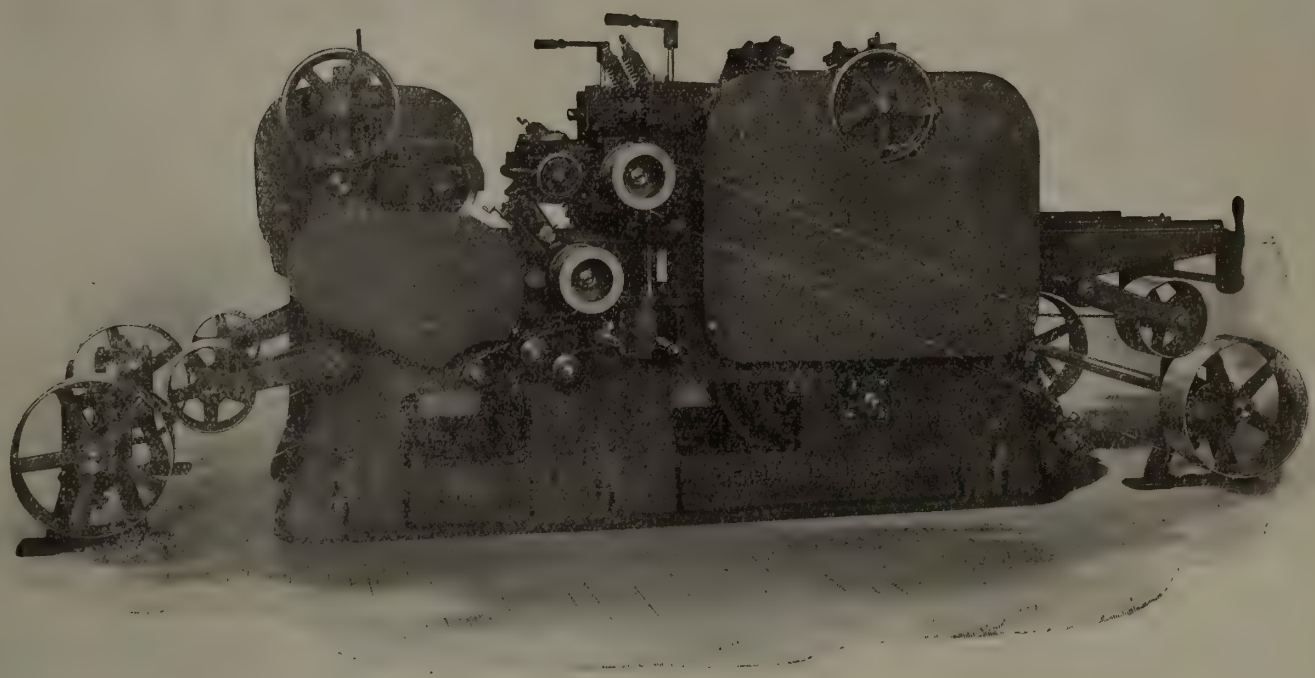
International Colic Cure
Guaranteed to cure Colic in ten minutes.

International Compound Absorment
Greatest Curb cure on Earth.

International Gall Cure
Cures while horses work or rest.

International Foot Remedy
Cures Foot diseases, keeps the hoof soft, elastic and tough.

International Harness Soap
Gives new life to old harness.



All our goods are guaranteed to give satisfaction.

"Berlin" Surfacers

Berlin Surfacers are built for the use of thin knives. A few years ago the significance of such a statement would hardly have been appreciated. To-day, the man who turns out the most lumber in the shortest time, who gets the most from his lumber and his machines, who gets the finest finish, is the man who uses thin knives.

Pyts Steel, used exclusively on Berlin machines, is the one self-hardening steel made to-day which possesses the requisite toughness combined with the right amount of hardness, for the successful use of thin knives.

Thin knives are set at a greater angle than the ordinary thick knives, consequently more of a "scrape" is secured. This is further effected by back-bevelling to suit the nature of the wood being worked.

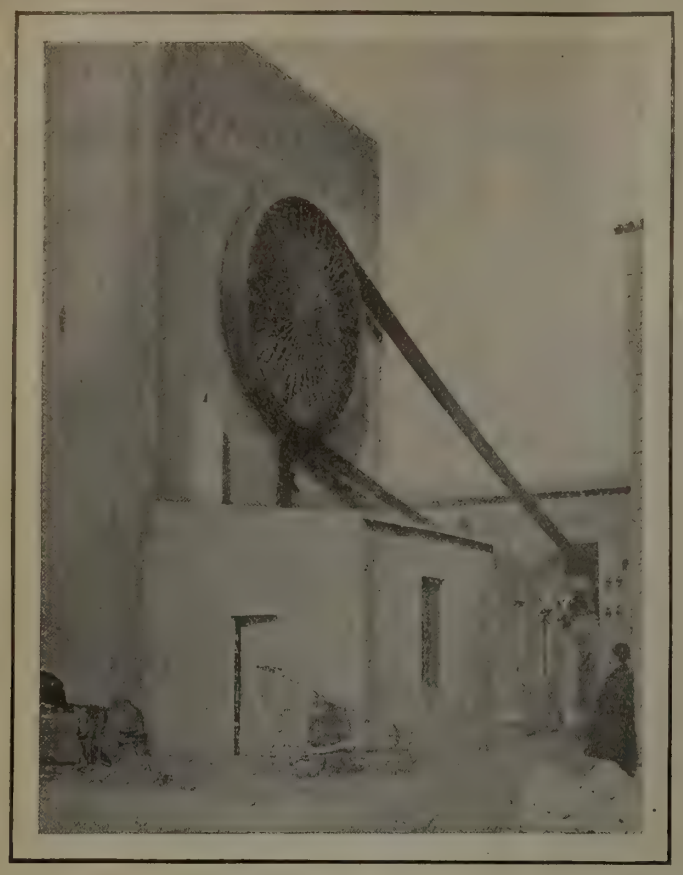
With Berlin thin knife heads, devices are used which grind the knives without disturbing the setting. The heads are then set in motion and jointed or brought to a perfect cutting circle so that each knife does its share of the work.

Thin knives actually make better work possible and will raise the grade from ten to twenty per cent.

The No. 186 is a fast feed matcher with the side-head spindles left out. It is also short-coupled and has six large feed rolls. Belt tighteners are provided for both top and bottom heads—no chance to "stall" them no matter how heavy the cut.

The No. 186 has the capacity of four ordinary surfacers and will produce a finish at 150 feet per minute that cannot be equalled short of a cabinet surfacer at 30 feet per minute. It is built in two sizes—20 in. or 30 in. wide with a 6 in. opening.

The top and bottom heads are very close together—warped and crooked stock can be better and more easily surfaced.



This surfacer gives the satisfaction which prompts the purchase of other Berlin machines.

SNOW PLOWS

A careful examination of the above illustration will demonstrate to you what a complete and practical snow plow this is.

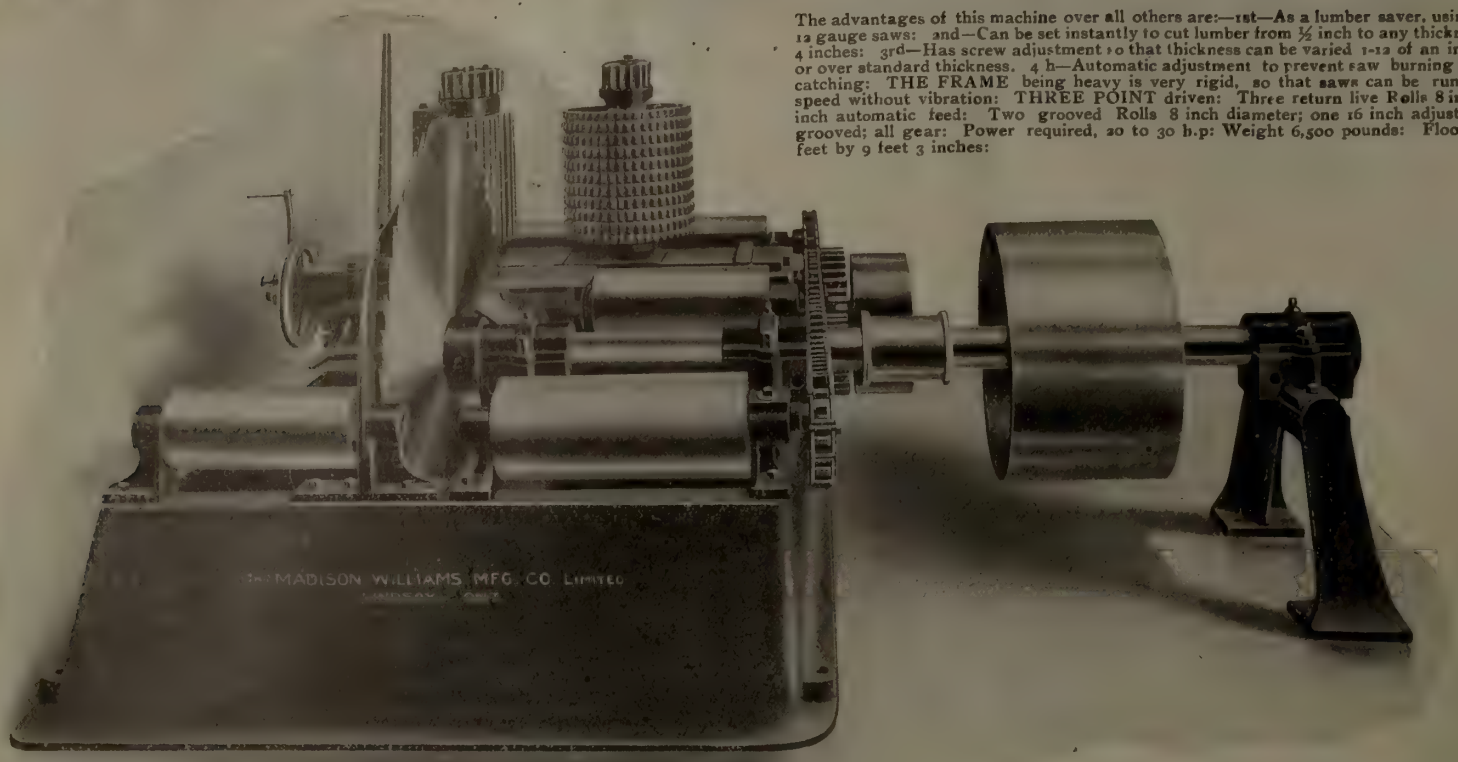
Important Points.

Rutter attachment for cutting into the ice to make track for the sleigh.

Nose Piece is cast with steel points and may be raised and lowered by screws shown in illustration.

Wings of hardwood on back may be set to shove the snow back 7 feet on each side of the road.

Weight about 1,800 pounds.



We have sold over 75 of these Snow Plows

Send us your enquiries.

MOWRY & SONS Gravenhurst Ontario

JOHNSTON RE-SAW is a Lumber Saver and a Money Maker

The advantages of this machine over all others are:—1st—As a lumber saver, using 10 and 12 gauge saws: 2nd—Can be set instantly to cut lumber from ½ inch to any thickness up to 4 inches: 3rd—Has screw adjustment so that thickness can be varied 1-12 of an inch under or over standard thickness. 4 h—Automatic adjustment to prevent saw burning by slivers catching: THE FRAME being heavy is very rigid, so that saws can be run at high speed without vibration: THREE POINT driven: Three return live Rolls 8 inch by 20 inch automatic feed: Two grooved Rolls 8 inch diameter; one 16 inch adjustable Roll grooved; all gear: Power required, 20 to 30 h.p: Weight 6,500 pounds: Floor space 8 feet by 9 feet 3 inches:

Why Atkins Sterling Saws Run Free and Easy

Saws that depend on "set" for clearance have to tear their way through the timber, like the picture to the left. The teeth are sprawled out on either side and chatter and stick and bind and tear. That's why wood sawing is sometimes considered such hard work. That's why commonly ground saws can NOT run fast or pull easy.

ATKINS SEGMENT-GROUND CROSS-CUT SAW BLADES are ground thinnest on the center of the back. The teeth are the widest part, and the blade drops easily into the smooth cut which is made by the saw teeth. Very little set makes the teeth cut clean and the rakers clear the center. See the picture to the right. These Saws merely require enough power to pull them back and forth. That's why they run so easily.

ATKINS STERLING CROSS-CUT SAWS are the only Saws that are Segment-Ground, and for this reason are guaranteed to run easier and cut faster than any other Saws. Write us for free information, or order through your jobber or dealer. If they won't supply you, let us know.

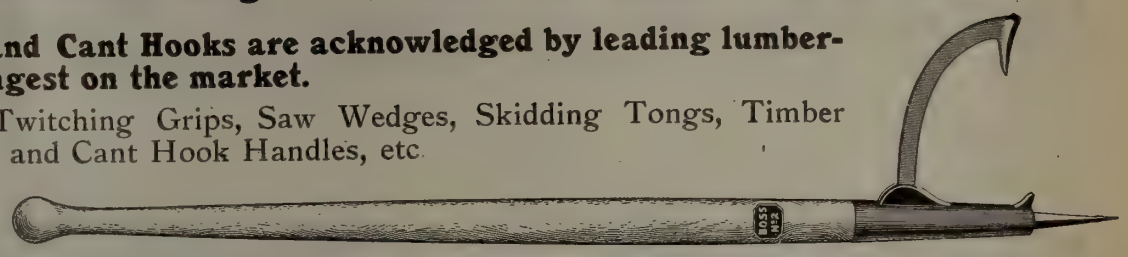
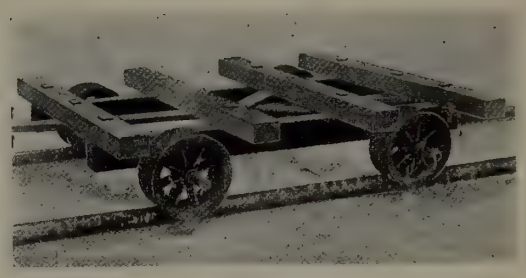
Boss Line Lumbering Tools



Manufactured by

The McFarlane-Neill Mfg. Co., Ltd., St. Mary's, N. B.

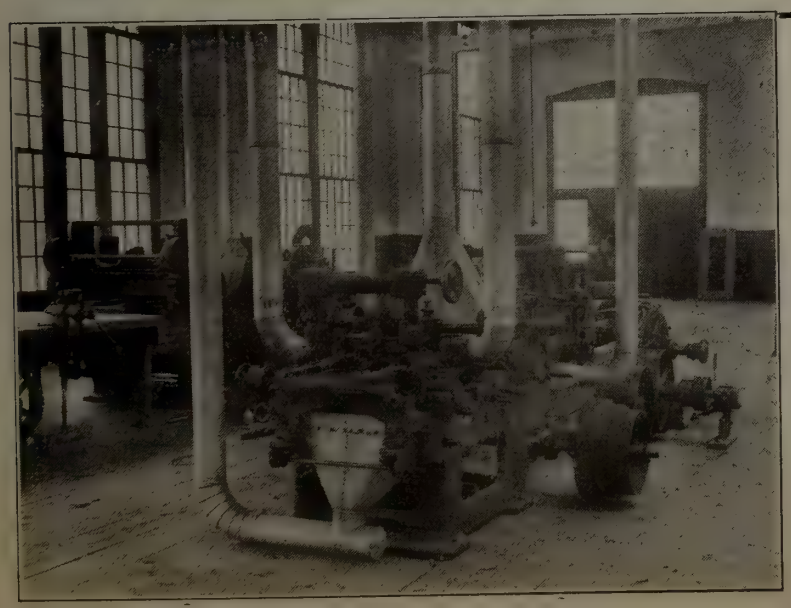
Forged Steel Socket Peaveys and Cant Hooks are acknowledged by leading lumbermen to be the lightest and strongest on the market.



Try our Steel Loading Blocks, Twitching Grips, Saw Wedges, Skidding Tongs, Timber Carriers, Split Rock Maple Peavey and Cant Hook Handles, etc.

Catalogues furnished and prices quoted on application

The Keystone Pole Tram Car



Indispensable to every saw mill. It runs on poles from 6 to 10 inches in diameter and the wheels are concave.

This method of conveying logs, pulpwood, or coal is undoubtedly the best and the cheapest that jobbers and mill-men can use. It can be used to great advantage on low and marshy ground.

We would appreciate the opportunity of furnishing you with further particulars.

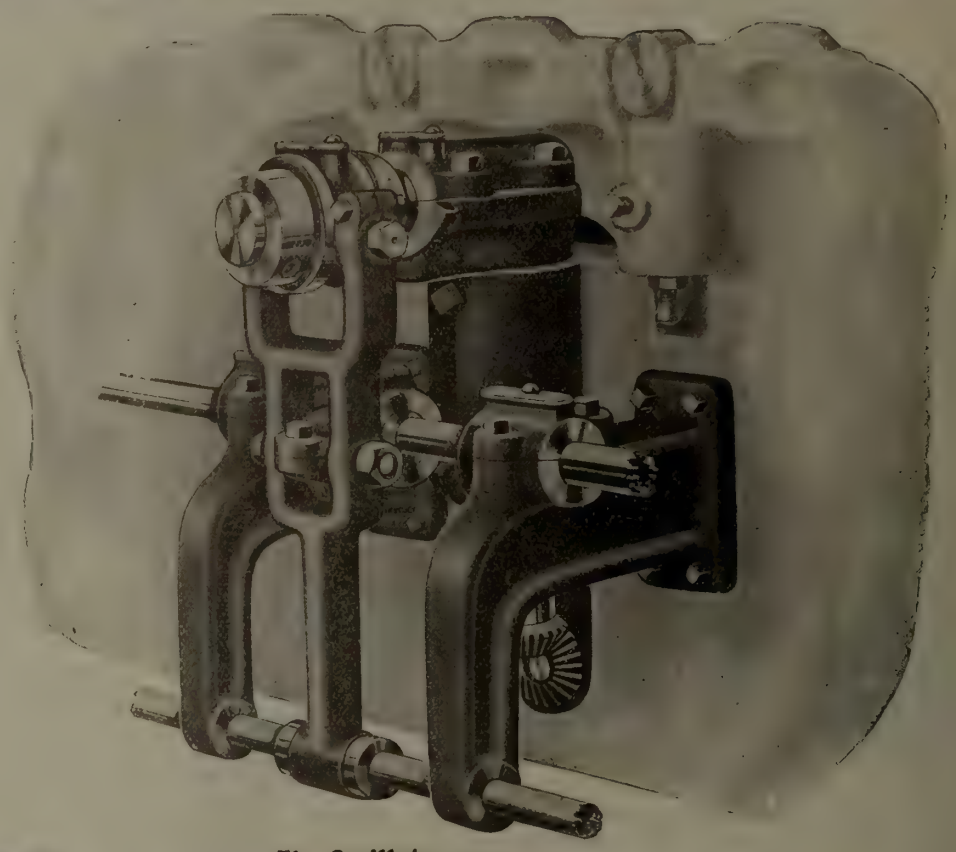
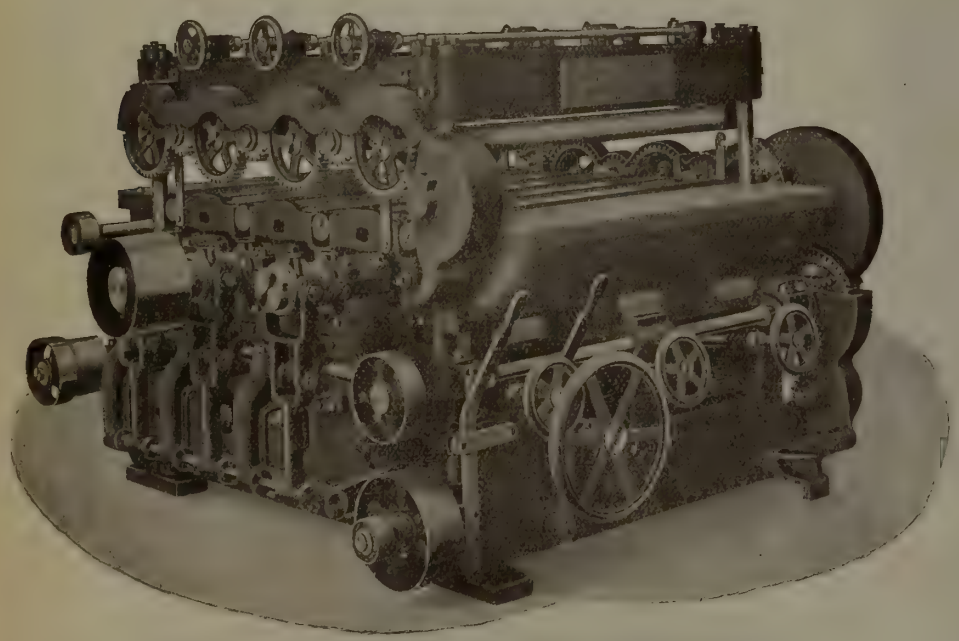
The Troublesome Feature on most Triple Drum Sanders is THE "OSCILLATOR"



Such is not the case with our

New No. 225 Triple Drum Sander



This machine is made exactly with the end in view of overcoming trouble with the oscillator. We have accomplished this by our improved method of eliminating wear in the oscillator bearings—these bearings cannot wear as the shaft does not touch their walls —then, again, they are relieved of all weight by pivoting the oscillators to a rigid shaft, shown in the sectional view.

This feature is not found on other makes and contributes largely to the success of our

New No. 225 Triple Drum Sander

The Oscillator

No. 225 Triple Drum Sander

Our New Catalog

on Sanders illustrates this feature of the No. 225 and other salient points on our machine. It also deals with sanders generally—all kinds of sanders. You ought to have a copy—Free

Isn't it Better to Investigate

"The HOWARD" Vulcanizing Process

than to wish you had

Positively the quickest and most economical system known for Drying and Preserving Lumber, Railroad Ties, etc.

POINTS IN ITS FAVOR:

Does away with all kilns
Improves quality of all lumber
Increases the crushing strength
Increases the transverse strength
Reduces the weight 30 per cent to 45 per cent
It materially prolongs the life of wood
Eliminates shrinking, swelling and warping
Emphasizes and beautifies natural grain of the wood
Makes fit for commercial use woods not otherwise merchantable
Does away with necessity of maintaining heavy stock of lumber in yards
By this process green lumber taken from the log can be used for building purposes in 2 or 3 days

---

We invite Lumbermen and Owners of Woodworking establishments to see a practical demonstration of the process at our plant in Toronto
